[2023R2 What's New Post: Enable Negative Tax Withholding for Negative Wages](#)

## Map Earnings and Deductions to Year End Tax Reporting Forms (USA)

### Map Earnings and Deductions to W-2 Boxes (USA)

#### Prerequisites

Security: These domains in the USA Payroll functional area:

- *Set Up: Payroll*
- *USA Payroll: Set Up: Payroll (Tax Filing/W-2s) - USA*

#### Context

Workday provides default W-2 form configuration and a **View W-2 Box Configuration** report that payroll administrators can use to view and edit the W-2 form configuration for year-end processing.

If you're using a common pay agent, Workday reports the EIN of the common pay agent in box b, then in box c reports:

- The name of the common pay agent.
- *As agent for* and the name of the worker's company.

You can map W-2 boxes so Workday Payroll knows which pay components to display in each section of the forms. You're responsible for mapping these boxes.

You can only map pay components or pay component-related calculations to boxes for W-2 forms.

## Steps

1. Access the **View W-2 Box Configuration** report. Select a tax year.
2. Click the **Edit** button to map earnings and deductions to a box.
3. Select the earnings, deductions, or pay component related-calculations you want to report in the box.

As you complete the task, consider:

| Option                             | Description                                                                                                                                                                                                                                                                             |
|------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Effective Date</b>              | Workday automatically populates this field with the year from the existing mapping.                                                                                                                                                                                                     |
| <b>Effective Until End of Year</b> | The last year the pay component mapping is valid. If you don't select a year, the mapping remains valid indefinitely.<br><br>If you create an additional row for a new calculation, you must select an <b>Effective Until End of Year</b> date for the previously existing calculation. |
| <b>Calculation</b>                 | You can select all pay components for a given year in the same row. Workday sums pay components selected in the same row and reports their total in the box.                                                                                                                            |

## Result

Use the **Company W-2 Audit** report before creating W-2 data to see company totals by box.

You can view the results of box configuration on the **W-2 Preview** report.

Access the **View W-2 Errors** report to identify and correct errors on the W-2 form.

## Map Earnings and Deductions to Year-End Forms for U.S. Territories (USA)

## Prerequisites

Security: These domains in the USA Payroll functional area:

- *Set Up: Payroll (US Territory Year End Forms)*
- *View US Territory Year End Box Configuration*

## Context

You can use the **View US Territory Year End Form Box Configuration** report to view or edit year-end form configuration for these territories:

- W-2GU for Guam.
- W-2PR for Puerto Rico.
- W-2VI for the U.S. Virgin Islands.

Workday populates the employer's:

- Name with the legal company name.
- Address with the primary business address.

You can only map pay components or pay component-related calculations to boxes for year-end forms for U.S. territories.

## Steps

1. Access the **View US Territory Year End Form Box Configuration** report.
2. Select a **Tax Year**.
3. Click **Edit** to map earnings and deductions to a box.
4. Select earnings, deductions, or pay component-related calculations to report in the box.

As you complete the task, consider:

| Option                             | Description                                                                                                                                     |
|------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Effective Date</b>              | If you don't select a year, this mapping remains valid indefinitely. If you select a year, you must provide a new mapping for subsequent years. |
| <b>Effective Until End of Year</b> | The last year the pay component mapping is valid. If you don't select a year, the mapping remains valid indefinitely.                           |
| <b>Calculation</b>                 | You can select all pay components for a given year in the same row. Workday sums all pay components selected in the same row.                   |

5. Map year-end form boxes so that Workday Payroll knows which earnings, deductions, and pay component-related calculations to calculate and display in each section of the form.

To see a list of the boxes you're responsible for mapping, see *Reference: Year-End Form Boxes to Be Mapped*.

## Result

Use the **Company US Territory Year End Form Audit Report** before creating year-end data to see company totals by box.

Access the **View US Territory Year End Form Errors** report to identify and correct errors.

You can view box configuration results on the **US Territory Year End Form Preview** report.

## Configure Box 13 for Employees Who Didn't Elect the Company Retirement Plan (USA)

### Prerequisites

Security: These domains in the Core Payroll functional area:

- *Set Up: Payroll (Calculations - Payroll Specific)*
- *Set Up: Payroll - Pay Group Specific*

### Context

When an employee hasn't elected a retirement plan for which they're eligible, use a memo earning and payroll input to populate box 13 (Statutory Employee, Retirement Plan, and Third Party Sick Pay check boxes) on an employee's W-2. A memo earning passes information through payroll for reporting purposes, but doesn't affect net pay or employee and employer taxes.

### Steps

1. Access the **Create Earning** task.
2. Set up a memo earning with these settings on the **Effective Dated** tab:

| Option                     | Setting                                                                                                                                       |
|----------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Worker Eligibility</b>  | <i>Payroll Input Exists for Pay Component</i>                                                                                                 |
| <b>Calculation Details</b> | <ul style="list-style-type: none"> <li>• <b>Calculation:</b> <i>Payroll Input</i></li> <li>• <b>Input Amount Allowed?</b> Selected</li> </ul> |

3. On the **Non-Effective Dated** tab, ensure that these **Groups** aren't included:
  - *Adds to Gross*
  - *Subtract from Net*
4. Add the memo earning to **Additional Pay Components to Calculate** on the **Edit Run Category** task.
5. Add payroll input for the memo earning. Enter at least 1 cent for the earning.
6. Map the memo earning to the W-2 form.

### Result

The **W-2 Preview** report displays Yes for box 13 of the worker's W-2 form. When you generate W-2 forms, an X displays in the related Box 13 check box.

### Related Information

#### Tasks

[Map Earnings and Deductions to W-2 Boxes \(USA\)](#) on page 1140

### Concept: Cost of Employer-Sponsored Health Coverage: Box 12DD (USA)

If you have an employer match or flexible benefits that apply to a Flexible Spending Account (FSA), add these pay component groups to your earnings and deductions:

- Section 125 Cafeteria Plan (for earnings or deductions).
- FSA Employer Match (for earnings or deductions).
- FSA Employee Deduction.

In addition, map any applicable deductions to Box 12DD.

Workday then determines whether to include the employer's FSA match in the Box 12DD amount.

## Example

In these year-end W-2 results, Workday determines to include an employer's FSA match in the Box 12DD amount:

- Worker A's Total FSA (2,400 USD) is less than the 125 Cafeteria Plan (3,540 USD). Therefore, Workday doesn't include the employer's FSA match in the Box 12DD box.
- Worker B's Total FSA (2,400 USD) is more than the 125 Cafeteria Plan (1,980 USD). Therefore, Workday includes the employer FSA match in the Box 12DD (Medical EE [600 USD] + ER Match to FSA [1,200 USD] = 1,800 USD).

| Pay Component     | 12DD | FSA ER | Sec 125 | FSA EE | Worker A | Worker B |
|-------------------|------|--------|---------|--------|----------|----------|
| Medical EE        | X    |        | X       |        | 1800     | 600      |
| FSA - EE          |      |        | X       | X      | 1200     | 1200     |
| Dental - EE       |      |        | X       |        | 300      | 60       |
| Vision - EE       |      |        | X       |        | 240      | 120      |
| Medical ER        | X    |        |         |        | 1800     | 0        |
| ER Match to FSA   | X    | X      |         |        | 1200     | 1200     |
| FSA               |      |        |         |        | 2400     | 2400     |
| 125               |      |        |         |        | 3540     | 1980     |
| Report ER FSA?    |      |        |         |        | No       | Yes      |
| Expected W-2 12DD |      |        |         |        | 3600     | 1800     |

## Related Information

### Tasks

[Map Earnings and Deductions to W-2 Boxes \(USA\)](#) on page 1140

### Reference: Year-End Form Boxes to Be Mapped (USA)

You can map boxes on year-end forms so that Workday Payroll:

- Calculates earnings, deductions, and pay component-related calculations.
- Displays the data in each section of the forms.

You're responsible for mapping these boxes:

- [W-2](#) on page 1145
- [W-2GU](#) on page 1147
- [W-2PR](#) on page 1149
- [W-2VI](#) on page 1153

You can only map pay components or pay component-related calculations to boxes on year-end forms. Use the relevant report to map boxes on year-end forms:

- **View US Territory Year End Form Box Configuration.**
- **View W-2 Box Configuration.**

When you select **Preferred** on the **General Name Display Type** on the **Edit Tenant Setup - System** task, Workday still uses the legal name on year-end forms.

## Multi-Jurisdiction Tax Allocations (USA)

### Setup Considerations: Multi-Jurisdiction Taxation (USA)

You can use this topic to help make decisions when planning your configuration and use of multi-jurisdiction taxation. It explains:

- Why to set it up.
- How it fits into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

### What It Is

Multi-jurisdiction tax allocation is a group of solutions that you can use separately or in combination. These solutions give you the ability to configure taxes for mobile workers and reduce manual entries of tax jurisdictions. The solutions are:

- Ongoing Multiple Work Jurisdictions (OMWJ)
- Tax Location Mapping (TLM)
- Payroll Input with worktags

When you configure any of these solutions, Workday withholds applicable state, county, city, and local other taxes accordingly.

| Workday Solution                                  | Description                                                                                                                                                          |
|---------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Ongoing Multiple Work Jurisdictions (OMWJ)</b> | Enables you to define tax allocations at the worker level. This solution is for workers with a set schedule and location assignments in differing tax jurisdictions. |
| <b>Tax Location Mapping (TLM)</b>                 | Enables you to define rules at a company level to allocate taxes based on time entry and payroll input with tax authority worktags.                                  |
| <b>Payroll Input with Worktags</b>                | Enables you to define tax allocations for one-off assignments based on payroll tax authority worktags you associate with payroll input.                              |

## Business Benefits

You can streamline the payroll process using any combination of these tax allocation solutions, which:

- Helps ensure compliance by automatically taxing wages based on where they're earned.
- Increases the accuracy of worker tax calculations.
- Reduces the amount of manual effort required to assign tax authority worktags to payroll input.
- Reduces the number of manual adjustments to taxes.
- Reduces the number of amendments to tax reports due to adjustments.

## Use Cases

| Solution                    | Use Cases                                                                                                                                                                                                                                                                                                                                                                          |
|-----------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| OMWJ                        | Salaried workers with a set schedule, assigned to multiple states.<br><br>Example: A pharmaceutical representative assigned to a tri-state area.                                                                                                                                                                                                                                   |
| TLM                         | Worker with unpredictable percentages of work performed in various tax jurisdictions.<br><br>Example: A technical support representative who travels only when technical issues arise.<br><br>Workday withholds taxes for all time entry or payroll input transactions with payroll tax location worktags. Tax allocations include payroll tax authorities mapped to the location. |
| Payroll Input with worktags | Workers with infrequent one-off assignments in different tax jurisdictions.<br><br>Example: A worker who, on rare occasions, works out of an office in a different tax jurisdiction.                                                                                                                                                                                               |

## Questions to Consider

Before deciding to use OMWJ, TLM, payroll input with worktags, or any combination, consider:

| Question                                                                                  | Considerations                                                                                                                                                                                                                                                                                                                                                                       |
|-------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Does the worker work in multiple tax jurisdictions for unpredictable percentages of time? | You can set up TLM so that Workday splits wages according to the location worktag entered on earnings. Workday withholds taxes for all Time Tracking entries or payroll input transactions with payroll tax location worktags.<br><br>If you have pretax deduction calculations enabled, Workday applies the percentages to taxable earnings, imputed income, and pretax deductions. |
| Do your workers have different tax rates for supplemental earnings?                       | Workday allocates supplemental earnings and pretax deductions according to the specified percentage splits (OMWJ) or payroll tax location worktags (TLM) before applying the supplemental tax rates.                                                                                                                                                                                 |

| Question                                              | Considerations                                                                                                                                                                                                                                                                                                                                                         |
|-------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Do workers enter their time in Workday Time Tracking? | <p>These considerations apply with or without Time Tracking:</p> <ul style="list-style-type: none"> <li>• If their work locations are consistent each pay period, you can use OMWJ to split hours automatically.</li> <li>• If their work locations vary from period to period, you can use TLM so they can specify their work location when entering time.</li> </ul> |

### Recommendations

Analyze your requirements and select the solution, or solutions, that require the least manual intervention.

### Requirements

Understand how Workday calculates and withholds taxes when you:

- Set up OMWJ. See [Concept: Tax Allocations for Ongoing Multiple Work Jurisdictions \(USA\)](#) on page 1168.
- Set up TLM.
- Use payroll input with tax location worktags. See [Add Payroll Input for Workers](#) on page 589.

### Limitations

Regardless of how you set up tax allocations, Workday doesn't apply percentage splits to State Unemployment Insurance (SUI) taxable and subject wages. Workday always applies SUI and other taxes based on SUI to the primary work state.

Workday doesn't support OMWJ elections for workers who have an international assignment position in the U.S.

Examples:

Workday:

- Doesn't support OMWJ elections for a worker with a regular position in Canada and an international assignment position in the U.S.
- Does support OMWJ elections for a worker with a regular primary position in the U.S. and an international assignment position in Canada.

### Tenant Setup

No impact.

### Security

Users with security enabled for these domains can view and set up taxes and worker tax elections:

## Set Up Company Taxes by Location (USA)

### Prerequisites

Locations must have a usage type of *Payroll Tax* and *Business Site*.

Security: *Set Up: Payroll - Company Specific (Taxes) - USA* domain in the USA Payroll functional area.

### Context

Set up tax location mapping (TLM) to have Workday automatically withhold taxes for time reported with location worktags. You also have the option to set up pretax deduction allocations.

### Steps

1. (Optional) Activate pretax deduction allocations.
  - a) Access the **Edit Company Federal US Tax Reporting** task.
  - b) In the **Company Tax Reporting** grid, select the **Allow Pre-Tax Deduction Allocation** check box.
  - c) To exclude an earning from the pretax deduction allocation calculation, add it to the *Pre-Tax Deduction Allocation Exclusion* pay component group. Example: You want to exclude a non cash-taxable earning that's used in the calculation of another earning.

2. Activate TLM for a company.

- a) Access the **Edit Company Federal US Tax Reporting** task.
- b) In the **Company Tax Reporting** grid, select the **Enable Tax Mapping on Location** check box.

**Note:** Select the **Enable Tax Mapping on Location** check box before creating and approving time blocks in Workday Time Tracking. Otherwise, Workday won't be able to link a time entry containing a reported Location to the tax authority codes of the Location.

If you select the **Enable Tax Mapping on Location** check box after you've approved time, you must update, resubmit, and approve the time blocks. Workday Payroll can then pick up the time blocks, and split them to different US tax authorities.

The **Tax Location Mappings** tab displays on the **Add Worker US Tax Elections** task for employees of the company.

3. Access the **Maintain Payroll Tax Mapping on Location** task to assign tax authorities to payroll tax locations.
  - a) Select a payroll tax location from the **Location** prompt.
  - b) In a new row on the **Location** grid, select tax authorities for **State**, **County**, **City**, and **Other**.

Alternatively, you can use these web services to update your tax location configurations for workers:

- *Get Payroll Payee Tax Location Mappings*
- *Put Payroll Payee Tax Location Mapping*

For the *Put* web service:

- Activate TLM at the company level.
- Ensure that an effective date is present in the load.

For audit purposes, the *Put* web service adds data and doesn't overwrite or update existing data.

You can use the **Payroll Tax Mappings on Location** report to review all payroll tax locations and the:

- TLM activation statuses.
- Respective tax authority designations.

4. (Optional) Access the **Add Worker US Tax Elections** task to deactivate TLM for a worker.

| Option                                       | Description                                                                                                                                            |
|----------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------|
| Inactivate for locations in a specific state | Locate the active state on the <b>Tax Location Mappings</b> grid, and select the <b>Inactivate Tax Location Mapping</b> check box.                     |
| Inactivate for all locations                 | Add a new row in the grid, enter the date to stop the existing tax location mappings, and select the <b>Inactivate Tax Location Mapping</b> check box. |

You can use the **Payroll Tax Mapping Inactivation on Worker** report to review worker status. You can use this report to identify workers excluded from state taxation before running payroll for a pay group.

### Result

Workday Payroll applies TLM to any time entry or payroll input transactions that contain a payroll tax location.

### Next Steps

Access these reports:

- **Company US Federal Tax Reporting**
- **Worker US Tax Elections**
- **View Location**

### Related Information

#### Concepts

[Add Worker State Tax Elections \(USA\)](#) on page 1185

[Create Locations](#)

[Set Up Company State Taxes \(USA\)](#) on page 1119

[Steps: Set Up Tax Locations for Time Entry](#)

[Steps: Set Up Worktags for Time Entry](#)

### Set Up Ongoing Multiple Work Jurisdictions (USA)

#### Prerequisites

Set up federal, state, and local tax reporting for the company. See:

- [Set Up Company Federal Taxes \(USA\)](#)
- [Set Up Company State Taxes \(USA\)](#)
- [Set Up Company Local Taxes \(USA\)](#) on page 1124

#### Context

Set up Workday to calculate and withhold taxes for multiple tax jurisdictions. For employees with multiple positions, the allocations apply to all positions.

Don't specify percentage splits for nonresident aliens. Nonresident aliens should have only 1 work state and 1 resident state.

## Steps

1. Access the **Edit Company Federal US Tax Reporting** task.

Select the **Allow Ongoing Work Jurisdiction Tax Allocation** check box.

Security: *Set Up: Payroll - Company Specific (Taxes) - USA* domain in the USA Payroll functional area. See: [Steps: Enable Functional Areas and Security Policies](#)

2. Access the **Add Worker US Tax Elections** task for a worker.

From the **Additional States** prompt, select the additional work states and click **OK**.

On **Tax Allocations** tab, define the work taxing jurisdiction levels. As you complete the **Ongoing Work Jurisdictions** grid, consider:

| Option                    | Description                                                                                                                                                                                                                                                                                                                                                                                   |
|---------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Effective Date</b>     | Enter the date the tax allocations begin, if they are after the effective date you entered to access this task. The worker must belong to the same company on both dates.<br><br>Workday uses the allocations in effect on the pay period end date or subperiod end date (if the allocations change midperiod).                                                                               |
| <b>County, City</b>       | Select from the counties and cities set up for the worker's company on the <b>Edit Company State and Local US Tax Reporting</b> task.                                                                                                                                                                                                                                                         |
| <b>Other</b>              | Select from the nonmandatory <b>Other</b> taxes.                                                                                                                                                                                                                                                                                                                                              |
| <b>Allocation Percent</b> | Enter the percentage of work performed in each tax jurisdiction. The total of all allocations must equal 100%.<br><br>If the total allocated to taxes for a state is less than 100%, Workday calculates the taxes listed here, unless you inactivate them: <ul style="list-style-type: none"> <li>• The <b>Other</b> grid on the <b>State</b> tab.</li> <li>• The <b>Local</b> tab</li> </ul> |

You can select the **Inactive** check box to inactivate existing allocations. To reactivate later, add a new row with a later effective date.

Security: *Worker Data: Payroll (Company Specific) - USA* domain in the USA Payroll functional area.

3. Access the **Create Earnings** or **Create Deductions** task.

Workday processes each earning for each jurisdiction defined on a worker's tax election, and applies the associated jurisdiction worktags. By default Workday applies the allocation percentage for the jurisdiction when calculating the earning. In the **Multiple Work Jurisdictions** section, you can select the **Do Not Apply Percentage Splits** check box to prevent Workday from splitting the calculation. In this case, Workday processes the pay component in full for each jurisdiction.

When determining whether to apply percentage splits to a pay component, consider:

- Whether you want to apply them at the pay component or pay component related calculation-level.
- Whether the calculation, eligibility, or limits of the pay components reference pay components with the same jurisdictions. In this case, Workday recommends that you reference a pay accumulation instead of directly referencing the pay components. Using a pay accumulation enables you to choose whether you want to filter by worktag or not.

Security: *Set Up: Payroll (Calculations - Payroll Specific)* domain in the Core Payroll functional area.

## Result

Workday calculates and withholds taxes for each jurisdiction based on percentages you specified. During a payroll run, before calculating taxes, Workday applies the percentages to:

- Taxable earnings
- Imputed income
- Pretax deductions

## Example

Steve works 60% in San Francisco, California, 20% in Bellevue, Ohio, and 20% in Cleveland, Ohio. Access the **Edit Company Federal US Tax Reporting** task and select the **Allow Ongoing Work Jurisdiction Tax Allocation** check box. Access **Tax Allocation** tab on the **Add Worker US Tax Elections** task and enter these settings in the **Ongoing Work Jurisdictions** section:

| State      | City                                             | Allocation Percent |
|------------|--------------------------------------------------|--------------------|
| California | <i>San Francisco (California: San Francisco)</i> | 60                 |
| Ohio       | <i>Bellevue City (Ohio: Huron)</i>               | 20                 |
| Ohio       | <i>Cleveland (Ohio: Cuyahoga)</i>                | 20                 |

## Related Information

### Tasks

[Set Up Company Federal Taxes \(USA\)](#) on page 1107

## Set Up Ongoing Multiple Work Jurisdictions with Time Tracking (USA)

### Prerequisites

- Set up federal tax reporting for the company.
- Set up worker tax allocations.
- Set up state and local tax reporting information for the company.
- Security:
  - *Set Up: Payroll (Calculations - Payroll Specific)* domain in the Core Payroll functional area
  - *Set Up: Payroll - Company Specific (Taxes) - USA* domain in the USA Payroll functional area

### Context

You can set up pay components and pay component related calculations to apply input from Workday Time Tracking to workers' ongoing multiple work jurisdiction (OMWJ) allocations.

### Steps

1. Access the **Edit Company Federal US Tax Reporting** task.
2. In the **Company Tax Reporting** grid, select both the **Allow Ongoing Work Jurisdiction Tax Allocation** and **Enable Ongoing Work Jurisdiction Tax Allocation with Time Tracking** check boxes.

### 3. For each pay component used by Workday Time Tracking:

- a) Access the **Edit Earning** or **Edit Deduction** task.
- b) In the **Ongoing Multiple Work Jurisdictions** section, select the **Do Not Apply Percentage Splits** check box.
- c) In the **Related Calculations** grid, select **Apply Percentage Splits** only for the hours-related calculation.

To avoid possible conflicts with your related calculation configuration, Workday recommends that you select **Do Not Apply Percentage Splits** for all other related calculations on the pay component.

**Note:** Don't split the hours-related calculation if the pay component uses hours from another pay component that has already split the hours.

## Result

When a worker with active OMWJ allocations enters time through Workday Time Tracking, payroll calculation splits the worker's earnings, pretax deductions, and taxes according to the OMWJ allocations. Amounts for each work jurisdiction display on a separate line in the pay result. Workday applies state and local taxes to the proper jurisdictions.

## Related Information

### Concepts

[Configure Earnings to Retrieve Calculated Time](#)

[Set Up Company Federal Taxes \(USA\)](#) on page 1107

### Concept: Multi-Jurisdiction Tax Allocations (USA)

Workday helps to enable payroll processing for a mobile workforce through:

- Ongoing Multiple Work Jurisdictions (OMWJ)
- Tax Location Mapping (TLM)
- Payroll Input with Tax Authority worktags

These tax allocation methods work with or without the use of Workday Time Tracking.

#### Ongoing Multiple Work Jurisdictions

You can use OMWJ when your mobile employees regularly:

- Work in the same multiple states, cities, or counties on an ongoing basis.
- Don't report hours separately for each jurisdiction.

You can set Workday up to calculate and withhold taxes for each jurisdiction based on percentages you specify. You set up OMWJ at the company and worker level.

Example: As a sales representative, each pay period Sam works:

- 30% in Virginia.
- 25% in Maryland.
- 45% in Pennsylvania.

The payroll administrator sets up these allocation percentages on his tax elections. Workday calculates taxes based on the specified percentages.

## Tax Location Mapping

You can use TLM when mobile employees work in unpredictable tax jurisdictions and percentages of time. You can set up Workday to calculate and withhold taxes for each jurisdiction based on tax location worktags you specify. TLM requires:

- The mapped location to be designated as a *Business Site* in Workday.
- Time entry (either manually or through Workday Time Tracking) that is associated with a tax location worktag.

Example: As a sales consultant, Susan has multiple customers in New York, New Jersey, and Connecticut. In 1 month she works 2 weeks in New York, 1 week in New Jersey, and 1 week in Connecticut. The next month, she works 2 weeks in Connecticut and 2 weeks in New Jersey. The payroll administrator sets up tax location mapping. Payroll input entered for Susan that includes the location worktags calculates all applicable state, city, and local taxes.

## Pretax Deduction Allocation

You have the option to enable pretax deduction allocations using any of these options:

- OMWJ.
- TLM.
- Payroll input with tax authority worktags.
- Any combination of these methods.

You set up pretax deduction allocations at the company level. Select the **Allow Pre-Tax Deduction Allocation** check box on the **Edit Company Federal US Tax Reporting** task.

To exclude an earning from the pretax deduction allocation calculation, add it to the *Pre-Tax Deduction Allocation Exclusion* pay component group. Example: You want to exclude a non cash-taxable earning that's used in the calculation of another earning.

**Note:** You can't set up flexible deductions for pretax deductions if you have also enabled Ongoing Multiple Work Jurisdictions (OMWJ).

## Exceptions for State Unemployment Insurance

Regardless of setup, Workday doesn't apply percentage splits to State Unemployment Insurance (SUI) taxable and subject wages. Workday always applies SUI and other taxes based on SUI to the primary work state.

## Priority of Tax Allocation

You can use a combination of OMWJ, TLM, and payroll input with worktags. Worktags, either through TLM or payroll input, take precedent over OMWJ and Workday will only apply the worktags. Workday applies OMWJ to the default wages with

no worktags and splits according to the specified percentages.

Example: You set up OMWJ tax allocation for a worker. You add payroll input with worktags for that worker. Workday applies OMWJ to the default wages, and applies the worktag split to the pay input wages.

### Pay Components Workday Automatically Splits

When configured, Workday splits all earnings and deductions that belong to these pay component groups:

- *Local Withholding Taxable (Do Not Withhold Taxes)*
- *Local Withholding Taxable Reduction*
- *Local Withholding Taxable (Withhold Taxes)*
- *State Withholding Taxable (Do Not Withhold Taxes)*
- *State Withholding Taxable Reduction*
- *State Withholding Taxable (Withhold Taxes)*

These pay component groups include taxable earnings, imputed earnings, and pretax deductions. Within these earnings and deductions, Workday splits pay component related calculations (PCRCs) that use these Workday-owned related calculations:

- *Hours Prorated*
- *Hours unprorated*
- *Original amount*
- *Time off paid (units)*
- *Time off total (units)*
- *Time off unpaid (units)*

### Pay Components Workday Automatically Resolves

When configured on the company, these local other deductions resolve for workers that work in jurisdictions other than their primary work state in the same period.

| Deductions                                                                                                                                                       | Always Resolve For     |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------|
| <i>NM: New Mexico Workers Compensation Administration Fund [USA]</i><br><br><i>NM: New Mexico Workers Compensation Administration Fund - Employer Paid [USA]</i> | New Mexico State Hours |

| <i>Oregon Workers Benefit Fund – Employer Paid [USA]</i><br><i>Oregon Workers Benefit Fund [USA]</i>                                                                                                                                                                                                                                                 | Oregon State Hours |

### Rounding with Ongoing Multiple Work Jurisdictions

Workday applies rounding when you select a proration option on a pay component. Workday rounds up the second decimal place to the total payroll input amount. Example: For a medical deduction with payroll input of 151.55 USD, Workday applies a rounding adjustment of - 0.02:

| State | Calculation (USD) | Result (USD)               | Round Up (USD)       |
|-------|-------------------|----------------------------|----------------------|
| CA    | 151.55 * 43%      | 65.1665                    | 65.17                |
| CO    | 151.55 * 31%      | 46.9805                    | 46.98                |
| UT    | 151.55 * 26%      | 39.403                     | 39.41 - 0.02 = 39.39 |
|       |                   | <b>Total Payroll Input</b> | 151.55               |

### State Tax Reciprocity

Many states have reciprocity agreements for employees that live in 1 state and work in another. These agreements sometimes:

- Exempt employees from taxes in 1 state under specific conditions.
- Specify how to calculate the taxes.

Workday references these agreements when processing payroll to correctly tax employees. You can review the rules Workday follows on the **View Payroll Multistate Withholding Rules** report.

## Related Information

[Setup Considerations: Payroll Tax Setup \(USA\)](#) on page 1098

[Concept: State Tax Reciprocity \(USA\)](#) on page 1170

[Concept: Multistate Withholding Rules \(USA\)](#) on page 1171

[Concept: Payroll Input for Ongoing Multiple Work Jurisdictions \(USA\)](#) on page 1167

### Concept: Payroll Input for Ongoing Multiple Work Jurisdictions (USA)

These examples illustrate how to use the **Add Payroll Input by Worker** task for employees who work in multiple jurisdictions on an ongoing basis.

#### Employee with Bonus and Medical Benefits

Oliver spends 40% of time in California and 60% in Colorado. You enter Oliver's bonus pay and an adjustment for a pretax medical benefit in the **Add Payroll Input by Worker** task:

| Pay Component                                          | Type          | Value (USD) |
|--------------------------------------------------------|---------------|-------------|
| <i>Bonus</i>                                           | <i>Amount</i> | 10,000      |
| <i>Medical – Blue Cross of CA – EE (Pre Tax) [USA]</i> | <i>Amount</i> | 200         |

You access the **View Payroll Results** report to view the results:

| Pay Component                                          | Worktags          | Amount (USD) | Input Amount (USD) |
|--------------------------------------------------------|-------------------|--------------|--------------------|
| Bonus                                                  | <i>California</i> | 4,000        | 10,000             |
| Bonus                                                  | <i>Colorado</i>   | 6,000        | 10,000             |
| <i>Medical – Blue Cross of CA – EE (Pre Tax) [USA]</i> | <i>California</i> | 80           | 200                |
| <i>Medical – Blue Cross of CA – EE (Pre Tax) [USA]</i> | <i>Colorado</i>   | 120          | 200                |

#### Hourly Employee Working Overtime

Rachel works 60% in Florida and 40% in Georgia, including 10 hours overtime. You enter Rachel's overtime hours using the **Add Payroll Input by Worker** task:

| Pay Component                                              | Type                      | Value |
|------------------------------------------------------------|---------------------------|-------|
| <i>FLSA Overtime (Straight Time and Overtime) MJ [USA]</i> | <i>Hours (unprorated)</i> | 10    |

You view the results using the **View Payroll Results** report:

| Pay Component                                       | Worktags | Amount (USD) | Related Calculation                          | Amount (USD) | Input Amount |
|-----------------------------------------------------|----------|--------------|----------------------------------------------|--------------|--------------|
| FLSA Overtime (Straight Time and Overtime) MJ [USA] | Florida  | 106.11       | FLSA - Payment for Straight Time of Overtime | 70.74        |              |
|                                                     |          |              | FLSA Rate                                    | 11.79        |              |
|                                                     |          |              | Hours (unprorated)                           | 6.00         | 10.00        |
|                                                     |          |              | Premium Rate (1/2 of FLSA Rate)              | 5.90         |              |
|                                                     |          |              | FLSA - Payment of Overtime                   | 35.40        |              |
| FLSA Overtime (Straight Time and Overtime) MJ [USA] | Georgia  | 70.74        | FLSA - Payment for Straight Time of Overtime | 47.16        |              |

#### Tasks

[Set Up Ongoing Multiple Work Jurisdictions with Time Tracking \(USA\)](#) on page 1162

#### Examples

[Example: Set Up Tax Allocation for Workers in Ongoing Multiple Work Jurisdictions \(USA\)](#) on page 1176

### Concept: Tax Allocations for Ongoing Multiple Work Jurisdictions (USA)

Some employees regularly work in the same tax jurisdictions every pay period. You can set up ongoing multiple work jurisdictions (OMWJ). Workday then calculates and withholds taxes for each jurisdiction based on percentages you specify. If you don't specify percentage allocations, Workday resolves pay components in full for each tax authority.

Example: Every pay period, Dennis performs 30% of his work in California and 70% in Arizona. You configure percentage allocations. When you process payroll, Workday calculates and withholds taxes accordingly.

## When to Override Tax Allocation Percentage Splits

Don't apply a percentage split on pay components used as related calculations if they've already been split. To override the split:

1. Navigate to the **Related Calculations** grid of the earning or deduction.
2. Select the **Do Not Apply Percentage Splits** option.

## How Workday Calculates Taxes for OMWJ

When calculating payroll for an employee with OMWJ, Workday:

1. Checks that you enabled tax allocation for ongoing work jurisdictions for the company.
2. Refers to the tax allocations as of the period or subperiod end date.
3. Calculates the full amount of each taxable earning and pretax deduction, and assigns a tax jurisdiction worktag to each amount.
4. Splits the amounts according to the percentages defined for the employee.
5. Calculates taxes for each jurisdiction, applying multistate withholding rules when the work state differs from the resident state.

## Payslips and Payroll Results

When Workday withholds taxes for multiple jurisdictions, payslips report the tax allocated to each jurisdiction separately. Payroll results display the work tax authority worktag that Workday uses to calculate each taxable earning, imputed earning, and taxable deduction on the **Tax Elections** tab. Results also display the tax calculated for each jurisdiction.

## Off-cycle Payments and Payroll Input

Workday uses the percentages defined on the **Add Worker US Tax Elections** task to split automatically:

- Pay components listed on the **Off Cycle (On Demand Additional, Manual)** tab on the **Create Run Category** task.
- Payroll input and off-cycle payments.

## 100% Allocation to 1 Jurisdiction

Workday doesn't recommend setting up a worker's allocation as 100% to 1 jurisdiction because this set up can cause incorrect calculation results for workers. Workday recommends that you adjust a worker's location if all of the costs for a worker must be allocated to a different jurisdiction.

However, you might need to set up 100% allocation for tax compliance. Example: A worker is working outside of a state where you want to collect SUI for them, and you need to set up 100% allocation to comply with New York's convenience of employer rule. Workday recommends testing thoroughly

when you set up a worker's allocation at 100% for 1 jurisdiction.

## Retroactive Payments

The **Run Retro Pay Calculation** task uses the tax allocations that were in effect for a worker during the recalculated period. Workday doesn't support retroactive changes to worker tax allocations.

When you add a new OMWJ allocation for a worker with an existing OMWJ allocation, you should avoid multiple retro runs to the prior OMWJ allocation. To prevent incorrect payments; Workday recommends that you set the NRPPT date to the start date of the pay period the new OMWJ allocation is effective, after completing the pay period. For any subsequent periods before the NRPPT date; Workday doesn't consider the unprocessed retro events and requires you to calculate and adjust the retro differences manually.

## FLSA

When you run pay calculation for FLSA bonuses using prior period coverage dates, Workday applies the tax allocations that were in effect for a worker during period the bonus was paid.

## Supplemental Earnings

Some states and cities have different tax rates for supplemental earnings. Workday allocates supplemental earnings and pretax deductions according to the specified percentage splits before applying the supplemental tax rates.

## Reciprocity

Workday applies state tax reciprocity rules to determine the taxable wages for the resident state.

## Temporarily Suspend OMWJ

You can temporarily suspend a percentage split. Use the **Add Payroll Input by Worker** task to enter payroll input. Enter the tax authority worktag in the **Payroll Worktags** field.

### Examples

[Example: Set Up Tax Allocation for Workers in Ongoing Multiple Work Jurisdictions \(USA\)](#) on page 1176

## Concept: State Tax Reciprocity (USA)

Some states make tax exemption agreements for people who live in 1 state and work in another. Workday checks both states for reciprocity agreements to calculate state withholding.

Workday only calculates withholding for states that you've configured using the **Edit Company State and Local US Tax Reporting** task. Be sure to set up payroll tax reporting information for all states in which employees reside. Otherwise, Workday calculates standard withholding for the work state only.

#### **Determining Employee Resident State and Work State**

Some states with reciprocity require that workers provide documentation certifying their residency or nonresidency. Record the receipt of these documents using the **Add Worker US Tax Elections** task. Employees can also manually submit residency forms using the self-service **Complete State and Local Withholding Elections** task.

Resident state is based on the primary home address.

Work state is based on the primary work address or, if that's missing, the business location for the primary or processing position.

#### **Employees with Multiple Work States**

To define tax allocations for ongoing multiple work states for a worker, use the **Tax Allocations** tab of the **Add Worker US Tax Elections** task.

#### **Related Information Concepts**

[Concept: Multistate Withholding Rules \(USA\)](#) on page 1171

#### **Concept: Multistate Withholding Rules (USA)**

When you have workers who live and work in different states, you can use the **View Payroll Multistate Withholding Rules** report to understand:

- Which states, if any, have reciprocal agreements.
- How Workday applies any reciprocal agreements to resident and work state tax withholdings.
- How Workday calculates resident and work state withholding when states don't have a reciprocal agreement.

This report organizes the rules by state for calculating tax withholding into these categories:

| Category                  | Subcategories                                          |
|---------------------------|--------------------------------------------------------|
| State = Resident          | Reciprocal Agreement Exists<br>No Reciprocal Agreement |
| State = Work              | Reciprocal Agreement Exists<br>No Reciprocal Agreement |
| Military Spouse Exemption |                                                        |

For each of these categories, subcategories identify whether to calculate the state and, if so, how to calculate the withholding when the state is:

- The resident state and there's a reciprocal agreement with the work state.
- The resident state and there isn't a reciprocal agreement with the work state.
- The work state and there's a reciprocal agreement with the resident state.
- The work state and there isn't a reciprocal agreement with the resident state.

The **Calculate State** columns identify when to calculate the state by indicating either:

- *True*, which means always calculate.
- The condition under which Workday calculates state taxes.

The **Calculation Method** columns identify how to calculate state taxes by indicating either:

- No calculation method, which means that Workday calculates full state withholding.
- The calculation method for how to withhold tax.

To change or override existing withholding elections or rules, you can use these tasks:

- **Add Worker US Tax Elections**
- **Complete State and Local Withholding Elections** where workers can manually submit residency forms.
- **Edit Company State and Local Tax Reporting** to override the default multistate withholding rule for resident state when there's no reciprocal agreement.

## Examples

Michelle lives in New Jersey and works in Pennsylvania and filed a Nonwithholding Certificate with their work state tax elections. You need to determine how Workday calculates tax withholding for both the resident and work states.

You access the **View Payroll Multistate Withholding Rules** report, select *New Jersey* and *Pennsylvania* from the **Payroll State Authorities** prompt, and consider:

### Resident State Taxes

New Jersey has a reciprocal agreement with Pennsylvania, so Workday must determine:

- Whether to withhold resident state taxes.
- Under what conditions to withhold resident state taxes.
- The calculation method to use.

In the **State = Resident / Reciprocal Agreement Exists** section, Workday follows the rules specified for New Jersey:

| Column                    | Description                                                  |
|---------------------------|--------------------------------------------------------------|
| <b>Calculate State</b>    | <i>True</i> indicates that resident state tax is calculated. |
| <b>Calculation Method</b> | <i>Resident State Tax - City</i>                             |

| Column | Description                                                                                       |
|--------|---------------------------------------------------------------------------------------------------|
|        | <i>Work EE Tax (if &gt; 0) tells Workday to calculate resident state tax minus work city tax.</i> |

### Work State Taxes

Pennsylvania has a reciprocal agreement with New Jersey, so Workday must determine:

- Whether to withhold work state taxes.
- Under what conditions to withhold work state taxes.
- The calculation method to use.

In the **State = Work / Reciprocal Agreement Exists** section, Workday follows the rules specified for Pennsylvania:

| Column                 | Description                                                                                                                                                                              |
|------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Calculate State</b> | <i>Tax Calc (State-WH Reciprocity): Certificate of Non-Residence Does NOT Exist tells Workday to calculate work state tax if the worker doesn't have a Certificate of Non-Residence.</i> |

| Column | Description                                                                                                               |
|--------|---------------------------------------------------------------------------------------------------------------------------|
|        | Workday doesn't withhold work state taxes for Michelle, because they filed a Nonwithholding Certificate for Pennsylvania. |

You want to understand the different scenarios in which Workday calculates tax withholding for residents and workers in Indiana.

You access the **View Payroll Multistate Withholding Rules** report and select *Indiana* as the **Payroll State Authority**. You view the report and see:

|                                                                                                                          |                                                                                                                                                                                                                        |
|--------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>States That Indiana Has Reciprocal Agreements With</b>                                                                |                                                                                                                                                                                                                        |
| <b>State = Resident / Reciprocal Agreement Exists - Withhold Tax - True</b>                                              | For workers who reside in Indiana and work in a state in the list, Workday calculates Indiana state tax. Whether Workday calculates work state tax depends on the work state and the rules associated with that state. |
| <b>State = Resident / No Reciprocal Agreement - Withhold Tax - True</b>                                                  | For workers who reside in Indiana and work in a nonreciprocal state, Workday calculates Indiana state tax.                                                                                                             |
| <b>State = Resident / No Reciprocal Agreement - Calculation Method - Resident State Tax - Work State Tax (if &gt; 0)</b> | For workers who reside in Indiana and work in a nonreciprocal state, then Workday calculates Indiana resident tax and reduces that tax by the withheld work state tax.                                                 |
| <b>State = Work / Reciprocal Agreement Exists - Withhold Tax - Tax Calc (State-WH Reciprocity):</b>                      | If Indiana is the work state and a worker lives in one of the reciprocity states listed, Workday calculates Indiana                                                                                                    |

|                                                                     |                                                                                                                                    |
|---------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------|
| <b>States That Indiana Has Reciprocal Agreements With</b>           |                                                                                                                                    |
| <b>Certificate of Residence Does NOT Exist</b>                      | work tax only if the worker doesn't have a certificate of residency filed.                                                         |
| <b>State = Work / No Reciprocal Agreement - Withhold Tax = True</b> | If Indiana is the work state but the worker lives in a state other than a reciprocity state, just withhold Indiana work state tax. |

## Related Information

### Concepts

[Concept: State Tax Reciprocity \(USA\)](#) on page 1170

### Tasks

[Set Up Ongoing Multiple Work Jurisdictions \(USA\)](#) on page 1160

## Example: Set Up Tax Allocation for Workers in Ongoing Multiple Work Jurisdictions (USA)

This example illustrates how to complete the **Tax Allocations** tab on the **Add Worker US Tax Elections** task for employees who work in multiple jurisdictions on an ongoing basis.

### Context

Ben Adams is a San Francisco, California worker now assigned to work in these tax jurisdictions at the specified percentages:

- San Francisco, California (40%)
- Bellevue, Ohio (20%)
- Cleveland, Ohio (20%)
- Kalamazoo, Michigan (20%)

You need to set up ongoing multiple work jurisdictions for Ben.

### Prerequisites

Enable **Allow Ongoing Work Jurisdiction Tax Allocation** on the **Edit Company Federal US Tax Reporting** task.

Security: These domains in the USA Payroll functional area:

- *Set Up: Payroll - Company Specific (Taxes) - USA*
- *Worker Data: Payroll (Company Specific) - USA*

### Steps

1. Access the **Add Worker US Tax Elections** task.
2. Select worker Ben Adams and these states in the **Additional States** field:
  - *Ohio*
  - *Michigan*
3. Add 4 rows in the **City Withholding** grid in the **Work** section on the **Local** tab and select:
  - *Bellevue City (Ohio: Huron)*
  - *Cleveland City (Ohio: Cuyahoga)*

Since Kalamazoo, Michigan has no city work tax, the city of Kalamazoo isn't available for selection. Delete the fourth row.

4. Access the **Ongoing Work Jurisdictions** section on the **Tax Allocations** tab, add 4 rows, and enter these settings:

| State      | City                                             | Allocation Percent |
|------------|--------------------------------------------------|--------------------|
| California | <i>San Francisco (California: San Francisco)</i> | 40                 |
| Ohio       | <i>Bellevue City (Ohio: Huron)</i>               | 20                 |
| Ohio       | <i>Cleveland City (Ohio: Cuyahoga)</i>           | 20                 |
| Michigan   | <i>No City Work Tax</i>                          | 20                 |

#### Tasks

[Steps: Add Worker Tax Elections \(USA\)](#) on page 1180

### Example: Inactivate Non-Applicable Tax Allocations (USA)

#### Context

Jordan usually works only in Portland, Oregon, where he's subject to an employer-paid transit tax. However, for 6 months he'll work only 50% in Sandy and 50% in Wilsonville, Oregon, which have different employer-paid transit taxes.

#### Prerequisites

Security: These domains in the USA Payroll functional area:

- *Set Up: Payroll - Company Specific (Taxes) - USA*
- *Worker Data: Payroll (Company Specific) - USA*

#### Steps

1. Access the **Add Worker US Tax Elections** task.
2. Add a row in the **Other** section on the **State** tab and select *Tri-County Metropolitan Transportation District Excise Tax - Employer Paid (Oregon)*, then select the **Inactive** check box.
3. Add 2 rows in the **Other** section on the **State** tab and select:
  - *Sandy County Transit Tax - Employer Paid (Oregon)*
  - *Wilsonville Transit Tax - Employer Paid (Oregon)*
4. Add 2 rows in the **Ongoing Work Jurisdictions** section on the **Tax Allocations** tab and enter these settings:

| State  | Other                                                    | Allocation Percent |
|--------|----------------------------------------------------------|--------------------|
| Oregon | <i>Sandy County Transit Tax - Employer Paid (Oregon)</i> | 50                 |
| Oregon | <i>Wilsonville Transit Tax - Employer Paid (Oregon)</i>  | 50                 |

#### Result

Workday stops processing tax for the inactivated allocation and begins processing the new tax allocations.

## Next Steps

When Jordan returns to Portland, the payroll administrator will inactivate the Sandy County and Wilsonville transit tax allocations and add the Portland transit tax allocation.

## FAQ: Multistate Withholding Rules

[Why didn't a worker who lives in 1 state and works in another receive a W-2 for their work state?](#) on page 1178

**Why didn't a worker who lives in 1 state and works in another receive a W-2 for their work state?**

Some reciprocal agreements between states result in work states not generating W-2s if there's an agreement between the resident state and work state. You can review reciprocity rules between states using the **View Payroll Multistate Withholding Rules** report.

## Tax Treaties (USA)

### Steps: Set Up Nonresident Alien Tax Treaty Withholding (USA)

#### Prerequisites

Security: *Worker Data: Payroll (Company Specific) - USA*

#### Context

Workday refers to tax treaty and the Internal Revenue Service Substantial Presence Test (SPT) when calculating taxes and taxable wages for 1042-S and W-2 reporting.

Tax treaties cover nonresident aliens (NRA) for these types of income:

- Scholarship or fellowship grants.
- Dependent personal services.
- Teaching.
- Studying and training.

Set up Workday to honor tax treaties between the U.S. and other countries for NRA.

#### Steps

1. Access the **Add Worker US Tax Elections** task.  
Identify NRA workers by selecting the **Nonresident Alien** check box on the **Federal** tab.
2. Enter tax treaty information for NRA employees who receive income that's subject to tax treaty rules.
  - a) To load tax treaty information from a third-party application, use *Put Payroll Worker Tax Treaty*.
  - b) Enter information for 1 worker at a time using the **Maintain Worker Tax Treaties** task.  
See [Maintain Tax Treaty Information for a Worker \(USA\)](#) on page 1179.
3. Identify states that honor federal tax treaties.
  - a) Access the **Maintain State Tax Treaty Withholding Rules** task.
  - b) Select the **State Honors Federal Tax Treaty** check box.

4. Add earnings that are subject to a tax treaty to the appropriate pay component groups:

| 2014 and Prior                                                                                                                                                                           | 2015 and After                                                                                                                                                                                                                                                                                              |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <ul style="list-style-type: none"> <li>Income Code 16 Non Qualified [USA]</li> <li>Income Code 16 Qualified [USA]</li> <li>Income Code 18 [USA]</li> <li>Income Code 19 [USA]</li> </ul> | <ul style="list-style-type: none"> <li>Income Code 16 Non Qualified [Effective 2015] [USA]</li> <li>Income Code 16 Qualified [Effective 2015] [USA]</li> <li>Income Code 18 [Effective 2015] [USA]</li> <li>Income Code 19 [Effective 2015] [USA]</li> <li>Income Code 20 [Effective 2015] [USA]</li> </ul> |

5. Update the **Net** pay accumulation for run categories that deduct tax treaty taxes to subtract the *1042-S Withholding (Tax Treaty) Taxes [USA]* pay component group.

### Maintain Tax Treaty Information for a Worker (USA)

#### Prerequisites

Security: *Worker Data: Payroll (Company Specific)* - USA domain in USA Payroll functional area.

#### Context

Add or update nonresident alien (NRA) tax treaty information. Workday applies the tax treaty rules when it calculates withholding for certain types of income.

You can use the *Put Payroll Worker Tax Treaty* web service to load tax treaty information for multiple workers from a third-party application.

#### Steps

1. Access the **Maintain Worker Tax Treaties** task.
2. As you complete the task, consider:

| Option                           | Description                                                                                                                                                                                                                                                                |
|----------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Tax Residency Country</b>     | The worker's country of residence that has a tax treaty with the U.S.                                                                                                                                                                                                      |
| <b>Income Code</b>               | The 2-digit IRS code for the type of income earned.                                                                                                                                                                                                                        |
| <b>Income Code Subtype</b>       | Applies to income code 16. Identify if the income is <i>Qualified</i> (not subject to NRA withholding) or <i>Non Qualified</i> .<br><br>If <i>Non Qualified</i> , select <b>Eligible for Withholding Allowance</b> and, if applicable, enter the <b>Withholding Rate</b> . |
| <b>Treaty Benefit Start Date</b> | The date when the treaty eligibility period starts. This is the time period when the worker receives treaty benefits.                                                                                                                                                      |
| <b>Treaty Benefit End Date</b>   | The date when the treaty eligibility period ends. Workday reports wages earned after this period in the applicable year on W-2 forms.<br><br>You can use this field to end a tax treaty rule.<br>Example: You add nonresident alien tax treaty                             |

| Option | Description                                                                                                                                                                                                                                                                          |
|--------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|        | information for a worker on August 1, 2024. When you need to end the treaty, you update this prompt and select <i>07/31/2025</i> . Workday no longer applies the nonresident alien tax treaty rule as of the <b>Treaty Benefit End Date</b> when calculating income for that worker. |

## Result

When you calculate payroll and the worker is identified as a nonresident alien on the **Worker US Tax Elections** report, Workday applies the tax treaty rules.

## Next Steps

To review a worker's tax treaty information, take the related action on the worker **Payroll > View Tax Treaties**.

## Related Information

### Tasks

[Steps: Add Worker Tax Elections \(USA\)](#) on page 1180

## Concept: Tax Withholding for Nonresident Alien Workers (USA)

Workday can calculate U.S. federal withholding for nonresident alien (NRA) employees in one of 3 ways:

| Tax Treatment of NRA Employee                                               | Withholding                                                                                                   | Employee Setup in Workday                                                                                           |
|-----------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------|
| Treated as a resident for tax purposes.                                     | Same as for U.S. citizens.                                                                                    | <b>Nonresident Alien</b> check box isn't selected on the worker's W-4.                                              |
| Not treated as a resident for tax purposes.<br>Not covered by a tax treaty. | Workday adds an additional amount to the earned amount to determine the taxable wages subject to withholding. | <b>Nonresident Alien</b> check box is selected on the W-4.<br>Filing status is Single or Married filing separately. |
| Not treated as a resident for tax purposes.<br>Covered by a tax treaty.     | Withholding from IRS income code numbers 16, 18, 19, and 20 is based on a tax treaty.                         | <b>Tax Treaty</b> is set up for the worker with benefit amounts and applicable dates.                               |

## Worker Tax Elections (USA)

### Steps: Add Worker Tax Elections (USA)

#### Prerequisites

Verify that the worker:

- Is in a company and a pay group.
- Has a valid work and primary home address in the U.S.

Security: *Worker Data: Payroll (Company Specific)* - USA domain in the USA Payroll functional area.

## Context

Enter federal, state, and local tax elections for a worker when they:

- Submit state withholding elections using paper forms instead of using employee self-service (ESS).
- Work in more than 1 company so you must enter a separate set of tax elections for each company.

## Steps

1. [Add Worker Federal Tax Elections \(USA\)](#) on page 1181
2. [Add Worker State Tax Elections \(USA\)](#) on page 1185
3. [Add Worker Local Tax Elections \(USA\)](#) on page 1189
4. (Optional) [Set Up Ongoing Multiple Work Jurisdictions \(USA\)](#) on page 1160

Some employees work in multiple states, cities, or counties on an ongoing basis and don't report hours separately for each jurisdiction. You can configure tax calculations and withholding in Workday for each jurisdiction.

5. (Optional) Resolve severance pay after termination.

Workday disconnects the work state from a terminated worker. To resolve severance pay after termination, select the work state for SUI from the **State Authority (Work)** prompt in the **Override Worktags** section on the **Run On Demand Payment for Worker** task.

See [Create On-Demand Additional Payments](#) on page 653.

## Result

Workday calculates payroll taxes according to the tax elections and allocations you enter.

## Next Steps

- To view tax data for an employee, access these reports:
  - **Worker US Tax Elections:** Displays federal, state, and local tax withholding information for an employee.
  - **Withholding Orders for Worker:** Lists all withholding orders for an employee.
- To correct employee tax elections, access the **Worker US Tax Elections** report. In the first column, select **Worker Tax Election > Edit** from the related actions menu.
- When an employee changes companies, enter their tax elections for the new company.
- When an employee works in multiple tax jurisdictions on an ongoing basis, you can configure tax location mapping for your company. You can disable those mappings for a worker entirely or for individual states.

## Related Information

### Tasks

[Set Up Company Federal Taxes \(USA\)](#) on page 1107

[Maintain Tax Treaty Information for a Worker \(USA\)](#) on page 1179

[Set Up Company Taxes by Location \(USA\)](#) on page 1159

[Set Up Ongoing Multiple Work Jurisdictions \(USA\)](#) on page 1160

[Steps: Set Up Payroll Taxes \(USA\)](#) on page 1104

## Add Worker Federal Tax Elections (USA)

### Prerequisites

Set up company federal taxes.

Verify that the worker:

- Is in a company and a pay group.
- Has a valid work and primary home address in the U.S.

Security: *Worker Data: Payroll (Company Specific)* - USA domain in the USA Payroll functional area.

## Context

You can enter federal tax elections for a worker when you receive a Lock in Letter from the federal government or when they:

- Submit withholding elections using a paper Form W-4 instead of using employee self-service (ESS).
- Have a Federal Tax Levy withholding order, which prevents them from using ESS. In this case, the payroll administrator can still make tax elections.
- Work in more than 1 company. Enter a separate set of tax elections for each company.

These web services support loading and retrieving federal tax elections:

- *Get Payroll Federal W-4 Tax Election*
- *Get Payroll FUTA (FUI) Elections*
- *Get Payroll Payee FICAs (FICA OASDI and Medicare exemption information)*
- *Put Payroll Federal W-4 Tax Election*
- *Put Payroll FUTA (FUI) Elections*
- *Put Payroll Payee FICA (FICA OASDI and Medicare exemption information)*

The web services for Payroll Payee FICA include any Reason for Exemption.

The *Put Payroll Payee FICA* web service:

- Considers worker FICA exemption data and adds or removes exemption reasons to determine worker exemption status.
- Uses the processing position if you don't specify a position for the worker and the payroll processing position rules are set up to use position override by default.

## Steps

1. Access the **Add Worker US Tax Elections** task.
2. As you complete the task, consider:

| Option                   | Description                                                                                                                                                                                                                                                                                           |
|--------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Company</b>           | Displays the employee's company as of the <b>Effective Date</b> .<br><br>Select a company as of the <b>Effective Date</b> when the employee:<br><ul style="list-style-type: none"> <li>• Has a future hire date.</li> <li>• Is terminated.</li> <li>• Has positions in multiple companies.</li> </ul> |
| <b>Work State</b>        | Displays the state from the employee's primary work address if it exists, or the location of the employee's primary or processing position.                                                                                                                                                           |
| <b>Home State</b>        | Displays the state from the employee's primary home address.                                                                                                                                                                                                                                          |
| <b>Additional States</b> | Select additional states in which the employee works.<br><br>Your selections apply to taxes calculated for payroll input when:                                                                                                                                                                        |

| Option | Description                                                                                                                                                                                                                                                                                                                                                  |
|--------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|        | <ul style="list-style-type: none"> <li>You select the tax authority worktag for the additional state or its localities on payroll input.</li> <li>Workers have ongoing multiple work jurisdictions specified on the <b>Tax Allocations</b> tab.</li> <li>Workers are <b>MSRR Exempt</b>. Select the domicile state where the employee pays taxes.</li> </ul> |

3. As you complete the **Federal** tab, consider:

| Option                               | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

| <b>Extra Withholding</b>             | <p>Workday calculates additional federal withholding on regular on-cycle payments unless it's supplemental pay only.</p> <p>For nonregular run categories, Workday doesn't deduct additional amounts. You can include the <b>Additional Amount</b> pay component related calculation as payroll input. Example: Worker has a bonus paid in an on-cycle, nonregular run category. You want Workday to withhold an additional amount, so you add the <b>Additional Amount</b> PCRC to the <i>Federal Withholding [USA]</i> deduction as payroll input tied to the specific payroll result.</p> <p><b>Note:</b> Workday displays the additional amount elected on the payroll administrator view of pay results, but it might not reflect the total amount withheld due to net pay validation.</p> <p>For on-demand additional payments paid in regular run categories, Workday deducts when you:</p> <ul style="list-style-type: none"> <li>Select the <b>Take Additional Tax Withholding Amounts</b> check box.</li> <li>Enter input for the <i>Additional Amount</i> PCRC.</li> </ul> |
| <b>Multiple Jobs or Spouse Works</b> | Select to update the withholding calculation for the worker to account for multiple jobs or their spouse working.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

| <b>Other Income</b>                  | Accepts up to 9 digits.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| <b>Deductions</b>                    | Accepts up to 9 digits.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| <b>Nonresident Alien</b>             | Limits <b>Marital Status</b> to <i>Single</i> and <b>Number of Allowances</b> to 1. You can change the marital status and number of allowances for a nonresident alien (NRA), but a warning displays.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

| Option                | Description                                                                                                                                                                                                                                         |
|-----------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                       | Select <b>Exempt from NRA - Additional Amount</b> to exclude the additional amount from the employee wages when calculating federal withholding.<br><br>Workers can select this check box through self-service when completing their tax elections. |
| <b>Lock In Letter</b> | When the IRS issues a Lock in Letter, select this check box to prevent the employee from making withholding changes through employee self-service.                                                                                                  |
| <b>Exempt</b>         | The employee remains exempt from federal withholding until you enter different instructions. Workday doesn't automatically reset employee exempt status at the beginning of each year.                                                              |
| <b>No Wage/No Tax</b> | Select this check box to prevent Workday from resolving federal withholding.                                                                                                                                                                        |

4. As you complete the **Unemployment Insurance**, **FICA Medicare**, and **FICA OASDI** sections, consider:

| Option                 | Description                                                                                                                              |
|------------------------|------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Exempt</b>          | Select this check box if applicable.                                                                                                     |
| <b>Apply to Worker</b> | Select this check box when the worker is exempt from FICA Medicare or FICA OASDI and you want to apply the exemption throughout Workday. |

The exemption from FICA Medicare or FICA OASDI continues when you use the **Job Change** business process to move the worker to a new job when you select these check boxes:

- **Apply to Worker**
- **Exempt**
- **Exempt Reason**

Access the **All Workers that are Exempt from FICA OASDI or FICA Medicare** report for more information on workers exempt from FICA Medicare or FICA OASDI.

## Result

You can view tax data for an employee by accessing these reports:

| Report                                  | Description                                                                   |
|-----------------------------------------|-------------------------------------------------------------------------------|
| <b>Payee W-4 Withholding IRS Report</b> | Displays an employee's W-4 data.                                              |
| <b>Withholding Orders for Worker</b>    | Displays an employee's federal and state tax levies.                          |
| <b>Worker US Tax Elections</b>          | Displays an employee's federal, state, and local tax withholding information. |

## Next Steps

- To correct tax elections, access the **Worker US Tax Elections** report. In the first column, select **Worker Tax Election > Edit** from the related actions menu.
- When an employee changes companies, enter their tax elections for the new company.

- When a worker is no longer exempt from Unemployment Insurance, FICA Medicare, and FICA OASDI, you can remove the exemption. Add a blank new row to the relevant section. Don't select the **Apply to Worker** or exempt check boxes.
- Workday disconnects the work state from a terminated worker. To resolve severance pay after termination, access the **Run On Demand Payment for Worker** task, and in the **Override Worktags** section, select the work state for SUI from the **State Authority (Work)** prompt.

## Add Worker State Tax Elections (USA)

### Prerequisites

Set up company federal taxes.

Verify that the worker:

- Is in a company and a pay group.
- A valid work and primary home address in the U.S.

Security: *Worker Data: Payroll (Company Specific)* - USA domain in the USA Payroll functional area.

### Context

You can enter state tax elections for a worker when they:

- Require other state withholding elections not entered through Employee Self Service (ESS).
- Submit state withholding elections using a paper form instead of using Employee Self Service (ESS).
- Work in more than 1 company. Enter a separate set of tax elections for each company.

These web services support loading and retrieving state and local tax elections:

- *Get Payroll USA State and Local Tax Elections*
- *Put Payroll USA State and Local Tax Election*

### Steps

1. Access the **Add Worker US Tax Elections** task.
2. As you complete the task, consider:

| Option                | Description                                                                                                                  |
|-----------------------|------------------------------------------------------------------------------------------------------------------------------|
| <b>Effective Date</b> | For Indiana, Workday only calculates county tax when the effective date of the county tax election is the first of the year. |
| <b>Company</b>        | Displays the employee's company as of the <b>Effective Date</b> .                                                            |

| Option                   | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
|--------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                          | <p>Select the company as of the <b>Effective Date</b> when the employee:</p> <ul style="list-style-type: none"> <li>• Has a future hire date.</li> <li>• Is terminated.</li> <li>• Has positions in multiple companies.</li> </ul>                                                                                                                                                                                                                            |
| <b>Work State</b>        | Displays the state from the employee's primary work address when it exists, or the location of their primary or processing position.                                                                                                                                                                                                                                                                                                                          |
| <b>Home State</b>        | Displays the state from the employee's primary home address.                                                                                                                                                                                                                                                                                                                                                                                                  |
| <b>Additional States</b> | <p>Select additional states in which the employee works.</p> <p>Your selections apply to taxes calculated for payroll input when:</p> <ul style="list-style-type: none"> <li>• You select the tax authority worktag on payroll input.</li> <li>• Workers have ongoing multiple work jurisdictions specified on the <b>Tax Allocations</b> tab.</li> <li>• Workers are <b>MSRR Exempt</b>. Select the domicile state where the employee pays taxes.</li> </ul> |

3. As you complete the **State** tab, consider:

When the **Work State** or **Home State** you select requires withholding, the **State Withholding** section displays.

4. As you complete the **State Withholding** section, consider:

| Option                      | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
|-----------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Number of Allowances</b> | Accepts up to 5 digits.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| <b>Additional Amount</b>    | <p>Workday calculates additional state withholding on regular on-cycle payments unless it's supplemental pay only.</p> <p>For nonregular run categories, Workday doesn't deduct additional amounts. You can include the <b>Additional Amount</b> pay component related calculation (PCRC) in your deduction. Example: Worker has a bonus paid in an on-cycle, nonregular run category and you want Workday to withhold an additional amount, so you add the <b>Additional Amount</b> PCRC to the <i>Federal Withholding [USA]</i> deduction.</p> <p><b>Note:</b> Workday displays the additional amount elected on the payroll administrator view of pay results, but it might not reflect the total amount withheld due to net pay validation.</p> <p>For on-demand additional payments paid in regular run categories, Workday deducts when you:</p> |

| Option                      | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
|-----------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                             | <ul style="list-style-type: none"> <li>Selected the <b>Take Additional Tax Withholding Amounts</b> check box.</li> <li>Enter input for the <i>Additional Amount</i> PCRC.</li> </ul>                                                                                                                                                                                                                                                                                       |
| <b>Exempt</b>               | <p>The employee remains exempt from state withholding in Workday until you enter different instructions. Workday doesn't automatically reset employee exempt status at the beginning of each year.</p> <p><b>Note:</b> When a worker is exempt but has an <b>Additional Amount</b> defined, the additional amount is still withheld from each payment. If your state doesn't allow an additional amount for exempt workers, ask the worker to submit a corrected form.</p> |
| <b>Inactivate State Tax</b> | <p>For workers who reside in Iowa or Arizona and work in another state, Workday calculates resident state withholding tax if the worker has an active state tax election.</p> <p>Select this check box when:</p> <ul style="list-style-type: none"> <li>The worker has an existing state tax election.</li> <li>You don't want Workday to calculate the resident state withholding tax for Iowa or Arizona.</li> </ul>                                                     |
| <b>MSRR Exempt</b>          | Select this check box for the state where worker is residing with their military spouse.                                                                                                                                                                                                                                                                                                                                                                                   |
| <b>Domicile State</b>       | When the employee is <b>MSRR Exempt</b> , select the state of permanent residency, where the employee pays state and local taxes.                                                                                                                                                                                                                                                                                                                                          |
| <b>No Wage/No Tax</b>       | Select to prevent Workday from resolving state withholding.                                                                                                                                                                                                                                                                                                                                                                                                                |

These states have additional withholding processing details:

| State                | Details                                                                                                                                                                                                                                                                                                                                                                                                               |

|           | <p>election to be effective on or after the date of the Indiana state election.</p> <p>When you don't select <b>Form WH-4 Filed</b>, Workday uses the most current effective tax elections for the Indiana Local County.</p> <p>Workday automatically selects the <b>Form WH-4 Filed</b> check box when you use the <b>Complete State and Local Withholding Elections</b> task to submit a WH-4 form.</p> <p>Workday doesn't create corresponding county elections when you or the employee submit a WH-4 form in Workday with these fields blank:</p> <ul style="list-style-type: none"> <li>County of Principal Employment as of January 1.</li> <li>County of Residence as of January 1.</li> </ul> <p>The county tax elections don't apply if you haven't completed these fields.</p> <p>If you need to make any changes to the state election, you must add applicable county elections again. Example: The worker changes marital status.</p> |
| Kentucky  | <p>If an employee has no birth date on file, Workday considers the employee to be under 65 for exemption purposes.</p> <p>When you select the <b>Fort Campbell Exempt</b> check box, Workday calculates the employee as exempt and the <b>Domicile State</b> field becomes available.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| Louisiana | The <b>Increase or Decrease Withholding Amount</b> field accepts negative numbers.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| Oklahoma  | When you select the <b>Active Duty</b> check box, Workday calculates the worker as exempt from state taxes.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| Virginia  | <p>When a worker claims <b>Estimated Tax Credit per Period</b>, Workday reduces the Virginia State Withholding (Resident) tax amount by the tax credit when the worker:</p> <ul style="list-style-type: none"> <li>Is a resident of Virginia.</li> <li>Works in a non-reciprocal state.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

5. As you complete the **Unemployment Insurance** section, consider:

Workday calculates State Unemployment Insurance (SUI) for the worker primary work state if required by the state. SUI is based on wages earned in all states.

6. As you complete the **Other** section, consider:

| Option          | Description                                                                                                                   |
|-----------------|-------------------------------------------------------------------------------------------------------------------------------|
| <b>Other</b>    | Select additional state or local tax to elect, exempt, or inactivate.                                                         |
| <b>Exempt</b>   | Select to exempt the worker from a tax that doesn't require an election.                                                      |
| <b>Inactive</b> | Select to stop calculating a tax when the worker is no longer liable for it. Example: The worker moves from the jurisdiction. |

When the **Work State** or **Home State** you select has payroll other tax authorities, the **Other** section displays.

These authorities are used for taxes that aren't covered by state or local withholding elections, such as optional state voluntary disability insurance. To view a complete list of other tax authorities and which require a tax election, access the **View Payroll Other Tax Authorities** report.

If the employee works in multiple tax jurisdictions on an ongoing basis, taxes elected here but not listed on the **Tax Allocations** tab are calculated under certain conditions, unless you inactivate them. See [Set Up Ongoing Multiple Work Jurisdictions \(USA\)](#) on page 1160.

## Result

You can view tax data for an employee on these reports:

| Report                               | Description                                                                   |
|--------------------------------------|-------------------------------------------------------------------------------|
| <b>Withholding Orders for Worker</b> | Displays an employee's federal and state tax levies                           |
| <b>Worker US Tax Elections</b>       | Displays an employee's federal, state, and local tax withholding information. |

## Next Steps

- To correct, delete, or update employee tax elections, access the **Worker US Tax Elections** report. In the first column, select **Worker Tax Election** and choose the applicable task (Edit, Delete).
- When an employee changes companies, enter their tax elections for the new company.
- When an employee works in multiple tax jurisdictions on an ongoing basis, you can set up tax location mapping for your company. You can deactivate those mappings for a worker entirely or for individual states. See [Set Up Company Taxes by Location \(USA\)](#) on page 1159.

## Related Information

### Tasks

[Set Up Company Taxes by Location \(USA\)](#) on page 1159

[Set Up Ongoing Multiple Work Jurisdictions \(USA\)](#) on page 1160

## Add Worker Local Tax Elections (USA)

### Prerequisites

Verify this employee data:

- Company.
- Pay group.
- Valid work and primary home address in the U.S.

Security: *Worker Data: Payroll (Company Specific)* - USA domain in the USA Payroll functional area.

## Context

You can enter local tax elections for a worker when they:

- Submit local withholding elections using a paper form instead of using employee self-service.
- Work in more than 1 company so you must enter a separate set of tax elections for each company.

Workday displays these tax authorities for the domicile state when you select the **MSRR Exempt** check box on the **State** tab:

- City
- County
- School District

For Indiana, resident and work counties are determined at the beginning of the calendar year. Set the tax election **Start Date** for an Indiana county to the first day of the year (January 1) in which the tax becomes effective for the worker.

These web services support loading and retrieving state and local tax elections:

- *Get Payroll USA State and Local Tax Elections*
- *Put Payroll USA State and Local Tax Election*

## Steps

1. Access the **Add Worker US Tax Elections** task, and consider:

| Option                   | Description                                                                                                                                                                                                                                                                                                                                                                                     |
|--------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Effective Date</b>    | For Indiana, Workday only calculates county tax when the effective date of the worker's county tax election is the first of the year.                                                                                                                                                                                                                                                           |
| <b>Company</b>           | Displays the employee's company as of the <b>Effective Date</b> .<br><br>Select the company as of the <b>Effective Date</b> when the employee:<br><ul style="list-style-type: none"> <li>• Has a future hire date.</li> <li>• Is terminated.</li> <li>• Has positions in multiple companies.</li> </ul>                                                                                         |
| <b>Work State</b>        | Displays the state from the employee's primary work address when it exists, or the location of the primary or processing position.                                                                                                                                                                                                                                                              |
| <b>Home State</b>        | Displays the state from the employee's primary home address.                                                                                                                                                                                                                                                                                                                                    |
| <b>Additional States</b> | Select additional states in which the employee works.<br><br>our selections apply to taxes calculated for payroll input when:<br><ul style="list-style-type: none"> <li>• You select the tax authority worktag for the additional state or its localities on payroll input.</li> <li>• Workers have ongoing multiple work jurisdictions specified on the <b>Tax Allocations</b> tab.</li> </ul> |

| Option | Description                                                                                                                                                                     |
|--------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|        | <ul style="list-style-type: none"> <li><b>MSRR Exempt</b> (Military Spouse Residency Relief Act) employees. Select the domicile state where the employee pays taxes.</li> </ul> |

2. As you complete the **Local** tab, consider: These sections might display depending on the state:

**Home**

- **City Withholding**
- **School District Withholding**

**Work**

- **City Withholding**
- **County Withholding**

3. As you complete the task, consider:

| Option                   | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
|--------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Withholding</b>       | Select the local tax authority.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| <b>Exemptions</b>        | Select to exempt the worker from the tax.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| <b>Additional Amount</b> | <p>For these localities, Workday calculates additional local withholding on regular on-cycle payments unless it's supplemental pay only:</p> <ul style="list-style-type: none"> <li>• Indiana, for Work or Residence county.</li> <li>• Michigan, for Work or Residence city.</li> <li>• New York, for Work or Residence city.</li> </ul> <p>For nonregular run categories, Workday doesn't deduct additional amounts. You can include the <b>Additional Amount</b> pay component related calculation (PCRC) in your deduction. Example: A worker received a bonus payment in an on-cycle, nonregular run category. You want Workday to withhold an additional amount, so you add the <b>Additional Amount</b> PCRC to the <i>Federal Withholding [USA]</i> deduction.</p> <p><b>Note:</b> Workday displays the <b>Additional Amount</b> elected on the payroll administrator view of pay results, but it might not reflect the total amount withheld due to net pay validation.</p> <p>For on-demand additional payments paid in regular run categories, Workday deducts when:</p> <ul style="list-style-type: none"> <li>• You select the <b>Take Additional Tax Withholding Amounts</b> check box.</li> <li>• You enter input for the <i>Additional Amount</i> PCRC.</li> </ul> |
| <b>Inactive</b>          | Select to stop calculating the tax for a worker, such as when they move out of the locality.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

## 4. Consider this additional location-specific tax withholding information:

| Option              | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
|---------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Kentucky</b>     | <p>For Louisville <b>City Withholding</b>, when the worker already has an election for <i>Transit Authority of River City (TARC) (Kentucky)</i>, select <b>Inactive</b> for it.</p> <p>Add a new row and select the <b>Effective Date</b>.</p> <p>Select 1 of these tax authorities from the <b>City</b> prompt:</p> <ul style="list-style-type: none"> <li>• <i>Louisville Non-Resident + TARC (Kentucky: Jefferson)</i></li> <li>• <i>Louisville Resident + TARC (Kentucky: Jefferson)</i></li> </ul> <p>For residents of Jefferson county, in the <b>School District Withholding</b> section, from the <b>School District Withholding</b> prompt, select <i>Jefferson County School Board Tax (Kentucky: Jefferson)</i> .</p> |
| <b>Maryland</b>     | <p>If you don't enter instructions for local tax withholding, Workday uses the default withholding rate for Maryland.</p> <p>On pay results and payslips, Workday combines state and local (county) tax withholding.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| <b>Pennsylvania</b> | <p>To apply wages earned in another state to the work location for local taxation, select the <b>Primary PA EIT</b> check box in the <b>Work</b> section. .</p> <p>Workday recognizes amounts previously withheld by other companies when:</p> <ul style="list-style-type: none"> <li>• You set up the <i>Local City (PENN) Local Service Tax [LST] (USA)</i> city withholding tax, and</li> <li>• Workers have transferred from or work in multiple companies.</li> </ul>                                                                                                                                                                                                                                                       |

5. On the **Tax Allocations** tab, for employees who work in multiple tax jurisdictions on an ongoing basis, enter the percentage of work performed in each jurisdiction. Taxes elected here but not listed on the **Tax Allocations** tab calculate under certain conditions.

See *Set Up Ongoing Multiple Work Jurisdictions (USA)*.

**Next Steps**

- You can view local tax withholding information for an employee on the **Worker US Tax Elections** report.
- When an employee changes companies, enter their tax elections for the new company.

## Copy Tax Elections for a Worker (USA)

### Prerequisites

- Security: Configure the *Copy Tax Elections for Worker* business process and security policy in the USA Payroll functional area.
- The worker is transferring or has transferred to the new company.
- Set up the tax authorities for the workers tax elections in Workday for the new or proposed company. If not set up, Workday doesn't copy the tax elections for that tax authority.

### Context

You can copy the tax elections for a worker from 1 company to another for events such as acquisitions. You can copy the elections from the predecessor to the successor company.

You can copy tax elections for a worker in single legal entity (SLE) company relationship. Tax elections need to be in the managing company.

### Steps

1. From the related actions menu of the worker, select **Payroll > Copy Tax Elections for Worker**.
2. If the worker works in more than 1 company, select the **Source Company**.  
Otherwise, Workday displays the company name.
3. Select the **Proposed Company**, the company to which you want to copy the elections.  
Workday displays only companies relevant to the employee.

### Result

The copied elections use the same effective date as the existing tax elections in the source company.

#### Examples

[Concept: Business Processes](#)

## Copy Tax Elections for Multiple Workers (USA)

### Prerequisites

- Configure the *Copy Tax Elections for Workers* business process and security policy in the USA Payroll functional area.
- The workers are transferring or have transferred to the new company.
- Set up the tax authorities for the workers tax elections in Workday for the new or proposed company. If not set up, Workday doesn't copy the tax elections for that tax authority.

### Context

You can copy the tax elections for a worker from 1 company to another for events such as acquisitions. You can copy the elections from the predecessor to the successor company.

You can copy tax elections for a worker in single legal entity (SLE) company relationship. Tax elections need to be in the managing company.

### Steps

1. Access the **Copy Tax Elections for Workers** task.

**2. Select:**

- **All Workers.**
- One or more **Worker(s)**.

**3. If the workers work in more than 1 company, select the **Source Company**.**

Otherwise, Workday displays the company name.

**4. Select the **Proposed Company**, the company to which you want to copy tax elections.****Result**

The copied elections use the same effective date as the existing tax elections in the source company.

The **Proposed Company missing Source Company's Payroll Tax Authorities** field displays any tax authorities from the source company that Workday didn't find in the proposed company. You can manually copy these tax elections over.

**Next Steps**

(Optional) Access the **Mass Copy Tax Elections Audit** report to review the tax elections you copied to the proposed company.

**Related Information****Examples**

[Concept: Business Processes](#)

**Exempt Military Spouses from Residence State and Local Taxes (USA)****Prerequisites**

- Make sure the worker's work address reflects the actual work state.
- Update the home address to their current residence.
- Security: *Worker Data: Payroll (Company Specific)* - USA domain in the USA Payroll functional area.

**Context**

When the spouse resides with the member of the military, the Military Spouse Residency Relief Act exempts spouses from state and local taxes for that state. When you set up the exemption, Workday deducts taxes for their Domicile State instead.

Midperiod changes to a worker's Domicile State results in gross-to-net proration.

Workday doesn't support exempting military spouses from residence state and local taxes for workers who have an international assignment position in the U.S.

**Steps**

1. Access the **Add Worker US Tax Elections** task, and enter the State of Domicile in the **Additional State** field.
2. On the **State** tab, select the **MSRR Exempt** check box for the state where worker is residing with their spouse.
3. For the **Domicile State**, select the state of permanent residency where the worker actually pays state and local taxes.

**Result**

Workday withholds taxes from the Domicile State. Workday keeps track of withholding for states that require a W-2 report even though the employee is exempt.

## Next Steps

Run the **Payroll Multistate Withholding Rules** report. The **Accumulate Wages for Employees Claiming Military Spouses Residency Relief Exemption** column displays Yes when a state requires accumulation of wages for employees claiming MSRR exemption.

Run the **Expiring Exempt Tax Elections** report to keep track of MSRR exemption elections that might be near expiration.

These web services include the MSRR exemption election:

- *Put Payroll USA State and Local Tax Elections*
- *Get Payroll USA State and Local Tax Elections*

## Related Information

### Tasks

[Steps: Add Worker Tax Elections \(USA\)](#) on page 1180

## Steps: Reset Exempt Tax Elections (USA)

### Context

You can find workers who have expiring federal, state, or local exempt tax elections and then:

- Notify them so they can create a new election for themselves.
- Add a new tax withholding election for them.

Workday supports local exempt elections for:

- Michigan
- New York
- Pennsylvania Local Service Tax (LST)

### Steps

1. Access the **Expiring Exempt Tax Elections** report.

Find workers with expiring exempt elections. You:

- Must select a **Tax Authority Type** to include local or state tax elections on the report.
- Can select the **Include Military Spouse Exempt Elections** check box to display workers with an MSRR election.

The **Expiring Exempt Tax Elections** report doesn't display workers who have:

- An active federal tax levy or a Lock-in Letter.
- Transferred out of the company.

Security: *Worker Data: Payroll (Company Specific)* - USA domain in the USA Payroll functional area.

2. Copy the **Expiring Exempt Tax Elections** report so you can configure an alert.

See [Copy Reports](#).

Security: *Custom/Standard Report Copy* domain in the Tenant Non-Configurable functional area.

3. Create an alert to notify workers who have expiring elections.

See [Configure and View Alerts](#).

Security: *Notification Alerts* domain in the System functional area.

#### 4. Access the **Add Workers US Tax Election for Expiring Exempt** report.

Add new elections for workers with expired exempt elections. You:

- Must select a **Tax Authority Type** to include local or state tax elections on the report.
- Can select the **Include Military Spouse Exempt Elections** check box to display workers with an MSRR election.

Security: *Worker Data: Payroll (Company Specific)* - USA domain in the USA Payroll functional area.

#### 5. (Optional) Create an alert to notify workers that you added a new exempt election for them.

See [Configure and View Alerts](#).

### Result

Workers have new tax elections with default values based on the relevant tax authorities. The effective date for the created election is the date you submit the report.

#### Examples

[2022R2 What's New Post: Reset Federal Exempt Withholding Elections](#)

## Create Reports with Worker Tax Elections (USA)

### Prerequisites

- Set up company taxes.
- Add worker tax elections.
- Security: *Worker Data: Payroll (Company Specific)*

### Context

Create custom reports that include information about worker tax elections.

### Steps

1. Access the **Create Custom Report** task:
  - a) For **Report type**, enter *Advanced Report*.
  - b) For **Data Source**, enter *All Workers*.
2. On the **Columns** tab:
  - a) For **Business Object**, select *Worker*.
  - b) For **Field**, select the category *Worker Tax Elections*.

### Result

A list of available fields is presented, including the following taxes:

- Federal (Withholding, FICA, UI, EIC)
- State (Withholding, UI, EIC)
- City (Withholding)
- County (Withholding)
- School District (Withholding)

### Related Information

#### Examples

[Concept: Custom Reports](#)

## Concept: Worker Tax Elections (USA)

### Administrative Tasks

#### Administrative Tax Election Tasks

Payroll administrators and partners can complete tax elections for workers using these administrative tasks:

- **Add Worker US Tax Elections**
- **Add Workers US Tax Election for Expiring Exempt**
- **Complete Federal Withholding Elections**
- **Complete State and Local Withholding Elections for Worker**
- **Copy Tax Elections for Workers**

Additionally, you can include these business processes in the *Change Job*, *Contact Change*, and *Onboarding* business processes:

- **Complete Federal Withholding Elections**
- **Complete State and Local Withholding Elections**

Workday doesn't support the business process step **Complete State and Local Withholding Elections** for workers who have an international assignment position in the U.S.

When configured, Workday sends a **My Tasks** notification to employees who might need to update their withholding elections.

#### Routing Tax Elections for Approval

Use these report fields as condition rules for the tax election business processes to route the approval step. When configured, Workday routes the business process for approval according to the condition rules you set:

| Tax Elections | Report Fields                                                                                                                                                                                                                                           |
|---------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Federal       | <ul style="list-style-type: none"> <li>• <i>Federal Withholding: Exempt Indicator</i></li> <li>• <i>Federal Withholding: Nonresident Alien</i></li> <li>• <i>Federal Withholding: Number of Allowances</i></li> </ul>                                   |
| State         | <ul style="list-style-type: none"> <li>• <i>State Withholding: Exempt</i></li> <li>• <i>State Withholding: MSRR Exempt</i></li> <li>• <i>State Withholding: Non-Resident Alien</i></li> <li>• <i>State Withholding: Number of Allowances</i></li> </ul> |

| Tax Elections | Report Fields                                                                                                                                                                                                                         |
|---------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|               | <ul style="list-style-type: none"> <li>• <i>State Withholding Payroll State Authority</i></li> <li>• <i>State Withholding Payroll Tax Authority Form</i></li> <li>• <i>State Withholding Tax Election Form Attachments</i></li> </ul> |

### Set Up Company Third Party Personal U.S. Tax Reporting

You can set up your company to enable workers to opt in to having their personal tax data transmitted to a third-party tax preparation provider. Once you set this process up, the **Employee Self-Service (ESS) 3rd Party Personal Automatic Transmission** task becomes available for workers to opt in to having their personal tax data transmitted. Use the **Edit Company 3rd Party Personal US Tax Reporting** task to:

- Set up a company to transmit tax data to a third-party tax provider partner.
- Enable workers to opt in to having their personal tax data sent to a third-party provider.
- Establish a lock-out date when workers can no longer opt in for the current tax year.

### Employee Self-Service Tax Elections

#### Employee Self-Service Tax Election Tasks

For security, Workday automatically masks workers' Social Security Numbers (SSNs) on all tax withholding elections. Select the **Display National ID** check box in the **USA and CAN ESS Withholding Elections** section of the **Edit Tenant Setup - Payroll** task to display all worker SSNs. Workers can use the related action from their profile page **Personal Data > View My ID Information > Verify National ID** to validate their SSN. To validate their SSN, workers require access to the *Self Service: Verify National ID* domain in the Personal Data functional area.

Employees can use self-service to view and update federal, state, and local tax elections using these tasks:

- **Complete Federal Withholding Elections**
- **Complete State and Local Tax Elections**

Workday doesn't support federal, state, or local withholding forms for workers who have an international assignment position in the U.S.

To add a tax election for the first time, employees can access the **Withholding Elections** report, if you've configured their security groups to use it. To update existing elections, employees can select the **Update** button on the **Federal, State, and Local Elections** tabs, either from the report or from their worker profile, depending on your configuration. They can also add or update federal, state, and

local tax elections using Workday on Android, iPad, and iPhone.

For pre-hires to access these tasks and make pre-hire state withholding elections, configure the same security groups under the authentication policy as well as the *Manage: Company* domain.

Example: You enter the *All Employees* and *All Pre-Employees* security groups on the *Manage: Company* domain under the **Domain Security Policies for Functional Area** task. You enter the same security groups on the **Manage Authentication Policies** report.

They can select **Withholding Elections** from the *Pay* worklet, then select **Update** on the **Federal**, **State**, and **Local** tabs.

For ESS tax elections, these security groups must have the permissions specified:

| Security Group                                                                                                 | Domain                                                                                            | Permission    |
|----------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------|---------------|
| <ul style="list-style-type: none"> <li><i>Employee as Self</i></li> <li><i>Pre-Employee as Self</i></li> </ul> | <i>Self-Service: Payroll (My Withholding Elections) - USA</i> in the USA Payroll functional area. | <i>Modify</i> |
| <ul style="list-style-type: none"> <li><i>All Employees</i></li> <li><i>All Pre-Employees</i></li> </ul>       | <i>Manage: Company</i> domain in the Organizations and Roles functional area.                     | <i>View</i>   |

Workday provides some state tax election forms as attachments and workers can complete others within Workday. See the list of state [ESS Withholding Elections Forms](#) on Community.

To view completed state forms:

| Custom Workday Forms                                                                                                                             | Forms Submitted as Attachments                                                                                                                                                       |
|--------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| From the related actions menu on the worker profile, select <b>Payroll &gt; View US Tax Elections</b> , then select <b>View Completed Form</b> . | From the worker profile related actions menu, select <b>Worker History &gt; View Worker History</b> . Locate the business process <b>State Tax Election</b> and select the PDF form. |

To view completed federal forms, from the worker profile, select the related action **Worker History** > **View Worker History**. Locate the business process **State Tax Election** and select the PDF form.

## Federal Tax Levies Block Self-Service Federal Tax Elections

Workday automatically selects the **Block Tax Election Changes in ESS** check box when workers have a federal tax levy. Employees can stop using the *Add Federal Withholding Elections* self-service task. Tax election changes can change disposable earnings calculations. However, administrators can still use the **Add Worker Tax Elections** task to make updates.

## Missing or Expired Tax Elections

### Calculations

When a worker is missing tax elections, Workday uses the default withholding elections and marital status to calculate federal and state tax withholding. See the **Payroll Tax Authority Defaults** report.

### Reports

You can use these reports to identify workers with missing or expiring tax elections, such as when:

- A worker transfers from 1 company to another.
- A new calendar year begins.
- Active military duty is ending for a spouse.

| Report                                            | Description                                                                                                                                                                                                                                                                                                      |
|---------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>View Workers with Missing US Tax Elections</b> | For use by payroll administrators and payroll partners for the worker's supervisory organization. ### Examples

[Steps: Set Up Security for Onboarding](#)

## Quarterly Tax Reporting (USA)

---

### Steps: Multiple Worksite Reporting (USA)

#### Prerequisites

- Workday bases multiple worksites reporting on the location of your business site. Each location requires:
  - A business site.
  - An address with a state.
  - A trade name. When your company doesn't require a trade name, you can enter placeholder text.
  - A unique worksite ID code. The codes can be the same for a location that multiple companies use.
- Process at least 1 payroll to view reporting data from multiple worksites.

#### Context

Workday enables you to:

- Create a worksite reporting integration using the *BLS Electronic Data Reporting - MWR* template so you can generate a Multiple Worksite Report (MWR) file for delivery to the Bureau of Labor Statistics (BLS).

- Provide the BLS with quarterly reports on employees with multiple worksites.
- Comply with BLS requirements to match the counts for unemployment. For employees with multiple jobs in multiple states, we report the state of the primary position.

Review these reports:

- **Audit: Worksite Discrepancies for Company** to identify discrepancies between current work state and worksite state data. The state must match the one used for SUI wages on results. To correct discrepancies, you can verify the correct:
  - Business site has been identified by accessing the **Edit Location** report.
  - Address has been identified as the primary work address by accessing the worker's contact information.
- **Multiple Worksite Report by Company** to review quarterly wages by tax authority and the count of workers who are active for the 12th day of each month of the quarter.
- **Multiple Worksite Report by Worker** to review quarterly wages by worker and verify whether workers are active on the 12th day of each month of the quarter. When workers:
  - Have an alternate work location, Workday uses the work location address to determine the work state.
  - Don't have an alternate work location, Workday uses the business location to determine the work state.

Workday doesn't support multiple worksite reporting for workers who have an international assignment position in the United States.

## Steps

1. Set up a worksite reporting integration to generate an MWR file for the BLS.  
See [Steps: Set Up Worksite Reporting Integration](#).
2. Launch the *BLS Electronic Data Reporting - MWR* integration to deliver the quarterly MWR file to the BLS.  
See [Launch an Integration](#).

## Result

You can send the Multiple Worksite Report form to the BLS in the required format, rounded to the nearest USD.

## Steps: Report Hours Worked for SUI

### Prerequisites

Have an earning for worker's salary that's reduced by time off or holiday pay.

See [Example: Reduce Salary for Time Off and Holidays](#) on page 384.

### Context

You can report hours worked at the state unemployment insurance (SUI) level to help you improve accuracy for quarterly tax reporting.

Set up reporting hours worked at the SUI level before you calculate pay results for the next quarter to help ensure that:

- All the workers' pay results include SUI hours on them.
- The total SUI hours for each worker are accurate.

Example: It's currently March, and you want to report hours worked for SUI. You've already completed some payroll results for your workers, so those completed results in Q1 won't have hours worked at the

SUI level. You decide to set up reporting hours worked for SUI this month so that the configuration is ready for Q2.

## Steps

1. Add the *Reporting: SUI ER Hours Worked [USA]* pay component group (PCG) to the relevant hours related calculation on the appropriate earning codes.

Example: You add the *Reporting: SUI ER Hours Worked [USA]* pay component group on the *Hours (prorated)* related calculation.

See [Set Up Pay Component Related Calculations](#) on page 241 .

2. Access the **Tax Filing Quarterly Data for Workers** report to verify that the hours worked at the SUI level are accurate by reviewing the:

- **QTD SUI Hours** column on the **Data for Quarters** tab.
- **Hours Worked** column on the **Additional Data** tab.

**Note:** If you configure the *Reporting: SUI ER Hours Worked [USA]* PCG after you already completed payroll results for the quarter, you might see inaccurate hours on the report. Workday recommends that you set up reporting hours worked at the SUI level prior to the beginning of the quarter before Step 3.

Security: *Reports: Pay Calculation Results for Worker (Tax Filing/ W-2's) - USA* domain in these functional areas:

- Payroll USA: Reports
- Integrations

3. Access the **Edit Tenant Setup - Payroll** task to opt in to filing hours worked at the SUI level.

In the **Tax Elections / Taxes** section, select the quarter where you want to start reporting SUI hours from the **Enable Hours Worked for Employer SUI** prompt.

Security: *Setup: Tenant Setup - Payroll* domain in the Payroll Core functional area.

## Result

The *Reporting: SUI ER Hours Worked [USA]* PCG enables:

- Payroll results to display the *SUI (ER) [USA]* pay component on the **Additional Pay Components** tab in the **Employer Paid Taxes** section.
- The **Tax Filing Quarterly Data for Workers** report to display hours worked on the **QTD SUI Hours** column of the **Data for Quarters** tab.

After you select a quarter from the **Enable Hours Worked for Employer SUI** prompt:

- Workday includes the hours worked at the *SUI (ER)[USA]* pay component level within the *Get Quarterly Worker Tax Filing Data* web service.
- U.S. tax filing integrations output hours worked within their respective quarterly tax files for the *SUI (ER) [USA]* pay component.

Example: Paul moved from California to Nevada. They worked 160 hours total for the pay period. After you set up reporting for SUI hours, Workday drills down on Paul's total hours to report the hours that they worked in each state:

- 40 hours in California.
- 120 hours in Nevada.

## Create Codes for Quarterly Tax Reporting (USA)

### Prerequisites

Configure the *Maintain Payroll Reporting Codes for Worker* business process and security policy in the USA Payroll functional area.

## Context

Workday delivers payroll reporting codes for Washington and Wyoming. You can create payroll reporting codes to capture worker data for quarterly tax filing in these states:

| State          | Type of Information Captured         |
|----------------|--------------------------------------|
| Alaska         | Geographic Code<br>Occupational Code |
| California     | Branch Code                          |
| Indiana        | Location Code<br>Occupational Code   |
| Iowa           | Reporting Unit Number Code           |
| Louisiana      | Occupational Code                    |
| Massachusetts  | Unit Number                          |
| Michigan       | Multi-Unit Number                    |
| Minnesota      | Unit Code                            |
| New Mexico     | Unit Number                          |
| North Carolina | Occupational Code                    |
| Ohio           | RITA Working from Home Indicator     |
| Oregon         | Replacement Worker                   |
| South Carolina | Occupational Code                    |
| Washington     | Occupational Code                    |
| West Virginia  | Occupational Code                    |

## Steps

1. Access the **Maintain Payroll Reporting Codes** task.
2. Select the type of code that you want to define. Examples: *California Branch Code* or *Minnesota Unit Code*.
3. Enter a **Name** and **Code** for each valid reporting code.  
Example: For the geographic *California Branch Code*, create a unique name and 3-digit code.

## Next Steps

Assign tax reporting codes to workers. See [Assign Codes for Quarterly Tax Reporting to Workers \(USA\)](#) on page 1205.

You can access the:

- **Payroll Reporting Codes** report to view the codes, usage counts, and number of inactive codes.
- **Tax Filing Quarterly Data for Workers** report and select the **Include Reporting Codes** check box to view codes with worker tax filing quarterly data.

**Note:** You can't delete codes with a usage count, but you can inactivate them on the **Maintain Payroll Reporting Codes** task. The **View Payroll Reporting Codes for Worker** report indicates whether a code is inactive. Inactivating a code doesn't remove it from a worker.

**Related Information****Examples**[Edit Business Processes](#)**Assign Codes for Quarterly Tax Reporting to Workers (USA)****Prerequisites**

Create payroll reporting codes for quarterly tax reporting.

See [Create Codes for Quarterly Tax Reporting \(USA\)](#).

**Context**

The states in this table are the current states that Workday supports for quarterly tax reporting. To capture information needed for quarterly tax filing, assign payroll reporting codes to workers in these states:

| State                | Type of Information                            |
|----------------------|------------------------------------------------|
| Alaska               | Geographic Code<br>Occupational Code           |
| California           | Branch Code                                    |
| District of Columbia | Owner or Corporate Officer                     |
| Indiana              | Location Code<br>Occupational Code             |
| Iowa                 | Reporting Unit Number                          |
| Louisiana            | Occupational Code                              |
| Massachusetts        | Unit Number                                    |
| Michigan             | Multi-Unit Number                              |
| Minnesota            | Unit Code                                      |
| New Mexico           | Owner or Corporate Officer<br>Unit Number      |
| North Carolina       | Occupational Code                              |
| Ohio                 | RITA Working from Home Indicator               |
| Oregon               | Replacement Worker                             |
| South Carolina       | Occupational Code                              |
| Washington           | Corporate Officer Type<br>Occupational Code    |
| West Virginia        | Occupational Code                              |
| Wyoming              | Class Code Indicator<br>Corporate Officer Type |

## Steps

1. Access the **Maintain Payroll Reporting Codes for Worker** task.
2. Enter an effective date.
3. Select the code that you created to assign it to the worker.

The worker's U.S. location determines which codes are available.

## Result

Workday transmits the tax codes to your tax service for quarterly tax filing.

## Next Steps

Access the **View Payroll Reporting Codes for Worker** report to view the payroll reporting codes assigned to workers.

# File Vermont Employer Health Care Contribution (USA)

## Prerequisites

Security: *Reports: Pay Calculation Results for Worker (Tax Filing/W-2s)* - USA domain in the USA Payroll functional area.

Because this feature covers Staffing, Benefits, Payroll, and Integrations, make sure that you have your security policies set up correctly.

## Context

Workday Payroll users can collect the information necessary to file the Vermont Employer Health Care Contribution. The **Tax Filing Quarterly Data for Workers** report includes this information and sends it to your tax filing partners:

- Seasonal employees.
- Employees with medical coverage.

**Note:** Check with your tax filing partner to ensure that the data meets their needs.

## Steps

1. [Set Up Employee Types](#).  
Use the **Maintain Employee Types** task to select the **Seasonal** check box for each employee type you want to identify as seasonal employment.
2. [Manage Benefit Coverage Types](#).
  - a. Access the **Maintain Benefit Coverage Types** task.
  - b. Access the **Health Care Coverage Types** section. Select the **Medical** check box for each coverage type you want to identify as medical.
3. [Set Up Company State Taxes \(USA\)](#) on page 1119.  
Use the **Edit Company State and Local US Tax Reporting** task to define tax information for Vermont.
4. [Hire Employees](#).  
When hiring employees, define the type of employee using the **Employee Type** prompt.
5. [Start Open Enrollment](#) or [Change Benefit Elections](#).  
During benefits enrollment, Workday determines whether an eligible employee works in Vermont and has waived coverage and asks whether they have outside medical coverage.

6. Have employees complete the Vermont Department of Labor Declaration of Health Care Coverage form.

Add a *To Do* step to your benefit enrollment business processes to have Vermont employees who have waived coverage complete the form.

These report fields can help identify those employees:

- *Worker: Worker*
- *Employee Enrollment Event: Employee Works in Vermont*
- *Employee Enrollment Event: All Medical Waived*

7. Run the **Tax Filing Quarterly Data for Workers** report.

8. [Launch an Integration](#) .

The tax filing integration then picks up the necessary information and sends it to your tax filing partner.

### Next Steps

When Workday doesn't return the expected *Employee Health Insurance Indicator* for a worker when you run the *ADP Tax Filing - Quarterly* integration, you can override the value.

1. Access the **Maintain Custom ID Types** task.
  - a. Enter *Vermont Healthcare Indicator* in the **Custom ID Type** field.
  - b. Select the **Public** check box.
2. Assign it to the worker using the **Edit Other IDs** task.
3. Enter 1 of these identification values:
  - 1 or N for workers with no coverage.
  - 3 or Y for workers with employee-only coverage.

#### Examples

[Concept: Tax Filing Integration](#)

[Edit Business Processes](#)

## Identify Corporate Officers for Quarterly Tax Filing Integrations (USA)

### Prerequisites

Configure the *Edit Other IDs* business process and security policy in the Personal Data functional area.

### Context

You can create a custom ID type to identify workers as corporate officers, enabling you to comply with quarterly tax filing requirements. (Doesn't apply to District of Columbia, New Mexico, Washington, and Wyoming.)

To identify workers in District of Columbia, New Mexico, Washington, and Wyoming as corporate officers, assign payroll reporting codes instead. See *Assign Codes for Quarterly Tax Reporting to Workers (USA)*.

### Steps

1. [Steps: Set Up Identification Documents](#).

**2. Access the Maintain Custom ID Types task.**

- a) Enter a name in the **Custom ID Type** field.

Example: *Corporate Officer (Enter Yes or No as the Identification #).*

- b) Select the **Public** check box.

Security: *Set Up: Contact Info, IDs, and Personal Data* domain in the Contact Information functional area.

**3. Access the Edit Other IDs task.**

As you complete the task, consider:

| Option                    | Description                                                                                                                                           |
|---------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Other ID Type</b>      | Select the type you created on the <b>Maintain Custom ID Types</b> task. Example: <i>Corporate Officer (Enter Yes or No as the Identification #).</i> |
| <b>Organization</b>       | Select the worker's company. Example: <i>Global Modern Services.</i>                                                                                  |
| <b>Custom Description</b> | Enter an explanation. Example: <i>I'm marking the Identification # as "Yes" to indicate that the worker is a corporate officer.</i>                   |
| <b>Identification #</b>   | Enter Yes or No.                                                                                                                                      |

**Result**

Workday will report corporate officers in the *ADP*, *MasterTax*, and *Ceridian* quarterly tax filing integrations.

**Related Information****Concepts**

[Concept: Tax Filing Integration](#)

**Examples**

[Steps: Set Up Identification Documents](#)

## Override the Employee Pull Mail Indicator for ADP Quarterly Tax Filing (USA)

**Prerequisites**

Configure the *Edit Other IDs* business process and security policy in the Personal Data functional area.

**Context**

Workday defaults the **Employer Pull Mail Indicator** field on the ADP quarterly tax filing integration template to *M*. You can create a custom ID type to override the value to *P*, indicating to ADP that you want to pull an employee's W-2 for special processing.

**Steps****1. Access the Maintain Custom ID Types task.**

- a) Enter a name in the **Custom ID Type** field.

Example: *Employee Pull Mail Indicator (Enter 'P' for Pull or 'M' for Mail).*

- b) Select the **Public** check box.

Security: *Set Up: Contact Info, IDs, and Personal Data* domain in the Contact Information functional area.

## 2. Access the **Edit Other IDs** task.

As you complete the task, consider:

| Option                    | Description                                                                                                                                                    |
|---------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Other ID Type</b>      | Select the type you created on the <b>Maintain Custom ID Types</b> task. Example: <i>Employee Pull Mail Indicator (Enter 'P' for Pull or 'M' for Mail)</i> .   |
| <b>Organization</b>       | Select the worker's company. Example: <i>Global Modern Services</i> .                                                                                          |
| <b>Custom Description</b> | Enter an explanation. Example: <i>I'm marking the Identification # as "P" to indicate that ADP should pull the W-2 for this worker for special processing.</i> |
| <b>Identification #</b>   | Enter <i>P</i> or <i>M</i> .                                                                                                                                   |

### Result

Workday will report *P* or *M* in the **Employer Pull Mail Indicator** field in the *ADP* quarterly tax filing integration file.

### Related Information

#### Concepts

[Concept: Tax Filing Integration](#)

## Set Up EIB for SUI Rates

### Prerequisites

Security:

- *Integration Build* domain in the Integration functional area.
- *Integration Configure* domain in the Integration functional area.
- *Integrations: EIBs* domain in the Integration functional area.
- *Integration Event* domain in the Integration functional area.
- *Process: Tax Filing/W-2s (RUN) - USA* domain in the USA Payroll functional area.

### Context

To help you save time and reduce manual effort, Workday enables you to:

- Configure your EIB to load State Unemployment Insurance (SUI) rates.
- Generate an EIB spreadsheet with SUI data and filter the data by company or state.

### Steps

1. Access the **Create EIB** task to set up an inbound EIB.
2. In the **Data Format** section on the **Get Data** page, select:

| Option                       | Description                                       |
|------------------------------|---------------------------------------------------|
| <b>File Type</b>             | <i>Web Service Spreadsheet Template</i>           |
| <b>Web Service Operation</b> | <i>Put Company US Tax Reporting (Web Service)</i> |

3. Access the **View Integration System** report.
4. Select **Template Model > Edit** from the related actions menu of the EIB.
5. Select **Edit Template with Data Options** to configure a **Filter** for your template.

6. In the **Filter** section, select **Condition Rule Filter** to filter SUI rates by company or state.
7. Add 1 or more rows to the **Rule Conditions** grid and select:

| Option                                         | Description                                                                               |
|------------------------------------------------|-------------------------------------------------------------------------------------------|
| <b>And/Or</b>                                  | <i>And</i>                                                                                |
| <b>Source External Field or Condition Rule</b> | <i>Company or State</i>                                                                   |
| <b>Relational Operator</b>                     | <i>in the selection list</i>                                                              |
| <b>Comparison Type</b>                         | <i>Value specified in this filter</i>                                                     |
| <b>Comparison Value</b>                        | The company or state with the SUI rates that you want to include in your EIB spreadsheet. |

8. Click **Generate Spreadsheet Template with Data**.
9. Select the **Generate Spreadsheet with Data** check box.

### Next Steps

You can now:

- Download the output file from the **Output Files** tab and review the SUI rates for the companies or states that you entered.
- Edit the SUI rates and import the updated data into Workday by launching an EIB spreadsheet upload.

## Company Relationships (USA)

---

### Common Pay Agent (USA)

#### Create or Edit a Common Pay Agent (USA)

#### Prerequisites

Security: *Set Up: Payroll (Tax Filing/W-2s) - USA* domain in the USA Payroll functional area.

#### Context

Designate a company as the common pay agent for a group of companies.

Workday doesn't support common pay agent company relationships for workers who have an international assignment position in the U.S.

#### Steps

1. Access the **Create Company Relationship** or **Edit Company Relationship** task.
2. From the **Company Relationship Type** field, select *Common Pay Agent*.
3. As you complete the task consider:

| Field                           | Description                                                            |
|---------------------------------|------------------------------------------------------------------------|
| <b>Effective as-of Tax Year</b> | Relationships are in effect for the entire tax year.                   |
| <b>Inactive as-of Tax Year</b>  | Relationships are no longer in effect as of the start of the tax year. |
| <b>Represented by Company</b>   | The common pay agent; you can enter only 1 company.                    |

| Field                    | Description                                                                                                                                                                                                                                                                                                                                                                           |
|--------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Federal Tax ID</b>    | Workday uses the common pay agent FEIN.                                                                                                                                                                                                                                                                                                                                               |
| <b>Related Companies</b> | <p>The companies that the common pay agent represents; you can enter multiple companies.</p> <ul style="list-style-type: none"> <li>Only companies with a federal tax ID (FEIN) or pending tax ID (<i>Applied for</i>) are available from these prompts.</li> <li>A representing or related company can't represent another group, and can't be a member of another group.</li> </ul> |

4. Add specific state and local taxes on the **Tax Reporting Configuration** grid.

| Field                                        | Description                                                                                                                                                                                                                                                                                                                                                                                              |
|----------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Payroll State Authority</b>               | <p>You can only select states that you set up for the <b>Represented by Company</b> or <b>Related Companies</b>.</p> <p>When you configure this field, Workday displays the common pay agent, the <b>Represented by Company</b>, EIN for all the related companies. Example: You select a New York state authority. Workday uses the New York EIN of the common pay agent for the related companies.</p> |
| <b>Tax Components Included for Reporting</b> | Select deductions to include them in the tax configuration of the common pay agent.                                                                                                                                                                                                                                                                                                                      |

## Result

By default, Workday uses the common pay agent for Federal withholding and FICA taxes (minus FUTA).

Employee W-2s for the common pay agent and related companies display:

- Box b: The EIN of the common pay agent.
- Box c:
  - Name of the common pay agent.
  - Address of the common pay agent.

Employee W-2s for the related companies display *Agent for* and the name of the worker's company in Box c.

You can use the **Delete Common Pay Agent** task to delete a common pay agent at any time.

## Common Pay Agent Reports

| Report                       | Description                                                                                                                 |

## Common Paymaster (USA)

### Setup Considerations: Common Paymaster Company Relationships (USA)

You can use this topic to help make decisions when planning your configuration and use of common paymaster company relationships. It explains:

- Why to set it up.
- How it fits into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

### What It Is

Workday enables you to process the common paymaster type of company relationship. The designated common paymaster pays the wages of all employees within companies in the relationship during the relationship period.

Workday aggregates the wages earned across all companies involved for purposes of limit calculations for:

- OASDI.
- Medicare.
- Federal Unemployment Insurance (FUI).
- State Unemployment Insurance (SUI) for configured states.

You're responsible for ensuring eligibility under applicable law for:

- All companies included in the common paymaster relationship.
- All employees paid by the common paymaster.

- All states configured in the common paymaster relationship for SUI aggregation.

### Business Benefits

- Reduce tax liability by designating a common paymaster that serves as a single employer for FICA, and FUTA wage bases.
- Reduce tax liability by designating a common paymaster that serves a single employer for SUI wage bases for configured states.
- Common paymaster calculations occur for employees in US and Territory companies in the relationship.
- Enables you to specify states to include in the common paymaster structure.
- Enables you to issue combined W-2s for all companies in the relationship.

### Use Cases

- Each company in the relationship can have different Employer Identification Numbers (EINs).
- An employee works multiple jobs in your companies. You employ them concurrently in the common paymaster company and related companies.

### Questions to Consider

| Questions                                                                                                   | Considerations                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
|-------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Do you qualify to file as a common paymaster?                                                               | You're responsible for ensuring eligibility under the applicable law.<br><br>Workday recommends that you work with your legal department before implementing common paymaster.                                                                                                                                                                                                                                                                                                                                 |
| How are you calculating common paymaster currently?                                                         | If you're using a workaround to calculate common paymaster in Workday, consider whether you want to migrate to Workday Common Paymaster.<br><br>Example: You're using a single company workaround for common paymaster. You currently receive a single pay result, single payslip, single deposit and single W-2 for an employee with multiple jobs. When you establish a Workday common paymaster relationship, you might not get a single pay result or a single deposit for an employee with multiple jobs. |
| Do you use the MasterTax integration?                                                                       | If you do, configure common paymaster on the MasterTax portal.                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| Do you use the ADP integration?                                                                             | If you do, configure your ADP profile to support the desired common paymaster reporting outcome.                                                                                                                                                                                                                                                                                                                                                                                                               |
| Do you use the Ceridian integration?                                                                        | Ceridian doesn't support common paymaster relationships.                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| Will you have a midyear transition from common paymaster in a legacy system to common paymaster in Workday? | For midyear transitions, test balances and limits thoroughly while considering any payroll history you've loaded.                                                                                                                                                                                                                                                                                                                                                                                              |
| Which administrators need access to managing the common paymaster relationship?                             | An administrator must have security access to the designated common paymaster company to be able to manage the relationship.                                                                                                                                                                                                                                                                                                                                                                                   |

| Questions                                                                                          | Considerations                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
|----------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                                                                                    | Confirm that security is working as expected when you establish a common paymaster relationship. Example: Make sure that administrators for related companies can still perform their duties as expected. Make security updates as needed.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| Do your workers have tax elections in the related companies for the common paymaster relationship? | <p>Workday Payroll for the USA only applies tax elections entered under the common paymaster company. Workday applies them to all jobs and companies within the common paymaster relationship.</p> <p>However, you can make an employee FICA exempt for a job in 1 common paymaster company, while jobs in other common paymaster companies continue to withhold FICA.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| What reconciliation items might you have for the common paymaster relationship?                    | <p>You're responsible for ensuring your payroll tax reporting and year-end statements reconcile and you report them according to applicable laws. Some reconciliation items to consider:</p> <ul style="list-style-type: none"> <li>EINs reported on federal and state tax returns match EINs reported on year-end forms.</li> <li>Information reported on the Form 941 and state tax returns will reconcile to year-end forms for the FEIN and state EINs reported.</li> </ul> <p>When using a third-party vendor for tax filing while using Workday to generate W-2s, ensure the FEIN and state EINs on the W-2s tie to the tax returns your vendor filed.</p> <ul style="list-style-type: none"> <li>The FEIN reported on the Form 940 is related to the state SUI account/EIN reported on the quarterly state unemployment returns. The IRS FUTA Certification Program verifies with each state that the credit claimed against the FUTA tax on Form 940 was actually paid into the SUI fund.</li> </ul> |

### Recommendations

Start a common paymaster relationship on 01-01 in the effective tax year before running payroll.

Configure 1 state per row on the common paymaster relationship. This method helps you easily identify configuration errors, and provides clarity when auditing your configuration history.

### Requirements

Set up the same federal, state, and local tax configuration for all companies in the common paymaster relationship. Ensure that the tax configuration is active before or at the start of the common paymaster relationship effective dates. If you need to add additional configuration after the start of the common paymaster relationship, enter the same effective date and tax configuration across all companies in the relationship.

Set up worker tax elections under the common paymaster.

Ensure that the configuration is accurate before running the first payroll for any companies in the relationship. Once run, you can't modify certain elements of common paymaster relationship. You also can't end the relationship until you complete the last payroll for the effective year.

### Limitations

Workday might not automatically update tax filing, and completed and in-progress pay results when you retroactively:

- Create a common paymaster relationship after you've processed payroll in the common paymaster effective year, for any companies in the relationship.
- Add a related company after you've processed payroll in the common paymaster effective year for that related company.
- Add a state after you've processed payroll in the effective quarter, for any companies in the relationship.

You can only:

- Start and stop a common paymaster relationship at the beginning of a year.
- Include a company in a common paymaster relationship when it's not part of any other company relationship for the same effective period.

You can't delete:

- The common paymaster relationship, and related companies from the relationship if you've calculated payroll within the common paymaster effective dates.
- States within the common paymaster relationship if you've calculated payroll within the configured effective quarter.

Workday doesn't:

- Display the common paymaster company on pay results for the worker. You can use the *Common Paymaster* report field in custom reports to return the common paymaster relationship from a pay result.
- Support common pay master company relationships for workers who have an international assignment position in the U.S.

### Tenant Setup

No impact.

### Tasks

[Copy Tax Elections for a Worker \(USA\)](#) on page 1193

## Steps: Set Up a Common Paymaster (USA)

### Prerequisites

Review setup considerations for common paymaster company relationships.

Create the common paymaster company and the related companies.

Security:

- *Manage: Company* domain in the Organizations and Roles functional area.
- *Set Up: Payroll (Tax Filing/W-2s) - USA* in the USA Payroll functional area.

### Context

You can create a common paymaster company relationship in Workday. During the relationship period, the designated common paymaster company pays the wages of all employees within companies in the relationship.

Workday aggregates the wages earned across all companies involved for purposes of limit calculations for:

- OASDI.
- Medicare.
- Federal Unemployment Insurance (FUI).
- State Unemployment Insurance (SUI) for configured states.

You're responsible for ensuring eligibility under applicable law for:

- All companies included in the common paymaster relationship.
- All employees paid by the common paymaster.
- All states configured in the common paymaster relationship for SUI aggregation.

Workday recommends starting a common paymaster relationship on 01-01 in the effective tax year before running payroll. When you retroactively do any of these actions, Workday might not automatically correct completed and in-progress results:

- Create a common paymaster relationship after you've processed any payroll period in that year.
- Add a state after you've processed any payroll in that effective quarter.
- Add a related company after you've processed any payroll in that year.

You can create and extract common paymaster company relationships in bulk using these web services:

- *Get Common Paymasters*
- *Put Common Paymaster*

## Steps

1. Access the **Create Company Relationship** task.
2. From the **Company Relationship Type** prompt, select *Common Paymaster*.
3. As you complete the task, consider:

| Option                         | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
|--------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Reporting Tax Year</b>      | <p>The tax year in which the common paymaster relationship begins and is applicable for the entire specified tax year. The year must be 2021 or later.</p> <p>Workday recommends you select a tax year without payroll results. Starting a retroactive common paymaster relationship won't reflect in already completed or in-progress payroll results or tax filing.</p>                                                                                                           |
| <b>Inactive as-of Tax Year</b> | <p>(Optional) The company relationship is no longer active as of 01-01 of the tax year selected.</p> <p>Example: You only want the common paymaster relationship to calculate for tax year 2022. You select 2022 as the <b>Reporting Tax Year</b> and 2023 as the <b>Inactive as-of Tax Year</b>. The common paymaster relationship is only active for tax year 2022. Common paymaster calculations no longer occur for pay results with a payment date on or after 2023-01-01.</p> |
| <b>Related Companies</b>       | <p>The prompt only displays companies that aren't part of another company relationship during the same time period. If needed, review the effective dates of each company relationship to identify concurrency.</p> <p>Workday recommends that you don't add related companies to an existing common paymaster relationship midyear. The change won't reflect in already completed or in-progress payroll results or tax filing.</p>                                                |
| <b>State Configuration</b>     | <p>When you include a state in your configuration, Workday aggregates the State Unemployment Insurance (SUI) wages earned across all the</p>                                                                                                                                                                                                                                                                                                                                        |

| Option                                                          | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
|-----------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                                                 | <p>companies involved in the relationship for limit calculations.</p> <p>Workday recommends configuring 1 state per row to help you easily identify configuration errors. This method also provides clarity when auditing your configuration history.</p> <p>You can't delete a state once you've calculated payroll within the configured quarters.</p> <p><b>Note:</b> You're responsible for ensuring that the states you include permit common paymaster under applicable law.</p>                                                                                             |
| <b>Start Quarter</b>                                            | <p>Workday includes a state in common paymaster calculations as of the first day of the start quarter you select. Applicable SUI calculations occur for payroll results with a payment date that's within the effective quarters of the configured row.</p> <p>Workday recommends that you don't add a state retroactively after you've processed payroll within the start quarter. The change won't reflect in already completed or in-progress payroll results or tax filing.</p>                                                                                                |
| <b>Inactive as-of Quarter</b>                                   | <p>The state unemployment calculations are no longer active as of the quarter selected.</p> <p>Example: You only want the state included in 2022-Q1 and 2022-Q2 calculations. You select the 2021-Q1 start quarter and the 2021-Q3 inactive as-of quarter. The common paymaster calculations only include the states for 2022 Q1 and Q2.</p> <p>Workday doesn't recommend inactivating a state retroactively, after you've processed payroll within the inactive quarter selected. The change won't reflect in already completed or in-progress payroll results or tax filing.</p> |
| <b>Payroll State Authority</b>                                  | <p>Select the state you want to include SUI calculations for.</p> <p>For a state to display in this prompt, it must be:</p> <ul style="list-style-type: none"> <li>Configured on the <b>Company State and Local US Tax Reporting</b> task for the designated common paymaster company.</li> <li>Active in the <b>Start Quarter</b> you configure for the common paymaster relationship.</li> </ul>                                                                                                                                                                                 |
| <b>Periodic Tax Reporting</b><br><b>Quarterly Tax Reporting</b> | <p>Workday uses this configuration as the default to separate tax filing. Workday doesn't support creating combined tax filing for all companies.</p>                                                                                                                                                                                                                                                                                                                                                                                                                              |

| Option                | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
|-----------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Year End Forms</b> | <p>Select whether to deliver year-end forms separately for each company or combined for all companies.</p> <p>When you select combined year-end reporting:</p> <ul style="list-style-type: none"> <li>You can only select the common paymaster managing company when reporting on and creating your year-end forms.</li> <li>You can generate a single W-2 or W-2C form for employees who work concurrently for 2 or more related corporations. Workday combines the worker's earned state and local taxes by ID.</li> <li>Workday takes the worker's print elections from the common paymaster managing company.</li> <li>Workday reports the designated common paymaster company for the federal boxes on the W-2.</li> <li>The W-2 includes aggregated federal taxes across all companies in the common paymaster relationship.</li> <li>Workday lists each company and state combination on separate lines and reports the individual EINs for each company.</li> </ul> <p>Once you create W-2s within the effective date of the common paymaster relationship, you can't modify the year-end form configuration. To change the configuration, you must inactivate the current common paymaster and create a new common paymaster relationship.</p> |

4. Use the **Edit Company Federal US Tax Reporting** task to enter the same Federal Unemployment Tax Act (FUTA) tax configuration for all companies in the relationship. The effective dates of your configuration should be before or at the start of the common paymaster relationship effective dates.

**Note:** If you need to change your configuration after the start of the common paymaster relationship, verify that the configuration and effective date are the same across all the companies in the relationship.

See [Set Up Company Federal Taxes \(USA\)](#) on page 1107, [Set Up Company State Taxes \(USA\)](#) on page 1119, and [Set Up Company Local Taxes \(USA\)](#) on page 1124.

5. Use the **Edit Company State and Local US Tax Reporting** task to configure all state and local tax authorities that exist for all related companies in the common paymaster company.

These tax authorities must exist in the common paymaster company before they can be calculated in the pay results of the related companies.

The effective dates of your configuration should be before or at the start of the common paymaster relationship effective dates.

If you include a state in your common paymaster company relationship configuration for purposes of SUI aggregation, configure the same SUI rate for that state across all the companies in the relationship.

This is the rate that the state might assign to you when approving your request to file as a common paymaster for SUI reporting.

**Note:** If you don't configure the same SUI rate for the state across all companies in the relationship, unexpected SUI variances can occur when processing the common paymaster payroll for the state.

If you need to make configuration changes after the CPM relationship has started, ensure that the configuration and effective dates are the same across all the companies in the relationship.

6. Enter worker tax elections in the common paymaster with effective dates that are within the relationship effective years.

The common paymaster company must enter and manage all tax elections as long as the relationship is in effect.

You can copy tax elections from related companies to the common paymaster company. See [Copy Tax Elections for a Worker \(USA\)](#) on page 1193.

**Note:** Verify that you configured all the state and local tax authorities in the common paymaster company before you add a worker tax election or run the **Copy Tax Elections for a Worker (USA)** task. You won't be able to add or copy a tax election otherwise.

Workday applies the common paymaster tax elections to all jobs and companies within the relationship. Workday doesn't apply tax elections in the related companies as long as the relationship is active.

### Example

Amanda Adams works at University Hospital as a surgeon and concurrently works as a professor at University Campus. The hospital and campus belong to different companies, each with their own FEIN.

Both University Hospital and University Campus meet the IRS definition of related companies. Amanda meets the definition of concurrent employment. The state in which both companies operate permits common paymasters for SUI calculations.

In this example, the OASDI wage limit is 142800 and the tax limit is 8853.60.

| Common Paymaster Configured? | Result                                                                                                                                                                | OASDI Calculation                                                                                                                                                                                          |
|------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| No.                          | Workday calculates the FICA, FUTA, and SUI limits for both companies separately. Multiple annual limits apply for the same employee and the tax liability increases.  | University Hospital: $142800 \times 6.2\% = 8853.60$ (+ Employer match).<br>University Campus: $142800 \times 6.2\% = 8853.60$ (+ Employer match).<br>Amanda pays 17707.20.<br>The employer pays 17707.20. |
| Yes.                         | FICA, FUTA, and SUI limits are aggregated across both companies. Workday applies a single annual limit and the designated common paymaster acts as a single employer. | University Hospital: $99600 \times 6.2\% = 6175.20$ (+ Employer match).<br>University Campus: $43200 \times 6.2\% = 2,678.40$ (+ Employer match).<br>Amanda pays 8853.60.<br>The employer pays 8853.60.    |

### Next Steps

You can edit the relationship using the **Edit Common Paymaster** or **Edit Company Relationship** tasks.

You can use the **Delete Common Paymaster** task as long as there are no payroll calculations performed during the relationship.

## Related Information Tasks

[Copy Tax Elections for a Worker \(USA\)](#) on page 1193

### Concept: Common Paymaster (USA)

#### Common Paymasters

Common paymasters enable you to reduce tax liability by designating a common paymaster company that serves as a single employer for:

- FICA wage bases.
- FUTA wage bases.
- SUI wage bases for configured states.

You're responsible for ensuring eligibility under applicable law for:

- All companies included in the common paymaster relationship.
- All employees paid by the common paymaster.
- All states configured in the common paymaster relationship for SUI aggregation.

#### Retro Pay Calculations

You can:

- Calculate differences for workers who transfer companies that are in a common paymaster relationship. When the tax authorities between the companies are different, Workday considers the tax elections in the common paymaster company.
- Pay those differences using on-demand additional payments in the company that the differences are from. Use tax authority worktags.

Retro pay calculations don't support:

- When the source or target companies are outside the common paymaster relationship, and the tax authorities are different.
- The *Other Authority* worktag because Workday doesn't consider local other tax authorities from the managing company.

#### In-Progress Pay Results for Multiple Jobs

Multiple in-progress pay results for a worker in a common paymaster relationship are aware of limits and balances of the other results when you meet these conditions:

- When the jobs are in 1 pay group, run the pay calculation for that pay group.

- When the jobs are in multiple pay groups:
  - The pay groups must share the same period schedule.
  - You must calculate the pay groups together in the same pay calculation run.

If you make an adjustment to any of these in-progress results, recalculate them all together again in the same pay calculation run. That way, the in-progress results can continue to account for limits and balances. If you recalculate any of these results independently from the others:

- The in-progress results won't be able to account for limits and balances of the other results until you complete the pay result.
- You could have over or under withholding.

### **Multiple Jobs and Different Period Schedules**

Workday determines the limits and balances to apply to in-progress results by looking at the last completed pay result for workers with multiple jobs that you are:

- Paying on different period schedules.
- Calculating in different pay calculation runs.

After you complete any pay result for a worker or pay group, you must recalculate any remaining in-progress results. Otherwise, you might have over or under withholding.

### **FAQ: Common Paymaster (USA)**

**Do limit calculations apply to workers who transfer between companies within the common paymaster relationship in Workday?**

Yes. You're responsible for ensuring that all workers paid by the common paymaster are eligible under applicable law.

**Will common paymaster relationships respect the annual limits for retirement contributions, such as 401k?**

Yes. Workday respects the annual limits for retirement contributions and other benefits with limits when the worker:

- Earns wages in multiple companies in the relationship.
- Transfers between companies in the relationship.

**Do I need to update income withholding orders for workers in a common paymaster relationship?**

No. Workday continues to manage income withholding orders at the individual company level.

### **Mergers and Acquisitions (USA)**

#### **Setup Considerations: Successor Employer Company Relationships (USA)**

You can use this topic to help make decisions when planning your configuration and use of USA successor employer company relationships. It explains:

- Why to set it up.
- How it fits into the rest of Workday.

- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

### What It Is

This feature enables you to set up company and employee data to continue payroll and tax reporting in a new company relationship after an acquisition or a merger.

Specify the relationship type to define what Workday brings to the successor company from the predecessor company:

- *Asset Purchase - Alternate*
- *Asset Purchase - Standard*
- *Merger*

### Business Benefits

- You can continue your payroll and tax reporting in a new relationship whenever you merge or acquire companies.
- Workday uses wages paid by the predecessor company when determining limits for taxes such as OASDI, Medicare, FUI, and SUI.
- You can copy the worker tax elections from the predecessor company instead of adding them for each worker, saving time on data entry.
- You can copy the worker withholding orders from the predecessor company instead of adding them for each worker, saving time on data entry.

For alternate asset purchases, Workday:

- Includes wages paid by both the predecessor and successor companies in tax filing.
- Provides workers with a single W-2 from the successor company that includes wages paid by the predecessor.

For standard asset purchases, Workday:

- Includes wages paid only by the successor company when tax filing.
- Provides workers with a W-2 for the predecessor company, and a separate W-2 for the successor company.

For mergers, Workday:

- Uses payroll data for all companies in the relationship to determine IWO limits.
- Displays YTD data for all employees in predecessor and successor companies in W-2 reports.
- Provides workers with a single W-2 from the successor company that includes wages paid by the predecessor.
- Continues taxes for noncontinuing workers in the successor company, instead of starting them over.

### Use Cases

- For asset purchases, Workday pays mid workweek overtime based on all hours worked, helping you comply with the Fair Labor Standards Act (FLSA).
- For mergers, Workday pays mid workweek overtime based on all hours worked, helping you comply with FLSA.

## Questions to Consider

| Questions                                                                      | Considerations                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

| Is the predecessor company in Workday?                                         | <p>If the predecessor company isn't in Workday, create the company and load its employee and payroll data into Workday.</p> <p><i>See Steps: Set Up Companies and Steps: Prepare and Load Payroll History.</i></p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| What's the start date of the first payroll processed by the successor company? | <p>The date that you must enter as the <b>Payroll Processing Begin Date</b> when setting up the company relationship.</p> <p>You can enter any date, but make sure the:</p> <ul style="list-style-type: none"> <li>• Date is based on the year in which you want the relationship.</li> <li>• Payroll Processing Begin Date is equal to the worker's transfer date.</li> <li>• Pay date after the transfer date is within the correct year that you intend for tax reporting to report all workers under the successor company.</li> <li>• Affected workers have at least 1 pay result with a pay date: <ul style="list-style-type: none"> <li>• After the worker transfer date to the successor company.</li> <li>• In that year.</li> </ul> </li> </ul> <p>Workday requires that you set 1 <b>Payroll Processing Begin Date</b> that applies to all workers in the companies. This solution ensures that results and reporting are correct, and is regardless of different pay frequencies.</p> <p>For mergers, this date must be 2013-10-01 or later.</p> <p>The worker transfer date must be equal to the <b>Payroll Processing Begin Date</b>. For companies that have multiple pay groups with overlapping period dates in the relationship, Workday calculates multiple results for the worker and creates subperiods for the appropriate company.</p> <p>Example: You have 2 pay groups whose workers have a <b>Transfer Effective Date</b> of 1/1/2022:</p> <ul style="list-style-type: none"> <li>• Pay Group 1: <ul style="list-style-type: none"> <li>• Pay Period: 12/18/2021 - 12/31/2021</li> <li>• Paid on 1/7/2022.</li> </ul> </li> <li>• Pay Group 2 <ul style="list-style-type: none"> <li>• Pay Period: 12/25/2021 - 1/7/2022.</li> <li>• Paid on 1/7/2022</li> </ul> </li> </ul> <p>You enter 1/1/2022 in the <b>Payroll Processing Begin Date</b> field. The <b>Active Through End of Tax Year</b> displays 2022.</p> |

| Questions                                                                                            | Considerations                                                                                                                                                                                                                                         |
|------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                                                                                      | <p>Workday issues multiple gross to nets if there are multiple pay groups with start dates different from the <b>Payroll Processing Begin Date</b>.</p> <p>Workday recommends that you preview any impacted W-2 forms in a Sandbox Preview tenant.</p> |
| Do the companies have multiple pay groups with overlapping period dates in the company relationship? | If the payroll processing begin date falls within the pay period, Workday will calculate multiple results for the worker, and create subperiods for the appropriate company.                                                                           |
| Are there worker payments in progress for both the companies?                                        | Workday considers the taxable wages and taxes with limits from the predecessor company when calculating the successor company. Complete worker payroll results in predecessor companies before completing payroll in the successor company.            |

### Recommendations

- Copy the worker tax elections from the predecessor company.
- Copy withholding orders from the predecessor company.
- Set 1 **Payroll Processing Begin Date** that applies to all workers in the companies. This solution ensures that results and reporting are correct, and is regardless of different pay frequencies.
- For merger and acquisition scenarios where you want to process the differences in off-cycle payments, Workday recommends that you use manual methods such as payroll inputs.

### Requirements

- If the predecessor company isn't in Workday, create the company, and load payroll history.
- Move workers from the predecessor company to the successor company.
- For mergers and alternate asset purchases, you must obtain the form W-4 records of the predecessor.
- Only create 1 relationship type per company per year.

### Limitations

You can't modify this relationship type once you've completed a payroll.

You need to complete retro manually for the predecessor company. When workers have retro differences from companies that went through a merger and acquisition, Workday only supports paying retro differences:

- From a company that's the predecessor of the workers' current primary job company.
- In the on-cycle payroll of the workers.

For asset purchases, Workday doesn't carry over prior withholding order limit balances and only carries over support orders to the successor company.

Workday doesn't support successor employer company relationships for workers who have an international assignment position in the U.S.

### Tenant Setup

No impact.

## Security

### Steps: Set Up Companies for Mergers and Acquisitions (USA)

#### Prerequisites

Review setup considerations for successor employer company relationships.

Security: The *Set Up: Payroll (Tax Filing/W-2s) - USA* domain in the USA Payroll functional area.

#### Context

When you merge or acquire companies, set up company and employee data to continue payroll and tax reporting in the new relationship.

#### Steps

1. (Optional) [Steps: Set Up Companies](#).  
If the predecessor company isn't in Workday, create the company.
2. (Optional) [Steps: Prepare and Load Payroll History](#) on page 190.  
If the predecessor company isn't in Workday, load its employee and payroll data into Workday.
3. [Create or Edit a Successor Employer \(USA\)](#) on page 1228.  
Set up a relationship for a merger or an asset purchase.
4. Move workers from the predecessor company to the successor company.  
See [Concept: Moving Workers](#).

5. (Optional) Copy the worker tax elections from the predecessor company or add them for each worker.
  - [Copy Tax Elections for a Worker \(USA\)](#) on page 1193
  - [Copy Tax Elections for Multiple Workers \(USA\)](#) on page 1193
  - [Steps: Add Worker Tax Elections \(USA\)](#) on page 1180
6. (Optional) Copy withholding orders from the predecessor company in bulk or for each worker.
  - [Copy Withholding Orders for Multiple Workers \(USA\)](#) on page 1262
  - [Copy Withholding Orders for a Worker \(USA\)](#) on page 1261

## Result

When you process payroll, balances include the values from the predecessor company.

The **Tax Filing Periodic Data for Workers** report displays periods from the predecessor company.

### Mergers

- Workday W-2 reports display YTD data for all employees in predecessor and successor companies.
- Workday uses payroll data for all companies in the relationship to determine withholding order limits. All withholding orders automatically carried over to the successor company.

### Acquisitions

Workday:

- Doesn't carry over prior withholding order limit balances.
- Only carries over support orders to the successor company.

### Reports and Web Services

- These reports and web services include combined predecessor amounts for QTD and YTD for all employees in predecessor and successor companies:
  - *Get Multiple Worksite Report*
  - **Multiple Worksite Report by Company**
  - **Multiple Worksite Report by Worker**

For alternate acquisitions, Workday W-2 reports display combined year-to-date data for all employees in predecessor and successor companies.

[Steps: Set Up, Audit, and Print Year-End Tax Forms \(USA\)](#) on page 919

### Examples

[Reference: Tax Filing Reports](#)

## Create or Edit a Successor Employer (USA)

### Prerequisites

Load payroll data from the predecessor company.

Security: *Set Up: Payroll (Tax Filing/W-2s) - USA* domain in the USA Payroll functional area.

## Context

Define a relationship between companies when a company acquires or merges with another.

**Note:** When using a tax filing vendor, Workday recommends that you supply the vendor with test files. Test files ensure that the vendor supports any new or modified configuration involving company relationships.

## Steps

1. Access the **Create Company Relationship** or **Edit Company Relationship** task.

**Note:** Only create 1 relationship type per company, per year.

2. From the **Company Relationship Type** field, select *Successor Employer*.
3. Select the **Successor Employer Type**. As you complete this field, consider what Workday carries over from the predecessor to the successor company for each type:

| Carried over to successor company?      | Asset Purchase - Standard                                                                           | Asset Purchase - Alternate                                                                                    | Merger                                                                 |
|-----------------------------------------|-----------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------|
| Employees.                              | Yes, if employment is continuous at the time of the acquisition.                                    | Yes, if employment is continuous at the time of the acquisition.                                              | Yes, if employed by predecessor during the tax year.                   |
| Wages in limit calculations.            | Yes                                                                                                 | Yes                                                                                                           | Yes                                                                    |
| Prior withholding order limit balances. | No                                                                                                  | No                                                                                                            | Yes                                                                    |
| Multiple worksite reports.              | No                                                                                                  | Yes, for acquired employees.                                                                                  | Yes, quarter-to-date, starting with the quarter the merger took place. |
| W-2s and W-2 reporting.                 | Employee receives a W-2 from the predecessor company and a separate W-2 from the successor company. | If the tax authority recognizes combined tax filing, employee receives a W-2 only from the successor company. | Yes, year-to-date.                                                     |

**Note:** Once you've completed a payroll, you can't modify this relationship type.

4. As you complete the task, consider:

| Option                               | Description                                                                                                                                                                                                                                                                                                                                                                                                                                 |
|--------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Acquisition or Merger Date</b>    | For information only. Doesn't affect calculations.                                                                                                                                                                                                                                                                                                                                                                                          |
| <b>Payroll Processing Begin Date</b> | <p>The date that you must enter when you set up the company relationship.</p> <p>You can enter any date, but make sure the:</p> <ul style="list-style-type: none"> <li>• Date is based on the year in which you want the relationship.</li> <li>• Payroll Processing Begin Date is equal to the worker's transfer date.</li> <li>• Pay date after the transfer date is within the correct year that you intend for tax reporting</li> </ul> |

| Option                                                                       | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
|------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                                                              | <p>to report all workers under the successor company.</p> <ul style="list-style-type: none"> <li>Affected workers have at least 1 pay result with a pay date:             <ul style="list-style-type: none"> <li>After the date the worker transferred to the successor company.</li> <li>In that year.</li> </ul> </li> </ul> <p>Workday requires that you set 1 <b>Payroll Processing Begin Date</b> that applies to all workers in the companies. This solution ensures that results and reporting are correct, and is regardless of different pay frequencies.</p> <p>For mergers, this date must be 2013-10-01 or later.</p> <p>The worker transfer date must be equal to the <b>Payroll Processing Begin Date</b>. For companies that have multiple pay groups with overlapping period dates in the relationship, Workday calculates multiple results for the worker and creates subperiods for the appropriate company.</p> <p>Example: You have 2 pay groups whose workers have a <b>Transfer Effective Date</b> of 1/1/2022:</p> <ul style="list-style-type: none"> <li>Pay Group 1 has a pay period of 12/18/2021 - 12/31/2021, paid on 1/7/2022.</li> <li>Pay Group 2 has a pay period of 12/25/2021 - 1/7/2022, paid on 1/7/2022.</li> </ul> <p>You enter 1/1/2022 in the <b>Payroll Processing Begin Date</b> field. The <b>Active Through End of Tax Year</b> displays 2022.</p> <p>Workday issues multiple gross to nets if there are multiple pay groups with start dates different from the <b>Payroll Processing Begin Date</b>.</p> <p>Workday recommends that you preview any impacted W-2 forms in a Sandbox Preview tenant.</p> |
| <b>Successor Company</b>                                                     | The company that is acquiring employees.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| <b>Predecessor Company</b>                                                   | The company from which you're acquiring employees.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| <b>Withholding Order Types</b>                                               | Select the withholding order types to carry forward to the successor company.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| <b>Tax Authorities Not Recognizing Combined Tax Filing and W-2 Reporting</b> | <p>Available only for these successor employer types:</p> <ul style="list-style-type: none"> <li><i>Asset Purchase - Alternate</i></li> <li><i>Merger</i></li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

## Result

You've established a relationship between companies, enabling payroll processing according to the type you selected.

Administrative results display values from the current company only.

You can use the **Delete Successor Employer** task as long as there are no payroll results on or after the **Payroll Processing Begin Date**.

## Example

Global Modern Services is the successor company for Green Planet Solutions. Green Planet Solutions has these pay groups:

- USA Semimonthly Professional Corporate is semimonthly with these periods:
  - 2020-01-01 to 2020-01-15
  - 2020-01-16 to 2020-01-31
- USA Biweekly with these periods:
  - 2020-01-05 to 2020-01-18
  - 2020-01-19 to 2020-02-01

The **Payroll Processing Begin Date** is 2020-01-16, so you must transfer the workers into Global Modern Services effective 2020-01-16.

You also transfer workers in pay group USA Biweekly effective 2020-01-16. Workday creates separate gross to net results for the workers in pay group USA Biweekly, with the results:

- 2020-01-05 to 2020-01-15 for Green Planet Solutions.
- 2020-01-16 to 2020-01-18 for Global Modern Services.

## Next Steps

These reports display balances from the predecessor company for the *Asset Purchase - Alternates* and *Mergers* successor employer types:

- **Tax Filing Periodic Data by Company**
- **Tax Filing Periodic for Workers**
- **Tax Filing Monthly Data for Workers**
- **Tax Filing Quarterly Data by Company**
- **Tax Filing Quarterly for Workers**

These web services are also available:

- *Get Periodic Company Tax Filing Data*
- *Get Periodic Worker Tax Filing Data*
- *Get Monthly Worker Tax Filing Data*
- *Get Quarterly Worker Tax Filing Data*

(Optional) You can copy worker tax elections from the predecessor or add them manually.

(Optional) You can copy income withholding orders (IWOs) from the predecessor or add them manually.

### Concept: Pay and Tax Calculation in Predecessor and Successor Companies (USA)

#### Worker Payment is In Progress for both Predecessor and Successor Companies

Workday considers the taxable wages and taxes with limits from the predecessor company when calculating the successor company. Complete worker payroll results in predecessor companies before completing payroll in the successor company.

| Predecessor Payment Status | Successor Payment Status       |
|----------------------------|--------------------------------|
| <i>In Progress</i>         | <i>Pending Completion</i>      |
| <i>Complete</i>            | <i>Requires Re-Calculation</i> |

#### Example:

Company Z acquires Company A on 2013-6-3, and a worker transfers from Company A to Z on 2013-6-10.

Both companies reside in the same pay group with a pay period of 2013-6-1 to 2013-6-15. The worker has 2 subperiod gross-to-net payments in progress:

- Company A for 2013-6-1 to 2013-6-9 (*In Progress*).
- Company Z for 2013-6-10 to 2013-6-15 (*Pending Completion of Prior*).

When the Company A payroll is complete:

- The calculation status of Company Z payroll for this worker changes to *Requires Re-Calculation*.
- Workday recalculates taxes considering the taxable wages and tax limits from Company A, the predecessor company.

#### Employee Works in the Successor Company

Workday calculates cross company taxable wages and applies limits differently for mergers and acquisitions:

| Type   | How Workday Handles Limits                                                                                                                                                               |
|--------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Merger | Uses taxable wages and taxes in both predecessor and successor companies for the calendar year in which the merger takes place. Includes wages for workers terminated by the predecessor |

| Type        | How Workday Handles Limits                                                                                                                                                                 |
|-------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|             | company before the merger.                                                                                                                                                                 |
| Acquisition | Uses taxable wages and taxes in both predecessor and successor companies for the calendar year of the acquisition. Includes only workers actively employed at the time of the acquisition. |

For an acquisition, Workday enables you to load successor employer types of company relationships using these web services:

- *Get Successor Employer*
- *Put Successor Employer*

## Single Legal Entity

### Setup Considerations: Single Legal Entity Company Relationships (USA)

You can use this topic to help make decisions when planning your configuration and use of the USA Single Legal Entity (SLE) company relationship type. It explains:

- Why to set it up.
- How it fits into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

### What It Is

The SLE company relationship type in Workday enables you to roll up multiple companies into 1 managing company that serves as the reporting legal entity.

### Business Benefits

- Process U.S. payroll for related companies while respecting tax and withholding order limits for workers in multiple companies in the company relationship.
- Combine wages and taxes paid by all companies for periodic and quarterly payroll tax filing.
- Combine Affordable Care Act (ACA) reporting for all companies.
- Produce financial and managerial reports for the legal entity and its related companies.

- Specify the length of the SLE relationship by tax year.

### Use Cases

- Generate balance sheet statements for related companies using the balancing worktag for other purposes.
- Produce consolidated financial statements for all companies in the SLE company relationship that are part of a company hierarchy.

### Questions to Consider

| Questions                                                                                              | Considerations                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|--------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| How do you review and file tax data for companies in an SLE company relationship?                      | <p>Workday calculates taxes in the related company. You can report taxes for related companies in 1 of 2 ways:</p> <ul style="list-style-type: none"> <li>• Combined: The SLE issues a single W-2, which includes wages paid by all companies in the relationship. You can't review and file tax data for individual companies in the company relationship.</li> <li>• Separate: Workday creates 1 W-2 for workers. Your tax filing vendor can create a separate W-2 for each company the worker is in.</li> </ul> |
| Do your workers have withholding orders in the related companies?                                      | You can copy withholding orders to the managing company to continue processing them.                                                                                                                                                                                                                                                                                                                                                                                                                               |
| What are your worker's tax elections in the related companies?                                         | You can copy tax elections to the managing legal entity company to continue processing them.                                                                                                                                                                                                                                                                                                                                                                                                                       |
| How have you set up taxes for the related companies?                                                   | You need to set taxes up the same way for all companies in the relationship.                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| How can I add a new related company to an existing SLE company relationship?                           | You can only add a new company on the <b>Edit Company Relationship</b> task if you haven't run any pay calculations yet.                                                                                                                                                                                                                                                                                                                                                                                           |
| How does Workday calculate 1042-S taxes when there's a Single Legal Entity (SLE) company relationship? | When there's a Single Legal Entity (SLE) company relationship and the <b>Exclude 1042-S Taxes from Tax Filing</b> configuration is different across the companies in the relationship, Workday only considers what you selected for the <b>Exclude 1042-S Taxes from Tax Filing</b> option for the managing company to determine if 1042-S taxes should be included or excluded from tax filing.                                                                                                                   |

### Recommendations

Workday recommends that you review tax elections in the companies, and align them with tax elections entered in the managing company. Workday takes the tax elections for the worker from the managing company.

### Requirements

For tax reporting purposes, Workday treats all companies in the SLE relationship as a single company. For tax reporting purposes, Workday requires that you standardize tax configurations for the SLE and the related companies. For all companies in the relationship, you must use the same:

- Federal, state, and local tax setup.
- Federal Employer Identification Number (FEIN)

### Limitations

When you complete a payroll run, you can't modify or delete the SLE relationship. You can only end the relationship at the end of the tax year.

Workday doesn't support SLE for workers who have an international assignment position in the U.S.

### Tenant Setup

No impact.

### Security

| Domains                                                                                                                                                         | Considerations                                           |

## Concept: Single Legal Entities (USA)

### Single Legal Entities

A Single Legal Entity (SLE) company relationship establishes a one-to-many relationship between one managing company (designated as the legal entity) and related companies. You can create an SLE company relationship to produce financial and managerial reports for the legal entity and its related companies.

For tax reporting purposes, Workday treats all companies in the SLE relationship as a single company. Workday requires that you set up tax configurations for the SLE in addition to the related companies. Federal, state, and local tax setup must be the same for all companies in the relationship.

SLE relationships enable you to:

- Track transactions for the legal entity company and each related entity company.

- Produce consolidated financial reports for the legal entity.
- Produce individual reports for the related companies in the SLE
- Perform transactions between nonlegal entities within the same SLE relationship
- Segregate sensitive data within the SLE.

Workday processes payroll for each related company in an SLE and respects limits across companies for taxes and withholding orders.

## Single Legal Entity Reporting

When you run the **1099 MISC** report for an SLE company, the report includes transactions from the SLE company and its related companies.

### Example

- Company A is the managing legal entity company for Company B.
- Company 1 is the managing legal entity company for Company 2.
- Both SLE companies and their related nonlegal entity companies are part of the Global Modern Services company hierarchy.

When you run the **1099 MISC Report** task for the SLE Company A, click the value in the **Reportable Amount** field to display a breakdown of the transactions and their amounts for Company A and Company B.

When you run the **1099 MISC Report** task for the Global Modern Services company hierarchy, the report displays amounts for the Company A and Company 1 single legal entities.

When you create a balance sheet statement for the Global Modern Services company hierarchy, it displays consolidated transaction information for all legal entities and their related companies.

## Withholding Orders (USA)

---

### Setup Considerations: Income Withholding Orders (USA)

You can use this topic to help make decisions when planning your configuration and use of USA income withholding orders (IWOs). It explains:

- Why to set it up.
- How it fits into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

### **What It Is**

Workday enables you to process these types of IWOs using rules that follow state and federal legislation:

- Bankruptcy
- Creditor Garnishment
- Federal Administrative Wage Garnishment
- Federal Student Loan
- Federal Tax Levy
- State Tax Levy
- Support Order (including Lump Sum)
- Wage Assignment

### **Business Benefits**

Workday makes it easy to comply with withholding order requirements by:

- Determining the amount to withhold from the employee's disposable earnings, including arrears and any agency and employer fees.
- Applying withholding limits and setting priorities for what to withhold.
- Updating the IWO calculation rules in accordance with federal and state changes.
- Providing visibility into the calculation rules that Workday uses to calculate IWOs, by tax authority and withholding order type.
- Providing Workday-delivered statutory pay components for each withholding type.
- Dynamically displaying the required fields for each type of IWO you record.
- Beginning automatic deductions during payroll processing once you record the IWO.
- Calculating multiple IWOs based on the rules for that order type and state.
- Aggregating IWO amounts to avoid exceeding limits for a type of withholding order.
- Enabling you to participate in the system-to-system eIWO program with the Office of Child Support Enforcement (OCSE).

You can also attach a document to the IWO in Workday, such as the issued order to:

- Eliminate the need for paper.
- Provide the flexibility for multiple payroll administrators to view the issued order.

### **Use Cases**

- Payroll administrators can view active and inactive withholding orders directly from the worker's profile.
- For employees that have multiple IWOs with the amount to withhold exceeding the maximum withholding limit, Workday uses statutory rules to calculate what to withhold per order.
- You can override the tax authority for Creditor Garnishment, State Tax Levy, Support Order, and Wage Assignment orders.
- You can override withholding order priority for workers with multiple withholding orders.
- When you receive an official amended support order for a worker who already has a support order in Workday, you can enter the amended order details with different dates. Workday creates a new record for the amended order, and retains the original order for tracking purposes.
- When workers transfer companies or you create a new company relationship, you can copy their IWOs from 1 company to another.

## Questions to Consider

| Questions                                                                      | Considerations                                                                                                                                                                                                                                                                                               |
|--------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Does the worker have past due amounts?                                         | When recording a support order for a worker, you can enter the past due amount. In the order details, record the current child or spouse support and the past due child or spousal support amounts. Workday calculates the max amount that's available to withhold, and limits the deduction to that amount. |
| For workers with multiple withholding orders, which one is of higher priority? | When a worker has multiple income withholding orders, Workday assigns a processing priority to each order based on the rules of the issuing agencies. You can override this priority from the related actions of the withholding order as needed.                                                            |

## Recommendations

If necessary, ensure that IWOs are valid by contacting the issuing court or agency.

Notify the worker of the order, and ensure they understand how it will affect their net pay.

Terminate IWOs for terminated employees after you process their final check.

## Requirements

Load active IWOs for the employees into Workday.

Add earnings and nonstatutory deductions to the pay component groups Workday uses to calculate disposable income.

Set up an account with the OSCE to participate in the system-to-system eIWO program.

## Limitations

Workers can't view their IWOs in Workday.

You can't delete IWOs that Workday is calculating as part of a payroll, even if the payroll calculation isn't complete yet. You can inactivate the order instead.

Workday doesn't support income withholding orders for workers who have an international assignment position in the U.S.

## Tenant Setup

(Optional) Define IDs for deduction recipients, that Workday will use during processing and with integrations on the **Edit Tenant Setup - Financials** task.

## Security

### Business Processes

You can use these business processes for copying IWOs for a single or multiple workers:

- *Copy Withholding Orders for Worker*
- *Copy Withholding Orders for Workers*

### Reporting

| Reports                                             | Considerations                                                                                                                                                                                                                               |
|-----------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>All Payroll Withholding Order Data</b>           | Displays calculation rules for calculating IWOs by tax authority and order type. Includes information on: <ul style="list-style-type: none"> <li>• Withholding limits.</li> <li>• Calculation methods.</li> <li>• Prioritization.</li> </ul> |
| <b>View Payroll Withholding Order Data</b>          | Displays an overview of the IWO information that Workday maintains, such as: <ul style="list-style-type: none"> <li>• Calculation rules, as-of a date.</li> <li>• Compliance updates by country and IWO type.</li> </ul>                     |
| <b>Withholding Orders for Worker</b>                | Enables you to edit, delete, change the processing priority, and view deduction history of an IWO.                                                                                                                                           |
| <b>Pay Calculation Results - Deduction Register</b> | View IWO deductions in one or more periods, pay run groups, or pay groups.                                                                                                                                                                   |

You can create custom reports from these report data sources:

- *All Payroll Withholding Order Tax Authority Rules*
- *All Withholding Orders*
- *Payroll Tax Withholding Form Data for BIRT*

## Integrations

You can use these web services when creating a custom integration for IWO processing to or from a third-party application:

- *Put Deduction Recipients* loads deduction recipient information into Workday.
- *Get Deduction Recipients* retrieves information from Workday.

Use these web services to integrate with third-party vendors that manage withholding orders, and to override the Workday-assigned default IWO rule:

- *Put Payroll Involuntary Withholding Order*
- *Get Payroll Involuntary Withholding Orders*

Use these integrations to retrieve and respond to eIWO files from the OSCE web portal:

- *Electronic Income Withholding Order Inbound* imports eIWO files in XML format and as image-ready PDFs.
- *Electronic Income Withholding Order Outbound* generates IWO acknowledgment records and sends them to the OCSE portal.

## Connections and Touchpoints

Create and set up bank accounts to pay third-party deduction recipients.

Record a *Business Number* tax ID for the worker's company.

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships in your tenant. Learn more about the [Workday Touchpoints Kit](#) on Workday Community.

## Other Impacts

No impact.

### Tasks

[Create a Payment for an Income Withholding Order or Court Order](#) on page 735

## Steps: Set Up Withholding Orders (USA)

### Context

Review setup considerations for USA income withholding orders (IWOs).

Set up withholding orders to begin automatic deductions during payroll processing.

### Steps

1. [Set Up Pay Component Groups to Calculate Disposable Income \(USA\)](#) on page 1242.
2. [Create Deduction Recipient](#) on page 232.

3. To record a withholding order, select from:

- [Record a Bankruptcy Withholding Order \(USA\)](#) on page 1244
- [Record a Creditor Garnishment Withholding Order \(USA\)](#) on page 1245
- [Record a Federal Administrative Wage Garnishment Withholding Order \(USA\)](#) on page 1247
- [Record a Federal Tax Levy Withholding Order \(USA\)](#) on page 1247
- [Record a State Tax Levy Withholding Order \(USA\)](#) on page 1250
- [Record a Student Loan Withholding Order \(USA\)](#) on page 1253
- [Record a Support Order \(USA\)](#) on page 1254
- [Record a Wage Assignment Withholding Order \(USA\)](#) on page 1255

4. (Optional) [Amend a Support Order \(USA\)](#) on page 1260.

Amend a support order when you receive an official amended support order from the agency.

5. (Optional) [Terminate a Support Order \(USA\)](#) on page 1261.

Terminate a support when you receive an official termination order from the agency.

### Next Steps

You can:

- Configure a withholding order to be tax deductible.
- Override the defaults for most order types. See the **All Payroll Withholding Order Data** report for the limits on each type of withholding order.
- (Optional) Override the processing order that Workday assigns.
- Delete withholding orders that don't have payroll input or completed results, using the related action **Withholding Order > Delete**.

Use these web services to integrate with third-party vendors that manage withholding orders:

- *Put Payroll Involuntary Withholding Order*
- *Get Payroll Involuntary Withholding Orders*

## Set Up Pay Component Groups to Calculate Disposable Income (USA)

### Prerequisites

Security: *Set Up: Payroll (Calculations - Payroll Specific)* domain in the Core Payroll functional area.

Create earnings and deductions.

### Context

Before you process withholding orders, add earnings and nonstatutory deductions to the pay component groups Workday uses to calculate disposable income. Workday determines which pay component groups to resolve during processing based on:

- Tax authority rules.
- Order type.

## Steps

### 1. Add earnings to Workday-provided pay component groups:

- Access the **Edit Earning** task.
- On the **Non-Effective Dated** tab, select the appropriate pay component groups in the **Groups** field.

| Earnings                                                                        | Pay Component Group                                             |
|---------------------------------------------------------------------------------|-----------------------------------------------------------------|
| Earnings paid to employees on a regular basis, such as base pay and hourly pay. | <i>Withholding Order (All): Periodic Earnings [USA]</i>         |
| One-time or occasional earnings for gifts and prizes.                           | <i>Withholding Order (All): Monetary Gifts and Prizes [USA]</i> |
| Lump sum earnings, such as a signing bonus. Applies to support orders only.     | <i>Withholding Order (All): Lump Sum Earnings [USA]</i>         |

### 2. Add nonstatutory deductions to Workday-provided pay component groups:

- Access the **Edit Deduction** task.
- On the **Non-Effective Dated** tab, select the appropriate pay component groups in the **Groups** field.

| Deductions                                                                                                                                            | Pay Component Group                                                  |
|-------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------|
| Deductions for disability plan contributions.                                                                                                         | <i>Withholding Order (All): Disability Insurance [USA]</i>           |
| Deductions for contributions to: <ul style="list-style-type: none"> <li>Group Life Insurance Plan.</li> <li>Group Accident Insurance Plan.</li> </ul> | <i>Withholding Order (All): Group Life / Group [USA]</i>             |
| Deductions for loan repayments due to an employer.                                                                                                    | <i>Withholding Order (All): Loan Repayment to Employer [USA]</i>     |
| Deductions for mandatory contributions to federal or state retirement plans.                                                                          | <i>Withholding Order (All): Mandatory Retirement Deduction [USA]</i> |
| Deductions for mandatory union dues.                                                                                                                  | <i>Withholding Order (All): Mandatory Union Dues [USA]</i>           |
| Deductions for medical insurance contributions.                                                                                                       | <i>Withholding Order (All): Medical Insurance [USA]</i>              |
| Deductions for health savings account (HSA) contributions.                                                                                            | <i>Withholding Order (All): Medical Savings Account [USA]</i>        |
| Deductions for 401K and other voluntary retirement plans.                                                                                             | <i>Withholding Order (All): Retirement Plan Deductions [USA]</i>     |

3. (Optional) For each tax authority, identify pay component exceptions for calculation of disposable earnings. To exclude or include exceptions when calculating disposable earnings for a withholding order, use the **Maintain Tax Authority Exceptions Pay Component Groups** task.

Example: Pennsylvania doesn't count workmens compensation payments as part of disposable earnings for creditor garnishments. Use the **Maintain Tax Authority Exceptions Pay Component Groups** task to configure this exception for Pennsylvania:

| Payroll Tax Authority | Withholding Order Type            | Exclude Pay Component(s)       | Include Pay Component(s) |
|-----------------------|-----------------------------------|--------------------------------|--------------------------|
| <i>Pennsylvania</i>   | <i>Creditor Garnishment (USA)</i> | <i>Workmens Comp Pay [USA]</i> |                          |

With this setup, Workday doesn't include worker's compensation payments as income when calculating disposable income for creditor garnishments.

### Result

Workday withholds the correct amount from employee pay based on state and federal rules for calculating disposable income. To calculate disposable income, Workday references the calculation rule for each state. The rule controls:

- Pay component groups and associated earnings to add to disposable income.
- Pay component groups and associated mandatory deductions to subtract from disposable income.

### Example

States A and B calculate disposable income for a support order according to these rules:

| State A                              | State B                     |
|--------------------------------------|-----------------------------|
| + Periodic Earnings                  | + Periodic Earnings         |
| + Monetary Gifts and Prizes          | + Monetary Gifts and Prizes |
| - Federal Taxes                      | - Federal Taxes             |
| - State Taxes                        | - State Taxes               |
| - Mandatory Retirement Contributions | - Disability Insurance      |
| - Medical Insurance                  | - Mandatory Union Dues      |
| - Mandatory Union Dues               | = Disposable Income         |
| = Disposable Income                  |                             |

## Record Withholding Orders (USA)

### Record a Bankruptcy Withholding Order (USA)

#### Context

Record a bankruptcy withholding order to begin automatic deductions during payroll processing.

## Steps

1. Access the **Record US Withholding Order for Worker** task.
2. Enter the **Worker** name and select the *Bankruptcy Order (USA)* **Order Type**.  
Workday dynamically displays the fields required for this type of withholding order.
3. Complete the **Order Info** fields on the right side of the page. Some of these fields are unique to bankruptcy withholding orders. As you complete this step, consider:

| Option                                | Description                                                                                                                                                   |
|---------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Issued In</b>                      | Workday populates this field with <b>Federal</b> and this value can't be changed.                                                                             |
| <b>Deduction Recipient</b>            | Select the third-party recipient of the withholding deduction. If the deduction recipient isn't set up in Workday, select <b>Create</b> to add the recipient. |
| <b>Originating Entity</b>             | Agency or court that issued the withholding order.                                                                                                            |
| <b>Chapter 13</b><br><b>Chapter 7</b> | Select as indicated on the order.                                                                                                                             |
| <b>Memo</b>                           | For information only. Use this field to document additional details for this IWO.                                                                             |

4. On the **Attachments** tab, select relevant attachments.
5. On the **Withholding Frequency** tab, select the pay period to withhold from. You can select more than 1 pay period.

**Note:** When you don't specify a withholding frequency, Workday withholds from each of the worker's pay periods.

## Record a Creditor Garnishment Withholding Order (USA)

### Context

Record a Creditor Garnishment withholding order to begin automatic deductions during payroll processing.

## Steps

1. Access the **Record US Withholding Order for Worker** task.
2. Enter the **Worker** name and select the *Creditor Garnishment (USA)* **Order Type**.  
Workday dynamically displays the fields required for this type of withholding order.
3. Complete the fields on the right side of the page. Some of these fields are unique to creditor garnishment withholding orders. As you complete this step, consider:

| Option                                 | Description                                                                                       |
|----------------------------------------|---------------------------------------------------------------------------------------------------|
| <b>Issued In</b>                       | Select the state that issued the order.                                                           |
| <b>Override Withholding Order Rule</b> | Use this field to override the Workday default tax authority and rule for an individual employee. |

| Option                                | Description                                                                                                                                                                                                                                                                     |
|---------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                       | <p>Workday calculates these withholding order deduction criteria based on that rule:</p> <ul style="list-style-type: none"> <li>• Deduction priority.</li> <li>• Disposable earnings.</li> <li>• Frequency conversion factor.</li> <li>• Maximum amount to withhold.</li> </ul> |
| <b>Payroll Tax Authority Used</b>     | Displays the Workday-assigned Payroll Tax Authority.                                                                                                                                                                                                                            |
| <b>Non Resident State</b>             | Applies only to Alaska creditor garnishments. Select to have Workday correctly calculate the maximum amount to withhold for nonresident Alaska workers.                                                                                                                         |
| <b>County FIPS code</b>               | Applies only to Maryland Creditor Garnishments.                                                                                                                                                                                                                                 |
| <b>Deduction Recipient</b>            | Select the third-party recipient of the withholding deduction. If the deduction recipient isn't set up in Workday, select <b>Create</b> to add the recipient.                                                                                                                   |
| <b>Originating Entity</b>             | Agency or court that issued the withholding order.                                                                                                                                                                                                                              |
| <b>Creditor Garnishment Type</b>      | Workday applies applicable rules based on the tax authority and the type you select in this field.                                                                                                                                                                              |
| <b>Head of Household</b>              | Applies only to Nebraska.                                                                                                                                                                                                                                                       |
| <b>Number of Dependants</b>           | <p>Applies only to:</p> <ul style="list-style-type: none"> <li>• Massachusetts.</li> <li>• Rhode Island.</li> <li>• South Dakota.</li> <li>• West Virginia.</li> </ul>                                                                                                          |
| <b>Worker is Laborer or Mechanic</b>  | Applies only to Arkansas.                                                                                                                                                                                                                                                       |
| <b>Worker Income is Poverty Level</b> | Applies only to New Jersey.                                                                                                                                                                                                                                                     |
| <b>Good Cause Limit Percent</b>       | Applies only to Indiana creditor garnishments.                                                                                                                                                                                                                                  |
| <b>Expected Annual Earnings</b>       | Applies only to Iowa.                                                                                                                                                                                                                                                           |
| <b>Weekly Gross Wages</b>             | Applies only to Nevada.                                                                                                                                                                                                                                                         |
| <b>Memo</b>                           | For information only. Use this field to document additional details for this IWO.                                                                                                                                                                                               |

4. On the **Attachments** tab, select relevant attachments.

5. On the **Local Minimum Wage** tab, select the **Use Override Rate** check box and enter the local minimum wage in the **Local Minimum Wage Amount** field.

Applies only to California creditor garnishments. Workday uses this information for compliance with the state requirement to use the higher of federal, state, or local minimum wages in creditor garnishment withholding order calculations.

You can use these web services for loading local minimum wages:

- *Get Withholding Order Local Minimum Wage Rate*
- *Put Withholding Order Local Minimum Wage Rate*

| Issued In                          | Defaults to <i>Federal</i> .                                                                                                                                                                                                                                                                         |
| Deduction Recipient                | Select the third-party recipient of the withholding deduction. If the deduction recipient isn't set up in Workday, select <b>Create</b> to add the recipient.                                                                                                                                        |
| Part 3 Effective Date              | For federal tax levies. Workday uses the chart in Publication 1494 for the year you enter here.                                                                                                                                                                                                      |
| Marital Status                     | For federal tax levies. Worker's marital status from Part 3 of Form 668-W (Notice of Levy on Wages, Salary, and Other Income). This can differ from the worker's marital status on Form W-4.                                                                                                         |
| Personal Exemptions                | Enter the number of personal exemptions from Part 3 of Form 668-W.                                                                                                                                                                                                                                   |
| Additional 65+ or Blind Exemptions | Enter the number of personal exemptions from Part 3 of Form 668-W.                                                                                                                                                                                                                                   |
| Exemption Amount Override          | Applies to federal tax levies and state tax levies in: <ul style="list-style-type: none"> <li>• Arizona.</li> <li>• Kentucky.</li> <li>• Virginia.</li> </ul>                                                                                                                                        |
| Exemption Frequency                | Applies to federal tax levies and state tax levies in: <ul style="list-style-type: none"> <li>• Arizona.</li> <li>• Kentucky.</li> <li>• Virginia.</li> </ul>                                                                                                                                        |
| Pay Period Exemption Amount        | Applies only to federal tax levies. Enter the pay period exemption amount from Form 668-W.<br><br>If Part 3 effective date is before 2007-01-01, Workday calculates this amount as equal to the exemption amount override multiplied by the pay period frequency divided by the exemption frequency. |
| Block Tax Election Changes in ESS  | Applies only to federal tax levies. When selected, employees can no longer use the <b>Withholding Elections</b> task to change their tax elections. Administrators can still make updates using the <b>Add Worker US Tax Elections</b> task.                                                         |
| Termination Date                   | Applies only to federal tax levies. Enter the termination date of the levy from Form 668-D (Release of Levy/Release of Property from Levy). Entering a termination date is the only way to stop withholding for a federal tax levy.                                                                  |
| Memo                               | For information only. Use this field to document additional details for this IWO.                                                                                                                                                                                                                    |

4. Complete the fields on the **Persons Claimed as Personal Exemptions** tab. Enter dependents claimed as personal exemptions.

Enter the name and Social Security Number for each dependent claimed. They can't be the same as the dependents included in a child support order.

5. On the **Attachments** tab, select relevant attachments.

6. The **Restrictions for Disposable Earnings** tab applies only to federal tax levies that use baseline deductions. Use fields on this tab to manage baseline and future deductions that affect the federal tax levy deduction calculation.

As you complete this step, consider:

| Option                                 | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
|----------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Current Deduction Restrictions</b>  | Applies only to federal tax levies. Displays a detailed list of the current deductions and overrides used to calculate disposable earnings. The information becomes available when you establish baseline deductions.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| <b>Deduction Restriction Overrides</b> | <p>To prevent changes to voluntary employee deductions from impacting disposable earnings, add deduction restriction overrides. Select the deduction and 1 of these override options:</p> <ul style="list-style-type: none"> <li>• <b>Amount:</b> The allowable amount for the deduction.</li> <li>• <b>Percent:</b> The allowable percent for the deduction. This option is only available when the deduction is a benefit calculated as a percent.</li> <li>• <b>Never Reduces DE:</b> Select to exclude the deduction from the disposable earning calculation.</li> <li>• <b>Always Reduces DE:</b> Select to include the deduction in the disposable earnings calculation without limiting the amount.</li> </ul> <p>When deduction amounts are greater than override amounts, Workday subtracts the difference from take-home pay, not disposable earnings.</p> |
| <b>Baselined Deductions</b>            | <p>Select <b>Load Deductions</b> to create a baseline list of deduction as of the effective date. This baseline can help you determine whether future changes in the deductions are allowable in the calculation of disposable earnings.</p> <p>For new federal tax levies, establish this baseline when the levy starts. After you load deductions the first time, you can verify them, make adjustments to them. However, after you complete payroll with baseline deductions in place, you can no longer change the baseline. It serves as a record of the deductions in place when the levy took effect. Instead, use deduction restriction overrides to make changes.</p>                                                                                                                                                                                       |

| Option | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
|--------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|        | <p><b>Note:</b> Workday can't correctly load baseline deductions when an employee has:</p> <ul style="list-style-type: none"> <li>• A midperiod pay group change.</li> <li>• Current payroll input</li> <li>• An adjustment override for percent-based deductions.</li> </ul> <p>In these cases, add deduction restriction overrides to accurately reflect the deductions to include in the disposable earnings calculation.</p> <p>For existing federal tax levies with completed payroll results, you can't load baseline deduction restrictions. Instead, use deduction restriction overrides to accurately reflect the deductions present when the levy took effect.</p> |

**Record a State Tax Levy Withholding Order (USA)****Context**

Record a state tax levy withholding order to begin automatic deductions during payroll processing.

**Steps**

1. Access the **Record US Withholding Order for Worker** task.
2. Enter the **Worker** name and select the *State Tax Levy (USA)* **Order Type**.  
Workday dynamically displays the fields required for this type of withholding order.
3. Complete the **Order Info** fields on the right side of the page. Some of these fields are unique to state tax levy withholding orders. As you complete this step, consider:

| Option                                                       | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

Can differ from the worker's marital status on Form W-4.</p> <p>For a Michigan form and these revision numbers, Marital Status is required:</p> <ul style="list-style-type: none"> <li>• 3793 (Rev. 05-22)</li> <li>• 3793A (Rev. 09-18)</li> </ul>                                                                                                                                                                           |
| <b>Personal Exemptions</b>                | Enter the number of personal exemptions from Part 3 of Form 668-W.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| <b>Additional 65+ or Blind Exemptions</b> | Enter the number of additional exemptions from Part 3 of Form 668-W.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| <b>Pay Period Exemption Amount</b>        | <p>For federal tax levies.</p> <p>Enter the pay period exemption amount from Form 668-W. If Part 3 Effective Date is before 2007-01-01, Workday calculates this amount as equal to the exemption amount override multiplied by the pay period frequency divided by the exemption frequency.</p>                                                                                                                                                                                                                                                                            |
| <b>Termination Date</b>                   | <p>For federal tax levies.</p> <p>Enter the termination date of the levy from Form 668-D (Release of Levy/Release of Property from Levy). This is the only way to stop withholding for a federal tax levy.</p>                                                                                                                                                                                                                                                                                                                                                             |
| <b>Good Cause Limit Percent</b>           | Applies only to Indiana creditor garnishments.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| <b>Process Until</b>                      | Applies only to Puerto Rico.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| <b>Prorate Until Date</b>                 | Applies only to Puerto Rico.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

| Option      | Description                                                                       |
|-------------|-----------------------------------------------------------------------------------|
| <b>Memo</b> | For information only. Use this field to document additional details for this IWO. |

4. Complete the fields on the **Persons Claimed as Personal Exemptions** tab.  
Can't be the same as those persons included in a child support order.
  - a) Enter **Dependent Name**.
  - b) Enter the Social Security Number for each person in the **Dependent Identification Number** field.
5. On the **Attachments** tab, select relevant attachments.
6. (Optional) To override the local minimum wage rate set for the worker's location, on the **Local Minimum Wage** tab:
  - Select the **Use Override Rate** check box.
  - Enter a new minimum wage rate in the **Local Minimum Wage Amount** field.

### Record a Student Loan Withholding Order (USA)

#### Context

Record a student loan withholding order to begin automatic deductions during payroll processing.

#### Steps

1. Access the **Record US Withholding Order for Worker** task.
2. Enter the **Worker** name and select the *Student Loan (USA)* **Order Type**.  
Workday dynamically displays the fields required for this type of withholding order.
3. Complete the **Order Info** fields on the right side of the page. Some of these fields are unique to student loan withholding orders. As you complete this step, consider:

| Option                                      | Description                                                                                                                                                                                                 |
|---------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Issued In</b>                            | Select the state or authority that issued the order.<br><br><b>Note:</b> Workday always uses the work state to define disposable earnings rules, regardless of the state that issued the withholding order. |
| <b>Deduction Recipient</b>                  | Select the third-party recipient of the withholding deduction. If the deduction recipient isn't set up in Workday, select <b>Create</b> to add the recipient.                                               |
| <b>Originating Entity</b>                   | Agency or court that issued the withholding order.                                                                                                                                                          |
| <b>Department of Education Student Loan</b> | Select the check box for federal student loans.                                                                                                                                                             |
| <b>Memo</b>                                 | For information only. Use this field to document additional details for this IWO.                                                                                                                           |

**Record a Support Order (USA)****Context**

Record a support order or support order (lump sum) to begin automatic deductions during payroll processing.

**Steps**

1. Access the **Record US Withholding Order for Worker** task.
2. Enter the **Worker** name and select the *Support Order (USA)* or *Support Order (Lump Sum) (USA)* **Order Type**.  
For a non-lump sum order, confirm that the **Original Order** check box is selected.  
Workday dynamically displays the fields required for this type of withholding order.
3. Complete the **Order Info** fields on the right side of the page. Some of these fields are unique to support orders. As you complete this step, consider:

| Option                                 | Description                                                                                                                                                                                                                                                                                                                                                                |
|----------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Issued In</b>                       | Select the state that issued the order.                                                                                                                                                                                                                                                                                                                                    |
| <b>Override Withholding Order Rule</b> | Use this field to override the Workday default tax authority and rule for an individual employee. Workday calculates these withholding order deduction criteria based on that rule: <ul style="list-style-type: none"> <li>• Deduction priority.</li> <li>• Disposable earnings.</li> <li>• Frequency conversion factor.</li> <li>• Maximum amount to withhold.</li> </ul> |
| <b>Payroll Tax Authority Used</b>      | Displays the Workday-assigned Payroll Tax Authority.                                                                                                                                                                                                                                                                                                                       |
| <b>County FIPS Code</b>                | Used in processing electronic income withholding orders (eIWOS).                                                                                                                                                                                                                                                                                                           |
| <b>Deduction Recipient</b>             | Select the third-party recipient of the withholding deduction. If the deduction recipient isn't set up in Workday, select <b>Create</b> to add the recipient.                                                                                                                                                                                                              |
| <b>Originating Entity</b>              | Agency or court that issued the withholding order.                                                                                                                                                                                                                                                                                                                         |
| <b>Custodial Party Name</b>            | Enter the name of the person who has custody of the children, as shown on the order.                                                                                                                                                                                                                                                                                       |
| <b>Remittance ID Override</b>          | Enter if the remittance ID differs from the case number.                                                                                                                                                                                                                                                                                                                   |
| <b>Support Second Family</b>           | Workday uses this field to define disposable earnings limits.                                                                                                                                                                                                                                                                                                              |

| Option      | Description                                                                       |

### Record a Wage Assignment Withholding Order (USA)

#### Context

Record a wage assignment withholding order to begin automatic deductions during payroll processing.

#### Steps

- Access the **Record US Withholding Order for Worker** task.
- Enter the **Worker** name and select the *Wage Assignment (USA)* **Order Type**.  
Workday dynamically displays the fields required for this type of withholding order.
- Complete the **Order Info** fields on the right side of the page. Some of these fields are unique to wage assignment withholding orders. As you complete this step, consider:

| Option                                 | Description                                                                                                                                                                                                                                                                                                                                                        |
|----------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Issued In</b>                       | Select the state that issued the order.                                                                                                                                                                                                                                                                                                                            |
| <b>Override Withholding Order Rule</b> | Use this field to override the Workday default tax authority and rule for an individual employee. Workday calculates these withholding order deduction criteria based on that rule: <ul style="list-style-type: none"> <li>Deduction priority.</li> <li>Disposable earnings.</li> <li>Frequency conversion factor.</li> <li>Maximum amount to withhold.</li> </ul> |
| <b>Payroll Tax Authority Used</b>      | Displays the Workday-assigned Payroll Tax Authority.                                                                                                                                                                                                                                                                                                               |
| <b>Deduction Recipient</b>             | Select the third-party recipient of the withholding deduction. If the deduction recipient isn't set up in Workday, select <b>Create</b> to add the recipient.                                                                                                                                                                                                      |
| <b>Regulated Loan</b>                  | Applies only to Minnesota wage assignments.                                                                                                                                                                                                                                                                                                                        |
| <b>Head of Household</b>               | Applies only to Nebraska.                                                                                                                                                                                                                                                                                                                                          |
| <b>Married</b>                         | Applies only to Ohio.                                                                                                                                                                                                                                                                                                                                              |

| Option      | Description                                                                       |
|-------------|-----------------------------------------------------------------------------------|
| <b>Memo</b> | For information only. Use this field to document additional details for this IWO. |

4. On the **Attachments** tab, select relevant attachments.

## Override Withholding Order Rule (USA)

#### Prerequisites

Security: *Setup: Payroll (Income Withholding Orders)* domain in the USA Payroll functional area.

#### Context

If you want to change the IWO rule for only 1 IWO, use 1 of these methods:

- When initially recording the IWO, select the desired rule in the **Override Withholding Order Rule** field.
- For an existing IWO, take the related action **Withholding Order > Edit**, then select the desired rule in the **Override Withholding Order Rule** field.

#### Steps

1. Access the **Edit Override Withholding Order Setup** task.
2. Select the **Payroll Tax Authority** and **Order Type**.
3. Select the **Start Date** and **Withholding Order Rule**.  
You can't back-date the **Start Date**.
4. Review existing IWOs in the state of this type to ensure the rules that you have set up are correct.

#### Result

Workday applies the rule to all IWOs of that type for that tax authority.

#### Example

Workday automatically applies the **Work State** rule to all creditor garnishments. Midperiod, the payroll administrator changes the withholding order rule for all creditor garnishments in the state of Pennsylvania to **Issued State**. As of the specified **Start Date**, when processing payroll for Pennsylvania, Workday applies the **Issued State** rule to all creditor garnishments in Pennsylvania.

#### Next Steps

You can use the **All Payroll Withholding Order Data** report to review the IWO rule Workday automatically assigns to each withholding order type.

You can use the **View Override Withholding Order Setup** report to review or edit the rules and pay components entered on the **Edit Override Withholding Order Setup** task.

[Concept: Override Withholding Order Rule \(USA\)](#) on page 1265

## Electronic Income Withholding Orders (USA)

### Steps: Set Up Electronic Income Withholding Orders (USA)

#### Prerequisites

Complete and submit a profile application to the Office of Child Support Services (OCSS) to register to participate in the system-to-system eIWO program.

Security:

- *Process: Payroll (Income Withholding Orders) - USA* domain in the USA Payroll functional area.
- *Security Configuration* domain in the System functional area.

#### Context

Effective 2015-10-01, all U.S. states and territories must electronically transmit child support orders to employers and payroll providers through the federal Office of Child Support Services (OCSS) portal.

#### Steps

1. Verify that your SDU (state disbursement unit) contact information is correct and that the contact is entered correctly as a deduction recipient.
  - Use the **View Deduction Recipient** report to verify existing deduction recipient contact information. Select **Deduction Recipient > Edit** to update any information.
  - Use the **Create Deduction Recipient** report to create missing deduction recipients.
2. Define these frequencies using the **Maintain Frequencies** task:
  - *Annual*
  - *Bi-weekly*
  - *Monthly*
  - *Semi-monthly*
  - *Weekly*
3. (Optional) Disable automatic calculation of the withholding order monthly limit.  
 Workday automatically calculates the withholding order monthly limit by annualizing the order amount and then de-annualizing the amount based on pay period intervals. This can result in under-withholding in some situations, such as workers paid biweekly.  
 To enable manual entries of monthly limits, select the **Disable Automatic Calculation of Monthly Limit** check box in the **US Electronic Withholding Orders** section of the **Edit Tenant Setup - Payroll** task.
4. Set up the inbound and outbound eIWO integrations and test them.
  - a) See [Steps: Set Up Inbound Electronic Income Withholding Order Integration](#).  
 The integration runs on the schedule you set up and imports eIWO files in XML format and as image-ready PDFs from the OSCE portal.
  - b) See [Steps: Set Up Outbound Electronic Income Withholding Order Integration](#).  
 The integration runs on the schedule you set up and sends acknowledgments and notifications to the OSCE portal.

#### Next Steps

After you run the inbound integration, use the **Process Electronic Income Withholding Order (eIWO) Records** task to review, match, accept, and reject support orders by file or batch.

#### Related Information

##### Examples

[Concept: Electronic Income Withholding Order Integrations](#)

## Process Electronic Income Withholding Orders (USA)

### Prerequisites

- Confirm the inbound eIWO integration has produced a file for you to process.
- Security: *Process: Payroll (Income Withholding Orders)* - USA domain in the USA Payroll functional area.

### Context

Workday supports the federally mandated electronic submission of child support orders through the Office of Child Support Enforcement (OCSE) portal. The OCSE portal transmits files daily that contain batches of orders, sorted by company Federal Employer Identification Number (FEIN). Payroll administrators can review, match, accept, and reject eIWOS.

### Steps

1. Access the **Process Electronic Income Withholding Order (e-IWO) Records** task and select the file or batch you want to process.
2. Under **Matching**, review the support orders Workday automatically matched to your employees.  
When determining whether records match your data, Workday searches legal and preferred employee names. Workday assigns accepted status *A* to accepted records.
3. Under **Not Matching**, review the support orders that don't match your data.  
Rejected records are assigned at least 1 **Disposition Reason Code**.

| Issue                                      | Description                                                                                                                                                                                                                                                                                                                                                                                                  |
|--------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Deduction recipient not found or incorrect | <p>Workday displays the deduction recipient's name and address in the <b>Remittance Information</b> section of the full record.</p> <p>When Workday can't find a deduction recipient, it restricts you from submitting this task until you select one. You may need to access the <b>Create Deduction Recipient</b> task to add the deduction recipient. Then return to this task to correct the record.</p> |
| Employee not assigned to a pay group       | <p>Workday rejects the record with the disposition reason code <i>O</i>.</p> <p>To record the order:</p> <ol style="list-style-type: none"> <li>a. Print the PDF record.</li> <li>b. Assign the employee to a pay group.</li> <li>c. Record the support order using the <b>Record Withholding Orders</b> task.</li> </ol>                                                                                    |
| Missing <b>Dependent Date of Birth</b>     | <p>Workday returns 09/09/9999.</p> <p>Use the related action <b>Withholding Order &gt; Edit</b> task to correct the dependent's date of birth after the support order is created.</p>                                                                                                                                                                                                                        |
| Record for contingent worker               | Workday rejects the support order.                                                                                                                                                                                                                                                                                                                                                                           |

| Issue                         | Description                                                                                                                                    |
|-------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------|
|                               | Print the PDF record before processing the batch or file. PDF links are not available after you submit this task.                              |
| Rejected for multiple reasons | <p>Workday rejects the record and displays all disposition reason codes.</p> <p>You can't correct records rejected for more than 1 reason.</p> |

4. Under **Not Matching**, select the **Accept Rejected Detail** check box and correct rejected support orders when possible.

You can correct rejected orders for all disposition reason codes except these:

- D
- O
- X
- Z

Example: An order is listed under **Not Matching** because the employee's name, *Rebecca Harris*, wasn't found in Workday. You know that *Rebecca Harris* is listed in Workday as *Becca Harris*.

- a. Select the check box next to the support order.
- b. Then select the **Employee Name** as it displays in Workday to accept the support order.

## Result

Workday processes accepted support orders the next time you run payroll.

Workday generates acknowledgments of the accepted and rejected support orders for the eIWO outbound integration to transmit. While Workday always retains records of OCSE integration events, we recommend you retain rejected order data for 6 months.

## Next Steps

Run the outbound eIWO integration to send acknowledgments and notifications to the OCSE portal. If an error occurs in the outbound integration file, the OCSE portal sends an acknowledgment results file within 1 day.

## Related Information

### Examples

[Concept: Electronic Income Withholding Order Integrations](#)

[Steps: Set Up Outbound Electronic Income Withholding Order Integration](#)

[Steps: Set Up Inbound Electronic Income Withholding Order Integration](#)

### Concept: Electronic Income Withholding Orders (USA)

Workday supports your compliance with the federally mandated electronic submission of child support orders through the Office of Child Support Enforcement (OCSE) portal. The OCSE portal transmits files daily that contain batches of orders, sorted by company Federal Employer Identification Number (FEIN).

Workday uses 2 integrations to transfer files to and from the OCSE portal:

- *Implement Inbound Electronic Withholding Order Integration*
- *Implement Outbound Electronic Withholding Order Integration*

You can set up Electronic Income Withholding Order (eIWO) integrations to:

- Import eIWOs in XML format or as image-ready PDFs.

- Send confirmation of whether eIWOS are accepted or rejected.
- Send OCSE notifications of the processing statuses of eIWOS.

Workday automatically accepts or rejects eIWO records based on OCSE-established criteria, assigning:

- Accepted records a status of A.
- Rejected records at least 1 disposition reason code.

Payroll administrators can review, match, accept, or reject eIWOS using the **Process Electronic Income Withholding Order (e-IWO) Records** task.

## Amend a Support Order (USA)

### Prerequisites

A support order exists for the employee in Workday and you receive an official amended support order from the agency.

Security: *Worker Data: Payroll (Income Withholding Orders) - USA* domain in USA Payroll functional area.

### Context

Editing a support order and amending a support order are 2 different things. You only amend a support order when you receive an amended order from the agency. When you enter the amended support order details with different dates, Workday automatically inactivates the original order. Workday retains the original order for tracking purposes and creates a new record for the amended order.

**Note:** Dates on amended orders can't be the same as the dates on the original order. Entering the original dates causes calculation errors.

If you need to make a correction, edit the support order instead of amending it. To edit the original support order record, select the related action on the order **Withholding Order > Edit**.

### Steps

1. Access the **Withholding Orders for Worker** report.
2. Select **Withholding Order > Amend/Terminate** from the related actions menu of the support order listed in the **Withholding Order** column.
3. If clear, select the **Amended Order** check box.
4. Enter the issue date of the amended order in the **Order Date** field.
5. Enter the date the amended order becomes effective in the **Begin Date** field.  
The order becomes effective in the first pay period that includes the **Begin Date**.
6. Revise other details of the original order as required.

### Result

As of the order date, the status of the:

- Amended order is set to *Active*.
- Original order changes to *Inactive*.

### Related Information

#### Tasks

[Steps: Set Up Withholding Orders \(USA\)](#) on page 1241

## Terminate a Support Order (USA)

### Prerequisites

Security: *Worker Data: Payroll (Income Withholding Orders)* - USA domain in USA Payroll functional area.

A support order exists for the employee in Workday.

### Context

When you terminate a support order, Workday:

- Inactivates and retains the original order for tracking purposes.
- Creates a new record for the termination order.

### Steps

1. Access the **Withholding Orders for Worker** report.
  - a) Select the related action **Withholding Order > Amend/Terminate** from the related actions menu of the withholding order listed in the **Withholding Order** column.
2. Select the **Termination Order** check box.
3. Enter the issue date of the termination order in the **Order Date** field.
4. Revise other details of the original order as required.

### Result

As of the order date, withholding ends immediately and the status of the:

- Original order is set to *Inactive*.
- Termination order is set to *Complete*.

### Next Steps

To reactivate the original support order, inactivate the termination order: Edit the termination order and select the **Inactive Order** check box.

#### Tasks

[Steps: Set Up Withholding Orders \(USA\)](#) on page 1241

## Copy Withholding Orders for a Worker (USA)

### Prerequisites

- Configure the *Copy Withholding Orders for Worker* business process and security policy in the USA Payroll functional area.
- The employee must have existing relationships with both the **Source Company** and the **Proposed Company**.

### Context

Copy a worker withholding order from 1 company to another when:

- An employee transfers between companies.
- New company relationships were created.

Workday copies IWO deduction history and balances for a worker across companies in these relationships:

- Single Legal Entity
- Successor Employer

When a worker transfers from 1 company to another and no company relationship exists, Workday doesn't copy deduction history or balances or apply limits. In this case, we anticipate that you'll request a new order from the courts.

### Steps

1. From related actions menu of the worker, select **Payroll > Copy Withholding Orders for Worker**.

2. Select the **Effective Date** and the **Source Company**.

If you copy withholding orders after you transfer a worker, enter the transfer date as the effective date. An effective date that is after the transfer date has no orders to copy, because the worker is no longer associated with the source company.

3. Select the **Proposed Company** (the company to which you're copying the orders).

4. Select the withholding orders to copy.

### Result

- Workday copies the withholding orders you selected into the proposed company. Workday copies all the rows of amended withholding orders, including inactive rows.
- The copied withholding order displays the case number that it's **Copied From** and the **Copied From Date**.

### Next Steps

View withholding orders for a worker in the **Pay** section of their worker profile.

If you update an original withholding order that has already been copied, Workday doesn't update the copy.

### Related Information

#### Tasks

[Steps: Prepare and Load Payroll History](#) on page 190

## Copy Withholding Orders for Multiple Workers (USA)

### Prerequisites

- Ensure that transferring employees have existing relationships with both the Source Company and the Proposed Company.
- Configure the *Copy Withholding Orders for Workers* business process and security policy in the USA Payroll functional area.

### Context

Workday doesn't copy:

- Fully paid debt orders (except for federal tax levy).
- Inactive orders.
- Orders for which the end date has passed (except for Federal, Arizona, Kentucky, and Virginia tax levies).

You can copy:

- A withholding order from 1 company to another company only once.
- The same withholding order from 1 company to multiple companies.
- Withholding orders for workers from 1 company to another when:
  - Employees transfer between companies.
  - You create new company relationships.

For the *Copy Withholding Order for Worker* business process, reviewers can:

- Approve
- Deny
- Cancel
- Rescind

Reviewers can only rescind subprocesses of the business process.

You can't rescind copied orders with an *In Progress* or *Completed* payroll status.

### Steps

1. Access the **Copy Withholding Orders for Workers** task.

2. Enter the **Effective Date** and the **Source Company**.

When you copy withholding orders after workers transfer, enter the transfer date as the effective date. An effective date that is after the transfer date has no orders to copy, because the worker is no longer associated with the source company.

3. Select **All Workers** or enter more than 1 worker.

4. From the **Withholding Order Type** prompt, select 1 or more withholding order types when there's no successor employer relationship. When a successor employer relationship exists, Workday automatically populates the withholding order types from the setup on the **Successor Employer Company Relationship** task. You can't add or delete them.

### Result

Workday copies:

- Withholding orders to the Proposed Company for relevant workers who have them. The copied withholding orders retain links to the originals.
- All the rows of amended withholding orders, including inactive rows.
- All corresponding amendments and terminations for support orders, including those terminated before the effective date of the support order.

### Next Steps

To view withholding order deductions in detail, including the amounts deducted for the withholding order you copied from, select **Withholding Order > View Deduction History** from the related actions menu of the withholding order.

### Related Information

#### Tasks

[Steps: Prepare and Load Payroll History](#) on page 190

[Create or Edit a Successor Employer \(USA\)](#) on page 1228

#### Examples

[Concept: Business Processes](#)

[Reference: Actions Available on Business Processes](#)

## Concept: Withholding Orders (USA)

### Income Withholding Order (IWO) Types

Workday provides rules for processing these types of income withholding orders (IWOs):

- Bankruptcy
- Creditor Garnishment
- Federal Administrative Wage Garnishment
- Federal Student Loan
- Federal Tax Levy
- State Tax Levy

- Support Order (including Lump Sum)
- Wage Assignment

## How Workday Calculates IWO Deductions

Based on state and federal rules, Workday:

- Determines the amount to withhold from disposable earnings, including any agency and employer fees.
- Applies the withholding limit.
- Sets garnishment priorities.
- Follows statutory rules to determine what to withhold for each order when:
  - An employee has multiple orders.
  - The amount to withhold exceeds the limit.

Workday automatically assigns the payroll tax authority. The withholding order calculation is based on these tax authority-defined criteria:

- Deduction priority.
- Disposable earnings.
- Frequency conversion factor.
- Limits.
- Maximum amount to withhold.

These criteria for all states are listed on the **View Payroll Withholding Order Data** report. This report displays the withholding order rule used for each IWO type.

## IWO Allocation Methods

Workday assigns the allocation method to the IWO based on the state rules for the IWO type. The allocation method specifies the allocation priority for workers with multiple IWOs. You can view the allocation types and the priority order of each on the **View Payroll Withholding Order Data Allocation** report. However, this report doesn't provide the context of state IWO calculation rules. To troubleshoot the allocation calculation with the context of the IWO calculation rules that Workday maintains, access the **View Payroll Withholding Order Data** report.

## Override Withholding Order Setup

You can override the assigned payroll tax authority for these U.S. IWO types:

- Creditor Garnishment
- State Tax Levy
- Support Order
- Wage Assignment

For details, see the topic *Override Withholding Order Rule (USA)*.

## IWO Priority

IWO priority indicates which IWO Workday processes first when a worker has multiple IWOs.

Workday delivers these IWO priorities, with the lower numbers indicating higher priority:

- 200 - Support
- 201 - Lump Sum
- 300 - Bankruptcy
- 400 - Federal Tax Levy
- 500 - Creditor Garnishment
- 500 - Federal Administrative Wage Assignment
- 500 - State Tax Levy
- 500 - Student Loan
- 600 - Wage Assignment

You can override the delivered withholding order priorities using the **Withholding Order > Override Priority** related action on the withholding order.

You can override the priority order assigned to any order type except support orders. See the topic *Override Withholding Order Priority*.

## View IWOs

You can view active and past withholding orders in the **Pay > Withholding Orders** tab on the worker profile. Workers can't view their withholding orders.

You can upload the official copy of the withholding order when creating or editing the IWO in Workday, from the attachments tab.

Workday doesn't keep a record of deleted IWOs.

## Create a Payment for IWOs

You can use the payroll third-party payments feature to pay and settle IWOs. For more information, see: [Create a Payment for an Income Withholding Order](#).

[Create a Payment for an Income Withholding Order or Court Order](#) on page 735

## Concept: Override Withholding Order Rule (USA)

### Withholding Order Processing Rules

Income withholding order (IWO) deductions are based on rules established by one of these governing tax authorities:

- Federal.
- Issued state.
- Work state.
- Resident state.

IWO calculation and processing criteria controlled by the rules includes:

- Deduction priority.

- Disposable earnings.
- Frequency conversion factor.
- Maximum amount to withhold.

Workday automatically assigns the payroll tax authority and applies the rules accordingly.

### Types of Withholding Order Rules

| Withholding Order Rule                                        | Description                                                                                                                              |
|---------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Federal</b>                                                | Uses the rules established by the federal government for each withholding order type.                                                    |
| <b>Issued State</b>                                           | Uses the rules established by the <b>Issued State</b> which is entered on the <b>Record US Withholding Order for Worker</b> task.        |
| <b>Work State</b>                                             | Uses the rules established by the <b>Work State</b> , which is defined in the employee's <b>Work Contact Information</b> .               |
| <b>Resident State</b><br>(Available only at the worker level) | Uses the rules established by the employee's <b>Resident State</b> , which is defined in <b>Home Contact Information</b> for the worker. |

### Overriding the Withholding Order Rule

You can override the assigned rule for these IWO types:

- Creditor garnishment.
- State tax levy.
- Support order (including Lump Sum).
- Wage assignment.

You can override the withholding order rule at the state or worker level for specific withholding order types:

| State-Level Override | Worker-Level Override                 |
|----------------------|---------------------------------------|
| Creditor Garnishment | Creditor Garnishment                  |
| State Tax Levy       | State Tax Levy                        |
| Wage Assignment      | Support Order<br>(including Lump Sum) |

| State-Level Override | Worker-Level Override |
|----------------------|-----------------------|
|                      | Wage Assignment       |

### Methods Used to Override a Withholding Order Rule

| Rule Override Method                                        | How to Override                                                                                                                                                                        | Result                                                                                                                                                                                                                                                                                         |
|-------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| For a single IWO for a worker                               | When initially recording the IWO, select the desired rule in the <b>Override Withholding Order Rule</b> field.<br><br>Or, edit an existing IWO to override the withholding order rule. | The rule applies only to the modified IWO.                                                                                                                                                                                                                                                     |
| For all IWOs of a specified type for a single tax authority | Access the <b>Edit Override Withholding Order Setup</b> task and select the desired rule in the <b>Withholding Order Rule</b> field.                                                   | You change the rule for all IWOs of that type in the tax authority.<br><br><b>Note:</b> Use this task with caution. Using this method changes the rule for all IWOs of that type in the tax authority. Review existing IWOs in the state to ensure the rules that you have set up are correct. |

### Rule Override Hierarchy

Workday uses this hierarchy for rule overrides:

| Override Level      | Hierarchy                                                                                  |
|---------------------|--------------------------------------------------------------------------------------------|
| Administrator-Level | Overrides the Workday-delivered rule.                                                      |
| Worker-Level        | Overrides the: <ul style="list-style-type: none"> <li>• Workday-delivered rule.</li> </ul> |

| Override Level | Hierarchy                                                                       |
|----------------|---------------------------------------------------------------------------------|
|                | <ul style="list-style-type: none"> <li>Administrator-level override.</li> </ul> |

## Withholding Order Reports

You can use these reports to review IWO data:

| Report                                       | Description                                                                                                   |
|----------------------------------------------|---------------------------------------------------------------------------------------------------------------|
| <b>All Payroll Withholding Order Data</b>    | Review the IWO rule Workday automatically assigns to each withholding order type.                             |
| <b>View Override Withholding Order Setup</b> | Review or edit the rules and pay components entered on the <b>Edit Override Withholding Order Setup</b> task. |

## FAQ: Withholding Orders (USA)

The questions in this topic are applicable only to Payroll for the U.S. To view withholding order FAQs for Payroll for Canada or France, see:

- [FAQ: Withholding Orders \(CAN\)](#)
- [FAQ: Withholding Orders \(FRA\)](#)

### What happens if an employee doesn't have enough wages to cover a withholding payment?

Workday follows statutory rules to determine what to withhold for each order. You can override the priority defaults for most order types.

### Can I purge withholding order data?

You can purge all withholding order attachments for any type of worker with the **Purge Person Data** task.

### How can I find out what limits Workday sets for a type of withholding order?

Access the **All Payroll Withholding Order Data** report and filter on the **Payroll Tax Authority** and **Pay Component**.

To ensure that Workday doesn't exceed limits, Workday aggregates withholding order amounts.

### How can I tell what allocation method Workday uses when calculating withholding order data for certain states?

Depending on the tax authority and the withholding order type, access the **All Payroll Withholding Order Data** report to get the calculation information. You can review calculation information such as allocation method, max amount to withhold, and fee limits.

### How can I see a detailed list of withholding orders for workers?

You can access the **USA Withholding Order Results for Workers** report. The report:

- Displays employees with any type of U.S. IWO deductions in payroll result lines.
- Makes it easier for you to audit IWO results.

#### How do I stop withholding for a federal tax levy?

Access the withholding order and enter the **Termination Date** from Form 668-D. Entering a termination date is the only way to stop withholding for a federal tax levy.

#### How can I prevent Workday from deducting amount-based withholding orders from on-demand payments?

Access the **Edit Run Category** task. On the **Off-Cycle (On Demand Additional, Manual)** tab, add the withholding order type in the **Pay Components to Calculate** column. In the **Processing Criteria** column, select *Only Include Percentage Type Withholding Order*.

You can prevent Workday from deducting percent-based withholding orders by selecting *Only Include Amount Type Withholding Order*.

#### Example: Calculate AD&D with Sales Tax (CAN)

This example illustrates 1 way to define an AD&D plan where there's no cost to the employee but the benefit is taxable to the employee.

#### Context

The company offers and pays the premiums for accidental death and dismemberment (AD&D) insurance for its employees. The company has offices in, and employs people from, many different provinces including Quebec.

Configure an employer-paid deduction for which the employer taxes employees on imputed income.

### Prerequisites

- Set up sales taxes that apply to the company and provinces.
- Define an AD&D benefit plan.
- Security:
  - *Set Up: Payroll - Company Specific (Taxes) - CAN* domain in the CAN Payroll functional area.
  - *Set Up: Payroll (Calculations - Payroll Specific)* domain in the Core Payroll functional area.

### Steps

1. Access the **Create Deduction** task.
2. Enter these settings:

| Option         | Description                                                                             |
|----------------|-----------------------------------------------------------------------------------------|
| <b>Name</b>    | AD&D - Employer Paid [CAN]                                                              |
| <b>Code</b>    | AD&D_ER                                                                                 |
| <b>Country</b> | Canada<br><br>In order for the calculation to work, you must flag it for use in Canada. |

3. Enter these settings on the **Effective Dated** tab:

| Option                     | Description                                                                                                                                                                                                                                                                |
|----------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Effective Date</b>      | Current date                                                                                                                                                                                                                                                               |

### Result

Workday calculates the *AD&D - Employer Paid [CAN]* deduction for eligible workers and displays this amount on worker pay results as imputed income for provincial and federal taxation.

#### Tasks

Steps: [Create Deductions](#) on page 227

## Example: Calculate Manitoba Retail Sales Tax on Employer-Paid Premiums (CAN)

This example illustrates 1 way to create a deduction that calculates the Manitoba Retail Sales Tax (RST) based on the worker's province of residence.

### Context

Jon's company calculates sales taxes on employer-paid insurance premiums for the employee payroll deductions. Jon's company employs workers from all over Canada, including Manitoba. For employer-paid premiums, Manitoba RST is based on the province of residence, while Quebec and Ontario sales tax is based on the province of employment. As a result, Jon needs to define 2 separate deductions:

- 1 that calculates the Manitoba RST for Manitoba resident employees.
- 1 that calculates sales tax based on province of employment for employees who aren't residents of Manitoba.

### Prerequisites

- Add the *Manitoba Retail Sales Insurance Premium Tax (MBRST) [CAN]* deduction to Manitoba's tax setup.
- Add the *Manitoba Retail Sales Insurance Premium Tax (MBRST) [CAN]* deduction to your account posting rule set.

- Security:
  - *Set Up: Payroll - Company Specific (Taxes) - CAN* domain in the CAN Payroll functional area.
  - *Set Up: Payroll (Calculations - Payroll Specific)* domain in the Core Payroll functional area.

## Steps

1. Create the deduction that calculates the Manitoba RST for Manitoba residents.

- a. Access the **Effective Dated** tab on the **Create Deduction** task.
- b. Select *Canada* for **Country**.
- c. In the **Criteria** section, select:

| Field                     | Setting                                                                       |
|---------------------------|-------------------------------------------------------------------------------|
| <b>Worker Eligibility</b> | <i>Worker (CAN): Resident Province = Manitoba (as of Sub Period End Date)</i> |

- d. In the **Calculation Details** section, select:

## Tax Setup (CAN)

### Steps: Set Up Payroll Taxes (CAN)

#### Context

Workday provides tax data and deductions for processing federal and provincial payroll taxes according to Canadian tax authorities. Enter the company and worker-specific tax data.

#### Steps

1. [Set Up Company Tax ID \(CAN\)](#) on page 1274 .
2. [Set Up Company Federal Taxes \(CAN\)](#) on page 1276.
3. [Set Up Company Province and Territory Taxes \(CAN\)](#) on page 1280.

4. [Set Up Province Payroll Tax for Northwest Territories and Nunavut \(CAN\)](#) on page 1285.
5. [Exempt Workers in Northwest Territories and Nunavut from the Province Payroll Tax \(CAN\)](#) on page 1286.
6. (Optional) Set up Workday to calculate taxes for nonresident workers and retirees who are earning income amounts for specified services performed in Canada.  
See [Set Up Nonresident Tax Treaty Withholding \(CAN\)](#) on page 1295.
7. Set up a pay component group to either exclude or include pay components for a tax authority.  
See [Define Tax Authority Exceptions from Pay Component Groups \(USA\)](#) on page 1137.
8. [Steps: Set Up Workers Compensation \(CAN\)](#) on page 1287.
9. [Steps: Set Up RPP and DPSP Registration Number Configuration](#) on page 1291.
10. Add worker tax elections or enable workers to add their own tax elections.  
See [Add Worker Federal Tax Elections \(CAN\)](#) on page 1308.

### Next Steps

You can use these reports and the web service when you outsource tax filing to a third party:

- **Workers Compensation Summary** report.
- **Workers Compensation Summary by Company** report.
- **Provincial Employee Payroll Tax Summary** report.
- **Tax Remittance Summary** report.
- *Get Periodic Company CAN Tax Remittance Data* web service. This web service doesn't support custom tax deductions.

## Set Up Company Tax ID (CAN)

### Prerequisites

Security:

- *Set Up: Payroll - Company Specific (Accounting)* domain in the Core Payroll functional area.
- *Set Up: Company General* domain in the Common Financial Management functional area.

### Context

Record tax ID numbers for a company.

### Steps

1. Access the **Edit Company Tax Details** task.
2. (Optional) On the **VAT on Payment** tab, for financial transactions, select **VAT on Payment** to record Value Added Tax (VAT) on payments instead of invoices.  
For financial transactions, if you use **VAT on Payment**, select the **Default Tax Applicability** and **Default Tax Code**.

3. On the **Tax IDs** tab, in the **Tax IDs** grid, add information for each country for which the company processes payments.

| Field                          | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|--------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Country for Tax ID Type</b> | The prompt displays only the countries with Workday-delivered tax ID types.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| <b>Tax ID Type</b>             | <i>Business Number</i><br><i>Non-Resident Tax Account</i>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| <b>Identification #</b>        | Enter the ID number for the selected tax ID type.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| <b>Transaction Tax ID</b>      | <p>Select this check box to include this identification number on financial transactions, like customer invoices and purchase orders.</p> <p>If you don't select <b>Transaction Tax ID</b> for any of the identification numbers you configure, financial transactions report the <b>Primary Tax ID</b>.</p> <p>Example: You configure 2 Tax IDs for your company. You select <b>Transaction Tax ID</b> for 1 of them. Workday includes that tax ID as the Transaction Tax ID on any invoices and purchase orders you generate for that company.</p>                           |
| <b>Primary Tax ID</b>          | <p>Select to indicate this identification number as the Primary Tax ID for your business entity. If you didn't select <b>Transaction Tax ID</b> for any of the identification numbers you configured, Workday finds and uses the Primary Tax ID.</p> <p>If you configured neither a Transaction Tax ID nor a Primary Tax ID for the business entity, financial transactions don't use tax ID, except for customer invoices where you selected <b>Transaction Tax ID Required</b>. You're unable to complete the customer invoice without configuring a Transaction Tax ID.</p> |

### Example

The Blake Company uses Workday Payroll for the U.S. to pay U.S. employees through their corporate office in the United States. Their branch office in Toronto uses Workday Payroll for Canada to process payroll for Canadian employees. They can also process payments to their non-resident workers. Enter this tax ID information:

| Country                         | Tax ID Type                            | Identification #  |
|---------------------------------|----------------------------------------|-------------------|
| <i>Canada</i>                   | <i>Business Number</i>                 | <i>123456789</i>  |
| <i>Canada</i>                   | <i>Non-Resident Tax Account Number</i> | <i>NR1234567</i>  |
| <i>United States of America</i> | <i>Employer ID Number</i>              | <i>98-7654321</i> |
| <i>United States of America</i> | <i>Transmitter Control Code</i>        | <i>56565</i>      |

**Related Information****Tasks**

[Set Up Company Federal Taxes \(CAN\)](#) on page 1276

**Set Up Company Federal Taxes (CAN)****Prerequisites**

- In Workday, record the business number (federal tax ID).
- If applicable, record the non-resident tax account number of the company in Workday.
- Security: *Set Up: Payroll - Company Specific (Taxes) - CAN* domain in the CAN Payroll functional area.

**Context**

Enter company-specific data for calculating and reporting federal payroll taxes. Workday provides and maintains federal tax data for payroll tax processing.

**Steps**

1. Access the **Edit Company Federal CAN Tax Reporting** task for the company.
2. Access the **Federal** tab.
3. In the **Reference Number Criteria Assignment** section, define criteria for assigning payroll account numbers to workers.

| Option                             | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Reference Number</b>            | The last 4 digits of the payroll account number assigned to a worker. This number determines the rate Workday uses to calculate their employment insurance. Employees subject to different reduced employment insurance rates require separate reference numbers. Workday recommends creating a default reference for employees subject to the premium rate.                                                                                                   |
| <b>Default</b>                     | The reference number for workers who don't meet any predefined criteria. Typically, you assign this reference number to employees who aren't eligible for a reduced employment insurance rate.                                                                                                                                                                                                                                                                 |
| <b>Worker Criteria Assignment</b>  | <p>Criteria that workers must meet for Workday to assign the reference number.</p> <ul style="list-style-type: none"> <li>• Select 1 or more eligibility that defines the criteria.</li> <li>• Workers must meet all criteria defined in the same row.</li> <li>• Don't enter criteria for the default reference number.</li> </ul> <p>During the pay calculation process, workers must meet the criteria on the end date of the period you're processing.</p> |
| <b>Payroll Account Description</b> | Enter an explanation for a worker having multiple year-end forms for the same company, tax year, and province. Example: 1 for part time and 1 for                                                                                                                                                                                                                                                                                                              |

| Option | Description                                                                 |
|--------|-----------------------------------------------------------------------------|
|        | full time. This explanation displays on the worker's Employee Self Service. |

4. In the **EI Reduced Rates** section, identify the reference numbers for employees subject to a reduced employment insurance rate and enter the **Reduced Rate**.

The reduced rate applies to all workers across Canada, including workers in Quebec.

5. In the **Bonus Tax Method** section, select the *Regular Bonus Tax Method* or the *YTD Bonus Tax Method*.

To calculate the bonus tax using the:

- *Regular Bonus Tax Method*, Workday determines the annual taxable income by multiplying the current periodic taxable wages by the number of pay periods in the year.
- *YTD Bonus Tax Method*, Workday determines the annual taxable income by multiplying the current periodic taxable wages by the number of remaining pay periods in the year and adding the year to date taxable income.

To calculate taxes for a bonus paid out separately from wages, Workday looks for the most recent, completed payroll result with a pay period before the current payroll result to determine the periodic taxable wages to use in the annual taxable income calculation.

Workday uses the **Annual Taxable Wages for Bonus Calculation** field on the Federal Income Tax (FIT) pay component to report on annual taxable income and bonus values, and determine the tax calculation to use on an in progress or completed bonus payment. On the FIT pay component, the field displays a worker's annual periodic wages and bonus year-to-date (YTD) wages, excluding any current bonus for FIT.

Workday defaults to the Regular Bonus Tax method when you don't select an option.

6. In the **Optional CPP Coverage (CPT124)** grid, enter the **Start Date** and select the **Enable Coverage** check box. This is applicable if you're an employer and have filed a CPT-124 form with CRA. When enabled, CPP resolves, enabling you to deduct and remit.
7. Access the **Record of Employment** tab.
8. In the **Default ROE Information** section, configure ROE information for the payroll reference numbers:

| Option                             | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Issuer Contact Name</b>         | The person responsible for ensuring the accuracy of the information reported in the ROE, typically a payroll partner.                                                                                                                                                                                                                                                                                                                                                                                                          |
| <b>Reason Contact Name</b>         | The person who can explain the reason for issuing an ROE, typically an HR analyst. The phone number must be in this format to comply with Service Canada guidelines: (000) 000-0000. If the phone number is incorrect for the worker, access the <b>Change Contact Information</b> report and edit the primary work phone number.<br><br>You can also enter a generic contact as <b>Text Input</b> . Example: You input Payroll Department so that a team, instead of an individual worker, handles calls from Service Canada. |
| <b>Reason Contact Phone Number</b> | The phone number must be in this format to comply with Service Canada guidelines: (000) 000-0000. To ensure that the phone number formatting matches Service Canada guidelines, add the appropriate countries in the <b>Allowed</b>                                                                                                                                                                                                                                                                                            |

| Option                       | Description                                                                                                                                                                                                                                                                                                                                    |
|------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                              | <b>Phone Validations</b> prompt on the <b>Edit Tenant Setup – Global</b> task.                                                                                                                                                                                                                                                                 |
| <b>Default Payment Dates</b> | (Optional) Enables Workday to populate the ROE <b>Payment Start Date</b> and <b>Payment End Date</b> . On the ROE, these are: <ul style="list-style-type: none"> <li>Block 17 - Separation payments</li> <li>Block 19 - Paid sick/maternity/parental/compassionate care/Family Caregiver leave or group wage loss indemnity payment</li> </ul> |
| <b>Organization Number</b>   | (Optional) Enables Workday to populate the ROE with the organization identifying number that you created on the Service Canada ROE website.                                                                                                                                                                                                    |
| <b>Folder CD</b>             | (Optional) Enables Workday to populate the ROE with the folder for submitting your ROE outbound file that you created on the Service Canada ROE website.                                                                                                                                                                                       |

When you create ROE data, you can see the results of these settings on the **View Payroll ROE Data** report.

9. (Optional) In the **Override ROE Contact Information** section, override the ROE contact information by location for a company reference number:

| Option                     | Description                                                                                                                                                                                                                                                                                                                                                                                                                                |
|----------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Reference Number</b>    | Configure a payroll reference number on the <b>Default ROE Information</b> grid in order to select it here.                                                                                                                                                                                                                                                                                                                                |
| <b>Location</b>            | Select the location you'd like to override ROE contact information for. You can select from active locations that have <i>Business Site</i> as a location usage.                                                                                                                                                                                                                                                                           |
| <b>Preferred Language</b>  | Select the language you'd like Service Canada to use when contacting the reason contact for the location.<br><br>Workday uses the default ROE preferred language on the ROE when the location you selected is inactive when creating the ROE.<br><br>Example: For Quebec, you select French (Canada).                                                                                                                                      |
| <b>Reason Contact Name</b> | Select a worker or enter custom text input as the overriding ROE reason contact for the location.<br><br>The phone number must be in this format to comply with Service Canada guidelines: (000) 000-0000. If the phone number is missing or incorrect for the worker, access the <b>Change Contact Information</b> report and edit the primary work phone number.<br><br>Workday uses the default ROE reason contact on the ROE when the: |

| Option                             | Description                                                                                                                                                                                                                                                                                                               |
|------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                    | <ul style="list-style-type: none"> <li>Location you selected is inactive when creating the ROE.</li> <li>Worker assigned as the overriding ROE reason contact is on leave-of-absence or terminated.</li> </ul>                                                                                                            |
| <b>Reason Contact Phone Number</b> | <p>The phone number must be in this format to comply with Service Canada guidelines: (000) 000-0000.</p> <p>To ensure that the phone number formatting matches Service Canada guidelines, add the appropriate countries in the <b>Allowed Phone Validations</b> prompt on the <b>Edit Tenant Setup – Global</b> task.</p> |

10. Access the **Year End** tab.

11. In the **Contact Information - Address** section, select the address printed on your payroll tax remittance (required for ROEs and T4 reporting).

For each reference number, specify **Use Primary Company Address** or **Use Location Address**.

12. In the **Year End Tax Form Configuration - T4 / T4A** section, configure your year-end tax T4 and T4A form data:

| Option                                                                                              | Description                                                                                                                                                                                                                                            |
|-----------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Create T4 with Box 14 Less than \$500</b><br><b>Create T4A with Total Income Less than \$500</b> | Select these check boxes to override Canada Revenue Agency's tax form thresholds for amounts less than 500 CAD.                                                                                                                                        |
| <b>Default T4A Employee ID Number</b>                                                               | <p>To include a worker's employee number on the T4A slip, check this to map it.</p> <p>To submit year-end tax filings using the CRA T4A integration, enable for each company. Workday will then report the Employee ID in Box 014 on the T4A form.</p> |
| <b>Employer Name Override</b>                                                                       | If the employer name and the legal company name are different, enter the employer name. Add a row for each payroll <b>Reference Number</b> .                                                                                                           |

13. In the **Year End Tax Form Configuration - NR4** section, configure your year-end tax NR4 form data:

| Option                                                    | Description                                                                                                             |
|-----------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------|
| <b>Non-Resident Account Number</b>                        | The <i>Non-Resident Tax Account</i> number you configured in the <b>Edit Company Tax Details</b> task.                  |
| <b>Default NR4 Employee ID Number</b>                     | Enable and Workday will include the Employee ID in the Payer or agent identification number box on the NR4 form.        |
| <b>Use Primary Company Address / Use Location Address</b> | For each reference number, specify whether you want to use the primary company address or the company location address. |
| <b>Location</b>                                           | Workday will use the address of the location you select when you select <b>Use Location Address</b> .                   |

## Next Steps

- Enter provincial tax reporting elections for each company.
- To view a summary of the company federal and provincial tax elections, including a history of elections that have ended, access the **Company CAN Tax Reporting** report.

## Set Up Company Province and Territory Taxes (CAN)

### Prerequisites

- Define workers compensation codes.
- Record the company business number (federal tax ID) in Workday.
- Set up federal tax reporting elections for the company.
- Security: *Set Up: Payroll - Company Specific (Taxes) - CAN* domain in the CAN Payroll functional area.

### Context

Enter company-specific data for calculating and reporting workers compensation, sales tax, and other employer-paid provincial taxes.

Workday uses this data to generate reports. These reports have the tax amounts, subject wages, and other figures you must report to tax authorities as part of your tax filing.

Start dates control when tax elections go into effect in Workday. When a tax election changes, enter an **End Date** for the election that is no longer in effect. Then add a row for the new **Start Date** and all information for the new election. When calculating payroll, Workday applies the tax elections in effect on the worker's payment date.

### Steps

1. Access the **Edit Company Province CAN Tax Reporting** task.

2. Select the **Company** and **Province**.

Tabs and sections displayed vary by province.

3. Enter information for employer-paid income taxes on the **Province** tab.

**Note:** The provincial education and health taxes exclude TD1-IN exempt wages.

The **Province** tab displays for these provinces:

[Set Up Province Payroll Tax for Northwest Territories and Nunavut \(CAN\)](#) on page 1285

[Steps: Set Up Payroll Taxes \(CAN\)](#) on page 1273

[Steps: Set Up Workers Compensation \(CAN\)](#) on page 1287

## Set Up Province Payroll Tax for Northwest Territories and Nunavut (CAN)

### Prerequisites

For positions in Northwest Territories or Nunavut, confirm worker locations and location contact information:

- From the worker profile, select **Job > Job Details**.
- From the **Job Details** tab, select the province or territory in the **Location** field.

Security:

- *Set Up: Payroll (Calculations - Payroll Specific) domain in the Core Payroll functional area.*
- *Set Up: Payroll - Company Specific (Taxes) - CAN domain in the CAN Payroll functional area.*

### Context

Set up these employee tax deductions for employees working in Northwest Territories or Nunavut:

- *NT: Province Payroll Tax*
- *NU: Province Payroll Tax*

These deductions use the *Province Location (CAN)* calculation worktag and apply the location based on the pay period end date.

**Note:** Workday only supports the Province Payroll Tax for the payroll processing position. Workday doesn't support the more than 50 rule for workers who work more than 50% of their time in one of these territories. It is your responsibility to ensure that you tax affected workers at the correct rate.

### Steps

1. Access the **Edit Company Province CAN Tax Reporting** task.

On the **Other** tab, add the **Start Date** and **Account Number** for each company with employees in Northwest Territories or Nunavut. If the **Other** tab doesn't display, verify that you have the location set up for at least 1 employee working in Northwest Territories or Nunavut.

2. Access the **Edit Earning** task for the income of employees working in Northwest Territories and Nunavut and select the applicable earning.

On the **Non Effective Dated** tab, add *Northwest Territories Payroll Tax Taxable [CAN]* and *Nunavut Payroll Tax Taxable [CAN]* in the **Groups** field.

### Result

Payroll results for eligible workers display the *NT: Province Payroll Tax [CAN]* or *NU: Province Payroll Tax [CAN]* tax deduction on the **Gross to Net** tab in the **Taxes** section.

These reports are available for *NT: Province Payroll Tax [CAN]* and *NU: Province Payroll Tax [CAN]*:

- **Provincial Employee Payroll Tax Summary:** Displays an aggregation of:
  - Earnings.
  - Total earnings.
  - Taxable earnings.
  - Tax amount by account number.
- **Provincial Employee Payroll Tax Details:** Displays the same information by worker.

### Next Steps

Access the **Add Worker CAN Tax Elections** task to exempt workers who work in Northwest Territories or Nunavut, but aren't required to pay the Province Payroll Tax.

## Exempt Workers in Northwest Territories and Nunavut from the Province Payroll Tax (CAN)

### Prerequisites

- Set up the Province Payroll Tax for Northwest Territories and Nunavut.
- Security: *Worker Data: Payroll (Company Specific)* - CAN domain.

### Context

You can exempt employees who work in Northwest Territories or Nunavut, but don't have to pay the Province Payroll Tax.

### Steps

1. Access the **Add Worker CAN Tax Elections** task for each exempt employee.
2. From the **Company** prompt, select the appropriate company.
3. From the **Work Province** prompt, select *Northwest Territories* or *Nunavut*
4. On the **Other** tab, click **Exempt**.

### Result

Workday doesn't deduct the *Province Payroll Tax [CAN]* for this worker.

## Related Information

### Tasks

[Add Worker Federal Tax Elections \(CAN\)](#) on page 1308

[Set Up Province Payroll Tax for Northwest Territories and Nunavut \(CAN\)](#) on page 1285

## Define Tax Authority Exceptions from Pay Component Groups (CAN)

### Prerequisites

- Add the province worktag to the pay components in the pay component group.
- Security: *Set Up: Payroll (Calculations - Payroll Specific)* domain in the Core Payroll functional area.

### Context

You can set up a pay component group (PCG) to either exclude or include pay components for a tax authority.

### Steps

1. Access the **Maintain Tax Authority Exceptions Pay Component Groups** task.
2. Select the **Pay Component Group** that requires exceptions.
3. In the **Payroll Tax Authority** field on the **Exceptions for Taxes** tab, select the payroll tax authority.

4. If the pay component should be excluded from the PCG, select the pay component in the **Exclude Pay Component(s)** field. If the pay component should be included in the PCG, select the pay component in the **Include Pay Component(s)** field.
5. On the **Exceptions for Withholding Orders** tab, specify exceptions to the disposable earnings calculation for withholding orders.
  - a) From the **Payroll Tax Authority** prompt, select 1 or more tax authorities that calculate disposable earnings differently.
  - b) From the **Withholding Order Type** prompt, select 1 or more types of withholding orders.
  - c) When the pay component:
    - Is part of the group but the tax authority treatment of it doesn't apply, select it from the **Exclude Pay Component(s)** prompt.
    - Isn't part of the group but the tax authority treatment of it does apply, select it from the **Include Pay Component(s)** prompt.

## Result

Workday makes the PCG exceptions that you configure and displays them in the **Exceptions for Taxes** section of the pay component **Non Effective Dated** tab.

## Example

### Example

The *Pay in Lieu of Notice [CAN]* earning should be included in the *Workers Compensation Exempt* PCG for:

- British Columbia
- Quebec
- Saskatchewan
- Yukon

Exceptions for taxes for the *Workers Compensation Exempt [CAN]* PCG:

| Payroll Tax Authority                               | Exclude Pay Component(s) | Include Pay Component(s)           |
|-----------------------------------------------------|--------------------------|------------------------------------|
| British Columbia<br>Quebec<br>Saskatchewan<br>Yukon |                          | <i>Pay in Lieu of Notice [CAN]</i> |

With this configuration, Workday includes the *Pay in Lieu of Notice [CAN]* pay component in the *Workers Compensation Exempt [CAN]* PCG when processing payroll for British Columbia, Quebec, Saskatchewan, and Yukon.

## Next Steps

## Steps: Set Up Workers Compensation (CAN)

### Context

Workday calculates workers compensation for an employee's payroll processing province based on Workers Compensation Board (WCB) Code worktags associated with:

- Pay results, if they exist.
- The worker's payroll processing position.

When calculating a worker's pay, Workday determines the:

- Worker's compensation rate in effect for the business location of the worker's payroll processing position. The location and the worker's compensation code display in the payroll results as worktags.
- Job profile as of the payment date for the payroll run.

## Steps

1. Access the **Maintain Workers' Compensation Codes** task to define industry classification codes for workers compensation reporting.

If a code pertains to more than 1 province (region), list all provinces that use it.

Security: *Set Up: Job* domain in the Jobs & Positions functional area.

2. Assign workers compensation codes to job profiles.

- a) Access the **Create Job Profile** or **Edit Job Profile** task.

Security: *Set Up: Job* domain in the Jobs & Positions functional area.

- b) On the **Worker's Compensation Codes** tab, add a row for each worker's compensation code.

To configure a worker who is physically in 1 province but has a different province of employment for tax purposes:

- Verify that the **Location** field on the worker's position displays their physical location. A position's location determines which province calculates worker's compensation.
- Verify that the **Alternate Work Location** field displays the province where the worker is taxed.

Example: A remote worker works from home in British Columbia where there's no physical work location. After reviewing Canada Revenue Agency (CRA) guidelines, you determine the worker's province of employment is Ontario. For this worker, the position **Location** province is British Columbia and the **Alternate Work Location** is Ontario. Taxes (FIT/PIT, CPP, EI, ONEHT) calculate for Ontario. Workers compensation benefits calculate for British Columbia.

See: [Determine the province of employment](#).

3. Access the **Edit Company Province CAN Tax Reporting** task for a company and province.
4. On the **Workers Compensation** tab, as you complete the fields in the **Account Information** and **Workers Compensation Rates** sections, consider:

### Account Information

|                                                 |                                                                                                                                                                                                                                                                                                                                                                                                                             |

| Start Date | End Date   | Code                                                                         | Identification Number | Rate  |
|------------|------------|------------------------------------------------------------------------------|-----------------------|-------|
| 1/1/2011   | 12/31/2011 | 541990 - All Other Professional, Scientific, and Technical Services (Canada) | 4577233-WCAQ          | 3.10% |
| 1/1/2011   | 12/31/2011 | 561330 - Professional Employer Organizations (Canada)                        | 4577233-WCAQ          | 3.55% |
| 1/1/2011   | 12/31/2011 | 541990 - All Other Professional, Scientific, and Technical Services (Canada) | 9876544-WCAQ          | 3.20% |
| 1/1/2011   | 12/31/2011 | 561330 - Professional Employer Organizations (Canada)                        | 9876544-WCAQ          | 3.65% |

These reports reflect data from each identification number and report data based on pay result worktags. You can use these reports to identify and correct missing supplemental worktags:

- **Workers Compensation Summary**
- **Workers Compensation Summary by Company**
- **Workers Compensation Details**

5. Exempt employees from workers compensation, if applicable. Employees can't exempt themselves.

a) Access the **Add Worker CAN Tax Elections** task.

Security: *Worker Data: Payroll (Company Specific)* - CAN domain in the CAN Payroll functional area.

b) Select the **Exempt** check box in the **Province Workers Compensation** section of the **Province** tab.

6. Access the **Edit Earning** task to assign earnings that are exempt from worker's compensation to the appropriate pay component group.

| Pay Component Group                | Description                                                                                                                                                                                                                                                                                                   |
|------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <i>Workers Compensation Other</i>  | Add earnings that are subject to workers compensation reporting, but not province income tax.<br><br>Typically, these earnings are for workers who might not be employees or whom you pay outside of Workday Payroll. For reporting purposes, you must include these wages in workers compensation reporting. |
| <i>Workers Compensation Exempt</i> | Add earnings that are exempt from worker's compensation.<br><br>Workday subtracts exempt wages from gross T-4 or RL-1 wages to determine insurable (assessable) income.                                                                                                                                       |

7. [Define Tax Authority Exceptions from Pay Component Groups \(USA\)](#) on page 1137.

If an earning applies to some, but not all provinces, you can include or exclude it from calculations.

Example: If pay in lieu of notice is subject to worker's compensation in all except these provinces, add a rule to handle these exceptions:

- British Columbia
- Quebec
- Saskatchewan
- Yukon

### Next Steps

Review these reports to ensure you defined worker's compensation codes and rates correctly:

- **View Workers' Compensation Codes**
- **View Workers Compensation Rates**
- **Audit - Workers Compensation Codes In Use with No Rate**
- **Workers' Compensation Code Exception Audit**

After calculating payroll, use these reports to view worker's compensation calculations, and to prepare for tax filing:

- **Workers Compensation Summary:** Displays totals by province.
- **Workers Compensation Summary by Company:** Displays totals by company.
- **Workers Compensation Details:** Displays totals by employee within each province.
- **Tax Remittance Details:** Includes Quebec CNESST tax amounts by worker.
- **Tax Remittance Summary:** Includes total deductions for Quebec CNESST by federal Payroll Account Number.
- **Tax Remittance Summary - Quebec:** Includes total deductions by Quebec CNESST by Quebec Identification Number.

You can also use these report fields in custom reports:

- *Worker's Compensation Code (Worktag)*, which returns the worker's compensation code from the WCB Code worktag for pay results.

- *Worker's Compensation Tax Rate (Worktag)*, which returns the worker's compensation tax rate based on the WCB Code worktag for pay results.

If necessary, use payroll input to override the:

- Work province pay component worktag for employees who work in more than 1 province.
- Worker's compensation code supplemental worktag to create prior period adjustments, or manually input a worker's compensation code for a specific province. These worktags only display with a worker's compensation deduction for payment dates on or after 2018-01-01.

To file federal and Quebec provincial tax remittance information, you can use the *Get Periodic Company CAN Tax Remittance Data* web service. This web service includes provincial worker's compensation information and provincial employer payroll and health tax information. You can exclude Worker Compensation Board tax items from this web service. Partners can use this feature to process necessary payments on your behalf. This web service doesn't support custom tax deductions.

## FAQ: Worker's Compensation (CAN)

**How do I configure workers' compensation for a remote worker when they work from home in a province that doesn't have a physical work location where they report?**

To configure workers' compensation for a remote worker, set their **Position Location** to the location where they actually work. Workers' compensation benefits derive from the province in which the worker is physically located.

### Related Information

#### Tasks

[Steps: Set Up Workers Compensation \(CAN\)](#) on page 1287

## Steps: Set Up RPP and DPSP Registration Number Configuration

### Prerequisites

Established registered pension plan (RPP) or deferred profit sharing plan (DPSP) registration numbers.

Security: These domains in the CAN Payroll functional area:

- *Set Up: Payroll (Year End) - CAN*
- *Worker Data: Payroll (Company Specific) - CAN*

### Context

You can define the 7-digit Registered Pension Plan (RPP) or Deferred Profit Sharing Plan (DPSP) number at the company level. You can also identify when a registration number is a union pension plan.

To populate Box 50 of the T4 form, you must configure each RPP or DPSP registration number.

You can use these web services to load and retrieve RPP and DPSP registration numbers in bulk:

- *Get Payroll Employer RPP or DPSP Registration Number Configuration*

- *Put Payroll Employer RPP or DPSP Registration Number Configuration*

### Steps

1. Access the **Create RPP or DPSP Registration Numbers** task.
2. Enter the 7-digit RPP or DPSP number.
3. Access the **View Canada Year End Form Box Configuration** report for the T4 form.
4. Select the **Maintain T4 Box Configuration** button for Box 52 and set up pay components associated with pension adjustments.
5. Access the **Maintain RPP or DPSP Registration Number Configuration** task and consider:

| Option                                  | Description                                                                            |
|-----------------------------------------|----------------------------------------------------------------------------------------|
| <b>Effective Until End of Year</b>      | Optional.                                                                              |
| <b>Reference Number</b>                 | Select one or more Reference Numbers associated with the Company selected.             |
| <b>Pension Adjustment Pay Component</b> | Select one or more pay components associated with the RPP or DPSP registration number. |
| <b>RPP or DPSP Registration Number</b>  | Select the <b>RPP or DPSP Registration Number</b> that you created.                    |
| <b>Union</b>                            | Select to identify the registration number as a union pension plan.                    |

### Note:

You can override a registration number for a specific worker using the **Override RPP or DPSP Registration Number for Worker** task.

You can use these web services to load or extract override RPP or DPSP registration numbers in bulk:

- *Get Override Payroll Payee RPP or DPSP Registration Number Configuration*
- *Put Override Payroll Payee RPP or DPSP Registration Number Configuration*

Use the override option sparingly. If you override the pension plan number at the worker level and the individual moves between plans, Workday can't allocate the appropriate registration number.

### Next Steps

You can view the RPP or DPSP registration number aligned to a worker in Box 50 on the **T4 Preview** report.

When there's an amount for Box 034 of the T4A form, you can view the RPP registration number in Box 036 on the **T4A Preview** report.

## Set Up the Indian Act Exemption for Employment Income (CAN)

### Prerequisites

Security: These domains in the CAN Payroll functional area:

- *Set Up: Payroll - Company Specific (Taxes) - CAN*
- *Set Up: Payroll (Year End) - CAN*

- *Worker Data: Payroll (Company Specific) - CAN*

## Context

You can configure Workday to exempt Indian status workers from income tax when they perform employment duties on a reserve.

When configured, Workday calculates and reports on these taxes accordingly:

- Federal Income Tax (FIT).
- Province Income Tax (PIT).
- QC-Province Income Tax (QC-PIT).

## Steps

1. Access the **Add Worker CAN Tax Elections** task.
  - a) Add a row to the **TD1-IN Exemption Percent** grid.  
Workday populates the **Percent Exempt** field with 100. Add a new row and select **Inactive** when a worker changes job location and no longer works on a reserve.
2. (Optional) Access the **Edit Company Federal CAN Tax Reporting** task.
  - a) Locate the **Optional CPP Coverage (CPT124)** grid.
  - b) Add a row, enter the **Start Date**, and select the **Enable Coverage** check box.
3. (Optional) Access the **Edit Company Province CAN Tax Reporting** task.
  - a) Locate the **Optional QPP Coverage (RR-2)** grid.
  - b) Add a row, enter the **Start Date**, and select the **Enable Coverage** check box.
4. Add the *Federal Income Tax (FIT) [CAN] - Indian Exempt Employment Income* pay component related calculation (PCRC) to Box 71 on the T4 Form.
  - a) Access the **View Canada Year End Form Box Configuration** task.
  - b) Select *Year End Forms by Country* from the **Payroll Year End Form Type** field.
  - c) Select the appropriate year.
  - d) Select *T4* from the **Canada Year End Forms** prompt.
  - e) Locate the **Other Information** row and select the **Maintain T4 Box Configuration** button.
  - f) Add a row to the **Maintain Canada Year End Form Box Configuration** grid and enter these values:

| Option                       | Description                                                                                                           |
|------------------------------|-----------------------------------------------------------------------------------------------------------------------|
| <b>Effective Date</b>        | Select the appropriate year.                                                                                          |
| <b>Calculation</b>           | Select the <i>Federal Income Tax (FIT) [CAN] - Indian Exempt Employment Income</i> pay component related calculation. |
| <b>Detail Reporting Code</b> | 71 - Indian employee                                                                                                  |

5. Add the *Province Income Tax (QC-PIT) [CAN] - Indian Exempt Employment Income* PCRC to Box R on the RL-1 form.
  - a) Access the **View Canada Year End Form Box Configuration** task.
  - b) Select *Year End Forms by Country* from the **Payroll Year End Form Type** field.
  - c) Select the appropriate year.
  - d) Select *RL-1* from the **Canada Year End Forms** prompt.
  - e) Locate the **R - Income paid to an Indian and situated on a reserve or premises** row and select **Maintain RL-1 Box Configuration**.
  - f) Add a row to the **Maintain Canada Year End Form Box Configuration** grid and enter these values:

| Option | Description |
|--------|-------------|
|--------|-------------|

|                       |                                                                                                                           |
|-----------------------|---------------------------------------------------------------------------------------------------------------------------|
| <b>Effective Date</b> | Select the appropriate year.                                                                                              |
| <b>Calculation</b>    | Select the <i>Province Income Tax (QC-PIT) [CAN] - Indian Exempt Employment Income</i> pay component related calculation. |

## Related Information

### Tasks

[Add Worker Federal Tax Elections \(CAN\)](#) on page 1308

## Set Up Taxation for Pretax Registered Pension and Savings Plan Deductions (CAN)

### Prerequisites

Security: *Set Up: Payroll (Calculations - Payroll Specific)* domain in the Core Payroll functional area.

### Context

Workday offers 2 ways to configure RPP / RRSP deductions:

- Proportional taxable wage reduction.
- Wage-specific taxable wage reduction.

In these examples, the employee contributes 10% of their salary to an RRSP and 5,000 of their 7,500 bonus to their RRSP.

Example: This table displays how RRSP deductions calculate with proportional taxable wage reduction configuration on the deduction.

| Wage Type | Gross Amount | RRSP Deduction | Taxable Wages |
|-----------|--------------|----------------|---------------|
| Salary    | 2,500        | 1,312.50       | 1,187.50      |
| Bonus     | 7,500        | 3,937.50       | 3,562.50      |

Example: This table displays how RRSP deductions calculate with wage-specific taxable wage reduction configuration on the deduction.

| Wage Type | Gross Amount | RRSP Regular Deduction | RRSP Bonus Deduction | Taxable Wages |
|-----------|--------------|------------------------|----------------------|---------------|
| Salary    | 2,500        | 250.00                 |                      | 2,250         |
| Bonus     | 7,500        |                        | 5,000                | 2,500         |

Your RRSP deductions use proportional taxable wage reduction and use these pay component groups:

- *RPP/RRSP/RCA (F) [CAN]*
- *Other Quebec Deductions (F) [CAN]*

As of Workday 2020R2, you can configure your existing RRSP deductions to use wage-specific taxable wage reduction by following these steps.

### Steps

1. Access the **Enable Factor F Pay Component Groups (Regular / Bonus / Lump Sum)** task.

2. Clear the **Prorate RPP/RRSP/RCA (F) Source Deductions** check box.

Clearing this check box enables you to attach wage type-specific pay component groups to your existing deductions.

3. As you attach the pay component groups to your deductions, consider these valid pairings to reduce taxable wages subject to specific tax methods:

| Taxable Wage Type | Valid Pay Component Group Pairs                                                                 |
|-------------------|-------------------------------------------------------------------------------------------------|
| <i>Regular</i>    | <i>RPP/RRSP/RCA (F) – Regular [CAN]</i><br><i>Other Quebec Deductions (F) – Regular [CAN]</i>   |
| <i>Bonus</i>      | <i>RPP/RRSP/RCA (F) – Bonus [CAN]</i><br><i>Other Quebec Deductions (F) – Bonus [CAN]</i>       |
| <i>Lump Sum</i>   | <i>RPP/RRSP/RCA (F) - Lump Sum [CAN]</i><br><i>Other Quebec Deductions (F) - Lump Sum [CAN]</i> |

4. Access the **Create Deduction** task to create additional pension and savings plan deductions for additional wage types.

See [Steps: Create Deductions](#) on page 227.

As you create the new deductions, consider the valid pay component group pairings listed above.

##### Tasks

[Steps: Create Deductions](#) on page 227

## Nonresident Taxation (CAN)

### Set Up Nonresident Tax Treaty Withholding (CAN)

#### Prerequisites

- Set up company federal taxes.
- Verify that the employee is assigned to a company and pay group.
- Security: *Worker Data: Payroll (Company Specific)* - CAN domain.

#### Context

Effective 2019-01-01, you can set up Workday to calculate taxes for nonresident workers and retirees earning income amounts for these services performed in Canada:

- Annuities.
- Investment income.
- Pensions.
- Research and development royalties.
- Retirement compensation arrangements.

Set up Workday to honor tax treaties between Canada and other countries for nonresidents. Workday refers to the Canada Revenue Agency NR4 – Non-Resident Tax Withholding, Remitting, and Reporting (T4061) guide when calculating taxes and taxable wages for NR4 reporting.

You can use these web services to update tax treaty information:

- *Get Payroll CAN Worker Tax Treaties*
- *Put Payroll CAN Worker Tax Treaty*

## Steps

1. Access the **Maintain Worker Tax Treaties** task.
2. Select the **Worker** and **Tax Country**.
3. Select the tax **Start Date** and **End Date**.
4. As you complete this task, consider:

| Option                             | Description                                                   |
|------------------------------------|---------------------------------------------------------------|
| <b>Tax Residency Country</b>       | Select only 1 country of residence.                           |
| <b>Canada Payroll Income Codes</b> | Select only 1 <b>Canada Payroll Income Code</b> per row.      |
| <b>Exemption Code</b>              | Select the applicable code.                                   |
| <b>Withholding Rate</b>            | Enter a <b>Withholding Rate</b> percentage if other than 25%. |

5. Add earnings that are subject to a tax treaty to the appropriate pay component groups:
  - *NR Tax Income Code - 29 - RRSP – Refund of premiums*
  - *NR Tax Income Code - 35 - Research and development royalties*
  - *NR Tax Income Code - 36 - Retiring allowance*
  - *NR Tax Income Code - 37 - Retirement compensation arrangements*
  - *NR Tax Income Code - 39 - Superannuation or pension benefits – Periodic payments*
  - *NR Tax Income Code - 40 - Superannuation or pension benefits – Lump-sum payments*

## Result

Workday calculates and reports on nonresident taxes according to configuration.

### Concept: Tax Withholding for Nonresident Workers and Retirees (CAN)

#### Nonresident Taxation

Effective 2019-01-01, Workday enables you to tax nonresident workers and retirees earning income amounts for these income codes or services performed in Canada:

- Annuity payments.
- Investment income.
- Pension payments.
- Pooled registered pension plan payments.
- Registered retirement savings plan payments.
- Retiring allowances.
- Royalty payments.

Nonresident workers and retirees can apply for a lower tax rate based on tax treaties between their country and Canada.

The *Federal Income Tax Non-Resident (FIT-NR) [CAN]* deduction calculates federal income tax for eligible nonresident workers and retirees. Workday calculates federal taxes for nonresidents at 25% unless there's a tax treaty. Workday uses the information in effect as of the pay period end date. The deduction references:

- The worker's country.

- The Income Code that's recorded on the Maintain Worker Tax Treaties task.

When calculating T4A tax within these deductions, Workday excludes workers or retirees whose province of employment is U.S. or Other:

- *Federal Income Tax (FIT T4A) [CAN]*
- *Federal Income Tax (FIT2 T4A Intermediate Calculation Only for Withholding Order DE) [CAN]*
- *Province Income Tax T4A (PIT T4A) [CAN]*
- *Province Income Tax (PIT2 T4A Intermediate Calculation Only for Withholding Order DE) [CAN]*

### Workday-Delivered Nonresident Pay Component Groups

Workday delivers these nonresident income codes pay component groups (PCGs) you can associate to related earnings for year-end tax reporting:

| Pay Component Group                                                                     | Description                                                              |
|-----------------------------------------------------------------------------------------|--------------------------------------------------------------------------|
| <i>NR Tax Income Code - 29 - Refund of premiums</i>                                     | Amounts related to RRSP refund of premiums.                              |
| <i>NR Tax Income Code - 35 - Research and development royalties</i>                     | Amounts related to research and development royalties.                   |
| <i>NR Tax Income Code - 36 - Retiring Allowance</i>                                     | Amounts representing retiring allowance earnings.                        |
| <i>NR Tax Income Code - 37 - Retirement compensation arrangements</i>                   | Amounts for retirement compensation arrangements.                        |
| <i>NR Tax Income Code - 39 - Superannuation or pension benefits - Periodic payments</i> | Amounts related to periodic superannuation or pension benefits payments. |
| <i>NR Tax Income Code - 40 - Superannuation or pension benefits - Lump-sum payments</i> | Amounts for superannuation or pension benefits.                          |

Workday prevents you from selecting these PCGs with a nonresident income code PCG on a pay component:

- Any other nonresident income code PCG
- *Bonus Earnings - Regular [CAN]*
- *Income Taxable (Do Not Withhold Taxes) [CAN]*
- *Income Taxable (Withhold Taxes) [CAN]*

- *Lump Sum Taxable T4 [CAN]*

You can configure these PCGs on an earning with another nonresident income code PCG:

- *Income Taxable T4A-RCA [CAN]*
- *Lump Sum Taxable T4A [CAN]*
- *Lump Sum Taxable T4A-RCA [CAN]*
- *Pension Income T4A [CAN]*

## Reports

These reports include the *Federal Income Tax Non-Resident (FIT-NR)* amounts within the *1a - Canada Revenue Agency Non Resident Tax* pay component group:

- *Tax Remittance Summary*
- *Tax Remittance Details*

## Web Services

You can use these withholding elections web services to import and export nonresident federal tax elections:

- *Get Payroll CAN Worker Tax Treaty*
- *Put Payroll CAN Worker Tax Treaties*

The *Get Periodic Company CAN Tax Remittance Data* web service includes nonresident tax deductions with the NR Tax Account.

## Related Information

### Tasks

[Set Up Nonresident Tax Treaty Withholding \(CAN\)](#) on page 1295

## Map Earnings and Deductions to Year-End Boxes (CAN)

### Prerequisites

Security: *Set Up: Payroll (Year End) - CAN* in the CAN Payroll functional area.

### Context

Map Canada year-end form boxes to earnings, deductions, and pay-component related calculations. Workday Payroll calculates them and displays them in each section on the forms.

Workday already maps several boxes for you.

### Steps

1. Access the **View Canada Year End Form Box Configuration** report.
2. Select the relevant form in the **Canada Year End Forms** field.
3. Click the relevant button for a configurable box:
  - **Maintain T4 Box Configuration**
  - **Maintain T4A Box Configuration**
  - **Maintain T4A-RCA Box Configuration**
  - **Maintain RL-1 Box Configuration**
  - **Maintain RL-2 Box Configuration**

## 4. As you complete the box configuration, consider:

| Option                             | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Effective Until End of Year</b> | <p>If you:</p> <ul style="list-style-type: none"> <li>Don't select a year, this mapping remains valid indefinitely.</li> <li>Select a year, you must provide a new mapping for subsequent years.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| <b>Calculation</b>                 | <p>Select all pay components for a given year in the same row. For all boxes except detail reporting codes, Workday sums up pay components in the same row. Workday then reports the total of those pay components on the year-end form in the box you're configuring.</p> <p>Keep all calculations valid for a year-end box in the same row. End date a previous row before adding a new one. Example: You add a new row with a new pay component effective 2020. You end the existing row in 2019, and add the pay components from that row to the new row for 2020.</p> <p>Create calculations as needed, such as one for research grants.</p> |
| <b>Detail Reporting Code</b>       | <ul style="list-style-type: none"> <li>T4 and T4A: This column is available only for <b>Other Information</b>.</li> <li>RL-1: This column is available only for <b>Box O</b> and <b>Additional Information</b>.</li> <li>RL-2: This column is available only for <b>Additional Information</b>.</li> </ul> <p>Select all the pay components valid for the detail reporting code in the same row.</p>                                                                                                                                                                                                                                              |

**Result**

Once you've completed a payroll, you can view the results of your configuration on these reports and change it if necessary:

### Box O and Additional Info (RL-1)

#### Multiple Calculations

You've created a *Research Grants [CAN]* calculation for your company. You configure multiple calculations for Box O and 1 or more calculations for Additional Info:

| Payroll Year<br>End Form Box | Calculation                                                                            | Detail<br>Reporting<br>Code                                                                                         |
|------------------------------|----------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------|
| O                            | <i>Retiring Allowances [CAN]</i><br><i>Research Grants [CAN]</i>                       | <i>RJ - Retiring allowance (including an amount paid for the loss of employment)</i><br><i>RC - Research grants</i> |
| Additional Info              | <i>Basic Life - Standard Life - ER [CAN]</i><br><i>Canada Pension Plan (CPP) [CAN]</i> | <i>A-1 - Employee benefit plan</i><br><i>B-1 - CPP contribution</i>                                                 |

The value of the pay components you configured are:

- Retiring allowance = 10,000
- Research grants = 5,000
- Basic life insurance = 1,400.48
- CPP contribution = 456

Workday lists the amounts for Box O and Additional Info in the Additional Info box on the RL-1.

| RL-1 Box                               | Code | Amount        | Explanation                                                                             |
|----------------------------------------|------|---------------|-----------------------------------------------------------------------------------------|

## Concept: Taxable Pension Income

Workday provides calculation elements to help you prepare pension income taxable calculations. They enable you to ensure amounts are on the correct pay component related calculation (PCRC) before year end.

### Pay Component Groups

Use these Workday-delivered pay component groups to return numeric values for specific earnings reported with the appropriate tax calculation:

- *Pension Income RL-2*
- *Pension Income T4A*

Validations on the new pay component groups ensure that you don't enable combinations such as pension and bonus.

### PCRCs

These Workday-delivered PCRCs are available:

- *Exempt Wages RL-2*
- *Exempt Wages T4A*
- *Regular Tax RL-2*
- *Regular Tax T4A*
- *Subject Wages RL-2*
- *Subject Wages T4A*
- *Taxable Wages RL-2*
- *Taxable Wages T4A*

### Pension Wages for Tax Calculation

Workday references the **Pension Wages for Tax Calculation** value on the **View Payroll Tax/Allowance Data** report to determine whether to launch the pension wages tax calculation for federal, provincial, and Quebec income tax.

## Reference: Year-End Form Box Mappings (CAN)

Workday maps federal and provincial taxable earnings and tax withholding deductions to some boxes on these forms:

- T4
- T4A
- T4A-RCA
- RL-1
- RL-2
- NR4

Map earnings, deductions, and pay component-related calculations to the other boxes on the forms. Workday then calculates earnings and deductions and displays them in each section of the forms. Use the **View Canada Year End Form Box Configuration** report to set up and maintain box configurations.

When you select **Preferred** on the **General Name Display Type** on the **Edit Tenant Setup - System** task, Workday still uses the legal name on year-end forms.

#### T4 Boxes

Workday maps these boxes:

- Employer's name
- Employee's name and address
- Year
- 10 - Province of employment
- 12 - Social insurance number
- 14 - Employment income
- 16 - Employee's CPP contributions
- 16A - Employee's second CPP contributions
- 17 - Employee's QPP contributions
- 17A - Employee's second QPP contributions
- 18 - Employee's EI premiums
- 22 - Income tax deducted
- 24 - EI insurable earnings
- 26 - CPP/QPP pensionable earnings
- 28 - Exempt - CPP/QPP
- 28 - Exempt - EI
- 28 - Exempt - PPIP
- 29 - Employment code
- 45 - Employer-offered dental benefits
- 50 - RPP or DPSP registration number
- 54 - Payroll account number
- 55 - Employee's PPIP premiums
- 56 - PPIP insurable earnings

Workday maps Box 10 (Province of Employment) from the worker's payroll result. You can verify the worker's work address using these reports:

- **Work Contact Information for Worker.** Security: *Person Data: Work Contact Information* in the Contact Information functional area.
- **Report Worker Province of Employment and Location.** Security: *Worker Data: Payroll (Company Specific)* - CAN domain in the CAN Payroll functional area.

Workday includes all codes applicable to Box 29 (Employment code).

Map these boxes:

- 20 - RPP contributions
- 44 - Union dues
- 46 - Charitable donations
- 52 - Pension adjustment
- Other Information

#### T4A Boxes

Workday maps these boxes:

- Payer's Name
- Recipient's name and address
- Year

- 012 - Social insurance number
- 015 - Payer-offered dental benefits

This box is optional. To report a value in Box 016, you must complete this box.

- 022 - Income tax deducted
- 061 - Payer's account number

Map these boxes:

- 016 - Pension or superannuation
- 018 - Lump-sum payments
- 020 - Self-employed commissions
- 024 - Annuities
- 048 - Fees for services
- Other Information

### **T4A-RCA Boxes**

Workday maps these boxes:

- Year
- Recipient's name and address
- 24 - Social insurance number
- Name of the Custodian or Person who bought an interest in the RCA
- 22 - Income tax deducted
- 61 - Payroll Account Number

Map these boxes:

- 12 - Refund of employer contributions
- 14 - Refund of employee contributions
- 16 - Distributions
- 17 - Distributions eligible for pension income splitting
- 18 - Selling price of an interest in the RCA
- 20 - Other amounts

### **RL-1 Boxes**

Workday maps these boxes:

- Year
- RL-1 Slip Code
- Number of last form transmitted
- Last name, first name, and address of the employee
- Social insurance number
- Name and address of the employer or the payee
- A - Employment income before source deductions
- B - Quebec Pension Plan (QPP) contribution
- C - Employment insurance premium
- E - Quebec income tax withheld at source
- G - Pensionable salary or wages under the Quebec Pension Plan (QPP)
- H - Quebec parental insurance plan (QPIP) premium
- I - Eligible salary or wages under the Québec parental insurance plan (QPIP)
- Code (case O) Amount
- Codes for Additional Info

You map these boxes:

- D - Registered Pension Plan (RPP) contribution
- F - Union dues
- J - Amount paid by the employer to a private health services plan
- K - Trips made by a resident of a designated remote area
- L - Other benefits
- M - Commissions included in the amount in box A or box R
- N - Charitable donations and gifts
- O - Other income not included in box A
- P - Contribution to a multi-employer insurance plan
- Q - Deferred salary or wages
- R - Income paid to an Indian and situated on a reserve or premises
- S - Tips not included in box T
- T - Tips allocated by the employer
- U - Amount deemed, under a phased retirement arrangement
- V - Meals and lodging
- W - Use of a motor vehicle for personal purposes
- Additional Info - Example: A-1 Income situated on a reserve or premises.

## RL-2 Boxes

Workday maps these boxes:

- Year
- RL slip code
- Number of last form transmitted
- Last name, first name, and address
- Social insurance number of the individual
- Name and address of the employer or payer
- Box J - Quebec income tax withheld at source
- Box N - Social insurance number of the contributor spouse (RRSP or RRIF)

Map these boxes:

- Source of Income.
- A - Payments from a registered pension plan
- B - Payments under an RRSP, RRIF, DPSP, PRPP, VRSP or Annuities
- C - Other Payments
- D - Refund of RRSP premiums paid to the surviving spouse
- E - Benefit deemed to have been received at the time of death (RRSP, RRIF, PRPP or VRSP)
- F - Refund of unused contributions (RRSP, PRPP or VRSP)
- G - Amount that is taxable because of the revocation of the registration of an RRSP or RRIF
- H - Other Income (RRSP or RRIF)
- I - Amount giving entitlement to a deduction (RRSP or RRIF)
- K - Income earned after death (RRSP, RRIF, PRPP or VRSP)
- L - Withdrawal under the LLP
- M - Tax paid amounts
- O - Withdrawal under the HBP
- Additional Info: A-1 - Income situated on a reserve or premises.

## NR4 Forms

Workday maps all NR4 form boxes:

- 10 - Year

- 11 - Recipient Code
- 12 - Country Code for tax purposes
- Payer or agent identification number
- Non-resident recipient's name and address
- Country code
- 13 - Foreign or Canadian tax identification number
- Name and address of payer or agent
- Non-resident account number
- 14/24 - Income code
- 15/25 - Currency code
- 16/26 - Gross income
- 17/27 - Non-resident tax withheld
- 18/28 - Exemption code

[Map Earnings and Deductions to Year-End Boxes \(CAN\)](#) on page 1298

## FAQ: Setup Taxes (CAN)

**How do I configure taxes for a remote worker who physically works in a province that is different than their province of employment for tax purposes?**

To configure a worker who physically works in a province that is different than their province of employment for tax purposes:

- Verify the **Location** field on the worker's position displays their physical location. The position location determines which province calculates workers compensation and statutory holiday.
- Use the **Change Work Contact Information** task and set the **Alternate Work Location** to the province that taxes the worker. Take this action if the tax province is different from their physical location, according to Canada Revenue Agency (CRA) guidelines.

See: [Which provincial or territorial tax tables you should use.](#)

Example: A remote worker works from home in British Columbia where there's no physical work location. After reviewing Canada Revenue Agency (CRA) guidelines, you determine that Ontario is the worker's province of employment. For this worker, the position **Location** province is British Columbia and the **Alternate Work Location** is Ontario. Taxes (FIT/PIT, CPP, EI, ONEHT) calculate for Ontario. Workers compensation benefits calculate for British Columbia.

Steps: [Set Up Payroll Taxes \(CAN\)](#) on page 1273

## Worker Tax Elections (CAN)

---

### Add Worker Federal Tax Elections (CAN)

#### Prerequisites

Define company elections for federal and provincial taxes.

Verify that the worker has:

- An assigned company.
- An assigned pay group.
- A valid work and primary home address in Canada.

Security: *Worker Data: Payroll (Company Specific)* - CAN domain in the CAN Payroll functional area.

#### Context

Enter federal tax elections for an employee when they submit a TD1 or TD1X instead of using self-service. If a worker works in more than 1 company, enter a separate set of tax elections for each company.

Only 1 set of elections can be in effect at a time. When calculating payroll for an employee, Workday uses the tax elections in effect on the payment date.

#### Steps

1. Access the **Add Worker CAN Tax Elections** task and select the worker.

When there are existing worker tax elections, you can view them by selecting:

- **Current Elections**
- **All Elections**

As you complete this task, consider:

| Field          | Description                                                            |
|----------------|------------------------------------------------------------------------|
| <b>Company</b> | Displays the company the employee is in on the <b>Effective Date</b> . |

| Field                | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
|----------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                      | <p>When the employee has a future hire date, is terminated, or has positions in multiple companies on the <b>Effective Date</b>, select the company.</p> <p>Accept the default company displayed, or choose one or more companies from the list.</p>                                                                                                                                                                                                                                                                                                                                                                                  |
| <b>Work Province</b> | <p>Displays the province for primary work address, if it exists. Otherwise, it displays the province for the primary position business location.</p> <p>When the worker works in the U.S., <b>Work Province</b> automatically populates to <i>United States</i>. When the worker works in any other country outside of Canada, <b>Work Province</b> automatically populates to <i>Other</i>.</p> <p>To enter future tax elections for another province, select the appropriate effective date and province. Example: If the employee is moving to another province, you can enter the tax elections for that province in advance.</p> |

2. Enter worker tax elections on the **Federal** tab, recording information from the form TD Personal Tax Credits Return.

#### TD1

| Field                        | Description                                                                                                                     |
|------------------------------|---------------------------------------------------------------------------------------------------------------------------------|
| <b>Basic Personal Amount</b> | Workday calculates the amount based on the <b>Effective Date</b> .                                                              |
| <b>Total Claim Amount</b>    | Workday calculates the amount. If you select <b>More than One Employer or Payer at the Same Time</b> , Workday sets it to zero. |
| <b>Non-Resident</b>          | Select to identify the worker as a nonresident for FIT taxes and set the <b>Basic Personal Amount</b> to zero.                  |

#### TD1X

Enter the employee-provided TD1X Statement of Commission Income and Expenses for Payroll Tax Deductions.

| Field           | Description                                               |
|-----------------|-----------------------------------------------------------|
| <b>Inactive</b> | Workers can inactivate elections anytime during the year. |

| Field                                                  | Description                                                                                                                             |
|--------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------|
| <b>Estimated Annual Net Commission Income</b>          | Calculated from the estimated <b>Commission, Salary or Wages,</b> and <b>Commission Expenses.</b>                                       |
| <b>Estimated Annual Pension / Retirement Deduction</b> | Although <b>Estimated Annual Pension / Retirement Deduction</b> isn't on the federal TD1X form, Workday uses it in the tax calculation. |

You can provide this information and configure commission earnings for the *Income Taxable (Withhold Taxes) [CAN]* PCG. When configured, Workday uses the commission tax calculation instead of the regular periodic pay calculation.

For more information about the commission tax calculation, see the **View Payroll Tax/Allowance Data** report for *Federal Income Tax (FIT) [CAN]*.

#### Federal Annual Values for Payments in the Effective Year

Enter the next payroll payment date as the **Effective Date**. Workday annualizes the amount and calculates the values for the remaining periods in the year. Federal annual values only impact the tax calculation for payments within the effective year. If the tax election is valid for more than one year, enter a separate row and effective date per year.

| Field                         | Description                                                                                                                             |
|-------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------|
| <b>Annual Deductions</b>      | The authorized amount for costs not deducted from the salary. Might include costs such as childcare, alimony, or maintenance payments.  |
| <b>Annual Tax Credits</b>     | The authorized amount for costs such as medical expenses and charitable donations.                                                      |
| <b>Labour-Sponsored Funds</b> | View only. Total amount the worker paid to purchase approved shares of capital stock in a labour-sponsored venture capital corporation. |

| Field | Description                                                                                                                                                                                                                                      |
|-------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|       | Add the <b>Labour-Sponsored Funds (LCF/LCP)</b> pay component group to your deductions to calculate the applicable federal tax credit. This credit is based on the amount withheld for the pay period, while respecting the annual credit limit. |

### Estimated Annual Lump Sum Wages

| Field                            | Description                                                                                                                                                                                                                                                                                                                                                                                                                           |
|----------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Inactive</b>                  | Select when you don't require Estimated Lump Sum.                                                                                                                                                                                                                                                                                                                                                                                     |
| <b>Estimated Annual Lump Sum</b> | <p>Workday bases taxes on the expected lump sum wages for the calendar year.</p> <p>Outside Quebec, Workday uses the aggregate of the lump sum wages to determine the tax rate of the lump sum when:</p> <ul style="list-style-type: none"> <li>A worker has earnings that are a combination of T4 and T4A lump sum payment types on their pay results.</li> <li>You haven't provided an <b>Estimated Annual Lump Sum</b>.</li> </ul> |

### Bonus - Regular Taxable Wages Override

| Field                                         | Description                                                                                              |
|-----------------------------------------------|----------------------------------------------------------------------------------------------------------|
| <b>Inactive</b>                               | Inactivate this election once the worker receives a regular wages payment or once you no longer need it. |
| <b>Bonus - Regular Taxable Wages Override</b> | Enter an override amount for Workday to use instead of a                                                 |

| Field | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
|-------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|       | <p>regular taxable wage for a worker who's never received a regular wages payment through Workday.</p> <p>To calculate tax withholding for a regular bonus for an employee on leave for whom Workday hasn't yet processed payroll:</p> <ol style="list-style-type: none"> <li>Enter the bonus as pay input.</li> <li>Enter pay input for the worker for the same pay period.</li> <li>Mark it as a <b>Special Entry</b>.</li> <li>Assign the <b>Pay Component</b><br/><i>Federal Income Tax (FIT) [CAN]</i></li> <li>In the <b>Input Details</b> section, select <i>Bonus - Regular Taxable Wages Override</i> in the <b>Type</b> field.</li> <li>Enter the gross amount typically paid to the worker for a pay period for Workday to use as the tax basis.</li> <li>For a Quebec worker, repeat the steps for the pay component <i>Province Income Tax (QC-PIT) [CAN]</i>.</li> </ol> <p>Example: For a worker making 78,000 CAD annually and paid biweekly, select <i>Bonus - Regular Taxable Wages Override</i> and enter 3,000 CAD. Workday uses the 3,000 CAD solely to determine how to tax the bonus and doesn't</p> |

| Field | Description                                                                                                                                                                                                                                   |
|-------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|       | <p>pay that amount to the worker.</p> <p>To report on the Annual Taxable Income for Bonus Calculation for a regular on-cycle or completed payroll result, use the <i>Annual Taxable Income for Bonus Calculation</i> related calculation.</p> |

**Federal (FIT)**

Specify whether the employee is exempt from the federal income tax. The effective date determines the number of months that are subject to taxation.

**Employment Insurance (EI)**

Specify if the employee is exempt from the employment insurance premium. The effective date determines the number of months that are subject to taxation.

**Canada Pension Plan (CPP) / Quebec Pension Plan (QPP)**

Specify if the employee is exempt from pension plan withholding and the reason for the exemption. The effective date determines the number of months that are subject to taxation.

**Canada Pension Plan Second Contribution (CPP2)/Quebec Pension Plan Second Contribution (QPP2)**

Specify if the employee is exempt from additional contributions to the Canada and Quebec pension plans and the reason for the exemption. The effective date determines the number of months that are subject to taxation.

**RPP or DPSP Registration Numbers**

Only displays when you:

- Enter an effective date on or before 2020-12-31.
- Didn't enable RPP or DPSP configuration for 2020 on the **Edit Tenant Setup - Payroll** task.

See: [Steps: Set Up RPP and DPSP Registration Number Configuration](#) on page 1291.

**Detached Employee - US - United States employment**

For detached employees working in the USA, select an **Employment Code Election**:

- *16 - Detached employee - Social Security Agreement*  
When selected, Workday reports code 16 in Box 29 of the T4 for employees whose province is USA.
- *No Social Security Agreement*

**Detached Employee - ZZ - Other Countries employment**

For detached employees working in countries besides the USA, select an **Employment Code Election**:

- *16 - Detached employee - Social Security Agreement*

When selected, Workday reports code 16 in Box 29 of the T4 for employees whose province is ZZ (Other).

- *No Social Security Agreement*

#### T4 - Box 29 - Employment Code

Select the **Employment Code Election** to report in Box 29 of the T4 year-end form for the worker. Example: For a worker who withdraws from a deferral plan, you select *14 - Withdrawal from a prescribed salary deferral arrangement plan*. The worker's province isn't USA or ZZ (Other) so Workday reports code 14 in Box 29 of their T4. Box 14 reports zero.

#### TD1-IN Exemption Percent

Enter the **Percent Exempt**. If the TD1-IN election is no longer required for the worker, enter a new election and select the **Inactive** check box.

#### Next Steps

Add worker Province tax elections.

You can view a worker's tax elections with these reports:

- **Worker CAN Tax Elections**
- **Payee T1 Withholding Election**
- **Worker TD1X Tax Elections**

To correct a worker's tax elections, access the **Worker CAN Tax Elections** report. In the first column, select **Worker Tax Election > Edit** from the related actions menu.

If a worker changes companies, enter the worker's tax elections for the new company.

#### Related Information

##### Tasks

[Steps: Set Up Payroll Taxes \(CAN\)](#) on page 1273

## Add Worker Province Tax Elections (CAN)

#### Prerequisites

Security: *Worker Data: Payroll (Company Specific)* - CAN domain in the CAN Payroll functional area.

#### Context

Enter provincial tax elections for an employee when the worker submits a TD1 or TD1X instead of using self-service. If a worker works in more than 1 company, enter a separate set of tax elections for each company.

Only 1 set of elections can be in effect at a time. When calculating payroll for an employee, Workday uses the tax elections in effect on the payment date.

## Steps

### 1. Access the **Add Worker CAN Tax Elections**.

When there are existing worker tax elections, you can view them by selecting:

- **Current Elections**
- **All Elections**

### 2. Access the **Province** tab.

As you complete this tab, consider:

#### TD1

Enter TD1 information provided by the employee.

| Field                        | Description                                                                                                                |
|------------------------------|----------------------------------------------------------------------------------------------------------------------------|
| <b>Basic Personal Amount</b> | The default amount based on the <b>Effective Date</b> .                                                                    |
| <b>Total Claim Amount</b>    | Workday sets the <b>Total Claim Amount</b> to zero if you select <b>More than One Employer or Payer at the Same Time</b> . |

#### TD1X

Quebec is the only province that requires provincial commissions and expenses election in addition to the federal election.

| Field                                         | Description                                                                                                                                                                                                                                                                 |
|-----------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Inactive</b>                               | Workers can inactivate elections at any time during the year.                                                                                                                                                                                                               |
| <b>Estimated Annual Net Commission Income</b> | Workday-supplied information when you enter the <b>Effective Date</b> , estimated <b>Annual Wages, Gross Commissions</b> , and <b>Expenses Related to Commissions</b> .                                                                                                     |
| <b>Percentage of Commissions</b>              | <p><b>Estimated Annual Net Commission Income / Gross Commissions</b></p> <p>Used to determine the percentage of periodic commission to include in the Quebec regular income tax calculation.</p> <p>Example: The worker's <b>Estimated Annual Net Commission Income</b></p> |

| Field | Description                                    |
|-------|------------------------------------------------|
|       | can be 80% of their <b>Gross Commissions</b> . |

Workday uses the commission tax calculation for Quebec when you provide this information and configure earnings for these pay component groups:

- *Quebec Taxable (Withhold Taxes) [CAN]*
- *Quebec Commission Earnings [CAN]*

You can use these web services to enter and retrieve workers' commission elections for Quebec:

- *Put Payroll Payee PTD1X*
- *Get Payroll Payee PTD1X*

#### Province Annual Values for Payments in the Effective Year

Province annual values will only impact the tax calculation for payments within the effective year. If the tax election is valid for more than 1 year, enter a separate row and effective date per year.

| Field                                                    | Description                                                                                                                                                                                                                                                                                                                                                               |
|----------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Annual Deductions</b><br>(Quebec only)                | The authorized amount for costs not deducted from salary, such as childcare, alimony, or maintenance payments.                                                                                                                                                                                                                                                            |
| <b>Annual Tax Credits</b>                                | The authorized amount for costs such as medical expenses and charitable donations.                                                                                                                                                                                                                                                                                        |
| <b>Labour-Sponsored Funds</b> (Not applicable to Quebec) | View only. Total amount the worker paid to purchase approved shares of capital stock in a labour-sponsored venture capital corporation.<br><br>View only. Add the <b>Labour-Sponsored Funds (LCF/LCP)</b> pay component group to your deductions to calculate the applicable provincial tax credit. This credit is based on the amount withheld for the pay period, while |

| Field | Description                         |

|       | respecting the annual credit limit. |

### Estimated Annual Lump Sum Wages

| Field                            | Description                                                                   |
|----------------------------------|-------------------------------------------------------------------------------|
| <b>Effective Date</b>            | Automatically populates to the current date.                                  |
| <b>Inactive</b>                  | Select if the Estimated Lump Sum isn't applicable.                            |
| <b>Province</b>                  | Quebec only.                                                                  |
| <b>Estimated Annual Lump Sum</b> | Workday bases the taxes on the expected lump sum wages for the calendar year. |

### Quebec Tax Elections

These tax election grids only display for Quebec province. Specify if the employee is exempt from any of these taxes:

- *Quebec Parental Insurance Plan*
- *Quebec Compensation Tax*
- *Quebec Health Services Fund*
- *Workforce Skills Development and Recognition Fund*
- *Commission des normes, de l'équité, de la santé et de la sécurité du travail (CNESST)*

### Province Workers Compensation

To exempt an employee from workers compensation, select **Exempt**. Employees can't select the exempt status through ESS.

### Province (PIT)

Specify if the employee is exempt from PIT.

### Year End RL-2 Reporting

Select the **Spouse Receiving Payments** check box, if applicable. When selected, Workday populates the worker's Social Insurance Number (SIN) in the spouse box on the RL-2 form.

3. The **Other** tab displays if there are workers in the Northwest Territories or Nunavut. For employees not required to pay the tax, if you set up Province Payroll Tax and at least 1 worker location:

- Enter an **Effective Date**.
- Select the **Exempt** check box for the **Province Payroll Tax Election**.

### Next Steps

You can view a worker's tax elections with these reports:

- **Worker CAN Tax Elections**
- **Payee T1 Withholding Election**

To correct a worker's tax elections, access the **Worker CAN Tax Elections** report. In the first column, select **Worker Tax Election > Edit** from the related actions menu.

If a worker changes companies, enter the worker's tax elections for the new company.

### Tasks

[Steps: Set Up Payroll Taxes \(CAN\)](#) on page 1273

[Set Up Province Payroll Tax for Northwest Territories and Nunavut \(CAN\)](#) on page 1285

[Steps: Set Up Workers Compensation \(CAN\)](#) on page 1287

## Concept: Worker Tax Elections (CAN)

### Tax Calculations

Only 1 set of tax elections can be in effect at a time. When calculating payroll for an employee, Workday uses the tax elections in effect for the payroll processing company and province on the payment date.

When a worker is missing tax elections, Workday calculates tax deductions based on amounts (set by the Canada Revenue Agency) that are in effect on the payment date.

If a worker changes companies, you must enter the worker's tax elections for the new company.

If permitted, Workday uses an index calculation to determine the total claim amount when the employee has:

- A form TD1 Personal Tax Credits Return for the previous tax year.
- No current withholding instructions.

### Tax Elections

#### Federal and provincial annual tax elections

Workday calculates the federal and provincial annual value tax elections for payments during the effective date year. Workday doesn't consider them in the tax calculation for the subsequent year. This process reduces your need to stop the tax election the next year manually for letters of authority.

### Future-Dated Tax Elections

To enter future tax elections for another province, select the appropriate effective date and province. Example: If the employee is moving to another province, you can enter the tax elections for that province in advance.

### Correcting Tax Elections

To correct a worker's tax elections, access the **Worker CAN Tax Elections** report. In the first column, select **Worker Tax Election > Edit** from the related actions menu.

### Employee Self-Service Tax Elections

For security, Workday automatically masks workers' Social Insurance Numbers (SINs) on all tax withholding elections. On the **Edit Tenant Setup - Payroll** task, you can select **USA and CAN ESS Withholding Elections > Display National ID**

to display all worker SINs. Workers can use the related action from their profile page **Personal Data** > **View My ID Information** > **Verify National ID** to validate their SIN. To validate their SIN, they require access to the *Self Service: Verify National ID* domain in the Personal Data functional area.

To enable employees to add their own tax withholding elections, set up these business processes (secured to the CAN Payroll functional area) and their security policies:

- *Complete Federal Withholding Elections*
- *Complete Province Withholding Elections*
- *Complete Federal Commissions and Expenses Withholding Elections*
- *Complete Quebec Commissions and Expenses Withholding Elections*

They're available as a subprocess of the *Onboarding* business process.

To add a tax election for the first time, employees can access the **Withholding Elections** report. To update existing elections, employees can select the **Update** button on the **Federal Elections** and **Province Elections** tabs, either from the report or from their worker profile. They can also add or edit federal and provincial TD1 tax elections using Workday on Android, iPad, and iPhone.

Employees can use these ESS tasks to enter their TD1X and TP-1015.R.13.1 elections:

- **Complete Federal Commissions and Expenses Withholding Elections**
- **Complete Quebec Commissions and Expenses Withholding Elections**

Workday doesn't support employee self-service tax elections for workers on international assignment in Canada.

## Tax Election Reports

You can view worker tax elections with these reports:

- **Worker CAN Tax Elections**
- **Payee T1 Withholding Election**

## Withholding Orders (CAN)

---

### Setup Considerations: Income Withholding Orders (CAN)

You can use this topic to help make decisions when planning your configuration and use of Canadian income withholding orders (also known as garnishments). It explains:

- Why to set it up.
- How it fits into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

### What It Is

Workday enables you to process these types of income withholding orders using rules that follow provincial and federal legislation:

- Family maintenance.
- Federal tax levies and provincial tax levies.
- Garnishments.
- Wage assignment.

### Business Benefits

Workday makes it easy to comply with withholding order requirements by:

- Determining the amount to withhold from the employee's disposable earnings, including arrears and any agency and employer fees.
- Applying withholding limits and setting priorities for what to withhold.
- Updating the withholding order calculation rules in accordance with federal and provincial changes. Example: The yearly update Quebec makes to their withholding rules.
- Providing visibility into the calculation rules that Workday uses to calculate withholding orders, by tax authority and withholding order type.
- Providing Workday-delivered statutory pay components for each withholding type.
- Dynamically displaying the required fields for each type of withholding order you record.
- Beginning automatic deductions during payroll processing once you record the withholding order.
- Calculating multiple withholding orders based on the rules for that order type and province.
- Aggregating withholding order amounts to avoid exceeding limits for a type of withholding order.

You can also attach a document to the income withholding order in Workday, such as the issued order. The attachment eliminates the need for paper and provides the flexibility for multiple payroll administrators to view the issued order.

### Use Cases

- Payroll administrators can view active and inactive withholding orders directly from the worker's profile.
- For employees that have multiple withholding orders and the amount to withhold exceeds the maximum withholding limit, Workday uses statutory rules to calculate what to withhold for each order.
- Workday enables you to override withholding order priority when a worker has multiple withholding orders. The override enables you to change the order in which they're processed.

## Questions to Consider

| Questions                                                                      | Considerations                                                                                                                                                                                                                                                                                                          |
|--------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Does the worker have past due amounts?                                         | When recording a family maintenance order for a worker, you can enter the past due amount. In the order details, record the current child or spouse support and the past due child or spousal support amounts. Workday calculates the max amount that's available to withhold, and limits the deduction to that amount. |
| For workers with multiple withholding orders, which one is of higher priority? | When a worker has multiple income withholding orders (IWOs), Workday assigns a processing priority to each order. The priority is based on the rules of the issuing agencies. You can override this priority from the related actions of the withholding order as needed.                                               |

## Recommendations

If necessary, ensure that withholding orders are valid by contacting the issuing court or agency.

Notify the worker of the order, and ensure they understand how it will affect their net pay.

## Requirements

Load active withholding orders for the employees into Workday.

## Limitations

Workers can't view their withholding orders in Workday.

You can't delete withholding orders Workday has calculated as part of a payroll, even if the payroll calculation isn't complete yet. You can inactivate the order instead.

Workday doesn't support income withholding orders for workers in international assignments.

## Tenant Setup

(Optional) Define IDs for deduction recipients that Workday will use during processing and with integrations on the **Edit Tenant Setup - Financials** task.

## Security

| Domains                                                                                           |                                                                                                                |

You can create custom reports from these report data sources:

- *All Payroll Withholding Order Tax Authority Rules*
- *All Withholding Orders*

## Integrations

You can use these web services when creating a custom integration for garnishment processing to or from a third-party application:

- *Put Payroll Deduction Recipient* loads deduction recipient information into Workday.
- *Get Payroll Deduction Recipients* retrieves information from Workday.

These web services enable you to enter Canada withholding orders into Workday, and retrieve them from Workday:

- *Put Canada Income Withholding Order*
- *Get Canada Income Withholding Orders*

## Connections and Touchpoints

Create and set up bank accounts to pay third-party deduction recipients.

Record a *Business Number* tax ID for the worker's company.

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships in your tenant. Learn more about the [Workday Touchpoints Kit](#) on Workday Community.

## Steps: Set Up Withholding Orders (CAN)

### Prerequisites

Review setup considerations for income withholding orders (IWOs).

### Context

You can use Workday-delivered rules to process these types of IWOs:

- Family maintenance.
- Federal tax levies and provincial tax levies.
- Garnishments.
- Wage assignment.

Based on provincial and federal law, Workday:

- Determines the amount to withhold from the employee's disposable earnings, including arrears and any agency and employer fees.
- Applies withholding limits and sets priorities for what to withhold.
- Determines statutory rules to determine what to withhold for each order, when an employee has multiple orders and the amount to withhold exceeds the limit.
- Dynamically displays the required fields for each type of withholding order you record.

You can configure a withholding order to be tax deductible for most order types. You can run the **All Payroll Withholding Order Data** report to view the limits Workday applies on each type of withholding order.

### Steps

1. [Set Up Pay Component Groups to Calculate Disposable Income \(CAN\)](#) on page 1324.
2. [Create Deduction Recipient](#) on page 232.
3. Record an IWO.
  - [Record a Family Maintenance Withholding Order \(CAN\)](#) on page 1325.
  - [Record a Garnishment Withholding Order \(CAN\)](#) on page 1327.
  - [Record a Federal or Province Tax Levy Withholding Order \(CAN\)](#) on page 1328.
  - [Record a Wage Assignment Withholding Order \(CAN\)](#) on page 1329.
4. Calculate payroll and review the results to ensure that Workday withholds the correct deduction and fee amounts.
 

See [Steps: Process Payroll](#) on page 613.

### Next Steps

- You can override the default processing order that Workday assigns according to federal and provincial rules.
- **Withholding Order > Delete** related action.
- You can view compliance updates (since 2014-08-01) for the withholding order type you select on the **Payroll Compliance Updates** tab on the **View Payroll Withholding Order Data** report.

## Set Up Pay Component Groups to Calculate Disposable Income (CAN)

### Prerequisites

Create any earnings and nonstatutory deductions you need to calculate disposable income.

Security: *Set Up: Payroll (Calculations - Payroll Specific)* domain in the Core Payroll functional area.

### Context

Before processing withholding orders, you can add the earnings and nonstatutory deductions that you created to the pay component groups Workday uses to calculate disposable income. Workday then uses the rules for the order type to decide which pay component groups to resolve during payroll processing.

You don't need to define statutory deductions or pay component groups for federal, provincial, and territorial taxes. Workday provides these definitions and automatically excludes them from disposable income calculations as required by law. You can run the **All Payroll Withholding Order Data** report for an overview of the information that Workday maintains.

### Steps

1. Access the **Edit Earning** task for earnings you created to calculate disposable income.
2. Add the *Withholding Order (All): Periodic and Lump Sum Earnings Canada [CAN]* pay component group to the **Groups** section on the **Non-Effective Dated** tab.
3. Access the **Edit Deduction** task for nonstatutory deductions you created to calculate disposable income.
4. Add the appropriate pay component groups to the **Groups** section on the **Non-Effective Dated** tab:
  - *Withholding Order (All): Compulsory Retirement Plan [CAN]*
  - *Withholding Order (All): Union Dues [CAN]*
  - *Withholding Order (All): Employee Paid Premium Deductions [CAN]*
  - *Withholding Order (All): Deductions (Canada) [CAN]*
5. Access the **Edit Pay Accumulation** task.
6. Select the Net pay accumulation for each run category that you've created.
7. Add the *Withholding Order (All): Deductions Canada [CAN]* pay component group to the **Deductions** field on the **Subtract from Pay Accumulation** section.

## FAQ: Withholding Orders (CAN)

The questions in this topic are applicable only to Payroll for Canada. To view withholding order FAQs for Payroll for France or the U.S., see:

- [FAQ: Withholding Orders \(FRA\)](#)
- [FAQ: Withholding Orders \(USA\)](#)

**What happens if an employee doesn't have enough wages to cover a withholding payment?**

Workday follows statutory rules to determine what to withhold for each order. You can override the priority defaults for most order types.

**Can I purge withholding order data?**

You can purge all withholding order attachments for any type of worker with the **Purge Person Data** task.

**How can I find out what limits Workday sets for a type of withholding order?**

Access the All Payroll Withholding Order Data report and filter on the Payroll Tax Authority and Pay Component.

To ensure that Workday doesn't exceed limits, Workday aggregates withholding order amounts.

## Record a Family Maintenance Withholding Order (CAN)

### Context

You can record a family maintenance withholding order to begin automatic deductions during payroll processing.

### Steps

1. Access the **Record CAN Withholding Order for Worker** task.
2. Select the *Family Maintenance (CAN)* **Order Type**.
3. As you complete the **Order Info** fields that are for all withholding order types, consider:
4. Some **Order Info** fields display dynamically based on the order type and tax authority. As you complete the fields for family maintenance withholding orders, consider:

| Option                                                                | Description                                                                                                                                                                                                                                 |
|-----------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Current Total Debt Amount</b><br><b>Past Due Total Debt Amount</b> | <p>Workday uses these amounts to prioritize payments and honor past due and limit calculations.</p> <p>Use the <b>Order Details</b> section to specify current or past due amounts.</p>                                                     |
| <b>Maintenance Type</b>                                               | <p>Displays for British Columbia and Newfoundland and Labrador only. Select 1 of these maintenance types:</p> <ul style="list-style-type: none"> <li>• Court Order Enforcement Act</li> <li>• Family Maintenance Enforcement Act</li> </ul> |
| <b>Remittance ID Override</b>                                         | You can override the order number if necessary.                                                                                                                                                                                             |
| <b>No Exemption</b>                                                   | Workday automatically applies the base exemption. Select this check box when there's no exemption amount, dependent exemption amount, or additional exemption amounts for family maintenance.                                               |
| <b>Exempt Percent Override</b>                                        | Displays for British Columbia, Ontario, Quebec, and Northwest Territories only. Select this field to override the Workday-determined exemption percentage.                                                                                  |

| Option                             | Description                                                                     |
|------------------------------------|---------------------------------------------------------------------------------|
| <b>Past Due Pay Period Maximum</b> | Displays for Ontario only. Required only for past due child or spousal support. |

5. As you complete the **Order Details** tab, consider:

| Option                | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
|-----------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Tax Deductible</b> | <p>For British Columbia, this field determines the exemption data Workday uses for the IWO calculation. When you select this check box, Workday uses the exemption amounts required for a tax deductible order. When you clear this check box, Workday uses the exemption amounts required for orders where tax deduction doesn't apply.</p> <p>When selected, to calculate taxable wages without affecting subject wages, Workday uses the <i>Federal Income Tax (FIT2)</i> and <i>Province Income Tax (PIT2)</i> pay components. You can view them in the <b>Other</b> section on the <b>Additional Pay Components</b> tab of the worker's payroll result.</p> |

## Concept: Amended or Terminated Family Maintenance Withholding Order (CAN)

Workday supports recording an amendment or termination family maintenance withholding order when you receive one from an issuing agency or court. Workday retains the original family maintenance order for tracking purposes.

**Note:** To correct clerical errors in the original family maintenance order, select **Withholding Order > Edit** from the related actions menu on the order.

These examples illustrate how to record additional family maintenance withholding orders.

Security: *Worker Data: Payroll (Income Withholding Orders)* - CAN domain in the CAN Payroll functional area.

### Example: Record an Amended Order

You've received an amended family maintenance order from an issuing agency.

1. Access the **Record CAN Withholding Order for Worker** task.
2. As you complete the task, consider these fields:

| Option               | Description            |
|----------------------|------------------------|
| <b>Amended Order</b> | Select this check box. |

| Option             | Description                                          |
|--------------------|------------------------------------------------------|
| <b>Case Number</b> | The number should be the same as the original order. |
| <b>Order Date</b>  | Enter the issue date of the amended order.           |

3. Complete the rest of the fields as needed.

As of the amended order date, Workday adjusts the relevant payroll deduction, and sets the status of the:

- Original order to *Inactive*.
- Amended order to *Active*.

### Example: Record a Terminated Order

You've received a termination family maintenance order from an issuing agency.

1. Access the **Record CAN Withholding Order for Worker** task.
2. As you complete the task, consider these fields:

| Option                   | Description                                                     |
|--------------------------|-----------------------------------------------------------------|
| <b>Termination Order</b> | Select this check box.                                          |
| <b>Termination Date</b>  | Workday stops processing the withholding order as of this date. |
| <b>Case Number</b>       | The number should be the same as the original order.            |
| <b>Order Date</b>        | Enter the issue date of the amended order.                      |

3. Complete the rest of the fields as needed.

As of the termination order date, Workday sets the status of the:

- Original order to *Inactive*.
- Termination order to *Complete*.

## Record a Garnishment Withholding Order (CAN)

### Context

You can record a garnishment withholding order to begin automatic deductions during payroll processing.

### Steps

1. Access the **Record CAN Withholding Order for Worker** task.
2. As you complete the **Order Info** fields that are for all withholding order types, consider:

3. Some **Order Info** fields display dynamically based on the order type and tax authority. As you complete the fields for garnishment withholding orders, consider:

| Option                                       | Description                                                                                                                                                                                                                                                   |
|----------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>No Exemption</b>                          | Displays for all tax authorities except Nova Scotia. Workday automatically applies the base exemption amount, dependent exemption amount, or additional exemption amounts for garnishments. Select this check box when no exemptions apply.                   |
| <b>Max Additional Exempt Amount Override</b> | Displays for Alberta only.                                                                                                                                                                                                                                    |
| <b>Exempt Percent Override</b>               | Select this field to override the Workday-determined exemption percentage.                                                                                                                                                                                    |
| <b>Amount as Percent</b>                     | When the <b>Amount Type</b> is <i>Percent of Disposable Earnings</i> or <i>Percent of Gross</i> , enter the percentage to withhold from the worker's income.                                                                                                  |
| <b>Total Debt Amount</b>                     | The total amount of the worker's debt, or the balance due if the worker has already paid part of the debt.<br><br>When a bankruptcy order doesn't indicate a total amount, Workday continues deductions until the End Date or until you inactivate the order. |

4. As you complete the **Order Fees** tab, enter employer or agency fees for processing the withholding order. Consider:

## Record a Federal or Province Tax Levy Withholding Order (CAN)

### Context

You can record federal or province tax levy withholding orders to begin automatic deductions during payroll processing.

### Steps

1. Access the **Record CAN Withholding Order for Worker** task.
2. Select the **Order Type**:
  - *Federal Tax Levy (CAN)*, or
  - *Province Tax Levy (CAN)*

3. For a *Federal Tax Levy (CAN)*, select the **Tax Authority** to determine which exemptions and rules Workday will use when calculating the order:

- *Federal*
- *Quebec*

Example: You need to pay the Canada Revenue Agency (CRA) for employment insurance owed by a Quebec employee. When creating the order, Workday defaults *Quebec* as the tax authority, because the worker's province of employment is Quebec. The order you received from the government specifies Federal, so you select the *Federal* tax authority instead. Workday uses CRA rules for federal withholding to calculate the order.

4. As you complete the **Order Info** fields that are for all withholding order types, consider:
5. Some **Order Info** fields display dynamically based on the order type and tax authority. As you complete the fields for tax levies, consider:

| Option                         | Description                                                                                                                                                                                                                                                         |
|--------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Pay Period Amount</b>       | Workday converts the <i>Order Form Amount</i> to the pay period amount, taking into account the frequency for each.                                                                                                                                                 |
| <b>Amount as Percent</b>       | When the <b>Amount Type</b> is <i>Percent of Disposable Earnings</i> or <i>Percent of Gross</i> , enter the percentage to withhold from the worker's income.                                                                                                        |
| <b>Total Debt Amount</b>       | The total amount of the worker's debt, or the balance due if the worker has already paid part of the debt.<br><br>When a bankruptcy order doesn't indicate a total amount, Workday continues deductions until either the End Date or when you inactivate the order. |
| <b>Exempt Percent Override</b> | Select this field to override the Workday-determined exemption percentage.                                                                                                                                                                                          |
| <b>Override Subject Rate</b>   | For Quebec, enter a percentage to override the delivered exemption override rate for workers.                                                                                                                                                                       |

## Record a Wage Assignment Withholding Order (CAN)

### Context

You can record wage assignment withholding orders to begin automatic deductions during payroll processing.

Workday no longer supports wage assignment withholding orders for Saskatchewan effective 2017-11-01.

## Steps

1. Access the **Record CAN Withholding Order for Worker** task.
2. Select the *Wage Assignment (CAN)* **Order Type**.
3. As you complete the **Order Info** fields that are for all withholding order types, consider:
4. Some **Order Info** fields display dynamically based off of the order type and tax authority. As you complete these fields for wage assignment withholding orders, consider:

| Option                         | Description                                                                                                                                                                                                                                                                |
|--------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Amount as Percent</b>       | When the <b>Amount Type</b> is <i>Percent of Disposable Earnings</i> or <i>Percent of Gross</i> , enter the percentage to withhold from the worker's income.                                                                                                               |
| <b>Total Debt Amount</b>       | The total amount of the worker's debt, or the balance due if the worker has already paid part of the debt.<br><br>When a bankruptcy order doesn't indicate a total amount, Workday continues deductions until either the <b>End Date</b> or when you inactivate the order. |
| <b>Exempt Percent Override</b> | Displays for Ontario only. Select this field to override the Workday-determined exemption percentage.                                                                                                                                                                      |

5. As you complete the **Order Fees** tab, consider:

## Record of Employment (CAN)

### Setup Considerations: Record of Employment (ROE) Reporting

You can use this topic to help make decisions when planning your configuration and use of Record of Employment (ROE) reporting. It explains:

- Why to set it up.
- How it fits into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

#### What It Is

Workday helps you generate and submit Records of Employment (ROEs) to Service Canada using a series of tasks and an integration.

Workday generates ROEs for employees who experience an interruption of earnings such as:

- Termination.
- Leave of absence.
- Change organization assignment.
- Change in pay frequency or schedule because of a pay group transfer.

You can also create an ROE on demand when Service Canada requests one and an ROE triggering event hasn't occurred.

### Business Benefits

Workday makes it easier to manage your ROE reporting obligations while complying with Service Canada requirements. Workday keeps your ROE data synchronized with Service Canada when you use Workday as your system of record for ROE reporting. Workday also enables you to:

- Issue original and amended ROEs.
- Configure criteria based on ROE events, worker eligibility, and pay results for Workday to create ROEs automatically.
- Configure reason codes and default comments. When configured, Workday automatically populates the comments and reason codes on the ROE when you create ROE data.
- Integrate with Service Canada.
- Load *Issued* ROEs and serial numbers back into Workday from Service Canada, using an integration. Therefore, keeping Workday in sync with Service Canada.

### Use Cases

Issue an ROE when an employee experiences an interruption of earnings.

Configure ROE creation criteria so Workday prepopulates ROE data when you complete these business processes in Workday:

- *Assign Pay Group* with a pay frequency or schedule change
- *Change Organization Assignments*
- *Request Leave of Absence*
- *Termination*

Create ROEs for retro-active events without having to rerun the specific effective date range.

Create ROEs for workers in multiple jobs.

Schedule when Workday should create ROEs based on completed events and effective since the last time Workday created ROEs.

Amend a previously issued ROE when you need to correct ROE data.

Ignore an ROE triggering event when there isn't an interruption of earnings, such as a worker on paid leave.

Use or modify these Workday delivered ROE creation criteria:

- Any specified leave event.
- Any specified termination event.
- Company transfer events.
- Completed ROE events.
- Events effective after first processing period begin date of previous pay group.
- Last Day For Which Paid Prior to First Day of Leave events.
- Leave events that aren't part of cascading leaves.
- Leave events that have payroll effects.
- Leave event types.

- No leave entitlement as of first day of leave events.
- Pay frequency change on assign pay group events.
- Termination event types.
- Terminations after ignored ROE leave events.

### Questions to Consider

| Questions                                                                                                                                                                                                                                                                                                                                   | Considerations                                                                                                                                                                                                                                                                                                                     |

| <p>Will I issue ROEs before going live on Workday to start a new employment period as of my Workday implementation date?</p> <p>Will I load historical data from my previous payroll application so that when I create ROEs in Workday, Workday reports the existing employment period that started in my previous payroll application?</p> | <p>Make this decision before running your first pay calculation in Workday.</p> <p>See <a href="#">Prepare and Load Historic ROE Data</a> on page 1337.</p>                                                                                                                                                                        |
| Which pay period do I need to allocate my earnings and deductions to?                                                                                                                                                                                                                                                                       | Review Service Canada guidelines. You can specify the pay period allocation for insurable earnings and hours for each earning and deduction: Edit the earning or deduction and update the <b>ROE</b> section.                                                                                                                      |
| Are my earnings configured to report separation payments on the ROE?                                                                                                                                                                                                                                                                        | You can configure separation payments for each earning by assigning it an ROE reporting type.                                                                                                                                                                                                                                      |
| Where do you want to see ROE results?                                                                                                                                                                                                                                                                                                       | <p>Workday automatically displays ROE results on the <b>ROE Results for Worker(s)</b> and <b>View ROE Events</b> reports.</p> <p>To display ROE results on the worker profile, add <b>ROE Results</b> to the <b>Pay for Worker Profile</b> group.</p> <p>This tab will only be visible to payroll administrators, not workers.</p> |

### Recommendations

Use Workday Payroll as your system of record for ROE reporting, including:

- Corrections, such as overrides you process on the ROE.
- Amendments, when you need to change what you reported on a previously issued ROE.

Do not correct or amend ROEs directly in Service Canada. Use Workday Payroll to process any ROE data, including data corrections or amendments to keep the data synchronized between Workday and Service Canada. Changing, correcting, or amending ROE data outside of Workday causes the ROE data in Workday to be out of sync with Service Canada. There is no way to resynchronize the data.

### Requirements

- Create an ROE Web account with Service Canada.
- Set up earnings and deductions for ROE reporting. The earnings and deductions define which periods Workday allocates the payments to when creating ROEs.
- When there's a completed business process for an ROE triggering event in Workday, create the ROE for events. See: [Steps: Create ROE Data to Report to Service Canada](#) on page 1343.

- Have access to a computer with a File Transfer Protocol (FTP) server to:
  - Export ROE data with the Outbound ROE integration.
  - Download ROE files from Service Canada.

### Limitations

When Service Canada accepts and issues the ROEs in ROE Web, Workday:

- Won't automatically update the Workday ROEs with a status of *Issued*.
- Will be out of sync with Service Canada until you run the *Canada ROE Inbound* integration.

To update the status of the ROEs, you must:

1. Manually download the Service Canada import file from ROE Web.
2. Run the *Canada ROE Inbound* integration in Workday, which will update the status of the ROEs to *Issued*.

Workday doesn't support pay frequencies for 13 pay periods a year. To submit these types of ROEs with Service Canada, manually create and issue them.

Workday doesn't support Record of Employment (ROE) for workers with international assignments in Canada.

### Tenant Setup

Configure the **ROE (CAN)** section of the **Edit Tenant Setup - Payroll** task. Select:

- The **Select Submit by default on Approve ROE task** check box.
- The **Preserve ROE period and separation payment overrides when re-creating ROE (default option)** check box.

### Security

| Domains                                                                                                                                                                                                                                             | Considerations                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

## Business Processes

These business processes are an ROE triggering event:

- *Assign Pay Group* with a pay frequency or schedule change.
- *Change Organization Assignments*.
- *Place Worker on Leave* and *Request Leave of Absence*.
- *Termination*.

When the business process completes, use the **Create ROE Data for Events** task to create ROE data.

## Reporting

### Examples

[Launch Service Canada ROE Integrations](#)

[2023R1 What's New Post: Records of Employment \(ROEs\) for Workers with Multiple Jobs](#)

## Set Up Record of Employment (ROE)

### Steps: Set Up ROE Reporting

### Prerequisites

Review setup considerations for Record of Employment (ROE) reporting.

### Context

You can generate Records of Employment (ROEs) for employees who experience an interruption of earnings such as:

- Change in pay frequency because of a pay group transfer.
- Leave of absence.
- Termination.
- Company Transfers.

To keep your ROE data synchronized with Service Canada, use Workday Payroll as your sole record for ROE reporting, including:

- Corrections, such as overrides you process on the ROE.

- Amendments, when you need to change what you reported on a previously issued ROE.

## Steps

1. Prepare and load historic ROE data from your previous payroll application.  
See [Prepare and Load Historic ROE Data](#) on page 1337.
2. Set up integration with Service Canada.  
See [Steps: Set Up Service Canada ROE Integration](#).
3. [Set Up Earnings for ROE Reporting](#) on page 1338.  
Identify earnings that are insurable, specify their allocation, and configure separation payments.
4. Set up deductions for ROE reporting.  
See [Steps: Create Deductions](#) on page 227.
5. Set up ROE contact information.  
See [Set Up Company Federal Taxes \(CAN\)](#) on page 1276.
6. [Set Up ROE Configurations](#) on page 1341.
7. To add an **ROE Results** tab to your worker profile **Pay** tabs, access the **Configure Profile Group** task.
  - a. Select *Pay for Worker Profile*.
  - b. Add *ROE Results* to the **Report** column.

## Next Steps

Complete payroll for a period you need to report on an ROE.

## Related Information

### Examples

[Concept: Service Canada ROE Integration](#)

## Prepare and Load Historic ROE Data

### Prerequisites

Either:

- Start a new employment period as of your Workday implementation date.
- Continue the existing employment period without an interruption of earnings.

Security: *Process: ROE (Create Data)* - CAN in the CAN Payroll functional area:

### Context

To prepare your Workday tenant for ROE processing, you must load historical data from your previous payroll application:

- ROE History - ROEs issued after running your final payroll.
- ROE Prior Period History Results - Insurable hours and earnings paid 1 year before your Workday implementation.

**Note:** If you don't load ROE history from your previous payroll application, or you don't load prior period history results, all ROEs generated in Workday default the First Day Worked to the first day the worker receives insurable earnings in Workday.

## Steps

1. Before running your first pay calculation in Workday, ensure that you loaded historical data from your previous payroll application.
  - If you start a new employment period as of your Workday implementation date:  
Issue ROEs for all of your workers from your previous payroll application. Load the information for the issued ROEs into Workday. Your implementation partner loads ROE history for all workers before the Workday implementation, or you can access the **Create ROE History** task and enter the information manually by worker.
  - If you continue the existing employment period without an interruption of earnings:  
Your implementation partner will load your historical insurable hours and earnings into Workday with the *Import ROE Prior Period History Results* web service.  
  
Before using the web service, ensure that your period schedules include the historical periods you want to load. We recommend that you load a minimum of 1 year before your Workday implementation date. Example: If your pay periods are semimonthly, load 24 payroll periods.
2. If you issued ROEs for workers on leave and they returned from their leave within 1 year of your Workday implementation, you have to record their return from leave date. Workday uses this date to find the First Day Worked on the first ROE Workday creates.
  - a) Access the **Create ROE History** task.
  - b) Select a date on the **Return from Leave Date (Prior to Go Live)** calendar prompt.

## Set Up Earnings for ROE Reporting

### Prerequisites

- Select *Canada* in the **Enabled Countries** field on the **Edit Tenant Setup – Payroll** task.
- Set up the groups, criteria, calculation, payment source, and costing on the **Create Earning** task.

Security: *Set Up: Payroll (Calculations – Payroll Specific)* domain in the Core Payroll functional area.

### Context

Identify:

- Earnings as separation payments.
- Insurable earnings. Specify the allocation, and define how to report payments. If you have insurable hours, create an *Hours* related calculation.

## Steps

1. Access the **Create Earning** or **Edit Earning** tasks for the ROE reporting earning.
2. Access the **Related Calculations** section on the **Effective Dated** tab. If hours related to the earning are insurable, select *EI Hours* in the **Group** field on the related calculation for insurable hours.
3. If the earning or its hours are insurable, select *EI Taxable* from the **Groups** field on the **Non-Effective Dated** tab.

4. In the **ROE** section of the **Non-Effective Dated** tab, specify the allocation for insurable earnings and hours. Your configuration defines which periods Workday allocates the payments to when creating ROEs.

When you use the **Maintain ROE Period Allocations** task to update the allocation method for insurable earnings and hours, the corresponding **Allocation Reporting Period** field also changes on the **Non-Effective Dated** tab for an earning or deduction code.

| Option                                       | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

Example: A worker receives retro earnings results for December 16 to 31st that were processed with the January 1st to 15th pay period. Workday allocates these earnings to the December 16 to 31st pay period on the ROE.</li> <li><i>Period Paid:</i> Allocate earnings to the Period End date of the last completed regular on-cycle pay period. Example: A worker receives retro earnings results for December 16 to</li> </ul> |

| Option                                             | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
|----------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                                    | 31st that were processed with the January 1st to 15th pay period. Workday allocates these earnings to the January 1st to 15th pay period on the ROE.                                                                                                                                                                                                                                                                                                                                                                  |
| <b>Allocation Reporting Period for Retro Hours</b> | <p>Applies when you use the <b>Run Retro Pay Calculation</b> task to recalculate earnings with insurable hours in response to:</p> <ul style="list-style-type: none"> <li>• Prior period changes (such as adjustments and corrections).</li> <li>• Payments for overtime and commission paid after the period worked.</li> </ul> <p>Select the period for allocating differences between the original and recalculated hours. The default period is the same as the <b>Allocation Reporting Period for Hours</b>.</p> |

5. If you use the earning for one of these types of separation payments, assign it a **Reporting Type** so that Workday can report separation payments on the ROE:

- Vacation (Block 17A)
- Statutory holidays occurring after the last day of work (Block 17B)
- Other monies (Block 17C)
- Wage loss (Block 19)

When configured, Workday reports the:

- Insurable earnings paid in or after the worker's final period, but before the start of the next employment period. The final period is defined as the period that:
  - Contains the worker's Last Day for Which Paid.
  - Is period 1 of the **Insurable Earnings Detail** (Block 15C) grid.
- Payment start and end dates on the ROE, when you configure it on the **Edit Company Federal CAN Tax Reporting** task. Select **Default Payment Dates** in the **Record of Employment** tab.
- Separation Payment type in one of these grids on the ROE:
  - **Separation Payments** (Block 17).
  - **Paid Sick, Maternity/ Parental Leave, Wage Loss** (Block 19).
- Amount of the Separation Payment that you paid in or after the worker's final period, where required
- ROE in *In Error* when it includes an earning with a wage loss or statutory holiday reporting type. Edit the ROE and enter additional information about the earning.

### Example

This example illustrates how to create a bonus earning that reports both regular and separation pay bonuses on the ROE.

Service Canada requires that you allocate:

- Bonuses to the period in which they're paid.
- Bonuses paid because of a separation in the last pay period of the employee.

Create a single *Bonus* earning.

Configure the *Bonus* earning on the **Non-Effective Dated** tab to report separation payment bonuses on the ROE:

1. From the **Groups** field, select *EI Taxable*.

2. In the **ROE** section, select these settings:

| Field                                 | Setting                                                |
|---------------------------------------|--------------------------------------------------------|
| Allocation Reporting Period           | <i>Period Paid</i>                                     |
| Allocation Reporting Period for Hours | Leave empty.                                           |
| Reporting Type                        | <i>Bonus (Separation or retirement) (Other Monies)</i> |

When you pay this insurable earning before the workers final period, Workday reports it on the ROE in the **Insurable Earnings Detail** (Block 15C) grid only. When you pay it in or after the workers final period it, Workday reports it in these grids:

- **Insurable Earnings Detail** (Block 15C)
- **Separation Payments** (Block 17C)

### Next Steps

Set up contact information and ROE Reporting on the **Record of Employment** tab on the **Edit Company Federal CAN Tax Reporting** task.

[Steps: Create Earnings](#) on page 222  
[Steps: Set Up ROE Reporting](#) on page 1336  
[Set Up Company Federal Taxes \(CAN\)](#) on page 1276  
[Create Related Calculations](#) on page 239

#### Examples

[2023R2 What's New Post: Record of Employment \(ROE\) Allocations and Insurable Details](#)

### Set Up ROE Configurations

#### Prerequisites

Define:

- Leave types in Workday Absence Management.
- Termination categories in Workday Human Capital Management.

#### Context

You can:

- Configure criteria based on ROE events, worker eligibility, and pay results for Workday to automatically create ROEs.
- Configure reason codes and default comments so that when you create ROE data, Workday automatically populates the comments and reason codes on the ROE.

### Steps

1. Access the **Maintain ROE Configuration** task.

As you complete the task, consider:

| Option    | Description                                                                                                                                                                 |
|-----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| ROE Event | You can configure ROE creation for these events: <ul style="list-style-type: none"> <li>• Assign Pay Group</li> <li>• Change Organization Assignments for Worker</li> </ul> |

| Option                                     | Description                                                                                                                                                                                                                                                                    |
|--------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                            | <ul style="list-style-type: none"> <li>Request Leave of Absence</li> <li>Termination</li> </ul>                                                                                                                                                                                |
| <b>Last Day for Which Paid Calculation</b> | Depending on the ROE event, Workday automatically populates the <b>Last Day For Which Paid Calculation</b> .                                                                                                                                                                   |
| <b>Order</b>                               | Order the events and conditions by priority so that when you create ROE data and a worker's event passes several criteria, Workday only creates 1 ROE against the condition that you configured with the highest priority.                                                     |
| <b>ROE Creation Criteria</b>               | <p>You can:</p> <ul style="list-style-type: none"> <li>Update the delivered ROE creation criteria to add any additional rule conditions to support creating the ROE in special scenarios.</li> <li>Create new ROE Creation Criteria.</li> </ul>                                |
| <b>ROE Reason Code</b>                     | <p>You're responsible for:</p> <ul style="list-style-type: none"> <li>Mapping Service Canada reason codes for any new ROE configurations you create.</li> <li>Reviewing Service Canada reason codes on delivered ROE Creation Conditions and updating as necessary.</li> </ul> |
| <b>ROE Default Comments</b>                | Workday automatically populates the comments when creating an ROE based on the configured conditions.                                                                                                                                                                          |

Security: *Set Up: Payroll (ROE) - CAN* domain in the CAN Payroll functional area.

2. Test new or updated ROE Creation Criteria with the **Test ROE Creation Criteria** task.

Security: *Set Up: Payroll (ROE) - CAN* domain in the CAN Payroll functional area.

## Result

Workday:

- Creates ROEs for triggering events that meet the ROE creation criteria.
- Enters the specified comment on the **Comments** field (Block 18) on the ROE.
- Enters the reason code on the **Reason for Issuing the ROE** (Block 16) field on the ROE.
- Displays the ROE creation criteria that initiated the ROE.

## Related Information

### Examples

[Steps: Set Up Termination](#)

[Steps: Set Up Leave of Absence](#)

## Process Record of Employment (ROE)

### Steps: Create ROE Data to Report to Service Canada

#### Prerequisites

- Set up ROE reporting.
- Complete one of these actions:
  - Complete on-cycle payroll for the period in which the ROE-triggering event occurred.
  - Pay final wages using an off-cycle payment in the period containing the Last Day for Which Paid.
- Security: These domains in the CAN Payroll functional area:
  - *Process: ROE (Create Data) - CAN*
  - *Reports: ROE Results for Worker(s) - CAN*
  - *Process: ROE (Edit Data) - CAN*
  - *Process: ROE (Approve Data) - CAN*

#### Context

You can create, review, and approve ROE data in preparation for sending to Service Canada. You can create ROE data for these ROE triggering events:

- Assign pay group with a pay schedule or frequency change.
- Change organization assignment.
- Request Leave of Absence.
- Termination.

#### Steps

##### 1. Create an ROE:

- For an ROE triggering event. See: [Steps: Create ROE Data for Events](#) on page 1345.
- On-demand. Use only when you need to issue an ROE that isn't a result of an ROE triggering event. See: [Steps: Create ROE Data On-Demand](#) on page 1349

##### Note:

You can create an on-demand ROE only when the worker has either:

- No prior ROEs.
- *Issued* prior ROEs.

You can't create an on-demand ROE for a worker who has an ROE in one of these statuses:

- *Approved*
- *In Error*
- *In Progress*
- *Pending Issuance*
- On a schedule. See: [Steps: Schedule ROE Creations](#) on page 1350.

For workers in multiple jobs, Workday creates:

- 2 ROEs for a worker who has 2 positions in 2 pay groups with different pay frequencies.
- 2 ROEs for a worker who has 2 positions, in 2 companies with different payroll account numbers.
- 2 ROEs for a worker who has 2 positions, in 2 pay groups with the same frequency and different payment dates.
- One ROE for a worker who has 2 positions in the same company, but 2 different pay groups with the same pay frequency and schedule.

2. Access the **ROE Results for Worker(s)** report to review and correct any errors.
3. Select the **ROE** and the relevant command. When no errors exist, Workday sets the ROE status to *In Progress*. You can approve the ROE.
  - **View** the ROE. See [Reference: ROE Results for Workers](#) on page 1357.
  - **Edit** the ROE. See [Reference: ROE Results for Workers](#) on page 1357.
  - **Re-Create** the ROE if you made data changes. See [Concept: Recreating ROE Data](#) on page 1355.
  - **Delete** the ROE. If you have a subsequent ROE, don't delete the ROE.
4. From the related actions menu of the ROE, select **ROE > Approve**:
  - Select **Confirm** to approve the ROE in *Draft* status.
  - Select both **Confirm** and **Submit** to set the ROE to *Submit* status in the ROE outbound integration. Selecting both enables you to avoid submitting the draft ROEs manually after you import them to Service Canada.

**Note:** You can select the **Submit** check box automatically if you select the **Select Submit by default on Approve ROE task** check box on **Edit Tenant Setup - Payroll**.

## Result

You can launch the ROE integration file for Service Canada. Workday includes all ROEs in *Approved* status. Filter the selection by choosing options from these fields on the **Launch/Schedule Integration** task:

- **Pay Group**
- **Company**
- **Worker**

## Next Steps

Use an integration connector to prepare ROE files, upload them directly to Service Canada, and import ROEs issued by Service Canada. The ROEs in Workday remain in *Pending Issuance* status until you import the issued ROEs from Service Canada.

**Note:** Workday recommends you complete the full process and run the ROE inbound integration to update ROEs in *Pending Issuance* status to *Issued*.

Workday recommends that you import only ROEs with an *Issued* status from Service Canada. If you import ROEs with the *Passed*, *Failed*, or *Rejected* status into Workday, you must delete or recreate the ROE data before sending the ROE back to Service Canada.

Use the **View ROEs to Amend** report to view terminated workers and workers on unpaid leave who have an Issued ROE who receive earnings after Service Canada issues the ROE, but before the worker's return to work.

Monitor the status of ROEs submitted to Service Canada using the **ROE Results for Worker(s)** report.

For more information, see the Service Canada web site.

### Examples

[2022R2 What's New Post: Record of Employment Outbound Integration](#)

[2023R1 What's New Post: Records of Employment \(ROEs\) for Workers with Multiple Jobs](#)

## Steps: Create ROE Data for Events

### Prerequisites

Security: *Process: ROE (Create Data)* - CAN domain in the CAN Payroll functional area.

### Context

Create ROEs for:

- Completed ROE events such as terminations or leave of absence, that are effective within the specified start and end date range.
- Events with a completion date between the start date and the day you run the **Create ROE Data for Events** task, but the events are effective before the start date.

### Steps

Access the **Create ROE Data for Events** task.

As you complete the task, consider:

| Option                       | Description                                                                                                                                                                                                                                                                                                              |
|------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>ROE Events</b>            | <p>If you don't select anything, Workday creates ROEs for all events based on the ROE creation criteria you configured on the <b>Maintain ROE Configuration</b> task.</p> <p>When you generate an ROE, Workday populates the reason code based upon the configuration in the <b>Maintain ROE Configuration</b> task.</p> |
| <b>ROE Creation Criteria</b> | You can select any of the ROE creation criteria events you configured on the <b>Maintain ROE Configuration</b> task.                                                                                                                                                                                                     |
| <b>Start Date / End Date</b> | <p>Workday creates ROEs for ROE events that are:</p> <ul style="list-style-type: none"> <li>• Effective in the date range.</li> <li>• Effective in the past and completed within the start date and the day you run the task.</li> </ul>                                                                                 |
| <b>Last Run Details</b>      | <p>Display only.</p> <p>Displays the last 10 times the <b>Create ROE Data for Events</b> task or the <b>Create ROE Data for Events - Scheduler</b> task was last ran in descending order.</p>                                                                                                                            |

When workers in the specified date range have more than 1 ROE triggering event, Workday creates an ROE for each event with the earnings and hours associated to it.

### Next Steps

Access the ROEs to review and correct any errors with these reports:

- **ROE Results for Worker(s)**
- **View ROE Events**
- **View Create ROE Data Run History**

## Example: Create an ROE for a Terminated Worker

### Context

This example illustrates how to create a Record of Employment (ROE) for a terminated worker.

### Prerequisites

Security: These domains in the CAN Payroll functional area:

- *Process: ROE (Create Data) - CAN*
- *Reports: ROE Results for Worker(s) - CAN*
- *Process: ROE (Edit Data) - CAN*
- *Process: ROE (Approve Data) - CAN*

### Steps

1. Set up ROE reporting.

See: [Steps: Set Up ROE Reporting](#) on page 1336.

2. You can:

- Complete on-cycle payroll for the period, which includes the worker's last day.
- Pay final wages using an off-cycle payment in the period containing the Last Day for Which Paid.

3. Create ROE data for the terminated worker.

See:

- [Steps: Create ROE Data for Events](#) on page 1345
- [Steps: Schedule ROE Creations](#) on page 1350

4. Access the **ROE Results for Worker(s)** report to select the ROE and the relevant command. When no errors exist, Workday sets the ROE status to *In Progress* and you can approve the ROE.

- **View** the ROE. See [Reference: ROE Results for Workers](#) on page 1357.
- **Edit** the ROE. See [Reference: ROE Results for Workers](#) on page 1357.
- **Re-create** the ROE if you made data changes. See [Concept: Recreating ROE Data](#) on page 1355.
- **Delete** the ROE. If you have a subsequent ROE, don't delete the ROE.

5. From the related actions menu of the ROE, select **ROE > Approve**:

- To approve the ROE in *Draft* status, select the **Confirm** check box.
- Select the **Confirm** and **Submit** check boxes to set the ROE to *Submit* status in the ROE outbound integration. Selecting both enables you to avoid the need to submit the draft ROEs manually after you loaded them to Service Canada.

**Note:** You can select the **Submit** check box automatically if you select the **Select Submit by default on Approve ROE task** check box on **Edit Tenant Setup - Payroll**.

## 6. Launch Service Canada ROE Integrations.

Select options from these fields on the **Launch/Schedule Integration** task to select which Approved ROEs to include in the outbound file for Service Canada:

- **Pay Group**
- **Company**
- **Worker**

Workday includes all ROEs in *Approved* status in the outbound integration file if you don't select an option.

Approved ROEs sent to Service Canada update to *Pending Issuance*. If you need to update or change an ROE in *Pending Issuance* status:

- Select **Cancel Pending Issuance**, either when you view the ROE or from the worker profile (**ROE > Cancel Pending Issuance**) to change the status of a single ROE back to *In Progress*.
- Use the **Change ROE Pending Issuance Status to Approved** task to revert all ROEs in an outbound integration file to *Approved*.

## 7. Access the Service Canada website and upload the generated file or files.

- See: <https://www.canada.ca/en/employment-social-development/programs/ei/ei-list/ei-roe/access-roe.html>.
- See: [Concept: Service Canada ROE Integration](#).

## 8. Import the issued ROEs into Workday from Service Canada.

- See: [Launch Service Canada ROE Integrations](#)
- See: [Steps: Set Up Inbound Service Canada ROE Integration](#)

**Note:** Workday recommends that you import only ROEs with an *Issued* status from Service Canada. If you import ROEs with the *Passed*, *Failed*, or *Rejected* status into Workday, you must delete or recreate the ROE data before sending the ROE back to Service Canada. For more information, see the Service Canada web site.

The imported ROE status updates from *Pending Issuance* to *Issued*. The Issued Date and ROE Serial Number display on the ROE.

### Examples

[2022R2 What's New Post: Record of Employment Outbound Integration](#)

[2023R1 What's New Post: Records of Employment \(ROEs\) for Workers with Multiple Jobs](#)

[Example: Create Multiple ROEs for a Terminated Worker in Multiple Jobs](#) on page 1347

## Example: Create Multiple ROEs for a Terminated Worker in Multiple Jobs

This example demonstrates how to create multiple Records of Employment (ROEs) for a terminated worker with multiple jobs.

## Context

A worker has 2 positions in 2 pay groups with different pay frequencies. You end the worker's additional job using the **End Additional Job** task, then terminate the worker.

## Prerequisites

Security: These domains in the CAN Payroll functional area:

- *Process: ROE (Create Data) - CAN*
- *Reports: ROE Results for Worker(s) - CAN*
- *Process: ROE (Edit Data) - CAN*
- *Process: ROE (Approve Data) - CAN*

## Steps

1. Set up ROE reporting.

See: [Steps: Set Up ROE Reporting](#).

2. You can:

- Complete on-cycle payroll for the period, which includes the worker's last day.
- Pay final wages using an off-cycle payment in the period containing the Last Day for Which Paid.

3. Create ROE data for the terminated worker.

**Note:** For a worker in multiple jobs, Workday creates:

- 2 ROEs for a worker who has 2 positions in 2 pay groups with different pay frequencies.
- 2 ROEs for a worker who has 2 positions, in 2 companies with different payroll account numbers.
- 2 ROEs for a worker who has 2 positions, in 2 pay groups with the same frequency and different payment dates.
- One ROE for a worker who has 2 positions in the same company, but 2 different pay groups with the same pay frequency and schedule.

When you don't configure a processing position using the **Maintain Payroll Processing Position Rules** task, the worker's primary position for the ROE automatically populates the **Occupation** field.

See:

- [Steps: Create ROE Data for Events](#).
- [Steps: Schedule ROE Creations](#).

4. Access the **ROE Results for Worker(s)** report to select the ROEs and the relevant command. When no errors exist, Workday sets the ROE status to *In Progress*, and you can approve the ROEs.

- **View** the ROE. See [Reference: ROE Results for Workers](#).
- **Edit** the ROE. See [Reference: ROE Results for Workers](#).
- **Re-create** the ROE if you made data changes. See [Concept: Recreating ROE Data](#).
- **Delete** the ROE. If you have a subsequent ROE, don't delete the ROE.

To view a list of multiple ROEs for workers in multiple jobs or linked ROEs (Example: Original and Amend) for workers in one position, select the **View linked or multiple ROEs for a worker in list view** check box in the **Edit Tenant Setup - Payroll** task.

5. Access the **Approve ROEs** task. To find the ROEs you want to approve, select **Approve All ROEs in Progress** or search and select a worker's name.

- To approve the ROE in *Draft* status, select the **Confirm** check box.
- Select the **Confirm** and **Submit** check boxes to set the ROE to *Submit* status in the ROE outbound integration. Selecting both enables you to avoid the need to submit the draft ROEs manually after you loaded them to Service Canada.

**Note:** You can select the **Submit** check box automatically if you select the **Select Submit by default on Approve ROE** task check box on **Edit Tenant Setup - Payroll**.

## 6. Launch Service Canada ROE Integrations.

Select options from these fields on the **Launch/Schedule Integration** task to select which Approved ROEs to include in the outbound file for Service Canada:

- **Pay Group**
- **Company**
- **Worker**

Workday includes all ROEs in *Approved* status in the outbound integration file if you don't select an option.

Approved ROEs sent to Service Canada update to *Pending Issuance*. If you need to update or change an ROE in *Pending Issuance* status:

- Select **Cancel Pending Issuance**, either when you view the ROE or from the worker profile (**ROE > Cancel Pending Issuance**) to change the status of a single ROE back to *In Progress*.
- Use the **Change ROE Pending Issuance Status to Approved** task to revert all ROEs in an outbound integration file to *Approved*.

## 7. Access the Service Canada website and upload the generated files.

- See: <https://www.canada.ca/en/employment-social-development/programs/ei/ei-list/ei-roe/access-roe.html>.
- See: [Concept: Service Canada ROE Integration](#).

## 8. Import the issued ROEs into Workday from Service Canada.

- See: [Launch Service Canada ROE Integrations](#)
- See: [Steps: Set Up Inbound Service Canada ROE Integration](#)

**Note:** Workday recommends that you import only ROEs with an *Issued* status from Service Canada. If you import ROEs with the *Passed*, *Failed*, or *Rejected* status into Workday, you must delete or recreate the ROE data before sending the ROE back to Service Canada. For more information, see the Service Canada web site.

## Result

Workday generates 2 ROEs and the imported ROE status for each update from *Pending Issuance* to *Issued*. The Issued Date and ROE Serial Number display for each ROE.

[2023R1 What's New Post: Records of Employment \(ROEs\) for Workers with Multiple Jobs](#)

[Example: Create an ROE for a Terminated Worker](#) on page 1346

## Steps: Create ROE Data On-Demand

## Prerequisites

Security: *Process: ROE (Create Data)* - CAN domain in the CAN Payroll functional area.

## Context

Create an on-demand Record of Employment (ROE) when Service Canada requests it and there wasn't an ROE-triggering event.

**Note:**

Triggering events include:

- Assigned pay group with a pay schedule or frequency change.
- Change in organization assignment.
- Leave of Absence request.
- Termination.

When an ROE event occurs, use the **Create ROE Data for Events** task.

You can only create on-demand ROEs if there's no prior ROE or a previously-issued ROE for the worker. You can't create an on-demand ROE for a worker who has an ROE *In Progress*, *In Error* or *Approved*.

**Steps**

Access the **Create On-Demand ROE** task.

As you complete the task, consider:

| Option                 | Description                                                                                                                                                                                                                                                                                                                                                                                                                        |
|------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>ROE Reason Code</b> | Select <b>Use the Same Reason Code for All</b> to populate the same reason code when you create multiple on-demand ROEs.                                                                                                                                                                                                                                                                                                           |
| <b>Date Range</b>      | <p>Enter a <b>Start Date</b> and <b>End Date</b>.</p> <p>When you create an ROE using a specified date range, the Start Date displays in the <b>First Day Worked</b> field and the End Date displays in the <b>Last Day for Which Paid</b> field.</p> <p>You can't enter a start or end date that matches or overlaps the dates for an issued ROE. However, you can enter overlapping dates if the issued ROE is History data.</p> |

**Next Steps**

Access the **ROE Results for Worker(s)** report to review and correct any errors.

**Related Information****Concepts**

[Concept: Creating ROE Data](#) on page 1353

**Tasks**

[Steps: Create ROE Data for Events](#) on page 1345

**Steps: Schedule ROE Creations****Prerequisites**

Security: *Process: ROE (Create Data)* - CAN domain in the CAN Payroll functional area.

**Context**

To save you time, you can schedule to create ROEs automatically on a recurring basis for:

- Completed events that are effective within the specified date range.
- Events with a completion date between the start date and the day you run the task, but the event is effective before the start of the date range.

## Steps

1. Access the **Create ROE Data for Events - Scheduler** task and select the **Run Frequency**.
2. As you complete the **Create ROE Criteria** tab on the task, consider:

| Option                              | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

| <b>First Scheduled Run Date</b>     | The start date that Workday uses for the first scheduled run.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| <b>Days From Scheduled Run Date</b> | <p>The number of days before or after the first scheduled run date you want to set as the end date for the ROE creations. You can specify from 5 to negative 5 days.</p> <p>If the <b>Days From Scheduled Run Date</b>:</p> <ul style="list-style-type: none"> <li>• Is zero or blank, the ROE End Date Range is the same as the scheduled run date.</li> <li>• Is negative, the ROE End Date Range is the scheduled run date minus the days you specified in the <b>Days From Scheduled Run Date</b> field.</li> <li>• Is positive, the ROE End Date Range is the Scheduled Run Date plus the days you specified in the <b>Days From Scheduled Run Date</b> field.</li> </ul> <p>The ROE start date for the next scheduled run is the previous run date or the previous ROE end date, whichever is earlier.</p> <p>Click <b>OK</b> to verify the calendar of recurrence dates for the ROE runs. Workday doesn't save the schedule configurations when you click <b>Cancel</b>.</p> |

## Example

You have a biweekly pay period, and you schedule the task to run every other Friday. You specify Monday October 4 for the **First Scheduled Run Start Date**.

- You specify zero or don't specify anything on the **Day From Scheduled Run Date** field. The scheduler runs for the first time on Friday October 15. The ROE end date for the run is Friday October 15 (the run date is the end date). The next scheduled ROE run will be on Friday October 29 with the:
  - ROE start date range of Friday Oct 15.
  - ROE end date range of Friday Oct 29.
- You specify -3 on the **Day From Scheduled Run Date** field. The scheduler runs for the first time on Friday October 15. The ROE end date for the run is Tuesday October 12 (3 days before the run date). The next scheduled ROE run will be on Friday October 29 with the:
  - ROE start date range of Tuesday October 12.
  - ROE end date range of Tuesday October 26.
- You specify 3 on the **Day From Scheduled Run Date** field. The scheduler runs for the first time on Friday October 15. The ROE end date for the run is Monday October 18 (3 days after the run date).
  - The next scheduled ROE run will be on Friday October 29 with the:
    - ROE start date range of Friday October 15.
    - ROE end date range of Tuesday November 1.

## Next Steps

Run the:

- **Scheduled Future Processes** report to view the status of future scheduled runs.
- **View All Scheduled Occurrences by Date** report to view upcoming, scheduled runs.
- **View All Occurrences for a Schedule** report to view all the upcoming, scheduled runs.
- **View Create ROE Data Run History** report to view the Run Request and completed ROE creations.

## Steps: Amend ROE Data

### Prerequisites

- The ROE type is *Original* or *Amend*.
- The ROE status is *Issued*.

Security: These domains in the CAN Payroll functional area:

- *Process: ROE (Amend Data) - CAN*
- *Reports: ROE Results for Worker(s) - CAN*
- *Process: ROE (Edit Data) - CAN*
- *Process: ROE (Approve Data) - CAN*

### Context

You can amend an ROE that you've already issued with Service Canada, as long as you've issued the original ROE using the Workday Outbound and Inbound integrations.

Example: You process an ROE for a worker who receives an additional payment after you issued the original ROE. You can amend the ROE to reflect the additional payment.

An amended ROE reports:

- The serial number of the original ROE.
- Changes made since issuing the original ROE.

When you create an amended ROE for an original ROE with override values entered, you can preserve the override values.

Whenever possible, don't amend ROEs directly through the Service Canada web site. Use Workday to manage all ROE activity so that you can maintain Workday as your system of record for ROE reporting.

## Steps

1. Access the **Amend ROEs** task.

Workday returns all ROEs with an *Issued* status.

2. Select the ROE from the **ROEs to Amend** prompt.

Workday identifies the ROE as *Amend* in the **Type** field.

3. Resolve any errors on the ROE by editing or recreating it. When no errors exist, Workday sets the ROE status to *In Progress*.

4. Select the check box to preserve any values you enter as an override.

Preserving values applies to either hours or earnings (or both) that you enter for these fields:

- **Insurable Earnings by Period** (box 15C)
- **Separation Payments** (box 17A or C).

Workday automatically selects the check box if you preserved the override values on the original ROE.

5. From the related actions menu of the ROE, select **ROE > Approve**:

- To approve the ROE in *Draft* status, select only the **Confirm** check box.
- Select the **Confirm** and **Submit** check boxes to set the ROE to *Submit* status in the ROE outbound integration. This action avoids the need to submit the draft ROEs manually after you load them to Service Canada.

**Note:** You can select the **Submit** check box automatically if you select the **Select Submit by default on Approve ROE task** check box on **Edit Tenant Setup - Payroll**.

## Result

Workday retains the original ROE for tracking purposes and creates a new amended ROE.

- The new Amend ROE is *In Progress* or *In Error*. The **Amended From** field contains a link to the original ROE.
- The original ROE remains in *Issued* status and the **Amended By** field contains a link to the amended ROE
- If the **View linked or multiple ROEs for a worker in list view** check box is enabled in **Edit Tenant Setup - Payroll**, you can view the list of linked ROEs (Original and Amend) for the worker.

## Related Information

### Tasks

[Steps: Create ROE Data to Report to Service Canada](#) on page 1343

## Concept: Creating ROE Data

### Pay Periods and Frequencies

Workday supports:

- Standard pay periods, such as weekly, biweekly, monthly, and semi-monthly.
- Nonstandard monthly and semi-monthly periods that don't end on the 15th or last day of the month.

Workday doesn't support pay frequencies for 13 pay periods a year.

### ROE Status

Workday assigns these statuses to ROE data and events:

| Status             | Description                                                                                                                                                                                                                                                 |
|--------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <i>Approved</i>    | Workday only includes <i>Approved</i> ROEs in the Service Canada ROE Outbound integration file.                                                                                                                                                             |
| <i>In Error</i>    | Use the ROE Results for Worker(s) report to edit, recreate, or delete these ROEs.<br><br>Workday keeps any overrides to First Day Worked and Last Day for Which Paid when you recreate ROE data for an employee who has an ROE <i>In Error</i> .            |
| <i>In Progress</i> | Ready for your review and approval. You can edit, recreate, or delete these ROEs.<br><br>If you recreate ROE data for an employee who has an ROE <i>In Progress</i> , Workday regenerates the ROE data. Workday keeps overriding data that you entered for: |

| Status                  | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

| <i>Issued</i>           | <p>You've successfully issued the ROE for that worker and employment period.</p> <p>Workday changes the ROE status from <i>Pending Issuance</i> to <i>Issued</i> when you load the Service Canada ROE Inbound integration file retrieved from Service Canada.</p>                                                                                                                                                                                                                                                                                                                                                                 |
| <i>Not Required</i>     | <p>There's an ROE triggering event and the worker has no insurable earnings for the given employment period. If you later issue earnings in that employment period and recreate the ROE data, Workday:</p> <ul style="list-style-type: none"> <li>Reports the added earnings on the ROE.</li> <li>Updates the status to <i>In Progress</i> or <i>In Error</i>.</li> </ul> <p>Workday uses the employment period dates on these ROEs to derive the First Day Worked for subsequent ROEs.</p>                                                                                                                                       |
| <i>Not Started</i>      | <p>Indicates an ROE-triggering business process completed but ROE data isn't created.</p> <p>You can view this status on:</p> <ul style="list-style-type: none"> <li>The <b>Ignore ROE Events</b> task.</li> <li>The <b>View ROE Events</b> report.</li> </ul> <p>Example: A manager terminates a worker and the HR business partner approves the termination, completing the business process.</p> <p>The payroll admin accesses the <b>View ROE Events</b> report to see the <i>Not Started</i> status for the ROE. They use the <b>Create ROE Data for Events</b> task to create the ROE and proceed with the ROE process.</p> |
| <i>Pending Issuance</i> | <p>After approving the ROE and creating the Service Canada ROE Outbound integration file, the ROE status updates to <i>Pending Issuance</i>.</p> <p>Select <b>Cancel Pending Issuance</b>, either from the worker profile or on the ROE to return the ROE to <i>In Progress</i>.</p>                                                                                                                                                                                                                                                                                                                                              |

### Create ROEs Before and After Insurable Wage Loss Earnings

For earnings before the wage loss payment, create the first ROE on-demand with the **Create On-Demand ROE** task.

For earnings after the wage loss payment, create the second ROE with the **Create ROE Data for Events** task. Select a range of dates that includes the worker's Last Day for Which Paid date. Edit the ROE and complete the **Paid Sick, Maternity/Parental Leave, Wage Loss** section.

### Examples

[2022R2 What's New Post: Record of Employment Outbound Integration](#)

## Concept: Recreating ROE Data

You might need to recreate an ROE after you make changes that affect ROE data, such as when you:

- Add insurable earnings.
- Override an allocation method.
- Make off-cycle payments to adjust insurable earnings or hours reported in the ROE.
- Change the First Day Worked.
- Change the Last Day For Which Paid.
- Update employer or employee information.

To recreate ROE data, select the ROE and click **Re-create** on the ROE.

To recreate ROE data in bulk, create ROEs using the **Create ROE Data for Events** task.

## Differences Between Recreating and Editing ROE Data

When you recreate ROE data, Workday:

- Keeps overriding data you entered for:
  - The **First Day Worked**, **Last Day for Which Paid**, and **Reason Contact** fields.
  - Insurable hours, earnings, and separation payments if you select the **Preserve ROE period and separation payment overrides** check box.
- Deletes the ROE record when you rescind or cancel the event that triggered the ROE.
- Deletes the ROE record when you cancel the pay period.
- Recalculates amounts using source data in Workday. Example: You paid the employee additional earnings.
- Refreshes employee and employer data. Example: You corrected a primary home address. Recreating the ROE pulls in the new address.
- Sets the status of the ROE to *In Progress* or *In Error*.
- Updates the **Date and Time Created** field on the ROE.

Editing ROE data enables you to:

- Add comments.
- Add insurable earnings for periods that occurred before your Workday implementation.
- Change the allocation period for insurable earnings or hours.
- Enter statutory holiday dates and amounts.
- Override the **First Day Worked**, **Last Day for Which Paid**, and **Reason Contact** fields.
- Override data for insurable hours, earnings, and separation payments. Workday keeps the overriding data when you select the **Preserve ROE period and separation payment overrides** check box and recreate the ROE.
- Record payments for paid sick time, maternity or parental leave, and wage loss.

After you edit the ROE to enter an **Override Last Day for Which Paid** date that's in a different period and recreate the ROE, Workday:

- Updates the **ROE Insurable Earnings by Period** and **Insurable Earnings Detail** sections (Block 15C).

- Recalculates the **Final Pay Period Ending Date** field (Block 12).

### Concept: View ROE Events

With the **View ROE Events** report, you can audit ROE events and associated ROEs within Workday.

| Use Case                                                                                                                                                                  | Action                                                                                                                                                                                                                                                                                                                                                                                                                                         | Outcome                                                                                                                                                                                                                                                |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| You want to see all ROE events initiated within a specific range of dates.                                                                                                | On the <b>ROE Event Initiated On Date (From)</b> prompt, enter a date to find all ROE events initiated on and after this date. On the <b>ROE Event Initiated on Date (To)</b> prompt, enter a date to find all ROE Events initiated on or before this date.<br><br><b>Note:</b> For performance purposes, Workday populates the dates in these fields to a 1 week period of time as of the current date. You can change these dates as needed. | Workday displays all the ROE events initiated on or between the selected date range.                                                                                                                                                                   |
| You want to know if there are any ROEs that exist for a rescinded ROE event. You also want to determine if there's any action needed for already approved or issued ROEs. | Select <i>Rescinded</i> on the <b>ROE Event Status</b> prompt.<br><br>Select all statuses except <i>Not Started</i> on the <b>ROE Status</b> prompt.                                                                                                                                                                                                                                                                                           | You can check if the ROE event was rescinded before or after the ROE was processed by comparing the <b>ROE Event Last Updated Date/Time</b> value to the <b>ROE Last Updated Date/Time</b> value.                                                      |
| You want to see the processed ROE events that don't have associated ROEs yet.                                                                                             | Select <i>Successfully Completed</i> on the <b>ROE Event Status</b> prompt. Select <i>Not Started</i> on the <b>ROE Status</b> prompt                                                                                                                                                                                                                                                                                                          | Workday displays all completed ROE events that don't have an associated ROE created yet.                                                                                                                                                               |
| You want to determine if you need to follow up with the owner of the ROE triggering event to ensure that the event completes in time so you can issue the ROE on time.    | Select <i>In Progress</i> on the <b>ROE Event Status</b> prompt.                                                                                                                                                                                                                                                                                                                                                                               | Workday displays all started but not yet completed ROE events. You can also see the expected last day for which paid date on the ROE event. This can help you determine the date you need to issue the ROE.                                            |
| You want to see all the events that are assigned to a particular ROE reason contact.                                                                                      | Select the specific name on the <b>ROE Reason Contact</b> prompt.                                                                                                                                                                                                                                                                                                                                                                              | Workday displays all events that have ROEs where the selected contact: <ul style="list-style-type: none"> <li>Is the default.</li> <li>Is the override contact.</li> <li>Is the <b>Override Reason Contact</b> entered directly on the ROE.</li> </ul> |

**Reference: ROE Results for Workers**

After creating ROE data, access the **ROE Results for Worker(s)** report to review and edit the ROE data. These sections represent the different sections of the ROE data in Workday.

**Employee Details**

| Field                                      | Description                                                                                                                                                                                                                                                                                                                                                                                       |
|--------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Employee Name and Employee Address</b>  | Displays in Block 9.                                                                                                                                                                                                                                                                                                                                                                              |
| <b>Employer's Payroll Reference Number</b> | Displays in Block 3. The employee ID.                                                                                                                                                                                                                                                                                                                                                             |
| <b>Social Insurance Number</b>             | Displays in Block 8.                                                                                                                                                                                                                                                                                                                                                                              |
| <b>Occupation</b>                          | Displays in Block 13 of the ROE when you check the <b>Display Occupation on ROE</b> check box. Access this check box when setting up ROE information on the <b>Edit Company Federal CAN Tax Reporting</b> task. Workday retrieves this information from the worker profile.                                                                                                                       |
| <b>Display Occupation on ROE</b>           | Displays Yes when configured on the <b>Record of Employment</b> tab on the <b>Edit Company Federal CAN Tax Reporting</b> task. If not configured: <ul style="list-style-type: none"> <li>• Workday still displays the occupation on the ROE in Workday but displays <i>No</i>.</li> <li>• Workday won't include the occupation on the ROE outbound integration file to Service Canada.</li> </ul> |
| <b>Printing Language</b>                   | Workday populates this field based upon the preferred locale set up by the employee. There are 2 languages available, Francais (Canada) and English (Canada). Workday sends the printing language to Service Canada so that they can display the ROE in French or English for the employee.                                                                                                       |

**Employer Details**

| <b>Return from Leave Date (Prior to Go Live)</b> | <p>Indicates the <b>Return from Leave Date</b> entered on an ROE History record as part of the Workday implementation.</p> <p>If the worker had a return from leave within 53 weeks before Workday implementation, this date is important for ROEs generated by Workday. Workday uses this date when calculating the <b>First Day Worked</b> for the worker's ROEs after the Workday implementation date.</p> <p><b>Note:</b> Only enter a date for workers who returned from leave within the 53 week time period before your Workday implementation date.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| <b>First Day Worked</b>                          | <p>Displays in Block 10.</p> <p>The first day for which the employee receives insurable earnings. Defines the start of the employment period.</p> <p>You can edit the ROE to override this date on the <b>Override First Day Worked</b> field.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| <b>Override First Day Worked</b>                 | <p>Displays when you edit the ROE. Recreate the ROE after entering an override.</p> <p>When you enter a date on this field, Workday reports the overriding date instead of the default first day worked date.</p> <p>Workday recommends that you correct the source data by editing the hire, rehire, or return-from-leave date. Then, add insurable earnings into the period that contains the first day of work, or move the insurable earnings into the period. This correction of the source data helps ensure that Workday can accurately calculate the <b>First Day Worked</b> when creating the ROE.</p> <p>Often, <b>First Day Worked</b> errors occur on the ROE because the first payment for a new hire is in the period after the hire. Workday recommends that you use retro processing to report the retroactive amounts due in the correct period of the ROE. Enter pay input using the start and end date of the hire period. Check that you're using the correct allocation method in your earnings. When you create the ROE, Workday allocates the retro earnings to the retro period indicated in the pay input.</p> |
| <b>Last Day for Which Paid</b>                   | <p>Displays in Block 11.</p> <p>Defines the end of the worker's employment period. When you create an ROE using the <b>Create ROE Data for Events task</b>, Workday derives this date from the <b>Last Date for Which Paid</b> field on the business process.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

| Field                                   | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|-----------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                         | <p>When you create an ROE using the <b>Create On-Demand ROE</b> task, Workday derives this date from the period end date of the worker's last completed pay result.</p> <p>For pay group changes or company transfers that result in a change in pay frequency, this date is 1 day before the effective date of the business process.</p> <p>You can edit the ROE to override this date with the <b>Override Last Day for Which Paid</b> field.</p>                                                                                                                                                                                                                                                                                                                                                             |
| <b>Override Last Day for Which Paid</b> | <p>Displays when you edit the ROE. Recreate the ROE after entering an override date. When the overriding date is in a different period, Workday:</p> <ul style="list-style-type: none"> <li>• Inserts or removes periods within the <b>ROE Insurable Earnings by Period</b> section (Block 15C). This action is regardless of whether pay results and insurable earnings exist for the periods.</li> <li>• Recalculates the <b>Final Pay Period Ending Date</b> field.</li> </ul> <p>When you enter a date on this field, Workday reports the overriding date instead of the default last day for which paid date on the ROE.</p> <p>Workday recommends that you correct the source data by updating the <b>Last Date for Which Paid</b> date on the business process for the ROE-generating event instead.</p> |
| <b>Final Pay Period Ending Date</b>     | <p>Displays in Block 12.</p> <p>This date is the period end date of the period that contains the <b>Last Day for Which Paid</b>.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| <b>Expected Date of Recall</b>          | <p>Displays in Block 14.</p> <p>Workday indicates <b>Unknown</b> in the <b>Expected Date of Recall</b> field on the ROE when you:</p> <ul style="list-style-type: none"> <li>• Don't enter a date on the <b>Date of Recall</b> field on the <i>Leave of Absence</i> business process.</li> <li>• Or, you didn't configure the field on the <i>Request Leave of Absence</i> business process.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                         |

### ROE Insurable Earnings by Period (Block 15C)

This section reports insurable hours and earnings aggregated by pay period, for reporting in Block 15C. Information reported here determines a worker's eligibility for employment insurance and can impact the claims amount.

This section lists all pay periods, up to the maximum reporting periods defined by Service Canada, from the **First Day Worked** or **Override First Day Worked** through the **Last Day for Which Paid** or **Override Last Day for Which Paid**. If you didn't pay an employee for a period Workday processed, Workday:

- Inserts the period into the **Insurable Earnings by Reporting Period** grid.
- And, populates the insurable hours and earnings to zero.

| Grid                                             | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|--------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Insurable Earnings by Reporting Period</b>    | <p>The <b>Period Number</b> identifies the reporting period that Workday allocates earnings or hours to. Period 1 always includes the <b>Last Day for Which Paid</b>.</p> <p>The <b>Period Start Date</b> and <b>Period End Date</b> come from the <b>Period Schedule</b> for the pay frequency. Workday reports all required periods up to the maximum reporting periods by pay frequency.</p> <p>Workday pulls insurable hours and insurable earnings from completed payroll results that fall within the employment period of the ROE.</p> <p>The <b>Override Insurable Hours</b> and <b>Override Insurable Earnings</b> fields display when you edit the ROE. Select the corresponding <b>Enable Override</b> check box to enter an override. However, Workday recommends that you correct the source data in Workday instead.</p> <p>When you select the <b>Preserve ROE period and separation payment overrides</b> check box, Workday includes the overriding data on the ROE when Workday recreates it.</p>                                                                                                                                                                               |
| <b>Edit Insurable Earnings for Prior Periods</b> | <p>Displays when you edit the ROE.</p> <p>This grid enables you to insert periods that occurred before your Workday implementation date. The hours and earnings entered here reflect payroll periods processed in your legacy system. Enter information for ROE Prior Period History results that are missing.</p> <p>You can only insert periods that:</p> <ul style="list-style-type: none"> <li>• Occurred before your Workday implementation date.</li> <li>• You included in the period schedule as part of your Workday cut-over.</li> </ul> <p>You can't select a period that's before the worker's hire date or after the first period processed in Workday. Inserting a period in this grid won't add an ROE Prior Period History Result record for the worker.</p> <p>Example: Your organization went live on Workday Payroll on 2018-04-01. You loaded 1 year of ROE Prior Period History results for periods 2017-04-01 through 2018-03-31. These results reflect period by period insurable hours and earnings paid to workers from your previous payroll application.</p> <p>A monthly paid worker takes a leave of absence on 2018-05-01. When you create the ROE, you realize</p> |

| Grid                                   | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
|----------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                        | <p>that the ROE prior period history results are missing for August 2017. You can add the missing period by editing the ROE in the <b>Edit Insurable Earnings for Prior Periods</b> grid.</p> <p>Recreate the ROE for Workday to include the inserted period, insurable hours, and insurable earnings in Block 15C.</p>                                                                                                                                                                                                                      |
| <b>History Loaded Reporting Period</b> | <p>Displays <b>Yes</b> to indicate that Workday reports the period from the ROE Prior Period History Results that you uploaded using the <i>Import ROE Prior Period History Results</i> web service.</p> <p>This column won't display if there are no historical periods reported in Block 15C.</p> <p>You can edit these reporting periods directly on the ROE by selecting the related action on the period. Editing the insurable earnings or hours will update the imported ROE Prior Period History Results record for that period.</p> |

### Insurable Details

Reports pay components within a pay result that have insurable hours that Workday includes on the ROE. Workday lists all insurable hours within the employment period. Workday only includes pay results that you created in Workday.

| Field                    | Description                                                                                                                                                                                                                |
|--------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Payroll Result</b>    | Click to see the payroll results details.                                                                                                                                                                                  |
| <b>Payroll Period</b>    | Period against which you paid the insurable earnings.                                                                                                                                                                      |
| <b>Allocation Method</b> | <p>Workday displays the allocation method of the pay component.</p> <p>To update the allocation method, use the pay component's <b>Non-Effective Dated</b> tab or the <b>Maintain ROE Period Allocations</b> task.</p>     |
| <b>Period Number</b>     | The period number that Workday reports the payment in Block 15C.                                                                                                                                                           |
| <b>Reporting Period</b>  | <p>The period in which Workday reports the insurable hours and earnings in Block 15C, based upon the allocation method configured on the pay component.</p> <p>See: <a href="#">Set Up Earnings for ROE Reporting</a>.</p> |

### Separation Payments (Block 17)

Workday only displays this section if there's a separation payment on the ROE or when you edit the ROE.

Workday displays the payment type and amounts when you:

1. Configure an earning with an ROE reporting type.
2. Pay the earning in or after the workers final period.

| Grid                      | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

### **Paid Sick, Maternity/Parental Leave, Wage Loss (Block 19)**

Edit the ROE to enter applicable payments for Block 19.

An ROE can include information for only 1 payment type.

For special payments, select 1 of these types:

- *Paid Maternity/Parental Compassionate Care/Family Caregiver leave (EI Insurable) (Maternity, Parental, Compassionate Care)*
- *Paid sick leave (EI Insurable) (Paid Sick Leave)*
- *Wage loss indemnity (Not EI insurable) (Wage Loss Insurance)*
- *Wage loss indemnity (ROE insurable) (Wage Loss Insurance)*

### **Comments (Block 18)**

To enter a comment, edit the ROE. You don't need to recreate the ROE after entering a comment.

Service Canada requires that you add comments to the ROE when reporting these reason codes:

- *K00-Other*
- *K15 - Other/Canadian Forces - Queen's Regulations/Orders*

The ROE will be *In Error* status until you enter one.

The Comment field has a max character limit of 160.

### Which report can I use to review all the ROEs that we created?

Use the **ROE Results for Worker(s)** report. This Workday-delivered standard report includes information to assist you to manage ROEs in Workday and enables you to view all created ROEs. Use these prompts to select the ROEs to view:

- Status
- Period(s)
- Workers

Examples:

- You want to view ROEs *In Progress*. Select **In Progress** from **Status** and use the related action from the ROE to approve it.

- You want to view ROEs *In Error*. Select **In Error** from **Status** and take action on the ROE.

Workday recommends you periodically use the **Delete ROEs** task to keep the **ROE Result(s) for Workers** report as current as possible. You can only delete ROEs if they aren't *Approved* or *Issued*.

#### Does Workday automatically delete any ROEs?

No, unless you ignore the ROE-triggering event from the **Ignore ROE Event** task and the ROE isn't *Approved* or *Issued*. ROE triggering events include:

- Termination
- Leave of absence
- Change in pay frequency because of a pay group transfer.

#### What happens if we rescind the event that triggered an ROE?

Workday appends (**rescinded**) to the description on the **Triggering Event** field on the ROE regardless of whether you issued it.

If you already issued the ROE, assess if you should amend the ROE or not.

- If the ROE is *Approved*, confirm that Service Canada didn't already issue the ROE before deleting it.
- If the ROE is *In Progress*, *In Error*, or *Not Required*, use the **Delete ROEs** task and manually delete the ROE.

#### What happens if I reverse a payment reported on an ROE?

| Situation                                              | Outcome                                                                                                                                                                                                                                          |
|--------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Workday reported the original payment on the ROE.      | Workday allocates the reversal to the same reporting period as the original payment.<br><br>Example: You allocated the original payment to the period paid. Workday allocates the reversal to the same period.                                   |
| Workday didn't report the original payment on the ROE. | Workday excludes the reversal from the ROE.<br><br>Example: Workday didn't report the original payment on the ROE because it occurred in a period before the maximum allowed reporting period in Block 15C. Workday won't report the reversal of |

| Situation | Outcome                  |
|-----------|--------------------------|
|           | that payment on the ROE. |

**Why don't I see the earnings that I expected to see on an ROE?**

Workday only reports ROE earnings in the **ROE Insurable Earnings by Period** (Block 15C) when you configure them as insurable. They must belong to the *EI Earnings* pay component group. If hours are insurable, the pay component-related calculation (PCRC) must belong to the *EI Hours* pay component group.

**How do we report retro payments on the ROE?**

Configure the earning with an allocation reporting period for retroactive earnings and hours. Complete these prompts in the **ROE** section of the **Non-Effective Dated** tab on the **Create Earning** or **Edit Earning** task:

- **Allocation Reporting Period Retro**
- **Allocation Reporting Period for Retro Hours**

If necessary, you can override the allocation reporting period by editing the ROE after its creation.

**Where does Workday report retro payments on a worker's ROE?**

Workday reports:

- Insurable retro payments for any supported retro event in the **ROE Insurable Earnings by Period** (Block 15C) grid.
- All separation payments paid using retro processing on the **Separation Payments** (Block 17) section.

**We have employees in Canada who are working for a U.S. company. How can we record their Last Day for Which Paid?**

You can only record the Last Day for Which Paid for employees who work for a Canadian company.

When you terminate an employee, Workday HCM uses the worker's location to determine whether to display ROE fields. These fields can be:

- **Last Day for Which Paid**
- **Expected Recall Date**

Workday doesn't consider the worker's primary work state.

**What happens if I create ROE data for a worker who is in multiple jobs and they experience an ROE triggering event, such as Termination?**

Workday creates multiple ROEs based on Service Canada requirements.

Example: Workday creates 2 ROEs for a worker in 2 positions in 2 companies with different payroll account numbers.

**Does Workday create an ROE if a worker in multiple jobs ends 1 job?**

Workday doesn't support the **End Additional Job** event and doesn't create an ROE when a worker ends only one of their jobs.

**How can I ensure that the ROEs I submit for workers in multiple jobs, in multiple pay frequencies, and in the same Payroll Account Number don't fail due to Overlapping Dates when I use Service Canada's ROE Web service?**

You might need to contact Service Canada to request that they apply the Overlap Rule to the relevant Business Number in ROE Web. Service Canada extends the Overlap Rule permanently when your business regularly issues overlapping ROEs. See: [ROE Web – Registration and account management guide](#).

**Can I create only 1 ROE for a worker in multiple jobs when I use the Create On-Demand ROE task?**

Workday creates multiple ROEs based on Service Canada requirements and a worker's circumstances. If a worker is set up to receive multiple ROEs, multiple ROEs are generated.

**Can I view multiple ROEs created for a worker in multiple jobs together?**

Yes, to view multiple ROEs together, enable the **View linked or multiple ROEs for a worker in list view** check box on the **Edit Tenant Setup – Payroll** task in the **ROE (CAN)** section.

**What happens if I delete 1 ROE for a worker in multiple positions?**

If Workday creates multiple ROEs for a worker in multiple jobs and you delete 1 ROE, you can re-create the deleted ROE regardless of the other ROE status.

**Can we provide employees with paper copies of ROEs?**

Workday doesn't generate printed ROEs. Employees can view or print their ROEs from the Service Canada website.

**How can a worker indicate what language they want Service Canada to print their ROE in?**

The worker can access the **Change Preferences** task and change the **Preferred Locale**.

**How can I change the preferred language in which I view a worker's ROE?**

Access the **Change Preferences** task to change your **Preferred Locale** and **Preferred Display Language**.

**How can we change the preferred language for Service Canada to use to communicate with our company?**

You can select *English (Canada)* or *French (Canada)* from the **Preferred Language** prompt. Navigate to **Record of Employment > Other Information - ROE Reporting > Preferred Language** on the **Edit Company Federal CAN Tax Reporting** task.

**We forgot to load ROE Prior Period History Results as part of our implementation. Can we still include earnings and hours processed in our previous payroll application?**

Use the *Import ROE Prior Period History Results* web service to load the ROE prior period history. If you already created the ROE, recreate it to pick up the newly imported historical periods.

Before using the web service, ensure that your period schedules include the historical periods you want to load. We recommend that you load a minimum of 1 year before your Workday implementation date. Example: If your pay periods are semimonthly, load 24 payroll periods.

You can also edit the ROE and insert the missing legacy system periods using the **Edit Insurable Earnings for Prior Periods** grid on the ROE.

**How can I populate a date for Block 14 – Expected Date of Recall on the ROE?**

Add the **Date of Recall** field to the *Request Leave of Absence* business process by adding **Date of**

**Why don't I see a specific ROE event in the Ignore ROE Events task, Cancel Ignored ROE Events task, or the View ROE Events report?**

**Recall** on the **Additional Fields** tab on the **Edit Leave Type** task.

Workday only displays *In Progress* and *Successfully Completed* ROE events and doesn't display canceled ROE events in these tasks and reports:

- **Ignore ROE Events**
- **Cancel Ignored ROE Events**
- **View ROE Events**

Workday doesn't display *Rescinded* ROE events in the **Ignore ROE Events** and **Cancel Ignored ROE Events** task, but does in the **View ROE Events** report.

**Note:** Workday doesn't include on-demand ROEs on these tasks and reports because you create them manually, not by an event.

**How can I amend an ROE that I originally issued to Service Canada to change the reason code?**

You can amend the issued ROE and edit the ROE to change the reason code.

Before you amend an ROE to report changes, confirm whether the ROE was included in the Canada ROE Outbound Integration file and sent to Service Canada.

- If the ROE was sent to Service Canada and is in *Pending Issuance* status in Workday:
  1. Run the ROE Inbound integration file to update the ROE status to *Issued*.
  2. Amend the ROE in Workday.
  3. Approve the ROE.
  4. Send the ROE back to Service Canada using the ROE Outbound Integration.
- Select **Cancel Pending Issuance** on the ROE when the ROE isn't sent to Service Canada and is in *Pending Issuance* status in Workday. The ROE returns to *In Progress* and you can make changes.

## Troubleshooting: Errors in ROE Results for Worker(s) Report

Workday validates Record of Employment (ROE) data to ensure that Service Canada accepts your ROEs. Workday displays an *In Error* status on the ROE when you have incorrect data. This topic provides strategies for diagnosing and resolving these errors in the **ROE Results for Worker(s)** report:

- [ROE has statutory holiday separation payment errors.](#) on page 1370
- [ROE has separation payment errors.](#) on page 1371
- [ROE has Last Day for Which Paid errors.](#) on page 1371
- [ROE has First Day Worked errors.](#) on page 1372

### ROE has statutory holiday separation payment errors.

**Cause:** You paid a statutory holiday separation payment to a worker during or after their final period and didn't include the payment date.

#### Solution:

##### Steps

Security: *Reports: ROE Results for Worker(s)* - CAN domain in the CAN Payroll functional area.

1. From the **ROE Results for Worker(s)** report, select **ROE > Edit** from the related actions menu of the ROE.
2. Add a row on the **Statutory Holidays** (Block 17B) grid on the **Separation Payments** section for each separation payment after the **Last Day for Which Paid** date.

Enter the statutory holiday date in the **Payment Date** field and complete the **Amount** field.

**Cause:** The amount for block 17A, 17B, or 17C on the ROE or the amount in period 1 for block 15C is less than the actual insurable separation payment amount you paid the worker.

#### Solution:

##### Steps

Security: *Reports: ROE Results for Worker(s)* - CAN domain in the CAN Payroll functional area.

1. From the **ROE Results for Worker(s)** report, select **ROE > Edit** from the related actions menu of the ROE.
2. Review the data and ensure Workday reports the correct amount.  
You can ignore the error and skip the next step when you need to report a different amount on the ROE than the actual separation payment amount. When you move the ROE to *Approved* status, the warning won't display.
3. Update the amount for block 15C or in 17A, B, or C:
  - The **Insurable Earnings by Reporting Period** (Block 15C) grid in the **ROE Insurable Earnings by Period** section.
  - The **Vacation Pay** (Block 17A) grid, **Statutory Holidays** grid (Block 17B), or the **Other Monies** (Block 17C) grid in the **Separation Payments** section.

**Cause:** You entered statutory holiday **Separation Payments** (Block 17) with dates before the **Last Day for Which Paid** date.

#### Solution:

##### Steps

Security: *Reports: ROE Results for Worker(s)* - CAN domain in the CAN Payroll functional area.

1. From the **ROE Results for Worker(s)** report, select **ROE > Edit** from the related actions menu of the ROE.
2. Update the **Payment Date** prompts for all rows on the **Statutory Holidays** grid in the **Separation Payments** section.

**Solution:** Correct the **Last Day for Which Paid** date on the business process for the ROE-generating event, such as:

- *Assign Pay Group* with a pay frequency or schedule change.
- *Change Organization Assignments*.
- *Request Leave of Absence*.
- *Termination*.

**Solution:**

### Steps

Security: *Reports: ROE Results for Worker(s)* - CAN domain in the CAN Payroll functional area.

1. From the **ROE Results for Worker(s)** report, select **ROE > Edit** from the related actions menu of the ROE.
2. Enter an **Override Last Day for Which Paid** date that's before the statutory holiday separation payment date.
3. Click **Re-Create** on the ROE.

### ROE has separation payment errors.

**Cause:** You entered insurable earnings for the first period with a value less than the sum of insurable separation payments in the **Separation Payments** (Block 17) section. Enter insurable earnings for the first period that are greater than the sum of insurable amounts reported in these grids in the **Separation Payments** section:

- **Vacation Pay** (Block 17A)
- **Statutory Holidays** (Block 17B)
- **Other Monies** (Block 17C)

**Solution:**

### Steps

Security: *Reports: ROE Results for Worker(s)* - CAN domain in the CAN Payroll functional area.

1. From the **ROE Results for Worker(s)** report, select **ROE > Edit** from the related actions menu of the ROE.
2. Select the **Enable Override** check box.
3. Either:
  - Enter a value that reflects all earnings in the final period on the **Override Insurable Earnings** field on the **Insurable Earnings by Reporting Period** (Block 15C) grid in the **ROE Insurable Earnings by Period** section. Enter an amount that reflects all earnings that you need to report in the final period, including the overriding amount for the insurable separation payment.
  - Enter a value on the **Override Amount** field in the **Separation Payments** section with a sum that isn't greater than the insurable earnings for the final period.

### ROE has Last Day for Which Paid errors.

**Cause:** **Period Number 1** doesn't have any reported earnings because you entered a **Last Day for Which Paid** or **Override Last Day for Which Paid** date that is after the **Final Pay Period Ending Date**.

**Solution:**

### Steps

Security: *Reports: ROE Results for Worker(s)* - CAN domain in the CAN Payroll functional area.

1. From the **ROE Results for Worker(s)** report, select **ROE > Re-Create** from the related actions menu of the ROE.  
Workday adds the new final period into **Period Number 1** on the **Insurable Earnings by Reporting Period** (Block 15C) grid.
2. Select **ROE > Edit** from the related actions menu of the ROE and enter overriding hours and earnings in the final period.
3. Click **Re-Create** on the ROE.

**Cause:** You entered an **Override Last Day for Which Paid** date that's after both the **Final Pay Period Ending Date** and **Last Day for Which Paid** date. As a result, Workday reports a new final period without any insurable earnings into the ROE. Service Canada doesn't allow a worker's final period to report an insurable earnings amount of 0.00.

**Solution:**

**Steps**

Security: *Reports: ROE Results for Worker(s)* - CAN domain in the CAN Payroll functional area.

1. From the **ROE Results for Worker(s)** report, select **ROE > Edit** from the related actions menu of the ROE.
2. Enter an **Override Last Day for Which Paid** date that's in a period before the **Final Pay Period Ending Date** or the **Last Day for Which Paid** date.
3. Click **Re-Create**.
4. Click **Edit**.
5. Add hours and amounts to **Period Number 1**, the final period, on the **Insurable Earnings by Reporting Period** (Block 15C) grid.
6. Determine if you need to move wages out of other periods on the grid to compensate.  
Example: You edited the ROE and entered an **Override Last Day for Which Paid** date that is in the future of the period the worker was last paid in (the **Final Pay Period Ending Date**). When you recreated the ROE after adding the **Override Last Day for Which Paid** date, the ROE added a new **Period Number 1** that doesn't have any insurable earnings to report. Therefore, you need to edit the ROE and enter overrides for **Period Number 1**. Those amounts might already be reported in the original last period, which is now **Period Number 2**. Determine if you need to override **Period Number 2** to remove the value that was reported in **Period Number**.

**Cause:** You either

- Changed the **Last Day for Which Paid** date since Workday created the ROE.
- Entered an **Override Last Day for Which Paid** date that's in a different period than the original **Last Day for Which Paid** date.

**Solution:** Security: *Reports: ROE Results for Worker(s)* - CAN domain in the CAN Payroll functional area.

From the **ROE Results for Worker(s)** report, select **ROE > Edit** from the related actions menu of the ROE.

Workday recalculates **Period Number 1**, the final period, on the **Insurable Earnings by Reporting Period** (Block 15C) grid based on the override date you enter.

**ROE has First Day Worked errors.**

**Cause:** You configured a First Day Worked date that is before the first payroll period with insurable earnings by:

- Closing the period containing the worker's start date before entering that date in Workday.
- Adding the additional earnings to the next payroll period instead of running the retro process to calculate the additional earnings.

- Running an off-cycle payroll for the additional payment against the current period instead of the period of hire.

### Solution:

#### Steps

Security: *Reports: ROE Results for Worker(s)* - CAN domain in the CAN Payroll functional area.

- From the **ROE Results for Worker(s)** report, select **ROE > Edit** from the related actions menu of the ROE.
- Either:
  - Add insurable earnings from the first period of employment to the last period reported in the **ROE Insurable Earnings by Period (Block 15C)** section. Block 15C reports the insurable wages with the most recent period (Period 1) and the oldest period last. If you need to add the period, add the period and the related hours and amounts on the **Edit Insurable Earnings to Prior Periods** grid in the **ROE Insurable Earnings by Period** section.
  - Correct the **First Day Worked** date.
- Click **Re-Create**.

**Cause:** You changed the **First Day Worked** date since Workday created the ROE.

### Solution:

#### Steps

Security: *Reports: ROE Results for Worker(s)* - CAN domain in the CAN Payroll functional area.

- From the **ROE Results for Worker(s)** report, select **ROE > Edit** from the related actions menu of the ROE.
- Enter an **Override First Day Worked** date that's before the worker's return date.
- Click **Re-Create**.  
Workday displays insurable hours and earnings in the **Insurable Earnings by Reporting Period** (Block 15C) grid based on the overriding date that you entered.

### Concept: Ignore ROE Events

With the **Ignore ROE Events** task, you can control which events to include or exclude from Record of Employment (ROE) processing.

#### Example: Worker Transitions Into Different Types of Leave

| Use Case                                                                                                                                                                                         | Action                                                                                                                 | Outcome                                                                                                                                                                                                                       |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <p>The worker is on paid leave, and then transitions to an unpaid leave.</p> <p>You don't want to issue an ROE for the paid leave event but want to issue an ROE for the unpaid leave event.</p> | <p>Ignore the paid leave event and select <b>Exclude ROE Event</b>. Then issue the ROE for the unpaid leave event.</p> | <p>Workday won't create an ROE for the paid leave event.</p> <p>Workday excludes the paid leave event as an interruption of earnings.</p> <p>The ROE for the unpaid leave includes earnings as of the first day insurable</p> |

| Use Case                                                                                                                                                                                                  | Action                                                                     | Outcome                                                                                                                                                                                                                                                                                                          |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                                                                                                                                                                                           |                                                                            | earnings are paid to the worker or after the last interruption of earnings.                                                                                                                                                                                                                                      |
| <p>The worker is on unpaid leave, and then transitions to another unpaid leave.</p> <p>You issued an ROE for the first unpaid leave event and don't want to issue an ROE for the second unpaid leave.</p> | Ignore the second unpaid leave event and select <b>Exclude ROE Event</b> . | <p>Workday won't create an ROE for the second leave event.</p> <p>Workday excludes the second leave event as an interruption of earnings.</p> <p>If the worker experiences another interruption of earnings, the next ROE for the worker will include earnings paid after the last interruption of earnings.</p> |

#### Example: Worker is Terminated While on Unpaid Leave

| Use Case                                                                                                                                                                                                                                                                   | Action                                                             | Outcome                                                                                                                                                                                                                                                               |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <p>The worker is on an unpaid leave and you issued the ROE. You then terminate the worker because they didn't return from leave. You didn't pay additional earnings as a result of the termination.</p> <p>You don't want to create an ROE for the termination because</p> | Ignore the termination event and select <b>Exclude ROE Event</b> . | <p>Workday won't create an ROE for the termination event.</p> <p>Workday excludes the termination event as an interruption of earnings.</p> <p>If the worker experiences another interruption of earnings, the next ROE for the worker will include earnings paid</p> |

| Use Case                                                                                                                                                                                                                                                                                                                                                                                   | Action                                                                                                                                                  | Outcome                                                                                                                                                                                                                                                                                                                                                                                                                                      |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| you already reported the earnings when the worker went on the unpaid leave.                                                                                                                                                                                                                                                                                                                |                                                                                                                                                         | after the last interruption of earnings.                                                                                                                                                                                                                                                                                                                                                                                                     |
| <p>The worker is on an unpaid leave and you issued the ROE. You terminate the worker because they didn't return from leave. You pay additional insurable earnings as a result of the termination.</p> <p>You don't want to create an ROE for the termination. You want to amend the ROE you issued when the worker went on the unpaid leave so you can report the additional payments.</p> | <p>Ignore the termination event and select <b>Exclude ROE Event</b>.</p> <p>Amend the issued ROE for the leave event to report additional payments.</p> | <p>Workday won't create an ROE for the termination event.</p> <p>Workday excludes the termination event as an interruption of earnings.</p> <p>The pay period end date for the additional payments must be before the return from leave date entered on the <i>Return from Leave</i> business process.</p> <p>Workday then includes the additional earnings on the amended ROE when Workday creates the amended ROE for the leave event.</p> |

#### Example: Worker is Terminated While on Paid Leave

| Use Case                                                                                                                                        | Action                                                                                                                      | Outcome                                                                                                                                   |
|-------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------|
| <p>The worker is on a paid leave and then you terminate the worker because they didn't return from leave.</p> <p>You don't want to issue an</p> | <p>Ignore the paid leave event and select <b>Exclude ROE Event</b>.</p> <p>Then issue an ROE for the termination event.</p> | <p>Workday won't create an ROE for the paid leave event.</p> <p>Workday excludes the paid leave event as an interruption of earnings.</p> |

| Use Case                                                                   | Action | Outcome                                                                                                                                                 |
|----------------------------------------------------------------------------|--------|---------------------------------------------------------------------------------------------------------------------------------------------------------|
| ROE for the paid leave but want to issue an ROE for the termination event. |        | The ROE for the termination includes earnings as of the first day insurable earnings are paid to the worker or after the last interruption of earnings. |

**Example: Worker has an ROE Triggering Event**

| Use Case                                                                                                                                                                                                                                                                                         | Action                                                     | Outcome                                                                                                                                                                                                                                                                                    |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <p>The worker had an ROE triggering event:</p> <ul style="list-style-type: none"> <li>• Assign pay group event with a pay frequency change</li> <li>• Change organization assignment</li> <li>• Leave</li> <li>• Termination</li> </ul> <p>You then accidentally created and issued the ROE.</p> | Ignore the ROE event and select <b>Include ROE Event</b> . | <p>Workday won't create an ROE for the ROE event.</p> <p>Workday includes the event as an interruption of earnings.</p> <p>If the worker experiences another interruption of earnings, the next ROE for the worker will include earnings paid after the last interruption of earnings.</p> |
| The worker has an ROE triggering event, but you issued the ROE directly with Service Canada.                                                                                                                                                                                                     | Ignore the ROE event and select <b>Include ROE Event</b> . | <p>Workday won't create an ROE for the ROE event.</p> <p>Workday includes the event as an interruption of earnings.</p> <p>If the worker experiences another interruption of earnings, the next ROE</p>                                                                                    |

| Use Case | Action | Outcome                                                                            |
|----------|--------|------------------------------------------------------------------------------------|
|          |        | for the worker will include earnings paid after the last interruption of earnings. |

#### Example: Pay Frequency Change Before Running Your First Workday Payroll

| Use Case                                                                                                                                                                                                                                                                                                          | Action                                                                               | Outcome                                                                                                                                                                                                                                                                                                                                                                                              |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <p>You process pay frequency changes for a group of workers, such as semimonthly to biweekly, before running your first payroll in Workday.</p> <p>You don't want to issue ROEs for this pay frequency change because you already issued ROEs for the old pay frequency as part of your migration to Workday.</p> | Ignore the ROE events for the impacted workers and select <b>Include ROE Event</b> . | <p>Workday won't create an ROE for the pay frequency changes.</p> <p>Workday includes the events as an interruption of earnings.</p> <p>If the worker experiences another interruption of earnings, the next ROE for the worker includes earnings paid after the last interruption of earnings. In this case, Workday uses the first insurable earnings paid on or after your first payroll run.</p> |

#### Steps: Ignore ROE Events

#### Prerequisites

Security: *Process: ROE (Create Data)* - CAN domain in the CAN Payroll functional area.

#### Context

You can ignore ROE-triggering events when you determine an ROE isn't required. When you update an ROE event to be ignored, Workday automatically deletes the associated ROE. Ignoring an ROE event:

- Eliminates the need to manually delete the ROE or guessing which ROEs to delete.
- Prevents accidentally issuing the ROE.

- Prevents Workday from creating the ROE again.

### Steps

1. Access the **Ignore ROE Events** task.
2. As you complete the task, consider:

| Option                                           | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|--------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>ROE Event Initiated On Date (From) / (To)</b> | <p>The date the business process for the ROE event initiated.</p> <p>If you only enter a date in the <b>ROE Event Initiated On Date (From)</b> field, Workday returns all initiated events as of that date and forward. If you only enter a date in the <b>ROE Event Initiated On Date (To)</b> field, Workday returns all initiated events as of that date and backwards. For the best performance, add dates in the <b>ROE Event Initiated On Date</b> fields and restrict the date range to 6 months or less.</p> <p>Example: A worker's last day worked is August 8. Their manager initiated the business process for their leave August 21 (the business process is still <i>In Progress</i>). You enter <i>August 8</i> and <i>August 18</i> in the <b>From</b> and <b>To</b> fields. The ROE leave event doesn't display in the <b>Ignore ROE Events</b> report since the business process was initiated after the <b>To</b> date (August 18).</p> <p>For performance purposes, Workday populates the dates in these fields to a 1 week period of time as of the current date. You can change these dates as needed.</p> |
| <b>Exclude ROE Event</b>                         | <p>Workday excludes this event as an interruption of earnings.</p> <p>If the worker experiences another interruption of earnings, the next ROE that Workday creates includes earnings as the first day insurable earnings were paid to the worker or after the last interruption of earnings.</p> <p>Block 15C (Insurable Earnings Detail) includes earnings paid during the employment period of the ignored event.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| <b>Include ROE Event</b>                         | <p>Workday includes this event as an interruption of earnings.</p> <p>If the worker experiences another interruption of earnings, the next ROE Workday creates will include earnings paid after the last interruption of earnings.</p> <p>Select if you completed the ROE event but issued the ROE directly with Service Canada.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

| Option          | Description                                                                                                                                                                                                                                                            |
|-----------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                 | Block 15C (Insurable Earnings Detail) doesn't include the earnings paid during the employment period of the ignored event.                                                                                                                                             |
| <b>Comments</b> | You can enter comments when you ignore an event if you want to record the reason for ignoring the event. Limited to 1,000 characters. If you ignored an event but want to correct the comments, access the <b>Ignore ROE Events</b> task again to change the comments. |

3. Review the rows in the grid, and remove any rows for the ROE events you don't want Workday to ignore.

4. Review the ROEs in each grid:

| Option                     | Description                                                                                                                                                     |
|----------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>ROEs to be Deleted</b>  | By ignoring these ROE events, Workday deletes the In Progress, In Error, and Not Required (No EI Earnings) ROEs.                                                |
| <b>ROEs to be Reviewed</b> | ROEs with Approved, Issued, or Amend status. Before ignoring these ROEs, review them to determine if you need to correct them. Workday won't delete these ROEs. |

### Result

Workday deletes the associated ROEs and marks the event as Ignored. Workday won't create an ROE for the ignored event.

### Next Steps

If you ignore an event but determine later that you need to create and issue an ROE, use the **Cancel Ignore ROE Events** task. After you run the **Cancel Ignore ROE Events**, Workday puts the ROE event back into ROE processing.

## Statutory Holiday Pay (CAN)

### Setup Considerations: Statutory Holiday Pay (CAN)

You can use this topic to help make decisions when planning your configuration and use of statutory holiday pay. It explains:

- Why to set it up.
- How it fits into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

### What It Is

Workday calculates statutory holiday hours and rates of pay based on federal, provincial, and territorial statutory requirements. This functionality requires:

- Workday Time Tracking to calculate the hours to pay for a statutory holiday.
- Workday Payroll for Canada to calculate the rate of pay for statutory holiday hours.

### Business Benefits

Calculate Canadian workers statutory holiday pay based on actual hours worked and legislation published by the federal jurisdictions, provinces, and territories in Canada. Workday updates compliance changes accordingly, while you can manage worker eligibility.

This feature also delivers the flexibility for you to provide more holiday pay than what minimum government guidelines prescribe.

### Use Cases

- Pay a worker's statutory holiday pay based on federal, provincial, and territorial regulatory compliance.
- Use the variety of delivered calculations that are specific to provincial requirements, like:
  - Prior 4 weeks earnings divided by 20 days.
  - Earnings divided by days worked.
  - 10% of earnings.
- Configure statutory pay over and above the mandated base rates for your provincial or federal workers.
- Configure multiple statutory holidays in the same pay period.
- Include earnings that aren't time-based, such as vacation pay, as part of your eligible statutory holiday pay earnings.
- To make it easier to track the calculation rules applied to an earning, Workday pay results display statutory holiday payments and the associated work location.

### Questions to Consider

| Questions                                                                                                                           | Considerations                                                                                                                                                                                                                                              |
|-------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| How do you want to handle calculations for workers in multiple provinces or territories?                                            | You can create: <ul style="list-style-type: none"> <li>• Holiday statutory configurations for each province and territory.</li> <li>• One calculation for the provinces and territories that reference statutory requirements in a lookup table.</li> </ul> |
| Which holidays do you want to include?                                                                                              | Determine which holidays to include in the worker holiday calendar by configuring statutory holidays and eligibility.                                                                                                                                       |
| How do you include pay components not based on time, such as vacation pay, as part of your eligible statutory holiday pay earnings? | Configure a balance period for non-time-based earnings to calculate: <ul style="list-style-type: none"> <li>• Statutory pay based on the period end date.</li> <li>• The payment date within the look-back period.</li> </ul>                               |
| How do you want to handle multiple holidays occurring in the same pay period?                                                       | You can configure Time Tracking to calculate individual holiday pay balances when multiple holidays occur in the same pay period.                                                                                                                           |
| How do you exclude earnings that aren't eligible for holiday pay?                                                                   | You can configure eligible earnings so that Workday includes only those earnings in the rate of pay calculation for statutory holiday earnings. You can configure earnings using time calculation tags or conditions for non-time-based earnings.           |

| Questions                                                           | Considerations                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
|---------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| How do you set up benefits over and above the minimum requirements? | <p>Workday automatically populates the look-back period for these requirements in the statutory holiday configuration:</p> <ul style="list-style-type: none"> <li>• Federal</li> <li>• Provincial</li> <li>• Territorial</li> </ul> <p>You can modify worker eligibility rules to increase benefits. At minimum, you must configure the Provincial Employment Standards requirements.</p> <p>You're responsible for configuring the Worked Hours Time Tags.</p> <p>Example: You want to include overtime or paid time off when the provincial requirements don't include it in the calculation of total earnings.</p> |
| Are your workers hourly or salaried?                                | <p>You can pay workers statutory holiday pay based on hours worked and legislation published by all the provinces and territories in Canada. Workday requires workers to record daily hours to calculate the statutory holiday pay.</p> <p>Salaried workers can:</p> <ul style="list-style-type: none"> <li>• Continue to get paid.</li> <li>• Have a statutory holiday pay for their daily standard hours that reduce their salary pay in the period.</li> </ul>                                                                                                                                                     |
| How do you pay federally regulated employees?                       | <p>Configure Workday to pay holiday pay for federally regulated industries by selecting the jurisdiction when creating the statutory holiday configuration.</p> <p>You can also select the Federal jurisdiction when you create the time calculation to link the calculation to a federal configuration.</p>                                                                                                                                                                                                                                                                                                          |

### Requirements

You must have both Workday Payroll and Workday Time Tracking to use the statutory holiday pay functionality.

Use Workday Time Tracking to configure:

- Holiday time block calculations.
- Identifying holiday time blocks.
- Specifying employee pay period eligibility for holiday time worked.
- Defining time calculation rules that govern worker statutory holiday payout.

Use Workday Payroll to set up earnings.

Each province requires a specific minimum number of days or weeks of data before the holiday. Run the first payroll calculation when you have enough weeks of time tracking and absence data in Workday.

## Limitations

Workday doesn't support:

- Retroactive pay for statutory holiday pay.
- Multiple eligibility rules by province.
- Payroll input for statutory holiday pay components.
- Multiple jobs or positions for statutory holiday pay.
- Workers with international assignments in Canada.

When a worker has both federal and provincial time blocks that resolve for the same statutory holiday, Workday calculates the federal, and not the provincial, statutory holiday pay. Test your time block eligibility rules to ensure that a worker isn't eligible for both provincial and federal statutory holiday.

### Examples

[Set Up Statutory Holiday Eligibility \(CAN\)](#)

[Create Time Calculations for Statutory Holidays \(CAN\)](#)

## Steps: Configure Statutory Holiday Pay (CAN)

### Prerequisites

- Review setup considerations for statutory holiday pay.
- Create a holiday calendar using Workday Time Tracking.

### Context

The Canada Statutory Holiday Pay feature uses both Workday Time Tracking and Workday Payroll to:

- Provide a customizable framework of building blocks such as pay component groups, pay calculations, time calculations, and holiday time blocks.
- Capture all Statutory Holiday applicable time for workers.
- Calculate statutory holiday pay based on all variables and eligibility requirements.

### Steps

#### 1. [Set Up Statutory Holiday Eligibility \(CAN\)](#).

Use Workday Time Tracking to specify employee period eligibility for holiday time worked.

Security: *Set Up: Time Tracking* in the Time Tracking functional area.

#### 2. [Create Time Calculations for Statutory Holidays \(CAN\)](#).

Use Workday Time Tracking to track worker time eligible for statutory holiday pay.

Security: *Set Up: Time Tracking* in the Time Tracking functional area.

#### 3. Using Workday Payroll, set up earnings for statutory holiday pay. Add the earnings to the *Statutory Holiday Pay Earning [CAN]* pay component group.

Workday provides the Statutory Holiday Pay example earning that you can use or amend to fit your needs. See:

- [Steps: Create Earnings](#) on page 222
- [Example: Configure Statutory Holiday Pay for Provinces \(CAN\)](#) on page 1387
- [Concept: Statutory Holiday Look-Back Periods \(CAN\)](#) on page 1385

#### 4. Update the pay component related calculation for the hourly rate to include the *Statutory Holiday Rate of Pay [CAN]* pay component group for any hourly earning included in Statutory Holiday pay calculation.

### Result

Workday calculates and pays statutory holiday pay when you run payroll.

### Concepts

[Setup Considerations: Statutory Holiday Pay \(CAN\)](#) on page 1379

## Concept: Statutory Holiday Look-Back Periods (CAN)

### Context

Statutory holiday pay is based on the total of time-based and non-time-based earnings that preceded the holiday.

To determine the total time-based earnings, Workday:

- Uses the statutory holiday look-back periods.
- Uses a reference point to define a time boundary for earnings, which come through **Time Tracking**.

Statutory guidelines for look-back periods vary across provinces.

Example:

| Province         | Period Time Span                                      | Period Pay Factor                                                                                                                     |
|------------------|-------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------|
| Quebec           | Looks back 4 weeks preceding the week of the holiday. | 1/20th of worker earnings subject to statutory holiday pay (5% of earnings).                                                          |
| British Columbia | Looks back 30 days preceding the holiday day.         | An average daily wage, derived from worker earnings subject to holiday divided by the number of days worked (Earnings / Days Worked). |

To support your compliance with the Province of Alberta legislation, we provide the **Override Statutory Holiday Data** task. You can use this task to override an existing look-back reference point. Then, select either the preceding holiday or preceding week of holiday.

**Note:** Workday doesn't support the recalculation of the Statutory Holiday earning pay component during retro.

### Look-Back Periods Non-Time-Based Earnings

For non-time-based earnings, the look-back periods don't necessarily align with pay periods and, depending on the province, can span pay periods.

Workday provides 2 balance periods that you can use to configure a pay balance:

| Balance Period                                                  | Description                                                  |
|-----------------------------------------------------------------|--------------------------------------------------------------|
| <i>Statutory Holiday Look Back Period - Period End Date</i>     | Period end dates that occur during the look-back period.     |
| <i>Statutory Holiday Look Back Period - Period Payment Date</i> | Period payment dates that occur during the look-back period. |

### Prior Holidays and Paid Time Off

Prior holidays can occur in the look-back period for the statutory holiday that you're calculating.

To include the prior Statutory Holiday hours in the look back period in time tracking, create a Prior Statutory Holiday time tag. The tag is included in the Time Tags when creating the Statutory Holiday Time block.

For provinces requiring prior Statutory Holiday pay inclusion, enter the Prior Stat Holiday time tag in the **Worked Hours Calculation Tags** prompt on the **Statutory Holiday Configuration** task.

Some provinces require that you include paid time off in the look-back period. To include employee paid time off in the statutory holiday earning:

- Enter the time off in hours, not days.
- Configure the calculation tag for the employee time off plan to the statutory holiday configuration. Use the **Worked Hours Calculation Tags** prompt on the **Create Statutory Holiday Configuration** task.

### Example: Determining Earnings During a Look-Back Period for Quebec

Look-back periods enable you to determine all time-based earnings for a worker in a given province.

A worker has these time-based earnings during the look-back period:

| Hours | Type     | Hourly Rate | Total           |
|-------|----------|-------------|-----------------|
| 112.5 | Regular  | 15          | 1,687.50        |
| 37.5  | Shift 1  | 20          | 750.00          |
| 10    | Overtime | 22.50       | 225.00          |
|       |          |             | <b>2,662.50</b> |

The worker receives additional vacation pay as a percentage of earnings at 6%:  $2,662.50 * 6\% = 159.75$ .

The worker receives additional 159.75 in vacation pay, resulting in total time-based earnings of 2,822.25.

Per Service Canada guidelines for Quebec, statutory holiday pay is 1/20th of the total time-based earnings:  $2,822.25 \times 0.05 = 141.11$ .

The worker payslip reflects the additional earnings of 141.11 for statutory holiday pay, resulting in total earnings of 2,963.36.

## Example: Configure Statutory Holiday Pay for Provinces (CAN)

This example illustrates 1 way to configure a statutory holiday earning to calculate all provinces for Canadian workers.

### Context

Sonia the payroll administrator needs to configure statutory holiday earnings for all the provinces. She uses Workday-owned statutory holiday values.

### Prerequisites

- Create holiday time blocks for workers.
- Specify employee period eligibility for holiday time worked.
- Configure time calculation rules that govern worker statutory holiday payout.
- Create an instance set comparison calculation for all provinces using the payroll tax authority worktags.
- Create a *Canada Statutory Holiday* time calculation tag.

Security: These domains in the Core Payroll functional area:

- *Set Up: Payroll (Calculations - Generic)*
- *Set Up: Payroll (Calculations - Payroll Specific)*

### Steps

1. Access the **Create Related Calculation** task and enter these settings:

| Option                             | Description                          |
|------------------------------------|--------------------------------------|
| <b>Name</b>                        | CAN Statutory Holiday - Hours Worked |
| <b>Code</b>                        | STAT_HOL_HRWK                        |
| <b>Category</b>                    | <i>Payroll</i>                       |
| <b>Value &gt; Currency Related</b> | Select                               |

2. Access the **Create Related Calculation** task and enter these settings:

| Option          | Description                         |
|-----------------|-------------------------------------|
| <b>Name</b>     | CAN Statutory Holiday - Days Worked |
| <b>Code</b>     | STAT_HOL_DYSWK                      |

**Result**

Statutory Holiday Pay now resolves for each province when you process payroll.

**Related Information****Examples**

[Set Up Statutory Holiday Eligibility \(CAN\)](#)

[Create Time Calculations for Statutory Holidays \(CAN\)](#)

[Create Time Calculation Tags](#)

[Steps: Set Up Calculations for Time Tracking](#)

[Reference: Time Calculation Types](#)

**Troubleshooting: Temporary Employees Aren't Receiving Statutory Holiday Pay**

**Cause:** These scenarios are possible reasons the temporary employee isn't receiving Statutory Holiday pay:

- The employee doesn't have enough employment days prior to the holiday. For Payroll for Canada, the number of employment days prior to the holiday varies by province. Example: In British Columbia, the number of required days of employment prior to the holiday is 30.
- The employee didn't work their scheduled day before or after the holiday, if you've configured the Statutory Holiday configuration for the province that way.
- Your time Tracking eligibility rules or Statutory Holiday pay component aren't allowing for temporary employees to receive Statutory Holiday pay.

**Solution:** Do one of these:

- Confirm that the employee has worked the required number of days prior to the holiday.
- Check the employee's schedule and whether they worked the day before and/or after the holiday to confirm their eligibility. Make any updates and recalculate the result for the employee.
- Update your Time Tracking eligibility rules or Statutory Holiday pay component. See: [Steps: Set Up Time Tracking](#).

**Successor Employer (CAN)****Setup Considerations: Successor Employer Company Relationships (CAN)**

You can use this topic to help make decisions when planning your configuration and use of Canada successor employer company relationships. It explains:

- Why to set it up.
- How it fits into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

## What It Is

Successor employer for Payroll for Canada enables you to consider a worker's employment continuous between a previous company and the company that immediately succeeds it through acquisition. A worker's deducted, remitted, or paid amounts under the Canada Pension Plan or the Employment Insurance Act, or both, from the predecessor company are considered in the annual limit and credit calculations by the successor employer.

## Business Benefits

- You can load the worker tax elections by EIB for the predecessor company instead of adding them for each worker, saving time on data entry.
- Workday:
  - Considers wages paid by the predecessor company, instead of starting them over, when determining limits for taxes like:
    - CPP/CPP2
    - QPP/QPP2
    - EI
    - QPIP/QPIP (ER)
  - Includes wages paid only by the successor company when tax filing.

## Use Cases

You can continue your payroll and tax reporting in a new relationship whenever you acquire companies.

## Questions to Consider

| Questions                                                                                                                        | Considerations                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
|----------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

See: <a href="#">Create Manual Payments</a> on page 678.</p> <p>To load large quantities of worker data, use the Off-Cycle Pay Input EIB. See: <a href="#">Concept: Import Payment Off-Cycle EIB</a>.</p> <p>You must obtain permission from the Canada Revenue Agency to proceed with successor employer.</p>                                                                                                   |
| Does the predecessor company need to be in Workday?                                                                              | <p>No. But you must obtain the year-to-date values for these pay components:</p> <ul style="list-style-type: none"> <li>• CPP/CPP2</li> <li>• QPP/QPP2</li> <li>• EI</li> <li>• QPIP</li> <li>• QPIP (ER)</li> </ul> <p>Then, create a manual (off-cycle) payment for the workers using the values obtained from the predecessor company.</p> <p>You must create this off-cycle payment before you proceed with on-cycle payments in the successor employer.</p> |

| Questions                                                                    | Considerations                                                                                                                                                                          |
|------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Have you completed the workers' first on-cycle pay in the successor company? | If yes, you can't continue using Successor Employer for Canada this year. You must enter the predecessor values for your worker prior to the first on-cycle payment with the successor. |

### Recommendations

- Confirm your workers' tax elections and withholdings are correct.
- Verify your off-cycle payroll entries before you complete the first on-cycle payment for workers in the successor company.

### Requirements

- Confirm any worker transfers in to or out of Quebec to ensure you're accounting for CPP or QPP contributions that need to be reported.
- You must obtain a Canada Pension Plan (CPP) or Employment Insurance (EI) ruling from the Canada Revenue Agency (CRA) before you can apply this functionality to successor employers.
- You must process an off-cycle payroll for your predecessor company workers in the successor company to capture the year-to-date predecessor values prior to completing your first on-cycle payroll in the successor company.
- Verify workers have no negative values entered or values over the maximum annual limits.
- You can use Successor Employer more than 1 time per year. Only consider the values from the immediate predecessor company when entering predecessor values.

### Limitations

If you use overrides for deductions that Workday configures (CPP/CPP2, QPP/QPP2, EI, QPIP), Workday recommends you don't use this feature for the remainder of 2024.

Tax forms for the predecessor company come from the predecessor company. The workers' year-to-date withholdings are not merged with the successor company.

You can't modify this relationship type once you've completed a payroll.

Workday doesn't support successor employer company relationships for workers who have an international assignment position in Canada.

Workday doesn't carry over prior withholding order limit balances, you must enter the information for withholding orders for your new workers.

### Tasks

[Steps: Process Pay Input for Successor Employer for Canada](#) on page 1396

### Examples

[2024R1 Feature Release Note: Successor Employer for Payroll for Canada](#)

## Steps: Process Pay Input for Successor Employer for Canada

### Prerequisites

You must obtain:

- A Canada Pension Plan (CPP) or Employment Insurance (EI) ruling from the Canada Revenue Agency (CRA). If you use overrides for deductions that Workday configures (CPP/CPP2, QPP/QPP2, EI, QPIP), Workday recommends you don't use this feature for the remainder of 2024.
- The year-to-date records for your workers from the predecessor company.

### Context

Successor employer for Payroll for Canada doesn't require you to import the predecessor company and its data, if it's not in Workday. When you acquire companies, set up employee data to continue payroll and tax reporting in the new successor employer.

Workers in successor employer companies receive 2 year-end tax forms, 1 from the predecessor company and 1 from the successor employer company.

## Steps

1. Run a manual (off-cycle) payment prior to the first on-cycle payment with the successor company. See: [Create Manual Payments](#) on page 678.

The payment date must be prior to the end of the first pay period with the successor employer company.

2. As you complete the off-cycle payment, consider:

| Option                                                                                                                                           | Description                                                                                                                                                                        |
|--------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Year-to-date values for:</b> <ul style="list-style-type: none"> <li>• <b>CPP/CPP2</b></li> <li>• <b>QPP/QPP2</b></li> </ul>                   | For these components: <ul style="list-style-type: none"> <li>• Predecessor Taxable Wages</li> <li>• Predecessor Deducted Amount</li> <li>• Predecessor Credit Allowance</li> </ul> |
| <b>Year-to-date values for:</b> <ul style="list-style-type: none"> <li>• <b>EI</b></li> <li>• <b>QPIP</b></li> <li>• <b>QPIP (ER)</b></li> </ul> | For these components: <ul style="list-style-type: none"> <li>• Predecessor Taxable Wages</li> <li>• Predecessor Deducted Amount</li> </ul>                                         |

To save time on data entry, Workday recommends you use an EIB for large quantities of workers.

3. Once the off-cycle payment is complete, process on-cycle payments in the successor employer.

| Successor Payment Status | Successor Company Process                                                                                                                                                                                                                                                                                           |
|--------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Off-Cycle Complete       | <p>Predecessor values are verified in the successor company and are used in the calculation.</p> <p>Annual limits in the successor company consider the predecessor values entered.</p> <p>K-2 credits are accurate when considering predecessor values in the calculation of CPP/CPP2, QPP/QPP2, EI, and QPIP.</p> |

**Example:**

Company A (predecessor) acquires Company B (successor) on 07/01/2024. Both companies are in Workday.

- Obtain a Canada Pension Plan or Employment Insurance Act ruling from the Canada Revenue Agency.
- Complete all payroll in Company A prior to Company B obtaining values for CPP/CPP2, QPP/QPP2, EI, QPIP, and QPIP (ER).
- Create a manual (off-cycle) pay input with payroll input for your worker in Company B with these pay components before you calculate on-cycle pay input for your workers in Company B:
  - Predecessor Credit Allowance (when applicable)
  - Predecessor Deducted Amount
  - Predecessor Taxable Wages
- Enter the YTD values for:
  - CPP/CPP2
  - QPP/QPP2
  - EI
  - QPIP
  - QPIP (ER)
- Verify your pay input:
  - Confirm the annual maximum limits for the pay components have not exceeded the annual limits.
  - Confirm the credit allowance has been prorated and entered correctly. (July 1 payroll, semi- monthly. The worker has a CPP credit allowance of  $\$145.82 \times 12 = \$1749.96$ )
  - Confirm there are no negative values entered for your worker.
  - Confirm the Amount fields are 0.
- Complete the Off-Cycle payroll.
- Run an on-cycle pay calculation for Company B so that it is *In Progress*.
- Verify the year-to-date values for the workers who have predecessor values.

When the Company B payroll is *In Progress*:

- The values paid, deducted and remitted in the predecessor company are included in the tax calculation with the successor company.
- Workday recalculates taxes considering the taxable wages and tax limits from Company A, the predecessor company.
- K-2 credits are applied accurately because all values are considered.

When the Company B payroll is *Completed*:

- The values paid, deducted and remitted by the Predecessor Employer remain the responsibility of the Predecessor Employer.
- Your worker will receive a year end tax form from the Predecessor employer and the Successor Employer. The YTD tax data will not merge.

- The predecessor and successor employer will complete year end forms; PIER reporting; and ROE filing as separate legal entities.
- The remittance reports will provide the tax data and remittance information for your Successor employer, and will not include Predecessor amounts.
- The Year End data and reporting will provide tax data for the Successor employer, and will not include Predecessor amounts.

### Tax Setup (UK)

---

#### Setup Considerations: Year-End Payroll Processing (UK)

You can use this topic to help make decisions when planning your configuration and use of UK year-end payroll processing. It explains:

- Why to set it up.
- How it fits into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

#### What It Is

UK year-end processing is a series of tasks, reports, and integrations in Workday that helps you complete the current tax year and prepare for the next.

Workday supports the P60 year-end tax form and these processes:

- Earlier Year Update (EYU) for the 2018-2019 and 2019-2020 tax years.
- Real Time Information (RTI) Full Payment Submission (FPS).
- RTI Employer Payment Summary (EPS).
- Tax code uplift at the start of a new tax year.

### Business Benefits

Workday makes it easier to handle your year-end payroll requirements by:

- Maintaining payroll data in a single location to validate payments to HMRC.
- Enabling you to provide workers with electronic and printed versions of year-end tax forms to your workers. Workers can access electronic forms on desktop and mobile using employee self-service (ESS).

### Use Cases

Year-end payroll processing enables you to:

- Enable workers to opt in or out of a paper copy of their year-end tax forms.
- Enable workers to view and print their electronic year-end tax forms in ESS.
- Generate P60 data for eligible workers.
- Review year-end form updates.

### Questions to Consider

| Questions                                                                                              | Considerations                                                                                                                                                           |
|--------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| How do you want to produce P60 year-end forms?                                                         | You can print P60s or enable online forms for ESS. You need to set up printing options for your company to print hard copy P60s.                                         |
| Have you changed any pay component groups after completing payroll and later need to adjust a balance? | You can create manual payments if you need to adjust balances. Example: To update the year to date balances for a worker's P60, process an on-demand additional payment. |

### Recommendations

To prepare for the year-end process, Workday recommends that you:

- Ensure that your HMRC PAYE account matches your PAYE results in Workday and investigate and correct any differences.
- Create test versions of your PDF and integration year-end forms and, if necessary, amend for the new year.
- Verify that all pay components have correctly configured pay component groups. Pay component groups control how Workday reports some amounts on payslips. Pay component groups can also control taxable wages on P60 forms.

When you complete the final period payroll for a tax year, Workday recommends that you process items in this order:

- View and correct RTI FPS exceptions.
- Send FPS data to HMRC.
- Send EPS data to HMRC.
- If necessary, run an Earlier Year Update.
- Create and distribute workers' P60 forms.

At the start of a new tax year, Workday recommends that you process items in this order:

- Review HMRC changes to year-end processes or forms.
- Process any HMRC notifications.
- Run a tax code uplift and clear down.
- Set up the period schedule for payroll and absence.
- Update holiday calendars.
- Apply any contractual or statutory changes for the new tax year. Example: Budget changes. Workday provides this information on the Payroll Compliance Updates dashboard.

## Requirements

At the beginning of the tax year:

- Set up period schedules and holiday calendars to support the entire year.
- Validate payment dates for the year against weekends and public holidays. Example: Bank holiday rescheduling to celebrate a specific historic occasion.
- Verify that new ledger periods are in *Open* status.
- For workers who have had childcare vouchers since April 2011, manually assess their tax bracket and adjust their records to match.
- Register with HMRC before it introduces benefit-in-kind changes on April 6. Workday recommends that you notify workers of changes to benefit in kind in a timely manner.

Near the end of the tax year:

- Complete all payrolls for the tax year, including off-cycles and manual adjustments.
- Verify that your company name, address, and tax references are correct.
- For P60 forms, ensure that your mapping of data items follows HMRC guidelines. Workday recommends that you generate a test version to check its layout.
- Identify data items used for gender pay gap and pension reporting.

## Limitations

Workday supports EYU for the 2018-2019 and 2019-2020 tax years only.

Workday creates a P60 for all active workers as of 5th April each year, and for workers who left between April 1 and 5. For workers who left before April 1, you must generate a P45 detailing their tax information, along with any student or postgraduate loan details.

Workday doesn't support the:

- Office of National Statistics Annual Survey of Hours and Earnings (ASHE) return.
- P11D form.
- PAYE Settlement Agreement (PSA).

## Tenant Setup

## Connections and Touchpoints

Workday uses worker data to produce P60 data and forms. Example: Provide any required information, such as home address, postcode, and National Insurance number in Workday Human Capital Management. Workday determines the work state of the worker from this information.

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships in your tenant. Learn more about the [Workday Touchpoints Kit](#) on Workday Community.

**Related Information****Concepts**

[Setup Considerations: Adjustments for Prior Periods](#) on page 693

**Tasks**

[Run Tax Code Uplift and Clear Down \(UK\)](#) on page 1414

[Record Worker RTI Earlier Year Update Details \(UK\)](#) on page 1451

[Process HMRC Notifications \(UK\)](#) on page 616

[Create P60 Forms for Workers \(UK\)](#) on page 1429

[Steps: Set Up Real Time Information Reporting \(UK\)](#) on page 1446

**Reference**

[Workday Community: Workday Payroll for UK Year-End & Year-Start Checklist](#)

**Steps: Set Up Payroll Taxes (UK)****Context**

Workday provides and maintains information on valid tax and National Insurance details, as required by HM Revenue and Customs (HMRC). You enter company and worker-specific tax data.

**Steps**

1. [Set Up Company Tax ID \(UK\)](#) on page 1404

2. [Set Up Employer Reference Tax Details \(UK\)](#) on page 1406.

3. [Record Apprenticeship Levy \(UK\)](#) on page 1408.

4. (Optional) [Edit Business Processes](#)

Add the **Provide New Hire Tax Details** task as a *To Do* step to the *Hire* or *Onboarding* Business Process in the UK Payroll functional area. This task enables workers to upload P45s and enter their tax details using the Starter Checklist.

5. (Optional) [Import P45 Tax Data Using Machine Learning \(UK\)](#) on page 1408

6. [Set Up Worker Taxes \(UK\)](#) on page 1410.

7. [Assign UK Payroll ID for Worker \(UK\)](#) on page 1412.

Ensure that all workers have a payroll ID. Workday recommends adding the *Assign UK Payroll ID* business process as a subprocess of the *Hire* business process, after the *Assign Pay Group* step.

**Result**

Workday uses these settings to calculate tax and National Insurance during payroll processing.

**Related Information****Reference**

[Reference: Payroll Configuration Reports](#) on page 264

[Workday Community: New Hire Tax Details](#)

**Set Up Company Tax ID (UK)****Prerequisites**

Security:

- *Set Up: Payroll - Company Specific (Accounting)* domain in the Core Payroll functional area.
- *Set Up: Company General* domain in the Common Financial Management functional area.

## Context

Record tax ID numbers for a company.

## Steps

1. Access the **Edit Company Tax Details** task.
2. (Optional) On the **VAT on Payment** tab, for financial transactions, select **VAT on Payment** to record Value Added Tax (VAT) on payments instead of invoices.  
For financial transactions, if you use **VAT on Payment**, select the **Default Tax Applicability** and **Default Tax Code**.
3. On the **Tax IDs** tab, in the **Tax IDs** grid, add information for each country for which the company processes payments.

| Field                          | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |

| <b>Country for Tax ID Type</b> | The prompt displays only the countries with Workday-delivered tax ID types.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| <b>Tax ID Type</b>             | <p>For the United Kingdom, you have these options:</p> <ul style="list-style-type: none"> <li>• <i>COTAX</i>: Corporation Tax number, where applicable.</li> <li>• <i>ECON</i>: The Employer's Contracted-Out Number for pension schemes, where applicable.</li> <li>• <i>Employer Accounts Office Reference Number</i>: The reference number for the employer's accounts office. A valid number is essential for RTI submission.</li> <li>• <i>Employer PAYE Reference</i>: A valid number is essential for RTI submission.</li> <li>• <i>HMRC Office Number</i>: A valid number is essential for RTI submission.</li> <li>• <i>UTR</i>: Your self-assessment unique tax reference (SA UTR), if you're a sole trader or partnership.</li> <li>• <i>VAT Reg No</i>: Number for purchase orders and customer invoices.</li> </ul> <p><b>Note:</b> If you enter both <i>COTAX</i> and <i>UTR</i>, HMRC rejects your Employer Payment Summary.</p> <p>Workday makes these options view-only if you edit them in the <b>Edit UK Employer Reference Details</b> task:</p> <ul style="list-style-type: none"> <li>• <i>Employer Accounts Office Reference Number</i></li> <li>• <i>Employer PAYE Reference</i></li> <li>• <i>HMRC Office Number</i></li> </ul> |
| <b>Identification #</b>        | Enter the ID number for the selected tax ID type.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| <b>Transaction Tax ID</b>      | Select this check box to include this identification number on financial transactions, like customer invoices and purchase orders.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

| Field                 | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|-----------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                       | <p>If you don't select <b>Transaction Tax ID</b> for any of the identification numbers you configure, financial transactions report the <b>Primary Tax ID</b>.</p> <p>Example: You configure 2 Tax IDs for your company. You select <b>Transaction Tax ID</b> for 1 of them. Workday includes that tax ID as the Transaction Tax ID on any invoices and purchase orders you generate for that company.</p>                                                                                                                                                                     |
| <b>Primary Tax ID</b> | <p>Select to indicate this identification number as the Primary Tax ID for your business entity. If you didn't select <b>Transaction Tax ID</b> for any of the identification numbers you configured, Workday finds and uses the Primary Tax ID.</p> <p>If you configured neither a Transaction Tax ID nor a Primary Tax ID for the business entity, financial transactions don't use tax ID, except for customer invoices where you selected <b>Transaction Tax ID Required</b>. You're unable to complete the customer invoice without configuring a Transaction Tax ID.</p> |

## Set Up Employer Reference Tax Details (UK)

### Prerequisites

Security: *Set Up: Payroll UK* domain in the UK Payroll functional area.

### Context

Configure the HM Revenue and Customs (HMRC) and Real Time Information (RTI) settings for your company to enable RTI submission of tax data.

### Steps

1. Access the **Create UK Employer Reference** task.
2. For the **Include Values from Related Companies Start Date**, enter the start of the tax year in which you report aggregated payroll details under 1 Employer Reference for related companies.
3. Access the **Edit UK Employer Reference Details** task.
4. As you complete the task, consider:

| Option                                   | Description                                                                                                                                                                                                                                                         |

| <b>Exclude Incoming Messages from HMRC</b>                                                                                                                                     | Consider excluding incoming messages only if polling HMRC might fail because of records that don't exist on the HMRC system.                                                                                                                                                                                                                                                                      |
| <b>HMRC P6P6B Index</b><br><b>HMRC P9 Index</b><br><b>HMRC SL1 Index</b><br><b>HMRC SL2 Index</b><br><b>HMRC PGL1 Index</b><br><b>HMRC PGL2 Index</b><br><b>HMRC RTI Index</b> | To control which incoming notification messages Workday retrieves when the incoming tax integrations launch, use these index numbers. These controls prevent you from duplicating notifications retrieved and applied within your previous payroll system.                                                                                                                                        |
| <b>Email Destination Configuration</b>                                                                                                                                         | Select 1 or more email addresses to send pensions auto-enrolment notifications to. When you select more than 1 address, Workday sends an email notification to each address, using this order of precedence: <ul style="list-style-type: none"> <li>• The worker's primary work email.</li> <li>• The worker's primary home email.</li> <li>• The <b>Administration Email Address</b>.</li> </ul> |

When you edit these fields in the **Edit UK Employer Reference Details** task, Workday makes them view-only in the **Edit Company Tax Details** task:

- **HMRC Office Number**
- **Employer PAYE Reference**
- **Employer Accounts Office Reference**

### Next Steps

Configure your pay calculations to look across all related companies. Workday-delivered pay balances consider pay results for all related companies under the same Employer Reference.

Example: To prevent Workday from grouping pay balances or accumulations by company, remove the Company filter worktag from your calculations. To split the calculations by Employer Reference, apply the Payroll ID filter worktag to the calculations.

**Record Apprenticeship Levy (UK)****Prerequisites**

Security:

- *Set Up: Payroll UK* domain in the UK Payroll functional area.
- *Set Up: Payroll (Calculations - Generic)* domain in the Core Payroll functional area.

**Context**

You can record any offset amount allowance for your company against the annual levy amount.

**Steps**

1. Access the **Edit UK Employer Reference Details** task.

Record the apprenticeship levy **Annual Allowance**.

If you share the levy allowance with other connected companies or charities, enter the portion of the allowance directly claimed by your company.

2. Access the **Edit Earning** task for each earning related to the allowance amount.

On the **Non-Effective Dated** tab, identify the type of allowance by selecting the appropriate pay component group from the **Groups** prompt:

- *GBR Earnings Liable to Class 1 secondary NICs [GBR]*
- *GBR Deductions or Earnings That Reduce Class 1 secondary NICs [GBR]*

**Next Steps**

You can run the **View UK Apprenticeship Levy** report to see how much apprenticeship levy is due each month.

**Import P45 Tax Data Using Machine Learning (UK)****Prerequisites**

- The newly hired worker provides a scan of their P45, as part of the *Hire* or *Onboarding* process.
- 

**Context**

Use machine learning and optical character recognition (OCR) to analyze and identify new worker's tax details from their P45. This can help improve efficiency and accuracy by reducing the manual processes involved in recording details of a new starter's pay-related information.

**Note:** This feature is only available to customers' tenants or instances hosted in the European Union or the U.S.

**Note:** You can still use the **Apply UK New Hire Tax Details** task to record workers' details, even if you don't use machine learning and OCR.

## Steps

### 1. [Enable Innovation Services Features and Machine Learning Data Contributions](#).

- a) On the **Available Services** tab, select the **Payroll** category in the left column, and then the **P45 Tax Form Scanning** service check box.
- b) Click **Next**.
- c) From **Payroll: P45 Tax Form Scanning** in the left column, select the **P45 Tax Form Scanning** category **Opt In** check box.
- d) Click **Next**.
- e) Click **OK**.

Security: *Manage: Innovation Services* domain in the Innovation Services functional area.

### 2. Access the **Apply UK New Hire Tax Details** task to verify the P45 data.

Workday prepopulates the **P45** section with the new worker's details and provides an estimated **Confidence Level** of how accurate the details are. Click on the **Image** for a worker to see their scanned P45.

To amend any details in either the **Tax Details** or **Student Loan Details** columns, select the check box in the left column, next to the worker's name.

Security: *Process: New Hire Tax Details* in the UK Payroll functional area.

- a) To apply the P45 data to a worker's record, select the check box in the left column, next to their name.

You can't apply both **Starter Checklist** and **P45** details.

- b) Select the **OK to Proceed** check box.
- c) Click **OK**.

Workday displays a summary of the changes to be applied.

- d) Click **OK**.

Workday updates the worker record with any changes and displays a summary of the actions taken.

## Result

The worker's tax details are updated to match the information from their P45. To check the updates, on the worker's profile, select **Pay > Tax Details**.

## Set Up Worker Taxes (UK)

### Prerequisites

- Obtain a worker's details and coding from:
  - P45.
  - P6 or P6B.
  - P7X.
  - P9 or P9X.
  - Completed HMRC Starter Checklist form.
  - Apply UK New Hire Tax Details** task.

Example: Importing tax details using optical character recognition. See [Steps: Set Up Payroll Taxes \(UK\)](#) on page 1404.

**Note:** If you already used the **Apply UK New Hire Tax Details** task, Workday might show the worker's tax details in the **Add Worker UK Tax Details** task under **Current Details**.

- If you've created an integration with HMRC, process HMRC notifications to obtain any existing tax code details.
- Security: *Worker Data: Payroll (Company Specific)* - UK domain in the UK Payroll functional area.

### Context

Enter these tax details for a worker to enable correct coding:

- Pay As You Earn (PAYE).
- National Insurance (NI).
- Student Loan.
- Postgraduate Loan.

### Steps

- Access the **Add Worker UK Tax Details** task.
- For a newly hired director, or when an existing worker becomes a director, enter the **Effective Date** when their directorship starts.

**Note:** When a director becomes an employee midyear, they must remain on the Directors' NI category until the end of the tax year. Change their category to Standard NI at the beginning of the next tax year.

- Enter **Tax Code** details. As you complete the section, consider:

| Option                      | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |

## Assign UK Payroll ID for Worker (UK)

### Prerequisites

Configure the *Assign UK Payroll ID* business process and security policy in the UK Payroll functional area.

### Context

Assign a payroll ID to a worker. Workday recommends that you add this task as a step in the *Hire* business process definition, to ensure that payroll administrators assign a payroll ID for the worker. A transferred, or terminated and rehired, worker requires a new payroll ID.

In addition, you can assign a payroll ID as a step in these business process definitions. Workday won't create an ID if the worker's already a member of a UK pay group:

- *Change Job*
- *Change Organization Assignments*

You can use these web services to integrate with other sources of legacy payroll IDs:

- *Put Payroll ID*
- *Get Payroll IDs*

### Steps

1. Access the **Assign UK Payroll ID** task.
2. Select the **Worker**.
3. As you complete the task, consider:

| Option                | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|-----------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Effective Date</b> | <p>Automatically populates from the worker's <b>Hire Date</b>. Use the worker's <b>Hire Date</b> when:</p> <ul style="list-style-type: none"> <li>• You hire a new worker and use Workday Payroll for the UK.</li> <li>• You migrate data from a legacy payroll, and the worker has no changes in the legacy payroll between their hire date and the first processing of their pay in Workday.</li> </ul> <p>Use the worker's <b>Rehire Date</b> when you:</p> <ul style="list-style-type: none"> <li>• Rehire a previous worker and use Workday Payroll for the UK.</li> <li>• Migrate data from a legacy payroll, and the worker has no changes in the legacy payroll between their rehire date and the first processing of their pay in Workday.</li> </ul> |

| Option        | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
|---------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|               | <p>Use the worker's <b>Transfer Date</b> when you transfer a worker:</p> <ul style="list-style-type: none"> <li>• Who already has a record in Workday, from a company outside the UK to a UK company.</li> <li>• From a UK Employer Reference to a different UK Employer Reference.</li> </ul> <p>If the worker's transferring in the future, enter their scheduled transfer date.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| <b>Reason</b> | <p>Select the reason for the new payroll ID.</p> <ul style="list-style-type: none"> <li>• <i>Employer Reference Transfer</i>: You're transferring a worker between UK Employer References. The Employer PAYE Reference and HMRC Office Number Tax IDs for the companies are different.</li> <li>• <i>International Transfer</i>: You're transferring the worker into a UK Employer Reference from another country.</li> <li>• <i>New Hire</i>: You're recording a worker who is new to your company and Workday Payroll.</li> <li>• <i>Rehire</i>: You've rehired a previous worker.</li> <li>• <i>Payroll ID Change (Implementation)</i>: This reason is only available when loading payroll ID data using the <i>Put Payroll ID</i> web service. When migrating data from a legacy payroll, Workday uses this reason to indicate to HMRC that there's a payroll ID change for the worker.</li> </ul> |

## Result

Workday generates the payroll ID for the worker. The payroll ID is used throughout Payroll for the UK, reported to HMRC, and functions as a filter worktag in pay balances and pay accumulations.

## Next Steps

To check the existence of payroll IDs, access the **View UK Payroll ID History** task.

For workers assigned a payroll ID outside of the *Hire* business process, you can update the effective date of their payroll ID to match their hire date if they don't have existing payroll results. Select **Worker History** > **View Worker History** from the worker's related actions menu, and select **Business Process** > **Correct** from the related actions of the *Assign UK Payroll ID* business process. When you use the *Hire* business process to assign a payroll ID, Workday automatically updates the effective date of the payroll ID if the hire date changes.

## Manage Taxes for Transferred Workers (UK)

### Prerequisites

Security: *Worker Data: Payroll (Company Specific)* - UK domain in the UK Payroll functional area.

### Context

Record tax details for transferred workers to avoid providing inaccurate RTI figures.

### Steps

- For a worker transferred into your employer reference:
  - a) Access the **Assign UK Payroll ID** task, and assign the worker a Payroll ID with an effective date equal to the transfer date.
  - b) Access the **Add Worker UK Tax Details** task, and enter the worker's tax, national insurance, and any student or postgraduate loan details.

## Run Tax Code Uplift and Clear Down (UK)

### Prerequisites

Configure the *Tax Code Uplift Event* business process and security policy in the UK Payroll functional area.

### Context

At the start of the tax year (P9X), or when directed (P7X), you can:

- Uplift workers' tax codes.
- Clear down any existing Week 1 or Month 1 entries.

**Note:** To prevent data entry conflicts, once you start the uplift don't make any other tax code modifications until the uplift completes. Example. Don't run the **Apply HMRC Notifications** task.

### Steps

1. Access the **Run UK Tax Code Uplift and Clear Down** task.
2. (Optional) If you run an uplift for P9X, enter a **Tax Code Letter** and **Value** provided by HMRC.
3. (Optional) To run a clear down of the W1/M1 indicator only, delete all tax code letter and value rows from the grid. Example. You might do this when HMRC hasn't issued an annual uplift.
4. Check for exceptions on the **Tax Code Uplift Data View** report and take any required action.

### Result

For every worker affected, Workday adds a new row to the **Worker UK Tax Details** report. The new row displays the effective date and:

- For an uplift, the new tax code.
- For a clear down, that the W1/M1 indicator is cleared.

## Transfer a Worker Between Related Companies (UK)

### Prerequisites

- The HR administrator has transferred the worker to the new company.
- For the UK Employer Reference:
  - Use the **View UK Employer Reference Details** report to check if the companies are linked. If they aren't, use the **Edit UK Employer Reference Details** task to:
    - Add the company in the **Related Companies** field.
    - Set the **Include Values from Related Companies Start Date** to the start of the current tax year, if there is no date set.
  - Check that pay balances and pay accumulations, especially their filter worktags, work for transfers between companies.
  - The companies you're transferring between are recorded as related companies.
  - All related companies have the same company pensions auto-enrolment details.

## Context

Transfer a worker between related companies, under the same UK Employer Reference, without having to terminate and rehire them.

To do a mass transfer of workers, use these web services to update worker details in the new company:

- Tax Details
  - *Get Payroll Payee NIs*
  - *Get Payroll Payee Postgraduate Loans*
  - *Get Payroll Payee Student Loans*
  - *Get Payee Tax Codes*
  - *Put Payroll Payee NI*
  - *Put Payroll Payee Postgraduate Loan*
  - *Put Payroll Payee Student Loan*
  - *Put Payee Tax Code*
- RTI
  - *Get Payroll Payee RTIs*
  - *Put Payroll Payee RTI*
- Pension Auto-Enrolment
  - *Get Worker Pensions Auto Enrolment Details*
  - *Get Pensions Auto Enrolment External Assessment History*
  - *Put Worker Pensions Auto Enrolment Details*
  - *Put Pensions Auto Enrolment External Assessment History*

## Steps

1. [Process HMRC Notifications \(UK\)](#) on page 616.
2. [Set Up Worker Taxes \(UK\)](#) on page 1410.  
 Ensure that worker's **Company** is the new one.  
 Review the worker's record to check that the **Apply HMRC Notifications** task applied their latest tax details.
3. [Add Worker RTI Details \(UK\)](#) on page 1450.
4. [Set Up Worker Pensions Auto-Enrolment \(UK\)](#) on page 1499.
5. (Optional) If the worker has any court orders, revise or edit them to refer to the new company.

## Result

Workday includes the worker when you next run payroll for their new company.

## Record IR35 Workers (UK)

### Prerequisites

Security:

- *Worker Data: Contingent Worker Assignment Details* domain in the Staffing functional area.
- *Worker Data: Payroll (UK IR35) - UK* domain in the UK Payroll functional area.

## Context

Assess and identify deemed workers, who meet the HMRC IR35 criteria, to process them through payroll and report to HMRC.

You can use these web services to do a mass update or retrieval of deemed workers who meet the HMRC IR35 assessment criteria:

- *Get IR35 Details*
- *Put IR35 Detail*

## Steps

1. Record the deemed worker in Workday.

Depending on your situation or business policies, you might:

- Convert a contingent worker to become a deemed worker.
- Create a new hire.

Ensure you allocate a new Payroll ID to the worker.

Use the worker's home address, not their registered company address.

2. Access the **Maintain UK Worker IR35 Details** task.

3. As you complete the task, consider:

| Option                | Description                                                                                                                                                                                                                                                       |
|-----------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Effective Date</b> | Enter the same date as their current contract start date. This date should be on or after 2021-04-06.                                                                                                                                                             |
| <b>IR35 Status</b>    | If the worker is deemed to be within IR35, check this box. Workday automatically updates the <b>Inside / Outside IR35</b> field.                                                                                                                                  |
| <b>Reference ID</b>   | Enter the date and time that you assessed the worker to consider if they're a deemed worker.                                                                                                                                                                      |
| <b>Comments</b>       | Enter any associated details. Examples include the: <ul style="list-style-type: none"> <li>• Outcome of the worker's assessment.</li> <li>• Date you issued the status determination statement.</li> <li>• Supplier number from the worker's contract.</li> </ul> |

## Result

On the **View UK RTI FPS Data** report, data item 208. *Off-Payroll Worker subject to the rules* identifies deemed workers that Workday includes in your FPS report to HMRC. The report displays either Yes or blank.

## Next Steps

Deemed workers can't receive benefits or a compensation package. You can configure pay component eligibility rules to prevent Workday including compensation earnings and deductions in deemed workers' pay. Example: Use the Workday-owned calculation *GBR IR35 Indicator*, which identifies a deemed worker within Workday.

If you reassess the deemed worker's status at any time and they no longer come under IR35, terminate their record and issue a P45.

### Tasks

[Convert Contingent Workers to Employees](#)

[Hire Employees](#)

## Concept: IR35 Workers (UK)

The UK introduced IR35, or off-payroll working, for medium and large organizations from 2021-04-06. For the purposes of payroll, if a contingent worker, once assessed, comes under IR35 regulations, employers must report them to HMRC using payroll and subject them to:

- Income tax.
- National Insurance.
- Apprenticeship Levy (where applicable).

Assessed workers who come under IR35 regulations are known as deemed workers and don't qualify for benefits, compensation, or statutory payments.

### Considerations

A contingent worker might have more than 1 contract, therefore you might have different outcomes when you assess each contract. Ensure you take the appropriate action for each contract. If there are changes to a contract, you must assess each time and update your records.

If your assessment shows that an individual is a deemed worker, you must inform them as soon as is practically possible. A deemed worker can dispute the outcome; HMRC provides guidance on the steps you should undertake in this case.

### Recording in Workday

If you have Payroll for the UK but don't pay deemed workers through it, or you only use Workday HCM, you can still record contingent workers' assessments.

When you assess your contingent workers, use the **Maintain UK Worker IR35 Details** task to record the outcome.

## FAQ: UK Payroll ID (UK)

A payroll ID uniquely identifies a worker for a specific employment, or period of employment, for a specific employer. HMRC requires you to use a payroll ID to comply with Real Time Information (RTI) reporting.

### How do I assign a payroll ID?

You assign a worker a payroll ID using the:

- *Put Payroll ID* web service.
- *Assign UK Payroll ID* business process. You can use this business process as an independent task. Alternatively, use the task as a subprocess of the *Hire*, *Change Organization Assignments for Worker*, or *Change Job* business processes.

### When must I assign a payroll ID to a worker?

In Workday Payroll for the UK, you assign a new payroll ID when a worker is:

- Hired or rehired by a UK employer.
- Transferred and starts working for a UK employer.
- Migrated from a legacy payroll.

**How is the payroll ID used in Workday?**

Workday uses the payroll ID:

- For reporting RTI FPS to HMRC.
- For matching Incoming Notifications from HMRC.
- In payroll calculations for:
  - Both Workday owned and your tenanted pay accumulations.
  - Pay balance web services.

## Court Orders (UK)

---

### Set Up Pay Component Groups to Identify Attachable Income (UK)

**Prerequisites**

- Create earnings and deductions.
- Security: *Set Up: Payroll (Calculations - Payroll Specific)* domain in the Core Payroll functional area.

**Context**

Before processing court orders, you can add the earnings and deductions that you created to the pay component groups (PCGs) that Workday uses to identify attachable income. Workday determines which PCGs to resolve during payroll processing based on the rules for the order type.

Attachable income is called arrestable income in Scotland.

You don't need to define statutory deductions or PCGs for national taxes. Workday provides these definitions and automatically excludes them from attachable income calculations. For an overview of the information that Workday maintains, run the **All Payroll Withholding Order Data** report.

**Steps**

1. Access the **Edit Earning** or **Edit Deduction** task for the earnings or nonstatutory deductions you created to identify attachable income.
2. Add the PCG to the **Groups** section on the **Non-Effective Dated** tab.

Workday provides these earnings PCGs:

| Pay Component            | Pay Component Group                                                                                                                                                                                                                                          |
|--------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Earnings.                | <i>GBR Attachable Earnings DEA [GBR]</i><br><i>GBR Attachable Earnings Definition A [GBR]</i><br><i>GBR Attachable Earnings Definition B [GBR]</i><br><i>GBR Attachable Earnings Definition C [GBR]</i><br><i>GBR Arrestable Earnings Definition D [GBR]</i> |
| Nonstatutory deductions. | <i>GBR Attachable Deductions DEA [GBR]</i>                                                                                                                                                                                                                   |

| Pay Component | Pay Component Group                                                                                                                                                                                                      |
|---------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|               | <i>GBR Attachable Deductions Definition A [GBR]</i><br><i>GBR Attachable Deductions Definition B [GBR]</i><br><i>GBR Attachable Deductions Definition C [GBR]</i><br><i>GBR Arrestable Deductions Definition D [GBR]</i> |

The **Comments** on each PCG identify which legislation applies to them.

## Record a Court Order (UK)

### Prerequisites

Security: *Worker Data: Payroll (Court Orders)* - UK domain in the UK Payroll functional area.

### Context

Workday enables you to record and process all types of court orders.

Workday calculates the deduction amount based on attachable or arrestable earnings, using either:

- Weekly or monthly tables for court orders with table-driven deductions.
- A normal deduction rate, taking into account any protected earnings.

### Steps

1. Access the **Record UK Court Order for Worker** task.

You can enter multiple court orders per worker, but they can't be from more than one issuing authority.

2. As you complete the task, consider:

| Option                  | Description                                                                                                                                                                                                                                                                                                                        |
|-------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Reference Number</b> | Reference number from court documents. Once saved, you can't change the number.                                                                                                                                                                                                                                                    |
| <b>Court Order ID</b>   | <p>Must be unique across all court orders from all jurisdictions.</p> <p>If you define a sequence generator using the <b>Create ID Definition / Sequence Generator</b> and <b>Edit Tenant Setup - Payroll</b> tasks, you can leave this field blank. Workday enters the generated ID when you finish entering the court order.</p> |
| <b>Order Date</b>       | Issue date of the order or judgment. If the order includes a serve date, enter that date instead.                                                                                                                                                                                                                                  |
| <b>Begin Date</b>       | <p>Workday deducts the initial deduction amount in the pay period that includes the <b>Begin Date</b>. The <b>Begin Date</b> must be on or after the <b>Order Date</b>.</p> <p>You can define a later begin date for fees on the <b>Order Fees</b> tab.</p>                                                                        |
| <b>End Date</b>         | Workday deducts the final deduction amount, including any order fees, in the pay period before the one with the <b>End Date</b> . The only exceptions                                                                                                                                                                              |

| Option | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
|--------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|        | <p>are Current Maintenance Arrestments and Conjoined Arrestments that include Maintenance.</p> <p>Maintenance Arrestments, as they're based on a daily deduction rate, are applied until the <b>End Date</b>.</p> <p>You can define an earlier end date for employer fees on the <b>Order Fees</b> tab.</p> <p>Regardless of the end date, Workday stops processing a court order when:</p> <ul style="list-style-type: none"> <li>• It's totally repaid.</li> <li>• The worker's terminated and has received their final pay.</li> </ul> |

3. On the **Order Fees** tab, enter any employer or agency fees for processing the court order.

| Option                     | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
|----------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Fee Type</b>            | Automatically populates with <i>Per Pay Period Employer Fee</i> which is the only valid type for the UK.                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| <b>Fee Amount</b>          | The amount shouldn't exceed the limit for the type of order, or £1 per period.                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| <b>Deduction Recipient</b> | Not applicable for UK court order fees.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| <b>Fee Schedule</b>        | <p>By default, the <b>Begin Date</b> and <b>End Date</b> fields, in the <b>Order Info</b> section, control the schedule for fees paid each period.</p> <ul style="list-style-type: none"> <li>• To start a fee later than the default <b>Begin Date</b>, select <b>Fee Schedule</b> and enter the <b>Fee Begin Date</b> field.</li> <li>• To end a fee before the default <b>End Date</b>, select <b>Fee Schedule</b> and enter the <b>Fee End Date</b>.</li> <li>• To charge an ongoing fee, leave <b>Fee End Date</b> empty.</li> </ul> |

### Next Steps

- **Run Pay Calculation** and review the results to ensure that the correct deduction and fee amounts are deducted. You can use **View Deduction History** to view the deduction amount for each pay period.
- View statutory details for calculating court orders using **View Payroll Withholding Order Data**.
- To stop a court order, select the **Inactive Order** check box in the **Order Info** section of the court order.

**Note:** Although Workday doesn't process inactive orders in a payroll run, it considers them as valid orders. Workday prevents you from adding orders for a worker from a different issuing authority when the worker has an inactive order.

- Create a settle payments for court orders. For more information, see: [Create a Payment for an Income Withholding Order or Court Order](#).

## Create Deduction Recipient (UK)

### Prerequisites

Set up the bank accounts to pay third-party deduction recipients.

Security: *Worker Data: Payroll (Income Withholding Orders)* domain in the Core Payroll functional area.

Security: (Optional) *Set Up: Payroll Third-Party Payments* domain in the Core Payroll functional area.

### Context

Record information for a third-party deduction recipient, including the:

- Recipient
- Contact information
- Method of payment
- Bank account details

Select a deduction recipient when creating a court order or making an ad hoc payment.

Workday delivers 2 web services that you can use when creating a custom integration for garnishment processing to or from a third-party application:

- *Put Deduction Recipients* loads deduction recipient information into Workday.
- *Get Deduction Recipients* retrieves information from Workday.

### Steps

1. Access the **Create Deduction Recipient** task.
2. Enter the recipient **Name**.
3. (Optional) Enter an **External Entity ID** that helps you identify the recipient.  
Enter a payee ID for a withholding order.
4. (Optional) Define IDs for deduction recipients.  
The **Deduction Recipient ID** field displays when you've configured it on the **Edit Tenant Setup - Financials** task. Select an ID Definition from the **ID Generator for Deduction Recipient** field in the **Business Entity Sequence ID** section. Workday uses the ID during processing and with integrations.
5. Select the **Payment Type**.
6. Select the **Country** for the deduction recipient. This field isn't effective dated and is required, so you must update it when editing existing deduction recipients.
7. Add contact information for the recipient.  
Selecting the **Visibility > Public** check box makes the contact information visible in Workday.
8. Add a **Settlement Bank Account** and enter information for the receiving account.  
You can only have 1 active settlement bank account at a time.
9. (Optional) Select the **Inactive** option to deactivate a specific snapshot of a deduction recipient. To deactivate the entire deduction recipient, you must deactivate all snapshots.
10. (Optional) Select the **Enable Payroll Third-Party Payments** option to generate and settle payments for Involuntary Withholding Order or Court Order deductions. For more information, see: [Concept: Payroll Third-Party Payments](#).
11. (Optional) The **Always Separate Payment** option is enabled by default when you select **Enable Payroll Third-Party Payments**. This option generates a separate payment for each payable item in a settlement run. If the payable item and payment have a 1:1 relationship when you generate an electronic payment for an Income Withholding Order or Court Order deduction recipient, we recommend you keep this option enabled.

**12.** (Optional) Select a **Category**. These categories are configured through the **Maintain Payroll Third-Party Payments Categories** task. You can reference these categories in bank routing rules, settlement filtering, and the **Maintain Remittance Setup Rule** task. Workday generates both a Workday ID and a Reference ID for each payroll third-party payment category. You can customize the Reference ID, but not the Workday ID. You can use Reference IDs when running the Put Payroll Deduction Recipient and Put Bank Routing Rules web services. You can't remove a category while it's assigned to a deduction recipient or referenced in bank routing rules.

### Next Steps

Access the **View Deduction Recipient** report. To see the **Deduction Recipient ID**, select **Integration IDs** > **View IDs** from the related actions menu of the deduction recipient.

When creating or editing a deduction recipient, you can view future, current, and previous deduction recipient snapshots. The section under the **Effective Dated Details** header represents the deduction recipient snapshot. Snapshots enable you to:

- Enter an effective date when creating or editing a deduction recipient.
- View the configuration as of a specific effective date of a deduction recipient.
- Make configuration changes as of a specific date without impacting prior configurations.
- Deactivate a deduction recipient.

You can add rows to a deduction recipient snapshot only if they're dated after the current effective snapshot. When you add a new snapshot, Workday copies the configuration of the prior snapshot to the newly added snapshot.

To remove a deduction recipient, access the **Delete Deduction Recipient** task. You can only delete deduction recipients that have never been in use.

## Revise Court Orders (UK)

### Prerequisites

A court order exists for the worker in Workday.

Security: *Worker Data: Payroll (Court Orders)* - UK domain in the UK Payroll functional area.

### Context

You can revise the deduction amounts and protected earnings for these types of court orders:

- Attachment of Earnings Orders for Maintenance
- Attachment of Earnings Order Non Priority
- Conjoined Arrestment
- Current Maintenance Arrestment
- Deductions from Earnings Orders
- Direct Earnings Attachments

When you revise a court order, Workday retains the original order for tracking purposes, and creates a new record for the amended order.

### Steps

1. On the worker profile, access the **Court Orders** report of the **Pay** profile group.

2. Select **Court Order > Revise** from the related actions menu of the court order.

If the court order type can't be revised, select **Court Order > Edit** from the related actions menu.

For a worker transfer between companies under the same UK Employer Reference:

- Only edit the original court order after you complete the transfer.
- If you have to update the court order before you transfer the worker, end the existing court order. After you transfer the worker, create a new court order under the worker's new company, with the appropriate reduced balance.

3. As you complete the task, consider:

| Option            | Description                                                                                                                                                                                                                                   |
|-------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Order Date</b> | Enter the issue date of the revised order.                                                                                                                                                                                                    |
| <b>Begin Date</b> | The order becomes effective in the first pay period that includes the court order begin date.<br><br>For court orders with daily arrestable earnings calculations, Workday uses the revised court order starting from the <b>Begin Date</b> . |

Revise deduction amounts and protected earnings of the original order as required.

### Result

As of the order date, the status of the:

- Revised order is set to *Active*.
- Original order is set to *Inactive*.

| Wales             | <ul style="list-style-type: none"> <li>• <i>Get AEO Council Tax Wales Orders</i></li> <li>• <i>Put AEO Council Tax Wales Order</i></li> </ul>                                                                                                                                                                                                                                                                                                                                                                                     |

### Collection Prioritization

Workday prioritizes collection of court orders, postgraduate loans, and student loans in this order:

**1. High priority court orders:**

- Attachment of Earnings Order Fines.
- Attachment of Earnings Order Maintenance.
- Conjoined Arrestment.
- Current Maintenance Arrestment.
- Deduction from Earnings Order.
- Earnings Arrestment.

**2. Postgraduate loans.**

**3. Student loans.**

**4. Non-priority court orders:**

- Attachment of Earnings Order Non-Priority.
- Debt Arrangement Scheme.
- Direct Earnings Attachment.

### FAQ: Court Orders (UK)

**How does Workday calculate court orders in subperiods?**

When calculating court order deductions for pay periods with multiple gross-to-net calculations, Workday recalculates these results in each subperiod:

- The court order outstanding balance to include any payments from previous subperiods.
- Protected earnings and attachable earnings to include any earnings or deductions paid in the previous subperiod.

When a worker has insufficient arrestable earnings for both Earnings Arrestment and Current Maintenance Arrestment deductions, Workday limits the calculated disbursement amount to the available arrestable earnings within a subperiod. If you want to modify the calculated disbursement amount, access the **Add Payroll Input** task and override the deduction amount.

**What's the processing order for court orders when running a retro termination?**

Stop a worker's court orders on their termination date before you process their retro termination.

**How can I check how many payments have been made to date for a court order?**

1. On the worker's profile, navigate to the **Court Orders** section of their **Pay** profile group.
2. Select **Court Order > View Deduction History** from the related actions of the court order. Workday displays the **View Court Order Deduction History** report.

## Civil Service Pensions (UK)

### Map Civil Service Pension Data (UK)

#### Prerequisites

Security:

- *Process:* UK Government Civil Service Pension domain in the UK Payroll functional area.
- *Set Up:* Payroll UK domain in the UK Payroll functional area.

#### Context

To comply with the Cabinet Office and pension scheme administrator requirements, you must provide payroll data in the format required by the UK Civil Service pension scheme interface. To extract the data required to calculate pensions, you must map Workday data to the pension scheme administrator's codes and other requirements.

#### Steps

1. Access the **Maintain UK Civil Service Pension Configuration** task.

Each tab relates to a separate data file that you send to the pension scheme administrator.

2. As you complete the task, consider:

| Option               | Description                                                                                 |
|----------------------|---------------------------------------------------------------------------------------------|
| <b>Employer Code</b> | Enter the codes provided by the pension scheme administrator for the UK Employer Reference. |
| <b>Payroll Code</b>  |                                                                                             |

3. If you use the Change Benefits business process, on the **Additional Mapping** tab, select the reasons that affect a worker's retirement savings.

4. Don't select or enter anything on the **Cutover Mode** tab. This tab is only used by your implementation team when first setting up Workday.
5. On the **Payment History** tab, enter the **Start Date** of when you start using Workday to send data to the pension scheme administrator.

Total amounts on the pay history data file accumulate from this date each time you run payroll. Workday resets the accumulated amount to zero in April each year.

### Next Steps

Configure the **Generate UK Civil Service Pension Files** business process and security policy in the UK Payroll functional area. Workday recommends that you don't add approval steps on this business process.

When you run the business process, Workday creates the data files that you download and send to the pension scheme administrator.

## P60 Reporting (UK)

---

### Configure Postal Address Header Sheet (UK)

#### Prerequisites

Security domains in the UK Payroll functional area:

- *Process: P45 (Reports) - UK*
- *Process: P60 (Reports) - UK*

#### Context

You can configure the layout of a worker's postal address header sheet that accompanies a generated P45 or P60 form. You can use the postal address sheet to mail forms to workers.

#### Steps

1. Access the **UK Form Address Header Layout** task.
2. As you complete the task, consider:

| Option                                                      | Description                                                                                                                                                                                                                                                                                                                                                                   |
|-------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Employee Address Top</b><br><b>Employee Address Left</b> | Specify the distance in millimeters that you want the address positioned from the top and left of the sheet.                                                                                                                                                                                                                                                                  |
| <b>Header ID</b>                                            | <p>To distinguish the current sheet from other sheets, enter text that displays at the top of the header sheet.</p> <p>Example: You can use the <b>Header ID</b> to provide details of a print job passed to an automated printing process, such as:</p> <ul style="list-style-type: none"> <li>• The type of print job.</li> <li>• The type of stationary to use.</li> </ul> |

| Option | Description                                                                                             |
|--------|---------------------------------------------------------------------------------------------------------|
|        | <ul style="list-style-type: none"> <li>How many sheets of paper to place into each envelope.</li> </ul> |

## Result

When you create P45 or P60 forms, you can select the **Produce with Worker Address Header Page** check box. Workday creates the header sheet with the worker's name and address.

## Create P60 Forms for Workers (UK)

### Prerequisites

- Process the final pay run of the year.
- If printing a worker's name and address separately to accompany their P60 form, complete the **UK Form Address Header Layout** task.
- Security:
  - Process: P60 (Reports)* - UK domain in the UK Payroll functional area.
  - Process: P60 (Run)* - UK domain in the UK Payroll functional area.

### Context

You can create P60s at any time after completing the final pay run of the year. All workers must receive their P60 form, either by paper or electronically, by May 31.

### Steps

- Access the **Create UK P60** task.  
If you need to run this task again in the same tax year to adjust P60s, you can select individual workers or groups of workers.  
You can run the whole company again using the **Rerun Company** option.
- (Optional) Access the **View UK P60** report to review the queued P60s for a specific company and groups of workers.  
Consider restricting your view to groups of workers, otherwise Workday displays all P60s meeting the selection criteria.
- (Optional) Access the **Publish UK P60** task to define the availability date, if you're publishing P60s to employee self-service or for access on mobile devices.  
You can change this date up until the availability date.
- Access the **Create UK P60 Forms** task to create PDF versions of P60s.  
To generate a postal address header sheet with the P60 form, select the **Produce with Worker Address Header Page** check box.

## Gender Pay Gap (UK)

### Concept: Gender Pay Gap (UK)

You can use these reports to collect and calculate worker pay and bonuses, enabling you to meet mandatory gender pay gap reporting requirements:

- View UK Gender Pay Gap Hourly Rate of Pay:** Displays the average hourly and weekly pay on the **Snapshot Date** of the **Snapshot Year**.

- **View UK Gender Bonus Gap Reporting:** Displays the total bonus paid during the 12 months preceding the **Snapshot Date** of the **Snapshot Year**. The total includes any retro bonus payments.

To change the **Snapshot Date**, access the **Maintain UK Company Gender Pay Gap Snapshot Date** task.

Security: *Reports: Results for Worker (Pay Calculation)* - UK domain in the UK Payroll functional area.

## Troubleshooting: Gender Pay Gap Earnings Don't Appear in Correct Report (UK)

**Cause:** Earnings are in the wrong pay component group.

**Solution:**

### Steps

1. Access the **Edit Earning** task.

On the **Non-Effective Dated** tab, in the **Groups** area, identify which gender pay gap pay component group (PCG) the earning is in.

Ensure that the earning is in the correct PCG:

| Earning Type      | Pay Component Group                                                                                                                          |
|-------------------|----------------------------------------------------------------------------------------------------------------------------------------------|
| Non bonus-related | <ul style="list-style-type: none"> <li>GBR Gender Pay Gap Reporting [GBR]</li> </ul>                                                         |
| Bonus related     | <ul style="list-style-type: none"> <li>GBR Bonus for Gender Pay Gap Reporting [GBR]</li> <li>GBR Gender Bonus Gap Reporting [GBR]</li> </ul> |

Security: *Set Up: Payroll (Calculations - Payroll Specific)* domain in the Core Payroll functional area.

2. Access the **Edit Run Category** task for all UK run categories that contain gender pay information.

On the **General** tab, in the **Additional Pay Components to Calculate** area, ensure these earnings have been added:

- GBR Gender Bonus Gap - Total Amount [GBR]
- GBR Gender Pay Gap - Average Hourly Pay [GBR]

Security: *Set Up: Payroll - Paygroup Specific* domain in the Core Payroll functional area.

3. Rerun the gender pay and bonus reports.

Workday recalculates the figures for any earnings that you amended and displays them in the relevant report:

- **View UK Gender Pay Gap Hourly Rate of Pay**
- **View UK Gender Bonus Gap Reporting**

Security: *Reports: Results for Worker (Pay Calculation)* - UK domain in the UK Payroll functional area.

## National Insurance (NI) Adjustments (UK)

### Adjust Incorrect NI Deductions Using Payroll Input (UK)

#### Prerequisites

- Worker has completed payroll results.
- Update the worker's National Insurance (NI) category using the **Add Worker UK Tax Details** task.

## Context

Workday automatically updates NI categories when a worker reaches an age that requires a different NI category. This automatic process means that you rarely need to make any retrospective adjustments to a worker's NI results.

When you retrospectively change a worker's NI category, also adjust their previously calculated NI deductions and associated balances. Example: Managing changes to directors' NI throughout the year.

The best practice is to use regular on-cycle payroll input to:

- Negate the incorrectly applied values from a previous NI category.
- Positively adjust for the correct NI category.

## Steps

1. (Optional) Access the **Pay Calculation NI Results for Group of Workers** report.

Use this report to view NI details before making adjustments.

Security: *Reports: Pay Calculation Results for Pay Group (Results)* - UK domain in the UK Payroll functional area.

2. Access the **Add Payroll Input by Worker** task and select the worker.

Security: *Worker Data: Payroll (Payroll Input)* domain in the Core Payroll functional area.

3. Select **Special Entry** and the appropriate **Pay Component**. Perform this task once for each pay component:

- *GBR NI - Employee NICs [GBR]*
- *GBR NI - Employer NICs [GBR]*

4. Select these **Processing Defaults**:

- **One-time**
- **Regular Run Category**

5. Under **Input**, enter the details to adjust *GBR NI - Employee NICs [GBR]*.

Enter 2 rows:

| Action                                                             | Start Date                               | Processing Options | Payroll Worktags     | Input Details - Type                 | Input Details - Value                                                                                                                                                                                                                             |
|--------------------------------------------------------------------|------------------------------------------|--------------------|----------------------|--------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Negate the incorrectly applied values from a previous NI category. | Start date of previous period to adjust. | <i>Adjustment</i>  | Previous NI Category | Select the appropriate option.       | A negative value equal to the adjustment amount for the previous period or periods.                                                                                                                                                               |
| Positively adjust for the correct NI category.                     | Start date of previous period to adjust. | <i>Adjustment</i>  | Current NI Category  | Select the same as in the first row. | <p>A positive value equal to the adjustment amount for the previous period or periods.</p> <p>When <i>GBR NI: Earnings at the LEL (Reporting)</i>, use the sum of:</p> <ul style="list-style-type: none"> <li>• A positive value equal</li> </ul> |

| Action | Start Date | Processing Options | Payroll Worktags | Input Details - Type | Input Details - Value                                                                                                                     |
|--------|------------|--------------------|------------------|----------------------|-------------------------------------------------------------------------------------------------------------------------------------------|
|        |            |                    |                  |                      | to the adjustment amount for the previous period or periods. <ul style="list-style-type: none"> <li>The current period amount.</li> </ul> |

6. Under **Input**, enter the details to adjust *GBR NI - Employer NICs [GBR]*.

Enter 2 rows:

| Action                                                             | Start Date                               | Processing Options | Payroll Worktags     | Input Details - Type | Input Details - Value                                                                                                                                                                 |

##### Tasks

[Set Up Worker Taxes \(UK\)](#) on page 1410

### Concept: NI Adjustments (UK)

When you retrospectively change a worker's National Insurance (NI) category, you must adjust previously calculated NI deductions and associated balances. The best practice is to use regular on-cycle payroll input to make the adjustment.

You can also consider:

- Entering NI for additional payments after an NI adjustment.
- Entering an NI adjustment that results in a negative value.
- Entering an NI adjustment after the end of the tax year.

#### Entering NI for Additional Payments After an NI Adjustment

Workday can't correctly calculate NI for an on-demand additional payment following an NI adjustment in the regular on-cycle period. This

restriction is because the pay components all contain values greater than the period threshold.

To make an additional payment following an NI adjustment in the regular on-cycle period, you can select either to:

- Calculate and enter regular payroll input for NI.
- Wait, and process either regular payroll input or an on-demand additional payment in the next pay period.

### **Adjustments That Result in a Negative Value**

Workday recommends that you avoid on-demand additional or manual payments when the net result of NI adjustment for an employee would be a negative value. However, if you do make an on-demand additional payment:

- When the net result of NI adjustment for Employer's NI is either negative or zero, consider:
  - Adjustments to the period's costing.
  - Waiting and adjusting in the next on-cycle payroll calculation.
- When the net result of NI adjustment for the worker's net pay is zero:
  - What's the benefit to you in using an on-demand additional payment?
  - Don't submit FPS for a zero payment.

### **Adjustments After the End of the Tax Year (2018-2019 or 2019-2020 Tax Years Only)**

When identified before April 19, does the adjustment result in negative pay?

- *No*: Use an on-demand payment and submit to HMRC by FPS.
- *Yes*: Consider a reversal and an on-demand additional payment. Submit the result to HMRC by FPS.

When identified after April 19, use an on-demand payment and send an Earlier Year Update (EYU) to HMRC.

When the adjustment has no net effect on the employee, use an on-demand payment. If you don't use an on-demand payment, the FPS and EPS won't reconcile. Contact HMRC to notify them of the adjustment to Employer's NI.

### **Adjustments After the End of the Tax Year (2020-2021 Tax Years Onwards)**

When identified after submitting the final FPS, but before submitting the final EPS, does the adjustment result in negative pay?

- *No*: Use an on-demand payment and submit a corrected FPS to HMRC. Workday includes the correction in the final EPS.
- *Yes*: Consider a reversal and an on-demand additional payment. Submit the result to HMRC

by FPS. Workday includes the correction in the final EPS.

When identified after April 19, as a prior year correction, does the adjustment result in negative pay?

- *No:*
  - Use an on-demand **Prior Period** payment to correct the NI categories and their associated values.
  - Use the worker's last submitted pay period for the last tax year as the **Payment Date**.
  - In the **Add Worker UK RTI Details** task, select the **Late PAYE Reporting Reason: H. Correction to earlier submission**.
  - Submit the corrected results to HMRC by FPS and EPS.
- *Yes:*
  - Use an on-demand **Prior Period** payment to correct the NI categories and their associated values. Include a pay component to correct the negative net pay.
  - Use the worker's last submitted pay period for the last tax year as the **Payment Date**.
  - In the **Add Worker UK RTI Details** task, select the **Late PAYE Reporting Reason: H. Correction to earlier submission**.
  - Submit the corrected results to HMRC by FPS and EPS.

## Processes for Terminated Workers (UK)

---

### Configure Postal Address Header Sheet (UK)

#### Prerequisites

Security domains in the UK Payroll functional area:

- *Process: P45 (Reports) - UK*
- *Process: P60 (Reports) - UK*

#### Context

You can configure the layout of a worker's postal address header sheet that accompanies a generated P45 or P60 form. You can use the postal address sheet to mail forms to workers.

## Steps

1. Access the **UK Form Address Header Layout** task.
2. As you complete the task, consider:

| Option                                                      | Description                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|-------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Employee Address Top</b><br><b>Employee Address Left</b> | Specify the distance in millimeters that you want the address positioned from the top and left of the sheet.                                                                                                                                                                                                                                                                                                                                   |
| <b>Header ID</b>                                            | <p>To distinguish the current sheet from other sheets, enter text that displays at the top of the header sheet.</p> <p>Example: You can use the <b>Header ID</b> to provide details of a print job passed to an automated printing process, such as:</p> <ul style="list-style-type: none"> <li>• The type of print job.</li> <li>• The type of stationary to use.</li> <li>• How many sheets of paper to place into each envelope.</li> </ul> |

## Result

When you create P45 or P60 forms, you can select the **Produce with Worker Address Header Page** check box. Workday creates the header sheet with the worker's name and address.

## Steps: Create P45s for Terminated Workers (UK)

### Prerequisites

- Complete payroll for the period.
- If printing a worker's name and address separately to accompany their P45 form, complete the **UK Form Address Header Layout** task.
- Security domains in the UK Payroll functional area:
  - *Process: P45 (Run) - UK*
  - *Process: P45 (Reports) - UK*
  - (Optional) *Self-Service: Payroll (My Tax Documents) - UK*

### Context

You can create P45s to provide terminated workers with their tax codes and taxable earnings.

**Note:** Before generating P45s for terminated, or retro-terminated, workers, run any retro events and:

- Complete any retro results in an on-cycle or off-cycle payroll calculation.
- Complete the payroll run.

## Steps

1. Access the **Create P45** task.

Create P45 data for terminated workers.

To include any retro terminated workers, enter the prior period that includes the earliest retro termination as the **Leavers On and After** date.

To display details of a worker's final payment, on the **Create P45 Criteria** tab, click the link in the **Payroll Result** column.

## 2. Access the **View P45** report.

Verify that the report displays all terminated workers and their P45 data.

## 3. (Optional) Access the **Cancel P45** task.

You can cancel P45 production for 1 or more workers.

## 4. Access the **Create P45 Forms** task.

Generate PDF P45 forms for selected workers.

If you select one or more **Workers**, and select the **Exclude Workers** check box, Workday creates a P45 form for all workers in the **Pay Group** except those you selected.

To schedule when the P45 will be available for workers to see from their **My Tax Documents** task, when they use self-service, set an **Availability Date**.

To enable workers to have access to their P45 form after their termination, grant them access to the *Self-Service: Payroll (My Tax Documents) - UK* domain using either their active *Employee As Self*, or an appropriate *Terminator As Self*, security profile.

To generate a postal address header sheet with the P45 form, select the **Produce with Worker Address Header Page** check box.

### Result

- After you run the **Create P45 Forms** task, the worker's **Tax Documents** tab displays a **P45 Leaver Issue Date**. In addition, the **View P45** report displays a terminated, or retro-terminated, worker's P45 details.
- Workday displays a link to the completed PDF for you to print and send to the terminated worker.
- Workday displays when a P45 is available to view or print as a PDF on the Tax Documents tab of a worker's Pay profile group. The P45 is available to the Pay Administrator as soon as the **Create P45 Forms** task completes. The P45 is only available to the worker from the **Availability Date**; if no **Availability Date** exists the worker can't see or print their P45.
- Workday indicates on the P45 if a terminated worker has ongoing student loan deductions.
- Workday sorts the PDF copies of multiple P45 forms in alphabetical order by surname.

#### Concepts

[Concept: Retro Events and Terminated Workers](#) on page 885

[Concept: Retro Terminated Worker P45 Creation \(UK\)](#) on page 1439

## Steps: Terminate and Rehire Workers in the Same Pay Period (UK)

### Context

When you terminate and rehire an employee in the same pay period, it impacts both RTI and statutory calculations.

### Steps

1. [Terminate Employees](#).
2. Process payroll for the terminated worker using an on-demand replacement payment.  
See [Create On-Demand Replacement Payments](#) on page 648.
3. Issue the worker's P45.  
See [Steps: Create P45s for Terminated Workers \(UK\)](#) on page 1435.
4. Rehire the worker.  
See [Hire Employees](#).
5. Assign the rehired worker to a pay group.  
See [Assign Workers to Pay Groups](#) on page 174.

6. Access the **Assign UK Payroll ID** task to assign a new ID to the rehired worker.
7. Process payroll for the rehired worker as part of the regular on-cycle payroll run.  
See [Steps: Process Payroll](#) on page 613.
8. [View Payroll Results](#) on page 741.

### Result

The payroll results reflect the rehiring.

## Assess Payments After Leaving for NI Calculations (UK)

### Context

After a worker leaves, use HMRC Guidance CWG2 to assess whether their earnings are regular or irregular payments. The payment type affects treatment of National Insurance (NI) calculations.

**Note:** Workday only supports a single payment after leaving in the period of termination. You can make further payments after leaving in following pay periods.

### Steps

1. Ensure that all earnings subject to NI contribute to the pay component group *GBR Nlable Pay*.  
See [Add Earnings or Deductions to Pay Component Groups](#) on page 234.
2. When making a payment after leaving, ensure that earnings that are considered irregular are part of the *GBR Irregular Nlable Pay [GBR]* pay component group.
3. **Run Pay Complete** for the period.

### Result

When calculating NI, Workday uses the pay frequency to determine the NI threshold:

| Payments                             | NI Threshold                                                        |
|--------------------------------------|---------------------------------------------------------------------|
| Regular earnings only.               | The worker's pay frequency.                                         |
| Irregular earnings only.             | A weekly pay frequency, irrespective of the worker's pay frequency. |
| Both regular and irregular earnings. | The worker's pay frequency.                                         |

## Search for Non-Terminated Potential Leavers (UK)

### Prerequisites

Security: *Reports: Pre-Payroll Reporting for Pay Group* – UK security domain in the UK Payroll functional area.

### Context

You can identify when a worker's employment has potentially ended, but the termination details haven't yet reached Payroll. Use the report to reduce the potential for overpayments and having to contact the terminated worker to return any overpayment.

### Steps

1. Access the **View UK Termination Warning Report** task.

2. As you complete the task, consider:

| Option                   | Description                                                                                                                                                             |
|--------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Time Tracking Start Date | If you use Workday Time Tracking to record workers' hours, enter a date to ensure greater accuracy in the <b>Time Entry Created Within a Given Period</b> report field. |

## FAQ: Payroll and RTI for Deceased Workers (UK)

How can I ensure that payroll calculates correctly for deceased workers?

Ensure that the worker has:

- A value of *Death* in the **Primary Termination Reason** prompt for the *Termination* event.
- An accurate **Date of Death** on the **Personal Information** report in the Personal profile group of the worker profile.

When you enter a **Date of Death** for a worker, Workday:

- Reports the date of death as the **Date Employment Contract Ended** within the Real Time Information (RTI) Full Payment Submission (FPS).
- Correctly processes National Insurance on the final wages for the deceased worker.
- Doesn't produce a P45.

After you've processed the final payroll and FPS, access the **Add Worker UK RTI Details** task. Select the **FPS Submitted to Deceased Worker** check box so that Workday calculates tax correctly if you make subsequent payments after termination. After you notify HMRC of the date of death, Workday deducts PAYE using code *OT* (on a week 1/month 1 basis).

How can I ensure that all deceased workers have a recorded date of death?

To ensure that deceased workers have a **Date of Death** on the **Edit Personal Information** task, Workday recommends that you either:

- Modify the *Termination* business process. Include a conditional *To Do* step on the **Edit Personal Information** task, when the termination reason is *Death* in either of these fields:
  - **Primary Termination Reason**
  - **Primary Termination Category**
- Create a custom report that identifies terminated workers with a **Termination Reason** of *Death* but without a **Date Of Death**. Use the report as an audit before processing payroll.

Workday only makes the **Date of Death** field available on the **Edit Personal Information** task

### How can I report additional payments to deceased workers?

when the *Terminated* business process is complete for the worker.

To report additional payments to deceased workers, correct your FPS submission after sending an FPS with their date of leaving.

1. Access the **Add Worker UK RTI Details** task.
2. For the **Late PAYE Reporting Reason**, select *H - Correction to earlier submission*.
3. Access the **View UK RTI FPS Data** report and verify the year-to-date figures. For payments made:
  - In the same tax year as the date of death, ensure that the revised year-to-date figures include the additional payment.
  - In a later tax year, ensure that the year-to-date figures only reflect the additional payment.
4. Run the *HMRC RTI Tax Filing System* integration.

[FAQ: Contact and Personal Information](#)

## Concept: Retro Terminated Worker P45 Creation (UK)

When you terminate a worker retrospectively and run the **Run Retro Pay Calculation** task, before creating their P45 check if their retro result contains a:

- Nonzero retro difference.
- Zero retro difference.

The actions you must take before generating a worker's P45 depends on the type of retro difference affecting them.

### Zero Retro Difference

Terminated workers with a zero retro difference have no change to their last completed period payroll calculation. Having no change means that the values for their *Workers Taxable Pay Year To Date* and *Tax Paid Year To Date* values are accurate and you can create their P45.

### Nonzero Retro Difference

Terminated workers with a nonzero retro difference have a change to their last completed period payroll calculation. This difference often means that there's a change to their *Workers Taxable Pay Year To Date* and *Tax Paid Year To Date* values that would result in an inaccurate P45.

You must process and complete a payroll calculation to correct the values Workday uses when creating a P45. You can process 2 types of nonzero retro differences:

- Negative Retro Difference.

For workers with negative retro differences, resolve their negative net pay and complete the result.  
Example: Offset the difference using an appropriate earning or deduction.

- Positive Retro Difference.

For workers with positive retro differences, process and complete both retro and regular payroll before creating P45s.

### Example

Albert, Billie, and Jade were all terminated retrospectively, the previous pay period is complete, and you must process their terminations through retro. They all left on different dates and have different circumstances to pick up in retro.

| Employee | Last Period Gross | Termination Date | Retro Difference |
|----------|-------------------|------------------|------------------|
| Albert   | 5000              | July 30          | 0                |
| Billie   | 4500              | July 15          | (2250)           |
| Jade     | 6400              | July 29          | 377.43           |

Albert terminated on the last day of the month. They don't owe any salary to the business and aren't owed any holiday pay.

Billie terminated on July 15. They owe 15 days salary to the business. They aren't owed any holiday pay:

- $4500 \text{ gross} / 30 \text{ days} * 15 \text{ days} = 2250$
- $2250 * -1 = (2250)$

Jade terminated on July 29. They owe 1 day of salary to the business, but are owed 2 days holiday pay:

- $6400 \text{ gross} / 30 \text{ days} = 213.33 \text{ per day}$
- $213.33 * -1 = (213.33)$
- $76800 \text{ annual gross} / 260 \text{ working days} = 295.38 \text{ per day}$
- $295.38 * 2 \text{ holiday pay days} = 590.76$
- $(213.33) + 590.76 = 377.43$

| Employee | Retro Calculation Complete | Pay Adjustment | On-Cycle / Off-Cycle Calculation Complete |
|----------|----------------------------|----------------|-------------------------------------------|
| Albert   | Yes                        | N/A            | N/A                                       |
| Billie   | Yes                        | Yes            | Yes                                       |
| Jade     | Yes                        | N/A            | Yes                                       |

## Real Time Information (RTI) Reporting (UK)

### Setup Considerations: Real Time Information (UK)

You can use this topic to help make decisions when planning your configuration and use of Real Time Information (RTI). It explains:

- Why to set it up.
- How it fits into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

### What It Is

You can enable Workday Payroll for the UK to submit or retrieve information directly through the HMRC RTI online service. Workday supports these processes:

- Earlier Year Update (EYU).
- RTI Full Payment Submission (FPS).
- RTI Employer Payment Summary (EPS).
- HMRC Notifications.

### Business Benefits

Workday helps you to:

- Meet requirements for reporting worker pay and statutory contributions.
- Maintain payroll data in a single location to validate payments to HMRC and increase efficiency.
- Verify your data by using validations and reports.
- Quickly process payroll cycles and streamline submissions using a configurable business process.

### Use Cases

Each time you pay workers, send their details in an RTI FPS to HMRC.

Using Workday for EPS and EYU submissions can remove the need to use the HMRC Basic PAYE Tools.

### Questions to Consider

| Questions                                                                            | Considerations                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
|--------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Which earnings or deductions do you need to report to HMRC?                          | To ensure accurate reporting, identify the earnings and deductions to map to specific RTI data items.                                                                                                                                                                                                                                                                                                                                                                 |
| How do you identify changes to a worker's employment status in your reports to HMRC? | <p>A payroll ID uniquely identifies an employee for a specific employment, or period of employment, for a specific employer. HMRC requires you to use a payroll ID when reporting RTI information.</p> <p>You can assign a new payroll ID when a worker is:</p> <ul style="list-style-type: none"> <li>• Hired or rehired by a UK employer.</li> <li>• Transferred and starts working for a UK employer.</li> <li>• Migrated from a legacy payroll system.</li> </ul> |
| Do you include company cars as benefits in payroll?                                  | If you have an agreement with HMRC, you can send workers' car information as part of your FPS.                                                                                                                                                                                                                                                                                                                                                                        |
| What non-standard reporting needs do you have for individual workers?                | <p>For individual workers, Workday enables you to report:</p> <ul style="list-style-type: none"> <li>• Irregular payment patterns. Example: Workers who aren't paid every pay period.</li> <li>• Reasons for late PAYE reporting.</li> <li>• Corrections to their contract end date.</li> </ul>                                                                                                                                                                       |

## Recommendations

When you complete the final period payroll for a tax year, process items in this order to avoid data conflicts:

- View and correct RTI FPS exceptions.
- Send FPS data to HMRC.
- Send EPS data to HMRC.
- If you need to correct workers previous tax year RTI data:
  - Run an EYU (2018-2019 and 2019-2020 tax years only).
  - Submit using EPS and FPS (2020-2021 tax year onwards).

## Requirements

- Configure statutory tax and National Insurance calculations in Workday.
- Assign a payroll ID to each worker. The ID identifies a worker for a specific employment, or period of employment, with a specific employer.
- Use Workday to calculate payroll results.

## Limitations

Workday supports EYU for the 2018-2019 and 2019-2020 tax years only.

These reports display a maximum of 1000 rows:

- **View UK RTI EPS Data**
- **View UK RTI FPS Data**
- **View UK RTI FPS Exceptions**

Workday recommends using the newer **View Advanced UK RTI FPS Data** and **View Advanced UK RTI FPS Exceptions** reports instead of the **View UK RTI FPS Data** and **View UK RTI FPS Exceptions** reports.

If you use the **View UK RTI FPS Exceptions** report, and have more than 1,000 records, enter a **Page Number** to select the workers to include. Workday allocates 1,000 workers to a page in ascending Payroll ID order.

## Tenant Setup

No impact.

## Security

Configure these domains.

| Domains                                                                                                                      | Considerations                                                                                                  |

| <i>Process: RTI (Reports) - UK</i> in the UK Payroll functional area.                  | Enables you to report on RTI submissions.<br>Example: View errors or warnings on the payroll results for an FPS.                                     |
| <i>Process: RTI (Run) - UK</i> in the UK Payroll functional area.                      | Enables you to process RTI data.                                                                                                                     |
| <i>Set Up: Payroll (RTI) - UK</i> in the UK Payroll functional area.                   | Enables you to generate your RTI FPS data for HMRC.                                                                                                  |
| <i>Set Up: Payroll UK</i> in the UK Payroll functional area.                           | Enables you to set up and view payroll-specific data that isn't based on Pay Group or Company.<br>Example: Add Employer Reference details.           |
| <i>Worker Data: Payroll (Company Specific) - UK</i> in the UK Payroll functional area. | Enables you to maintain company specific data for correct processing of workers' RTI details.<br>Example: Submit the last FPS for a deceased worker. |
| <i>Worker Data: Payroll (Company Vehicle) - UK</i> in the UK Payroll functional area.  | Enables users to record company car data for workers.                                                                                                |

### Business Processes

Configure the *RTI FPS Submission Event* business process and security policy in the UK Payroll functional area. This business process enables you to submit your FPS data to HMRC.

Configure the *Change Contact Information* business process to tell workers that Workday notifies HMRC whenever they change address.

### Reporting

| Reports                                                                          | Considerations                                                                                                                                                                                                                                                                                            |

| Companies      | <p>Workday uses data from your company tax details in RTI reports. Examples:</p> <ul style="list-style-type: none"> <li>• Employer Accounts Office Reference Number.</li> <li>• Employer PAYE Reference.</li> <li>• HMRC Office Number.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                             |
| Pay components | Workday declares data from pay components, both deductions and earnings, in RTI reports.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| Payroll ID     | <p>When moving to Workday from a legacy payroll, identify and load the worker's legacy payroll ID when you record the worker's details. After Workday generates their new Workday payroll ID, you can't go back and load the legacy ID. Without the legacy ID, HMRC might not be able to match the worker's details under the legacy ID with their new Workday payroll ID.</p> <p>Workday uses the payroll ID as a unique identifier to track worker compensation from hire to termination. To ensure continuity in RTI reporting, ensure that a worker's payroll ID doesn't change regardless of job changes or transfers within a UK employer reference.</p> |
| Terminations   | <p>To ensure accurate RTI reporting for terminated workers, follow Workday recommendations for entering a worker's:</p> <ul style="list-style-type: none"> <li>• Last day of work.</li> <li>• Pay through date.</li> <li>• Termination date.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                        |
| Workers        | <p>Workday declares personal worker data in RTI reports. Examples:</p> <ul style="list-style-type: none"> <li>• Address.</li> <li>• Current gender.</li> <li>• Date of birth.</li> <li>• Forename and surname.</li> <li>• National insurance number.</li> <li>• Title.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                              |

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships in your tenant. Learn more about the [Workday Touchpoints Kit](#) on Workday Community.

[Steps: Set Up HM Revenue & Customs RTI Integration](#)

### Reference

[FAQ: Payroll and RTI for Deceased Workers \(UK\)](#) on page 1438

## Steps: Set Up Real Time Information Reporting (UK)

### Prerequisites

- Review setup considerations for Real Time Information (RTI) reporting.
- Set up the company tax ID.
- Ensure you use a decimal point when submitting your figures. HMRC rejects any other decimal separator, such as a comma.

If you normally use commas as a decimal separator, you can temporarily change your locale in Workday before submitting to HMRC. To change your locale, click on your profile picture at the top right, select **My Account > Change Preferences**, and select *English (United Kingdom) - en\_GB* as your **Preferred Locale**.

### Context

To help you meet requirements for reporting payroll data and National Insurance contributions, you can enable Workday Payroll for the UK to prepare and submit these items to HMRC:

- RTI Employer Payment Summary (EPS).
- RTI Full Payment Submission (FPS).

Workday can submit RTI data directly through the HMRC RTI online service.

**Note:** Payroll for the UK doesn't support RTI submissions for international assignments and pensioners payroll.

### Steps

1. Configure the HMRC integration for FPS files.  
See [Steps: Set Up HM Revenue & Customs RTI Integration](#).
2. Configure the HMRC integration for EPS files.  
See [Steps: Set Up HM Revenue & Customs RTI Employer Payment Summary Integration](#).
3. [Set Up Employer Reference Tax Details \(UK\)](#) on page 1406.
4. Access the **View RTI Data Item Configuration** report.  
Click **Maintain RTI Data Item** to map calculations to RTI data items. Workday only displays the **Maintain RTI Data Item** button for data items that you must map to customer-specific calculations.  
From the **Calculation** prompt, select the calculations you want to report under the data item. Available calculations include:
  - Deductions.
  - Earnings.
  - Pay accumulations.
  - Pay balances.
  - Pay component groups.
  - Pay component related calculations.

Security: *Set Up: Payroll (RTI) - UK* domain in the UK Payroll functional area.

## 5. (Optional) Access **Maintain HR Mapping for UK Payroll**.

If you have workers within a designated Freeport, enter each of the **Workplace Locations**.

Workday reports the workplace postcode of any Freeport workers with an NI category of: D, E, F, I, K, L, N, or S as part of your FPS.

Security: *Set Up: Payroll (RTI) - UK* and *Set Up: Payroll UK* domains in the UK Payroll functional area.

## 6. (Optional) [Add Worker RTI Details \(UK\)](#) on page 1450.

### Related Information

#### Tasks

[Set Up Company Tax ID \(UK\)](#) on page 1404

## Steps: Process Real Time Information Full Payment Submissions (UK)

### Prerequisites

- Verify that all workers have a UK Payroll ID on the **View UK Payroll ID History** report.
- Run a payroll calculation for the payments that you need to report.
- Configure the *RTI FPS Submission Event* business process and security policy in the UK Payroll functional area. Workday recommends that you don't add approval steps on this business process.
- For deceased workers, ensure that their date of death displays on their worker profile.

### Context

After each payroll calculation, you can use Workday to prepare and submit Real Time Information (RTI) Full Payment Submissions (FPS) to HMRC.

Example: After processing and completing payroll for June, Global Modern Services has:

- 3,000 workers with results for a full pay period.
- 25 workers with results for 2 subperiods.
- 1 worker with results for 3 subperiods.

Ella, the payroll administrator, needs to launch 3 RTI FPS for June:

| Submission Number | Submission Scope                                            |
|-------------------|-------------------------------------------------------------|
| 1                 | Entire pay period or first subperiod for all 3,026 workers. |
| 2                 | Second pay period for 26 workers.                           |
| 3                 | Third subperiod for 1 worker.                               |

### Steps

#### 1. Access the **Generate UK RTI FPS Data** task.

If you select one or more **Workers**, and select the **Exclude Workers** check box, Workday includes data for all workers except those you selected.

If you're rerunning a submission, select the **Enable Smart RTI** check box. This prevents Workday from creating duplicate information for unchanged results, and speeds up the collation of any changed results.

Security: *Set Up: Payroll (RTI) – UK* domain in the UK Payroll functional area.

#### 2. Access the **View Advanced UK RTI FPS Exceptions** report.

View any errors or warnings on the payroll results for the FPS and correct any critical exceptions.

Security: *Process: RTI (Reports) - UK* domain in the UK Payroll functional area.

3. Access the **Run Pay Calculation** task.

Rerun the payroll calculation for the reported period.

Security: *Process: Run Batch Calculations (Pay Calculation)* domain in the Core Payroll functional area.

4. (Optional) Access the **View Advanced UK RTI FPS Data** report.

To ensure you've removed their critical exceptions, preview and spot-check selected workers' submission data.

Security: *Process: RTI (Reports)* - UK domain in the UK Payroll functional area.

5. After you've checked that the payroll calculation results for the FPS submission are correct, access the **Run Pay Complete** task.

Security: *Process: Run Batch Calculations (Pay Complete)* domain in the Core Payroll functional area.

6. Access the **Generate UK RTI FPS Data** task again.

Security: *Set Up: Payroll (RTI)* – UK domain in the UK Payroll functional area.

7. Access the **View Advanced UK RTI FPS Exceptions** report again.

View any BACS hashcode errors for workers who have missing bank details during payroll completion.

Workday recommends that you exclude workers with BACS hashcode errors from the on-cycle RTI FPS integration. Resolve BACS hashcode errors in a separate integration.

**Note:** From the 2024/2025 tax year onwards, HMRC no longer requires notification of the BACS hashcode.

Security: *Process: RTI (Reports)* - UK domain in the UK Payroll functional area.

8. Access the **Run UK RTI FPS** task.

Complete the launch parameters for your company HMRC RTI integration.

To submit files to the HMRC Live Gateway, without updating any records, select **Test in Live**.

To exclude workers with BACS hashcode errors, select the:

- Workers from the **Workers** prompt.
- **Exclude Workers** check box.

When a worker is on leave and has multiple subperiods for a pay period, Workday generates 1 RTI FPS submission for each subperiod. Launch an integration for each submission, in ascending order. Wait for HMRC to confirm acceptance of each submission before sending the next one.

Security: *Process: RTI (Reports)* - UK domain in the UK Payroll functional area.

9. Access the **View UK RTI Submission Responses** report.

View:

- HMRC responses to submission details.
- Success and error messages generated by HMRC.
- The number of errors or rejections. You can drill down to display individual validation or warning messages.

Security: *Process: RTI (Reports)* - UK domain in the UK Payroll functional area.

10. (Optional) Access the **View UK FPS Amounts Reported To HMRC** report.

Use the report to review amounts reported to HMRC when you reconcile your payments.

Security: *Process: RTI (Reports)* - UK domain in the UK Payroll functional area.

## Next Steps

If HMRC rejects the FPS, correct the problem and access the **Run UK RTI FPS** task to relaunch the integration for the submission number. To view RTI endpoint error messages, access the Diagnostic Audit file in the **Reports and Other Output Files** section of the integration event for the integration task.

Add worker RTI details for any deceased workers in your submission.

**Steps: Process Real Time Information Employer Payment Summary (UK)****Prerequisites**

Run and complete a payroll calculation for the reported period.

**Context**

After each monthly payroll calculation, you can use Workday to prepare and submit Real Time Information (RTI) Employer Payment Summary (EPS) submissions to HMRC.

**Steps**

1. Access the **View UK RTI EPS Data** report.  
 Check that the calculated data in the EPS submission is correct.  
 Workday updates the data in this report after the 19th of each month.  
 Security: *Process: RTI (Reports) - UK* domain in the UK Payroll functional area.
2. Access the **View Recovery and NIC Compensation Percentages on Statutory Payments** report.  
 Check that the recovery and National Insurance Contributions percentages used to calculate data in the EPS report are correct.  
 Security: *Set Up: Payroll UK* domain in the UK Payroll functional area.
3. After you've checked that the payroll calculation results for the EPS submission are correct, access the **Run Pay Complete** task.  
 Security: *Process: Run Batch Calculations (Pay Complete)* domain in the Core Payroll functional area.
4. Access the **Launch/Schedule Integration** task.  
 Complete the launch parameters for your company's HMRC RTI EPS integration.  
 To submit files to the HMRC Live Gateway, without updating any records, select **Test in Live**.  
 Security: *Integration Event* domain in the Integration functional area.
5. Access the **View UK RTI Submission Responses** report.  
 Check any:
  - HMRC responses to submission details.
  - Success and error messages generated by HMRC.
 Security: *Process: RTI (Reports) - UK* domain in the UK Payroll functional area.

## Next Steps

If HMRC rejects the RTI EPS, correct the problem and relaunch the integration for the submission number. To view error messages from the RTI endpoint, access the Diagnostic Audit file in the **Reports and Other Output Files** section of the integration event for the integration task.

## Add Worker RTI Details (UK)

### Prerequisites

Security: *Worker Data: Payroll (Company Specific)* - UK domain in the UK Payroll functional area.

### Context

To improve RTI processing, you can provide additional worker RTI details in certain cases, such as:

- Amending contract dates for terminated and transferred workers.
- Reporting a worker's PAYE late.
- After submitting the last FPS for a deceased worker.

### Steps

1. Access the **Add Worker UK RTI Details** task.
2. As you complete the task, consider:

| Option                            | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
|-----------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Irregular Payment Pattern</b>  | Select this check box for a worker who isn't paid every pay period, or is on leave of absence.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| <b>Override Contract End Date</b> | <p>Select this check box to submit corrections regarding worker termination or transfer without creating a duplicate HMRC record. Workday overrides the previously reported contract end date (Data Item 41) in an FPS.</p> <p>To override the contract end date:</p> <ol style="list-style-type: none"> <li>a. Enter the termination or transfer date as the <b>Effective Date</b>.</li> <li>b. Select the <b>Override Contract End Date</b> check box.</li> <li>c. Enter the termination or transfer date as the <b>Contract End Date</b>.</li> </ol> <p>To remove the previously reported end date, leave the <b>Contract End Date</b> blank.</p> <p>Example: Override the contract end date when you incorrectly reported a worker's contract end date, because of termination or transfer, and HMRC instructed you:</p> |

| Option                                   | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
|------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                          | <ul style="list-style-type: none"> <li>• Not to report the amendment.</li> <li>• To remove the contract end date.</li> </ul> <p>To identify workers with a contract end date that Workday will include in your next RTI FPS, run the <b>View UK RTI FPS Data with Contract End Date</b> report. Workday displays the date when a worker was:</p> <ul style="list-style-type: none"> <li>• Terminated.</li> <li>• Transferred between UK Employer References.</li> <li>• Transferred internationally.</li> </ul> <p>In addition, when you override the original date, Workday displays the latest date.</p> |
| <b>Late PAYE Reporting Reason</b>        | <p>Use only if entering a reason for a single worker.</p> <p>To specify the reason for a group of workers or an entire submission, use the <b>Late PAYE Reporting Reason</b> parameter in the FPS integration launch parameters.</p>                                                                                                                                                                                                                                                                                                                                                                       |

[Terminate Employees](#)

[Steps: Automate Initiation of Termination](#)

**Record Worker RTI Earlier Year Update Details (UK)****Prerequisites**

Security: *Process: RTI (Reports)* - UK domain in the UK Payroll functional area.

**Context**

To adjust worker data and amounts sent to HMRC for the 2018-2019 or 2019-2020 tax years, you can submit an Earlier Year Update (EYU).

From the 2020-2021 tax year onward, use the FPS and EPS processes to submit adjustments.

## Steps

1. (Optional) Access the **View Worker UK RTI EYU Details** report.

In the Tax Details section, verify the worker's previous tax year RTI data. Workday bases the report on the last completed pay result for the worker, for the selected tax year.

2. Access the **Add Worker UK RTI EYU Details** task.

Enter the difference between the updated and previously reported amounts in the Tax Details section.

## Result

Workday sends the updated information to HMRC when you next run your company RTI integration.

## Next Steps

Run the **View UK RTI Submission Responses** report to verify that HMRC accepts the EYU details.

## Steps: Record Disguised Remuneration (UK)

### Context

HMRC treats disguised remuneration as taxable pay. Workers must inform you of any income they receive that HMRC categorizes as disguised remuneration. You can report the income as an item in your FPS.

### Steps

1. Access the **Create Earning** task.

Set up an earning that identifies all income that HMRC considers as disguised remuneration.

Security: *Set Up: Payroll (Calculations - Payroll Specific)* domain in the Core Payroll functional area.

2. Access the **View RTI Data Item Configuration** report.

For the FPS **RTI Submission Type**, map the new earning to data item **197. Amount of Part 7A Disguised Remuneration**.

Security: *Set Up: Payroll (RTI) – UK* domain in the UK Payroll functional area.

3. Access the **Add Payroll Input by Worker** task.

In the **Worker Defaults** section, select the new earning as the **Pay Component**.

In the **Input** grid, enter the remuneration in the **Input Details - Value** column.

Security: *Worker Data: Payroll (Payroll Input)* domain in the Core Payroll functional area.

4. Access the **Run Pay Calculation** task.

Calculate payroll for the period.

Security: *Process: Run Batch Calculations (Pay Calculation)* domain in the Core Payroll functional area.

5. Access the **View UK RTI FPS Data** report.

Preview your FPS and verify that the **197. Amount of Part 7A Disguised Remuneration** column displays the worker's remuneration.

Security: *Process: RTI (Reports) - UK* domain in the UK Payroll functional area.

### Next Steps

Where applicable, include disguised remuneration in these data items when you submit your EPS and FPS returns:

- 41A - Total taxable pay, year to date.

- 58 - Taxable pay in this pay period.
- 59 - Net pay after statutory deductions for tax, National Insurance, and all types of Student Loans.
- 79A - Gross earnings for NI contributions, year to date.
- 79B - Gross earnings for NI contributions in this pay period.

## Example: Resolve BACS Hashcode Errors (UK)

This example illustrates how to resolve a BACS hashcode error in Real Time Information (RTI) reporting, for a worker with missing bank details, after you already completed payroll.

**Note:** From the 2024/2025 tax year onwards, HMRC no longer requires notification of the BACS hashcode.

### Context

When Ella, the Global Modern Services pay administrator, calculated June payroll, Alisha, an employee, had missing bank details. Ella was unable to add the missing details in Workday before completing payroll and sending the BACS file. The missing details resulted in a BACS hashcode error on the **View Advanced UK RTI FPS Exceptions** report. To submit RTI Full Payment Submissions (FPS) for workers in June, Ella needs to:

- Exclude Alisha from the on-cycle FPS submission.
- Resolve the BACS hashcode error.
- Submit a separate RTI FPS for Alisha.

### Prerequisites

Configure the *RTI FPS Submission Event* business process and security policy in the UK Payroll functional area.

### Steps

1. Access the **Run UK RTI FPS** task.
2. Enter these settings to exclude Alisha from the on-cycle RTI FPS submission:

| Option                        | Value                         |
|-------------------------------|-------------------------------|
| <b>Pay Period</b>             | <i>June</i>                   |
| <b>UK Employer Reference</b>  | <i>Global Modern Services</i> |
| <b>Pay Calculation Status</b> | <i>Complete</i>               |
| <b>Workers</b>                | <i>Alisha</i>                 |
| <b>Exclude Workers</b>        | Select the check box.         |

Security: *Process: RTI (Reports)* - UK domain in the UK Payroll functional area.

3. Click **Submit**.
4. To reverse Alisha's pay calculation result for June, select **Pay Calculation > Reversal** from the related actions menu of the pay calculation.  
Security: *Process: Off Cycle (Reversal)* domain in the Core Payroll functional area.
5. Access the **Maintain Payment Elections** report for Alisha and add the missing bank account details.  
Security: *Worker Data: Payroll (Payment Elections)* domain in the Core Payroll functional area.
6. Click **OK**.

7. Access the **Run On Demand Payment for Worker** task and create an on-demand additional payment for Alisha's June salary.

Security: *Process: Off Cycle (On Demand)* domain in the Core Payroll functional area.

8. Click **OK**.

9. Select **Pay Calculation > Complete** from the related actions menu.

Security: *Pay Calculation: Ad-Hoc Actions (Complete)* domain in the Core Payroll functional area.

10. Access the **Run UK RTI FPS** task.

11. Enter these settings to report the on-demand payment:

| Option                      | Value                                         |
|-----------------------------|-----------------------------------------------|
| Pay Period                  | <i>June</i>                                   |
| UK Employer Reference       | <i>Global Modern Services</i>                 |
| Pay Calculation Status      | <i>Complete</i>                               |
| Workers                     | <i>Alisha</i>                                 |
| Exclude Workers             | Leave blank.                                  |
| Submission for Off Cycle    | Select the check box.                         |
| After RTI Integration Event | Select the previous on-cycle RTI integration. |

Security: *Process: RTI (Reports) - UK* domain in the UK Payroll functional area.

12. Click **Submit**.

## Result

Workday processes the RTI FPS for Alisha's June salary.

## FAQ: Payroll and RTI for Deceased Workers (UK)

**How can I ensure that payroll calculates correctly for deceased workers?**

Ensure that the worker has:

- A value of *Death* in the **Primary Termination Reason** prompt for the *Termination* event.
- An accurate **Date of Death** on the **Personal Information** report in the Personal profile group of the worker profile.

When you enter a **Date of Death** for a worker, Workday:

- Reports the date of death as the **Date Employment Contract Ended** within the Real Time Information (RTI) Full Payment Submission (FPS).

- Correctly processes National Insurance on the final wages for the deceased worker.
- Doesn't produce a P45.

After you've processed the final payroll and FPS, access the **Add Worker UK RTI Details** task. Select the **FPS Submitted to Deceased Worker** check box so that Workday calculates tax correctly if you make subsequent payments after termination. After you notify HMRC of the date of death, Workday deducts PAYE using code *OT* (on a week 1/month 1 basis).

#### How can I ensure that all deceased workers have a recorded date of death?

To ensure that deceased workers have a **Date of Death** on the **Edit Personal Information** task, Workday recommends that you either:

- Modify the *Termination* business process. Include a conditional *To Do* step on the **Edit Personal Information** task, when the termination reason is *Death* in either of these fields:
  - **Primary Termination Reason**
  - **Primary Termination Category**
- Create a custom report that identifies terminated workers with a **Termination Reason** of *Death* but without a **Date Of Death**. Use the report as an audit before processing payroll.

Workday only makes the **Date of Death** field available on the **Edit Personal Information** task when the *Terminated* business process is complete for the worker.

#### How can I report additional payments to deceased workers?

To report additional payments to deceased workers, correct your FPS submission after sending an FPS with their date of leaving.

1. Access the **Add Worker UK RTI Details** task.
2. For the **Late PAYE Reporting Reason**, select *H - Correction to earlier submission*.
3. Access the **View UK RTI FPS Data** report and verify the year-to-date figures. For payments made:
  - In the same tax year as the date of death, ensure that the revised year-to-date figures include the additional payment.
  - In a later tax year, ensure that the year-to-date figures only reflect the additional payment.
4. Run the *HMRC RTI Tax Filing System* integration.

## FAQ: Real Time Information Reporting (UK)

- [How can I indicate a final RTI submission?](#) on page 1456
- [How can I view the amount of apprenticeship levy that's due?](#) on page 1456
- [How can I report that a company car was allocated to the wrong worker?](#) on page 1456
- [How do I report the correct date on my FPS return when a worker's contractual date falls on a bank holiday or weekend?](#) on page 1457
- [How do I keep employer's NI for Termination Awards and Sporting Testimonials \(TAST\) separate from regular NI?](#) on page 1457
- [How do I correct a mistake on a previously submitted FPS return?](#) on page 1457
- [How does Workday process special characters in names and addresses?](#) on page 1457
- [Why do I get a warning when I try to report some pension or lump sum items in my FPS return?](#) on page 1457

### How can I indicate a final RTI submission?

Before launching the RTI integration, access the **Edit UK Employer Reference Details** task. In the **Details** grid, enter a value in the **Date Scheme Ceased** field.

### How can I view the amount of apprenticeship levy that's due?

- Run the **View UK RTI EPS Data** report. Workday displays apprentice levy due for the year to date in row 187.
- For greater detail, run the **View UK Apprenticeship Levy** report.

The **View UK RTI EPS Data** and **View UK Apprenticeship Levy** reports calculate the total levy depending on your total pay bill, rate, and the allowance you record for the UK Employer Reference in the **Edit UK Employer Reference Details** task.

### How can I report that a company car was allocated to the wrong worker?

When you allocated a car in a previous tax year, contact HMRC to correct the issue.

To report an incorrect allocation for the current tax year:

1. Access the **Edit Company Vehicle Assignment** task.
2. Select the same **From**, **To**, and **Free Fuel Provided** dates. Example: The date you reported the incorrect allocation to HMRC.
3. Select the **Car Incorrectly Submitted to HMRC** check box.

Workday recommends that you run the **View UK RTI FPS Worker Company Car Data** report next. Verify that Workday displays a value of zero in these fields:

- **182. Cash equivalent of car.**
- **185. Cash equivalent of fuel.**

**How do I report the correct date on my FPS return when a worker's contractual date falls on a bank holiday or weekend?**

1. Access the **Maintain UK Payroll Contractual Payment Date** task.
2. For affected periods in the period schedule, enter the contractual payment date when it differs from the actual payment date.

**How do I keep employer's NI for Termination Awards and Sporting Testimonials (TAST) separate from regular NI?**

When you create separate deductions for termination awards or sporting testimonial payments, use the:

- *GBR NI Class 1A – Employer NICs* deduction to calculate the NI contributions payable.
- *GBR Class 1A NIC ERS* pay component group to identify the pay components used by the deduction.

When you create separate earnings for termination awards or sporting testimonial payments, use these pay component groups:

- *GBR Adds to Gross*
- *GBR Class 1A NIC ERS*
- *GBR Taxable Pay*

**How do I correct a mistake on a previously submitted FPS return?**

Correct the amounts for the affected workers on a new FPS and send it to HMRC. You must use the same submission number as the original one.

HMRC compares the new submission data to the previous submission and only updates records that display any differences.

**How does Workday process special characters in names and addresses?**

When you select the **Enable RTI FPS Special Characters** check box on the **Edit UK Employer Reference Details** task, Workday automatically converts any special characters to HMRC acceptable characters when you send your FPS.

To manually verify the mappings between accepted and special characters, use the **View UK RTI Special Character Mapping** report.

**Why do I get a warning when I try to report some pension or lump sum items in my FPS return?**

Workday might display a warning on the **View Advanced UK RTI FPS Exceptions** or **View UK RTI FPS Exceptions** reports when you attempt to report on these data items:

- 168. Flexibly accessing pension rights
- 171. Pension Death Benefit
- 172. Serious ill health lump sum indicator
- 219. Pension commencement excess lump sum indicator
- 220. Stand alone lump sum indicator

To prevent Workday display the warnings, ensure you have a value in one of these data items:

- 173. Flexible drawdown taxable payment

- 174. Flexible drawdown non-taxable payment

## Holiday Pay (UK)

---

### Statutory Holiday Pay (UK)

#### Setup Considerations: Statutory Holiday Pay (UK)

You can use this topic to help make decisions when planning your configuration and use of statutory holiday pay for UK-based workers. It explains:

- Why to set it up.
- How it fits into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

#### What It Is

Workday enables you to calculate holiday time taken and rates of pay based on UK statutory requirements. Workday uses:

- Absence to calculate the amount of holiday time off to pay and the associated occurrences.
- Workday Payroll for the UK to calculate the rates of pay for holiday time off.

#### Business Benefits

The statutory holiday pay feature helps you calculate UK workers' statutory holiday pay, based on the requirements described in the UK government's Taylor report and the Department for Business, Energy, and Industrial Strategy (BEIS) guidance.

The statutory holiday pay feature ensures efficient and flexible management of holiday pay by delivering regular updates to maintain regulatory compliance and enabling you to:

- Easily manage worker eligibility.
- Calculate and view weekly earnings data to determine how earnings impact holiday pay.
- Identify relevant earnings for holiday pay calculations.
- Determine periods and earnings to include and exclude from holiday pay assessments.
- Calculate retroactive payments based on earning date rather than payment date.

#### Use Cases

- Pay a worker's statutory holiday pay based on UK regulations, guidance, and best practice.
- Include or exclude specific earnings from the holiday pay calculation. Example: Overtime.
- Identify relevant weeks for holiday payments. Example: Workers with irregular working patterns.
- Determine the rate of pay for unused holidays when workers leave your employment.

#### Questions to Consider

| Questions                                                                       | Considerations                                                                                                                                    |
|---------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------|
| Which holidays do you want to include in the statutory holiday pay calculation? | Workday takes account of holidays that you include in the absence occurrences that you create for statutory holiday pay usage. You indicate which |

| Questions                                                                                                 | Considerations                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

|                                                                                                           | absence occurrences are for holiday pay use when you configure holiday pay.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| How does pay frequency impact on statutory holiday pay calculations?                                      | <p>Workday processes statutory holiday pay weekly, regardless of your pay frequency.</p> <p>Workday enables you to calculate weekly earnings. You can:</p> <ul style="list-style-type: none"> <li>• Split earnings based on a predefined holiday pay work period calendar.</li> <li>• Create shadow earnings, which you can split based on the predefined holiday pay work period calendar. Creating shadow earnings prevents you from splitting the original earnings.</li> </ul> <p>On the <b>Create Earning</b> or <b>Edit Earning</b> task, select the <b>Split by UK Statutory Holiday Pay Work Period Calendar</b> check box to factor in all earnings that qualify for holiday pay assessment or calculation.</p>                                                                                                                                                                                                                                                |
| Do you want to include or exclude certain types of pay or certain weeks from your holiday pay assessment? | <p>You can determine which earnings and periods to include or exclude by creating pay component groups (PCGs) and linking them to a holiday pay configuration. You can create these PCGs that you link to specific fields on the <b>Create UK Statutory Holiday Pay Configuration</b> task:</p> <ul style="list-style-type: none"> <li>• A PCG for all earnings to include in holiday pay calculations. You can then link this PCG to the <b>Earnings Pay Component Group</b> field.</li> <li>• A PCG to exclude any week or earnings from the holiday pay assessment period. You can then link this PCG to the <b>Work Period Exclusion Pay Component Group</b> field.</li> </ul> <p>Example: You can exclude a week with unpaid or partial time off from a holiday pay assessment period by adding an absence component-related calculation to an earning. You can then add the PCG for the excluded period or earnings to the pay component-related calculation.</p> |
| How many different configurations of holiday pay apply to your workers?                                   | <p>Workday enables you to create as many different holiday pay configurations as you need.</p> <p>Example: You can create separate configurations for pensionable and nonpensionable earnings.</p> <p>If you have workers in both Northern Ireland and the rest of the UK, you might need to set up separate configurations for both of groups of workers.</p> <p>Each separate configuration determines:</p> <ul style="list-style-type: none"> <li>• The payout earning.</li> <li>• Which earnings to include or exclude.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                  |

| Questions                                                                                                                                                       | Considerations                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

| If you use Workday's legacy UK Holiday Pay, and are moving to use UK Statutory Holiday Pay, will you have retro calculations that impact the legacy time frame? | Statutory Holiday Pay doesn't look at legacy pay period history. Load new, weekly, history records for any retro calculations that refer to the legacy time frame.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| Do you want to convert your data into the Statutory Holiday Pay format?                                                                                         | <p>You can use the <b>UK Statutory Holiday Pay Data Migration</b> task to:</p> <ul style="list-style-type: none"> <li>• Convert your existing data for a UK statutory holiday pay configuration, date range, and pay group.</li> <li>• Use the converted data to create workers' statutory holiday pay history.</li> </ul> <p>The <b>UK Statutory Holiday Pay Data Migration</b> task doesn't allocate specific weekly amounts when you create new data but rather provides average amounts spread across the period.</p> <p>When you encounter significant data errors while importing large volumes of historical pay data, contact Support to delete the history.</p> |

### Recommendations

Work with Workday Professional Services or your consultant to set up statutory holiday pay processing.

Adhere to BEIS holiday pay guidance to identify workers and earnings to include in statutory holiday pay processing.

Consider how much of your payroll history to gather and how to reflect it in a weekly format in order to meet BEIS recommendations.

### Requirements

Provide worker earnings for calculating statutory holiday pay in weekly amounts.

You must have both Workday Payroll for the UK and Absence to use the statutory holiday pay functionality.

Use Workday Payroll for the UK to set up:

- Calendars, rules, and events.
- Earnings, calculations, and eligibility.
- Pay component groups.
- Holiday pay configuration.
- Holiday pay history.
- Termination payout of holiday pay.

Use Absence to configure:

- Absence occurrences.
- Holiday time offs.
- Termination payout plans.

## Limitations

Amending worker history doesn't trigger any retro processing. After you change a worker's holiday pay history, run a pay calculation to include the changes. To ensure that Workday includes history changes, leave the **Smart Calculation** options clear.

UK statutory holiday pay uses effective dates, and Workday retro processing picks up changes. However, the existing Workday legacy UK holiday pay doesn't use effective dates, so ensure you inactivate any legacy configurations before activating UK statutory holiday pay.

## Tenant Setup

If your shadow earnings don't display in workers' pay results, review your configuration in **Tenant Setup > Payroll > Administrator Results > Disable Payroll Result Profile**.

## Steps: Set Up Statutory Holiday Pay (UK)

### Context

You can set up Workday to calculate payments for workers with absences that qualify for holiday pay, as part of the standard payroll process.

**Note:** Workday recommends that you complete the Next Level series on UK Statutory Holiday Pay on Workday Community. This series contains detailed information on configuring statutory holiday pay.

We also recommend that you work with Workday Professional Services, or your consultant, to set up your holiday pay processing.

### Steps

1. Work with your absence administrator to create a custom absence occurrence for all time offs that impact statutory holiday pay.

See [Steps: Set Up Absence Occurrences](#).

We recommend that you create a custom occurrence for UK Statutory Holiday Pay to keep it separate from other occurrences and any edits by other users.

2. Access the **Create UK Statutory Holiday Pay Work Period Calendar Rule** task.

Create holiday pay calendar rules to assign holiday pay work period calendars to workers.

**Note:** Workday can select a worker using 2 or more eligibility rules. To avoid inconsistent holiday pay results, ensure that workers aren't eligible for more than 1 calendar.

Security: *Set Up: Payroll (Holiday Pay) - UK domain* in the UK Payroll functional area.

3. Access the **Create UK Statutory Holiday Pay Work Period Calendar** task.

From the related actions menu of the calendar, select **UK Statutory Holiday Pay Work Period Calendar > Build UK Statutory Holiday Pay Work Period Calendar Events** to determine when weekly periods start and end.

Unless you already have weekly schedules that start on another day, Workday recommends that you consider the BEIS guidance for the start date for your week. Example: Consider starting weeks on Sunday.

To include historic pay data, select a historic **Start Date**. Ensure that the day matches your normal weekly start day. Example: If your current weeks start on a Monday, select a historic Monday as the start date.

Workday recommends you create enough periods to cover both your historic records and a reasonable amount for future, ongoing work. Example: If your **Start Date** is 2 years in the past, enter 208 in the **Number of Work Periods** to create 2 years of both past and future weekly periods.

Workday uses the calendar periods to prorate earnings into weekly results for statutory holiday pay calculations.

Security: *Set Up: Payroll (Holiday Pay) - UK domain* in the UK Payroll functional area.

4. (Optional) Create weekly shadow earnings for worker pay.

See [Create Statutory Holiday Pay Shadow Earnings \(UK\)](#) on page 1465.

5. Split holiday pay related earnings into weeks. These earnings can be either the original source earning or newly created, related shadow earnings.

If you edit an existing source earning, select **Add New Effective Date** and enter the current or future date from which you'll start using statutory holiday pay.

On the **Effective Dated** tab of the earning, in the **Holiday Pay** section, select **Split by UK Statutory Holiday Pay Work Period Calendar**.

Workday recommends that, where possible, you create shadow earnings instead of splitting existing monthly or salary earnings to result in weekly amounts.

6. Create a payout earning to disburse holiday pay to workers.

See [Example: Create a Payout Calculation for Statutory Holiday Pay \(UK\)](#) on page 1468 and [Example: Create a Payout Earning for Statutory Holiday Pay \(UK\)](#) on page 1470.

7. Create pay component groups (PCG) for all earnings and hours that represent payments to include in statutory holiday pay calculations.

Ensure that you split all earnings in these PCGs by weeks.

See [Create Pay Component Groups](#) on page 230.

8. (Optional) Create a PCG for the periods that you want to assess for holiday pay calculations.

Ensure that you split all earnings in this PCG by holiday work period weeks.

9. (Optional) Create a PCG for any earnings or periods that you want to exclude from holiday pay calculations. Example: To exclude weeks that include partial sick pay.

Ensure that you split all earnings in this PCG by weeks.

See [Example: Create a Calculation for Periods to Exclude from Statutory Holiday Pay \(UK\)](#) on page 1472 and [Example: Create an Earning for Periods to Exclude from Statutory Holiday Pay \(UK\)](#) on page 1473.

10. Access the **Create UK Statutory Holiday Pay Configuration** task.

Select the earnings PCGs, hours worked PCGs, and absence occurrences for holiday pay.

You can create multiple configurations to cover your different holiday pay needs. Example: Pensionable and nonpensionable earnings for holiday pay.

If you have workers in Northern Ireland, you can select the **Northern Ireland Reference Period** check box. This uses the 12 week reference period to calculate average pay. When you have workers in both Northern Ireland and the rest of the UK, you might need to set up separate configurations for both groups of workers. Contact Workday Professional Services, or your consultant, before setting up either configuration.

Security: *Set Up: Payroll (Holiday Pay) - UK* domain in the UK Payroll functional area.

## Next Steps

Enter workers' historic statutory holiday pay.

## Related Information

### Concepts

[Concept: Absence Occurrences](#)

### Tasks

[Create Rules for Assigning Calendars](#)

### Reference

[The Next Level: UK Statutory Holiday Pay Next Level Series](#)

## Create Statutory Holiday Pay Shadow Earnings (UK)

### Prerequisites

- Configure your workers' standard earnings.
- Security:
  - *Set Up: Payroll (Calculations - Payroll Specific)* domain in the Core Payroll functional area.
  - *Set Up: Payroll (Holiday Pay) - UK* domain in the UK Payroll functional area.

### Context

Workday requires that you provide worker earnings for statutory holiday pay in weekly amounts. To avoid impacting your original source earnings, Workday recommends that you create shadow earnings and link the source and shadow earnings.

**Note:** Evaluate which earnings you want to split directly and which earnings you want to create a shadow for. Example: You must directly split holiday pay payout or exclusion earnings without creating shadow earnings for them.

When you link 2 earnings using a shadow relationship, Workday:

- Automatically applies amendments, such as compensation changes and pay input adjustments, from the source to the shadow.
- Divides the values from the source earning into weekly amounts.

### Steps

1. Create a shadow earning to split holiday pay into weeks.

When creating shadow earnings, consider which amounts and related calculations can be split into weekly amounts.

See [Example: Create Shadow Earnings for Statutory Holiday Pay \(UK\)](#) on page 1467.

2. Access the **Create UK Statutory Holiday Pay Shadow Earnings** task.

Link your shadow earnings for holiday pay to their associated source earnings.

3. Access the **Edit Run Category** task.

In the **Gross / Net** section, add either the shadow earning, or a new pay component group (PCG) associated with the shadow earnings. This addition ensures that Workday processes the shadow earning during payroll calculation.

### Result

When you run payroll, Workday displays all earnings, that are part of a PCG linked to a holiday pay configuration, on the **UK Statutory Holiday Pay** tab of the **View Payroll Results** report.

### Related Information

#### Tasks

[Identify What to Pay in On-Cycle and On-Demand Replacement Pay](#) on page 102

## Maintain a Worker's Historic Statutory Holiday Pay (UK)

### Prerequisites

- Create a UK statutory holiday pay work period calendar, rule, and events.
- Create a UK statutory holiday pay configuration.
- Security: *Worker Data: Payroll (Non-Company Specific)* - UK domain in the UK Payroll functional area.

### Context

Workday enables you to add or adjust a worker's past weekly holiday pay.

To mass load or retrieve history data for multiple workers, use these web services:

- *Get UK Statutory Holiday Pay History.*
- *Import UK Statutory Holiday Pay History.*

### Steps

1. Access the **Maintain UK Worker Statutory Holiday Pay History Data** task.

2. Select the **UK Holiday Pay Configuration** to which the history applies.

If you've multiple statutory holiday pay configurations, load the weekly pay history separately for each configuration, even if all configurations use the same earnings pay component group.

3. As you complete the task, consider:

| Option                                          | Description                                                                                                                                                                                                                                                                                                                                                                                                  |
|-------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>UK Holiday Pay Work Period</b>               | Select the week to which the history applies.                                                                                                                                                                                                                                                                                                                                                                |
| <b>Earnings Adjustment</b>                      | Add the amount to add to, or subtract from, the existing earnings for the week.                                                                                                                                                                                                                                                                                                                              |
| <b>Hours Adjustment</b>                         | Add the amount to add to, or subtract from, the existing hours for the week.                                                                                                                                                                                                                                                                                                                                 |
| <b>Include Work Period in Pay Calculation</b>   | Select this check box to add the values of any adjustments to the worker's holiday pay calculation for the week.<br><br><b>Note:</b> If you select this check box, it overrides the Work Period Exclusion Pay Component Group entry on the statutory holiday pay configuration. Workday includes the week in the holiday pay calculation.                                                                    |
| <b>Exclude Work Period from Pay Calculation</b> | Select this check box to record history without including the results in the worker's holiday pay calculation. Example: You want to exclude earnings for a week due to sickness.<br><br><b>Note:</b> If you select this check box, it overrides the Work Period Assessment Pay Component Group entry on the statutory holiday pay configuration. Workday excludes the week from the holiday pay calculation. |

### Next Steps

Amending worker history doesn't trigger any retro processing. After you change a worker's holiday pay history, run a pay calculation to include the changes. To ensure that Workday includes history changes in a pay calculation, leave the **Smart Calculation** options clear on the **Run Pay Calculation** task.

Verify your results in the **View UK Statutory Holiday Pay for Worker** report.

### Concept: Bulk Load Historic Statutory Holiday Pay (UK)

To load historical pay data for multiple workers for statutory holiday pay, you can create an Enterprise Interface Builder (EIB) based on the *Import UK Statutory Holiday Pay History* web service.

When you bulk load historical pay data for workers, ensure that you use these settings for these columns.

| Column        | Selection          |
|---------------|--------------------|
| <b>Worker</b> | <i>Employee_ID</i> |

| Column                 | Selection                              |
|------------------------|----------------------------------------|
| FLSA Workweek Calendar | UK_Holiday_Pay_Work_Period_Calendar_ID |

If you've multiple statutory holiday pay configurations, load weekly pay history for each configuration, even when they use the same earnings pay component group.

### Examples: Statutory Holiday Pay (UK)

#### Example: Create Shadow Earnings for Statutory Holiday Pay (UK)

This example illustrates one way to create shadow earnings for statutory holiday pay.

### Context

You want to ensure that workers' earnings that you use to calculate holiday pay are in weekly amounts.

When creating the shadow earnings, you want to:

- Start paying holiday pay from April 6th, 2022.
- Split the earnings using the UK statutory holiday pay work period calendar.

To identify shadow earnings, you start their names with z\_.

### Prerequisites

- An existing earning for workers' salaries, called *GBR Basic Salary (GBR)*.
- Create a UK statutory holiday pay work period calendar.
- Create a *GBR Shadow Earnings* pay component group (PCG) to hold the shadow earnings.
- Security:
  - *Set Up: Payroll (Calculations - Payroll Specific)* domain in the Core Payroll functional area.
  - *Set Up: Payroll (Holiday Pay) - UK* domain in the UK Payroll functional area.

### Steps

1. Access the **View Earning** report and select the *GBR Basic Salary (GBR)* earning.
2. From the related actions menu, select **Calculation > Copy**
3. Enter these values:

| Option  | Description        |
|---------|--------------------|
| Name    | z_GBR Basic Salary |
| Code    | z_GBR Basic Salary |
| Country | United Kingdom     |

4. On the **Effective Dated** tab, enter these values:

| Option                                                 | Description                                                           |
|--------------------------------------------------------|-----------------------------------------------------------------------|
| Effective Date                                         | April 6, 2022                                                         |
| Calculation                                            | Workday automatically copies the calculation from the source earning. |
| Do Not Recalculate During Retro                        | Workday automatically copies the value from the source earning.       |
| Split by UK Statutory Holiday Pay Work Period Calendar | Select.                                                               |

5. From the **Worker Eligibility** prompt, select **Create > Create Value Comparison Calculation**.

6. Enter these values:

| Option   | Description           |
|----------|-----------------------|
| Name     | GBR Basic Salary <> 0 |
| Category | Payroll               |

7. Add this row to the **Calculation** grid:

| 1st Operand            | Operator     | 2nd Operand |
|------------------------|--------------|-------------|
| GBR Basic Salary (GBR) | not equal to | 0           |

8. Click **OK** to return to the **Copy Pay Component** task.

9. On the **Non-Effective Dated** tab, in the **Groups** section, add the *GBR Shadow Earnings* PCG.

## Result

Workday splits the earning into weekly periods, based on workers' holiday pay work period calendars.

## Next Steps

Edit your run category to add the PCGs for statutory holiday pay.

### Example: Create a Payout Calculation for Statutory Holiday Pay (UK)

This example illustrates one way to create a payout calculation for UK statutory holiday pay.

## Context

You want to calculate the amount to pay for UK statutory holiday pay based on the:

- Number of assessment weeks delivered by Workday, when the result isn't equal to zero.
- Number of days worked in a week.
- Workday-delivered pay balance for holiday pay.

Your workers work 5 days a week.

## Prerequisites

Security:

- *Set Up: Payroll (Calculations - Generic)* domains in the Core Payroll functional area.
- *Set Up: Time Off (Calculations - Generic)* domain in the Time Off and Leave functional area.

## Steps

1. Access the **Create Arithmetic Calculation** task.

Enter these values:

| Option | Description                                               |
|--------|-----------------------------------------------------------|
| Name   | Holiday Pay Balance divided by Number of Assessment Weeks |

| Option   | Description    |
|----------|----------------|
| Category | <i>Payroll</i> |

Add this row to the **Calculation** section:

| 1st Operand                                                         | Operator      | 2nd Operand                                                   |
|---------------------------------------------------------------------|---------------|---------------------------------------------------------------|
| <i>GBR Statutory Holiday Pay:<br/>Assessment Period Pay Balance</i> | <i>Divide</i> | <i>GBR Statutory Holiday Pay:<br/>Assessment Period Weeks</i> |

2. Access the **Create Arithmetic Calculation** task.

Enter these values:

| Option   | Description                                                              |
|----------|--------------------------------------------------------------------------|
| Name     | Holiday Pay Balance/(Number of Assessment weeks * Days worked in a week) |
| Category | <i>Payroll</i>                                                           |

Add this row to the **Calculation** section:

| 1st Operand                                                          | Operator      | 2nd Operand |
|----------------------------------------------------------------------|---------------|-------------|
| <i>Holiday Pay Balance divided by<br/>Number of Assessment Weeks</i> | <i>Divide</i> | 5           |

3. Access the **Create Value Comparison Calculation** task.

Enter these values:

| Option   | Description                                 |
|----------|---------------------------------------------|
| Name     | Holiday Pay Assessment Weeks (divisor) <> 0 |
| Category | <i>Payroll</i>                              |

Add this row to the **Calculation** section:

| 1st Operand                                                   | Operator            | 2nd Operand |
|---------------------------------------------------------------|---------------------|-------------|
| <i>GBR Statutory Holiday Pay:<br/>Assessment Period Weeks</i> | <i>not equal to</i> | 0           |

4. Access the **Create Conditional Calculation** task.

Enter these values:

| Option   | Description              |
|----------|--------------------------|
| Name     | Holiday Pay Daily Amount |
| Category | <i>Payroll</i>           |

Add this row to the **Calculation** section:

| Condition                                                | Result                                                                          |
|----------------------------------------------------------|---------------------------------------------------------------------------------|
| <i>Holiday Pay Assessment Weeks (divisor) &lt;&gt; 0</i> | <i>Holiday Pay Balance/(Number of Assessment weeks * Days worked in a week)</i> |

## Next Steps

Add the calculation to a payout earning for UK statutory holiday pay.

### Example: Create a Payout Earning for Statutory Holiday Pay (UK)

This example illustrates one way to create a payout earning for UK statutory holiday pay.

## Context

You want to create a payout earning for statutory holiday pay based on the statutory holiday pay framework.

When creating the earning, you want to:

- Calculate the earning only when workers receive paid time off that is eligible for statutory holiday pay.
- Directly split the holiday pay payout by the UK statutory holiday pay work period calendar.
- Start paying holiday pay on April 1st, 2022.

## Prerequisites

Create an arithmetic calculation named *Holiday Pay Amount Paid* that calculates the amount of holiday pay to for a weekly period.

Create a conditional calculation named *Holiday Pay Daily Amount*, that calculates the daily holiday pay amount based on the pay balance for holiday pay.

Create a time off named *GBR Statutory Holiday Pay (Days)*.

Create these related calculations:

- *Holiday Pay Amount Per Day*
- *Number of Assessment Weeks*
- *Number of Days (of Holiday to be paid)*
- *UK Statutory Holiday Pay - Pay Balance*

Security:

- *Set Up: Payroll (Calculations - Payroll Specific)* and *Set Up: Payroll (Calculations - Generic)* domains in the Core Payroll functional area.
- *Set Up: Time Off (Calculations - Generic)* domain in the Time Off and Leave functional area.

## Steps

1. Access the **Create Earning** task.

2. Enter these values:

| Option          | Description             |
|-----------------|-------------------------|
| <b>Name</b>     | Holiday Pay Payout Days |
| <b>Code</b>     | HP Payout Days          |
| <b>Category</b> | <i>Payroll</i>          |
| <b>Country</b>  | <i>United Kingdom</i>   |

3. On the **Effective Dated** tab, enter these values:

| Option                                | Description                    |
|---------------------------------------|--------------------------------|
| <b>Effective Date</b>                 | April 1, 2022                  |
| <b>Calculation</b>                    | <i>Holiday Pay Amount Paid</i> |
| <b>Do Not Recalculate During Reto</b> | Leave clear.                   |

| Option                                                        | Description |
|---------------------------------------------------------------|-------------|
| <b>Split by UK Statutory Holiday Pay Work Period Calendar</b> | Select      |

4. From the **Worker Eligibility** prompt, select **Create > Value Comparison Calculation**.

5. Enter these values:

| Option          | Description                |
|-----------------|----------------------------|
| <b>Name</b>     | UK Statutory Time Off <> 0 |
| <b>Category</b> | <i>Payroll</i>             |

6. Add this row to the **Calculation** grid:

| 1st Operand                             | Operator            | 2nd Operand |
|-----------------------------------------|---------------------|-------------|
| <i>GBR Statutory Holiday Pay (Days)</i> | <i>not equal to</i> | <i>0</i>    |

7. Click **OK** to return to the **Create Earning** task.

8. Add these rows to the **Related Calculations** grid:

| Related Calculation                           | Override Calculation                                            |
|-----------------------------------------------|-----------------------------------------------------------------|
| <i>UK Statutory Holiday Pay - Pay Balance</i> | <i>GBR Statutory Holiday Pay: Assessment Period Pay Balance</i> |
| <i>Number of Assessment Weeks</i>             | <i>GBR Statutory Holiday Pay: Assessment Period Weeks</i>       |
| <i>Holiday Pay Amount Per Day</i>             | <i>Holiday Pay Daily Amount</i>                                 |
| <i>Number of Days (of Holiday to be paid)</i> | <i>GBR Statutory Holiday Pay (Days)</i>                         |

9. On the **Non-Effective Dated** tab, select these groups from the **Groups** prompt:

- *GBR Adds to Gross [GBR]*
- *GBR Arrestable Earnings Definition D [GBR]*
- *GBR Attachable Earnings DEA [GBR]*
- *GBR Attachable Earnings Definition A [GBR]*
- *GBR Attachable Earnings Definition B [GBR]*
- *GBR Attachable Earnings Definition C [GBR]*
- *GBR Earnings Liabile to Class 1 secondary NICs [GBR]*
- *GBR Gender Pay Gap Reporting [GBR]*
- *GBR Maternity Schedule [GBR]*
- *GBR Nlable Pay [GBR]*
- *GBR Pen AE Qualifying Earnings [GBR]*
- *GBR Taxable Pay [GBR]*

10. Click **Ok**.

### Result

During a payroll calculation, Workday uses the configuration on the **Edit UK Statutory Holiday Pay Configuration** to calculate the amount of holiday pay for the weekly period.

### Next Steps

Add the payout earning to the **Edit UK Statutory Holiday Pay Configuration** task.

## Related Information

### Tasks

[Steps: Set Up Statutory Holiday Pay \(UK\)](#) on page 1463

### Examples

[Example: Create a Payout Calculation for Statutory Holiday Pay \(UK\)](#) on page 1468

### Example: Create a Calculation for Periods to Exclude from Statutory Holiday Pay (UK)

This example illustrates how to create a calculation to identify periods to exclude.

### Context

You want to identify weeks where an employee has either partially paid or unpaid sickness to exclude those weeks from the statutory holiday pay assessment. You want to create a nested calculation to:

- Determine whether the sum is greater than zero, and return a value of 1 if it is.
- Sum the total time off of absence component related calculations for partially paid and unpaid time off.

### Prerequisites

Create 2 time offs for unpaid time off and partially unpaid time off, named *GBR Sickness 0% Time Off*, and *GBR Sickness 50% Time Off*.

Security:

- *Set Up: Payroll (Calculations - Generic)* domains in the Core Payroll functional area.
- *Set Up: Time Off (Calculations - Generic)* domain in the Time Off and Leave functional area.

### Steps

1. Access the **Create Aggregate Calculation** task.
2. Enter these values:

| Option   | Description                                 |
|----------|---------------------------------------------|
| Name     | SUM of GBR Sickness Time Off 50% & 0% ACRCs |
| Category | <i>Payroll</i>                              |

Add this row to the **Calculation** section:

| Function   | Operand                                                                                               |
|------------|-------------------------------------------------------------------------------------------------------|
| <i>Sum</i> | <i>GBR Sickness 0% Time Off - Time Off Total</i><br><i>GBR Sickness 50% Time Off - Time Off Total</i> |

3. Click **OK**.
4. Access the **Create Value Comparison Calculation** task.
5. Enter these values:

| Option | Description               |
|--------|---------------------------|
| Name   | Sum Sickness 50% + 0% > 0 |

| Option   | Description    |
|----------|----------------|
| Category | <i>Payroll</i> |

Add this row to the **Calculation** section:

| 1st Operand                                            | Operator            | 2nd Operand |
|--------------------------------------------------------|---------------------|-------------|
| <i>SUM of GBR Sickness Time Off 50% &amp; 0% ACRCs</i> | <i>greater than</i> | <i>0</i>    |

6. Click **OK**.
7. Access the **Create Conditional Calculation** task.
8. Enter these values:

| Option   | Description                       |
|----------|-----------------------------------|
| Name     | Holiday Pay Sickness Exclude Flag |
| Category | <i>Payroll</i>                    |

Add this row to the **Calculation** section:

| Condition                           | Result   |
|-------------------------------------|----------|
| <i>Sum Sickness 50% + 0% &gt; 0</i> | <i>1</i> |

9. Click **OK**.

### Next Steps

Add the calculation to an exclusion earning for holiday pay.

#### Example: Create an Earning for Periods to Exclude from Statutory Holiday Pay (UK)

This example illustrates one way to create an exclusion earning for statutory holiday pay.

### Context

You want to exclude weeks where an employee has either partially paid or unpaid sickness the statutory holiday pay assessment.

### Prerequisites

Create a conditional calculation that identifies when workers have partially paid or unpaid time off for sickness called *Holiday Pay Sickness Exclude Flag*.

Create a value comparison calculation named *Sickness 50% + 0% <> 0* that determines when a worker has either unpaid or partially unpaid sick pay.

Create a pay component group named *UK Statutory Holiday Pay Work Period Assessment Exclusion [GBR]*.

Security:

- *Set Up: Payroll (Calculations - Payroll Specific)* and *Set Up: Payroll (Calculations - Generic)* domains in the Core Payroll functional area.
- *Set Up: Time Off (Calculations - Generic)* domain in the Time Off and Leave functional area.

### Steps

1. Access the **Create Earning** task.

2. Enter these values:

| Option   | Description                  |
|----------|------------------------------|
| Name     | Holiday Pay Sickness Exclude |
| Code     | Holiday Pay Sickness Exclude |
| Category | Payroll                      |
| Country  | United Kingdom               |

3. On the **Effective Dated** tab, enter these values:

| Option                                                 | Description                       |
|--------------------------------------------------------|-----------------------------------|
| Effective Date                                         | January 1, 2022                   |
| Worker Eligibility                                     | Sickness 50% + 0% <> 0            |
| Calculation                                            | Holiday Pay Sickness Exclude Flag |
| Do Not Recalculate During Retro                        | Leave clear.                      |
| Split by UK Statutory Holiday Pay Work Period Calendar | Select.                           |

4. On the **Non-Effective Dated** tab, select these groups from the **Groups** prompt:

- GBR Memo Entries [GBR]
- UK Statutory Holiday Pay Work Period Assessment Exclusion [GBR]

5. Click **OK**.

## Result

During a payroll calculation, Workday excludes any period with these time offs from the statutory holiday pay work period assessment:

- GBR Sickness 0% Time Off
- GBR Sickness 50% Time Off

## Next Steps

Add the *UK Statutory Holiday Pay Work Period Assessment Exclusion [GBR]* pay component group to the **Edit UK Statutory Holiday Pay Configuration** task.

## Related Information

### Tasks

[Steps: Set Up Statutory Holiday Pay \(UK\)](#) on page 1463

[Create Pay Component Groups](#) on page 230

## Legacy Holiday Pay (UK)

### Steps: Set Up Legacy Holiday Pay (UK)

### Prerequisites

Create time off types.

### Context

You can set up Workday to calculate payments for workers with absences that qualify for supplemental holiday pay.

**Note:** For an enhanced user experience and additional capabilities, Workday recommends that you use the UK Statutory Holiday Pay solution to manage UK workers' holiday pay.

We recommend that you work with Workday Professional Services, or your consultant, to set up your holiday pay processing.

## Steps

1. Access the **Maintain Payroll Country Time Off Payment Types** task.

On the **Holiday** tab, add a row for each **Time Off Type** associated with holiday pay.

Security: *Set Up: Payroll (Holiday Pay)* - UK domain in the UK Payroll functional area.

2. Set up earnings for holiday pay.

See [Steps: Create Earnings](#) on page 222.

3. Create an earnings pay component group and add the earnings.

See [Create Pay Component Groups](#) on page 230.

4. Access the **Maintain UK Holiday Pay Settings** task.

Add the **Earnings Pay Component Group**.

Security: *Set Up: Payroll (Holiday Pay)* - UK domain in the UK Payroll functional area.

5. (Optional) To use hours worked in your calculations, add an **Hours Pay Component Group**.

6. (Optional) If you assess holiday pay based on pay periods, you can:

- Consider any supported retro payments in the pay periods when they were earned, not the periods when they were paid.
- Select the **Exclusion Earning** that identifies any pay periods to ignore in the calculations. Because Workday treats the earning as a flag, to exclude a pay period from holiday pay calculations ensure that this earning resolves to 1.
- Select earnings that indicate which historic recurring payments to include in holiday pay calculations.

Workday recommends that you only use **Recurring Payment Earnings** when the worker no longer receives a recurring payment but you still want to include it.

(Optional) If you select to **Calculate Eligible Time Off On Termination**, work with your business process administrator to amend the *Termination* business process to add the *Adjust Time Off Balances* service.

**Note:** To assess based on pay periods, select *First Day of Pay Period (minus one day)* as the **Day to Look Back From**.

## Result

If the worker took eligible time off in the processed pay period, Workday calculates and pays holiday pay when you run payroll.

[Steps: Enable Termination Adjustments for Time Off Plans](#)

## FAQ: Legacy Holiday Pay (UK)

**Note:** For an enhanced user experience and additional capabilities, Workday recommends that you use the UK Statutory Holiday Pay solution to manage UK workers' holiday pay.

**How can I add a worker's holiday pay to Workday from our legacy payroll system?**

**Note:** If you base your holiday pay assessment on pay periods, you must create the historic pay period schedules before loading the worker's history.

- For an individual worker, access the **Maintain UK Worker Payroll Absence History Data** task. Add a row for each separate pay period or applicable payment.

Security: *Worker Data: Payroll (Non-Company Specific)* - UK domain in the UK Payroll functional area.

- For a mass update of workers' previous holiday pay details, use these web services:
  - Import Payroll Holiday Pay History*
  - Get Payroll Holiday Pay History*

When you add workers' payroll history, if you select the:

- Earnings Pay Component Group** or **Hours Pay Component Group**, ensure that they match the same fields on the **Maintain UK Holiday Pay Settings** task.
- Use In Pay Calculations** check box, Workday adjusts the values in the pay component groups on the **Maintain UK Holiday Pay Settings** task.
- Exclude from Pay Calculations** check box, Workday overrides any alternative selection in the **Exclusion Earning** on the **Maintain UK Holiday Pay Settings** task.

#### How do I configure the start date for calculating holiday pay?

Access the **Maintain UK Holiday Pay Settings** task and select the **Day to Look Back From**. Example: For a holiday from Monday, June 5 to Friday, June 9, with the pay period starting on Monday 5:

| Option                                                                                        | Description                                                      |
|-----------------------------------------------------------------------------------------------|------------------------------------------------------------------|
| <b>First Day of Holiday (inclusive)</b><br><b>First Day of Pay Period (inclusive)</b>         | Workday includes Monday 5 in the assessment period calculation.  |
| <b>First Day of Holiday (minus one day)</b><br><b>First Day of Pay Period (minus one day)</b> | Workday excludes Monday 5 and calculates from Sunday 4.          |
| <b>Specific Day of the Week (inclusive)</b>                                                   | If Friday is the specific day, Workday calculates from Friday 2. |

#### How do I join holiday periods together for workers?

Access the **Maintain UK Holiday Pay Settings** task and select the **Link Holidays Across Non-Working Days** check box. Workday then considers any holidays that aren't separated by a working day as a continuous holiday period.

Example: You have a worker who only works Monday, Wednesday, and Friday each week. If they take 2 weeks holiday, Workday ignores Tuesday, Thursday, Saturday, and Sunday and counts the 2 weeks as 1 holiday pay period of 6 days.

## Related Information

### Tasks

[Set Up Payroll and Time Tracking Period Schedules](#) on page 149

### Example: Legacy Holiday Pay Assessment Based on Pay Periods (UK)

This example illustrates how to use pay periods to calculate holiday pay, and how to identify periods to ignore.

**Note:** For an enhanced user experience and additional capabilities, Workday recommends that you use the UK Statutory Holiday Pay solution to manage UK workers' holiday pay.

### Context

As the payroll administrator, you want to update your holiday pay calculations to use pay periods.

You want to find 3 pay periods that represent a workers' typical monthly pay. You're willing to look back up to a year to find those periods.

### Prerequisites

- Set up basic holiday pay settings, including the day to look back from and the earnings pay component group.
- Load period schedules that cover the historic period that your calculations might include.
- Load workers' holiday pay history.

### Steps

1. Access the **Create Earning** task and create an earning called *Holiday Pay Exclusion*.

In the **Worker Eligibility** section, add a row for each of the reasons why you won't include a period in holiday pay calculations. Example: Insufficient hours worked, or absent due to illness.

Security: *Set Up: Payroll (Calculations - Payroll Specific)* domain in the Core Payroll functional area

2. Access the **Maintain UK Holiday Pay Settings** task.

a) In the **Assessment Period** section, enter a **Look Back a Total Of 52 Weeks**.

b) In the **Use Assessment Based On Pay Periods** section, enter a **Maximum Number to Include** of 3 pay periods.

c) In the **Exclusion Earning** field, select *Holiday Pay Exclusion*.

Security: *Set Up: Payroll (Holiday Pay) - UK* domain in the UK Payroll functional area.

### Result

When you run payroll, Workday identifies any workers on approved holiday during the payroll period and calculates their holiday pay.

## Company Vehicles (UK)

---

### Setup Considerations: Company Vehicles (UK)

You can use this topic to help make decisions when planning your configuration and use of UK company vehicles. It explains:

- Why to set it up.
- How it fits into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

### What It Is

Workday enables you to record details of any vehicles you own or lease in the UK and which of your workers use them.

### Business Benefits

Recording company vehicle details helps you to:

- Maintain data in a single location, increasing operational efficiency.
- Meet compliance requirements.

### Use Cases

Payroll for the UK users can include:

- Company cars as a taxable benefit within Workday.
- Workers' car details in online submissions to HMRC.

### Questions to Consider

| Questions                                                         | Considerations                                                                                                                                                                                                                                |
|-------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| How do you want to report company cars as benefits in payroll?    | <p>If you have an agreement with HMRC, you can send workers' car information as part of your RTI FPS.</p> <p>If you don't have an agreement, you can record car and worker allocations for use in your P46 (Car) forms.</p>                   |
| How do you want to calculate UK workers' tax due on company cars? | <p>Workday includes 2 template calculations that enable you to create pay components to calculate the cash equivalent of a car and any fuel provided. You can use these pay components within your payroll run to establish the tax owed.</p> |

### Recommendations

Workday uses the start of the UK tax year as the effective date for company cars as a payroll benefit. To ensure that completeness of annual records Workday recommends that you reach an agreement with HMRC before the start of the tax year.

Due to the potential volume and different types of vehicles, we recommend that you record all vehicle makes and models first.

### Requirements

Before you can include company cars as benefits in payroll, you must obtain agreement from HMRC. Agreements relate to an Employer Reference, so you might need more than 1 agreement.

## Limitations

Workday supports including company cars as benefits in only Payroll for the UK.

Payroll for the UK users can record details of any type of vehicle within Workday, but HMRC only accepts RTI FPS reports on company cars.

You can't retrieve vehicle data directly into Workday from an external source, such as the UK Driver and Vehicle Licensing Agency (DVLA). However, you can mass upload and retrieve vehicle data using web services.

## Tenant Setup

No impact.

## Security

Configure these domains in the UK Payroll functional area.

| Domains                                            | Considerations                                                                                                                        |

## Connections and Touchpoints

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships in your tenant. Learn more about the [Workday Touchpoints Kit](#) on Workday Community.

## Related Information

### Reference

[The Next Level: Company Car - UK Payroll](#)

## Steps: Set Up Company Vehicles (UK)

### Prerequisites

Review setup considerations for company vehicles.

### Context

You can record details about vehicles that your company provides for UK workers.

When your company has an agreement with HMRC to include company cars as benefits in payroll, you can send workers' car information with your regular Real Time Information Full Payment Submission (RTI FPS).

### Steps

1. Access the **Maintain Vehicle Makes** task.  
Security: *Set Up: Payroll (Company Vehicle)* - UK domain in the UK Payroll functional area.
2. Access the **Maintain Vehicle Models** task.  
Security: *Set Up: Payroll (Company Vehicle)* - UK domain in the UK Payroll functional area.

3. [Create Company Vehicles \(UK\)](#) on page 1481.

4. Access the **Create Company Vehicle Assignment** task.

**Vehicle Unavailability** can affect a worker's deductions. Example: When a company car is unavailable for a consecutive 30 days or more, HMRC disregards it as a benefit.

When you add a new row on these grids, enter the cumulative total for each row in GBP:

- **Capital Contributions**
- **Payments Made Toward Private Use**

Security: *Worker Data: Payroll (Company Vehicle)* - UK domain in the UK Payroll functional area.

5. (Optional) When your company has an agreement with HMRC, access the **Edit UK Employer Reference Details** task.

Enter the start of the tax year as the **HMRC Company Car Payroll Benefit Effective Date**.

Security: *Set Up: Payroll UK* domain in the UK Payroll functional area.

## Result

Workday displays details of cars and their associated costs on the **View UK RTI FPS Worker Company Car Data** report.

## Related Information

### Tasks

[Set Up Employer Reference Tax Details \(UK\)](#) on page 1406

## Create Company Vehicles (UK)

### Prerequisites

- Configure vehicle makes and models.
- Security: *Set Up: Payroll (Company Vehicle)* - UK domain in the UK Payroll functional area.

### Context

To be able to calculate the cash equivalent of a car, or a car and fuel, in a Real Time Information Full Payment Submission (RTI FPS), you must provide specific details such as the overall value and emissions data.

Workday enables you to record details for cars, motorcycles, and vans. However, RTI only includes cars you assign to workers when you agree with HMRC to report company cars as a benefit through payroll.

### Steps

1. Access the **Create Company Vehicle** task.

2. As you complete the task, consider:

| Option                         | Description                                                                                                                                                               |
|--------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Country of Registration</b> | Workday only processes UK company car data.                                                                                                                               |
| <b>Vehicle ID</b>              | To ensure a continuous record for audit purposes, enter a unique ID that you can't change or transfer, such as the Vehicle Identification Number (VIN) or chassis number. |
| <b>Date Vehicle Terminated</b> | Date that you remove the vehicle from your fleet, such as at the end of the lease.                                                                                        |
| <b>Vehicle Type</b>            | The RTI FPS submission only reports on <i>Car</i> .                                                                                                                       |

| Option                                   | Description                                                                                                                                                                                                                                                                         |
|------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Zero Emissions Mileage</b>            | Enter the number of miles the vehicle can travel in electric mode without recharging the battery.                                                                                                                                                                                   |
| <b>No Approved CO2 Emissions</b>         | <p>Select this check box when HMRC doesn't hold CO2 data for the vehicle, such as when the vehicle is:</p> <ul style="list-style-type: none"> <li>Imported from outside the European Union.</li> <li>Rare or a one-off model.</li> <li>Registered in the UK before 1998.</li> </ul> |
| <b>Engine Capacity</b>                   | <p>Use cubic centimeters. Example: For a 3-liter engine, enter <i>3000</i>.</p> <p>When you select <b>No Approved CO2 Emissions</b>, Workday uses the engine capacity when calculating the cash equivalent of the car.</p>                                                          |
| <b>Accessories Price (including VAT)</b> | Only record accessories with a list price of 100 GBP or more (including VAT) that your company added to the vehicle after making it available to a worker.                                                                                                                          |

[FAQ: Real Time Information Reporting \(UK\)](#) on page 1456

## Statutory Payments (UK)

---

### Statutory Sick Pay (UK)

#### Steps: Set Up Statutory Sick Pay (UK)

#### Context

You can determine Periods of Incapacity for Work (PIW) and calculate payments for eligible workers with absences that qualify for Statutory Sick Pay (SSP).

Unlike other types of statutory pay in Workday, you can associate both leaves and time offs with SSP.

Workday creates 1 PIW for:

- Consecutive leaves or time offs with no days in between, except for nonworking days.
- Overlapping periods of sickness.

To qualify for SSP, workers must meet the main regulatory criteria. You can view the eligibility requirements on the **View Earning** report for the *GBR SSP [GBR]* earning.

#### Steps

- [Set Up Time Offs for Statutory Sick Pay \(UK\)](#) on page 1483.

Workday uses the start and end dates of SSP qualifying time offs and leaves to determine the PIWs. Ensure that the absence for sickness has the correct dates, and that it covers each working and nonworking day the worker is off sick from work.

2. (Optional) [Offset Statutory Sick Pay for a Worker \(UK\)](#) on page 1484.

You can offset a worker's Statutory Sick Pay (SSP) against any company, contractual, or occupational sick pay that you provide.

3. (Optional) [Create Statutory Leave Types for UK Payroll \(UK\)](#) on page 1490.

If you use leaves of absence for long-term sickness, in addition to time offs for short-term sickness, create a statutory leave type for Statutory Sick Pay.

4. (Optional) [Create an SSP Work Schedule Calendar \(UK\)](#) on page 1484.

When you don't create an SSP work schedule calendar, Workday uses a 7-day work week to calculate the PIW.

For workers on cross-day shifts, Workday recommends using work schedule calendars to ensure that SSP calculates correctly.

5. (Optional) [Assign SSP Work Schedule Calendars to Workers \(UK\)](#) on page 1486.

You can use different SSP calendars to cover different working patterns.

6. [Enter SSP History \(UK\)](#) on page 1487.

## Result

You can place a worker on leave or enter the time off that corresponds to SSP.

## Next Steps

To view the details of:

- A PIW for a worker, access the **View UK SSP Absences for Worker** report. Security: *Reports: Payroll (SSP) – UK* domain in the UK Payroll functional area.
- Workers who have reached 21 weeks SSP, access the **View UK Payroll SSP History for Group of Workers** report. Security: *Reports: Payroll SSP History (View Data) – UK* domain in the UK Payroll functional area.
- An individual worker's SSP information, access the **View UK Payroll SSP History** report. Security: *Reports: Payroll SSP History (View Data) – UK* domain in the UK Payroll functional area.

## Set Up Time Offs for Statutory Sick Pay (UK)

### Prerequisites

- [Create time off types](#).
- Security: *Set Up : Payroll UK* domain in the UK Payroll functional area.

### Context

Define which time offs are associated with Statutory Sick Pay (SSP).

### Steps

1. Access the **Maintain Payroll Country Time Off Payment Types** task.
2. On the **Sickness** tab, add a row for each **Time Off Type** associated with SSP.

## Result

For eligible workers, when you place them on this type of time off, Workday creates a PIW and pays minimum sick pay according to UK regulations.

## Offset Statutory Sick Pay for a Worker (UK)

### Prerequisites

- Configure time off types for sick leave under the **Sickness** tab in the **Maintain Payroll Country Time off Payment Types** task.
- Create a separate time off for each of the sickness allowances.
- Enable re-evaluation on absence tables or tiers.
- Security: Set Up: Payroll (Calculations - Payroll Specific) domain in the Core Payroll functional area.

### Context

Use the **Create UK Absence Component Related Calculations for SSP** task to offset a worker's Statutory Sick Pay (SSP) against any company, contractual, or occupational sick pay that you provide. This task can reduce the need to calculate the amount to offset manually, such as when a worker crosses different time off plans or event types.

Example: For a company that offers occupational sick pay, such as Full Sick Pay, Half Sick Pay, and No Sick Pay, then based on the company policy for sickness, you only offset SSP when the employee receives Full Sick Pay. In such cases, create a Payroll Absence Component Related Calculation (ACRC) only for the time off that relates to Full Sick Pay.

### Steps

1. Access the **Create UK Absence Component Related Calculations for SSP** task.

Select the time off for which you want to create the absence related calculations.

To view all the payroll related calculations, run the **View UK Absence Component Related Calculations for SSP** report.

2. Create a new earning or deduction.

Add the **Workers Eligible for SSP Offset** eligibility rule to the **Worker Eligibility** field in the **Criteria** section of the **Effective Dated** tab.

3. Add your payroll related calculations for SSP offset.

Workday creates 2 ACRCs. One ACRC returns the number of qualifying absence units that you have to offset and the other ACRC returns the payment value that you can offset.

4. (Optional) Add a calculation worktag of position if you plan to support multiple positions or jobs for a worker.

To use time off entries for multiple positions, specify all the time off entries using the same method, either in hours or in days.

## Create an SSP Work Schedule Calendar (UK)

### Prerequisites

- Create work schedule calendars for workers.

- Security: *Set Up: Payroll (SSP) - UK* domain in the UK Payroll functional area.

Create work schedule calendars for workers.

## Context

You can set up a work schedule calendar to determine the working pattern of a worker on Statutory Sick Pay (SSP). When a worker has no SSP calendar defined, Workday uses a calendar with 7 working days in a week.

Example: Use a work schedule calendar to record shift patterns that span over 2 days. Using a calendar for cross-day shifts means that Workday only allocates 1 day of SSP to a worker for a shift.

## Steps

1. Access the **Create UK SSP Work Schedule Calendar Rule** task.  
Define the eligibility conditions for the SSP work schedule calendar.
2. Access the **Create UK SSP Work Schedule Calendar** task.

As you complete the task, consider:

| Option                                      | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|---------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Holiday Calendar</b>                     | Define the calendar to use for public holidays. Workday considers all bank holidays defined on the holiday calendar as nonworking days.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| <b>Include Non Working Days for SSP</b>     | <p>Select how to treat nonworking days during and after an SSP absence in the Period of Incapacity for Work (PIW).</p> <ul style="list-style-type: none"> <li>• <i>Between Sicknesses</i>: When there are no working days between 2 SSP absences, Workday includes the nonworking days in the PIW. Example: A worker with a Monday-to-Friday work schedule is absent on Friday and Monday, Workday determines the PIW as Friday to Monday.</li> <li>• <i>Between Sicknesses and up to Next Working Day</i>: Workday includes in the PIW all consecutive nonworking days between the SSP absence and the next working day. Example: When a worker with a Monday-to-Wednesday work schedule is absent on Wednesday, Workday determines the PIW as Wednesday to Sunday.</li> </ul> |
| <b>Use Work Schedule for Calendar Event</b> | <p>(Optional) Select the check box to create an SSP calendar using the days specified as qualifying days on the worker's general work schedule calendar.</p> <p>Workday no longer uses any existing calendar event settings for the worker.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

3. (Optional) Not required if you select the **Use Work Schedule for Calendar Event** check box. From the related actions of the SSP work schedule calendar, select **Calendar > Add Calendar Event**.

Enter these settings to define the worker's working days:

| Option               | Setting                                  |
|----------------------|------------------------------------------|
| Start Date           | The first day of the first work period.  |
| Recurs Every x Weeks | 1                                        |
| Days(s) of the Week  | Select the worker's actual working days. |

### Example

To define an SSP work schedule calendar, using a calendar event, for the *London* pay group, create an SSP work schedule calendar rule with these settings:

| Source External Field or Condition Rule | Relational Operator          | Comparison Type                       | Comparison Value |
|-----------------------------------------|------------------------------|---------------------------------------|------------------|
| <i>Pay Group</i>                        | <i>in the selection list</i> | <i>Value specified in this filter</i> | <i>London</i>    |

After creating the calendar, you can define a Monday-Friday work schedule starting in 2021 for all workers in the pay group. To define the schedule, add an SSP work schedule calendar event with these settings:

| Option               | Setting                                                                                 |
|----------------------|-----------------------------------------------------------------------------------------|
| Start Date           | <i>January 1, 2021</i>                                                                  |
| Recurs Every x Weeks | 1                                                                                       |
| Days(s) of the Week  | <i>Monday</i><br><i>Tuesday</i><br><i>Wednesday</i><br><i>Thursday</i><br><i>Friday</i> |

### Related Information

#### Tasks

[Create Work Schedule Calendars](#)

### Assign SSP Work Schedule Calendars to Workers (UK)

#### Prerequisites

- Create Statutory Sick Pay (SSP) work schedule calendars.
- Security: *Worker Data: Payroll (Company Specific)* - UK domain in the UK Payroll functional area.

#### Context

When a worker's working pattern changes, you can assign 1 or more calendars to the worker, based on effective dates, to calculate SSP for the different periods. Example: A worker moves from a 5-day to a 3-day week.

## Steps

1. Access the **Assign UK Worker SSP Work Schedule Calendar** task.
2. As you complete the task, consider:

| Option                       | Description                                                                                                                                                                                                                           |
|------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>SSP Rate Viewing Date</b> | <p>To use the latest SSP rates, enter the current date.</p> <p>To view historic SSP rates for the worker, enter a past date. Workday displays historic rates but doesn't run retro calculations for any historic date you select.</p> |

3. In the grid, add a row and effective date for each calendar that applies for the worker.  
If the worker's SSP calendar is based on their work schedule calendar, Workday selects the **Use Work Schedule for Calendar Event** check box.
4. (Optional) If the worker is eligible for the standard SSP calendar for your company, add a row and select the **Apply Global SSP Work Schedule Calendar** check box. Example: A worker moves back to their full-time schedule after being on reduced days after surgery.

## Next Steps

Access the **View UK SSP Absences for Worker** report to check the SSP amounts for the period you select.

## Enter SSP History (UK)

### Prerequisites

Security: *Process: Payroll SSP History (Create Data)* - UK domain in the UK Payroll functional area.

### Context

To continue workers' Statutory Sick Pay (SSP) records in Workday Payroll for the UK, you can enter their payroll SSP history from external payroll systems.

## Steps

1. Access the **Create UK Payroll SSP History** task.  
You can search for a worker by name, pay group, or employee ID in the payroll SSP history tasks and reports.

2. Enter the previous **Average Weekly Earnings**.

**Note:** Required, even if the worker has zero earnings.

3. (Optional) Select **SSP Absence History** to enter historical SSP data.

If you record a worker's sickness history in Workday, as either time off or leave of absence, you might not complete the history fields.

To record a full sickness history, enter the **Last PIW Start Date**, **Last PIW End Date**, **Waiting Days**, and **First Day of SSP**.

| Option                              | Description                                                                                               |
|-------------------------------------|-----------------------------------------------------------------------------------------------------------|
| <b>Last PIW End Date</b>            | Enter the end date of the Period of Incapacity for Work (PIW) entered in the <b>Last PIW Start Date</b> . |
| <b>Total Number of Waiting Days</b> | Enter the number of waiting days (WD) used in the current PIW. If the current PIW is linked to            |

| Option | Description                                                                      |
|--------|----------------------------------------------------------------------------------|
|        | a previous PIW in which you didn't use all WD, enter the number of remaining WD. |

4. (Optional) Enter the number of SSP weeks and days taken. Enter either:

- **Total Number of Payment Days for SSP**, if you have an SSP work schedule calendar. Workday uses the calendar effective at the time of the **Last PIW Start Date** and **Last PIW End Date** to calculate SSP weeks and days taken.
- **Number of SSP Weeks and Days Taken (Decimal Weeks)**, if you don't have an SSP work schedule calendar.

## Result

You create SSP history for the worker, continuing their SSP into Workday. If you entered absence history, Workday SSP calculations won't use any sickness history previously recorded in Workday as either time off or leave of absence.

## Steps: Process SSP1 Form Information (UK)

### Prerequisites

Identify the memo or notional pay component groups (PCG) and run categories containing your SSP data.

### Context

You complete an SSP1 form when an employee can't get Statutory Sick Pay (SSP), or when their SSP has come, or is coming to an end. You can report on the relevant SSP data held in Workday to help you fill out forms and keep track of when you issue or update them.

**Note:** Workday can't provide data that's affected by external factors. Example: If an employee has been incarcerated.

### Steps

1. Access the **Edit Pay Component Group** task.

On the **Adds to Group** tab, add the *GBR SSP1 Reporting* earning.

Security: *Set Up: Payroll (Calculations - Payroll Specific)* domain in the Core Payroll functional area.

2. Access the **Edit Run Category** task.

In the **Gross/Net** section, add the PCG to the **Additional Pay Component Groups to Calculate** list.

Security: *Set Up: Payroll - Pay Group Specific* domain in the Core Payroll functional area.

3. (Optional) Access the **Maintain UK SSP1 Forms Issued** task.

Workday uses the **Issued Date** and **Effective Date** in the View UK SSP1 Alert report.

To bulk load details of SSP1 forms issued to workers, use the *Put UK SSP1 Form Issued* web service.

Security: *Worker Data: Payroll (Company Specific) - UK* domain in the UK Payroll functional area.

4. To generate data for the alert report, calculate your payroll.

See [Steps: Process Payroll](#).

5. Access the **View UK SSP1 Alert** report.

As you complete the report, consider:

| Option            | Description                                                                                                                                  |
|-------------------|----------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Alert Type</b> | <b>SSP Expiry Warning Report</b> - Looks at a worker's current SSP and assists in identifying when their SSP entitlement is going to expire. |

| Option                                    | Description                                                                                                                                                  |
|-------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                           | <b>SSP Eligibility Exception Report</b> - Displays any workers who have a Period of Incapacity for Work (PIW) for SSP and who don't qualify for SSP payment. |
| <b>6 Weeks or Less of SSP Entitlement</b> | To restrict your search to workers with 6 weeks or less of SSP entitlement, and reduce the number of entries on the report, select this check box.           |

Each row in the report includes the worker's **Primary Address**, which enables you to use the address for external purposes such as mail merging.

## Steps: Set Up Statutory Leave Payments (UK)

### Context

Workday Payroll for the UK provides calculations and leave payment types that enable you to manage these statutory leave payments:

- Statutory Adoption Pay
- Statutory Maternity Pay
- Statutory Neonatal Care Pay
- Statutory Parental Bereavement Pay
- Statutory Paternity Pay
- Statutory Shared Parental Pay

**Note:** Unlike these statutory payments, you can manage Statutory Sick Pay (SSP) through leaves or time offs. Workday treats SSP separately from other types of statutory leave.

### Steps

1. [Create Statutory Leave Types for UK Payroll \(UK\)](#) on page 1490.

**Note:** Workday Payroll for the UK doesn't support cascading leave types that are linked to statutory payments.

2. [Initiate Statutory Leave Payments \(UK\)](#) on page 1492.
3. For Statutory Shared Parental Pay, add payroll input to record the total agreed number of weeks that the worker's entitled to receive shared parental pay.
  - a) Access the **Add Payroll Input by Worker** task.  
Security: *Worker Data: Payroll (Payroll Input)* domain in the Core Payroll functional area.
  - b) Enter these settings:

| Option            | Setting                                                                                                                                   |
|-------------------|-------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Start Date</b> | Select a <b>Start Date</b> in the period in which leave starts.                                                                           |
| <b>End Date</b>   | Select either the: <ul style="list-style-type: none"> <li>• Leave event end date, if the worker takes leave in a single block.</li> </ul> |

| Option        | Setting                                                                                                                                                                                 |
|---------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|               | <ul style="list-style-type: none"> <li>End date of the last leave, if the worker takes leave in several blocks.</li> </ul>                                                              |
| Pay Component | Select <i>GBR ShPP [GBR]</i> .                                                                                                                                                          |
| Input Details | Add a row for the <i>Entitlement Weeks Total Leave Entitlement</i> type. In the <b>Value</b> field, enter the agreed total number of weeks leave that the worker individually receives. |

4. (Optional) Access the **Maintain Payroll Country Leave Of Absence Types Calculated In Days** task.

Security: *Set Up: Payroll UK* domain in the UK Payroll functional area.

By default, Workday calculates statutory parental payments in completed weeks, processed in the period when a worker starts their leave. You can change the payment calculation to calendar days for these leave of absence types:

- Adoption Leave
- Bereavement Leave
- Maternity Leave
- Ordinary Paternity Leave
- Shared Parental Leave

Example: Paying in calendar days, instead of part weeks, when the completed week crosses 2 pay periods.

When you calculate in calendar days, the worker must still take a complete week of leave to be eligible for payment. If a worker returns to work part way through a complete week, they relinquish the right to payment for that week.

##### Tasks

[Create Leave Types](#)

## Create Statutory Leave Types for UK Payroll (UK)

#### Prerequisites

Security: *Set Up: Leave of Absence* domain in the Time Off and Leave functional area.

#### Context

The United Kingdom requires these types of payments for workers on statutory leave:

- Statutory Adoption Pay
- Statutory Maternity Pay
- Statutory Neonatal Care Pay
- Statutory Parental Bereavement Pay
- Statutory Paternity Pay
- Statutory Shared Parental Pay
- Statutory Sick Pay

Create leave types that correspond to each statutory leave payment. Workday uses the leave types to pay eligible workers at the appropriate rate while they're on leave. Also configure each leave type to capture the information required by each statutory leave, such as an expected due date or adoption notification date.

**Note:** Workday Payroll for the UK doesn't support cascading leave types that are linked to statutory payments.

### Steps

1. Access the **Create Leave Type** task.
2. Select the **Leave Payment Type** to which the leave type links.

| Statutory Leave Payment            | Leave Payment Type                                                                                                                                                                                                                                                                                    |

**Related Information****Tasks**[Create Leave Types](#)**Initiate Statutory Leave Payments (UK)****Prerequisites**

- Configure the *Request Leave of Absence* business process and security policy in the Time Off and Leave functional area.
- Create statutory leave types for UK Payroll.

**Context**

When placing a worker on leave, you can provide the inputs needed to ensure that the worker receives payment according to UK regulations.

**Steps**

1. Access the **Place Worker on Leave** task.
2. Select the appropriate regulatory leave.  
Example: **Regulatory** > **GBR Maternity Leave**.
3. Enter the specific requirements for the selected leave type:

| Statutory Leave Payment Type | Required Fields                                                                                                                                                                                                                                                                                                                                                                                                         |

## FAQ: Maternity Pay (UK)

### How do I estimate maternity pay for a worker?

To create a report showing estimated gross income for a worker who will be taking maternity leave:

1. For each earning that applies to the pay shown in the Maternity Schedule report, access the **Edit Earning** task.
2. In the **Groups** field on the **Non-Effective Dated** tab, select the GBR Maternity Schedule [GBR] pay component group.
3. Run the **View UK Maternity Schedule Data for Worker** report.

The worker must have at least 8 weeks pay history.

4. Create a report for the worker using the *Workday Example Maternity Schedule Report Template.xlsx* file, which is available on [Workday Community](#).

### Why do weekly earnings differ between the Weekly Pay for OMP and Average Weekly Earnings fields?

Payroll for the UK uses earnings that are subject to National Insurance to calculate statutory maternity pay (SMP). When you set up occupational maternity pay (OMP), you can select any earnings used in the calculation of weekly earnings.

Although SMP and OMP use the same calculation for a worker's weekly earnings, they use different pay component groups (PCGs):

- GBR Niable Pay [GBR]
- GBR Maternity Schedule [GBR]

If the **Adds to Group** earnings differ between the 2 PCGs, you'll see a difference between a worker's **Weekly Pay for OMP** and their **Average Weekly Earnings** (SMP).

## Pensions Auto-Enrolment (UK)

---

### Setup Considerations: Pensions Auto-Enrolment (UK)

You can use this topic to help make decisions when planning your configuration and use of Pensions Auto-Enrolment. It explains:

- Why to set it up.
- How it fits into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

## What It Is

Workday enables you to combine workers' pension eligibility assessments from Workday Payroll with a pension scheme in Workday Benefits. You can configure Workday to assess workers' eligibility and automatically enrol them into a company pension scheme.

## Business Benefits

Workday automates the process of assessing and identifying eligible workers and enrolling them into your pension scheme. This automation reduces manual effort and makes it easier to comply with UK laws on workers' pensions.

Assessing workers' eligibility in Payroll ensures that you use their latest earnings instead of historical data.

## Use Cases

Workday enables you to manage a wide variety of pension enrolment scenarios, including:

- Opt ins.
- Opt outs.
- Re-enrolments.

## Questions to Consider

| Questions                                     | Considerations                                                                                                                                                                                                                              |
|-----------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Do you want to postpone enrolment?            | You can configure Workday to postpone enrolment as part of your company configurations.<br><br>Example: You could postpone aligning a worker's enrolment with their pay periods. The enrolment must be within 3 months of their assessment. |
| Do you manage pensions in an external source? | If you manage your pensions outside of Workday, you can use web services to mass load data from your pension provider.                                                                                                                      |

## Recommendations

To prevent possible calculation mismatches, Workday recommends that you use the same selection criteria when you create rules that:

- Enrol workers into a retirement savings plan in Benefits.
- Calculate pension contributions in Payroll.

To ensure that you use workers' latest pay details, create a scheduled passive event to enrol eligible workers, that automatically runs after your **Run Pay Complete** task finishes. Workday recommends that you set up 3 passive events, each with its own benefit eligibility rules, to identify:

- New hires.
- Rehired workers.
- Workers who must, or want to, re-enrol in the pension.

Workday recommends that you use Workday Benefits to integrate with Workday Payroll. Payroll for the UK customers who aren't licensed to use Benefits can use limited benefits features to support the set up of UK pension auto-enrolment.

## Requirements

Workday Payroll on its own isn't a pensions solution. Record your pension benefits details using either:

- Benefits in Human Capital Management.
- Externally provided data. Example: From your pension provider.

Load existing benefit elections and assessment history for all workers, including workers who have opted out of pensions auto-enrolment.

### Limitations

- You can only send auto-enrolment details to workers as a Workday notification or an email. You can't send notifications as a letter or added to a worker's documents.

For workers without email, you can send their notification to an administrative email address, manually copy the content to a letter, and attach the letter to their documents.

- Payroll for the UK doesn't support pension auto-enrolment in prior pay periods. If you run payroll in arrears, you can either turn off the pension auto-enrolment feature or ensure you monitor the process and make the necessary adjustments.

### Tenant Setup

You can select tenant-wide configuration on the **Edit Tenant Setup - Notifications** task to determine how auto-enrolment notifications are sent to workers.

### Security

| Domains                                                                                       | Considerations                                                                                                                                                                                                                       |

| <i>Set Up: Benefits</i> domain in the Benefits functional area.                               | Enables you to: <ul style="list-style-type: none"> <li>• Set up a benefits plan for workers who Workday assesses as eligible for auto-enrolment.</li> <li>• Set up a passive event to enrol workers into a benefits plan.</li> </ul> |
| <i>Set Up: Payroll (Pensions) - UK</i> in the UK Payroll functional area.                     | Enables you to create and manage pension schemes and re-enrolment dates to use with auto-enrolment.                                                                                                                                  |
| <i>Set Up: Payroll UK</i> in the UK Payroll functional area.                                  | Enables you to set up and modify employer reference details, including email configuration for auto-enrolment notifications.                                                                                                         |
| <i>Set Up: System</i> domain in the System functional area.                                   | Enables you to configure the different email templates to use for enrolment notifications.                                                                                                                                           |
| <i>Set Up: Tenant Setup - BP and Notifications</i> domain in the System functional area.      | Enables you to configure Workday for UK enrolment notifications.                                                                                                                                                                     |
| <i>Worker Data: Payroll (Company Specific) - UK</i> domain in the UK Payroll functional area. | Enables you to record enrolment and re-enrolment data for a single worker. Example: Opting in or out.                                                                                                                                |

### Business Processes

Workday recommends that you add a To Do reminder to the *Pay Cycle Event* business process, after the **Run Pay Complete** task, to identify and enrol eligible workers into your workplace pension scheme.

## Reporting

| Reports                                                | Considerations                                                                                                                                              |
|--------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>View Company UK Pensions Auto Enrolment Details</b> | Use this report to review a company's: <ul style="list-style-type: none"> <li>• Key auto-enrolment dates.</li> <li>• Qualifying pension schemes.</li> </ul> |
| <b>View UK Pensions Re-Enrolment Details</b>           | Enables you to review which workers were re-enrolled into a qualifying pension scheme.                                                                      |
| <b>View Worker UK Pensions Auto Enrolment Details</b>  | Enables you to review the assessment history for a single worker.                                                                                           |

In addition to the provided reports, consider creating custom reports to provide further analysis, such as:

- Assessment history within a pay group.
- A worker's notification history.
- The workers scheduled to be re-enrolled at the mandatory 3 year re-enrolment.

## Integrations

| Web Service                                                                                                                            | Considerations                                                               |
|----------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------|
| <i>Get Pensions Auto Enrolment Legacy Assessment History Only</i><br><i>Put Pensions Auto Enrolment Legacy Assessment History Only</i> | Loads and retrieves any external assessment history from your legacy system. |

## Steps: Set Up Pensions Auto-Enrolment (UK)

### Prerequisites

- Review setup considerations for pensions auto-enrolment.
- When a company has passed its staging date or duties start date:
  - Use the *Put Pensions Auto Enrolment Legacy Assessment History Only* web service to load any external assessment history.
  - Load current benefit elections for workers from legacy systems. Workday recommends that you load benefit elections for all workers, including those workers who have opted out of pensions auto-enrolment.

### Context

You can enable Workday to:

- Assess workers at each pay run for pensions auto-enrolment.
- Enrol eligible workers in a pensions auto-enrolment scheme.

### Steps

1. Configure your run category to calculate the *GBR Pensions Auto Enrolment Assessment [GBR]* pay component in both on-cycle and off-cycle runs for active workers, and workers on leave.  
See [Example: Set Up Pay Run Category for Workers on Leave \(UK\)](#) on page 147 and [Example: Set Up Pay Run Category for Active and Terminated Workers \(UK\)](#) on page 138.
2. (Optional) [Set Up Worker Pensions Auto-Enrolment \(UK\)](#) on page 1499.  
Indicate specific worker cases, such as opting in or out. Ensure that you load any information from legacy systems.
3. Create retirement savings benefit plans for auto-enrolment schemes.  
See [Example: Set Up Retirement Savings Plans for Auto-Enrolment Schemes \(UK\)](#) on page 1505.
4. Access the **Maintain UK Pensions Auto Enrolment Qualifying Schemes** task, and select the retirement savings plan.  
Security: *Set Up: Payroll (Pensions) - UK* domain in the UK Payroll functional area.
5. [Set Up Company Pensions Auto-Enrolment \(UK\)](#) on page 1500.  
Indicate auto-enrolment details for the company, such as postponement details, retirement savings plans, and important pension dates.
6. [Steps: Set Up Pensions Re-Enrolment \(UK\)](#) on page 1502  
Indicate re-enrolment details for the company and associated pay groups, such as the current and future dates, and re-enrolment criteria.
7. Set up passive events to enrol newly eligible workers in an auto-enrolment scheme.  
See [Example: Set Up a Passive Event for Pension Auto-Enrolment \(UK\)](#) on page 1507.

## Next Steps

To perform a pensions assessment, run a pay calculation. After the calculation, you can use the **View Worker UK Pensions Auto Enrolment Details** report to review the assessment history for workers.

**Note:** If you need to recalculate payroll, and have modified re-enrolment details such as manually including or excluding a worker, don't use Smart Calculation when recalculating payroll.

## Related Information

### Concepts

[Setup Considerations: Pensions Auto-Enrolment \(UK\)](#) on page 1494

## Set Up Worker Pensions Auto-Enrolment (UK)

### Prerequisites

- Set up company pension auto-enrolment details.
- Security: *Worker Data: Payroll (Company Specific)* - UK domain in the UK Payroll functional area.

### Context

You can indicate specific pensions auto-enrolment details for a worker, such as:

- Exceptions from employer duties.
- External or legacy assessment history.
- Opting in.
- Opting out, along with the reason.
- Resuming employer duties.

**Note:** You only need to enter auto-enrolment details for workers with specific cases; Workday assesses all workers unless they have an exception.

You can use these web services to do a mass update or retrieval of pensions auto-enrolment details:

- *Get Worker Pensions Auto Enrolment Details*
- *Put Worker Pensions Auto Enrolment Details*

### Steps

1. Access the **Add Worker UK Pensions Auto Enrolment Details** task.
2. As you complete the task, on the **Pensions Auto Enrolment Details** tab, consider:

| Option                         | Description                                                                                                                                                                                                                                                                                                                                                                             |
|--------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Don't Assess Until</b>      | The worker won't be assessed until this date.                                                                                                                                                                                                                                                                                                                                           |
| <b>Eligible for Tax Relief</b> | The pension provider uses this information to claim tax relief from HMRC on behalf of a worker.                                                                                                                                                                                                                                                                                         |
| <b>Opt In</b>                  | A worker can opt in any time during the pension scheme auto-enrolment period.                                                                                                                                                                                                                                                                                                           |
| <b>Opt Out</b>                 | <p>Use to indicate that the worker has opted out, or ceased active membership, of a qualifying pension scheme.</p> <p>When you select this check box, Workday enables you to select the <b>Reason for Opt Out</b>. If the reason isn't listed, use the <b>Comments</b> field.</p> <p><b>Note:</b> For a worker to be included when you run re-enrolment, this box must be selected.</p> |

| Option                                | Description                                                                                                                                                                                                                 |
|---------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Exception from Employer Duties</b> | <p>When selected, Workday doesn't assess the worker for pensions auto-enrolment. Enter the <b>Reason for Exception</b>.</p> <p>To remove the exception, add a row to the grid and select <b>Resume Employer Duties</b>.</p> |

3. (Optional) When the worker has a staging date that's been processed outside of Workday, enter any external or legacy assessments on the **Legacy Assessment History Only** tab.

When an eligible jobholder's assessment is postponed either:

- in the external or legacy system, or
- from when they're hired

enter a **Deferral Date after Assessment/Hire** date to ensure that they're assessed on that date. If you select **Not Assessed (Postponed from Hire)** in the **Worker Type** column, Workday doesn't automatically calculate the **Deferral Date after Assessment/Hire**.

Other than the **Deferral Date after Assessment/Hire**, dates on this tab don't impact general assessment and are for information only.

**Note:** For workers who opted out in a legacy payroll system, enter these details to ensure Workday includes those workers in your subsequent re-enrolment assessment:

- **Assessment/Hire Date**
- **Worker Type**

4. (Optional) If you use a payroll input to override the *GBR Pensions Auto Enrolment Assessment [GBR]* pay component for a worker, Workday displays Yes in the **Override** column on the **Assessment History** tab.

The **Assessment History** tab holds all pay results and information relating to a worker's enrolment assessment.

### Next Steps

You can check the date that a worker or group of workers reaches state pension age by accessing the **View UK Date State Pensions Age Reached** report.

## Set Up Company Pensions Auto-Enrolment (UK)

### Prerequisites

- Define retirement savings plans for pensions auto-enrolment schemes.
- Security: *Set Up: Payroll (Pensions)* - UK domain in the UK Payroll functional area.

### Context

You can define specific auto-enrolment details for a company to help you comply with pensions auto-enrolment requirements.

### Steps

1. Access the **Add Company UK Pensions Auto Enrolment Details** task.
2. As you complete the task, consider:

| Option                | Description                                                                                                   |
|-----------------------|---------------------------------------------------------------------------------------------------------------|
| <b>Effective Date</b> | When you set up a company for the first time, the <b>Effective Date</b> defaults to the <b>Staging Date</b> / |

| Option                                            | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|---------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                                   | <p><b>Duties Start Date.</b> For an existing company, the <b>Effective Date</b> defaults to today's date.</p> <p>If you have any configuration changes to your auto-enrolment details, you can add a new row with the <b>Effective Date</b> of those changes. This enables you to record upcoming configuration changes without having to wait until the end of the standard 3 year re-enrolment period. If adding a row to do this, Workday recommends you choose an <b>Effective Date</b> for a future payroll period or period for which payroll hasn't been run.</p> <p>If you add a new row that includes the <b>Postponement From</b> hire date option, and any existing noneligible jobholders or entitled workers become eligible jobholders after the row's <b>Effective Date</b>, Workday doesn't postpone them from assessment.</p> |
| <b>Deferral Date</b>                              | Do not use this field.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| <b>Postponement Periods</b>                       | <p>The number of days you postpone pension enrolment for workers. You can't postpone enrolment for more than 3 months (13 weeks, or 92 days).</p> <p>You can enter separate rows for each <b>Frequency</b>, for example for <b>Monthly</b> or <b>Weekly</b> paid workers. Alternatively, select <b>Default</b> to apply to all frequencies.</p> <p>Consider the number that you want to enter. Too high a value might push a worker into the period after the one in which you should enrol them.</p> <p>Example: You can align enrolment with pay periods or avoid enrolling short-term workers.</p>                                                                                                                                                                                                                                          |
| <b>Postponement From</b>                          | <p>If you select <b>Hire Date</b>, to postpone assessment of a worker, workers aren't assessed for enrolment until the <b>Deferral Date after Assessment/Hire</b> shown on their record in the <b>View Worker UK Pensions Auto Enrolment Details</b> report.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| <b>Pensions Auto Enrolment Qualifying Schemes</b> | <p>Define the company's retirement savings plan for pensions auto-enrolment.</p> <p>You can only select a retirement savings plan that is part of a pension auto-enrolment scheme.</p> <p>When assessing workers for pensions auto-enrolment, Workday verifies that a worker isn't already enrolled in a retirement savings plan that's designated as a company's pensions auto-enrolment scheme.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                          |

| Option | Description                                                                               |
|--------|-------------------------------------------------------------------------------------------|
|        | If you don't add a scheme, Workday can't establish a worker's current state of enrolment. |

## Steps: Set Up Pensions Re-Enrolment (UK)

### Prerequisites

Set up company pension auto-enrolment details.

### Context

Every three years you must put certain staff who have left your pension scheme back into it. You can configure Workday to re-enrol workers automatically.

### Steps

1. Access the **Maintain Company UK Pensions Re-Enrolment Details** task.  
Enter the future dates on which you must re-enrol eligible workers.  
Security: *Set Up: Payroll (Pensions) - UK* domain in the UK Payroll functional area.
2. [Select Workers for Pension Re-Enrolment](#).
3. (Optional) To manually re-enrol a worker, access the **Add Worker UK Pensions Auto Enrolment Details** task and select the worker.  
On the **Pensions Auto Enrolment Details** tab:
  - Change the **Effective Date** to today's date.
  - Select the **Re-Enrolment Date**. Workday sets the **Re-Enrolment Selection Type** to *Included (Manually)*.
 Security: *Worker Data: Payroll (Company Specific) - UK* domain in the UK Payroll functional area.

### Result

When you run the **Run Pay Calculation** task for your re-enrolment period, Workday updates all eligible workers' records to show them to be **Eligible Jobholders** and sets the **Enrol Worker** flag to yes.

### Next Steps

Complete your usual process of Benefits enrolment and creating and sending notifications.

After completing payroll for the re-enrolment period, run the **View UK Pensions Re-Enrolment Details** report to display a list of re-enrolled workers.

Security: *Worker Data: Payroll (Company Specific) - UK* domain in the UK Payroll functional area.

## Select Workers for Pension Re-Enrolment (UK)

### Prerequisites

- Set up company pension re-enrolment details.
- To include workers when you run re-enrolment, select the **Opt Out** check box on their record in the **Add Worker UK Pensions Auto Enrolment Details** task.

- Security: *Worker Data: Payroll (Company Specific)* - UK domain in the UK Payroll functional area.

## Context

You can define re-enrolment details for a company to help you comply with pensions auto-enrolment requirements.

## Steps

1. Access the **Add UK Pensions Re-Enrolment Details** task.
2. As you complete the task, consider:

| Option                       | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
|------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Re-Enrolment Date</b>     | Workday automatically enters the next date recorded in the <b>Maintain Company UK Pensions Re-Enrolment Details</b> task.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| <b>Re-Enrolment Criteria</b> | <p>For the selected <b>Pay Group</b>, choose whether or not to re-enrol workers who opted out or left a qualifying pension scheme within the past year.</p> <p><b>Note:</b> If you choose to include workers who opted out or left, and you run the re-enrolment task in advance of the actual re-enrolment date, you might have to make manual corrections.</p> <p>Example: Your re-enrolment date is in September and you run the <b>Add UK Pensions Re-Enrolment Details</b> task in early August to identify which workers will be re-enrolled. If a worker subsequently opts out in mid-August they won't be automatically re-enrolled in the September pay run.</p> |

3. Click **OK**. Workday displays a list of **Workers Selected for Re-Enrolment**.  
To exclude a worker, clear the **Select Worker for Re-Enrolment** check box. Example: When you know a worker has recently submitted their resignation.  
**Note:** If you exclude a worker and subsequently re-run the **Add UK Pensions Re-Enrolment Details** task, you must manually remove the worker again.
4. Click **OK**. Workday displays a summary of the re-enrolment details and updates the **Select Worker for Re-Enrolment** field to display **Yes** against each selected worker.
5. Click **Done**. Workday updates the selected workers' records to show they'll be re-enrolled into the pension scheme.  
**Note:** If you need to recalculate payroll, and have modified re-enrolment details such as manually including or excluding a worker, don't use Smart Calculation when recalculating payroll.

## Next Steps

Access the **View Worker UK Pensions Auto Enrolment Details** report to check that a worker will be automatically re-enrolled. When you select a worker, their record displays the:

- **Re-Enrolment Date** - as recorded in the **Maintain Company UK Pensions Re-Enrolment Details** task.
- **Re-Enrolment Selection Type** of *Included (Automatically)*.

Security: *Worker Data: Payroll (Company Specific)* - UK domain in the UK Payroll functional area.

**Note:** Workday recommends you only have 1 row containing a worker's re-enrolment information. To remove any row other than the latest details, on the **View Worker UK Pensions Auto Enrolment Details** report, select the **Pensions Auto Enrolment Details** tab. On the related actions menu of the magnifying glass, select **Worker Pensions Auto Enrolment Details > Delete**.

## Steps: Set Up Pensions Auto-Enrolment Notifications (UK)

### Prerequisites

Set up company pension auto-enrolment details.

### Context

When you run pensions auto-enrolment, you must notify workers of certain information at key events during the enrolment lifecycle. You can configure Workday to send these notifications automatically.

### Steps

1. Access the **Edit Tenant Setup - Notifications** task.

In the **Notification Delivery Settings** section:

- a. Select the **Payroll** tab.
- b. On the **UK Pensions Auto Enrolment** row, from the **Rule** prompt, select a routing rule that enables *Email* as a channel and *Immediately* as the email channel frequency.

Security: *Set Up: Tenant Setup - BP and Notifications* domain in the System functional area.

2. [Create Email Templates](#).

Create a template using each of these email template behaviors:

- UK Pensions Auto Enrolment – Automatic Enrolment
- UK Pensions Auto Enrolment – Automatic Re-enrolment
- UK Pensions Auto Enrolment – Postponement
- UK Pensions Auto Enrolment – Right to Opt In or Join

3. Access the **Edit UK Employer Reference Details** task.

From the **Email Destination Configuration** prompt, select 1 or more email addresses to send notifications to.

When you select more than 1 address, Workday sends an email notification to each address, using this order of precedence:

- The worker's primary work email.
- The worker's primary home email.
- The **Administration Email Address**.

Security: *Set Up: Payroll UK* domain in the UK Payroll functional area.

### Result

You can use the **Create UK Pensions Auto Enrolment Notifications** task to generate notifications.

Security: *Process: Pensions Auto Enrolment Notifications - UK* domain in the UK Payroll functional area.

### Next Steps

Access the **Send UK Pensions Auto Enrolment Notifications** task to distribute notifications to workers.

If you select one or more **Workers**, and select the **Exclude Workers** check box, Workday creates a notification for all workers in the **Pay Group** except those you selected.

Security: *Process: Pensions Auto Enrolment Notifications - UK* domain in the UK Payroll functional area.

**Related Information****Reference**

[Reference: Edit Tenant Setup - Notifications](#)

**Concept: Pensions Auto-Enrolment (UK)**

You, as an employer, must enrol eligible workers into a workplace pension scheme automatically, without any action from the worker.

You can create passive events to identify and enrol eligible workers.

**Types of Passive Events to Create**

Workday recommends that you set up 3 passive events, each with its own benefit eligibility rules, to identify:

- New hires.
- Rehired workers.
- Workers who must, or want to, re-enrol in the pension.

**Frequency of Running Passive Events**

When you first create a passive event, run it manually to test it. Then, you can add a To Do reminder to the *Pay Cycle Event* business process after the **Run Pay Complete** task.

Run all of your passive events after you complete payroll and before you carry out any other payroll processing.

**Related Information****Tasks**

[Steps: Set Up Passive Events](#)

**Example: Set Up Retirement Savings Plans for Auto-Enrolment Schemes (UK)**

This example illustrates how to set up retirement savings plans for auto-enrolment pension schemes.

**Context**

Global Modern Services (GMS) regularly assesses and enrolls workers in pension schemes according to the UK pensions auto-enrolment legislation.

As the payroll administrator, you need to work with the GMS benefits administrator to create retirement savings plans in accordance with the legislation.

**Prerequisites**

- Create:
  - A benefit provider named *Standard Pension*.
  - A benefit group named *Active Employees in U.K.*
  - 2 deductions or negative earnings named *Pension Contribution - Employee* and *Pension Contribution - Employer*, which are:
    - Based on the values in the *GBR Pen AE: Earnings Thresholds [GBR]* lookup table.
    - Eligible for employees enrolled in a pensions auto-enrolment benefit plan.
- Security: *Set Up: Benefits* domain in the Benefits functional area.

## Steps

1. Create a benefit plan eligibility rule that limits benefit plans to workers who Workday assesses as eligible for pensions auto-enrolment in completed payroll results.
  - a) Access the **Create Benefit Eligibility Rule** task.
  - b) Select the *Benefit Plan Eligibility Rule* option.
  - c) In the **Description** field, enter Auto Enrolment Eligibility.
  - d) In the **Rule Conditions** grid, add a row with these settings:

| And/Or     | Source External Field or Condition Rule             | Relational Operator | Comparison Type                       | Comparison Value |
|------------|-----------------------------------------------------|---------------------|---------------------------------------|------------------|
| <i>And</i> | <i>GBR Pen AE: Assessment Result - Enrol Worker</i> | <i>equal to</i>     | <i>Value specified in this filter</i> | 1                |

The benefit plan eligibility must match the eligibility of the related pension contributions (earnings or deductions), to select the same group of workers.

2. Create a retirement savings plan for the pension auto-enrolment scheme.
  - a) Access the **Create Benefit Plan** task.
  - b) Complete these settings:

| Option                   | Setting                                 |
|--------------------------|-----------------------------------------|
| <b>Effective Date</b>    | Enter today's date.                     |
| <b>Benefit Provider</b>  | Select <i>Standard Pension</i> .        |
| <b>Benefit Plan Type</b> | Select <i>Retirement Savings Plan</i> . |

- c) Click **OK**.
- d) Complete these settings:

| Option                                  | Setting                                                                                                                                              |
|-----------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Retirement Savings Coverage Type</b> | Select <i>Pension</i> .                                                                                                                              |
| <b>Benefit Plan Name</b>                | Enter Auto Enrolment.                                                                                                                                |
| <b>Participating Benefit Groups</b>     | Select <i>Active Employees in U.K.</i>                                                                                                               |
| <b>Worker Plan Eligibility</b>          | Select <i>Auto Enrolment Eligibility</i> .                                                                                                           |
| <b>Frequency</b>                        | Select <i>Monthly</i> .                                                                                                                              |
| <b>Earnings and Deductions</b>          | Select: <ul style="list-style-type: none"> <li>• <i>Pension Contribution - Employee</i></li> <li>• <i>Pension Contribution - Employer</i></li> </ul> |

**Note:** Leave the **Auto Enroll** field empty.

- e) Define the contribution percentages or amounts in the **Employee** and **Employer Contribution** sections.

3. Edit the benefit plan eligibility rule to enable workers who Workday automatically enrolls in the benefit plan to opt out.
  - a) Access the **Edit Benefit Eligibility Rule** task and select *Auto Enrolment Eligibility*.
  - b) In the **Rule Conditions** grid, add a row with these settings:

| And/Or | Source External Field or Condition Rule | Relational Operator      | Comparison Type                | Comparison Value                          |
|--------|-----------------------------------------|--------------------------|--------------------------------|-------------------------------------------|
| Or     | Benefit Plans - Currently Enrolled      | any in the selected list | Value specified in this filter | Pension - Standard Pension Auto Enrolment |

4. Add the benefit plan to the benefit plan year definition for the current year.
  - a) Access the **Edit Benefit Plan Year Definition** task for the definition that covers the current year.
  - b) On the **Retirement Savings Plans** tab, select *Pension - Standard Pension Auto Enrolment*.

## Result

The benefits administrator can now enrol any workers eligible for pensions auto-enrolment in an appropriate retirement savings plan.

## Next Steps

- Map the *Pension Contribution - Employee* and *Pension Contribution - Employer Type* deductions to the *Pension - Standard Pension Auto Enrolment* benefit plan.
- Set up a passive event to automatically enrol workers who are eligible for pensions auto-enrolment.

## Example: Set Up a Passive Event for Pension Auto-Enrolment (UK)

This example illustrates how to configure Workday, using a passive event, to automatically enrol workers in a retirement savings plan when they reach eligibility.

## Context

Global Modern Services must regularly assess and enrol workers in a pension scheme, according to UK pensions auto-enrolment legislation.

You, as the payroll administrator, work with the benefits administrator to set up a process that enrolls eligible workers in the retirement savings plan. You create a passive event process so that Workday automatically enrolls the workers.

## Prerequisites

Set up a retirement savings plan for auto-enrolment, including:

- A benefit group named *Active Employees in U.K.*
- A benefit eligibility rule named *Benefit Plan Eligibility Rule*.

## Steps

1. Set up a benefit event type that identifies when a worker is eligible for pension auto-enrolment.
  - a) Access the **Create Benefit Event Type** task.
  - b) Configure these settings:

| Option                                      | Description                 |
|---------------------------------------------|-----------------------------|
| <b>Name</b>                                 | <i>Auto Enrolment Event</i> |
| <b>Enrollment Offering Type</b>             | <i>Pension</i>              |
| <b>Route Enrollment to Benefits Partner</b> | Select the check box.       |
| <b>Days to Enroll Calculation</b>           | <i>Event Date</i>           |
| <b>Days to Enroll</b>                       | 2                           |

2. Create a passive event rule for auto-enrolment eligibility.
  - a) Access the **Create Passive Event Rule** task.
  - b) Configure these settings:

| Option                          | Description                       |
|---------------------------------|-----------------------------------|
| <b>Name</b>                     | <i>Auto Enrolment</i>             |
| <b>Benefit Event Type</b>       | <i>Auto Enrolment Event</i>       |
| <b>Benefit Eligibility Rule</b> | <i>Auto Enrolment Eligibility</i> |
| <b>Benefit Group</b>            | <i>Active Employees in U.K.</i>   |

3. Schedule the passive event.
  - a) Access the **Schedule Passive Events** task.
  - b) Configure these settings:

| Option                         | Description             |
|--------------------------------|-------------------------|
| <b>Run Frequency</b>           | Select <b>Run Now</b> . |
| <b>Request Name</b>            | <i>Auto Enrolment</i>   |
| <b>Passive Event Rules</b>     | <i>Auto Enrolment</i>   |
| <b>Generate Passive Events</b> | Select the check box.   |

## Result

After you calculate and complete payroll, Workday identifies workers eligible for pensions auto-enrolment and automatically enrolls them in the retirement savings plan.

Troubleshooting: Worker Not Assessed During Pension Auto-Enrolment (UK)

**Cause:** Personal information is missing from a worker's record.

**Solution:**

**Steps**

- 1. Access the **Edit Personal Information** task.  
Enter the worker's **Gender** and **Date of Birth**. Workday uses these fields to determine the worker's date of retirement.  
  
If you don't have permission to access this task, work with your HR administrator to amend the worker's record.  
  
Security: *Personal Information Change* business process.
- 2. Access the **Run Pay Calculation** task.  
In the **Employees to Calculate** area, select the **Workers** to assess for auto-enrolment.  
Security: *Process: Run Batch Calculations (Pay Calculation)* domain in the Core Payroll functional area
- 3. Run the **View Worker UK Pensions Auto Enrolment Details** report to verify the worker's been assessed.  
Security: *Worker Data: Payroll (Company Specific) - UK* domain in the UK Payroll functional area

## Map Staffing Information to Payroll Calculations (FRA)

### Map Staffing Information to Payroll Calculations (FRA)

#### Prerequisites

Set up:

- Collective agreement factor options.
- Disability types.
- Employee types.
- Employee contract types.
- Employee contract reasons.
- Local termination reasons.

Security: *Setup Payroll - FRA* domain in the FRA Payroll functional area.

#### Context

Workday Payroll for France provides payroll calculations and DSN reporting configurations that enable you to calculate and report statutory contributions according to French regulations.

To enable Workday to identify the appropriate calculations and reporting for each worker, you can map staffing information such as contract or employee types to DSN rubric values.

Example: When you map the employee type for trainees to the DSN rubric value *Trainee/Internship*, Workday:

- Calculates worker contributions based on the Workday-owned earnings for trainees.
- Includes information about the trainee's pay in the appropriate rubrics in a DSN report.

#### Steps

1. Access the **Maintain HCM Mapping for Payroll France** task.
2. Select a rubric in the left pane.
3. As you complete the task, consider:

| Option                 | Description                                                                  |
|------------------------|------------------------------------------------------------------------------|
| <b>Values from HCM</b> | Select the staff information value that corresponds to the DSN rubric value. |

| Option | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
|--------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|        | <p>For rubric categories:</p> <ul style="list-style-type: none"> <li>• <i>S21.G00.40.002 - Employee Status (Collective Agreement)</i>: Select a professional category collective agreement factor option.</li> <li>• <i>S21.G00.40.007 - Contract type</i>: Select an employee type.</li> <li>• <i>S21.G00.40.008 - Public Policy</i>: Select an employee contract type.</li> <li>• <i>S21.G00.40.021 - Pôle Emploi Fixed Term Contract Usage</i>: Select an employee contract reason.</li> <li>• <i>S21.G00.40.72 - BOETH Status</i>: Select a disability type.</li> <li>• <i>S21.G00.62.002 - Termination Reason</i>: Select a local termination reason.</li> </ul> <p>You can select multiple HCM values for 1 rubric value, but you can only map each HCM value once.</p> <p>Example: You can select HCM values <i>Permanent (CDI)</i> and <i>Regular</i> for DSN Rubric value <i>01 - Unlimited Contract</i>. You can't map <i>Permanent (CDI)</i> to both <i>01 - Unlimited Contract</i> and <i>09 - Public Law - Unlimited Contract</i>.</p> |

## Result

When processing payroll, Workday uses the defined mapping to:

- Run specific payroll calculations for a worker.
- Fill these rubrics in a DSN report:
  - S21.G00.40.002
  - S21.G00.40.007
  - S21.G00.40.008
  - S21.G00.40.021
  - S21.G00.40.72
  - S21.G00.62.002

[Steps: Set Up Disability Tracking](#)

## Concept: HCM Mapping for Payroll (FRA)

To determine which preconfigured payroll calculations apply to which workers, you must map customer-owned staffing information to Workday-owned DSN rubric values. Workday then maps the rubric values to preconfigured payroll elements.

### Example of Mapping Impacts

When you map the employee contract type of *Permanent (CDI)* to the DSN rubric *01 - Unlimited Contract*, it's linked to the *Severance Legal Indemnity (FRA)* earning. Eligibility criteria for the earning is based on the *FRA Contract Type Equal to Unlimited Contract* instance set comparison calculation.

When you terminate a worker, Workday calculates a legal severance indemnity only if the worker has a contract type of *Permanent (CDI)*.

### Delivered Report Fields

Workday delivers a report field for each type of data that you need to map (Example: contract type).

You can use the report field when creating:

- Reports to retrieve results of payroll mapping.
- Instance set comparison calculations for pay component eligibility.

| Staffing Data                              | Report Field                                                                              |
|--------------------------------------------|-------------------------------------------------------------------------------------------|
| Employee type                              | <b>FRA Worker: Contract Type as of Sub-Period End Date</b>                                |
| Employee contract type                     | <b>FRA Worker: Public Policy as of Sub-Period End Date</b>                                |
| Employee contract reason                   | <b>FRA Worker: Pôle Emploi Fixed Term Contract Usage Reason as of Sub-Period End Date</b> |
| Local termination reason                   | <b>FRA Worker: Termination Reasons as of Sub-Period End Date</b>                          |
| Collective agreement professional category | <b>Collective Agreement Professional Category as of Sub Period End Date</b>               |

## Pay Advances (FRA)

### Example: Set Up Pay Advances (FRA)

This example illustrates how to enable workers to request and receive pay advances through Workday.

#### Context

Global Modern Services allows employees to request payroll advances, which are all paid on the 15th of every month. Global Modern Services then deducts the repayment amount from workers' salaries in the regular pay run at the end of the month. Julie, the payroll administrator wants to set up Workday to:

- Manage the request and approval of payroll advances.
- Process the payment and repayment of the advances.

To manage advances outside of the regular payroll run Julie will use:

- A separate payroll period schedule with the payment dates of the advances.
- A run category to only process workers with approved advance requests.

#### Prerequisites

Security: *Set Up: Payroll - Pay Group Specific* domain in the Core Payroll functional area.

## Steps

1. Configure the *Payroll Advance* business process and security policy in the FRA Payroll functional area.
2. Create a payroll period schedule for the payment of the advances.
  - a) Access the **Create Period Schedule**.
  - b) Enter these settings:

| Option    | Value          |
|-----------|----------------|
| Name      | Advance Period |
| Frequency | Monthly        |
| Usage     | Payroll        |

- c) In the **Period** grid, add a row for each month with these settings:

| Option               | Value                                                           |
|----------------------|-----------------------------------------------------------------|
| Period Start Date    | January 16, or the 16th of the month preceding the pay advance. |
| Period End Date      | February 15, or the 15th of the month of the pay advance.       |
| Payroll Payment Date | February 15, or the 15th of the month of the pay advance.       |

3. Create a run category to pay approved advance requests.

- a) Access the **Create Run Category** task.
- b) Enter these settings:

| Option               | Value                |
|----------------------|----------------------|
| Name                 | Advance              |
| Regular Run Category | Clear the check box. |

- c) To only process workers with an approved pay advance, add a row to the **Workers to Process** grid, with these settings:

| Option             | Value               |
|--------------------|---------------------|
| Status             | Active              |
| Selection Criteria | Advance Payment > 0 |

- d) Enter these settings in the **Gross/Net** section:

| Option                 | Value                                |
|------------------------|--------------------------------------|
| Gross Pay Accumulation | FRA Advance Gross Accumulation [FRA] |
| Net Pay Accumulation   | FRA Advance Net Accumulation [FRA]   |

4. Add the run category and period schedule to the pay group used for the regular pay run.
  - a) Access the **View Pay Group** report and select **Organization > Edit Organization** from the related actions menu of the pay group used for the regular payroll run.
  - b) Add a row with these settings to the **Pay Group Details** grid:

| Option       | Value   |
|--------------|---------|
| Run Category | Advance |

| Option          | Value                 |
|-----------------|-----------------------|
| Period Schedule | <i>Advance Period</i> |

## Result

Workers can access the **Request Advance** task to request a salary advance. Julie can also directly record approved requests for a worker.

When a worker requests multiple advances for the same period, Workday pays 1 payment that is the sum of the different payment amounts.

## Next Steps

To process:

- The payment of advances, run a pay calculation for the advance pay run category.
- The repayment of advance requests, runs a pay calculation with the regular run category.

[Set Up Payroll and Time Tracking Period Schedules](#) on page 149

[Steps: Set Up Pay Run Categories](#) on page 98

## Approve Pay Advances (FRA)

### Prerequisites

Configure the *Payroll Advance* business process and security policy in the FRA Payroll functional area.

### Context

If you have set up pay advances, Workers can use the **Request Advance** task to make a request. When a worker makes a request, you can approve and complete the request. You can also record a preapproved advance request.

### Steps

1. Enter an approval for a pay advance:

- To review and approve a request made by a worker in Workday, use the advance request in **My Tasks**.
- To record a preapproved request made by a worker outside of Workday, select **Payroll > Record Advance** from the worker's related actions menu.

2. As you complete the task, consider:

| Option                  | Description                                                                                                                            |
|-------------------------|----------------------------------------------------------------------------------------------------------------------------------------|
| <b>Amount</b>           | Enter the amount of the advance.                                                                                                       |
| <b>Payment Period</b>   | (Optional) To pay the advance as part of payroll, select a period from your advance period schedule.                                   |
| <b>Repayment Period</b> | Select a period from your regular period schedule. Workday deducts the advance repayment from the worker's pay in the selected period. |

## Result

After you calculate, complete, and settle payroll, Workday pays or deducts the approved advance payments for the period. If the worker has multiple subperiods in a payroll period, Workday pays or deducts the entire payment in the first subperiod.

As part of the settlement process, Workday provides the option to print a payment advice.

## Security Domains (FRA)

---

### Create Security Domains (FRA)

#### Prerequisites

Security: *Security Configuration* domain in the System functional area.

#### Context

A security policy secures the items in a domain. Before you can configure security, enable the security policies for the secured items you want to provide access to, like BPIJ.

#### Steps

1. Access the **Create Security Policy for Domain** task.

As you complete the task, consider:

| Option            | Description           |
|-------------------|-----------------------|
| <b>For Domain</b> | Select a domain.      |
| <b>Confirm</b>    | Select the check box. |

2. In the **Report/Task Permissions** grid, add users and check **View** and **Modify** to give those users the rights to View and Modify tasks and reports in the domain.
3. In the **Integration Permissions** grid, add users and check **Get** and **Put**.  
Workday recommends you allocate Integration Permissions to a limited number of users.
4. Access the **Activate Pending Security Policy Changes** task.  
Confirm the security domain changes.

#### Example

This example illustrates the security domains you need to enable for BPIJ.

By enabling security domains for:

- *Process: BPIJ (Integration)*, you can specify the employees who have access to BPIJ machine to machine integration. Users with this type of access sometimes need **Integrations Permissions**.
- *Process: BPIJ (Run)*, you can specify the employees who can run BPIJ-related reports to confirm IJ information. Users with this type of access require **Report/Task Permissions**.

#### Related Information

##### Tasks

[Steps: Set Up BPIJ \(Machine to Machine\) Integration \(FRA\)](#) on page 1690

## Loans (FRA)

### Steps: Set Up Loans (FRA)

#### Context

You can enable a worker to receive and repay a loan through the payroll department.

**Note:** For an enhanced user experience and additional capabilities, Workday recommends that you use the Flexible Payment and Deduction Options solution to manage workers' loan requests and repayments. See [Steps: Set Up Flexible Payment and Deduction Options](#).

#### Steps

1. Access the **Create Deduction** task.

Create a deduction for loan repayment with these settings:

| Option             | Description                                                                                                                                                                                                                                                                                                                                                                                 |
|--------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Country            | <i>France</i>                                                                                                                                                                                                                                                                                                                                                                               |
| Worker Eligibility | <i>Loan Repayment &gt; 0</i>                                                                                                                                                                                                                                                                                                                                                                |
| Calculation        | Select: <ul style="list-style-type: none"> <li>• <i>Loan Repayment</i> to deduct an amount based on the worker's loan repayment schedule.</li> <li>• A custom calculation to deduct a different amount. Example: You can create a conditional calculation to deduct the loan repayment amount for active workers, and the total loan outstanding balance for terminated workers.</li> </ul> |

Optionally add a row to the **Related Calculations** grid to display additional loan details in the payroll results. Example: From the **Override Calculation** prompt, select *FRA Loan Outstanding Balance* to display the value of the outstanding balance before repayment.

On the **Non-Effective Dated** tab, select the pay component group to which the loan repayment belongs. Example: *FRA Subtracts from Net [FRA]*.

Security: *Set Up Payroll (Calculations - Payroll Specific)* security policy in the Core Payroll functional area.

2. (Optional) Access the **Create Earning** task.

Create an earning for loan payment with these settings:

| Option             | Description                |
|--------------------|----------------------------|
| Country            | <i>France</i>              |
| Worker Eligibility | <i>Loan Payment &gt; 0</i> |
| Calculation        | <i>Loan Payment</i>        |

| Option        | Description                                                                                                 |
|---------------|-------------------------------------------------------------------------------------------------------------|
| <b>Groups</b> | Select the pay component group to which the loan repayment belongs. Example: <i>FRA Adds to Net [FRA]</i> . |

Security: *Set Up: Payroll (Calculations - Payroll Specific)* security policy in the Core Payroll functional area.

### 3. Access the **Maintain Loan Configuration** task.

As you complete the task, consider:

| Option                               | Description                                                                                                              |
|--------------------------------------|--------------------------------------------------------------------------------------------------------------------------|
| <b>Interest Rate</b>                 | Select to indicate that a payroll partner must define an interest rate and interest amount when approving loan requests. |
| <b>Allow Only One Active Request</b> | Select to indicate that a worker can't request a new loan if they have a request or in progress loan of the same type.   |

Security: *Set Up: Payroll - FRA* domain in the FRA Payroll functional area.

### 4. Set up security for how you want to manage loan requests:

- Configure the *Request Loan* business process and security policy in the FRA Payroll functional area for worker self-service loan requests.
- Configure the *Worker Data: Payroll (Company Specific) - FRA* domain in the FRA Payroll functional area for loans requested outside of Workday.

## Result

If you set up the *Request Loan* business process, workers can request a loan by accessing the **Request Loan** task.

## Next Steps

Approve a loan request and define the loan repayment schedule.

### Tasks

[Steps: Create Deductions](#) on page 227

[Steps: Create Earnings](#) on page 222

### Examples

[Example: Deduct Loan Outstanding Balance for Terminated Workers \(FRA\)](#) on page 1520

## Record or Complete Approved Loan Requests (FRA)

### Prerequisites

- Security: *Worker Data: Payroll (Company Specific) - FRA* domain in the FRA Payroll functional area for loans requested outside of Workday.
- Configure the *Request Loan* business process and security policy in the FRA Payroll functional area for worker self-service loan requests.

## Context

You can approve a loan request made by a worker through self-service or record an approved loan request made outside of Workday.

When approving a loan, you can define the characteristics of the granted loan such as the repayment schedule, the interest rate, and the amount.

## Steps

1. Enter an approval for a loan request:

- To record an approved loan request made by a worker outside of Workday, select **Payroll > Record Loan** from the worker's related actions menu.
- To review and approve a request made by a worker in Workday, access the loan request in **My Tasks**.

The worker must belong to a pay group with a country that has a defined loan configuration.

2. As you complete the **Record Payroll Loan for Worker** task, consider:

| Option                           | Description                                                                                                                                                                                              |
|----------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Default Currency</b>          | The currency of the worker's pay group.                                                                                                                                                                  |
| <b>Period to Pay Loan</b>        | Select the period in which the worker receives the loan.                                                                                                                                                 |
| <b>Amount</b>                    | Enter the loan amount.                                                                                                                                                                                   |
| <b>Interest Rate Amount</b>      | Enter the interest rate, if applicable.                                                                                                                                                                  |
| <b>Total Interest Amount Due</b> | Enter the interest amount for a loan that accrues interest.. Workday includes this amount in the displayed loan balance.                                                                                 |
| <b>Period to Repay Loan</b>      | Select the pay period in which the worker repays the loan.                                                                                                                                               |
| <b>Periodic Amount</b>           | Enter the amount deducted from the worker's salary at each period. To create a repayment schedule with varying repayment amounts, complete the loan request and then update the loan repayment schedule. |

## Next Steps

View all loans for a worker by selecting **Payroll > View Loans** from the worker's related actions menu.

## Update Loan Balances or Repayment Schedules (FRA)

### Prerequisites

Security: *Worker Data: Payroll (Company Specific)* - FRA domain in the FRA Payroll functional area.

## Context

You can update the balance of an existing loan for a worker to:

- Increase it if the worker has borrowed additional funds.
- Decrease it if the worker has made loan repayments outside of payroll.

You can also set up an amortizing schedule that varies for each month.

## Steps

1. From the related actions menu of a worker's loan, select **Payroll > Edit**.
2. As you complete the task, consider:

| Scenario                                                    | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
|-------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Increase the loan balance when a worker borrows more funds. | <p>In the <b>Payment</b> grid, enter the additional amount borrowed in the <b>Amount</b> field, and indicate a <b>Repayment Start Date</b>.</p> <p>Example: If a worker's current loan balance is 500 EUR, enter an <b>Amount</b> of 200 EUR to change the loan balance to 700 EUR.</p> <p>When you edit a loan, Workday immediately updates the payroll loan balance, but doesn't deduct payments for the additional amount until the <b>Repayment Start Date</b>. Example: A worker repays the previous loan balance before the start of the additional payment <b>Repayment Start Date</b>. Workday stops the period repayment amounts until the repayment start date of the additional payment.</p> |
| Change the loan balance after a repayment.                  | <p>In the <b>Payment</b> grid, enter a negative <b>Amount</b>, and leave the other fields blank.</p> <p>Workday immediately updates the loan balance and uses it in the current pay period.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| Modify the loan repayment schedule.                         | <p>In the <b>Repayment</b> grid, complete these fields:</p> <ul style="list-style-type: none"> <li>• Select the period when the new period repayment amount applies from the <b>Period to Repay Loan</b> prompt.</li> <li>• Enter the amount to be deducted from the worker pay in the <b>Periodic Amount</b> field.</li> </ul> <p>Workday continues to apply the periodic amount for all subsequent periods until you define a new amount the worker repays the loan.</p>                                                                                                                                                                                                                              |

## Example

Carol has a loan of 1200 EUR. In the **Repayment** section of the loan record, define a repayment schedule of 400 EUR per month. The repayment starts in June, and switches to 200 EUR per month in August:

| Period to Repay Loan | Periodic Amount |
|----------------------|-----------------|
| June                 | 400             |
| August               | 200             |

In June, Carol pays 200 EUR by personal check. When you receive the personal check, you enter an amount in the **Payment** section of the loan record.

| Period to Pay Loan | Amount | Repayment Start Date |
|--------------------|--------|----------------------|
| May                | 1200   | June                 |

| Period to Pay Loan | Amount | Repayment Start Date |
|--------------------|--------|----------------------|
|                    | -200   |                      |

In July, Global Modern Services grants Carol an additional payment of 150 EUR with a **Repayment Start Date** of September. The new payment doesn't modify the defined repayment period amounts.

During payroll calculations, Workday calculates these loan repayments for Carol:

| Payroll Period | Active Loan Balance Before Payroll (EUR) | Repayment Amount (EUR) | Nonactive Balance (EUR)       |
|----------------|------------------------------------------|------------------------|-------------------------------|
| June           | 1000                                     | 400                    |                               |
| July           | 600                                      | 400                    | 150 (starting from September) |
| August         | 200                                      | 200                    | 150 (starting from September) |
| September      | 150                                      | 150                    | 0                             |

### Next Steps

To view the payment and deduction history for a worker's loan, select **Payroll Loan > View History** from the related actions menu of the loan.

## Example: Deduct Loan Outstanding Balance for Terminated Workers (FRA)

This example illustrates how to create a deduction for a worker's remaining loan balance in the period they're terminated.

### Context

You've created an existing deduction for loan repayments for workers with loans based on the worker's loan repayment schedule. For terminated workers, instead of deducting the loan repayment amount, you want to automatically deduct the total remaining balance in the period of termination.

### Prerequisites

Security:

- *Set Up: Payroll (Calculations - Payroll Specific)* in the Core Payroll functional area.
- *Set Up: Time Off (Calculations - Generic)* domain in the Time Off and Leave functional area.

### Steps

1. Access the **Create Conditional Calculation** task.
2. Enter these values:

| Field           | Value                                                     |
|-----------------|-----------------------------------------------------------|
| <b>Name</b>     | Loan Repayment (Balance Repayment for Terminated Workers) |
| <b>Category</b> | <i>Payroll</i>                                            |

3. In the **Conditional Calculations** grid, enter these values:

| Calculation                                           | Result                              |
|-------------------------------------------------------|-------------------------------------|
| <i>Worker is Terminated as of Sub Period End Date</i> | <i>FRA Loan Outstanding Balance</i> |

4. From the **Default Response** prompt, select *Loan Repayment*.
5. Access the **Edit Deduction** task for the deduction you use for loan repayments.
6. In the **Calculation** prompt, replace your existing calculation with *Loan Repayment (Balance Repayment for Terminated Workers)*.

## Termination Allowances (FRA)

### Steps: Set Up Termination Allowance Taxation (FRA)

#### Prerequisites

Security: *Set Up Payroll (Calculations - Payroll Specific)* domain in the Core Payroll functional area.

#### Context

You can use Workday to calculate income tax and social contributions for these types of termination allowances:

- Mutual agreements.
- Legal/conventional allowances.
- Retirement at the employer's instigation.
- Supra-legal allowances.

#### Steps

1. Create earnings for each type of termination allowance.

See [Example: Set Up Severance Allowances Based on the Legal Requirement \(FRA\)](#) on page 1523.

Workday delivers the *IND Fixed Term Contract Allowance [FRA]* earning for legal termination allowances for fixed-term contracts.

2. Access the **Edit Earning** task for each earning that represents a termination allowance.

On the **Non-Effective Dated** tab, select the appropriate pay component group from the **Groups** prompt to identify the type of termination allowance.

| Pay Component Group                                                | Description                                                                                                                                                                                                                                                                                                                                                            |
|--------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <i>FRA Adds to Total Severance Allowance Paid [FRA]</i>            | <p>Applies to all termination allowances that are partially liable to taxes and contributions.</p> <p>For each earning associated with this pay component group, Workday:</p> <ul style="list-style-type: none"> <li>• Calculates the taxable portion of the termination allowance.</li> <li>• Includes the taxable portion in the applicable taxable base.</li> </ul> |
| <i>FRA Adds to Legal or Conventional Severance Allowance [FRA]</i> | Workday uses the amounts associated with this pay component group to calculate exemption limits for termination allowances.                                                                                                                                                                                                                                            |

| Pay Component Group                                                                                | Description                                                                                                                                                                                                                                                                                                                                                                                                           |
|----------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <i>FRA Adds to Retirement Allowance at the Employer's Instigation [FRA]</i>                        | <p>Identifies termination allowances for retirement at the employer's instigation. Workday applies specific URSSAF contributions to these types of termination allowances.</p> <p>This is required for on-demand payments in a prior period related to a payroll period before 2023-09-01.</p> <p>Workday applies the appropriate taxation rules through the <i>Memo – Severance Allowances Taxation</i> earning.</p> |
| <i>FRA Adds to Total Severance Allowance paid for Social Lump Sum 20% [FRA]</i>                    | Applies to payments for terminations by mutual consent.                                                                                                                                                                                                                                                                                                                                                               |
| <i>FRA Adds to Severance Allowance for Specific Employer Contribution at 30% Calculation [FRA]</i> | <p>Applies to termination allowances that represent the full value of a mutually agreed termination. This amount isn't configured in the <i>FRA Adds to Specific Employer Contribution 30%</i> pay component group.</p> <p>Workday applies the appropriate taxation rules through the <i>Memo – Severance Allowances Taxation</i> earning.</p>                                                                        |
| <i>FRA Adds to Specific Employer Contribution 30% [FRA]</i>                                        | <p>Represents only the indemnity portion submitted when the specific employer contribution is 30%. This amount isn't configured in the <i>FRA Adds to Severance Allowance for Specific Employer Contribution at 30% Calculation</i> pay component group.</p> <p>You need to precalculate the portion submitted to contributions for this pay component group.</p>                                                     |
| <i>FRA End of Contract by Mutual Agreement when Eligible for Retirement [FRA]</i>                  | <p>Identifies workers who are eligible for retirement and accept a mutually agreed end of contract. Add only payments directly related to severance to this pay component group.</p> <p>Workday applies the appropriate taxation rules through the <i>Memo – Severance Allowances Taxation</i> earning.</p>                                                                                                           |

**Note:** Workday recommends creating a new earning pay component to replace earnings before 2023-08-31 for the pay component groups associated with mutually agreed termination.

For termination allowances that are split into successive payments, Workday:

- Includes previous payments when calculating income tax or social contribution exemptions.
- Uses only the monthly payment amount when calculating the amount subject to contributions or taxation.

### Next Steps

Run a payroll calculation, and then access the **Gross to Net** tab of a worker's payroll results. Review the **Related Values** for the *Memo - Severance Allowances Taxation [FRA]* earning to verify:

- Amounts subject to taxes and contributions.
- Exemption amounts.
- Legal and conventional amounts.

##### Reference

[FAQ: Fixed-Term Contracts \(FRA\)](#) on page 1529

## Example: Set Up Severance Allowances Based on the Legal Requirement (FRA)

This example illustrates how to create the minimum legal severance indemnity for a worker with an unlimited contract.

### Context

You need to pay the legal severance amount to terminated workers with unlimited contracts.

### Prerequisites

- Map local termination reasons and employee types to payroll calculations.
- Define the worker's seniority start date, if different from the hire date.
- If applicable, define the notice period for the worker's termination.
- Define which absences freeze seniority accrual.

### Steps

1. Access the **Edit Earning** task to exclude earnings from the full-time equivalent (FTE) reference taxable wages used in the severance allowance calculation.

On the **Non-Effective Dated** tab, from the **Groups** prompt, select the appropriate pay component group to exclude or include the earnings in the FTE reference taxable wages.

See [Concept: Reference Wages for Severance Allowances \(FRA\)](#) on page 1524.

Security: *Set Up: Payroll (Calculations - Payroll Specific)* domain in the Core Payroll functional area.

2. Access the **Create Value Comparison Calculation** task.

Enter these values:

| Option             | Value                                                      |
|--------------------|------------------------------------------------------------|
| <b>Name</b>        | Severance Amount Not 0                                     |
| <b>Category</b>    | <i>Payroll</i>                                             |
| <b>1st Operand</b> | <i>Severance Legal Indemnity [FRA] - Considered Amount</i> |
| <b>Operator</b>    | <i>not equal to</i>                                        |
| <b>2nd Operand</b> | <i>0</i>                                                   |

Security:

- *Set Up: Payroll (Calculations - Payroll Specific)* domain in the Core Payroll functional area.
- *Set Up: Time Off (Calculations - Generic)* domain in the Time Off and Leave functional area.

**3. Access the Create Earning task.**

Create an earning with these settings:

| Option                    | Value                                                                        |
|---------------------------|------------------------------------------------------------------------------|
| <b>Name</b>               | Severance allowance                                                          |
| <b>Worker Eligibility</b> | <i>Severance Amount Not 0</i>                                                |
| <b>Calculation</b>        | <i>Severance Legal Indemnity [FRA] - Considered Amount</i>                   |
| <b>Groups</b>             | On the <b>Non-Effective Dated</b> tab, select <i>FRA Adds to Net [FRA]</i> . |

Security: Set Up: Payroll (Calculations - Payroll Specific) domain in the Core Payroll functional area.

**Result**

You have configured severance allowances based on the legal amount. When you calculate pay results, Workday includes severance allowances for eligible workers in the payroll period of their termination.

**Related Information****Tasks**

[Map Staffing Information to Payroll Calculations \(FRA\)](#) on page 1510

**Examples**

[Example: Exclude Full Day Absences from Seniority Calculations \(FRA\)](#) on page 1528

**Concept: Reference Wages for Severance Allowances (FRA)**

To calculate a severance allowance, Workday calculates an average of the worker's full-time equivalent (FTE) taxable wages during the:

- Past 3 months before the notification date.
- Past 8 to 12 months before the notification date, depending on the available wages.

**Pay Component Groups**

Before setting up severance allowances, you can define which earnings to include in the referenced taxable wages. In addition to the worker's gross wages, Workday uses these pay component groups to determine the FTE taxable wages.

| Pay Component Group                                                                                                                 | Impacts 12-month FTE taxable wages | Impacts 3-month FTE taxable wages |
|-------------------------------------------------------------------------------------------------------------------------------------|------------------------------------|-----------------------------------|
| <i>FRA Adds to FTE 3 Months Taxable Wages Average [FRA]</i>                                                                         |                                    | X                                 |
| <i>FRA Bonuses with a Semi Yearly Frequency to be Subtracted from Taxable Wages for 3 Months Severance Reference Taxable Wages</i>  |                                    | X                                 |
| <i>FRA Bonuses with a Yearly Frequency to be Subtracted from Taxable Wages for 3 Months Severance Reference Taxable Wages [FRA]</i> |                                    | X                                 |

| Pay Component Group                                                                                                              | Impacts 12-month FTE taxable wages | Impacts 3-month FTE taxable wages |
|----------------------------------------------------------------------------------------------------------------------------------|------------------------------------|-----------------------------------|
| <i>FRA Bonuses with Other Frequency to be Subtracted from Taxable Wages for 3 Months Severance Reference Taxable Wages [FRA]</i> |                                    | X                                 |
| <i>FRA FTE Unprorated Payroll Variables to be Subtracted from Severance Reference Taxable Wages [FRA]</i>                        | X                                  | X                                 |
| <i>FRA Subtracts from Both Reference Taxable Wages [FRA]</i>                                                                     | X                                  | X                                 |

### Unprorated Earnings

For earnings not paid on a monthly basis, you need to calculate a prorated amount to include the reference taxable wages.

#### Annual and Semiannual Bonuses

Workday prorates annual and semiannual bonuses for the 3-month FTE reference wages. To identify which earnings to prorate, add them to one of these pay component groups:

- *FRA Bonuses with a Semi Yearly Frequency to be Subtracted from Taxable Wages for 3 Months Severance Reference Taxable Wages [FRA]*
- *FRA Bonuses with a Yearly Frequency to be Subtracted from Taxable Wages for 3 Months Severance Reference Taxable Wages [FRA]*

#### Bonuses with Other Frequencies

You can manually prorate the earning amount for bonuses with frequencies other than annual or semiannual.

Workday recommends that you create 2 earnings:

- An earning for the full bonus amount, paid at the actual frequency.
- An earning with a prorated monthly amount, paid at a monthly frequency.

To define which earning Workday includes in the reference wages, add each earning to the appropriate pay component group.

| Scenario                                                     | Earning                            | Pay Component Group                                                                      |
|--------------------------------------------------------------|------------------------------------|------------------------------------------------------------------------------------------|
| Exclude the full amount from the reference wage calculation. | Earning for the full bonus amount. | <i>FRA Bonuses with Other Frequency to be Subtracted from Taxable Wages for 3 Months</i> |

|                                                               |                                           |                                                                         |
|---------------------------------------------------------------|-------------------------------------------|-------------------------------------------------------------------------|
|                                                               |                                           | <i>Severance<br/>Reference<br/>Taxable Wages<br/>[FRA]</i>              |
| Include a prorated amount for the 3-month FTE reference wage. | Earning with the prorated monthly amount. | <i>FRA Adds to<br/>FTE 3 Months<br/>Taxable Wages<br/>Average [FRA]</i> |

To calculate the prorated earning without including it in the worker's monthly salary:

- Don't add the *FRA Adds to Gross [FRA]* pay component group to the prorated earning.
- Select the prorated earning from the **Additional Pay Components to Calculate** prompt on the run category.

### Payroll Variables Not Requiring Proration

For some payroll variables not associated with a frequency, the severance reference taxable wages need to include the full amount of the earning. To define the amount included in the reference wages, add the earning to the appropriate pay component group.

| Scenario                                                                  | Earning                                                         | Pay Component Group                                                                                                                           |
|---------------------------------------------------------------------------|-----------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------|
| Include the full earning amount in the reference wages without proration. | Earning for a payroll variable not associated with a frequency. | <i>FRA FTE<br/>Unprorated<br/>Payroll<br/>Variables to<br/>be Subtracted<br/>from<br/>Severance<br/>Reference<br/>Taxable Wages<br/>[FRA]</i> |

[Steps: Create Earnings](#) on page 222

## Steps: Set Up an Adjusted Seniority Calculation (FRA)

### Prerequisites

- Create deductions for paid time off, using an absence component related calculation to retrieve time off in days.
- Create leave types.

## Context

You can configure Workday Payroll for France to calculate an adjusted seniority that excludes time offs or leaves of absences where the worker doesn't accrue seniority.

**Note:** The adjusted seniority calculation is specific to payroll calculations. It's different from the seniority calculation and length of service dates shown on Human Capital Management reports.

Workday considers workers to continue to accrue seniority while on time off or a leave of absence unless you exclude the absence from the seniority calculation.

## Steps

1. (Optional) Access the **Edit Service Dates** task for a worker, and complete the **Seniority Date** field.

Workday calculates the adjusted seniority based on the worker's seniority date if it's available, or hire date if it isn't.

Security: Configure the *Service Dates Change* business process and security policy in the Staffing functional area.

2. Access the **Edit Leave Type** task for all types of leaves that are excluded from the seniority calculation.

To freeze seniority accrual while a worker is on leave, select the **Continuous Service Accrual Effect** check box.

Security: *Set Up: Leave of Absence* domain in the Time Off and Leave functional area.

3. To only partially exclude a leave of absence from the adjusted seniority calculation, access the **Maintain Absence Mapping for Payroll for France** task.

Map the leave type to one of these **DSN Rubric Values**:

- 632 - Parental Leave
- 607 - Parental Presence

Workday deducts half of the number of days on leave, rounded down to the nearest day, from the adjusted seniority calculation.

**Note:** Workday doesn't manage partial parental leaves that need to be taken into account on a full-time basis for seniority calculations.

Security: *Set Up: Payroll - FRA* domain in the FRA Payroll functional area.

4. Access the **Edit Deduction** task for deductions based on time offs excluded from the seniority calculation.

On the **Effective Dated** tab, in the **Related Calculations** grid, access the related calculation that retrieves the amount of time off in days.

To freeze seniority accrual while a worker is absent, select *FRA Time Offs Freezing Seniority [FRA]* from the **Groups** prompt.

Security: *Set Up: Payroll (Calculations - Payroll Specific)* domain in the Core Payroll functional area.

## Result

To view reference values, access the **Gross to Net** tab in a worker's pay results and view these **Related Values** for the *Memo - Reference Values for Seniority* deduction:

- *Seniority Months Adjusted* for workers with a seniority greater than 1 month.
- *Seniority Days Adjusted* for workers with a seniority less than 1 month.

## Related Information

### Examples

[Example: Create a Deduction for Multiple Time Offs \(FRA\)](#) on page 1529

## Example: Exclude Full Day Absences from Seniority Calculations (FRA)

The example illustrates how to exclude absences from the adjusted seniority calculation.

### Context

In Global Modern Services, workers do not continue to accrue seniority during unpaid time off. Julie, the payroll administrator for Global Modern Services, wants to exclude absences for unpaid leave from the adjusted seniority calculation, however she only wants to exclude full days off.

**Note:** The adjusted seniority calculation is specific to payroll calculations, and is different from the seniority calculation and length of service dates shown on Human Capital Management reports.

### Prerequisites

- Create an *Unpaid Time Off* time off.
- Create a deduction named *Deduction for Unpaid Time Off* for unpaid time off.
- Security: *Set Up: Payroll (Calculations - Payroll Specific)* domain in the Core Payroll functional area.

### Steps

1. Access the **Edit Deduction** task for *Deduction for Unpaid Time Off*.
2. On the **Effective Dated** tab, add these rows to the **Related Calculations** grid.

| Related Calculation           | Override Calculation                   | Groups                                        |
|-------------------------------|----------------------------------------|-----------------------------------------------|
| <i>FRA Days</i>               | <i>Unpaid Time Off -Time Off Total</i> |                                               |
| <i>FRA Time Off Full Days</i> |                                        | <i>FRA Time Offs Freezing Seniority [FRA]</i> |

When determining full days of absences, Workday only considers absences linked to the *FRA Days* related calculation.

### Result

When Fabienne, a worker at Global Modern Services, requests 2 separate half days and 1 full day of *Unpaid Time Off* during her first month at Global Modern Services, Workday excludes 1 day from the adjusted seniority calculation.

### Next Steps

On the **Gross to Net** tab of Fabienne's results, verify the **Related Values** for the *Memo - Reference Values for Seniority [FRA]* deduction.

## Calculations for Contract Types (FRA)

---

### FAQ: Fixed-Term Contracts (FRA)

**How can I modify worker eligibility for termination allowances for fixed-term contracts?**

Workday delivers the *IND Fixed Term Contract Allowance [FRA]* earning for legal termination allowances for fixed-term contracts. The *IND Fixed Term Contract Allowance [FRA]* earning has eligibility criteria that identify workers who are typically eligible for termination allowances for fixed-term contract. You can prevent this earning from resolving for a worker who meets the delivered eligibility criteria. Add a calculation with a nonzero result to the *FRA Prevents the End of Fixed Term Contract Allowance Payment* pay component group.

**How can I modify the gross wages used to calculate termination allowances for fixed-term contracts?**

Workday uses the *FRA Gross* pay accumulation to calculate the *IND Fixed Term Contract Allowance [FRA]* earning. To add or exclude pay components from the gross wages for the termination allowance, add the pay component to one of these pay component groups:

- *FRA Adds to FRA Fixed-Term Allowance Base.*
- *FRA Subtracts from FRA Fixed-Term Allowance Base.*

**Can I exclude workers from the training tax deduction for fixed-term contracts?**

Yes. Workday delivers the *URS Professional Training on Fixed Term Contracts - ER [FRA]* deduction for workers with fixed-term contracts. This deduction has eligibility criteria that identify workers who are typically eligible for the training tax calculation. You can exclude workers who met the eligibility criteria from the training tax calculation. Add a calculation with a nonzero result for the worker to the *FRA Prevents the Training Contribution on Fixed Term Contracts Calculation [FRA]* pay component group.

## Examples: Time Off Earnings and Deductions (FRA)

---

### Example: Create a Deduction for Multiple Time Offs (FRA)

This example illustrates how to group multiple types of time off in 1 deduction in payroll reports and payslips.

#### Context

Global Modern Services has 3 types of annual vacation time off that have the same payroll calculations. To display the sum of all annual vacation as 1 line on the payroll results and payslip, you need to create 1 deduction for all annual vacation.

## Prerequisites

Set up these types of time off for Global Modern Services:

- Annual Vacation
- Annual Vacation – Splitting days
- Annual Vacation – Seniority

Security: *Set Up: Payroll (Calculations - Payroll Specific)* and *Set Up: Payroll (Calculations - Generic)* domains in the Core Payroll functional area.

## Steps

### 1. Create the aggregate calculation.

- Access the **Create Aggregate Calculation** task.
- Name the aggregate calculation All Annual Vacation.
- Complete these fields:

| Field    | Value                                                                                                                                                                                                                                                                                                         |
|----------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Category | <i>Payroll</i>                                                                                                                                                                                                                                                                                                |
| Function | <i>Sum</i>                                                                                                                                                                                                                                                                                                    |
| Operand  | Select these absence-component-related calculations that pull in paid time off: <ul style="list-style-type: none"> <li>• <i>Annual Vacation - Time Off Total</i></li> <li>• <i>Annual Vacation - Splitting days - Time Off Total</i></li> <li>• <i>Annual Vacation- Seniority - Time Off Total</i></li> </ul> |

### 2. Create the deduction:

- Access the **Create Deduction** task and enter these settings:

| Field                 | Setting                 |
|-----------------------|-------------------------|
| <b>Name</b>           | Annual Leave - Time Off |
| <b>Code</b>           | Annual Leave TO         |
| <b>Effective Date</b> | Enter today's date.     |

- In the **Criteria** section of the **Effective Dated** tab, create an eligibility rule to prevent the deduction from resolving when the employee has no paid time off.

From the **Worker Eligibility** prompt, select **Create > Create Value Comparison Calculation**, and select *Payroll* as the **Category**. Add a row with these values:

| 1st Operand                       | Operator            | 2nd Operand                                                |
|-----------------------------------|---------------------|------------------------------------------------------------|
| Select <i>All Annual Vacation</i> | <i>not equal to</i> | Select <b>By Category &gt; Common</b> , and then select 0. |

### 3. Define the deduction calculation in the **Calculation Details** section of the **Effective Dated** tab:

- Select *FRA Days \* Rate rounded to the Nearest 0.01* in the **Calculation** field.
- Insert these rows in the **Related Calculations** section:

| Related Calculation | Override Value             |
|---------------------|----------------------------|
| <i>FRA Days</i>     | <i>All Annual Vacation</i> |

| Related Calculation | Override Value |
|---------------------|----------------|
| Rate                | 100            |

4. On the **Non-Effective Dated** tab, select *FRA Subtracts from Gross [FRA]* from the **Groups** prompt to subtract the deduction from the gross pay.

### Result

Arnaud earns 100 EUR a day. In November, Arnaud takes:

- Annual Vacation: 2 days.
- Annual Vacation – Splitting: 1 day.
- Annual Vacation - Seniority: 1 day.

You can view the deduction Annual Leave - Time Off deduction on his payroll results:

| Description             | Time Off Entries | Rate | Amount (EUR) |
|-------------------------|------------------|------|--------------|
| Annual Leave - Time Off | 4                | 100  | (400)        |

### Related Information

## Example: Create Earnings for Paid Vacation (FRA)

This example illustrates how to create earnings and deductions based on the same related calculations, in order to:

- Ensure that the deduction and earnings are using the same inputs for *FRA Days* and *Rate*.
- Display the time off dates only once on payroll results and payslips.

### Context

Global Modern Services wants to display on payroll results:

- Deductions for time off due to paid vacation.
- Earnings for paid vacation.

You've already created a deduction, *Annual Leave - Time Off*, to deduct time off for vacation.

### Prerequisites

Create a deduction named *Annual Leave -Time Off*, based on a daily rate of 100 EUR and *Annual Vacation* time offs.

Security: *Set Up: Payroll (Calculations - Payroll Specific)* domain in the Core Payroll functional area.

### Steps

1. Access the **Create Earning** task and enter these settings:

| Field | Settings                    |
|-------|-----------------------------|
| Name  | Annual Leave - Compensation |
| Code  | Annual Leave Comp           |

| Field          | Settings            |
|----------------|---------------------|
| Effective Date | Enter today's date. |

- On the **Effective Dated** tab, in the **Worker Eligibility** section, select the same eligibility used for the deduction.
- In the **Calculation** field, select *FRA Days \* Rate rounded to the Nearest 0.01*.
- Add these rows in the **Related Calculations** section, and select the pay-component-related calculations from the *Annual Leave - Time Off* deduction as override calculations.

| Related Calculation | Override Calculation                            |
|---------------------|-------------------------------------------------|
| <i>FRA Days</i>     | <i>Annual Leave - Time Off [FRA] - FRA Days</i> |
| <i>Rate</i>         | <i>Annual Leave - Time Off [FRA] - Rate</i>     |

- On the **Non-Effective Dated** tab, select *FRA Adds to Gross [FRA]* from the **Groups** prompt to add the earning to the gross pay.

### Result

George earns 100 EUR a day. When George takes 2 days of paid vacation in February, you can see these lines in his payroll results:

| Description                 | Time Off Entries | Unit | Rate | Amount (EUR) |
|-----------------------------|------------------|------|------|--------------|
| Annual Leave - Compensation |                  | 2    | 100  | 200          |
| Annual Leave - Time Off     | 2                | 2    | 100  | (200)        |

### Related Information

#### Concepts

[Concept: Time Off Earnings](#) on page 298

## Example: Create Time Off Deductions Based on Worker Schedules (FRA)

This example illustrates how to:

- Set up time off deduction calculations based on worker schedules.
- Perform time off calculations, in hours, for time off entered in days.

### Context

Global Modern Services pays workers monthly salaries, and has its workers enter time off in days. You want to calculate deductions for time off based on a daily rate for the month. You want to calculate the daily rate based on:

- The monthly salary.
- The number of hours in a worker's schedule for a given month.

### Prerequisites

Set up for Global Modern Services:

- A *Family Leave* time off.
- Earnings for a worker's base salary.
- Worker schedule calendars with the work hours and schedule for all employees.

Security: *Set Up: Payroll (Calculations- Payroll Specific)* and *Set Up: Payroll (Calculations - Generic)* domains in the Core Payroll functional area.

## Steps

1. Access the **Edit Earning** task, and for each base salary earning:
  - a) Select **None of the above** in the **Calculation Proration** section on the **Effective Dated** tab.
  - b) Select *FRA Base Salary Elements (for absence valuation)* from the **Groups** prompt on the **Non-Effective Dated** tab.
2. Access the **Create Deduction** task and enter these settings:

| Field                 | Setting               |
|-----------------------|-----------------------|
| <b>Name</b>           | Family Leave Time Off |
| <b>Code</b>           | Family Leave TO       |
| <b>Effective Date</b> | Select today's date.  |

3. In the **Criteria** section of the **Effective Dated** tab, create an eligibility rule to prevent the deduction from resolving when the employee has no *Family Leave* time off.
  - a) Add a row in the **Worker Eligibility** grid. From the **Worker Eligibility** prompt, select **Create > Create Value Comparison Calculation**.
  - b) Name the value comparison *Family Leave > 0*.
  - c) Select *Payroll* as the **Category**.
  - d) Enter these settings:

| Field              | Setting                                                            |
|--------------------|--------------------------------------------------------------------|
| <b>1st Operand</b> | <i>Family Leave - Time Off Total</i>                               |
| <b>Operator</b>    | <i>greater than</i>                                                |
| <b>2nd Operand</b> | Select <b>By Category &gt; Common</b> , and then select <i>0</i> . |

4. Define the deduction calculation in the **Calculation Details** section of the **Effective Dated** tab.
  - a) Select *FRA Days \* Rate rounded to the Nearest 0.01* from the **Calculation** prompt.
  - b) To retrieve the daily salary rate for the deduction, add a row in the **Related Calculations** grid, and complete the fields with these settings:

| Field                       | Setting                                                                 |
|-----------------------------|-------------------------------------------------------------------------|
| <b>Related Calculation</b>  | <i>Rate</i>                                                             |
| <b>Override Calculation</b> | <i>FRA Base Salary Elements Daily Rate for Full Period Non Rounded.</i> |

- c) To retrieve the total time off in days, add a second row:

| Field                      | Setting         |
|----------------------------|-----------------|
| <b>Related Calculation</b> | <i>FRA Days</i> |

| Field                | Setting                              |
|----------------------|--------------------------------------|
| Override Calculation | <i>Family Leave - Time Off Total</i> |

- d) To convert time off entered in days to hours, based on the worker's calendar schedule, add a third row.

| Field                | Setting                                    |
|----------------------|--------------------------------------------|
| Related Calculation  | <i>FRA Unpaid Hours</i>                    |
| Override Calculation | <i>Time Off Hours for Time Off in Days</i> |

5. On the **Non-Effective Dated** tab, from the **Groups** prompt, select *FRA Subtracts from Gross [FRA]* to subtract the deduction from the gross pay.

## Result

Gloria is an employee who:

- Has a monthly salary of 4000 EUR.
- Works 7.5 hours per day and 5 days per week, based on her calendar schedule.

When Gloria takes 3 days of family leave in January, Workday calculates a daily rate of 181.81 EUR based on:

- 22 workable days in the January.
- 7.5 standard hours per day.
- 165 workable hours in January, based on the worker's calendar schedule definition.
- A monthly salary of 4000 EUR.

On Gloria's pay results, Workday subtracts this deduction from her gross pay:

| Description                  | Time Off Entries | Rate   | Amount (EUR) |
|------------------------------|------------------|--------|--------------|
| <i>Family Leave Time Off</i> | 3                | 181.81 | (545.45)     |

## Next Steps

To pay Gloria compensation for her family leave time off, create a *Family Leave Compensation* earning based on these related calculations:

- *Family Leave Time Off - Rate*
- *Family Leave Time Off - FRA Days*

## Related Information

### Tasks

[Create Related Calculations](#) on page 239

[Map Earnings to Compensation Elements](#) on page 252

## Example: Create Deductions for New Hires and Terminated Employees (FRA)

This example illustrates how to create a deduction to reduce a worker's earnings based on:

- The worker's calendar schedule.
- The time not worked in a full period, due to termination or hire.

## Context

Global Modern Services:

- Pays workers monthly salaries.

- Uses worker schedules to manage the number of days and hours a worker normally works in a month.

For workers hired or terminated in the middle of a payroll period, you want to reduce the worker's monthly salary for the time not worked. To calculate the reduction amount, you want to:

- Use the worker's calendar schedule to prorate the monthly salary based on the unworked hours.
- Convert the prorated amount to a daily rate based on unworked calendar days.

### Prerequisites

- Set up a *Base salary* earning for monthly salaries.
- Security: *Set Up: Payroll (Calculations - Payroll Specific)* domain in the Core Payroll functional area.

### Steps

1. Access the **Edit Earning** task, for the *Base salary* earning and select **None of the above** in the **Calculation Proration** section.
2. Access the **Create Deduction** task and enter these settings:

| Field                 | Setting                       |
|-----------------------|-------------------------------|
| <b>Name</b>           | Reduction for Days Not Worked |
| <b>Code</b>           | Days Not Worked               |
| <b>Effective Date</b> | Select today's date.          |

3. On the **Effective Dated** tab, add a row in the **Worker Eligibility** grid.  
Select *Worker has Non Worked Hours (based on Work Schedule)* from the **Worker Eligibility** prompt.  
This calculation ensures that the deduction resolves only for workers who entered or left the company in the middle of a pay period.
4. From the **Calculation** prompt, select *FRA Days \* Rate Rounded to the Nearest 0.01*.
5. In the **Calculation Proration** section, select **None of the above**.
6. Add these rows in the **Related Calculations** section:

| Related Calculation     | Override Calculation                                                   |
|-------------------------|------------------------------------------------------------------------|
| <i>Rate</i>             | <i>FRA Base Salary Elements Daily Rate for Full Period Non Rounded</i> |
| <i>FRA Days</i>         | <i>Non Worked Days in Full Period [FRA]</i>                            |
| <i>FRA Unpaid Hours</i> | <i>Non Worked Hours in Full Period [FRA]</i>                           |

7. On the **Non-Effective Dated** tab, from the **Groups** prompt, select *FRA Subtracts from Gross [FRA]* to subtract the deduction from the gross pay.

### Result

Global Modern Services terminated Eric on January 16th, 2018. Before his termination he:

- Had a monthly salary of 4000 EUR.
- Worked Monday to Friday, 7.5 hours per day, based on his calendar schedule.

Workday calculates a daily rate of 127.536 EUR for the remaining days in the full period that weren't included in the worked subperiod, based on:

- Eric's work calendar schedule: 82.5 unworked hours out of 172.5 work hours for January.
- 15 unworked calendar days.

Workday displays these earning and deduction lines on Eric's payroll results:

| Description                   | Rate    | Unit | Amount (EUR) |
|-------------------------------|---------|------|--------------|
| Base salary                   |         |      | 4000         |
| Reduction for Days Not Worked | 127.536 | 15   | (1913.04)    |

## Related Information

### Examples

[Example: Calculate Hours Not Worked](#) on page 383

[Example: Reduce Salary for Time Off and Holidays](#) on page 384

## Example: Create Earnings for Varying Sickness Entitlements (FRA)

This example illustrates how to create earnings for time offs with varying rates.

### Context

Global Modern Services provides sick leave entitlements with different rates over the course of a worker's sick leave. Workers receive:

- 100% of their salary for the first 10 days.
- 50% of their salary for the next 10 days.
- Unpaid time off for any additional days after 20 days.

You want to set up earnings to ensure that workers receive the correct payment for each portion of their time off.

### Prerequisites

- Create 3 time off plans:
  - *Plan Sickness 100%* with time off balance limits between zero and 10.
  - *Plan Sickness 50%* with time off balance limits between zero and 10.
  - *Plan Sickness 0%* with no time off balance limit.
- Create accruals for each time off plan.
- Create 3 time offs based on 3 new time off types:
  - *TO Sickness 100*
  - *TO Sickness 50*
  - *TO Sickness 0*
- Create an absence table that contains tiers for each of the time off plans and time offs.
- Security: *Set Up: Payroll (Calculations - Payroll Specific)* domain in the Core Payroll functional area.

### Steps

1. Create an arithmetic calculation to calculate a percentage of a worker's daily rate.  
See [Example: Calculate a Percentage of a Worker's Daily Rate \(FRA\)](#) on page 1538.
2. Access the **Create Earning** task.
  - a) Enter these settings:

| Option | Description            |
|--------|------------------------|
| Name   | Sickness - 100 Payment |

| Option         | Description         |
|----------------|---------------------|
| Code           | Sickness 100        |
| Effective Date | Enter today's date. |

- b) In the **Calculation** field, select *FRA Days \* Rate rounded to the Nearest 0.01*.  
c) Add these rows in the **Related Calculations** section:

| Related Calculation | Override Calculation                                   |
|---------------------|--------------------------------------------------------|
| <i>FRA Days</i>     | <i>TO Sickness 100 - Time Off Paid</i>                 |
| <i>Rate</i>         | <i>Base Salary Divided by 30 Multiplied by Percent</i> |
| <i>Percent</i>      | <i>100</i>                                             |

- d) On the **Non-Effective Dated** tab, select *FRA Adds to Gross [FRA]* from the **Groups** prompt to add the earning to gross pay.

### 3. Access the **Create Earning** task.

- a) Enter these settings:

| Option         | Description           |
|----------------|-----------------------|
| Name           | Sickness - 50 Payment |
| Code           | Sickness 50           |
| Effective Date | Enter today's date.   |

- b) In the **Calculation** field, select *FRA Days \* Rate rounded to the Nearest 0.01*.  
c) Add these rows in the **Related Calculations** section:

| Related Calculation | Override Calculation                                   |
|---------------------|--------------------------------------------------------|
| <i>FRA Days</i>     | <i>TO Sickness 50 - Time Off Paid</i>                  |
| <i>Rate</i>         | <i>Base Salary Divided by 30 Multiplied by Percent</i> |
| <i>Percent</i>      | <i>50</i>                                              |

- d) On the **Non-Effective Dated** tab, select *FRA Adds to Gross [FRA]* from the **Groups** prompt to add the earning to gross pay.

## Result

Workday uses the absence table to determine which rate to pay the worker based on the number of absence days. Workday displays the absence dates for each earning on the worker's payslip.

## Next Steps

Add any other appropriate pay component groups to the new time off earnings to configure impacted payroll calculations and DSN reporting. Examples: General Contribution Reductions, social security ceiling, DSN working time declaration.

Create a deduction for the time off based on an aggregate calculation of:

- *TO Sickness 100 - Time Off Total*
- *TO Sickness 50 - Time Off Total*
- *TO Sickness 0 - Time Off Total*

### Concepts

[Concept: Social Security Ceiling Proration \(FRA\)](#) on page 1583

**Tasks**

[Declare Working Time and Absences in a DSN \(FRA\)](#) on page 1635

[Identify Amounts to Declare for DSN Reporting \(FRA\)](#) on page 1633

**Examples**

[Example: Create a Deduction for Multiple Time Offs \(FRA\)](#) on page 1529

[Example: Set Up General Contribution Reductions \(FRA\)](#) on page 1586

**Example: Calculate a Percentage of a Worker's Daily Rate (FRA)**

This example illustrates how to calculate a percentage of a worker's daily rate for absence calculations.

**Context**

You want to calculate a percentage of a worker's daily rate when calculated with the 30-day rule (en jours trentièmes).

**Prerequisites**

- Add all earnings that contribute to base pay to the *FRA Base Salary Elements (for absence valuation) [FRA]* pay component group.
- Security: *Set Up: Payroll (Calculations - Generic)* domain in the Core Payroll functional area.

**Steps**

1. Access the **Create Arithmetic Calculation** task.

- a) Enter these values:

| Option   | Description               |
|----------|---------------------------|
| Name     | Base Salary Divided by 30 |
| Category | Payroll                   |

- b) Add this row to the **Calculation** grid:

| 1st Operand                                                   | Operator | 2nd Operand |
|---------------------------------------------------------------|----------|-------------|
| <i>FRA Base Salary Elements (for absence valuation) [FRA]</i> | Divide   | 30          |

2. Access the **Create Arithmetic Calculation** task.

- a) Enter these values:

| Option   | Description                                     |
|----------|-------------------------------------------------|
| Name     | Base Salary Divided by 30 Multiplied by Percent |
| Category | Payroll                                         |

- b) Add this row to the **Calculation** grid:

| 1st Operand                      | Operator | 2nd Operand |
|----------------------------------|----------|-------------|
| <i>Base Salary Divided by 30</i> | Multiply | Percent     |

**Next Steps**

Add the *Percent* related calculation to a pay component definition, and provide an override calculation that defines the percent.

## Worker Tax Elections (FRA)

---

### Add Worker Tax Elections (FRA)

#### Prerequisites

- Define a SIREN company tax id on the **Edit Company Tax Details** task.
- Security: *Worker Data: Payroll (Company Specific)* - FRA domain in the FRA Payroll functional area.

#### Context

Enter worker details needed for tax and contribution calculations, such as:

- AGIRC-ARRCO category.
- Individual standard deduction rates.
- ISD industries.
- Mobility individual tax rates.
- Retirement contributions for part-time workers.
- International assignments.
- Salary tax exemptions and sectors.
- Tax residency.
- URSSAF type of personnel.

Workday uses tax elections to determine which contributions apply to a worker. To ensure accurate DSN reporting, also verify on the **View HCM Mapping for Payroll France** report that you correctly mapped the worker's:

- Contract type.
- Reason for a fixed term contract.
- Employee type.

Except for apprentices, Workday uses the postal code of the job location to determine if contributions specific to the Alsace-Moselle region apply. Workday also uses the worker's home address postal code to determine the type of neutral rate to calculate the withholding income tax.

You can use these web services to create an inbound EIB to perform mass updates on worker tax elections:

- *Put Payee Salary Tax*
- *Put Payee ARRCO-AGIRC*
- *Put Payee International Assignment*
- *Put Payee Part Time Pension Option*
- *Put Payee URSSAF*

See [Steps: Set Up EIBs Using Templates from Web Service Operations](#).

#### Steps

1. Access the **Add Worker FRA Tax Elections** task and select the worker.

The **Company** prompt displays the employee's company on the **Effective Date**. When the employee has a future hire date or has changed companies, select the company for which the tax election applies.

2. Add a row in the **URSSAF** section. As you complete the section, consider:

| Option                                        | Description                                                                                                                                                                                                                                                                                                                                                                                                                         |
|-----------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Type of Personnel</b>                      | When you don't define a tax election for an employee, Workday considers the employee to be in <i>100 - General Plan</i> .                                                                                                                                                                                                                                                                                                           |
| <b>Individual Standard Deduction/Rate</b>     | Only available for workers with a <b>Type of Personnel</b> set to <i>100 - General Plan</i> .<br><br>If applicable, enter the percentage for the worker's individual standard deduction (déduction forfaitaire spécifique).                                                                                                                                                                                                         |
| <b>Individual Standard Deduction/Industry</b> | Only available for workers with a <b>Type of Personnel</b> set to <i>100 - General Plan</i> .<br><br>Select 1 of these industries if your company is eligible: <ul style="list-style-type: none"> <li>• Construction</li> <li>• Cleaning</li> <li>• Civil Aviation</li> <li>• Road Haulage</li> <li>• Journalism</li> <li>• Casino and Gaming Circle</li> </ul> Workday maintains these industry rates in a dedicated lookup table. |
| <b>Individual Tax</b>                         | Select to define individual mobility payment contribution rates and INSEE codes for an employee that vary from the establishment rates and INSEE codes.                                                                                                                                                                                                                                                                             |
| <b>Degree Level in Progress</b>               | For apprentices and professionalization contracts only. Select the type of degree that the worker is pursuing. Workday reports the selected degree level in progress in DSN rubric S21.G00.30.025.                                                                                                                                                                                                                                  |

3. Add a row in the **ARRCO-AGIRC** section, and select the classification of the employee from the **Category** prompt.

When you don't define a tax election for an employee, Workday considers the employee to be a *Non Manager*.

4. For part-time workers, add a row to the **Retirement Contributions Option for Part Time Workers** grid. As you complete the section, consider:

| Option                     | Description                                                                                                                                                                                                                                                                                                                                                                   |
|----------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Contribution Option</b> | For full-time pension agreements, Workday applies additional contributions based on the difference between fictitious gross wages and the current gross pay.<br><br>Workday uses the legal AGIRC-ARRCO and URSSAF rates for regular and additional contributions, unless you define company-specific AGIRC-ARRCO rates in the <b>Edit Company FRA Tax Configuration</b> task. |

| Option | Description                                                                                                                                                                                                                                       |
|--------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|        | <p>You can view the calculated fictitious gross wages in these memo deductions:</p> <ul style="list-style-type: none"> <li>• <i>Memo - Reference Values for AGIRC-ARRCO [FRA]</i></li> <li>• <i>Memo - Reference Values for URSSAF</i></li> </ul> |

5. For expatriates, cross-border workers, or workers on an international assignment, add a row to the **International Assignment Status and Tax Residency** grid. As you complete the section, consider:

| Option                                 | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
|----------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>International Assignment Status</b> | <p>When you don't define an international assignment status, Workday considers the worker's status to be <i>99 - Not Applicable</i>. Workday reports the international assignment status in block <i>S21.G00.40.024</i> of a DSN.</p> <p>For workers with an international assignment status of <i>02 - Expatriate</i>, Workday:</p> <ul style="list-style-type: none"> <li>• Blocks standard URSSAF and Pôle Emploi contributions.</li> <li>• Applies specific Pôle Emploi contributions.</li> <li>• Reports the worker's social security coverage in DSN reporting in rubrics <i>S21.G00.40.18</i>, <i>S21.G00.40.20</i>, and <i>S21.G00.40.39</i>.</li> </ul>                                                                                                                                                                                                                                                                                    |
| <b>Non-Resident</b>                    | <p>Select the <b>Non-Resident</b> check box for workers that have a nonresident tax status.</p> <p>For workers with a nonresident status and who are a posted worker, expatriate or cross border worker, Workday:</p> <ul style="list-style-type: none"> <li>• Applies some contribution exemptions and additional URSSAF contributions.</li> <li>• Reports the worker's international tax status in block <i>S21.G00.30.022</i> of a DSN.</li> </ul> <p>For nonresident workers who aren't an expatriate, posted worker, or cross-border worker, Workday:</p> <ul style="list-style-type: none"> <li>• Calculates income tax withholding of zero.</li> <li>• Calculates employee nonresident contributions for URS illness, maternity, invalidity, and death.</li> <li>• Excludes the worker from CSG/CRDS and social lump sum calculations.</li> <li>• Doesn't report an international tax status in DSN rubric <i>S21.G00.30.022</i>.</li> </ul> |

6. As you complete the **Salary Tax** grid, consider:

| Option          | Description                                             |
|-----------------|---------------------------------------------------------|
| <b>Exempted</b> | Select to exempt a worker from salary tax calculations. |

| Option          | Description                                                                                                                                                                                           |
|-----------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Activity</b> | For companies with multiple tax sectors. Select the activity that applies to the worker, when it's different from the default activity defined on the <b>Edit Company FRA Tax Configuration</b> task. |

7. As you review the **Withholding Tax Rate** grid, consider:

| Option                   | Description                                                                                                                                                                                                                                                                                                                               |
|--------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Rate</b>              | View the worker's rate from the Direction Générale des Finances Publiques (DGFIP).<br><br>When the rate is zero, Workday displays zero for income tax withholding on the payroll results and payslip.                                                                                                                                     |
| <b>Neutral Rate</b>      | When selected Workday calculates income tax withholding for a worker without a rate from DGFIP. Workday calculates a neutral rate based on: <ul style="list-style-type: none"> <li>The worker's monthly taxable net.</li> <li>The applicable neutral rate scale based on the postal code of the worker's primary home address.</li> </ul> |
| <b>Identifier</b>        | Required for DSN reporting when you use a rate from the DGFIP to calculate income tax withholding.                                                                                                                                                                                                                                        |
| <b>Validity End Date</b> | Workday uses the rate for all payments with a payment date before the <b>Validity End Date</b> .                                                                                                                                                                                                                                          |

When you launch the *DSN Polling (Machine to Machine)* integration, it uploads any rates for income tax withholding available from the DGFIP. You can alternatively use the *Import Withholding Tax Rates* web service to mass upload worker withholding tax rates.

Workday recommends that you avoid modifying worker income tax rates directly in a worker's tax elections, to ensure you use the same income tax rates as the DGFIP.

### Next Steps

- To correct a worker's tax elections, access the **Worker FRA Tax Elections** report. Select **Worker Tax Election > Edit** from the related actions menu of the tax election.
- When a worker changes companies, enter the worker's tax elections for the new company.

## Withholding Orders (FRA)

---

### Steps: Set Up and Process Withholding Orders (FRA)

#### Prerequisites

Add gross and net salary elements to pay component groups contributing to the *FRA Taxable Net [FRA]* pay accumulation.

#### Context

Workday provides rules for processing these types of income withholding orders:

- Administrative Seizure
- Alimony Pension
- Debt

Based on regulations for France, Workday:

- Determines the amount to withhold from the employee's disposable earnings.
- Applies withholding limits and sets priorities for what to withhold.
- Determines what to withhold for a worker with multiple orders when the total withholding amount exceeds the limit.

You can use the *Put Payroll France Withholding Order* web service to mass load income withholding orders.

#### Steps

1. Access the **Edit Deduction** or **Edit Earning** task for a pay component that contributes to disposable earnings for withholding orders.

Workday uses the *FRA Taxable Net [FRA]* pay accumulation to determine disposable earnings for withholding orders. Only select earnings or deductions that need to be added or removed from the value of the *FRA Taxable Net [FRA]* pay accumulation.

On the **Non-Effective Dated** tab, select the appropriate pay component group from the **Groups** prompt:

- *FRA Adds to Disposable Earnings [FRA]*
- *FRA Subtracts from Disposable Earnings [FRA]*

Security: *Set Up: Payroll (Calculations - Payroll Specific)* domain in the Core Payroll functional area.

2. [Create Deduction Recipient](#) on page 232.
3. [Record a Withholding Order \(FRA\)](#) on page 1544.
4. Calculate payroll and review the withheld deduction amounts.  
See [Steps: Process Payroll](#) on page 613.

Workday Payroll for France doesn't support pay inputs for withholding orders.

#### Next Steps

You can delete withholding orders that don't have completed results. Select **Withholding Order > Delete** from the related actions menu of a withholding order.

You can create and settle payments for income withholding orders. For more information, see: [Create a Payment for an Income Withholding Order or Court Order](#).

**Tasks**

[Define Bank Accounts](#)

[Create a Payment for an Income Withholding Order or Court Order](#) on page 735

**Reference**

[Reference: Edit Tenant Setup - Financials](#)

**Record a Withholding Order (FRA)****Prerequisites**

- Create a deduction recipient.
- Security: *Worker Data: Payroll (Withholding Orders)* - FRA domain in the FRA Payroll functional area.

**Context**

You can record withholding order details such as:

- Order type.
- Total balance amount or monthly due amount.
- Number of dependents.

Workday calculates the amount to withhold for a pay period, taking into account:

- Workers' disposable earnings.
- Legal brackets and minimum welfare allowance (RSA).
- Order balance.
- Number of dependents.

**Steps**

1. Access the **Record FRA Withholding Order for Worker** task.
2. As you complete the task, consider:

| Option            | Description                                                                                                                                                                                                                                                                  |
|-------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Order Date</b> | Workday uses this date to determine the order in which Workday processes orders with the same priority.                                                                                                                                                                      |
| <b>Begin Date</b> | <p>Workday makes the initial withholding deduction in the pay period that includes the <b>Begin Date</b>. The <b>Begin Date</b> must be on or after the <b>Order Date</b>.</p> <p>Workday doesn't prorate withholding amounts based on the order begin date or end date.</p> |
| <b>End Date</b>   | <p>Workday deducts the final withholding amount in the pay period before the one with the <b>End Date</b>.</p> <p>Workday stops processing a withholding order as soon as the balance is zero, regardless of the <b>End Date</b>.</p>                                        |

## Result

For employees with multiple orders, Workday assigns a processing priority to each order based on legal regulations.

You can view a worker's withholding orders (active and historical) using the **Withholding Orders for Worker** report.

You can use the **View Available Withholding Orders for a Group of Workers** report to view:

- All active withholding orders for a group of workers.
- All inactive orders that are completed during the current pay period in progress.

## Next Steps

After completing payroll:

- View updated order balances in the **Order Updates** section of debt, and administrative seizure orders.
- Access the **Withholding Order Payments** report to view all withholding orders calculated during the pay period for a company. Use the withheld amount and the deduction recipient's banking information on the report to prepare external payments.

## Change the Balance or Limits of Withholding Orders (FRA)

### Prerequisites

- A withholding order exists for the worker.
- Security: *Worker Data: Payroll (Withholding Orders)* - FRA domain in the FRA Payroll functional area.

### Context

You can update an existing withholding order to reflect changes such as:

- Additional order repayments that reduce the current balance.
- Court orders that lower the legal withholding limits.
- Court orders that modify the monthly due amount for alimony pensions.
- New debt that increases the balance of an aggregated order.

### Steps

1. Access the **Withholding Orders for Worker** report.
2. Select **Withholding Order > Edit** from the related actions menu of the withholding order.

3. To change the outstanding balance or alimony pension amount, add a row in either the:

- **Balances** section on the **Order Updates** tab.
- **Alimony Pension Amounts** section on the **Alimony Pension Amounts** tab.

| Option                | Description                                                                                                                                                                                                                                                                                                                                                                |
|-----------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Effective Date</b> | For effective dates in the middle of a payroll period, Workday applies the new balance or alimony amount at the end date of the current payroll period. Example: The end date of the last completed pay calculation is February 28. When you create a new balance amount with an effective date of February 20, Workday applies the new balance in March pay calculations. |

4. To override the standard legal limits for debts, and administrative seizures, add a row in the **Limits** section on the **Order Updates** tab:

| Option       | Description                                                                                                                                                                               |
|--------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Limit</b> | Workday applies this limit to the aggregated withholding amount in a monthly payment period.<br><br>Workday uses the amount calculated by the legal bracket when it is below this amount. |

### Example

Anne has a debt withholding order. A court order has set a lower limit of 700 EUR per month.

Enter a withholding order limit of 700 EUR with an effective date of January 1.

Based on her salary, the legal maximum withholding amount for Anne is 900 EUR, but in January, Workday withholds 700 EUR based on the lowered limit.

In February, Anne changes establishments, which creates 2 subperiods in the payroll period.

For the February payroll, Workday:

- Calculates a legal maximum withholding amount for each subperiod, prorated according to the number of days in the subperiod.
- Applies the limit based on the sum of all payments in the month.

| Subperiod        | Legal Maximum Withholding Amount | Withholding Order Amount | Comment                                                                                                        |
|------------------|----------------------------------|--------------------------|----------------------------------------------------------------------------------------------------------------|
| February 1 - 15  | 500 EUR                          | 500 EUR                  | Workday applies the prorated legal maximum withholding amount, because it's less than the limit you set.       |
| February 15 - 28 | 400 EUR                          | 200 EUR                  | Workday limits the withholding order amount in the second subperiod to enforce the limit of 700 EUR per month. |

## Next Steps

To stop a temporary limit, select the **Inactive** check box on the limit in the **Limits** section of the **Order Updates** tab.

To end a withholding order, add a row with an **Amount** of 0 to either the:

- **Balances** section of the **Order Updates** tab.
- **Alimony Pensions Amounts** section of the **Alimony Pension Amounts** tab.

## Concept: Withholding Order Priorities (FRA)

Workday automatically applies these processing priorities, which you can override, to withholding orders:

- 100 - Alimony pension.
- 300 - Administrative seizure.
- 400 - Debt.

### Withholding Orders with the Same Priority and Different Order Dates

During payroll processing, Workday uses the order priority to determine which orders to process first. When 2 withholding orders have the same processing priority, Workday uses the order date to determine processing priorities.

Anne has 3 withholding orders that all have a begin date of February 15, 2020:

| Withholding Order        | Amount or Balance (EUR) | Order Date       |
|--------------------------|-------------------------|------------------|
| Alimony pension          | 100 per month           | February 1, 2020 |
| Administrative seizure 1 | 1000                    | January 1, 2020  |
| Administrative seizure 2 | 500                     | February 1, 2020 |

You haven't modified the default withholding order priorities.

In February, Anne has 1000 EUR disposable earnings for withholding orders. Workday calculates these withholding order payments:

| Withholding Order        | Withholding Order Amount (EUR) |
|--------------------------|--------------------------------|
| Alimony pension          | 100                            |
| Administrative seizure 1 | 900                            |
| Administrative seizure 2 | 0                              |

### Withholding Orders with the Same Priority and Order Dates

When 2 orders of the same type have the same order date, Workday distributes the disposable earnings based on the remaining order balances.

When 1 order has a limit below its allocated disposable amount, Workday distributes the exceeding disposable amount among the other orders, based on the order balances.

Mark has 4 withholding orders that all have a begin date of February 15, 2020. They also all have the same order date:

| Withholding Order        | Amount or Balance (EUR) | Order Date       |
|--------------------------|-------------------------|------------------|
| Alimony pension          | 100 per month           | February 1, 2020 |
| Administrative seizure 1 | 1000                    | February 1, 2020 |

| Withholding Order        | Amount or Balance (EUR) | Order Date       |
|--------------------------|-------------------------|------------------|
| Administrative seizure 2 | 500                     | February 1, 2020 |
| Administrative seizure 3 | 500                     | February 1, 2020 |

You haven't modified the default withholding order priorities.

In February, Mark has 1100 EUR disposable earnings for withholding orders. Workday calculates these withholding order payments:

| Withholding Order        | Withholding Order Amount (EUR) |
|--------------------------|--------------------------------|
| Alimony pension          | 100                            |
| Administrative seizure 1 | 500                            |
| Administrative seizure 2 | 250                            |
| Administrative seizure 3 | 250                            |

If you add a limit of 400 EUR to Administrative seizure 1, Workday distributes the remaining 100 EUR among Administrative seizure 2 and Administrative seizure 3:

| Withholding Order        | Withholding Order Amount (EUR) |
|--------------------------|--------------------------------|
| Alimony pension          | 100                            |
| Administrative seizure 1 | 400                            |
| Administrative seizure 2 | 300                            |
| Administrative seizure 3 | 300                            |

## FAQ: Withholding Orders (FRA)

**What happens if an employee doesn't have enough wages to cover a withholding payment?**

Workday follows statutory rules to determine what to withhold for each order. You can override the priority defaults for most order types.

**Can I purge withholding order data?**

You can purge all withholding order attachments for any type of worker with the **Purge Person Data** task.

**How can I view the minimum welfare (RSA) values and legal brackets that Workday uses to calculate the withholding order amount? (FRA)**

Access the **All Lookup and Advanced Lookup Tables** report, and filter on **Country**.

- *FRA IWO Calc: RSA and Dependent Amounts* contains the minimum welfare amounts.
- *FRA IWO Calc: Limit by Slices* contains the legal brackets.

## Pay Commuting Allowances (FRA)

### Set Up Mileage-Based Commuting Allowances (FRA)

#### Prerequisites

- Set up your run category to process pay component groups containing Workday statutory calculations. See [Steps: Set Up Pay Run Categories](#) on page 98.
- Security: *Worker Data: Payroll (Payroll Input)* domain in the Core Payroll functional area.

#### Context

You can use Workday-delivered earnings to calculate mileage allowances based on limits defined by French authorities. Workday calculates monthly mileage allowances based on estimated mileage. Workday creates an adjustment based on actual mileage at year-end or at the worker's termination.

When a worker changes vehicle during the year, you have to create a new pay input for Workday to calculate a year-end adjustment.

#### Steps

- Access the **Add Payroll Input by Worker** task.
- As you complete the **Worker Defaults** section, consider:

| Option               | Description                                                                                                                                                       |
|----------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Start Date</b>    | Enter the date when workers become eligible for reimbursement.                                                                                                    |
| <b>End Date</b>      | When a worker changes vehicle during the year, enter a date for the ongoing mileage allowance pay input. You can then create a new pay input for the new vehicle. |
| <b>Pay Component</b> | Select <i>Mileage Allowance [FRA]</i> .                                                                                                                           |

- In the **Processing Defaults** section, select:

- Ongoing**
- Override**
- Regular Run Category**

Then click **OK**.

- On the **Input** grid, add rows and enter values for these **Input Details** types:

| Type                                     | Value                                                                                                                            |
|------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------|
| <i>Mileage Allowance Monthly Limit</i>   | Enter the mileage allowance calculation cap for workers who drive business vehicles for personal use.                            |
| <i>Mileage Allowance Tax Rating</i>      | Enter the chevaux fiscaux (CV) for the vehicle.                                                                                  |
| <i>Mileage Allowance Type of Vehicle</i> | Enter: <ul style="list-style-type: none"> <li>1 for a car.</li> <li>2 for a two-wheeler.</li> <li>3 for a motorcycle.</li> </ul> |

| Type                                   | Value                                                                                                                                                    |
|----------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------|
| <i>Mileage Allowance Vehicle Usage</i> | Enter 2 when the worker drives the business vehicle for personal use. When you don't enter a value, Workday classes the vehicle as for professional use. |
| <i>Yearly Actual Mileage</i>           | Enter the actual mileage traveled in kilometers at year-end or the worker's termination.                                                                 |
| <i>Yearly Estimated Mileage</i>        | Enter a value in kilometers.                                                                                                                             |

5. (Optional) Create a separate pay input for workers who change vehicle during the year.

### Next Steps

Run a payroll calculation to calculate the mileage allowance for each worker.

### Related Information

#### Examples

[Example: Set Up Pay Run Category for Active and Terminated Workers \(FRA\)](#) on page 136

## Set Up Public Transportation Commuting Allowances (FRA)

### Prerequisites

Set up your run category to process pay component groups containing Workday statutory calculations.

### Context

You can use Workday-delivered earnings to reimburse workers for 50% of their transportation costs, based on current public transportation subscription rates.

Workday provides earnings that you can use to reimburse workers for these public transportation cards:

- Public transportation cards in the Paris region.
- Transportation cards outside the Paris region.
- Student and schooling cards.

**Note:** When determining the reimbursement percentage for transportation card refunds, Workday always uses the calculated full-time equivalent (FTE).

### Steps

1. Access the **Edit Deduction** task for deductions with related calculations for absences.

Security: *Set Up: Payroll (Calculations - Payroll Specific)* domain in the Core Payroll functional area.

In the **Related Calculations** grid, select *FRA Absence Days Impacting Public Transportation Refund [FRA]* from the **Groups** prompt for any related calculations that represent absence days.

When determining worker eligibility for a transportation card refund, Workday considers the worker's schedule minus any:

- Holidays from the worker's holiday calendar.
- Absences included in the *FRA Absence Days Impacting Public Transportation Refund [FRA]* pay component group.

When a worker is absent for an entire month, Workday excludes the worker from refunds for:

- Public transportation card refunds for the Paris area.
- Other public transportation card refunds.

2. Access the **Add Payroll Input by Worker** task.

Security: *Worker Data: Payroll (Payroll Input)* domain in the Core Payroll functional area.

3. In the **Worker Defaults** section, consider:

| Option               | Description                                                                                                                                                                                                                                                                                 |
|----------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Start Date</b>    | Enter the first date at which the workers are eligible for reimbursement.                                                                                                                                                                                                                   |
| <b>Pay Component</b> | Select one of these earnings: <ul style="list-style-type: none"> <li>• <i>Public Transportation Card Refund for Paris Area [FRA]</i> for transportation cards in the Paris region or for schooling and student cards.</li> <li>• <i>Other Public Transportation Card Refund.</i></li> </ul> |

4. In the **Processing Defaults** section, select:

- **Ongoing**
- **Override**
- **Regular Run Category**

5. In the **Input** grid, add a row and enter values for these **Input Details** types:

| Type                                                                   | Description                                                                                                                                                                                                                                                                                                  |
|------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <i>Public Transportation Card Frequency</i>                            | Define the frequency of the purchase. For Paris area or other regions, enter: <ul style="list-style-type: none"> <li>• 1 for yearly.</li> <li>• 2 for monthly.</li> <li>• 3 for weekly.</li> <li>• 4 for annual student and schooling cards.</li> </ul>                                                      |
| <i>Paris Public Transportation Card Zone Details</i>                   | For public transportation cards in the Paris region only. Enter: <ul style="list-style-type: none"> <li>• 1 for zones 2-3.</li> <li>• 2 for zones 3-4.</li> <li>• 3 for zones 4-5.</li> <li>• 4 for all zones.</li> </ul> Workday automatically calculates the cost of all-zone student and schooling cards. |
| <i>Public Transportation Card Subscription Fees</i>                    | Only applies to public transportation cards for outside the Paris region.<br><br>Enter total fees. Example: Enter monthly fees for a monthly subscription, weekly fees for a weekly subscription.                                                                                                            |
| <i>Other/Paris Public Transportation Card Number of Weekly Tickets</i> | Used to calculate the cost for an entire pay period for cardholders who purchase weekly tickets. If you don't enter a value, Workday calculates the cost for 1 ticket. Enter the number of weekly tickets purchased in the pay period.                                                                       |

**Next Steps**

Run a pay calculation to calculate reimbursement amounts for workers.

**Related Information****Examples**

## Contributions and Tax Setup (FRA)

---

### Steps: Set Up Payroll Statutory Contributions (FRA)

**Context**

Workday provides deductions and regulatory contribution rate data that enable you to calculate social contributions according to French regulations. You must enter the company and worker-specific contribution data, and create company-specific statutory deductions, such as health insurance or contingency contributions.

**Steps**

1. [Set Up Company Tax ID \(FRA\)](#) on page 1552.  
If you enter a SIREN number, it automatically populates on the **Maintain Establishment** task.
2. [Set Up Company Tax Configuration \(FRA\)](#) on page 1554.
3. Access the **Maintain Establishment** task.  
Define the **SIRET** for each establishment. Workday automatically updates the **SIRET** field based on your updates to the **NIC** field or the **SIREN** field on the **Edit Company Tax Details** task.  
Security: *Set Up Establishment* domain in the Regulatory Reporting (HCM) functional area.
4. [Define Work Accident and Mobility Payment Contribution Rates \(FRA\)](#) on page 1558.
5. [Map Staffing Information to Payroll Calculations \(FRA\)](#) on page 1510.  
Map your organization's contract and employee types to statutory calculation classifications.
6. To base contribution calculations on the appropriate gross and net amounts, assign pay components for salary elements to pay component groups used in statutory calculations.
  - a) Access the **Edit Earning** or **Edit Deduction** task for one of your company's earnings or deductions.  
Security: *Set Up: Payroll (Calculations - Payroll Specific)* in the Core Payroll functional area.
  - b) From the **Groups** prompt on the **Non-Effective Dated** tab, select one of these pay component groups:
    - *FRA Adds to Gross [FRA]*
    - *FRA Subtracts from Gross [FRA]*
    - *FRA Adds to Net [FRA]*
    - *FRA Subtracts from Net [FRA]*
7. Create company-specific statutory contributions, such as health insurance or contingency contributions.  
See [Concept: Company-Specific Contributions \(FRA\)](#) on page 1561.
8. Configure your run category to process the pay component groups containing statutory calculations.  
See [Example: Set Up Pay Run Category for Active and Terminated Workers \(FRA\)](#) on page 136.
9. [Add Worker Tax Elections \(FRA\)](#) on page 1539.

### Set Up Company Tax ID (FRA)

**Prerequisites**

Security:

- *Set Up: Payroll - Company Specific (Accounting)* domain in the Core Payroll functional area.

- *Set Up: Company General* domain in the Common Financial Management functional area.

## Context

Record tax ID numbers for a company.

## Steps

1. Access the **Edit Company Tax Details** task.
2. (Optional) On the **VAT on Payment** tab, for financial transactions, select **VAT on Payment** to record Value Added Tax (VAT) on payments instead of invoices.  
For financial transactions, if you use **VAT on Payment**, select the **Default Tax Applicability** and **Default Tax Code**.
3. On the **Tax IDs** tab, in the **Tax IDs** grid, add information for each country for which the company processes payments.

| Field                          | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|--------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Country for Tax ID Type</b> | The prompt displays only the countries with Workday-delivered tax ID types.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| <b>Tax ID Type</b>             | For France, select <i>SIREN</i> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| <b>Identification #</b>        | Enter the ID number for the selected tax ID type.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| <b>Transaction Tax ID</b>      | <p>Select this check box to include this identification number on financial transactions, like customer invoices and purchase orders.</p> <p>If you don't select <b>Transaction Tax ID</b> for any of the identification numbers you configure, financial transactions report the <b>Primary Tax ID</b>.</p> <p>Example: You configure 2 Tax IDs for your company. You select <b>Transaction Tax ID</b> for 1 of them. Workday includes that tax ID as the Transaction Tax ID on any invoices and purchase orders you generate for that company.</p>                           |
| <b>Primary Tax ID</b>          | <p>Select to indicate this identification number as the Primary Tax ID for your business entity. If you didn't select <b>Transaction Tax ID</b> for any of the identification numbers you configured, Workday finds and uses the Primary Tax ID.</p> <p>If you configured neither a Transaction Tax ID nor a Primary Tax ID for the business entity, financial transactions don't use tax ID, except for customer invoices where you selected <b>Transaction Tax ID Required</b>. You're unable to complete the customer invoice without configuring a Transaction Tax ID.</p> |

## Set Up Company Tax Configuration (FRA)

### Prerequisites

Define a SIREN company tax ID on the **Edit Company Tax Details** task. See [Set Up Company Tax ID \(FRA\)](#) on page 1552.

- Security: *Set Up: Payroll Company Specific (Taxes)* - FRA domain in the FRA Payroll functional area.

### Context

You can enter company-specific details for more accurate contribution and tax calculations:

- Company headcount. Workday uses this value to identify which social contributions apply to your company.
- Custom annual working time information.
- Custom contribution rate. Workday uses this value instead of the legal rate in retirement contribution calculations.
- Tax liabilities.

### Steps

1. Access the **Edit Company FRA Tax Configuration** task.
2. In the **Company Headcount** grid, enter the **Headcount** based on the company headcount for December 31 of the previous year.  
Workday uses different contribution deductions based on the company headcount. If you don't enter a headcount, Workday assumes that the company has 50 workers during payroll calculations.
3. (Optional) In the **Company Collective Agreement** grid, click **Add** to enter the collective agreement that is most frequently applied to the company.
4. (Optional) In the **Organization Membership** grid, click **Add** to select AGIRC-ARRCO or URSSAF from a list of regime types and enter the **Deduction Recipient**.
5. On the **Benefits** tab, click **Add** to select a benefit plan. Configure the **Risk Holder**, **Options**, and **Populations** for each Benefit Plan. See [Indicate Health Care Plans for DSN Reporting \(FRA\)](#) on page 1617.
6. (Optional) On the **AGIRC-ARRCO Specific Rates** tab, click **Add** to define custom retirement contribution rates for AGIRC-ARRCO retirement contribution calculations.

Select **Define company specific rates**.

As you complete the grid, consider:

| Option                      | Description                                                                                                                                                         |
|-----------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Retirement Deduction</b> | Workday uses default AGIRC-ARRCO rates for any retirement deductions not listed in the grid.                                                                        |
| <b>AGIRC-ARRCO Category</b> | Select the worker category that is dynamically generated from the <b>Retirement Deduction</b> option.                                                               |
| <b>Company Rates</b>        | Enter the <b>Worker</b> and <b>Employer</b> rates as percentages.<br><br>Workday applies the contribution rates that are effective on the subperiod end date of the |

| Option | Description                                                                               |
|--------|-------------------------------------------------------------------------------------------|
|        | payroll calculation, even in the case of multiple subperiods or retroactive calculations. |

**Note:** You can override retirement contribution rates for Band 1 or Band 2 for specific workers. See [Example: Override Retirement Rates for Specific Workers \(FRA\)](#) on page 1563.

7. (Optional) Define contribution and tax exemptions after a headcount increase on the **Headcount Threshold Change Exemption** tab.

Workday applies any exemptions specified in the **Headcount Threshold Change Exemption** tab, regardless of the company headcount. When the company headcount changes, update the applicable rates in the **Headcount Threshold Change Exemption** tab.

Workday recommends that you verify the **Headcount Threshold Change Exemption** settings when:

- The company headcount reaches a new legal threshold.
- The exemption eligibility of your company changes. Example: When your company has benefited from the reduction level for the allowed amount of time.

8. Define company liability for taxes on the **Taxes** tab.

As you complete this tab, consider:

If you don't select **Liability** or define a rate, Workday doesn't calculate the associated taxes or contributions.

| Grid                                | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
|-------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Salary Tax</b>                   | <p>Select the <b>Annual Ceiling</b> check box to start calculating the annual salary tax ceiling as of the worker's first regular payroll calculation of the year.</p> <p>When clear, Workday only calculates the annual ceiling in December or when a worker is:</p> <ul style="list-style-type: none"> <li>• On leave.</li> <li>• Terminated.</li> <li>• Transferred</li> </ul> <p>In addition to defining a company's liability for salary tax, you can also set up salary tax reductions for companies with multiple activities. See <a href="#">Set Up Salary Tax Reductions for Multiple Activity Sectors (FRA)</a> on page 1556.</p> |
| <b>Apprenticeship Tax Liability</b> | <p>In the <b>Option</b> field, select whether the company is liable to apprenticeship tax. You can specify a different option for establishments when configuring the establishment tax configuration.</p> <p>Workday uses the <b>Option</b> field to determine whether to:</p> <ul style="list-style-type: none"> <li>• Calculate deductions for apprenticeship tax.</li> <li>• Report apprenticeship tax details in DSN reporting.</li> </ul> <p>For companies liable to apprenticeship tax, Workday reports the <b>OPCO (Opérateur de</b></p>                                                                                            |

| Grid                                                 | Description                                                                                                                                        |
|------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------|
|                                                      | <b>compétences) Membership</b> information in DSN rubric S21.G00.11.                                                                               |
| <b>Supplementary Contribution for Apprenticeship</b> | Workday uses the location of the primary job to determine whether the <b>Applicable Rate</b> or the <b>Applicable Rate Alsace Moselle</b> applies. |

9. (Optional) Define custom yearly values for collective agreements on the **Annual Working Time** tab.  
As you complete the **Annual Working Time** grid, consider:

| Option                             | Description                                                                                                                                                                                                      |
|------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Classification Factor Value</b> | Enter values to identify the workers to whom the working time details apply.<br><br>If you don't enter any factor values, the company-specific values apply to all workers assigned to the collective agreement. |
| <b>Unit</b>                        | Select days or hours for DSN reporting.<br><br>If you select <b>Company Specific Value</b> , complete the <b>Value</b> column.                                                                                   |

10. (Optional) Define details related to your company's Obligation d'emploi des travailleurs handicapés (OETH) agreement on the **OETH Certified Agreement** tab.  
11. (Optional) Define the Pôle Emploi bonus/penalty rate on the **Pôle Emploi** tab.

#### Related Information

#### Tasks

Steps: [Set Up Payroll Statutory Contributions \(FRA\)](#) on page 1552

## Set Up Salary Tax Reductions for Multiple Activity Sectors (FRA)

### Context

When a company has activities in multiple sectors, you can define different salary tax reductions for each sector. You can also then configure which activities to apply to:

- A company.
- Each worker.

### Steps

1. Access the **Maintain Company FRA Salary Tax Sectors** task.

Define your company's activities and the associated **Reduction Rate**. Example: Casino.

When you change the reduction rate for an activity sector, Workday applies the new value as of January. When you retroactively change the rate, Workday calculates a progressive regularization in the current payroll calculation.

Security: *Set Up: Payroll Company Specific (Taxes) - FRA* domain in the FRA Payroll functional area.

## 2. Access the **Edit Company FRA Tax Configuration** task.

As you complete the **Salary Tax** grid on the **Taxes** tab, consider:

| Option                                                                  | Description                                                                                                                                                                                                                                                                                                                                                                                                                          |
|-------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Liability</b>                                                        | Select to indicate that the company is liable to salary tax. When you don't select this field, Workday considers the company to be exempt.                                                                                                                                                                                                                                                                                           |
| <b>Annual Ceiling</b>                                                   | Select to start calculating the annual salary tax ceiling as of the worker's first regular payroll calculation of the year. Workday recommends that you select this option for companies with multiple activity sectors.<br><br>When clear, Workday only calculates the annual ceiling in December or when a worker is: <ul style="list-style-type: none"> <li>• On leave.</li> <li>• Terminated.</li> <li>• Transferred.</li> </ul> |
| <b>Multi Sectors</b>                                                    | Select to indicate that the company is liable to salary tax in multiple activity sectors.                                                                                                                                                                                                                                                                                                                                            |
| <b>General</b><br><b>Sector 1</b><br><b>Sector 2</b><br><b>Sector 3</b> | For each tax declaration category, select the corresponding company activity.<br><br>Workday calculates salary tax and the corresponding reductions for activities listed here.                                                                                                                                                                                                                                                      |
| <b>Workday Default Tax Election</b>                                     | Select the default activity that applies to workers who don't have a defined activity in their tax election.<br><br>Select <i>Exempted</i> if, by default, workers are exempt from salary tax.                                                                                                                                                                                                                                       |

Security: *Set Up: Payroll Company Specific (Taxes)* - FRA domain in the FRA Payroll functional area.

## 3. Access the **Add Worker FRA Tax Elections** task.

In the **Salary Tax** grid, select the **Activity** that applies to the worker. Applies when the worker has an activity that's different from the default activity defined at the company level. When a worker changes from a nondefault activity to the default activity, you must select the default activity as the worker's tax election.

Security: *Worker Data: Payroll (Company Specific)* - FRA domain in the FRA Payroll functional area.

## Result

During a payroll calculation, Workday calculates 1 or more of these deductions for eligible workers:

- *TAX Salary Tax Reduction - Activity Sector 1 - ER [FRA]*
- *TAX Salary Tax Reduction - Activity Sector 2 - ER [FRA]*
- *TAX Salary Tax Reduction - Activity Sector 3 - ER [FRA]*
- *TAX Salary Tax Reduction - Activity Sector General - ER [FRA]*

### Next Steps

After calculating payroll, you can access the **Salary Tax Summary for Multi-Sector Companies** report to help you prepare your salary tax declaration for multisector companies.

## Define Work Accident and Mobility Payment Contribution Rates (FRA)

### Prerequisites

- Define a SIREN company tax ID on the **Edit Company Tax Details** task.
- Security: *Set Up: Payroll - Company Specific (Taxes) - FRA* domain in the FRA Payroll functional area.

### Context

You can define mobility payment contribution and work accident rates, which enable Workday to calculate URSSAF mobility payment, additional mobility payment, or work accident contributions.

### Steps

1. Access the **Edit Establishment FRA Tax Configuration** task.
2. To correctly report mobility payment and additional mobility payment contributions in a DSN, enter the **INSEE City Code** of the establishment.
3. In the **Work Accident Rates** grid, consider:

| Option           | Description                                                                                                                                                                                                |
|------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Rate</b>      | Enter the work accident rate as a percentage, for the given risk code and establishment.<br><br>Workday uses this rate to calculate the <i>URS Work Accident - ER</i> deduction.                           |
| <b>Risk Code</b> | If an office code is also applicable, enter the office code directly after the risk code. Example: For goods road transport, enter 602MD. For goods road transport with an office code of B, enter 602MDB. |

4. In the **Mobility Payment Contribution Rates** section, consider:

| Option                 | Description                                                                                                                                                                                                    |
|------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Rate</b>            | Enter the mobility payment contribution rate for the establishment, as a percentage.<br><br>Workday uses this rate to calculate the <i>URS Mobility Payment Contribution - ER</i> deduction.                   |
| <b>Additional Rate</b> | Enter the additional mobility payment contribution rate for the establishment, as a percentage.<br><br>Workday uses this rate to calculate <i>URS Additional Mobility Payment Contribution - ER</i> deduction. |

**Note:** Workday calculates mobility payment contributions when rates are available for an establishment, regardless of the company headcount defined in Workday. Only define mobility payment contribution rates when your establishment is subject to the URSSAF mobility payment contributions.

5. (Optional) For workers with individual mobility payment contribution rates, access the **Add Worker FRA Tax Elections** task. As you complete the **URSSAF** grid, consider:

| Option                                | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
|---------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Individual Tax</b>                 | <p>Select to define individual mobility payment contribution rates and INSEE codes that are different from the establishment tax rates and INSEE codes.</p> <p>When selected, Workday uses the worker's individual rates in mobility payment contribution calculations. Workday also reports:</p> <ul style="list-style-type: none"> <li>The worker's rate and INSEE code in DSN block S21.G00.23.</li> <li>The worker's taxable wages and INSEE code in DSN block S21.G00.81.</li> </ul> |
| <b>Rate</b><br><b>Additional Rate</b> | <p>Enter the worker's mobility payment contribution rates. When you select the <b>Individual Tax</b> check box, but leave <b>Rate</b> and <b>Additional Rate</b> empty, Workday blocks the mobility payment contribution calculations for the worker.</p>                                                                                                                                                                                                                                 |

### Result

When calculating work accident contributions, Workday uses the work accident rate defined for the worker's establishment and job location. Workday also reports the work accident rate and the risk code when generating a DSN.

When calculating mobility payment contributions, Workday uses the rate or additional rate defined for the worker's establishment.

### Example

Add a row in the **Work Accident Rates** grid, to set up a 2016 work accident social contribution for:

- Goods road transport workers in Paris.
- A work accident rate of 3 percent.

| Start Date | Location | Rate | Risk Code |
|------------|----------|------|-----------|
| 2016-01-01 | Paris    | 3    | 602MD     |

#### Tasks

[Steps: Set Up Payroll Statutory Contributions \(FRA\)](#) on page 1552

[Set Up Company Tax ID \(FRA\)](#) on page 1552

[Steps: Set Up Establishments](#)

## Set Up Individual Standard Deductions (FRA)

### Prerequisites

Security:

- Worker Data: Payroll (Company Specific)* - FRA domain in the FRA Payroll functional area.
- Set Up: Payroll (Calculations - Payroll Specific)* domain in the Core Payroll functional area.
- Worker Position: View* domain in the Staffing functional area.

## Context

When adding workers' tax elections, you can indicate that a worker has an individual standard deduction (déduction forfaitaire spécifique). When you configure individual standard deductions, Workday reduces:

- Workers' taxable wages by a percentage for all contributions, except CSG/CRDS and salary taxes.
- Taxable wages for journalists by a percentage for URSSAF and related taxes.

## Steps

1. Access the **Add Worker FRA Tax Elections** task.

In the **URSSAF** grid, add these values:

| Option                                 | Value                                                                                                                                                                                                                                                                                                                                        |
|----------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Effective Date                         | 2024-01-01 or later for industry-specific rates.                                                                                                                                                                                                                                                                                             |
| Type of Personnel                      | 100 - General Plan                                                                                                                                                                                                                                                                                                                           |
| Individual Standard Deduction/Rate     | Worker's individual standard deduction percentage                                                                                                                                                                                                                                                                                            |
| Individual Standard Deduction/Industry | <p>Select 1 of these industries if your company is eligible:</p> <ul style="list-style-type: none"> <li>• Construction</li> <li>• Cleaning</li> <li>• Civil Aviation</li> <li>• Road Haulage</li> <li>• Journalism</li> <li>• Casino and Gaming Circle</li> </ul> <p>Workday maintains these industry rates in a dedicated lookup table.</p> |

2. (Optional) For journalists, also access the **Job Details** report on the Job profile group of the worker profile.

In the **Position** section, verify these classification codes:

- *P352*, for journalists with a press card.
- *NP352*, for journalists without a press card.

3. Identify which hours to include in the SMIC calculation for individual standard deductions.

Workday uses the SMIC to determine the minimum taxable wages workers must have to be eligible for an individual standard deduction.

- a) Access the **Edit Deduction** or **Edit Earning** task for pay components that have related calculations for hours.
- b) On the **Related Calculations** grid on the **Effective Dated** tab, in the row with the related calculation for hours, select 1 of these pay component groups from the **Groups** prompt:
  - *FRA Partially Paid Absence in Hours [FRA]*
  - *FRA Unpaid Absence in Hours [FRA]*

4. (Optional) Define an alternative minimum wage amount for individual standard deductions.

- a) Access the **Edit Earning** task for the earning representing the minimum wage.
- b) On the **Non-Effective Dated** tab, select *FRA Minimum Wages for Individual Standard Deduction* from the **Groups** prompt.

5. (Optional) Change the reference salary Workday submits to an individual standard deduction.
  - a) Access the **Edit Earning** or **Edit Deduction** task for a pay component that you want to add to or subtract from the submitted amount.
  - b) On the **Non-Effective Dated** tab, select 1 of these pay component groups from the **Groups** prompt:
    - *FRA Adds to Contribution Base Before Taxable Wages Reduction*
    - *FRA Subtracts from Contribution Base Before Taxable Wages Reduction*
6. (Optional) Prevent Workday from applying the individual standard deduction rate to a pay component for a given pay period.
  - a) Create a related calculation.
  - b) Access the **Edit Deduction** or **Edit Earning** task for the pay component for which you want to be able to prevent the individual standard deduction.
  - c) On the **Related Calculations** grid on the **Effective Dated** tab, in the row with the related calculation for preventing the individual standard deduction, select *FRA Prevent the Individual Standard Deduction Calculation [FRA]* from the **Groups** prompt.
  - d) To prevent Workday from applying the individual standard deduction, add a value other than null to the related calculation when you process payroll.

### Related Information Tasks

[Add Earnings or Deductions to Pay Component Groups](#) on page 234

[Add Worker Tax Elections \(FRA\)](#) on page 1539

[Create Job Profiles](#)

## Concept: Company-Specific Contributions (FRA)

You can create deductions for contributions with calculations that are specific to your company. To ensure that Workday includes your company's contributions in statutory calculations and DSN reporting, consider these recommendations.

### Deduction Codes

Workday uses the code ending to determine where to display employer and employee deductions on the payslip and payroll results. Workday displays:

- Deductions ending in **\_EE** in the Employee column.
- Deductions ending in **\_ER** in the Employer column.

To display employer and employee deductions on the same line in the payslip, use the same code for both deductions, except for the **\_ER** and **\_EE** ending.

### Contingency Contributions

When creating contingency contributions, use these pay component groups to ensure that Workday correctly calculates and reports contributions for:

- Contingency funds.
- Health care funds.
- Supplementary retirement funds.

| Type of Contribution  | Pay Component Groups                                     |
|-----------------------|----------------------------------------------------------|
| Health care fund - EE | <i>FRA Contributions to Health Care Funds EE - [FRA]</i> |
| Health care fund - ER | <i>FRA Contributions to Health Care Funds ER - [FRA]</i> |

| Type of Contribution          | Pay Component Groups                                                  |
|-------------------------------|-----------------------------------------------------------------------|
| Contingency fund - EE         | <i>FRA Contributions to Contingency Funds EE - [FRA]</i>              |
| Contingency fund - ER         | <i>FRA Contributions to Contingency Funds ER - [FRA]</i>              |
| Supplementary retirement - EE | <i>FRA Contributions to Supplementary Retirement Funds EE - [FRA]</i> |
| Supplementary retirement - ER | <i>FRA Contributions to Supplementary Retirement Funds ER - [FRA]</i> |

For some replacement incomes, you can use these pay component groups to configure the taxable wages used in the contribution in excess calculations for supplementary retirement contributions:

- *FRA Adds to Reference Taxable Wages – Supplementary Retirement Contributions (FRA)*
- *FRA Subtracts from Reference Taxable Wages – Supplementary Retirement Contributions (FRA)*

### Other Contributions

For all contributions that aren't in a contingency contribution pay component group, add them to the *FRA Employee Statutory Contribution* pay component group.

### Tax and Contribution Bases

When creating company-specific contributions, use Workday-delivered pay component groups to ensure that Workday includes them in the appropriate taxable bases:

Examples:

- *FRA Adds to CSG/CRDS Base without Exemption [FRA]*
- *FRA Adds to Salary Tax Taxable Base [FRA]*
- *FRA Adds to Social Lump Sum Taxable Base at 8%*
- *FRA Adds to Social Lump Sum Taxable Base at 20%*
- *FRA Payslip - Health Insurance [FRA]*
- *FRA Statutory Taxes ER [FRA]*

Add any statutory taxes that are deductible from tax to the *FRA Statutory Taxes EE - Deductible from Tax - Excluded from Gross Up* pay component group. Workday excludes these taxes from gross-up calculations. Workday recommends that you subtract the *FRA Statutory Taxes EE - Deductible from Tax - Excluded from Gross Up* pay component group from all net pay accumulations. This ensures that the payroll calculation resolves all applicable employee statutory taxes that are deductible from tax.

### Statutory Taxes

Ensure that you include any company-specific contributions in the pay component groups configured for your run category. Example: *FRA Statutory Taxes ER [FRA]*.

#### Examples

[Example: Set Up Pay Run Category for Active and Terminated Workers \(FRA\)](#) on page 136

## Example: Override Retirement Rates for Specific Workers (FRA)

This example illustrates how to configure retirement rate overrides for specific types of workers.

### Context

You want to define these specific override retirement rates for workers with unlimited contracts:

- Manager: 4.72 (Employee rate), 3.15 (Employer rate).
- Nonmanager: 1 (Employee and Employer rate).

For all other types of contracts, you want to apply a rate of 2.

You can use these pay component groups to indicate that rates for the specific workers override the company-level rates:

- EE Retirement Contribution on Band 1 Rate Override
- ER Retirement Contribution on Band 1 Rate Override

### Prerequisites

Security:

- *Set Up: Payroll (Calculations - Generic)* domain in the Core Payroll functional area.
- *Set Up: Payroll (Calculations - Payroll Specific)* domain in the Core Payroll functional area.
- *Set Up: Time Off (Calculations - Generic)* domain in the Time Off and Leave functional area.

### Steps

1. Access the **Create Conditional Calculation** task, and enter these values:

| Option                  | Description                  |
|-------------------------|------------------------------|
| <b>Name</b>             | EE Rate Retirement on band 1 |
| <b>Category</b>         | <i>Payroll</i>               |
| <b>Default Response</b> | 2                            |

2. Add these rows and click **OK**:

| Order | Condition                                                      | Result |
|-------|----------------------------------------------------------------|--------|
| a     | <i>AGIRC/ARRCO Tax Election code equal to Manager category</i> | 4.72   |
| b     | <i>AGIRC/ARRCO Tax Election code equal to Non Manager</i>      | 1      |

3. Access the **Create Conditional Calculation** task, and enter these values:

| Option                  | Description                  |
|-------------------------|------------------------------|
| <b>Name</b>             | ER Rate Retirement on band 1 |
| <b>Category</b>         | <i>Payroll</i>               |
| <b>Default Response</b> | 2                            |

4. Add these rows and click **OK**:

| Order | Condition                                                      | Result |
|-------|----------------------------------------------------------------|--------|
| a     | <i>AGIRC/ARRCO Tax Election code equal to Manager category</i> | 3.15   |

| Order | Condition                                          | Result |
|-------|----------------------------------------------------|--------|
| b     | AGIRC/ARRCO Tax Election code equal to Non Manager | 1      |

5. Access the **Create Related Calculation** task, and enter these values:

| Option        | Description                  |
|---------------|------------------------------|
| Name          | EE Rate Band 1               |
| Code          | RC - EERateB1                |
| Category      | Payroll                      |
| Default Value | EE Rate Retirement on band 1 |

6. Access the **Create Related Calculation** task again, and enter these values:

| Option        | Description                  |
|---------------|------------------------------|
| Name          | ER Rate Band 1               |
| Code          | RC - ERRateB1                |
| Category      | Payroll                      |
| Default Value | ER Rate Retirement on band 1 |

7. Access the **Create Deduction** task, and enter these values:

| Option                           | Description                                   |
|----------------------------------|-----------------------------------------------|
| Name                             | Rate Override on Retirement Band 1            |
| Code                             | RORB                                          |
| Effective Date                   | Enter today's date.                           |
| Category                         | Payroll                                       |
| Country                          | France                                        |
| Worker Eligibility               | FRA Contract Type Equal to Unlimited Contract |
| Calculation                      | 0                                             |
| Groups (Non-Effective Dated tab) | FRA Statutory Taxes ER [FRA]                  |

In the **Related Calculations** grid, add these rows:

| Related Calculation | Groups                                                   | Default Calculation          |
|---------------------|----------------------------------------------------------|------------------------------|
| EE Rate Band 1      | EE Retirement Contribution on Band 1 Rate Override [FRA] | EE Rate Retirement on band 1 |
| ER Rate Band 1      | ER Retirement Contribution on Band 1 Rate Override [FRA] | ER Rate Retirement on band 1 |

## Result

When you run a payroll process, Workday uses the override rates to calculate AGCO retirement contributions on Band 1 for workers with unlimited contracts.

## Reference: Compare Working Time Payroll Impacts (FRA)

Workday uses information regarding an employee's working time and schedule for several payroll calculations and DSN reporting. This table compares the impact of each type of working time on payroll calculations.

| Working Time                                                                                                                                              | Description                                                                                                                                                                     | Payroll Impact                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

## FAQ: Contribution and Tax Exemptions (FRA)

### Do apprentices benefit from exemptions for overtime work?

Workday calculates the *Overtime Work Amount Contribution Exemption [FRA]* deduction for apprentices when they meet the legal eligibility criteria. Workday uses a different taxable base for apprentices that takes into account the number of overtime hours versus the total paid hours.

To enable Workday to identify hours to include, add pay component related calculations for hours to these pay component groups:

- *FRA Overtime Hours Eligible for Apprentice Exemption [FRA]*
- *FRA Partially Paid Absence in Hours [FRA]*
- *FRA Unpaid Absence in Hours [FRA]*

In the *FRA Overtime Hours Eligible for Apprentice Exemption [FRA]* pay component group, include overtime hours increased by their corresponding increased rate.

### How can I prevent Workday from calculating apprenticeship tax?

Workday calculates apprenticeship tax for all establishments marked as liable for apprenticeship tax on either the **Edit Company FRA Tax Configuration** or **Edit Establishment FRA Tax Configuration** tasks.

You can prevent Workday from calculating the Workday-delivered apprenticeship tax deductions by creating a pay component with a nonzero result and adding it to the *FRA Prevent Apprenticeship Taxes Calculation* pay component group.

### How can I identify exempted contractual overtime hours to prorate for absences?

When calculating overtime contribution and tax exemptions, Workday prorates overtime hours based on the worker's built-up salary versus the worker's actual salary.

To calculate contribution and tax exemptions for overtime hours, you must add pay component

related calculations for overtime hours and earnings to these pay component groups:

- *FRA Contractual Overtime Work Amount Eligible for Exemption*
- *FRA Contractual Overtime Hours Eligible for Employer Exemption*

**How can I adjust exemptions for overtime work?** Workday calculates tax and contribution exemptions based on:

- The legal tax limit.
- The overtime work amounts that are part of the *FRA Overtime Work Amount Eligible for Exemption [FRA]* pay component group.

To add or subtract from the legal tax limit, add an override payroll input for the *Memo – Overtime Work Amount Tax Exemption [FRA] - Tax Exemption Ceiling Adjustments* pay component related calculation.

To add to or subtract from the calculated eligible amount for overtime exemptions, add an override payroll input for 1 of these pay component related calculations:

- *Memo – Overtime Work Amount Contribution Exemption [FRA] - Eligible Amount Adjustment*
- *Memo – Overtime Work Amount Tax Exemption [FRA] – Eligible Amount Adjustment*

**Note:** When you add a payroll input for only 1 of the Eligible Amount Adjustment pay component related calculations, Workday uses its value by default for the tax exemption calculation.

**How does Workday calculate statutory contributions and taxes for on-demand additional payments?**

When you process an on-demand additional payment, Workday calculates the contributions and taxes configured on the **Off Cycle (On Demand Additional, Manual)** tab of the run category.

Workday calculates:

- Social contributions based on a rate from the payment subperiod end date.
- Taxes with a rate based on the payment date.

As opposed to regular payments, Workday only calculates SMIC reference values and social security ceilings for payments that are associated with 1 of these pay component groups:

- *FRA Absence Deduction to Subtract from Social Security Ceiling [FRA]*
- *FRA Absence Indemnity to Add to Social Security Ceiling [FRA]*
- *FRA Adds to Built up Reprocessed Taxable Wages [FRA]*
- *FRA Full Time and Part Time Workers Overtime Hours [FRA]*

- *FRA Part Time Medical Jobs Proration Ceiling Number of Days [FRA]*
- *FRA Partially Paid Absence in Hours [FRA]*
- *FRA Subtracts from Built up Taxable Wages [FRA]*
- *FRA Unpaid Absence in Hours [FRA]*

When an on-cycle or on-demand replacement payment follows an on-demand additional payment, Workday calculates a monthly regularization to respect the limits for:

- Absences and complementary hours for social security ceilings.
- Monthly overtime and contribution amounts for the employee overtime exemption calculation.
- Monthly overtime units, and contribution amounts for the employer overtime exemption calculation, applying to companies with a headcount below 20 employees.

**How does Workday calculate and report RTT payout-related exemptions for companies with fewer than 20 workers?**

When workers request payment for their RTT days, Workday calculates income tax and social security exemptions. Workday uses dedicated pay component groups and deductions to manage the impact on URSSAF contributions and DSN reporting.

Use these pay component groups to calculate RTT payout exemptions:

- *FRA RTT Payout Number of Days* for pay components related to the number of RTT payout days for the employer exemption.
- *FRA RTT Payout Amount* for pay components related to the RTT payout amount for the employee exemption.

You also need to add RTT payout-related earnings to the *FRA Days Off Payoff Eligible for Employer Exemption [FRA]* and the *FRA Overtime Work Amount Eligible for Exemption [FRA]* pay component groups.

Workday calculates the reduction of URSSAF contributions based on RTT payout with 2 deductions:

- *FRA RTT Payout Employer Exemption*
- *FRA RTT Payout Employee Exemption*

Workday reports these values in DSN rubric S21.G00.23.002:

- *096 pour la réduction de cotisations salariales*
- *097 pour la déduction forfaitaire de cotisations patronales pour les employeurs de moins de 20 salariés*

### How does Workday calculate overtime exemptions for companies with more than 20 workers?

In addition, the *FRA RTT Payout Employer Exemption* deduction is reported in DSN block 81 for rubric value 021 – *Déduction patronale au titre des heures supplémentaires*. The *FRA RTT Payout Employee Exemption* is reported for rubric value 114 - *Montant de réduction des heures supplémentaires/complémentaires*.

The Employer Contribution Lump Sum Deduction calculates the exemption based on either daily or hourly rates and the corresponding contribution limit. Add your workers to these pay component groups, depending if they are paid in hourly or daily increments:

- *FRA Employer of more than 20 Workers Exemption – Overtime Hours*
- *FRA Employer of more than 20 Workers Exemption – Days Off Paid*

In the **Edit Company FRA Tax Configuration** task, complete the **Company Headcount** grid.

## Troubleshooting: Contributions and Tax Setup (FRA)

**Cause:** Individual standard deduction calculation is incorrect when it starts in the middle of an existing contract.

**Solution:**

### Steps

Security: *Worker Data: Payroll (Payroll Input)* domain in the Core Payroll functional area.

1. Access the **Add Payroll Input by Worker** task.
2. Enter these values:

| Option               | Description                                                           |
|----------------------|-----------------------------------------------------------------------|
| Worker               | Select the impacted worker.                                           |
| Start Date           | Enter the start date of the impacted pay period.                      |
| End Date             | Enter the end date of the impacted pay period.                        |
| Pay Component        | <i>Memo – Reference Values for all Contributions – No Retro [FRA]</i> |
| Special Entry        | Select                                                                |
| One-Time             | Select                                                                |
| Override             | Select                                                                |
| Regular Run Category | Select                                                                |

3. Click **OK**.
4. Enter these values in the **Input** grid:

| Type                                                                                        | Value                                                                                     |
|---------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------|
| <i>General Contribution Reduction Taxable Wages without Impact of Professional Expenses</i> | Enter the value to use for the worker when calculating the individual standard deduction. |

5. Click **OK**.

[Add Payroll Input for Workers](#) on page 589

**Income Tax Withholding (FRA)**

**Setup Considerations: Income Tax Withholding (FRA)**

You can use this topic to help make decisions when planning your configuration and use of income tax withholding. It explains:

- Why to set it up.
- How it fits into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

**What It Is**

Income tax withholding (prélèvement à la source) in Workday provides web services, tax elections, and calculations that enable you to:

- Withhold a worker's income tax from their pay based on rates provided by the Direction Générale des Finances Publiques (DGFIP).
- Report income tax withholding in Déclaration Sociale Nominative (DSN) reports.

**Business Benefits**

- Effective-dated income tax rates on worker profiles provide an audit trail and historical record of past rates.
- Workday-delivered calculations make it easier for you to stay up to date with income tax withholding requirements.
- Streamlined processes, worker audits, and reporting make it easier to verify income tax calculations for each worker.
- Integrations with DGFIP help you automatically retrieve income tax rates as soon as they're available.

**Use Cases**

In addition to calculating income tax withholding for workers, you can:

- Upload income tax withholding rates from DGFIP.
- Display income tax withholding on payslips.
- Create an audit to identify workers who potentially need an income tax regularization due to a negative taxable base for income tax withholding.
- Record income tax regularizations and report them in a DSN or directly to DGFIP. Example: To regularize an incorrect tax rate.
- Calculate income tax withholding on on-demand payments.

**Questions to Consider**

| Questions                                                         | Considerations  |
|-------------------------------------------------------------------|-----------------|
| How does your organization retrieve income tax withholding rates? | You can use an: |

| Questions                                                         | Considerations                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
|-------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                                                   | <ul style="list-style-type: none"> <li>EIB to upload rates received in a compte-rendu métier (CRM) that you manually download from net-entreprises.fr.</li> <li>Integration to retrieve rates directly through DSN responses from net-entreprises.fr.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| Do you have workers who opted to use a neutral rate?              | <p>When you upload a worker's tax elections from DGFIP or CRM, Workday records whether a worker has opted to use a neutral rate for income tax calculations. Workday uses the tax election information as of the payment date. Workday calculates the neutral rate based on the:</p> <ul style="list-style-type: none"> <li>Applicable neutral rate scale based on the postal code of the worker's primary home address.</li> <li>Worker's monthly taxable net.</li> </ul> <p>When a worker has no tax election information, Workday automatically uses a neutral rate in the income tax calculation.</p>                                                                                                                                     |
| What income does your organization need to subject to income tax? | <p>By default, Workday bases the income tax withholding calculation on the taxable net for:</p> <ul style="list-style-type: none"> <li>Taxable net for workers.</li> <li>Taxable net with exemption for trainees, apprentices, and short-term contracts.</li> </ul> <p>You can further configure withholding tax calculations by identifying:</p> <ul style="list-style-type: none"> <li>Which benefits in kind to include.</li> <li>Overtime hours leading to exempted overtime amounts, which Workday excludes from income tax withholding.</li> </ul> <p>You can add any other income, such as paid profit-sharing and employer contributions to health care plans, to the <i>FRA Adds to Taxable Gross [FRA]</i> pay component group.</p> |
| Do you need to exempt any workers from income tax withholding?    | <p>Workday calculates the standard income tax withholding for all workers based on your run category configuration for the <i>TAX Withholding Tax [FRA]</i> deduction.</p> <p>Workday doesn't deduct income tax withholding when the taxation results in a negative net pay. Example: When you use benefits in kind. You can create an audit to identify workers who potentially need an income tax regularization due to a negative income tax withholding taxable base.</p>                                                                                                                                                                                                                                                                 |
| Does your organization include nonresident workers?               | <p>You can configure your own deduction to calculate the specific nonresident income tax (Retenue à la Source spécifique aux non-résidents). When you</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

| Questions                                                          | Considerations                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

|                                                                    | <p>configure your company's deductions for specific nonresident income tax, Workday:</p> <ul style="list-style-type: none"> <li>• Declares the nonresident withholding tax in DSN rubric S21.G00.81.004.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| <p>Do you need to regularize income tax withholding amounts?</p>   | <p>You can add payroll input to adjust a worker's current pay to account for an incorrect withholding tax calculation from a previous period. You can process regularizations based on an incorrect:</p> <ul style="list-style-type: none"> <li>• Rate.</li> <li>• Taxable base, either resulting or not in a withholding correction.</li> </ul> <p>When you accidentally overpay a worker, you generally don't need to process a regularization when the worker's net pay is positive. You must enter regularizations for workers when a correction isn't possible due to a negative net taxable pay.</p> <p>When entering a regularization, you can specify whether it's for IJSS payments or not.</p>                                                                                                                                                                                                                                                                                  |
| <p>Do you manage income tax withholding for IJSS payments?</p>     | <p>When adding pay input for sickness IJSS payments, you can specify for each payment whether it's taxable or not. Example: You can separately enter:</p> <ul style="list-style-type: none"> <li>• Nontaxable sickness IJSS amounts if the sickness absence continues after 2 months.</li> <li>• Taxable IJSS amounts for the first 2 months of an employee's sickness absence.</li> </ul> <p>You can also identify IJSS net earnings and deductions included in the total IJSS net amount but not in a gross-up. Workday includes these pay component amounts in the IJSS amount used for income tax withholding calculations, but not in a gross-up calculation.</p> <p>Example: When an IJSS payment is greater than the usual net of the worker, you can enter the:</p> <ul style="list-style-type: none"> <li>• IJSS amount up to the regular net amount.</li> <li>• Remaining portion in a specific tenanted pay component that you exclude from a gross-up calculation.</li> </ul> |
| <p>Do you manage workers with DSNs from other payroll systems?</p> | <p>When uploading income tax withholding rates through an integration or EIB, Workday identifies workers based on their Social Security number (SSN) or Temporary Technical Number (NTT). This enables you to retrieve a worker's rate whether they keep the same employee ID.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

## Recommendations

Create an audit based on the *Withholding Tax Taxable Base < 0* related calculation on the *Memo - Reference Values for Withholding Tax [FRA]* deduction. You can use this to identify workers with a negative withholding tax taxable base and who potentially need withholding tax regularizations.

To make it easier to display income tax information on your company's payslip, use a copy of the **Payslip to Print - FRA** report in your payslip configuration.

To help you ensure that you use the same income tax rates data as DGFIP, don't modify workers' income tax rates directly in their tax elections.

## Requirements

Ensure that you configure the:

- *DSN Polling (Machine to Machine)* integration to retrieve income tax withholding rates.
- Run category to process the appropriate workers and the *TAX Withholding Tax [FRA]* deduction.

## Limitations

Workday doesn't provide calculations for the specific nonresident withholding tax. To calculate this tax, you must manually configure your own calculations.

## Tenant Setup

No impact.

## Security

### Concepts

[Setup Considerations: DSN Reporting \(FRA\)](#) on page 1595

### Tasks

[Gross Up IJSS Payments \(FRA\)](#) on page 1684

### Reference

[Workday Community: Payroll Payslip Printing and Bulk Check Printing \(FRA\)](#)

## Steps: Set Up Income Tax Withholding (FRA)

### Prerequisites

- Review setup considerations for income tax withholding.
- Set up *DSN Polling (Machine to Machine)* integration.

### Context

You can configure Workday to directly withhold a worker's income tax from their pay using either:

- A rate from the Direction Générale des Finances Publiques (DGFIP).
- A neutral rate calculated based on the worker's monthly taxable net and applicable neutral rate scale.

**Note:** Workday doesn't automatically calculate the specific nonresident withholding tax (Retenue à la Source spécifique).

### Steps

**1.** Load income tax withholding rates. Choose from:

- Launching the *DSN Polling (Machine to Machine)* integration to retrieve and upload any worker income tax rates that are included in the response from net-entreprises.fr.
- Setting up an EIB to upload income tax withholding rates for rates received in a compte-rendu métier (CRM) that you manually download from net-entreprises.fr.

When uploading income tax withholding rates through an integration or EIB, Workday identifies workers based on their Social Security Number or Temporary Technical Number (NTT). You can verify income tax withholding rates for a group of workers by accessing the **FRA Tax Elections for Group of Workers** report.

2. Access the **Edit Deduction** task for your company's deductions for benefits in kind. Examples: Company cars, employer health insurance contributions.

On the **Non-Effective Dated** tab, select *FRA Benefits in Kind Deductions for Withholding Tax [FRA]*.

Workday doesn't deduct income tax withholding for benefits in kind if the taxation results in negative net pay. When determining if taxation would result in negative net pay, Workday considers exempted overtime and Indemnités Journalières de Sécurité Sociale (IJSS) payments.

Security: *Set Up: Payroll (Calculations - Payroll Specific)* domain in the Core Payroll functional area.

3. Access the **Edit Run Category** task.

On the **Nonactive (On Cycle, On Demand Replacement)** tab, select *TAX Withholding Tax [FRA]* from the **Pay Components to Calculate** prompt on rows for:

- Terminated workers.
- Workers on leave.

Security: *Set Up: Payroll - Pay Group Specific* domain in the Core Payroll functional area.

4. [Create Payroll Audit Rules](#) on page 775.

Create an audit based on the *Memo - Reference Values for Withholding Tax [FRA] - Withholding Tax Taxable Base < 0* payroll calculation.

Workday recommends that you use the audit to identify workers who potentially need an income tax regularization due to a negative income tax withholding taxable base.

## Result

After calculating payroll, you can view the income tax amount on the payroll results for the *TAX Withholding Tax [FRA]* deduction.

You can also view the deducted income tax amounts on payslips that are based on both:

- The **Payslip to Print - FRA** report.
- The *payslip\_fra* report design layout, available on [Workday Community: Payroll Payslip Printing and Bulk Check Printing \(FRA\)](#).

## Set Up an EIB to Upload Income Tax Withholding Rates (FRA)

### Context

You can set up an EIB to mass upload rates received in a compte-rendu métier (CRM) file that you manually download from [net-entreprises.fr](#)

### Steps

1. [Create Integration Transformation](#).

Create an XSLT attachment transformation based on the latest version of the *withholding\_tax\_rate\_transformation.xslt* in [Workday Community](#).

2. [Set Up Inbound EIB](#).

As you configure the EIB, consider:

| Option                     | Value                                                                                               |
|----------------------------|-----------------------------------------------------------------------------------------------------|
| <b>Retrieval Method</b>    | Select <i>Attach File at Launch</i> to upload the Compte Rendu Métier (CRM) as the attachment file. |
| <b>Transformation Type</b> | Select <i>Custom Transformation</i> to use your custom XSLT attachment transformation.              |

| Option                  | Value                                                                                                                     |
|-------------------------|---------------------------------------------------------------------------------------------------------------------------|
| <b>Transformation</b>   | Select your custom XSLT attachment transformation based on the Workday-delivered XSLT.                                    |
| <b>Delivery Method</b>  | Select <i>Workday Web Service Operation</i> to use the Workday-delivered web service for importing withholding tax rates. |
| <b>Workday Endpoint</b> | Select <i>Import Withholding Tax Rates (WS Background Process)</i> .                                                      |

- Launch the EIB to upload withholding tax rates.  
Upload the CRM as the attachment file when launching the EIB.

## Result

You can view a worker's income tax withholding rate in the **Worker FRA Tax Elections** report.

During payroll calculations, Workday uses a worker's income tax withholding rates to calculate their income tax withholding.

### Tasks

[Set Up DSN Polling \(Machine to Machine\) Integration](#)

[Launch an Integration](#)

## Process Income Tax Regularizations (FRA)

### Prerequisites

- Have existing payroll results in Workday for the period that you want to adjust.
- Security: *Worker Data: Payroll (Payroll Input)* domain in the Core Payroll functional area.

### Context

You can process a regularization to adjust a worker's current payroll to account for an incorrect withholding tax calculation from a previous period.

You can process regularizations for calculations based on an incorrect:

- Rate.
- Taxable base, resulting in a withholding correction.
- Taxable base, not resulting in a withholding correction.

When you accidentally overpay a worker, you generally don't need to process a regularization to correct the corresponding income tax withholding. You can, however, enter regularizations for workers when a correction isn't possible due to a negative net taxable pay.

Workday reports DSN block S21.G00.56 for all workers with a payroll regularization.

### Steps

- Access the **Add Payroll Input by Worker** task.
- In the **Worker Defaults** section, consider:

| Option            | Description                                                                                                        |
|-------------------|--------------------------------------------------------------------------------------------------------------------|
| <b>Start Date</b> | Enter the dates for the original tax withholding period. Workday reports this period in DSN rubric S21.G00.56.001. |
| <b>End Date</b>   |                                                                                                                    |

| Option               | Description                                                                                                                                                                                                                                                                                             |
|----------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                      | Workday only processes regularizations for prior periods.                                                                                                                                                                                                                                               |
| <b>Pay Component</b> | Select 1 of these deductions: <ul style="list-style-type: none"> <li>• <i>TAX Withholding Regularization on IJSS [FRA]</i> for regularizations related to Indemnités Journalières de Sécurité Sociale.</li> <li>• <i>TAX Withholding Regularization [FRA]</i> for all other regularizations.</li> </ul> |

3. In the **Process Defaults** section, select:

- **One-time**
- **Override**
- **Regular Run Category**

4. In the **Input Grid**, add a row and enter values for these **Input Details** types:

| Type                   | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Type of Regularization | Enter 1 of these values: <ul style="list-style-type: none"> <li>• 1: For regularizations related to the taxable net pay.</li> <li>• 2: For regularizations related to the rate.</li> <li>• 3: For regularizations linked to overpayments to workers who currently have a negative taxable net.</li> <li>• 4: For regularizations related to a previous declared taxable net pay, but not the calculated withholding.</li> </ul> Workday reports the type of regularization in DSN rubric S21.G00.56.002.                                                          |
| Net Taxable Income     | Doesn't apply to regularizations on IJSS.<br>Workday reports this amount in these DSN rubrics: <ul style="list-style-type: none"> <li>• S21.G00.56.003: Régularisation de la rémunération nette fiscale</li> <li>• S21.G00.56.004: Rémunération nette fiscale déclarée le mois de l'erreur</li> </ul> For: <ul style="list-style-type: none"> <li>• Rate regularizations: Enter the original net taxable income declared.</li> <li>• Other regularizations: Enter the difference between the original taxable income and the corrected taxable income.</li> </ul> |
| Nontaxable Income      | Doesn't apply to regularizations on IJSS.<br>Applies to regularizations related to: <ul style="list-style-type: none"> <li>• Taxable net.</li> <li>• Undue payments.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                   |

| Type                  | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|-----------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                       | Enter the amount of the regularization that isn't subject to income tax. Workday reports this amount in DSN rubric S21.G00.56.008:Régularisation du montant de la part non imposable du revenu.                                                                                                                                                                                                                                                                                                                                                                                 |
| Rate                  | <p>Enter the rate used to calculate the tax regularization. For:</p> <ul style="list-style-type: none"> <li>Rate regularizations: Enter the difference between the original rate and the corrected rate. Example: -1.5.</li> <li>Other regularizations: Enter the original rate used to calculate the income tax withholding.</li> </ul> <p>Workday reports this amount in these DSN rubrics:</p> <ul style="list-style-type: none"> <li>S21.G00.56.005 Régularisation du taux de prélèvement à la source.</li> <li>S21.G00.56.006 Taux déclaré le mois de l'erreur.</li> </ul> |
| Withholding Tax Basis | <p>Enter the taxable base for the regularization that is subject to income tax withholding. For:</p> <ul style="list-style-type: none"> <li>Taxable net regularizations (type 1 and 4): Enter the difference between the original and corrected amount subject to tax. Example: -200.</li> <li>Rate regularizations: Enter the original amount subject to tax.</li> <li>Undue payment regularizations: Enter the negative taxable net, or the IJSS amount.</li> </ul>                                                                                                           |

### Example

In February, you accidentally used an income tax rate of 6.5% instead of 5% when calculating Jean's income tax withholding. In February, Jean had a:

- Taxable net of 1400 EUR.
- Taxable IJSS payments of 500 EUR.

In March, you add these payroll inputs for the February pay period:

| Pay Component                               | Type                          | Value |
|---------------------------------------------|-------------------------------|-------|
| <i>TAX Withholding Regularization [FRA]</i> | <i>Withholding Tax Basis</i>  | 1400  |
|                                             | <i>Net Taxable Income</i>     | 1400  |
|                                             | <i>Nontaxable Income</i>      | 0     |
|                                             | <i>Rate</i>                   | -1.5  |

|                                                     | <i>Type of Regularization</i> | 2     |

### Next Steps

Run a retro pay calculation to calculate the amount of the regularization for income tax withholding.

After running a retro calculation, run a pay calculation to process the regularizations in the worker's current payroll.

### Related Information

#### Tasks

[Calculate Retro Payroll](#) on page 827

#### Examples

[Example: Add Income Tax Regularizations \(FRA\)](#) on page 1580

### FAQ: Does Workday Calculate Income Tax Withholding for Non-Residents? (FRA)

Workday excludes workers from tax withholding calculations depending on the worker's residency and international assignment status.

| Status                                                                    | Income Tax Withholding                       | Other Contributions                                                                                                                                                                                                                                       |
|---------------------------------------------------------------------------|----------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Expatriate                                                                | Only calculated if the worker is a resident. | Workday doesn't calculate URSSAF contributions.                                                                                                                                                                                                           |
| Other than expatriate.<br>Examples: Posted workers, cross-border workers. | Only calculated if the worker is a resident. | Workday: <ul style="list-style-type: none"> <li>Calculates employee nonresident contributions for URS illness, maternity, invalidity, and death when a worker is a nonresident.</li> <li>Only calculates CSG/CRDS if the worker is a resident.</li> </ul> |

You can configure your own deduction to calculate the specific nonresident income tax (Retenue à la Source spécifique aux non-résidents). When you add your company's deductions for specific nonresident income taxes to the *FRA DSN Withholding Tax for Non-Resident [FRA]* pay component group, Workday declares the nonresident withholding tax in DSN rubric S21.G00.81.004.

### Example: Add Income Tax Regularizations (FRA)

This example illustrates how to create an income tax withholding regularization for a worker with a negative taxable net pay.

### Context

Andre is terminated at the end of February 2020 and receives a bonus amount of 1500 EUR. You calculate income tax withholding with a 5% rate from DGFIP.

In March 2020, you:

- Receive a 200 EUR IJSS payment (206.22 EUR taxable base) for Andre.
- Recognize that you need to change the February bonus from 1500 EUR to 1000 EUR.

You need to provide complementary pay to:

- Retroactively correct the bonus amount.
- Pay the IJSS net amount.

You calculate that Andre's taxable net for the complementary pay is -612.07 EUR. Since Andre's pay is negative, you need to manually regularize the withholding tax amount.

### Prerequisites

Security: *Worker Data: Payroll (Payroll Input)* domain in the Core Payroll functional area.

### Steps

1. Access the **Add Payroll Input by Worker** task.
2. In the **Worker Defaults** section, enter these values:

| Option            | Description       |
|-------------------|-------------------|
| <b>Worker</b>     | Andre             |
| <b>Start Date</b> | February 1, 2020  |
| <b>End Date</b>   | February 29, 2020 |

3. In the **Processing Defaults** section, select:

- **One-time**
- **Override**
- **Regular Run Category**

4. Click **OK**.

5. In the **Input** grid, add these rows:

| Pay Component                                     | Input Details -Type           | Input Details -Value |
|---------------------------------------------------|-------------------------------|----------------------|
| <i>TAX Withholding Tax Regularization</i>         | <i>Withholding Tax Basis</i>  | -612.07              |
|                                                   | <i>Net Taxable Income</i>     | -612.07              |
|                                                   | <i>Rate</i>                   | 5                    |
|                                                   | <i>Type of Regularization</i> | 3                    |
| <i>TAX Withholding Tax Regularization on IJSS</i> | <i>Withholding Tax Basis</i>  | 206.22               |
|                                                   | <i>Rate</i>                   | 5                    |
|                                                   | <i>Type of Regularization</i> | 3                    |

### Result

When you run a retro pay calculation, and then run March payroll calculations, Workday calculates these withholding tax regularizations:

| Pay Component                  | Taxable Base | Rate | Amount |
|--------------------------------|--------------|------|--------|
| Withholding Tax Regularization | -612.07      | 5    | 30.60  |

| Pay Component                          | Taxable Base | Rate | Amount |
|----------------------------------------|--------------|------|--------|
| Withholding Tax Regularization on IJSS | 206.22       | 5    | -10.31 |

In the monthly DSN for March 2020, Workday reports in block S21.G00.56:

- The taxable base from the regularization for the bonus.
- Aggregated bonus and IJSS regularization amounts (-30.60 EUR + 10.31 EUR).

| Rubric         | Description                 | Value   |
|----------------|-----------------------------|---------|
| S21.G00.56.001 | Error month                 | 022020  |
| S21.G00.56.002 | Type of error               | 03      |
| S21.G00.56.003 | Taxable base regularization | -612.07 |
| S21.G00.56.006 | Rate in the error month     | 5       |
| S21.G00.56.007 | Amount                      | -20.29  |
| S21.G00.56.010 | Withholding tax basis       | -405.85 |

#### Related Information

##### Tasks

[Process Income Tax Regularizations \(FRA\)](#) on page 1577

[Add Payroll Input for Workers](#) on page 589

## Concepts: Statutory Calculation Frameworks (FRA)

### Concept: Fictitious Gross Wages for Part-Time Workers (FRA)

Workday calculates fictitious gross wages in order to manage part-time workers who contribute to retirement on a full-time basis.

#### Pay Component Groups

Before setting up full-time retirement contributions for part-time workers, you can define which pay components impact the fictitious gross wages. Workday uses these pay component groups to determine the fictitious gross wages:

- *FRA Complementary Hours in Fictitious Gross [FRA]*.
- *FRA Deductions Impacted by FTE in Fictitious Gross [FRA]*. Example: For hire and termination deductions.
- *FRA Deductions Not Impacted by FTE in Fictitious Gross [FRA]*.
- *FRA Earnings Impacted by FTE in Fictitious Gross [FRA]*. Example: For the base salary or seniority bonuses.
- *FRA Earnings Not Impacted by FTE in Fictitious Gross [FRA]*. Example: For exceptional bonuses.

In the case of a 10th absence calculation where the paid vacation earning is greater than the time off deduction:

- Add the paid vacation earning to the *FRA Earnings Not Impacted by FTE in Fictitious Gross [FRA]* pay component group.
- Add the time off deductions to the *FRA Deductions Not Impacted by FTE in Fictitious Gross [FRA]* pay component group.

## Working Time Inputs

As part of the fictitious gross wages calculation, Workday calculates fictitious full-time monthly hours for a worker based on these inputs.

| Worker's Working Time Definition   | Fictitious Monthly Hours Based On     |
|------------------------------------|---------------------------------------|
| Monthly frequency defined in hours | Worker's weekly scheduled hours       |
| Annual frequency defined in hours  | Worker's annual working time in hours |
| Annual frequency defined in days   | Worker's annual working time in days  |

For subperiods, Workday prorates the monthly working time based on the number of calendar days in the subperiod.

## FRA Fictitious Gross Wages

To override the fictitious gross wage calculation, you can add pay input for these pay component related calculations:

- *Memo - Reference Values for AGIRC-ARRCO [FRA] - FRA Fictitious Gross Wages.*
- *Memo - Reference Values for URSSAF [FRA] - FRA Fictitious Gross Wages.*

## Related Information

### Tasks

[Add Worker Tax Elections \(FRA\)](#) on page 1539

[Add Earnings or Deductions to Pay Component Groups](#) on page 234

## Concept: Social Security Ceiling Proration (FRA)

Workday uses the social security ceiling to calculate statutory contributions, such as retirement, Pôle Emploi, and URSSAF.

## Social Security Ceiling

When calculating the social security ceiling for hourly workers, Workday takes into account:

- The number of calendar days in the period.
- Unpaid absences.
- Complementary hours.

To identify the hours and absences that impact the social security calculation, add these pay component groups to the appropriate pay component related calculations:

- *FRA Absence Deduction to Subtract from Social Security Ceiling [FRA]*
- *FRA Absence Indemnity to Add to Social Security Ceiling [FRA]*
- *FRA Complementary Hours [FRA]*

Example: On an earning for complementary payments to part-time workers, add the *FRA Complementary Hours [FRA]* pay group to the pay component related calculation for complementary hours.

## Including Nonworked Days

You can configure Workday to include nonworked days in the proration calculation for social security, such as weekends or public holidays. This configuration applies when managing time off configured in business days.

To include nonworked days in the proration calculation, add the *FRA Full Time Off Calendar Days* related calculation to both:

- Pay components that impact the social security calculation.

- Pay component groups impacting the social security ceiling proration.

### Workers with Multiple Employment

You can manage social security calculations for workers with multiple employment by overriding the numerator and denominator of the social security calculation.

To override the social security calculation, add pay input for these related calculations on the *Memo – Reference Values for Multiple Employment Overrides [FRA]* deduction:

- *Social Security Ceiling Override Denominator*
- *Social Security Ceiling Override Numerator*

When you want to define a social security ceiling of zero, Workday recommends that you directly override URSSAF and AGIRC-ARRCO ceiling amounts.

### Medical Jobs with Multiple Employers

For medical workers with multiple employers, you can prorate the ceiling for AGIRC-ARRCO and Pôle Emploi based on the number of daily shifts. To identify the number of daily shifts for a medical worker, add the *FRA Part Time Medical Jobs Proration Ceiling Number of Days [FRA]* pay component group to the appropriate pay component related calculations.

### Related Information

#### Tasks

[Add Earnings or Deductions to Pay Component Groups](#) on page 234

### Concept: Pôle Emploi Bonus/Penalty (FRA)

Workday applies the Pôle Emploi Bonus/Penalty contribution required for companies that participate in certain activities, as defined by government regulations.

#### Rate

Access the **Edit Company FRA Tax Configuration** task. On the **Pôle Emploi** tab, add a row and enter the Rate.

When this rate is other than zero or the national average, Workday calculates an additional deduction to reflect the bonus or penalty effect.

### Pay Component Group

Workday provides the *FRA Paid Vacation Fund Bonus/Penalty Rate on Unemployment Insurance* pay component group to override the company rate for workers affiliated to a paid vacation fund. To calculate the bonus or penalty contribution, configure the rate specific to an employee affiliated with a paid vacation fund, regardless of the company configuration.

### DSN

Workday reports the Bonus/Penalty central rate in these DSN blocks:

- S21.G00.20
- S21.G00.22
- S21.G00.23

DSN blocks 81 and 78 include taxable wages, the rate, and the amount related to the Pôle Emploi Bonus/Penalty central rate.

## Examples: Set Up Exemptions (FRA)

### Example: Set Up Exemptions for Trainees (FRA)

This example illustrates how to set up and pay trainees.

#### Context

You want to calculate statutory contributions for George, a trainee.

#### Prerequisites

Define George's employee type as *Trainee*.

Security:

- *Worker Data: Payroll (Payroll Input)* and *Set Up: Payroll (Calculations - Payroll Specific)* domains in the Core Payroll functional area.
- *Set Up: Payroll - FRA* domain in the FRA Payroll functional area.

#### Steps

1. Access the **S21.G00.40.007** tab on the **Maintain HCM Mapping for Payroll France** task.

| DSN Rubric Name      | DSN Rubric Value               | Values from HR |
|----------------------|--------------------------------|----------------|
| <b>Contract Type</b> | <i>29 - Trainee/Internship</i> | <i>Trainee</i> |

2. Access the **Edit Deduction** or **Edit Earning** task for pay components with related calculations for absences to include the trainee compensation calculation.
3. On the **Effective Dated** tab, in the **Related Calculations** grid, access a row for the related calculation that retrieves the amount of unpaid or partially paid hours.

4. Select the appropriate pay component group from the **Groups** prompt:

- *FRA Non Paid Hours [FRA]*
- *FRA Paid Hours for Trainees [FRA]*

5. Add payroll input for the *Trainee Compensation [FRA]* pay component to record George's hours and compensation for the month.

Add rows with values for:

- *Training Hours*
- *Amount*

Workday bases the exemption calculation on compensation returned by the *Trainee Compensation [FRA]* pay component.

#### Result

When you run a payroll calculation, Workday:

- Exempts the portion of George's compensation that is below the legal limit for statutory contributions.
- Calculates statutory contributions on any portion that exceeds the legal exemption limit.

#### Next Steps

To view George's exemption amount, access the **Gross to Net** tab in his pay results. View the **Related Values** for the *Memo - Reference Values for all Contributions [FRA]* pay component.

#### Related Information

[Add Payroll Input for Workers](#) on page 589

### Example: Set Up General Contribution Reductions (FRA)

This example illustrates how to set up General Contribution Reductions (Réduction générale) for employer contributions on a worker's pay.

#### Context

You want to configure payroll for Aurelie and Beth, 2 workers who are eligible for the General Contribution Reduction. Beth contributes to a transportation paid vacation fund (caisse de congés payés transport), and needs a specific calculation for the General Contribution Reduction coefficient.

#### Prerequisites

- Define a working time and a work schedule calendar for Aurelie and Beth.
- Security: *Set Up: Payroll (Calculations - Payroll Specific)* domain in the Core Payroll functional area.

#### Steps

1. Confirm that Aurelie and Beth meet the eligibility criteria for a General Contribution Reduction.
  - a) Access the **View Deduction** report for *General Contribution Reduction Extended for URSSAF [FRA]*.
  - b) Review the **Criteria** section on the **Effective Dated** tab and evaluate whether Aurelie is eligible.
2. Define which absences and pay elements to include in the General Contribution Reduction calculations.
  - a) Access the **Edit Deduction** or **Edit Earning** task.
  - b) On the **Non-Effective Dated** tab, select these pay component groups from the **Groups** prompt:
    - *FRA Adds to Built up Reprocessed Taxable Wages [FRA]*
    - *FRA Subtracts from Built up Taxable Wages [FRA]*
    - *FRA Subtracts from Reprocessed Taxable Wages [FRA]*
    - *FRA Subtracts from Taxable Wages for General Contribution Reduction [FRA]*
3. Identify overtime hours for the General Contribution Reduction calculation.
  - a) Access the **Edit Earning** task for pay components with related calculations for overtime hours.
  - b) Navigate to the **Related Calculations** grid on the **Effective Dated** tab. In the row with the related calculation for overtime hours, select *FRA Full Time and Part Time Workers Overtime Hours [FRA]* from the **Groups** prompt.
  - c) On the **Non-Effective Dated** tab, select *FRA Subtracts from Reprocessed Taxable Wages [FRA]* from the **Groups** prompt.
4. (Optional) Select the proration method for the SMIC used in the General Contribution Reduction calculations.
 

By default, Workday prorates the SMIC for the General Contribution Reduction by calendar days when subperiods occur. To prorate the SMIC with a reprocessed built-up salary:

  - a) Access the **Edit Deduction** or **Edit Earning** task for a pay component that has a nonzero result for the subperiod.
  - b) From the **Groups** prompt on the **Non-Effective Dated** tab, select *FRA SMIC Calculation Prorata Based on Built-Up Salary [FRA]*.

5. Identify that Beth is a worker who contributes to a transportation paid vacation fund.
  - a) Access the **Edit Deduction** or **Edit Earning** task for a pay component for workers eligible for a transportation paid vacation fund.
  - b) Ensure that the pay component has a nonzero result for the subperiod for Beth.
  - c) From the **Groups** prompt on the **Non-Effective Dated** tab, select *FRA Worker Affiliated to a Transportation Paid Vacation Fund Eligibility Criteria [FRA]*.

### Next Steps

Run a payroll calculation and access the **Summary** tab of Aurelie and Beth's payroll results. Verify the deduction amounts for the *General Contribution Reduction Extended for URSSAF [FRA]*.

To view the reference values for the calculations, access the **Gross to Net** tab in the pay results and view the **Related Values** for these pay components:

- *Memo - Reference Values for all Contributions [FRA]*
- *Memo - Reference Values for all Contributions - No Retro [FRA]*

### Related Information

[Reference: Compare Working Time Payroll Impacts \(FRA\)](#) on page 1565

### Example: Set Up Exemptions for Pôle Emploi Lump Sum Contributions (FRA)

This example illustrates how to exempt workers for the Pôle Emploi lump sum contribution.

### Context

You want Workday to apply the Pôle Emploi lump sum contribution for workers with sector fixed-term contracts (CDD d'usage). You want to exempt 1 worker, Pierre, based on his collective agreement.

### Prerequisites

Security: *Setup Payroll - FRA* domain in the FRA Payroll functional area.

### Steps

1. Access the **Maintain HCM Mapping for Payroll France** task.
 

In the **S21.G00.40.007** tab, map these **DSN Rubric Values** to your company's contract types and employee contract reasons:

  - *02- Fixed-Term Contract*
  - *05 - Sector Fixed-Term Contract*
2. Create a tenanted pay component related calculation based on collective agreements that returns a nonzero result for Pierre.
 

From the **Groups** prompt on the **Related Calculations** grid, select *FRA Prevents the Lump Sum Contribution for Sector Fixed-term Contracts Calculation [FRA]* pay component group.

See [Set Up Pay Component Related Calculations](#) on page 241.

### Result

Workday calculates the *POL Lump Sum Contribution for Sector Fixed-term Contracts [FRA]* deduction for nonexempt workers.

Workday reports the lump sum contribution amount in these DSN rubrics:

- S21.G00.23.001 for rubric value 771.
- S21.G00.81.001 for rubric value 908.

### Next Steps

You can add payroll input for the *POL Lump Sum Contribution for Sector Fixed-term Contracts [FRA]* deduction to adjust the deduction calculation. Example: To apply the deduction retroactively after correcting the HCM mapping.

### Related Information

[Add Payroll Input for Workers](#) on page 589

[Map Staffing Information to Payroll Calculations \(FRA\)](#) on page 1510

## Partial Activity (FRA)

### Steps: Set Up Calculations for Partial Activity (FRA)

#### Context

You can configure Workday to manage contribution calculations for partial activity, including:

- Reductions on CSG and CRDS for replacement income.
- The legal exemption limit above which employer indemnities to include in contribution calculations.
- The impact of long-term partial activity on taxable wages.

#### Steps

1. [Set Up Workday Reductions for Indemnities for Partial Activity \(FRA\)](#) on page 1588.
2. [Set Up Custom Reductions for Indemnities for Partial Activity \(FRA\)](#) on page 1589.
3. Access the **Edit Earning** task for pay components related to partial activity.

Select the appropriate pay component groups from either:

- The **Groups** prompt on the **Non-Effective Dated** tab.
- The **Groups** prompt in the **Related Calculations** grid on the earning.

See [Reference: Pay Component Groups for Partial Activity \(FRA\)](#) on page 1590.

Security: *Set Up: Payroll (Calculations - Payroll Specific)* domain in Core Payroll functional area.

### Related Information

#### Tasks

[Add Earnings or Deductions to Pay Component Groups](#) on page 234

### Set Up Workday Reductions for Indemnities for Partial Activity (FRA)

#### Context

Workday provides several calculations that you can use to calculate reductions for replacement income for partial activity. By default, Workday doesn't calculate these deductions.

#### Steps

1. Access the **Edit Run Category** task.

Select *FRA CSG and CRDS Reduction Calculation Activation [FRA]* pay component group from the **Additional Pay Component Groups to Calculate** prompt.

Security: *Set Up: Payroll - Pay Group Specific* domain in Core Payroll functional area.

2. Create a pay component with a nonzero result.

Select *FRA CSG and CRDS Reduction Calculation Activation [FRA]* from the **Groups** prompt on the **Non-Effective Dated** tab.

You can also create a pay component related calculation with a nonzero result, and add it to the *FRA CSG and CRDS Reduction Calculation Activation [FRA]* pay component group.

See [Steps: Create Deductions](#) on page 227.

3. Access the **Edit Earning** or **Edit Deduction** task for pay components that are replacement income and contribute to URSSAF reduction calculations.

Select these pay component groups from the **Groups** prompt on the **Non-Effective Dated** tab:

- *FRA Adds to CSG/CRDS on Replacement Income Taxable Base and Subtracts from Common Law Contributions Taxable Bases [FRA]*
- *FRA Adds to URSSAF - Partial Activity [FRA]*

Security: *Set Up: Payroll (Calculations - Payroll Specific)* domain in Core Payroll functional area.

4. (Optional) [Add Payroll Input for Workers](#) on page 589.

To override the default calculation, add payroll input for the *Memo - Reference Values for all Contributions [FRA]* pay component and add input for these related calculations:

- *Gross SMIC Limit*
- *Net Salary Prior to Reduction on CSG CRDS*

## Result

Workday calculates these deductions:

- *URS Reduction on CRDS [FRA]*
- *URS Reduction on CSG Deductible from Tax [FRA]*
- *URS Reduction on CSG Submitted to Tax [FRA]*

Workday also reports reduction amounts in these DSN blocks:

- S21.G00.20
- S21.G00.22
- S21.G00.23

## Set Up Custom Reductions for Indemnities for Partial Activity (FRA)

### Context

When you create custom CSG/CRDS reductions for indemnities for partial activity, you can configure Workday to report in DSN reporting.

### Steps

1. Access the **Edit Run Category** task.

Select *URS CSG and CRDS Reduction for Replacement Income [FRA]* deduction from the **Additional Pay Components to Calculate** prompt.

Security: *Set Up: Payroll - Pay Group Specific* domain in Core Payroll functional area.

2. Create deductions to calculate CSG and CRDS reductions for replacement income, based on your company's business need.

Select *FRA DSN – CSG and CRDS Reduction for Replacement Income Amount [FRA]* from the **Groups** prompt on the **Non-Effective Dated** tab.

See [Steps: Create Deductions](#) on page 227.

## Result

Workday reports reduction amounts in DSN block S21.G00.23.

### Reference: Pay Component Groups for Partial Activity (FRA)

#### Partial Activity Calculations

Workday uses pay components in these pay component groups to determine:

- Which calculations to use for specific cases.
- Which pay components to consider as replacement income.

| Pay Component for                                               | Groups                                                                                                                         |
|-----------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------|
| Activation of the Workday calculation for the reduction on CSG. | <i>FRA CSG and CRDS Reduction Calculation Activation [FRA]</i>                                                                 |
| Replacement income.                                             | <i>FRA Adds to CSG/CRDS on Replacement Income Taxable Base and Subtracts from Common Law Contributions Taxable Bases [FRA]</i> |

#### Common Law Partial Activity

Workday uses pay components in these pay component groups to calculate the impact of common law partial activity on taxable wages for contributions.

| Pay Component for                                                                   | Groups                                                                                                               |
|-------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------|
| Activation of a different exemption limit for protected sectors.                    | <i>FRA Activation for Partial Activity Exemption Increase [FRA]</i>                                                  |
| Hours that benefit from indemnities.                                                | <i>Partial Activity Hours [FRA]</i>                                                                                  |
| Payments for partial activity granted in addition to the legal one.                 | <i>Additional Partial Activity Indemnity [FRA]</i><br><i>FRA Adds to URSSAF - Replacement Income [FRA]</i>           |
| Taxable wages for illness reduction for workers in Alsace-Moselle and nonresidents. | <i>FRA Adds to URSSAF - Replacement Income [FRA], for nonresident workers, or workers located in Alsace Moselle.</i> |

#### Long-Term Partial Activity

Workday uses pay components in these pay component groups to calculate the impact of long-term partial activity on taxable wages for contributions.

| Pay Component for                                                                              | Groups                                                                                                                        |
|------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------|

| Payments for long-term partial activity granted by the employer in addition to the legal one.  | <i>Additional Long-Term Partial Activity Indemnity [FRA]</i><br><i>FRA Adds to URSSAF - Long- Term Partial Activity [FRA]</i> |
| Payments for long-term partial activity for nonresident workers and workers in Alsace Moselle. | <i>FRA Adds to URSSAF - Long- Term Partial Activity</i>                                                                       |

## Set Up Payroll Journal Reports for France (FRA)

---

### Set Up Payroll Journal Reports for France (FRA)

#### Prerequisites

- Define the payslip configuration on the **Maintain Payroll Payslip Configuration** task.
- Define the earning and deduction payslip display order on the **Maintain Earnings and Deductions Reporting Order** task.
- Security: *Set Up: Payroll (Calculations - Payroll Specific)* domain in the Core Payroll functional area.

#### Context

To help you verify cumulated payroll results before completing payroll, you can configure these Workday reports to generate a typical French payroll journal (Journal de Paie):

- **FRA Payroll Journal by Company**
- **FRA Payroll Journal by Establishment**

Workday uses the French payslip configuration as a basis for the payroll journal reports, but also aggregates data based on:

- Workday-configured groups.
- A configurable group for taxes.

#### Steps

1. Access the **Edit Deduction** task for your company's specific taxes.
2. On the **Non-Effective Dated** tab, select *FRA Payroll Journal - Miscellaneous Taxes [FRA]* from the **Groups** prompt.

#### Result

Workday displays all taxes associated with the *FRA Payroll Journal -Miscellaneous Taxes [FRA]* pay component group under a Miscellaneous Taxes display group.

#### Next Steps

Customize the French payroll journal reports to display employee type details on report drill-downs or launch parameters.

### Example: Add Launch Prompts to Payroll Journal Reports (FRA)

Illustrates how to add launch prompts to the standard French payroll journal reports.

#### Context

You want to add prompts that enable you to run a payroll journal report for:

- Specific employee types.
- Workers with a nonresident tax election.

#### Prerequisites

Copy 1 of these reports:

- **FRA Payroll Journal by Company**
- **FRA Payroll Journal by Establishment**

Security: These domains in the System functional area:

- *Custom Field Management*
- *Custom Report Management*
- *Manage: All Custom Reports*

### Steps

1. Access the **Create Calculated Field** task to create a calculated field for the employee type.

Enter these values:

| Option          | Description                        |
|-----------------|------------------------------------|
| Field Name      | Employee Type                      |
| Business Object | <i>Pay Component (Combined) DI</i> |
| Function        | <i>Lookup Related Value</i>        |

2. Click **OK** and enter these values on the **Calculation** tab:

| Option       | Description                                                                                                                                |
|--------------|--------------------------------------------------------------------------------------------------------------------------------------------|
| Lookup Field | <i>Payroll Result</i>                                                                                                                      |
| Return Value | <i>Employee Type</i><br><br>Ensure you select the Employee Type field on the Payroll Result business object for the Payroll France module. |

3. Click **OK** and **Create Another Calculation** to create a calculated field for nonresidency.

4. Enter these values:

| Option          | Description                        |
|-----------------|------------------------------------|
| Field Name      | Nonresidency                       |
| Business Object | <i>Pay Component (Combined) DI</i> |
| Function        | <i>Lookup Related Value</i>        |

5. Click **OK** and enter these values on the **Calculation** tab:

| Option       | Description                                                  |
|--------------|--------------------------------------------------------------|
| Lookup Field | <i>Payroll Result</i>                                        |
| Return Value | <i>FRA Worker: Is Non-Resident as of Sub-Period End Date</i> |

6. Click **OK** and **Done**.

7. Access the **Edit Custom Report** task for your custom report.

In the **Filter** tab, add these rows to the **Filter on Instances** grid:

| Field                | Operator                     | Comparison type with                                                                       | Comparison value      |
|----------------------|------------------------------|--------------------------------------------------------------------------------------------|-----------------------|
| <i>Employee Type</i> | <i>In the selection list</i> | <i>Prompt the user for the value and ignore the filter condition if the value is blank</i> | <i>Default Prompt</i> |
| <i>Nonresidency</i>  | <i>Equal to</i>              | <i>Prompt the user for the value and ignore the</i>                                        | <i>Default Prompt</i> |

| Field | Operator | Comparison type with                              | Comparison value |
|-------|----------|---------------------------------------------------|------------------|
|       |          | <i>filter condition if the value is unchecked</i> |                  |

8. To order the filters, access the **Prompts** tab, and in the **Runtime Date Prompts** section, order the rows in the **Prompt Defaults** grid.

By default, the new prompt displays at the top of the launch parameters list on your custom report.

9. Click **OK** and **Done**.

## Result

You can now run the payroll journal report for:

- A specific type of worker.
- Nonresident workers only.

When running the report, all parameters are inclusive.

### Tasks

[Copy Reports](#)

## Example: Add Headcount Split to Payroll Journal Reports (FRA)

Illustrates how to add a headcount split by gender on the standard French payroll journal reports.

## Context

You want to include a headcount split by gender on your French payroll journal reports.

## Prerequisites

Create a custom report based on 1 of these reports:

- **FRA Payroll Journal by Company**
- **FRA Payroll Journal by Establishment**

Security: These domains in the System functional area:

- *Custom Field Management*
- *Custom Report Management*
- *Manage: All Custom Reports*

## Steps

1. Access the **Create Calculated Field** task to create a calculated field for worker gender.

Enter these values:

| Option                 | Description                |
|------------------------|----------------------------|
| <b>Field Name</b>      | Gender is Male             |
| <b>Business Object</b> | <i>Worker</i>              |
| <b>Function</b>        | <i>Evaluate Expression</i> |

2. Click **OK** and enter these values on the **Calculation** tab.

| Option            | Description            |
|-------------------|------------------------|
| <b>Field Type</b> | <i>Single Instance</i> |

| Option          | Description    |
|-----------------|----------------|
| Business Object | Worker         |
| Default Value   | Empty Instance |

3. Add this row to the grid in the **Calculation** tab:

| Option                            | Description |
|-----------------------------------|-------------|
| Condition                         | Male Gender |
| Return Value If Condition is True | Worker      |

4. Click **OK** and **Create Another Calculation** to create a calculated field for the male workforce.

5. Enter these values:

| Option          | Description                 |
|-----------------|-----------------------------|
| Field Name      | Male Workforce              |
| Business Object | Pay Component (Combined) DI |
| Function        | Lookup Related Value        |

6. Click **OK** and enter these values on the **Calculation** tab:

| Option       | Description    |
|--------------|----------------|
| Lookup Field | Worker         |
| Return Value | Gender is Male |

7. Click **OK** and **Done**.

8. Access the **Edit Custom Report** task for your custom report.

Add this row to the **Define the Field(s) to Summarize** section.

| Summarization Type | Summarization Field |
|--------------------|---------------------|
| Count Distinct     | Male Workforce      |

## Example: Add Drill-Downs to Payroll Journal Reports (FRA)

Illustrates how to add drill-downs to the standard French payroll journal reports.

### Context

You want to be able to drill down by employee type and nonresidency on the standard French payroll journal reports.

### Prerequisites

Create a custom report based on 1 of these reports:

- **FRA Payroll Journal by Company**
- **FRA Payroll Journal by Establishment**

Create 2 calculated fields, named Nonresidency and Employee Type.

Security: These domains in the System functional area:

- *Custom Report Management*

- *Manage: All Custom Reports*

### Steps

1. Access the **Edit Custom Report** task for your custom report.
2. Add a row for each of these fields to the **Detail Data** section on the **Drill Down** tab.
  - *Employee Type*
  - *Nonresidency*

### Result

You can now drill down by employee type and nonresidency in your customized report.

## DSN Reporting (FRA)

---

### Setup Considerations: DSN Reporting (FRA)

You can use this topic to help make decisions when planning your configuration and use of Déclaration Sociale Nominative (DSN) reporting. It explains:

- Why to set it up.
- How it fits into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

### What It Is

You can use Workday to prepare DSN reports for:

- Monthly payroll results, including on-demand additional results
- Absences
- Workers who return after an absence
- Terminations

You can also use Workday to generate DSN submissions, and automatically deposit them on the net-entreprises.fr portal.

### Business Benefits

Workday DSN reporting enables you to meet the legal requirements for reporting worker pay and statutory contributions.

It increases efficiency by streamlining the process for managing and submitting DSN reports. This enables you to use a single system to manage:

- Payroll calculations
- DSN reports
- DSN submissions
- DSN deposits

Workday provides validations and reports to help you verify data and ensure accurate DSN reporting.

Workday makes it easy to trace your compliance with DSN reporting requirements by enabling you to receive an electronic record of each automatic DSN file deposit.

### Use Cases

Report payroll and contributions for several types of workers and situations, including:

- Changes in a worker's status. Example: Changing from an apprenticeship to an unlimited contract.
- International transfers.
- Exposure to workplace risk hazards.
- Terminations and rehires.
- Transfers between companies.

In addition to generating DSN submissions, you can:

- Create nil declarations when you have no employees to report.
- Override the version of the DSN technical reporting specifications associated with the DSN.
- Manually override declared data.
- Replace and cancel an existing DSN.

### Questions to Consider

| Questions                                                                      | Considerations                                                                                                                                                                                                                                                                                                                                                                                                                     |
|--------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Which establishments do you want to include in a DSN?                          | Define: <ul style="list-style-type: none"> <li>• Which establishments are responsible for preparing the DSN submission file for specific DSN natures.</li> <li>• Which establishments to report in each DSN.</li> </ul>                                                                                                                                                                                                            |
| How do you pay contributions to social organizations?                          | Enable social organizations to debit contributions directly based on the amounts reported in the DSN.<br><br>For URSSAF payments, select either: <ul style="list-style-type: none"> <li>• Have all establishments pay contributions to a single URSSAF location.</li> <li>• Define different URSSAF deduction recipients for 1 or more establishments.</li> </ul>                                                                  |
| Do you use subrogation for Indemnités Journalières de Sécurité Sociale (IJSS)? | You can configure Workday to report specific IJSS information when an establishment applies subrogation.<br><br>Configure rules to determine how to apply subrogation for DSN reporting based on absence types and worker details. | What are you reporting for health and disability coverage?                     | Indicate which plans for mandatory health and disability coverage (mutuelle et prévoyance) to report in a DSN. Workday Payroll for France only supports DSN reporting for health care, contingency, and supplemental retirement benefit                                                                                                                                                                                            |

| Questions                                                          | Considerations                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
|--------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                                                    | <p>plans. Configure these plans as health care coverage plans.</p> <p>You can also report individual benefit contributions for health care plans by:</p> <ul style="list-style-type: none"> <li>• Mapping pay components for benefit contributions to the appropriate DSN rubric.</li> <li>• Defining the coverage target and applicable benefit group for each plan.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                          |
| Which absences do you want to report in a DSN?                     | <p>Workday reports all time offs and leaves of absence that you map to rubrics:</p> <ul style="list-style-type: none"> <li>• S21.G00.60.001</li> <li>• S21.G00.65.001</li> </ul> <p>Workday also reports the leaves of absence that you map to specific leave payment types in these rubrics.</p> <p>We report consecutive time offs that you map to the same DSN rubric value as 1 absence in the DSN. For DSN reporting, Workday doesn't consider absences separated by nonworked days as consecutive. Workday recommends that you include nonworked days in time offs for absences reported in block S21.G00.60.</p>                                                                                                                                   |
| What working time information do you want to report for workers?   | <p>To accurately report working time for workers in DSN block S21.G00.53.002, identify pay components that represent the:</p> <ul style="list-style-type: none"> <li>• Number of hours or days worked</li> <li>• Unpaid or partially paid absences</li> <li>• Overtime hours</li> </ul> <p>To identify your company's calculations, associate pay component related calculations to the corresponding FRA DSN pay component group.</p>                                                                                                                                                                                                                                                                                                                    |
| What different elements of pay and salary do your workers receive? | <p>To ensure that Workday accurately reports worker payments, map pay components that represent the different types of payments to the corresponding DSN reporting blocks. Examples:</p> <ul style="list-style-type: none"> <li>• Salary elements</li> <li>• Bonuses and indemnities</li> <li>• Professional expenses, meal vouchers, and other gross pay elements</li> </ul> <p>When you have nonmonthly reference periods for bonuses or other elements of gross pay, declare reference period details for DSN blocks S21.G00.52 and S21.G00.54. You can add related calculations to the bonus earnings to define the:</p> <ul style="list-style-type: none"> <li>• Reference period duration</li> <li>• Start month of the reference period</li> </ul> |

| Questions                                                                    | Considerations                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

|                                                                              | <ul style="list-style-type: none"> <li>Start year of the reference period</li> </ul> <p>For bonuses subject to Pôle Emploi, you can identify which ones to exclude from the declared Pôle Emploi Taxable Base.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| Which workplace risk factors do you need to declare in a DSN?                | <p>To declare worker exposition to workplace risk hazards, you can either:</p> <ul style="list-style-type: none"> <li>Add payroll input for the appropriate workplace risk hazard on the <i>Memo - Prevention Account Exposure Factors [FRA]</i> deduction.</li> <li>Create value comparison calculations that return a nonzero result for exposure to workplace risk hazards and associate the calculation with 1 of the <i>FRA Prevention Account</i> pay component groups.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| How do you want to deposit your DSN submission?                              | <p>You can deposit DSN submissions by:</p> <ul style="list-style-type: none"> <li>Generating a .txt file in Workday and manually uploading it to net-entreprises.fr.</li> <li>Configuring Workday to automatically deposit generated submissions on the net-entreprises.fr portal.</li> </ul> <p>Workday recommends automatically depositing DSN files to keep an electronic record of the deposit.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| Do you have workers with previous DSNs submitted from other payroll systems? | <p>When generating DSNs, Workday only includes:</p> <ul style="list-style-type: none"> <li>Event or worker changes that occur after a worker's first payroll results in Workday.</li> <li>Absences entered after calculating the first payroll results in Workday.</li> </ul> <p>To report data or changes that occurred before a worker's first payroll results in Workday, create a manual absence DSN, an FCTU, or a manual entry.</p> <p>A worker's first payroll results are the first results for a regular run category for France, excluding payroll history results.</p> <p>To ensure coherence in reported worker data between generated DSNs and other DSNs previously submitted, manually enter:</p> <ul style="list-style-type: none"> <li>A minimum order number to ensure that Workday continues to increase the reported order numbers on new event DSNs.</li> <li>The worker's temporary technical number (NTT) declared in previous DSNs.</li> </ul> |
| How do you want to verify the values reported in the DSN?                    | <p>When you use Workday to prepare a DSN, Workday compares reported data with standards from the government for the DSN structure. Workday then raises errors for any exceptions.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

| Questions | Considerations                                                                                                                                                                                                                      |
|-----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           | <p>Workday provides several reports that you can use to verify values reported in a DSN.</p> <p>You can also create an EIB to extract a DSN submission to an XML file, if you prefer to verify the submission in a spreadsheet.</p> |

### Recommendations

- Verify your DSN reporting before completing payroll, because you can't make changes after completing payroll.
- Use DSN-val or your *DSN Polling (Machine to Machine)* integration, and DSN-FPOC for a complete verification before submitting your DSN.
- Automatically deposit DSN files to keep an electronic record of the deposit.
- Keep copies of the DSN files that you send.
- Associate custom payroll calculations with the appropriate pay component groups or DSN rubrics to ensure that they're reported in the DSN.
- Configure the **Employee Contract: Generate Contract ID for each New Employment** localized field in the **Staffing** area on the **Maintain Localization Settings** task. This can help you ensure continuity in DSN reporting by generating contract IDs for new contracts based on DSN requirements.
- For workers with a suspended contract, ensure that you have payroll results for the current month to avoid an invalid FCTU DSN.

### Requirements

To generate a DSN, you must:

- Configure statutory calculations in Workday.
- Use Workday to calculate payroll results.

To deposit DSN submissions automatically, you must have credentials for a net-entreprises.fr account.

### Limitations

When generating a monthly DSN, Workday includes any on-demand additional or replacement payments that target:

- The current period
- A prior period that hasn't been included in a previous monthly DSN

Workday only supports DSN submissions for fewer than 20,000 workers.

### Tenant Setup

On the **Maintain Localization Settings** task, you can configure Workday to generate a contract ID for new contracts based on DSN requirements.

On the **Edit Tenant Setup – HCM** task, you can configure a sequence generator for employee contract IDs.

| <i>Set Up: Payroll</i> - FRA in the FRA Payroll functional area                              | <p>Enables users to map:</p> <ul style="list-style-type: none"> <li>Absences to DSN rubrics.</li> <li>Staffing information to DSN rubrics.</li> </ul>                                                                                                                                                                                                  |
| <i>Set Up: Payroll - Company Specific (Taxes)</i> - FRA in the FRA Payroll functional area   | <p>Enables users to set tax configuration settings on the <b>Edit Company FRA Tax Configuration</b> task, including:</p> <ul style="list-style-type: none"> <li>Setting up social organizations.</li> <li>Defining which health care plans to report in a DSN.</li> </ul>                                                                              |
| <i>Set Up: Payroll (Calculations - Payroll Specific)</i> in the Core Payroll functional area | Enables users to add pay components to specific pay component groups for DSN reporting.                                                                                                                                                                                                                                                                |
| <i>Set Up: Payroll (DSN)</i> - FRA in the FRA Payroll functional area                        | <p>Enables users to configure the main DSN setup, including:</p> <ul style="list-style-type: none"> <li>Defining which establishments to include in a DSN.</li> <li>Mapping pay components to DSN reporting.</li> </ul>                                                                                                                                |
| <i>Set Up: Tenant Setup - Worklets</i> in the System functional area                         | Enables users to set up the <b>DSN Command Center</b> dashboard.                                                                                                                                                                                                                                                                                       |
| <i>Worker Data: Payroll (Payroll Input)</i> in the Core Payroll functional area              | Enables users to add payroll input for DSN reporting.                                                                                                                                                                                                                                                                                                  |

## Business Processes

To generate automatic DSN deposits through Workday, configure the *DSN Submission Event* business process. You can configure the business process to manage both automatic and manual deposits.

## Reporting

| Report                                                         | Considerations                                                                                                                                                                                                     |
|----------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Audit Workers Reported in DSN</b>                           | Identifies workers who don't have a continuous contract during their entire period of employment. Workers with continuous contract numbers ensure continuity in DSN reporting.                                     |
| <b>DSN Benefits Contributions by Establishment</b>             | Compares benefit amounts aggregated by benefit plan and population with the aggregated payroll amounts.                                                                                                            |
| <b>DSN Command Center</b> dashboard                            | Configure on your Home page to enable you to manage and track your generated DSNs.                                                                                                                                 |
| <b>DSN Contributions by Establishment</b>                      | Compares payroll contribution calculations to the URSSAF amounts declared in the DSN.<br><br>For AGIRC-ARRCO, compares calculated amounts by population type to the aggregated payroll amount declared in the DSN. |
| <b>DSN Header Rubric Results</b>                               | Compares and verifies the values in DSN header results.                                                                                                                                                            |
| <b>DSN Payments to Tax and Social Organizations by Company</b> | Displays the aggregated values of payments to tax and social organizations. You can also compare current payments with payments from the previous month.                                                           |
| <b>DSN Payments to Worker by Company</b>                       | Displays the aggregated values of declared worker payments.                                                                                                                                                        |
| <b>DSN Status for Group of Workers</b>                         | Displays workers with payroll or DSN results that have incorrect or missing data.<br><br>Verifies the list of workers who are reported in a monthly DSN and identify any missing ones.                             |
| <b>DSN Worker Rubric Results</b>                               | Compares and verifies the values of a rubric result for multiple workers. You can also select individual workers to display only their results.                                                                    |

## Integrations

| Integration                             | Considerations                                                                                                                                           |
|-----------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------|
| <i>DSN Deposit (Machine to Machine)</i> | Sends DSN submissions to the net-entreprises.fr.<br><br>With this integration, you can enable access to a zip file containing Workday-created DSN files. |
| <i>DSN Polling (Machine to Machine)</i> | Retrieves: <ul style="list-style-type: none"> <li>The status of a deposited DSN submission from the net-entreprises.fr portal.</li> </ul>                |

| Integration | Considerations                                                                                                                                                                                                                                                                                             |
|-------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|             | <ul style="list-style-type: none"> <li>Withholding rates for income tax from the DGFIP and uploads them to worker tax elections.</li> <li>DSN response messages (CRMs). View CRMs in the <b>View DSN Responses (CRM)</b> report.</li> <li>AER PDFs or CRMs if there is a related error message.</li> </ul> |

You can create an EIB based on the *Get DSN Data* web service to generate your DSN submission as a .txt file for manual submissions.

### Connections and Touchpoints

| Features             | Considerations                                                                                                                                                                                                                                                                                                                                                                                           |
|----------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Contracts            | <p>Workday uses the contract number as a unique identifier to track employee compensation from hire to termination. To ensure accurate DSN reporting, verify that the contract number doesn't change regardless of internal transfers or contract conversions.</p> <p>To help you ensure continuity, you can configure Workday to generate contract IDs for new contracts based on DSN requirements.</p> |
| Companies            | <p>Workday declares data from your company configuration in DSN reports. Examples:</p> <ul style="list-style-type: none"> <li>Address</li> <li>APEN</li> <li>Bank account details</li> </ul>                                                                                                                                                                                                             |
| Bank routing rules   | <p>Workday declares the default bank account from bank routing rules when declaring:</p> <ul style="list-style-type: none"> <li>Contribution payments</li> <li>IJSS subrogation payments</li> <li>Income tax withholding</li> </ul>                                                                                                                                                                      |
| Benefits             | <p>Workday declares data from your benefit configuration in DSN reports. Examples:</p> <ul style="list-style-type: none"> <li>Group policy numbers for benefit plans</li> <li>Benefit provider IDs</li> </ul>                                                                                                                                                                                            |
| Deduction recipients | <p>Configure a deduction recipient for each social organization that you declare URSSAF or AGIRC-ARRCO contributions to. You can enable the social organization to debit contributions based on the amounts reported in the DSN, by selecting a direct debit payment method.</p>                                                                                                                         |
| Establishments       | <p>Workday declares data from your establishment configuration in DSN reports. Examples:</p> <ul style="list-style-type: none"> <li>Industry code</li> </ul>                                                                                                                                                                                                                                             |

| Features                | Considerations                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
|-------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                         | <ul style="list-style-type: none"> <li>Location</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| Income tax withholding  | When you launch the <i>DSN Polling (Machine to Machine)</i> integration, Workday retrieves withholding rates from the compte rendu métier (CRM) sent by the DGFIP. Workday then automatically uploads the rates to worker tax elections.                                                                                                                                                                                                                                                                                                                                         |
| Statutory Contributions | Workday uses the statutory contribution configuration in Workday to prepare the DSN report.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| Terminations            | <p>To ensure accurate DSN reporting for terminated workers, enter a worker's:</p> <ul style="list-style-type: none"> <li>Last Day of Work</li> <li>Pay Through Date</li> <li>Termination Date</li> </ul> <p>You can activate localized fields in the <b>Staffing</b> area of the <b>Maintain Localization Settings</b> task to select relevant options for different types of termination, such as:</p> <ul style="list-style-type: none"> <li>Agreement Signature Date for mutual agreements</li> <li>Dismissal Process Start Date</li> <li>Notice Period Start Date</li> </ul> |
| Workers                 | <p>Workday declares data from worker personal and contract information in DSN reports. ## Set Up DSN Reporting (FRA)

#### Reference: DSN Data Requirements (FRA)

To avoid errors and missing data in DSN declarations, your Workday setup must contain the required data before you run these tasks:

- Run Pay Calculation.
- Run DSN Preparation.

Workday recommends that you verify staffing and organizational data during your initial tenant configuration, and at each reportable event:

- Hire.
- Termination.
- Absences.
- Return to work before the expected date.

These sections list all data that you can report in a DSN. The required information for each DSN varies depending on the DSN nature and the specific situation of a company or a worker.

### Company Data

## Related Information Reference

[Reference: Compare Working Time Payroll Impacts \(FRA\)](#) on page 1565

[The Next Level: Evaluate HCM Data Readiness for French Payroll Deployment](#)

## Steps: Set Up DSN Reporting (FRA)

### Prerequisites

- Create establishments.
- Map staffing information to payroll calculations.
- Review setup considerations for DSN reporting.

### Context

To meet the legal requirements for reporting worker pay and statutory contributions, you can enable Workday Payroll for France to prepare DSNs for:

- Monthly on-cycle payroll results.
- Absences.
- Returns to work after an absence.
- Terminations.

Workday can prepare DSNs for completed or in progress payroll results.

### Steps

1. [Set Up Social Organizations \(FRA\)](#) on page 1614.
2. [Define Establishments Included in DSN \(FRA\)](#) on page 1615.
3. Access the **Maintain Absence Mapping for Payroll France** task and map:
  - Time offs to rubric values from S21.G00.60.001.
  - Leave types to rubric values from S21.G00.65.001.

Workday reports consecutive time offs that map to the same DSN rubric value as 1 absence in the DSN. Absences separated by nonworked days aren't considered as consecutive. Workday recommends that you include nonworked days in time offs for absences reported in block S21.G00.60.

Don't map part-time therapeutic leaves to DSN block S21.G00.60. Workday automatically reports all leaves with the *France - FRA\_TPT - Therapeutic Part Time* leave payment type as part-time therapeutic leaves.

Security: *Set Up: Payroll - FRA* domain in the FRA Payroll functional area.

#### 4. [Indicate Health Care Plans for DSN Reporting \(FRA\)](#) on page 1617.

### Next Steps

Set up the amounts and dates reported in the DSN, including those for part-time therapeutic leave and absences.

### Related Information

### Set Up Social Organizations (FRA)

### Prerequisites

Define a SIREN company tax ID on the **Edit Company Tax Details** task. See [Set Up Company Tax ID \(FRA\)](#) on page 1552.

### Context

During payroll calculations, Workday calculates the contribution amounts due to social organizations, such as URSSAF, or retirement organizations.

You can define the payment method and identification details about each social organization to:

- Report in a DSN all contributions that are due to each organization.
- Enable the organization to debit the amount from the company bank account.

### Steps

1. Access the **Create Deduction Recipient** task. As you complete the task, consider:

| Option                    | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
|---------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>External Entity ID</b> | Enter the SIRET for the social organization.                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| <b>Payment Method</b>     | <p>Select <i>Direct Debit</i> to enable the social organization to debit contributions based on the amounts reported in a DSN. In this case, when you generate a DSN that includes contributions to the organization, Workday reports:</p> <ul style="list-style-type: none"> <li>• Block S21.G00.20 - Versement Organisme de Protection Sociale, and sets the DSN payment method to 05 - <i>Prélèvement SEPA</i>.</li> <li>• Details of the company bank account used to pay contributions.</li> </ul> |

Security: *Worker Data: Payroll (Income Withholding Orders)* domain in the Core Payroll functional area.

## 2. Access the **Edit Company FRA Tax Configuration** task.

In the **Organization Membership** grid, map each **Recipient Type** to a **Deduction Recipient**.

If all of the establishments of the company pay contributions to the same URSSAF location, select:

- **Unique Deduction Recipient**.
- The establishment responsible for paying URSSAF contributions from the **Payer Establishment** prompt.

When you select the **Unique Deduction Recipient** check box, Workday reports:

- In S21.G00.22.001: The SIRET of the URSSAF deduction recipient defined at the company level.
- In S21.G00.22.002: The SIRET of the payer's establishment.

Security: *Set Up: Payroll - Company Specific (Taxes) - FRA* domain in the FRA Payroll functional area.

## 3. (Optional) Access the **Edit Establishment FRA Tax Configuration** task to define a different URSSAF deduction recipient for 1 of the establishments in a company.

Don't define URSSAF deduction recipients for establishments if you selected **Unique Deduction Recipient** in the **Edit Company FRA Tax Configuration** task.

Security: *Set Up: Payroll - Company Specific (Taxes) - FRA* domain in the FRA Payroll functional area.

### Related Information

#### Tasks

[Steps: Set Up DSN Reporting \(FRA\)](#) on page 1613

### Define Establishments Included in DSN (FRA)

#### Prerequisites

- Create establishments.
- Ensure that you have only 1 headquarter establishment for a company.
- Security: *Set Up: Payroll (DSN) - FRA* domain in the FRA Payroll functional area.

#### Context

To enable Workday to produce a DSN for each establishment that's running payroll in Workday, you must define:

- Which establishments and companies to report together in a DSN submission file.
- Which establishment is responsible for preparing and sending the DSN submission file.
- Contact information for each reported establishment.

#### Steps

1. Access the **Edit Establishment FRA Reporting** task.
2. For an issuer establishment, complete the **DSN Issuer** tab:

| Option             | Description                                                                                                                                                                                                                                                                                                                                                                        |
|--------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>DSN Issuer</b>  | Select.                                                                                                                                                                                                                                                                                                                                                                            |
| <b>DSN Natures</b> | <p>Select the declaration natures for which the issuer is responsible.</p> <p>Select <i>07 - Signalement Fin du contrat de travail Unique</i> in addition to the <i>02 - Signalement fin du contrat de travail</i> to enable the issuer to manage DSNs for termination.</p> <p>You can continue to manually generate DSNs for a Fin de contrat de travail (FCT) nature through</p> |

| Option                              | Description                                                                                                                                                                                                 |
|-------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                     | 2021. When you manually create an FCT DSN for a worker, Workday doesn't generate an FCTU DSN.                                                                                                               |
| <b>Contact</b>                      | Select the worker to report as the issuer contact in DSN block S10.G00.02.                                                                                                                                  |
| <b>Companies and Establishments</b> | <p>Add a line for each company to declare in the DSN submission file. Select which establishments to report.</p> <p>Include the establishment that's responsible for preparing the DSN submission file.</p> |

3. For an issuer or reported establishment complete the **DSN Header** and **DSN Options** tabs.  
On the **DSN Options** tab, consider:

| Option                                                                        | Description                                                                                                                                                                                                                                                                                    |
|-------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Subrogation Option</b>                                                     | Select the subrogation option for the establishment. Workday uses the subrogation information for reporting purposes only. To manage the impact of subrogation on payroll, define whether subrogation applies when adding pay input for each Indemnité Journalière de Sécurité Sociale (IJSS). |
| <b>Type of Compensation Subject to Unemployment Insurance for Expatriates</b> | Workday uses this option to determine which type of compensation to report in rubric S21.G00.11.009 for monthly DSNs. Workday uses the value of the configuration based on the DSN Reference Moment.                                                                                           |
| <b>Deduction Recipient</b>                                                    | Complete this option to report unemployment contributions to Pôle Emploi for expatriate workers. See <a href="#">Set Up DSN Reporting for Expatriate Workers (FRA)</a> on page 1639.                                                                                                           |

## Result

When you run the:

- **Run DSN preparation** task for a DSN issuer, Workday prepares 1 DSN for each reported establishment and for each event.
- **Create DSN Submission** task for the DSN issuer, Workday prepares a DSN submission that contains all of the DSNs created for the issuer.

## Example

Global Modern Services SA (France) has 2 establishments:

- GMS Paris
- GMS Lyon

Global Modern Services SA (Mulhouse) has 1 establishment, GMS SA Mulhouse.

GMS Lyon is responsible for submitting the monthly payroll DSN submission file. The submission file should contain DSNs for all establishments in both Global Modern Services companies.

To define GMS Lyon as the DSN issuer, access the **Edit Establishment FRA Reporting** task for GMS Lyon, and select the **DSN Issuer** check box.

In the **Companies and Establishments** grid, add these lines:

| Company                                     | Option     |
|---------------------------------------------|------------|
| <i>Global Modern Services SA (France)</i>   | <i>All</i> |
| <i>Global Modern Services SA (Mulhouse)</i> | <i>All</i> |

When you run the monthly payroll, Workday produces:

- 3 DSNs (GMS Paris, GMS Lyon, GMS Mulhouse).
- 1 DSN submission containing all 3 DSNs.

### Next Steps

Create DSN subrogation rules to report subrogation for specific workers.

## Indicate Health Care Plans for DSN Reporting (FRA)

### Prerequisites

- Set up health care plans.
- Create health care coverage targets.
- Security: *Set Up: Payroll - Company Specific (Taxes) - FRA* domain in the FRA Payroll functional area.

### Context

To fulfill DSN reporting requirements, you can indicate which health care plans your company offers for mandatory health and disability coverage (prevoyance). Workday Payroll for France only supports DSN reporting for health care benefit plans.

### Steps

1. Access the **Edit Company FRA Tax Configuration** task.
2. In the **Benefits** tab, add a row to the **Benefits** grid for each benefit plan to be reported in a DSN.  
(Optional) In the **Risk Holder** field, enter the 6-character code that represents the risk holder for the benefit plan.
3. (Optional) Click **OK** and then **Maintain Details** to define details for each benefit plan.
  - a) For each plan coverage target, add a row with these settings to the **Options** grid:
    - **Option:** Select the coverage target.
    - **DSN Rubric Value:** Enter the option code provided in the insurance settings sheet by the benefit provider. Workday reports this value in DSN rubric S21.G00.70.004.
  - b) For each benefit group associated with the plan, add a row with these settings to the **Populations** grid:
    - **Population:** Select a benefit group applicable for France or all countries.
    - **DSN Rubric Value:** Enter the population code provided in the insurance settings sheet by the benefit provider. Workday reports this value in DSN rubric S21.G00.70.005.

## Next Steps

Map pay components for individual benefit contributions to DSN block S21.G00.79.

## Set Up Derogation Tracks (FRA)

### Context

You can configure Workday to apply a derogation track for DSN reporting for contracts that are classified as a contrat de travail à durée déterminée d'usage (CDDU). When you apply a derogation track to eligible contracts, Workday no longer creates a termination DSN, and reports the termination only in the monthly DSN.

### Steps

1. Access the **View DSN Rubric Configuration** report.

In the row for **Rubric Code** S21.G00.62.017, click **Maintain**.

From the **CDDU Rubric Value** prompt, select *01 - Application du circuit dérogatoire* to use a derogation track for all eligible contracts in the tenant.

Security: *Set Up: Payroll (DSN) - FRA* domain in the FRA Payroll functional area.

2. (Optional) Access the **Edit DSN Worker Information** task.

To record a worker's refusal of a derogation track, select **Refusal of Derogation Track** in the **Derogation Track** section.

Security: *Worker Data: Payroll (Company Specific) - FRA* domain in the FRA Payroll functional area.

### Example: Set Up the DSN Command Center Dashboard (FRA)

This example illustrates how to configure the DSN command center dashboard.

### Context

You want to configure the **DSN Command Center** dashboard on your Home page to:

- Manage and track your generated DSNs.
- Verify reported payroll data.
- Quickly access related DSN tasks in Workday.

The **DSN Command Center** dashboard is secured to the *Process: DSN (Run) - FRA* domain in the FRA Payroll functional area.

### Prerequisites

Security: *Set Up: Tenant Setup - Worklets* domain in the System functional area.

### Steps

1. Access the **Maintain Dashboards** report.
2. On the row for the *DSN Command Center* dashboard, click **Edit**.
3. On the **Content** tab, click **Add**.
4. Enter these values:

| Option                      | Description                 |
|-----------------------------|-----------------------------|
| <b>Tab Name</b>             | DSN Status                  |
| <b>Prompt Set</b>           | <i>Find DSN Data Blocks</i> |
| <b>Configurable By User</b> | Clear                       |

5. In the **Prompts** section, enter these values:

| Prompt Field      | Default Type                              | Default Value            |
|-------------------|-------------------------------------------|--------------------------|
| <b>DSN Period</b> | <i>Determine default value at runtime</i> | <i>Latest DSN Period</i> |

You can optionally define default values for the other rows. Examples: **Companies with SIREN for Search, Establishments**.

6. In the **Worklets** section, add a row for these worklets:

- **Monthly DSNs To Process**
- **Event-Based DSNs To Process**

We secure these reports to these domains in the FRA Payroll functional area:

- *Process: DSN (Run) - FRA*
- *Process: DSN for Pay Group (Run) - FRA*
- *Process: DSN (Submission) - FRA*

7. In the **Menu** section, enter these values:

| Section Label  | Item - Task                                         |
|----------------|-----------------------------------------------------|
| DSN Management | <i>Create Manual DSN</i>                            |
|                | <i>Run DSN Preparation</i>                          |
|                | <i>Convert Monthly DSNs to Partial Monthly DSNs</i> |
| DSN Audit      | <i>All DSN Exceptions</i>                           |
|                | <i>Audit Workers Reported in DSN</i>                |
|                | <i>DSN Status for Group of Workers</i>              |

8. On the **Content** tab, click **Add** to add another tab.

9. Enter these values:

| Option                      | Description                 |
|-----------------------------|-----------------------------|
| <b>Tab Name</b>             | DSN Verification            |
| <b>Prompt Set</b>           | <i>Find DSN Data Blocks</i> |
| <b>Configurable By User</b> | Clear                       |

10. In the **Prompts** section, enter these values:

| Prompt Field      | Default Type                              | Default Value            |
|-------------------|-------------------------------------------|--------------------------|
| <b>DSN Period</b> | <i>Determine default value at runtime</i> | <i>Latest DSN Period</i> |

Workday displays several additional rows with populated settings. Examples: **Companies with SIREN for Search, Establishments**.

11. In the **Worklets** section, add a row for the **DSN Total Payments to Tax and Social Organizations by Company** worklet.

We secure this report to these domains in the FRA Payroll functional area:

- *Process: DSN (Run) - FRA*
- *Process: DSN for Pay Group (Run) - FRA*

12. In the **Menu** section, enter these values:

| Section Label    | Item - Task                                                    |
|------------------|----------------------------------------------------------------|
| DSN Verification | <i>DSN Payments to Tax and Social Organizations by Company</i> |
|                  | <i>DSN Payments to Workers by Company</i>                      |
|                  | <i>DSN Header Rubric Results</i>                               |
|                  | <i>DSN Worker Rubric Results</i>                               |
|                  | <i>DSN Contributions by Establishment</i>                      |
|                  | <i>DSN Benefits Contributions by Establishment</i>             |

13. From the Home page, access the **Configure Applications** menu to display the **Configure Worklets** task.

In the **Optional Worklets** section, add a row with the *DSN Command Center* **Worklet**.

### Result

You can now access the **DSN Command Center** dashboard from your Home page.

### Next Steps

Run a payroll calculation and generate a DSN report to view data in the **DSN Command Center** dashboard.

## Set Up OETH Reporting (FRA)

### Setup Considerations: OETH Reporting (FRA)

You can use this topic to help make decisions when planning your configuration and use of OETH reporting. It explains:

- Why to set it up.
- How it fits into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

### What It Is

Workday provides a series of tasks, web services, and reports that enable you to automatically report Obligation d'emploi des travailleurs handicapés (OETH) details on a yearly basis as part of Déclaration Social Nominative (DSN) reporting.

### Business Benefits

- Automatic calculations help you comply with regulatory reporting requirements.
- Streamlined processes for regularizations enable you to make adjustments easily.
- A variety of reports enables you to verify OETH reporting data easily.

### Use Cases

- Report OETH details, such as contribution amounts, number of workers, and expenses, as part of a DSN report.

- Verify differences between payroll and DSN reporting details due to OETH details.
- Regularize previously reported OETH details.

### Questions to Consider

| Questions                                                                  | Considerations                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
|----------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Do you need to report OETH details before the definitive reporting period? | <p>Workday automatically reports OETH reporting details in the monthly DSN designated for the definitive reporting period. For establishments closing between January 1 and the definitive reporting period, you can choose to report OETH data early.</p> <p>After the initial reporting period, you can regularize previously reported data in subsequent DSN reports. You can only regularize data for DSNs that have a status of <i>Passed</i>.</p>                                                                                                                                                                                             |
| Do you have custom contribution amounts to report?                         | <p>By default, Workday automatically calculates these contributions based on your company's OETH reporting parameters:</p> <ul style="list-style-type: none"> <li>• Actual OETH contribution amount owed.</li> <li>• Gross OETH contribution amount before deductions.</li> <li>• Net OETH contribution amount before and after reduction.</li> </ul> <p>Workday calculates and reports the values for the establishment defined as the headquarters.</p> <p>You can:</p> <ul style="list-style-type: none"> <li>• Delete and recalculate previously calculated amounts.</li> <li>• Override any of the calculated contribution amounts.</li> </ul> |
| Do you have an OETH certified agreement?                                   | <p>You can specify that you have an OETH certified agreement as part of your tax setup. Workday then calculates the net OETH contribution amount after reduction as zero.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| What expenses do you have that are related to OETH?                        | <p>Consider which expenses you have that are related to OETH. You can enter the amounts of different types of expenses you want to declare as an OETH reporting detail. Workday reports expense amounts in DSN rubric S21.G00.82.002, and uses the expense information to calculate and report:</p> <ul style="list-style-type: none"> <li>• The net OETH contribution amount.</li> <li>• Planned expenses.</li> </ul>                                                                                                                                                                                                                              |
| Do you have a reduction amount based on transitional measures?             | <p>When applicable, you can provide the reported contribution amount for the previous year as an OETH reporting detail. Workday uses this amount to calculate a reduction amount automatically.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

| Questions                                                     | Considerations                                                                                                                                                                                                                             |
|---------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| How do you classify worker disabilities in your organization? | To ensure accurate reporting of OETH data, you can map your organization's disability types to Bénéficiaires de l'Obligation d'Emploi des Travailleurs Handicapés (BOETH) statuses when mapping staffing information payroll calculations. |

### Recommendations

As completing payroll modifies the status of your DSN to *Ready for Submission*, verify OETH reporting data in your generated DSN before. Workday considers any modifications as an update for the current month if the DSN isn't yet included in a real submission. Otherwise, it is treated as a regularization in the next monthly DSN.

### Requirements

Workday prompts you during the definitive reporting month to include OETH reporting details in your monthly DSN, but you must independently verify statutory reporting requirements.

Run DSN preparations after any modification to OETH reporting details.

Set up and track disability data for workers.

To accurately report workers with an Emploi exigeant des Conditions d'Aptitude Particulière (ECAP), configure the PCS ESE code for the job classification.

### Limitations

You can't make DSN manual adjustments for personnel types 730 and 740.

When the employed internal and external headcount is greater than the headcount to be employed, Workday doesn't calculate an OETH contribution.

### Tenant Setup

No impact.

## Tasks

[Steps: Set Up Disability Tracking](#)

[Map Staffing Information to Payroll Calculations \(FRA\)](#) on page 1510

## Steps: Set Up OETH Reporting (FRA)

### Prerequisites

- Review the setup considerations for Obligation d'emploi des travailleurs handicapés (OETH) reporting.
- Set up disability tracking and track disability data for workers.
- Map disability types to Bénéficiaires de l'Obligation d'emploi des travailleurs handicapés (BOETH) statuses in the **Maintain HCM Mapping for Payroll France** task. See [Map Staffing Information to Payroll Calculations \(FRA\)](#) on page 1510.

### Context

You can configure Workday to report OETH details as part of DSN reporting.

### Steps

1. [Enter OETH Reporting Details \(FRA\)](#) on page 1625.
2. Access the **Edit Company FRA Tax Configuration** task.

As you complete the task, consider:

| Option                              | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|-------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Company Collective Agreement</b> | Enter the value of the collective agreement that is most frequently applied to the company. Workday reports this value in DSN rubric S21.G00.06.015.                                                                                                                                                                                                                                                                                                                              |
| <b>OETH Certified Agreement</b>     | <p>Workday reports the code of the certified agreement in DSN rubric S21.G00.13.001. To cancel an agreement reported by mistake, enter the code as defined by the DSN technical specifications that relates to a cancellation of a wrong certified agreement code. Example: D00000000001.</p> <p>Workday uses the start and end dates to determine when to apply the collective agreement for OETH reporting. Ensure that the start and end dates cover the reference period.</p> |

Security: *Set Up: Payroll - Company Specific (Taxes) - FRA* domain in the FRA Payroll functional area.

3. Access the **Run DSN Preparation** task.

Generate a DSN for the definitive OETH reporting period.

Security: Either of these domains in the FRA Payroll functional area:

- *Process: DSN (Run) - FRA*
- *Process: DSN (Submission) - FRA*

#### 4. Access the **View OETH Reporting Details** report.

Verify the contribution amounts calculated by Workday. When viewing OETH data for DSNs with a status lower than *Ready for Submission*, you can:

- Edit the amounts to be reported in the current DSN.
- Delete OETH details.
- Preview the DSN.

Security: *Set Up: Payroll - OETH Reporting - FRA* domain in the FRA Payroll functional area.

#### Next Steps

Create a DSN submission to submit the DSN.

##### Tasks

[Steps: Set Up Disability Tracking](#)

[Map Staffing Information to Payroll Calculations \(FRA\)](#) on page 1510

#### Enter OETH Reporting Details (FRA)

##### Prerequisites

Security: *Set Up: Payroll - OETH Reporting - FRA* domain in the FRA Payroll functional area.

##### Context

You can provide details about your organization to enable Workday to calculate Obligation d'emploi des travailleurs handicapés (OETH) contributions and other reporting details. While OETH reporting has a definitive reporting period once a year, you can enter reporting details and make adjustments throughout the reporting year. When you modify reporting details after you've already submitted a previous DSN, Workday reports the details as a regularization in the next monthly DSN. For regularizations, Workday reports the new data:

- As a cancel and replace for the certified agreement and external headcounts.
- By negating previous details and reporting the updated versions for other details.

You use the *Put OETH Reporting Details* web service to upload reporting details.

##### Steps

1. Access the **Maintain OETH Reporting Details** task.
2. From the **Company** prompt, select a company. Workday applies the OETH details to the company headquarters related to the selected company.
3. From the **Reference Year** prompt, select the year related the to data to report, not the year of the DSN. Workday only takes into account the details starting from the first definitive reporting period. You can enter regularizations for a reference year until the end of the year. You can't process any reporting for previous reference years.  
You can only modify OETH reporting details for DSNs with a status that is lower than *Ready for Submission*. Any details after that point are considered a regularization for the same reference period, and reported in the next monthly DSN.
4. Select **Report DSN Early** to report OETH details in a DSN before the definitive reporting date.  
Only select this option if your organization is closing between January 1st and the definitive reporting period.

5. As you complete the **Headcount and Parameters** grid, consider:

When entering a regularization for a previous declaration, Workday automatically populates the details entered in the prior monthly DSN. Adjust the amounts to represent the full amounts to report, and not just the missing delta from the prior declaration.

| Option                                             | Description                                                                                                                                                                                                                                                                                                                                                                                                                                |
|----------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Headcount Liable to OETH</b>                    | Workday uses this value when calculating the yearly average BOETH (Bénéficiaires de l'Obligation d'emploi des travailleurs handicapés).                                                                                                                                                                                                                                                                                                    |
| <b>OETH Headcount to be Employed</b>               | Workday uses this value when calculating the gross OETH contribution amount.                                                                                                                                                                                                                                                                                                                                                               |
| <b>OETH Headcount Employed</b>                     | Workday uses this value when calculating the: <ul style="list-style-type: none"> <li>Gross OETH contribution amount.</li> <li>Yearly average BOETH.</li> </ul>                                                                                                                                                                                                                                                                             |
| <b>Headcount Employed with ECAP</b>                | Workday uses this value when calculating the: <ul style="list-style-type: none"> <li>ECAP (Emploi exigeant des Conditions d'Aptitude Particulière)</li> <li>Net OETH contribution amount.</li> </ul> <p>Unlike other calculations, Workday doesn't display the ECAP calculation on the <b>View OETH Reporting Details</b> task. You can verify the value of the ECAP deduction by viewing the reported values in DSN block S21.G00.82.</p> |
| <b>SMIC Multiplier for BOETH Missing Headcount</b> | Workday uses this value to calculate the gross OETH contribution amount.                                                                                                                                                                                                                                                                                                                                                                   |
| <b>Transitional Measures</b>                       | Workday uses this value to calculate a reduction when you report a contribution increase compared with the last reference year.                                                                                                                                                                                                                                                                                                            |

6. Complete the **External Workers** grid.

Workday reports the number of external workers in DSN block S21.G00.13. Workday uses this information to calculate:

- The gross OETH contribution amount.
- The yearly average BOETH.

7. Add any expenses related to OETH in the **Expenses** grid.

Workday reports this information in DSN block S21.G00.82. Workday also uses this information to calculate:

- The net OETH contribution amount.
- Planned OETH expenses that aren't used.

8. (Optional) Add override value for the OETH calculated contribution amounts in the **Contribution Overrides** grid.

When you add an override value, it impacts all of the others that depend on it. Example: If you override the gross OETH contribution amount, Workday uses the override value as the basis when calculating the net OETH contribution amount.

### Next Steps

Access the **Run DSN Preparation** task to generate a DSN and calculate contribution amounts.

## Troubleshooting: OETH Reporting (FRA)

### Workday doesn't calculate an Obligation d'emploi des travailleurs handicapés (OETH) contribution.

You have entered data in the **Maintain OETH Reporting Details** task, but don't see any details in the DSN.

| Cause                                                                                                                                                                                                                                         | Solution                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

### View DSN Contributions report displays different contribution totals by type of personnel and pay component groups.

In the **View DSN Contributions** report, there are different URSSAF totals for these columns:

- **By Type of Personnel or Population**
- **By Pay Component Groups**

**Cause:** Since the OETH contribution amounts come from the DSN preparation, and not the payroll calculation, they can't be aggregated under a pay component group. There's therefore a difference due to OETH contributions.

**Solution:**

**Steps**

Security: These domains in the FRA Payroll functional area:

- *Process: DSN (Run) - FRA*
- *Process: DSN for Pay Group (Run) - FRA*

1. In the **View DSN Contributions** report, click the **Differences** column.
2. Use the adjustment difference classified as **OETH** to reconcile any differences when verifying results.

## Set Up Training and Apprenticeship Tax Reporting (FRA)

### Steps: Configure Training and Apprenticeship Taxes (FRA)

**Prerequisites**

Security: *Set Up: Payroll - Company Specific (Taxes) - FRA* domain in the FRA Payroll functional area.

**Context**

You can configure Workday to report details on training tax and apprenticeship tax as part of DSN reporting.

**Steps**

1. [Enter Apprenticeship Tax Reporting Details \(FRA\)](#) on page 1629.
2. In the **Company Collective Agreement** grid, select a collective agreement for the establishment to report in DSN block S21.G00.11.
3. Access the **Taxes** tab on the **Edit Company FRA Tax Configuration** task.

As you complete the **Apprenticeship Tax Liability** grid, consider:

| Option                     | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
|----------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Option</b>              | <p>Select whether the company is liable to apprenticeship tax. You can specify a different option for establishments when configuring establishment tax configuration.</p> <p>Workday uses the <b>Option</b> field to determine whether to:</p> <ul style="list-style-type: none"> <li>• Calculate deductions for apprenticeship tax.</li> <li>• Report apprenticeship tax details in DSN reporting.</li> </ul> <p><b>Note:</b> To calculate supplementary apprenticeship, you must still enter a rate in the <b>Supplementary Contribution for Apprenticeship</b> grid on the <b>Taxes</b> tab.</p> |
| <b>Nonliability Reason</b> | <p>Workday reports this information in DSN S21.G00.44.004 <i>Motif de non assujettissement à la taxe d'apprentissage</i>.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

| Option                                            | Description                                                                                                                                                                                                     |
|---------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>OPCO (Opérateur de compétences) Membership</b> | Workday reports this information in DSN rubric S21.G00.11. Workday uses the value of this field when you don't define a value for an establishment on the <b>Edit Establishment FRA Tax Configuration</b> task. |

4. Access the **Edit Establishment FRA Tax Configuration** task. Click the **Apprenticeship Tax** tab.

In the **Collective Agreement** grid, select a collective agreement for the establishment to report in DSN block S21.G00.11. You can also use the collective agreement for the company.

As you complete the **Apprenticeship Tax Liability** grid, consider:

| Option                                            | Description                                                                                                                                                    |
|---------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Option</b>                                     | By default, the establishment has the same liability as the company. Select an option when the establishment has a different liability for apprenticeship tax. |
| <b>Nonliability Reason</b>                        | Workday reports this information in DSN S21.G00.44.004 as <i>Motif de non assujettissement à la taxe d'apprentissage</i> .                                     |
| <b>OPCO (Opérateur de compétences) Membership</b> | Workday reports this information in DSN rubric S21.G00.11.                                                                                                     |

### Next Steps

Run a DSN preparation to include the information in a DSN.

### Enter Apprenticeship Tax Reporting Details (FRA)

#### Prerequisites

Security: These domains in the FRA Payroll functional area:

- *Process: DSN (Run) - FRA*
- *Process: DSN for Pay Group (Run) - FRA*

#### Context

You can provide details about apprenticeship expenses calculated outside of Workday, to help you meet DSN reporting requirements.

If you need to update apprenticeship tax reporting details after submitting a DSN, you can enter a regularization on the next month. When you enter a regularization, Workday cancels and replaces the previous values from the initial DSN in the next DSN report.

#### Steps

1. Access the **Find DSN** task.
2. From the related actions menu of the DSN, select **DSN > Maintain Apprenticeship Tax Reporting Details**.
3. As you complete the task, consider:

| Option                | Description                                                               |
|-----------------------|---------------------------------------------------------------------------|
| <b>Regularization</b> | Select to change previously reported tax reporting details when possible. |

| Option                      | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
|-----------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                             | <p>Example: You can't cancel and replace an incorrect value reported in DSN block S21.G00.82 for rubric value 74. In this case, correct the contribution amount directly in the payroll results. Workday processes the total updated amount in payroll and reports it as zero in block S21.G00.81 in the DSN associated to the current pay period.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| <b>DSN to Regularize</b>    | <p>Select the DSN to regularize. Example: In April, you want to override amounts reported in March. You access the DSN for April and enter these settings:</p> <ul style="list-style-type: none"> <li>• <b>Regularize:</b> Selected</li> <li>• <b>DSN to Regularize:</b> Select the DSN for March.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| <b>DSN Rubric Value</b>     | <p>You can't edit the amount for DSN rubric value <i>074- Exonération Taxe d'apprentissage pour un employeur d'apprenti(s), dont la masse salariale est inférieure à 6 SMICs</i>. Workday automatically reports zero for this value.</p> <p>Supplementary apprenticeship tax is reported annually, when applicable, that is, when the establishment is a headquarters and the DSN period is in March. For supplementary apprenticeship tax, the DSN Rubric Value <i>080 – Exonération de la contribution supplémentaire à l'apprentissage</i> is automatically populated with zero in the <b>Maintain Apprenticeship Tax Reporting Details</b> task.</p> <p>When you select either the balance for apprenticeship tax (<i>076 – libératoire de la taxe d'apprentissage</i>) or supplementary apprenticeship tax (<i>079 – Contribution supplémentaire à l'apprentissage (CSA)</i>) the amount is populated automatically, making it available for override.</p> <p>Workday also displays these rubric values to manage any expenses deductible from the apprenticeship tax settlement amount:</p> <ul style="list-style-type: none"> <li>• <i>077 – Réduction du versement libératoire de la taxe d'apprentissage liés à des subventions aux CFA</i></li> <li>• <i>078 – Réduction du versement libératoire de la taxe d'apprentissage liés à des créances alternants</i></li> </ul> |
| <b>Maximum Amount</b>       | <p>Displays the contribution amount for either the:</p> <ul style="list-style-type: none"> <li>• Current DSN period.</li> <li>• DSN period selected for regularization.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| <b>Amount to Regularize</b> | <p>If you've already submitted a DSN, Workday displays the originally reported amount.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

| Option | Description                                                                                                                                                                                                               |
|--------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Amount | <p>Enter the amount to report for the DSN rubric value.</p> <p>For regularizations, enter the new amount to report. Always enter a positive value for regularizations for rubric value 075, even if it's a reduction.</p> |

### Next Steps

Run a DSN preparation to include apprenticeship tax reporting details in a DSN.

## Set Up DSN Reported Values (FRA)

### Steps: Set Up DSN Reported Values (FRA)

#### Context

Workday automatically identifies the values for most DSN rubrics. To ensure correct processing, you need to specify how to identify and report:

- Specific amounts. Example: Withholding tax for nonresidents.
- Different types of days and hours. Examples: Overtime, unpaid absences.
- Reference periods. Example: For nonmonthly bonuses.
- Waiting periods. Example: For IJSS payments.

#### Steps

1. [Map Pay Components to DSN Reporting Blocks \(FRA\)](#) on page 1631.
2. [Identify Amounts to Declare for DSN Reporting \(FRA\)](#) on page 1633.
3. [Declare Working Time and Absences in a DSN \(FRA\)](#) on page 1635.
4. [Define Nonmonthly Reference Periods for Reported Bonuses \(FRA\)](#) on page 1637.
5. Add payroll input to declare additional events or situations in a DSN. Examples: Exposure to a risk hazard, vested free shares.  
See [Reference: Payroll Inputs for DSN Reporting \(FRA\)](#) on page 1640.
6. Access the **Edit DSN Worker Information** task.  
Add individual worker information to report in a DSN, such as:
  - Workers receiving retirement benefits while still working.
  - Workers with existing Temporary Technical Numbers (NTT) from other payroll systems.
 Security: *Worker Data: Payroll (Company Specific)* - FRA domain in the FRA Payroll functional area.
7. (Optional) [Set Up DSN Reporting for Expatriate Workers \(FRA\)](#) on page 1639.

### Map Pay Components to DSN Reporting Blocks (FRA)

#### Prerequisites

Security: *Set Up Payroll (DSN)* - FRA domain in the Payroll France functional area.

#### Context

To ensure that Workday accurately reports pay components for your company, you can map your calculations to rubric values from the DSN framework.

Workday uses rubric configuration mappings for these DSN blocks:

- S21.G00.40 (Contrat): To identify workers who receive tips.
- S21.G00.51 (Remuneration): To identify different salary elements.
- S21.G00.52 (Prime, gratification et indemnité): To identify different types of bonuses and indemnities.
- S21.G00.54 (Autre élément de revenu brut): To identify professional expenses, meal vouchers, and other different gross pay elements.
- S21.G00.78 (Code de base assujettie): To identify contribution bases to report for civil servants in private sectors, and paid vacation fund contribution basis.
- S21.G00.79 (Composant de base assujettie): To identify individual benefit contributions.
- S21.G00.81 (Cotisation individuelle): To identify individual contribution amounts for civil servants in private sectors.

**Note:** Only earnings and deductions can be used in the configuration of DSN rubric S21.G00.40.045.

### Steps

1. Access the **View DSN Rubric Configuration** report.
2. For each rubric value that requires mapping, click **Maintain**.

Workday only displays a **Maintain** button for rubric values that you must map to calculations. To view predefined calculations for other DSN rubric values, access the **Calculations** column in the **View DSN Rubric Configuration** task.

3. As you complete the row, consider:

| Option                               | Description                                                                                                                                                                                                                                                                                                                                          |

|--------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Contribution Calculation</b>      | For DSN block S21.G00.81. Workday reports the sum of all selected calculations as the contribution amount for the selected rubric value in DSN rubric S21.G00.81.004.                                                                                                                                                                                                                                                                                                            |
| <b>URSSAF Tax Election Selection</b> | <p>For DSN blocks S21.G00.78 and S21.G00.81. Determines whether Workday reports a rubric value for a worker. Workday reports the rubric value for:</p> <ul style="list-style-type: none"> <li>Workers with the selected type of personnel when you select <i>Selected Only</i> as the <b>Selection Option</b>.</li> <li>All workers except for workers with the selected type of personnel when you select <i>All Except Selected</i> as the <b>Selection Option</b>.</li> </ul> |

**Result**

When you create a DSN, Workday evaluates the payroll calculation and reports it in the associated rubric value.

**Example**

You need to report the calculations for overtime hours in DSN block S21.G00.51.

In addition to the statutory setup, you have an earning, *Overtime*, which uses the related calculation *FRA Hours* to retrieve the number of overtime hours.

Enter this configuration for the rubric code S21.G00.51.011 - Type (Rémunération):

| Rubric Value                                                      | Calculations for Rubric Value | Related Calculations |
|-------------------------------------------------------------------|-------------------------------|----------------------|
| <i>017 - Heures supplémentaires ou complémentaires aléatoires</i> | <i>Overtime</i>               | <i>FRA Hours</i>     |

**Identify Amounts to Declare for DSN Reporting (FRA)****Prerequisites**

Security: *Set Up: Payroll (Calculations - Payroll Specific)* domain in the Core Payroll functional area.

**Context**

Workday automatically identifies the amounts required for most DSN rubrics. To ensure correct DSN processing, you need to identify how to report some specific pay components, such as:

- Pôle Emploi taxable base.
- Withholding tax for nonresidents.

**Steps**

1. Access the **Edit Deduction** or **Edit Earning** task for pay components that represent amounts to be reported in the DSN.

2. On the **Non-Effective Dated** tab, select the appropriate pay component group from the **Groups** prompt:

| Reported Amount                                                                          | Rubric Value                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | Pay Component Groups                                                                                                                                                                                                                                                                             |

## Declare Working Time and Absences in a DSN (FRA)

### Prerequisites

Security: *Set Up: Payroll (Calculations - Payroll Specific)* domain in the Core Payroll functional area.

### Context

To correctly report working time and specific absences in the DSN, you can identify pay components that represent:

- Worked hours or days.
- Unpaid or partially paid absences.
- Overtime hours.
- Social security waiting periods.

### Steps

1. Access the **Edit Deduction** or **Edit Earning** task for the pay component with related calculations for worked time or absences.
2. On the **Effective Dated** tab, in the row with the related calculation for the overtime or time off, select the appropriate pay component group from the **Groups** prompt.

| Related Calculation For | Impacted DSN Rubric                | Pay Component Groups                                                                                                                                                                                                                                                                            |

[Add Earnings or Deductions to Pay Component Groups](#) on page 234

[Steps: Set Up DSN Reported Values \(FRA\)](#) on page 1631

## Define Nonmonthly Reference Periods for Reported Bonuses (FRA)

### Prerequisites

Create pay components for bonuses and gross pay elements.

Security: *Set Up: Payroll (Calculations - Payroll Specific)* domain in the Core Payroll functional area.

### Context

Identify nonmonthly reference periods for:

- Bonuses reported in DSN block S21.G00.52.
- Other elements of gross pay reported in DSN block S21.G00.54.

You can view which bonuses and elements are reported in DSN by accessing the **View DSN Rubric Configuration** task for rubric codes:

- S21.G00.52.001
- S21.G00.54.001

### Steps

1. Access the **Edit Earning** task for a bonus or gross pay component.

2. Add these rows to the **Related Calculations** grid:

| Related Calculation                | Override Calculation                                                                               | Do Not Store/ Do Not Store if Zero |
|------------------------------------|----------------------------------------------------------------------------------------------------|------------------------------------|
| <i>Reference Period Start Date</i> | Enter the start date when the reference period starts.<br>Example: 01-01-2025 for January 1, 2025. |                                    |
| <i>Reference Period End Date</i>   | Enter the end date when the reference period starts.<br>Example: 31-12-2025 for December 31, 2025. |                                    |

**Note:** For the *Value Sharing Bonus*, the start and end period dates are related to the payment date.

## Result

When you prepare a DSN, Workday uses the values of the related calculations to calculate the reported reference period start and end dates. If you don't indicate any related calculations, Workday:

- Reports bonuses in block S21.G00.52 as annual with reference start dates in January.
- Doesn't report the reference period start and end dates in block S21.G00.54.

[Steps: Set Up DSN Reported Values \(FRA\)](#) on page 1631

## Report Subrogation for Specific Workers (FRA)

### Context

You can configure how to apply subrogation for DSN reporting based on absence types and worker details. You can define your own rules to determine which workers Workday reports as eligible for subrogation. Example: You can create subrogation rules to define a different subrogation reporting for managers, workers with tips, and workers with a specific type of absence.

### Steps

1. Access the **Create DSN Subrogation Rule** task.

In the **Rule Condition** grid, define conditions that identify workers you want to report as eligible for subrogation.

Use the **By category > DSN Subrogation** prompt in the **Source External Field or Condition Rule** column to select criteria for the column in order to ensure using recommended report fields.

Security: *Set Up: Payroll (DSN) - FRA* domain in the FRA Payroll functional area.

2. Access the **Edit Establishment FRA Reporting** task.

In the **DSN Options** tab, select **Apply Social Security Allowance Subrogation**.

Select your subrogation rule from the **DSN Subrogation Configuration Rule** prompt.

Security: *Set Up: Payroll (DSN) - FRA* domain in the FRA Payroll functional area.

## Result

Workday evaluates subrogation rules for absences based on 1 day before the absence start date.

When a worker meets the criteria for a subrogation rule, Workday reports the worker as subject to subrogation for an Absence DSN. Workday reports all other workers for the establishment as not subject to subrogation.

### Next Steps

Since DSN subrogation rules aren't effective dated, Workday recommends creating a new rule when you want to add criteria instead of editing an existing rule.

### Set Up DSN Reporting for Expatriate Workers (FRA)

#### Prerequisites

Security: *Set Up: Payroll (DSN)* - FRA domain in the FRA Payroll functional area.

#### Context

For expatriate workers, you can configure how to report unemployment insurance and Pôle Emploi contributions in DSN reporting.

#### Steps

1. Access the **DSN Options** tab in the **Edit Establishment FRA Reporting** task.

In the **Type of Compensation Subject to Unemployment Insurance for Expatriates** section, select whether to report the real or equivalent salary in DSN rubric S21.G00.11.009.

In the **Deduction Recipient** section, complete the **Pôle Emploi** grid.

| Option                     | Description                                                                                                  |
|----------------------------|--------------------------------------------------------------------------------------------------------------|
| <b>Start Date</b>          | Determines when Workday starts to report Pôle Emploi payments in a DSN.                                      |
| <b>Deduction Recipient</b> | Select the deduction recipient representing the Pôle Emploi organization.                                    |
| <b>External Entity ID</b>  | Workday automatically displays the Pôle Emploi SIRET from the External Entity ID of the deduction recipient. |
| <b>Reference Number</b>    | Enter the reference number from Pôle Emploi.                                                                 |

Security: *Set Up: Payroll (DSN)* - FRA domain in the FRA Payroll functional area.

2. Access the **Edit DSN Worker Information** task.

In the **Place of Work** section, consider:

| Option                                | Description                                                                                                                                                                                                                                                                                                             |
|---------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Location/Use Assigned Location</b> | Select: <ul style="list-style-type: none"> <li>• <b>Location</b> to indicate that the worker isn't working at their assigned establishment. Select the location of their current workplace.</li> <li>• <b>Use Assigned Establishment Location</b> to indicate that worker is no longer an expatriate worker.</li> </ul> |
| <b>Location Identifier</b>            | Workday automatically displays the location identifier from the <b>View Location</b> report of the selected location.                                                                                                                                                                                                   |

| Option | Description                                                                                                                                                                                      |
|--------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|        | Workday uses the location identifier to report: <ul style="list-style-type: none"> <li>The identifier in DSN block S21.G00.40.</li> <li>The location details in DSN block S21.G00.85.</li> </ul> |

Security: *Worker Data: Payroll (Company Specific)* - FRA in the FRA Payroll functional area.

## Result

When you prepare a DSN with an expatriate worker, Workday reports:

- Payments to Pôle Emploi in DSN block S21.G00.20 for establishments with a defined deduction recipient.
- The location identifier in DSN block S21.G00.40.
- The location of the worker in DSN block S21.G00.85.
- The real or equivalent salary in DSN block S21.G00.11.

## Reference: Payroll Inputs for DSN Reporting (FRA)

There are several pay components that you can use to declare specific events or situations in DSN reporting.

To declare the event, add payroll input for the pay component and then run a payroll calculation to process the added input.

| Declared Event                                                 | Pay Component                                                          | Considerations                                                                                                                                                                                                                                                                                                                                                                                                                          |
|----------------------------------------------------------------|------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Exercised stock options (S89.G00.88)                           | <i>Memo – Reporting of Stock Options – Exercise [FRA]</i>              | Indicate the: <ul style="list-style-type: none"> <li>Number.</li> <li>Share unit price.</li> <li>Share subscription price.</li> <li>Percent of gain from a French source.</li> <li>Release date.</li> <li>Exercise date.</li> </ul>                                                                                                                                                                                                     |
| Exposure to workplace risk hazards (S21.G00.34)                | <i>Memo - Prevention Account Exposure Factors [FRA]</i>                | Select the workplace risk hazard factor as the <b>Input Details - Type</b> and enter a nonzero value for the <b>Input Details - Value</b> .<br><br>You only need to indicate exposure once for each year. Workday reports the workplace exposure factor in a monthly DSN for either: <ul style="list-style-type: none"> <li>The December pay period.</li> <li>The worker's termination pay period, if earlier than December.</li> </ul> |
| Regularization of reported workplace risk hazards (S21.G00.34) | <i>Memo – Prevention Account Exposure Factors Regularization [FRA]</i> | Select the correct workplace risk hazard factor as the <b>Input Details - Type</b> and enter a                                                                                                                                                                                                                                                                                                                                          |

| Declared Event                      | Pay Component                                                          | Considerations                                                                                                                                                                                                                                                                                                                                                                                                              |
|-------------------------------------|------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                     |                                                                        | <p>nonzero value for the <b>Input Details - Value</b>.</p> <p>Enter the impacted period as the value for the <i>Reference Year</i> related calculation.</p> <p>To cancel a previously reported risk exposure factor, enter a nonzero value for the <i>Cancellation</i> related calculation.</p> <p>When you enter a regularization, Workday cancels and replaces the previously reported workplace risk hazard details.</p> |
| Released free shares (S89.G00.87)   | <i>Memo - Reporting of Free Shares - Release [FRA]</i>                 | <p>Indicate the:</p> <ul style="list-style-type: none"> <li>• Number of shares.</li> <li>• Percent of gain from a French source.</li> <li>• Release dates.</li> <li>• Share unit price.</li> <li>• Vesting dates.</li> </ul>                                                                                                                                                                                                |

## Related Information

### Tasks

[Add Payroll Input for Workers](#) on page 589

### Example: Create Calculations for Workplace Risk Exposure Factors (FRA)

This example illustrates how to create calculations to determine when a worker is exposed to a workplace risk factor.

### Context

Global Modern Services (GMS) has several workers who work night hours. You want to report in a DSN the workers' exposure to the night-work risk factor when they work more than 120 nights.

Your company already stores the number of worked nights in a pay component. Instead of adding pay input for each worker, you want to create calculations based on the available night work information.

### Prerequisites

Create a *Night Work Bonus* earning for with a *Worked Nights* related calculation.

### Steps

1. Access the **Create Pay Balance** task.

Enter these values:

| Option          | Values                                                      |
|-----------------|-------------------------------------------------------------|
| Name            | <i>YTD Worked Nights for Company</i>                        |
| Filter Worktags | <i>Company</i>                                              |
| Pay Component   | <i>Night Work Bonus - Worked Nights</i>                     |
| Balance Period  | <i>YTD Current Calendar Year (based on Period End Date)</i> |

Security: *Set Up: Payroll (Calculations - Payroll Specific)* domain in the Core Payroll functional area.

2. Access the **Create Value Comparison Calculation** task.

Enter these values:

| Option      | Values                                |
|-------------|---------------------------------------|
| Name        | <i>Worked Nights Greater than 120</i> |
| 1st Operand | <i>YTD Worked Nights for Company</i>  |
| Operator    | <i>&gt;</i>                           |
| 2nd Operand | <i>120</i>                            |

Security:

- *Set Up: Payroll (Calculations - Generic)* domain in the Core Payroll functional area.
- *Set Up: Time Off (Calculations - Generic)* domain in the Time Off and Leave functional area.

### 3. Access the **Edit Earning** task for the *Night Work Bonus* earning.

In the **Related Calculations** section, access the *Worked Nights* related calculation, and select *FRA Prevention Account - Night Work Exposure Factor [FRA]* from the **Groups** prompt.

Security: *Set Up: Payroll (Calculations - Payroll Specific)* in the Core Payroll functional area.

## Result

Workday is now configured to identify workers with exposure to the night-work risk factor, based on the number of nights worked.

When a worker works more than 120 nights in a year, Workday:

- Creates a nonzero result for the corresponding related calculation on the *Memo - Prevention Account Exposure Factors* deduction.
- Reports the exposure to the risk factor in block S21.G00.34 for the December pay period, or the worker's termination pay period.

## Next Steps

Run a payroll calculation and generate DSN reports for the processed payroll.

Create similar calculations for other exposure factors. Example: Noise exposure, repetitive work.

### Tasks

[Steps: Process Payroll](#) on page 613

[Steps: Generate DSNs \(FRA\)](#) on page 1647

[Create Related Calculations](#) on page 239

[Steps: Set Up DSN Reported Values \(FRA\)](#) on page 1631

## Set Up DSN Deposits (FRA)

### Steps: Set Up DSN Deposits (FRA)

## Context

You can configure Workday Payroll for France to either:

- Prepare a DSN submission file that you can manually upload to the net-entreprises.fr portal.
- Automatically deposit a DSN submission on the net-entreprises.fr portal.

## Steps

1. [Set Up DSN Deposit \(Machine to Machine\) Integration.](#)
2. Create an EIB to extract a DSN submission in the format required by net-entreprises.fr for manual deposits.  
See [Example: Create EIB for Manual DSN Deposits \(FRA\)](#) on page 1644.
3. Configure the *DSN Submission Event* business process for both manual and automatic submissions.  
See [Example: Set Up the DSN Submission Event Business Process \(FRA\)](#) on page 1645.
4. [Set Up DSN Polling \(Machine to Machine\) Integration.](#)

5. (Optional) Use the *Pay France DSN Rejected* notification type to configure Workday to send notifications when the net-entreprises.fr portal rejects a DSN.

Workday sends the notification to the user who launched either of these integrations:

- *DSN Deposit (Machine to Machine)*
- *DSN Polling (Machine to Machine)*

See [Steps: Set Up Workday Notifications](#).

## Result

You can manage automatic or manual deposits through the **Send DSN File** task. You can access the **Send DSN File** task by accessing a DSN submission and clicking **Send DSN File** on a DSN submission.

## Example: Create EIB for Manual DSN Deposits (FRA)

This example illustrates how to create an EIB that extracts a DSN submission to a text file compatible with the net-entreprises.fr portal.

## Context

You want to upload your DSN submissions manually to the net-entreprises.fr portal.

## Prerequisites

- Create a custom XSLT attachment transformation, named *DSN Data Transformation - Custom*, based on the latest version of the *DSN Data Transformation.xslt* file. You can download the *DSN Data Transformation.xslt* file from [Workday Community](#).
- These security domains in the Integration functional area:
  - *Integration Build*
  - *Integrations: EIBs*

## Steps

1. Access the **Create Web Service Data Source** task.
2. Select *Get DSN Data (Web Service)* from the **Web Service Operation** prompt.
3. Click **OK**.
4. From the related actions menu of the data source, select **Web Service Data Source > Edit**.
5. In the **Request XML** field, enter:

```
<wd:Get_DSN_Data_Request xmlns:wd="urn:com.workday/bsvc">
  <wd:Request_References>
    <wd:DSN_Submission_Reference>%DSN Submission Reference%</
wd:DSN_Submission_Reference>
  </wd:Request_References>
</wd:Get_DSN_Data_Request>
```

6. In the **Launch Parameters** grid, enter these values:

| Option                       | Description                                                                                               |
|------------------------------|-----------------------------------------------------------------------------------------------------------|
| <b>Add Name</b>              | <i>DSN Submission Reference.</i>                                                                          |
| <b>Launch Parameter Type</b> | From the <b>Data Type</b> prompt, select the self-referencing instance field type <i>DSN Submission</i> . |
| <b>Options</b>               | <i>Required</i>                                                                                           |

7. Click **OK**.
8. Access the **Create EIB** task.

9. Enter these values and click **OK**.

| Option   | Value                      |
|----------|----------------------------|
| Name     | <i>DSN Submission Data</i> |
| Outbound | Select                     |

10. On the **General Settings** page, click **Next**.

11. In the **Get Data** section, select these values:

| Option           | Value                             |
|------------------|-----------------------------------|
| Data Source Type | <i>Web Service</i>                |
| Web Service      | <i>Get DSN Data (Web Service)</i> |

12. Click **Next**.

13. In the **Transform** section, select these values:

| Option                | Value                                                                                      |
|-----------------------|--------------------------------------------------------------------------------------------|
| Transformation Type   | <i>Custom Transformation</i>                                                               |
| Custom Transformation | The custom transformation that you created based on the DSN Data Transformation.xslt file. |

14. Click **Next**.

15. In the **Deliver** section, enter these values:

| Option          | Value                     |
|-----------------|---------------------------|
| Delivery Method | <i>Workday Attachment</i> |
| File Name       | <i>DSN_Data.txt</i>       |

16. Click **Next** and **OK**.

### Next Steps

Create an integration step for manual submissions on the *DSN Submission Event* business process and add the *DSN Submission Data*.

### Related Information

#### Tasks

[Create Integration Transformation](#)

[Create Web Service Data Source](#)

[Set Up Outbound EIB](#)

### Example: Set Up the DSN Submission Event Business Process (FRA)

This example illustrates how to configure the *DSN Submission Event* business process for automatic and manual DSN deposits.

### Context

You want to enable Workday to manage both manual and automatic DSN deposits. You plan on primarily using automatic deposits for your DSN submissions, but you want to be able to prepare a manual deposit when necessary. Because your company has multiple accounts that can deposit DSN submissions, you want to provide your net-entreprises.fr credentials for each submission.

## Prerequisites

Set up a DSN Deposit (Machine to Machine) integration.

Create an EIB for manual DSN deposits. See [Example: Create EIB for Manual DSN Deposits \(FRA\)](#).

Security:

- Configure the *DSN Submission Event* business process and security policy in the FRA Payroll functional area.
- *Business Process Administration* and *Manage: Business Process Definitions* domains in the System functional area.

## Steps

1. Select **Business Process > Edit Definition** from the related actions menu of your business process definition for the *DSN Submission Event* business process.
2. Create an integration step for automatic DSN deposits.
  - a) From the related actions menu of the integration step, select **Business Process > Configure Integration Step**.
  - b) From the **Integration** prompt, select an integration based on the *DSN Deposit (Machine to Machine)* integration system.
  - c) Enter these values in the **Integration Criteria** grid:

| Field                      | Value Type                        | Value                         |
|----------------------------|-----------------------------------|-------------------------------|
| <b>SIRET</b>               | <i>Determine Value at Runtime</i> | <i>DSN Issuer SIRET</i>       |
| <b>First Name</b>          | <i>Determine Value at Runtime</i> | <i>DSN Deposit First Name</i> |
| <b>Last Name</b>           | <i>Determine Value at Runtime</i> | <i>DSN Deposit Last Name</i>  |
| <b>Password</b>            | <i>Determine Value at Runtime</i> | <i>DSN Deposit Password</i>   |
| <b>DSN Submission</b>      | <i>Determine Value at Runtime</i> | <i>DSN Submission</i>         |
| <b>Generate Excel File</b> | <i>Determine Value at Runtime</i> | <i>Generate Excel File</i>    |

- d) Select **Business Process > Create Condition Rule** from the related actions menu of the integration step.
- e) Enter these settings:

| Source External Field or Condition Rule | Relational Operator | Comparison Type                       | Comparison Value |
|-----------------------------------------|---------------------|---------------------------------------|------------------|
| <i>DSN Automatic Deposit</i>            | <i>equal to</i>     | <i>Value specified in this filter</i> | <i>Yes</i>       |

- f) In the **View Business Process Definition** task, click the **Step** related actions menu on the *Business Process Steps* tab and select **Business Process > Maintain Step Conditions**. Add a row to the *Entry Conditions* table and select *DSN Automatic Deposit*. Click **OK**.
3. Create a second integration step for manual deposits.
    - a) From the **Integration** prompt, select your EIB for manual DSN deposits.
    - b) Enter these values in the **Integration Criteria** grid:

| Field                           | Value Type                        | Value                 |
|---------------------------------|-----------------------------------|-----------------------|
| <b>DSN Submission Reference</b> | <i>Determine Value at Runtime</i> | <i>DSN Submission</i> |

| Field     | Value Type                 | Value                                           |
|-----------|----------------------------|-------------------------------------------------|
| File Name | Determine Value at Runtime | DSN Submission Name<br>Defaulted with Extension |

- c) Select **Business Process** > **Create Condition Rule** from the related actions menu of the integration step.
- d) Enter these settings:

| Source External Field or Condition Rule | Relational Operator | Comparison Type                | Comparison Value |
|-----------------------------------------|---------------------|--------------------------------|------------------|
| DSN Automatic Deposit                   | equal to            | Value specified in this filter | No               |

4. (Optional) Create an integration step to generate Excel files with a manual deposit.

- a) From the **Integration** prompt, select your EIB for manual DSN deposits.
- b) Enter these values in the **Integration Criteria** grid:

| Field                    | Value Type                 | Value                                               |
|--------------------------|----------------------------|-----------------------------------------------------|
| DSN Submission Reference | Determine Value at Runtime | DSN Submission                                      |
| File Name                | Determine Value at Runtime | DSN Submission Name<br>Defaulted With XML Extension |

- c) Select **Business Process** > **Create Condition Rule** from the related actions menu of the integration step.
- d) Enter these settings:

| Source External Field or Condition Rule | Relational Operator | Comparison Type                | Comparison Value |
|-----------------------------------------|---------------------|--------------------------------|------------------|
| DSN Automatic Deposit                   | equal to            | Value specified in this filter | No               |

## Result

The *DSN Submission Event* business process is configured to process a manual or automatic deposit based on the option selected on the **Send DSN File** task.

For automatic deposits, the integration is configured to retrieve the net-entreprises.fr sign-in credentials from the **Send DSN File** task.

## Related Information

### Tasks

[Set Up DSN Deposit \(Machine to Machine\) Integration](#)

## Prepare and Submit DSN Declarations (FRA)

### Steps: Generate DSNs (FRA)

### Prerequisites

Run a payroll calculation for the company of the declared establishments.

### Context

After each payroll calculation, you can generate a DSN with information on social contributions and payments to workers to report to French authorities.

Workday compares reported data against the standards from the government for data submission, and raises errors for any exceptions. You can also check for errors on nil declarations, replacements, or cancellations created as a manual DSN.

When generating DSNs, Workday only considers events or worker changes that occur after a worker's first payroll results in Workday. A worker's first payroll results are the first results for a regular run category for France, excluding payroll history results. Example: Workday only creates absence DSNs for time offs with a begin date after the worker's first payroll results.

## Steps

### 1. Access 1 of these tasks to generate DSNs:

- **Run DSN Preparation** to generate DSNs immediately.
- **DSN Scheduler** to schedule DSN generation either once in the future or on a recurring basis.

Security: *Process: DSN (Run) - FRA* and *Process: DSN (Submission) - FRA* domains in the FRA Payroll functional area.

Workday generates a DSN for each declared establishment of the selected DSN issuer that has a reportable event. Workday generates DSNs with the payroll results from the last regular run category. Workday also includes results from any run categories that share the same period schedule as the regular run category, regardless of the pay group.

### 2. Access the **DSN Contributions by Establishment** report.

Compare the payroll contribution calculations to the URSSAF amounts declared in the DSN. For AGIRC-ARRCO, compare calculated amounts by population type to the aggregated payroll amount declared in the DSN.

Security: *Process: DSN (Run) - FRA* or *Process: DSN for Pay Group (Run) - FRA* domain in the FRA Payroll functional area.

### 3. Access the **DSN Benefits Contributions by Establishment** report.

Compare the declared benefit amounts by benefit plan and population with the aggregated payroll amounts.

Security: *Process: DSN (Run) - FRA* or *Process: DSN for Pay Group (Run) - FRA* domain in the FRA Payroll functional area.

### 4. To view raised exceptions, select **DSN > View Exceptions** from the related actions menu of the DSN. You can view the source of errors in the **Description** or **Worker** columns.

Workday verifies the basic data requirements such as length, regular expression, or required fields. Workday recommends that you use the DSN-val tool for other data controls.

To view DSN exceptions for multiple DSNs, access the **All DSN Exceptions** report.

Security: *Process: DSN (Run) - FRA* or *Process: DSN for Pay Group (Run) - FRA* domain in the FRA Payroll functional area.

### 5. To view comptes rendus métiers (CRMs), access the **View DSN Responses (CRM)** report. The CRM 11 – Certificat de conformité /Bilan d'anomalies provides the same verifications as DSN-val.

Security: *Process: DSN (Run) - FRA* or *Process: DSN for Pay Group (Run) - FRA* domain in the FRA Payroll functional area.

### 6. Correct any missing or incorrect data in Workday.

### 7. (Optional) When you can't correct the data or payroll result, you can manually override the generated value for most DSN blocks.

- a) In a DSN, click **Preview** or **Preview Header** to access the DSN block with the exception.
- b) Click **Add Manual Entry for [DSN Block]**.

When you create a manual entry to modify a reportable value in certain blocks, you must also manually report the change. Example: You create a manual entry for block 40, then from

block **S21.G00.40**, click **Create S21.G00.41 - Changements Contrat** to create the block that reports changes in contract information. You create a manual entry for block 30, then from block **S21.G00.30**, click **Create S21.G00.31** to create the block that reports worker information.

Security: *Process: DSN (Run) - FRA* or *Process: DSN for Pay Group (Run) - FRA* domain in the FRA Payroll functional area.

8. Access the **Run Pay Calculation** task to rerun the payroll calculation for the reported period.

Security: *Process: Run Batch Calculations (Pay Calculation)* domain in the Core Payroll functional area.

9. To set the status of monthly or termination DSNs to *Ready for Submission*, access the **Run Pay Complete** task before regenerating the DSN.

Security: *Process: Run Batch Complete (Pay Complete)* domain in the Core Payroll functional area.

10. Access the **Run DSN Preparation** task to regenerate the DSN.

You can select the **Only verify exceptions for workers with changes** check box to limit the DSN verifications Workday does during the DSN preparation. When selected, Workday only verifies the generated data against DSN data requirements for workers:

- Reported with exceptions during the previous DSN preparation.
- With DSN manual entries.
- With recalculated payroll results.
- With new payroll-impacting events since the previous DSN preparation such as time off, collective agreements, and benefits.

Security: *Process: DSN (Run) - FRA* and *Process: DSN (Submission) - FRA* domains in the FRA Payroll functional area.

## Result

You can view generated DSNs by accessing the **Find DSN** report.

## Related Information

### Concepts

[Concept: Workday Scheduled Processes](#)

### Tasks

[Steps: Process Payroll](#) on page 613

## Steps: Generate and Deposit DSN Submissions (FRA)

### Prerequisites

- Create a DSN with a status of *Ready for Submission* or *In Progress* for each establishment included in the submission.
- Set up the *DSN Submission Event* business process to manage automatic deposits.
- Security:
  - Configure the *DSN Submission Event* business process and security policy in the FRA Payroll functional area.
  - *Process DSN (Run) - FRA* domain in the FRA Payroll functional area.
  - Ensure that you have *Put* permissions on the *Process DSN (Submission) - FRA* domain in the FRA Payroll functional area.

### Context

To submit your DSNs to the authorities, you can use Workday to:

- Generate a DSN submission containing 1 or more DSN reports.
- Automatically submit the DSN on [net-entreprises.fr](http://net-entreprises.fr).

**Note:** Workday recommends automatically depositing DSN files to keep an electronic record of the deposit. For test submissions, Workday recommends that you also create an automatic deposit with *DSN Polling (Machine to Machine)* integration template to test DSN submissions.

## Steps

1. Access the **Create DSN Submission** task. As you complete the task, consider:

| Option                                         | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |

| <b>DSN Test or Production</b>                  | <p>For a test submission, Workday includes all available DSNs for the issuer with a status of <i>Ready for Submission</i> or <i>In Progress</i>, based on the selection criteria.</p> <p>For a real submission, Workday only includes DSNs with a status of <i>Ready for Submission</i>, based on the selection criteria.</p> <p>To reduce the risk of a duplicate submission, Workday automatically excludes from new DSN submissions any DSNs that have a deposit status of:</p> <ul style="list-style-type: none"> <li>• <i>Technical Verification In Progress</i></li> <li>• <i>Waiting for Response</i></li> </ul> |
| <b>DSN Test Cancel and Replace</b>             | <p>Can be used in test submissions to replace a DSN that has been previously accepted in a test submission to net-entreprises.fr.</p> <p>When selected, Workday generates the DSN submission with the declaration type <i>03 - déclaration annule et remplace integral</i>.</p>                                                                                                                                                                                                                                                                                                                                         |
| <b>Only Include DSNs Waiting for Responses</b> | <p>Select to create a DSN submission that only contains DSNs with the deposit statuses that are typically excluded:</p> <ul style="list-style-type: none"> <li>• <i>Technical Verification In Progress</i></li> <li>• <i>Waiting for Response</i></li> </ul> <p>Example: Create a test submission to verify modified data.</p>                                                                                                                                                                                                                                                                                          |
| <b>DSN Version Number</b>                      | <p>Automatically filled with the DSN version based on the year of the reportable event.</p> <p>Remains empty when there are no DSNs with the appropriate status for the submission. In this case, correct the status of the DSNs before creating a submission.</p>                                                                                                                                                                                                                                                                                                                                                      |
| <b>Filter on DSN Natures</b>                   | Enables you to create a submission that contains only the selected DSN natures.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| <b>Filter on DSN Establishments</b>            | Enables you to create a submission that contains only the DSNs from the selected establishments.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| <b>DSN for Submission</b>                      | <p>Displays the DSN included in the submission.</p> <p>You can add or remove a DSN from the submission before depositing the DSN. Create</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

| Option | Description                                                                                                                                                                                                                                 |
|--------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|        | <p>the submission, and then select 1 of these options from the related actions menu of the DSN.</p> <ul style="list-style-type: none"> <li>• <b>DSN Submission &gt; Remove DSN</b></li> <li>• <b>DSN Submission &gt; Add DSN</b></li> </ul> |

2. (Optional) Extract the DSN submission to an Excel format.

See [Example: Extract DSN Submissions to Excel \(FRA\)](#) on page 1659.

3. Access the **Find DSN Submissions** report and view the DSN submission.

4. Click **Send DSN File**.

5. Select **Automatic Deposit using Machine to Machine**.

6. Enter your credentials for the net-entreprises.fr portal.

Workday recommends that you use the same net-entreprises.fr account for automatic deposits as for *DSN Polling (Machine to Machine)* integrations.

## Result

Workday automatically deposits the DSN submission on net-entreprises.fr.

## Next Steps

To view the status of an automatic DSN deposit, access the **Find DSN** report.

Launch an integration based on the *DSN Polling (Machine to Machine)* integration template to retrieve:

- The status. Example: Rejected.
- Comments from net-entreprises.fr on the DSN submission.
- Status updates for the 11, 20, 21, 22, 42, or 44 CRMs in the **View DSN Responses (CRM)** report.

**Note:** Workday recommends scheduling the integration to run several times each day to collect CRMs.

## Related Information

### Tasks

[Launch an Integration](#)

[Steps: Set Up DSN Deposits \(FRA\)](#) on page 1643

### Reference

[FAQ: DSN Reporting \(FRA\)](#) on page 1667

## Manually Deposit DSN Submissions (FRA)

### Prerequisites

- Set up the *DSN Submission Event* business process to manage manual deposits.
- Create a DSN submission.
- Security:
  - Configure the *DSN Submission Event* business process and security policy in the FRA Payroll functional area.
  - *Process: DSN (Submission)* - FRA domain in the FRA Payroll functional area.

### Context

To submit your DSNs to the authorities, you can use Workday to generate a submission file in the format required by net-entreprises.fr.

## Steps

1. Access the **Find DSN Submissions** report and view a DSN submission.
2. Click **Send DSN File**.
3. Select **Manual Deposit**.  
Workday initiates the *DSN Submission Event* business process and sends a **My Tasks** item to the reviewer to verify the DSN submission file.
4. Use the regulatory DSN-val tool to verify the DSN submission file.

## Next Steps

When all DSNs have passed the submission file verifications on DSN-val, submit the generated file to net-entreprises.fr.

The *DSN Submission Event* business process sends Action items to **My Tasks** that enable authorized users to update the status of the DSN with the submission results.

When you indicate that DSN-val or net-entreprises.fr has rejected 1 of the DSNs in the submission, Workday:

- Stops the submission.
- Marks the business process as Complete.
- Marks the DSN as rejected.

To submit the DSNs that passed the DSN-val data verifications, you must create a new DSN submission.

## Related Information

### Tasks

[Steps: Set Up DSN Deposits \(FRA\)](#) on page 1643

## Create Partial DSNs (FRA)

### Context

When submitting an event DSN, you generally need to also send the relevant monthly DSN data for the worker. However, in some cases a worker doesn't have any previous monthly DSNs at the time of their event DSN. Example: Workers who are hired and terminated before you complete the monthly DSN.

In these cases, to submit the relevant monthly information to net-entreprises.fr, you can create partial DSNs that only contain information for selected workers.

## Steps

1. Access the **Convert Monthly DSNs to Partial Monthly DSNs** task.  
Enter selection criteria, and click **OK** to view a list of termination DSNs that are ready for submission.  
Workday only displays termination DSNs for workers with completed results.  
Security: *Process: DSN (Run)* - FRA domain in the FRA Payroll functional area.
2. Select the workers for which you need to create a partial DSN.  
Workday tags the associated monthly DSNs as targeted to be converted. You can later remove any DSNs that were tagged in error by selecting **DSN > Remove Partial DSN Attribute** from the related actions menu of the DSN.
3. Access the **Run DSN Preparation** task for the associated monthly DSNs.  
Security: *Process: DSN (Run)* - FRA and *Process: DSN (Submission)* - FRA domains in the FRA Payroll functional area.

## Result

Workday converts the selected monthly DSNs to partial monthly DSNs by removing:

- Active workers or workers on leave.
- DSNs blocks that don't apply to a partial DSN. Examples: S21.G00.20, S21.G00.22, S21.G00.23, S21.G00.55.

## Next Steps

Submit the partial DSNs to net-entreprises.fr.

Before submitting the next full monthly DSN:

- Access the **Mass Create Cancel and Replace DSNs** task to replace any partial DSNs with the full monthly DSN.
- Access the **Run DSN Preparation** task to generate the DSN data for the replacement DSNs.

## Steps: Create a Nil Declaration (FRA)

### Prerequisites

Security: *Process DSN (Run)* - FRA and *Process DSN (Submission)* - FRA domains in the FRA Payroll functional area.

### Context

When an establishment has the legal obligation to submit a DSN but has no employees to report, you can create a manual DSN for the nil declaration.

### Steps

1. Access the **Create Manual DSN** task, and select:

- **DSN Nature:** *01-DSN mensuelle*
- **DSN Type:** *02 - Déclaration normale néant*

As you complete the task, remember that the options are for the declared establishment, not the issuer.

2. [Steps: Generate DSNs \(FRA\)](#) on page 1647.

Workday compares reported data against the government's technical standards for data submission and raises errors for any exceptions.

3. Select **DSN > Update Status** from the related actions menu of the DSN, and *Ready for Submission* from the **Next Status** prompt.

4. [Steps: Generate and Deposit DSN Submissions \(FRA\)](#) on page 1649.

When all of the DSNs in the submission file are nil, select *02-Envoi néant* from the **DSN Submission Type** prompt.

## Steps: Replace or Cancel a DSN (FRA)

### Prerequisites

- Have a DSN submission with a status of *Passed*.
- Security: *Process DSN (Run)* - FRA domain in the FRA Payroll functional area.

### Context

If you discover an error in a DSN after authorities have acknowledged it for post-processing, you can:

- Replace the previous DSN with a new one.
- Cancel the previous DSN (only for a termination event).

In both cases, you need to generate a new:

- DSN for the establishment or for the event and worker.
- DSN submission file.

When replacing or canceling a DSN submission file containing DSNs for multiple establishments, you can only create or cancel 1 DSN at a time.

## Steps

1. Access the **Find DSN** task.

**Note:** If you have security permissions to view pay results for only some of the establishments declared in a DSN, access the **Create Manual DSN for Events** task, secured to the *Process: DSN for Pay Group (Run) - FRA* domain in the FRA Payroll area. You can then cancel and replace leave or termination DSNs.

2. From the related actions menu of a DSN, select **DSN > Cancel and Replace**.

Workday copies any manual entries from the DSN selected in the **Replacement For** prompt, and adds them to the replacement DSN.

3. Generate the replacement DSN.

Workday compares reported data against the government technical standards for data submission, and raises errors for any exceptions.

See [Steps: Generate DSNs \(FRA\)](#) on page 1647.

4. Create the submission file for the replacement DSN.

See [Steps: Generate and Deposit DSN Submissions \(FRA\)](#) on page 1649.

## Report URSSAF Contribution Adjustments (FRA)

### Prerequisites

Generate a DSN.

Security: These domains in the FRA Payroll functional area:

- *Process: DSN (Run) - FRA*
- *Process: DSN for Pay Group (Run) - FRA*

### Context

You can add URSSAF contribution adjustments directly in a DSN report without having to calculate contribution amounts individually for each worker. You can directly enter contribution amounts to a generated DSN to help manage certain situations. Example: When your company offers a retirement plan where the employer contribution is based on a global amount for the entire company.

## Steps

1. Access the **Find DSN** report.

Select a DSN with 1 of these statuses:

- *In Error*.
- *In Progress*.
- *Ready for Submission*, and not in a real DSN submission.

2. Select **DSN > Maintain Contribution Adjustments** from the related actions of the DSN.

## 3. As you complete the task consider:

| Option                                   | Description                                                                                                                                                                                                                                                                                                                                  |
|------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Only Adjust Total Due Amount</b>      | <p>Select to enter 1 aggregated amount for a period in the <b>Rounded Adjustment Amount</b> field. When clear, you can enter granular adjustment details. Example: Adjustment amounts by INSEE city code.</p> <p>When you enter an adjustment for the total due amount, Workday only adjust the amount reported in DSN block S21.G00.20.</p> |
| <b>Period</b>                            | <p>Select the payroll period for either:</p> <ul style="list-style-type: none"> <li>• The month covered by the DSN.</li> <li>• A previous month.</li> </ul>                                                                                                                                                                                  |
| <b>Type of Personnel/ Base Qualifier</b> | <p>You can add multiple lines for the same type of personnel and period combination. Workday aggregates these values in the DSN blocks and related reports.</p> <p>When you process an adjustment for a personnel type, such as FNAL, Workday creates a new block when there's no existing block for the same dimensions.</p>                |
| <b>Special Rate</b>                      | <p>Enter the rate for types of personnel with a variable rate. Example: Work accident and mobility contributions.</p> <p>When you process an adjustment contribution with a special rate, Workday creates a new block if there isn't an existing block for the same dimensions. Examples: Period, type of personnel, rate.</p>               |
| <b>Rounded Adjustment Base</b>           | Enter an amount rounded to the nearest integer.                                                                                                                                                                                                                                                                                              |
| <b>Rounded Adjustment Amount</b>         | Enter an amount rounded to the nearest integer.                                                                                                                                                                                                                                                                                              |
| <b>INSEE City Code</b>                   | <p>Enter the INSEE city code for adjustments to mobility contributions.</p> <p>When you process the adjustment contribution with a specified INSEE city code, Workday creates a new block if there isn't an existing block for the same dimensions. Examples: Type of personnel, period, city code.</p>                                      |
| <b>Inactive</b>                          | Select to delete previously processed contribution adjustments.                                                                                                                                                                                                                                                                              |

4. Access the **Run DSN Preparation** task to:

- Process contribution adjustments.
- Delete inactive adjustments.

## Result

Workday modifies DSN blocks S21.G00.20 and S21.G00.23. Workday:

- Updates blocks S21.G00.23 when the adjustments apply to existing data.
- Creates a new block S21.G00.23 when the adjustments relate to different reported dimensions.
- Updates only block S21.G00.20 when you only adjust the total due.

## Report a Return from Absence (FRA)

### Prerequisites

- Create an Absence DSN with a status of *Passed*.
- Correct the end date of the time off for sick leave to have an earlier date.
- Security: *Process: DSN (Run)* - FRA domain in the FRA Payroll functional area.

### Context

When a worker returns from an absence (arrêt de travail) earlier than expected, you can create a DSN to report the return from absence.

### Steps

1. Access the **Find DSN** task.
2. From the related actions menu of an Absence DSN, select **DSN > Report a Return from Absence**.  
Workday populates:
  - The DSN options based on the Absence DSN. Examples: **DSN Nature**, **Worker**.
  - The **Absence Event** option with the corrected absence event.
3. Generate the Return from Absence DSN.  
See [Steps: Generate DSNs \(FRA\)](#) on page 1647.

## Result

Workday generates a Return from Absence DSN.

## Override the DSN Version (FRA)

### Prerequisites

- Generate a DSN that has a status of In Progress, In Error, or Ready for Submission.
- Security: *Process: DSN (Run)* - FRA in the FRA Payroll functional area.

### Context

You can override the version of the DSN technical specifications on a DSN before submitting it to net-entreprises.fr. Overriding the DSN version can help you manage DSN submissions during interim periods between 2 versions of technical specifications on net-entreprises.fr.

Examples:

- You can add a 2018 DSN version when reporting a DSN for 2019 before the 2019 technical specifications are in place.
- After the 2019 technical specifications are in place, you can change a DSN version to 2019 when reporting events that took place in 2018.

## Steps

1. Access the **Override DSN Version** task.

2. Enter search criteria to find the DSNs to override.

You can only override the version for DSNs with a current version of 2018 or later.

3. Click **OK**.

4. Select the DSNs you want to modify.

Only DSNs that are eligible for a version override display. You can't override the DSN version for DSNs that are part of a real submission that is in progress.

Ensure that the selected DSN meets DSN requirements for the override version. Example: You can't override a 2019 DSN to 2018, if the DSN has rubric values that aren't valid for 2018.

5. From the **Override Version** prompt select the new DSN version.

6. Access the **Run DSN Preparation** task to update the DSN according to the specifications for the new DSN version.

## Result

Workday reports:

- The new DSN version in DSN rubric S10.G00.00.006.
- The rubrics according to the specifications for the new DSN version.

## Next Steps

To remove previous version overrides, run the **Override DSN Version** task for a DSN, and leave the **Override Version** field empty.

## Reference: DSN Verification Reports (FRA)

You can use several reports to verify DSN results before completing payroll and submitting DSNs. To easily access these reports, consider adding them to the **DSN Command Center** dashboard.

### Example: Extract DSN Submissions to Excel (FRA)

This example illustrates how to create an EIB to extract a manual DSN submission to Excel. You can also set up Workday-generated Excel files with the *DSN Deposit (Machine to Machine)* integration. See [Example: Set Up the DSN Submission Event Business Process \(FRA\)](#).

### Context

You want to extract your monthly DSN submissions to:

- Verify the submission before sending the DSN file to net-entreprises.fr.
- Archive the sent DSNs.

### Prerequisites

- Create a DSN submission.
- Create a custom XSLT attachment transformation named *DSN Excel Transformation - Custom* based on the latest version of the *DSN Excel Transformation.xslt* file. You can download the *DSN Excel Transformation.xslt* from [Workday Community](#).
- Security:
  - *Integrations: EIBs, Integration Event, and Integration Build* domains in the Integration functional area.
  - *Process: DSN (Submission) - FRA* domain in the FRA Payroll functional area.
  - Your tenant must have a definition for the *Integration Process Event* business process including the *Initiation* and *Fire Integration* steps.

### Steps

1. Access the **Create Web Service Data Source** task.
2. Select *Get DSN Data (Web Service)* from the **Web Service Operation** prompt.
3. Click **OK**.
4. From the related actions menu of the data source, select **Web Service Data Source > Edit**.

5. In the **Request XML** field, enter:

```
<wd:Get_DSN_Data_Request xmlns:wd="urn:com.workday/bsvc">
  <wd:Request_References>
    <wd:DSN_Submission_Reference>%DSN Submission Reference%</wd:DSN_Submission_Reference>
  </wd:Request_References>
  <wd:Request_Criteria>
    <wd:Show_DSN_Structure>1</wd:Show_DSN_Structure>
  </wd:Request_Criteria>
</wd:Get_DSN_Data_Request>
```

6. In the **Launch Parameters** grid, enter these values:

| Name                     | Launch Parameter Type                                                                         | Options         |
|--------------------------|-----------------------------------------------------------------------------------------------|-----------------|
| DSN Submission Reference | Select <b>Data Type</b> , and then the self-referencing report field, <i>DSN Submission</i> . | <i>Required</i> |

7. Access the **Create EIB** task and enter these values:

| Option                       | Value                                    |
|------------------------------|------------------------------------------|
| <b>Name</b>                  | DSN Excel Export                         |
| <b>Outbound</b>              | Checked                                  |
| <b>Data Source Type</b>      | <i>Web Service</i>                       |
| <b>Web Service</b>           | <i>Get DSN Data (Web Service)</i>        |
| <b>Transformation Type</b>   | <i>Custom Transformation</i>             |
| <b>Custom Transformation</b> | <i>DSN Excel Transformation - Custom</i> |
| <b>Delivery Method</b>       | <i>Workday Attachment</i>                |

## Result

Workday generates the DSN submission as an XML file, which you can then open in Excel.

[Launch an Integration](#)

## Concept: Contract Setup for DSN Reporting (FRA)

In DSN reporting, the employee contract number is a unique identifier that enables you to track employee compensation from hire to termination. The contract number doesn't change regardless of internal transfers or contract conversions. These examples illustrate how to set up contracts in Workday to support continuity in the DSN reporting.

You can access the **Audit Workers Reported in DSN** report to verify that all workers for a company or establishment have continuous contracts covering an entire period.

**Note:** Workday recommends that you configure **Employee Contract: Generate Contract ID for each New Employment**, localized field in the Staffing area on the **Maintain Localization Settings** task when using DSN reporting. This can help you ensure continuity in DSN reporting, by generating contract IDs

for new contracts. Workday either generates a new contract ID or copies the existing one based on DSN requirements.

#### Example 1: New Hire

You hire an employee on January 20, 2017.

1. Access the **Hire Employee** task, and enter a **Hire Date** of *2017-01-20*.
2. Access the **Add Contract** task, and enter a **Contract Start Date** of *2017-01-20*.

In the DSN, Workday reports:

| Rubric Label            | Reported Information                                   |
|-------------------------|--------------------------------------------------------|
| DSN Contract Start Date | The employee's hire date. Example: <i>2017-01-20</i> . |

#### Example 2: Contract Date Entered in Error

You hired an employee on January 25. In February you recognize that you entered an incorrect hire date of January 20, 2017.

1. From the related actions menu of the *Hire* staffing event, select **Business Process > Correct**.  
Correct the **Hire Date** to *2017-01-25*.
2. From the worker's related actions menu, select **Job Change > Employee Contracts**.
3. Access the business process used to create the employee's contract.

From the related actions menu of the business process, select **Business Process > Correct**.

Change the **Contract Start Date** to *2017-01-25*.

In the February DSN, Workday reports:

| Rubric Label            | Reported Information                                              |
|-------------------------|-------------------------------------------------------------------|
| DSN Contract Start Date | The new hire date. Example: <i>2017-01-25</i> .                   |
| Modification Date       | The beginning of the payroll period. Example: <i>2017-02-01</i> . |

#### Example 3: Convert an Employee's Contract from a Fixed-Term to an Unlimited Contract

An employee has a fixed-term contract starting on 2017-01-01 and ending on 2017-03-31. You convert the employee's contract to an unlimited contract, without terminating the employee.

1. Access the **Change Job** task and change the **Employee Type** to one for unlimited contracts.
2. Edit the employee's contract, and enter an **Effective Date** of *2017-04-01*.

Don't modify the **Contract ID**.

In the April DSN, Workday reports:

| Rubric Label            | Reported Information                                                                                               |
|-------------------------|--------------------------------------------------------------------------------------------------------------------|
| DSN Contract Start Date | The hire date on the employee profile, which is the start date of the fixed-term contract.<br>Example: 2017-01-01. |
| DSN Contract Type       | The DSN contract type value that corresponds to the new employee type. Example: 01 - <i>Unlimited Contract</i> .   |
| Modification Date       | The effective date of the contract change.<br>Example: 2017-04-01.                                                 |

#### Example 4: Rehire a Previously Terminated Employee

An employee has a fixed-term contract that ended in March 2016. You terminated the employee and paid them all termination compensation. In April 2017, you rehire the employee with an unlimited contract.

When you rehire the employee, create a new contract with a different **Contract ID** than the fixed-term contract ID.

### Concept: DSN Manual Entry (FRA)

A DSN manual entry allows you to correct DSN data. Your manual entry value in the DSN replaces the 1 generated with an existing calculation.

Workday recommends that you correct data in either the worker's profile or payroll results if you find an error in the monthly DSN. After the correction, you can run payroll again and then the **Run DSN Preparation** task. If the worker profile or payroll result correction isn't reflected in the DSN, then you can use a manual entry to override the generated DSN block value for most blocks.

You can create a manual entry when a DSN has 1 of these statuses:

- *Error*.
- *In Progress*.
- *Ready For Submission* (if the DSN isn't already included in a real submission).

Workday supports manual entries for all DSN blocks, except:

- S21.G00.00
- S21.G00.01
- S21.G00.02
- S21.G00.13
- S21.G00.23
- S21.G00.82
- S21.G00.90

#### Example 1: Correcting a DSN Error with Manual Entry

Alex prepares a monthly DSN but a new hire, Chris, was sick the first day of their contract, 2024-11-01. When Alex runs the DSN, the sick leave-related rubric S21.G00.60.002 Date du dernier jour travaillé is empty. Alex needs to correct this so the rubric

value reports the hire date as the last day of work before a sick leave.

1. Access **Find DSN** and click the spyglass under DSN.
2. On the **Workers** tab, click **Preview** for Chris's pay result.
3. Select S21.G00.60, and click **Add Manual Entry for S21.G00.60**.
4. Select S21.G00.60.002, and click **Override** to enter 01/11/2024 in the **New** field.
5. Click **OK**.
6. Click **Done**.
7. **Run DSN Preparation** to confirm the changes.

Alex sees the correct value in block 60.

### Example 2: Creating a Child Block with Manual Entry

Pay administrator Alex needs to update a DSN to create a block that reports changes in a worker's contract information. Alex needs to create 2 child blocks, 1 for the contract information and 1 for worker information.

Before adding the child block:

- Run DSN Preparation. See [Steps: Generate DSNs \(FRA\)](#) on page 1647.
- Security: *Process: DSN (Run)* - FRA and *Process: DSN (Submission)* - FRA domains in the FRA Payroll functional area.

1. Access the **View DSN** report.
2. Click **Preview** to access DSN block 40.
3. Click **Add Manual Entry for S21.G00.40**.
4. Click **Create S21.G00.41 - Changements Contrat**.
5. Click **Preview** to access DSN block 30.
6. Click **Add Manual Entry for S21.G00.30**.
7. Click **Create S21.G00.31** to create the block that reports worker information.

Alex sees a new child block in block 40 and a new child block in block 30.

## Concept: Termination Dates for DSN Reporting (FRA)

### Example 1: Termination without Notice Period

On January 22, Global Modern Services terminates Bertrand without notice for serious misconduct.

To report a termination without notice in the DSN, the HR administrator ensures that there's no notice period in Workday.

The HR administrator then enters these dates when completing the **Terminate Employee** task:

- **Termination Date:** January 22
- **Last Day of Work:** January 22
- **Pay Through Date:** January 22

#### Example 2: Termination with Partially Worked Notice Period

Fiona submits her resignation on January 22. Her contract requires a 3-month notice period ending on April 21. Global Modern Services has agreed to let her leave on March 1.

Fiona selects **Job Change > Resign** from the related actions on her worker profile, and enters a **Notification Date** of January 22.

The HR administrator enters these dates when completing the **Terminate Employee** task:

- **Termination Date:** April 21
- **Last Day of Work:** March 1
- **Pay Through Date:** March 1

Workday reports the termination in a DSN in April, with these notice periods:

- Paid and worked notice: January 22 - March 1.
- Unpaid and unworked notice: March 2 - April 21.

#### Example 3: Termination with Unworked Notice Period

Global Modern Services terminates Gabriel on January 22. Gabriel has a 3-month notice period ending on April 21. Due to a noncompete clause, Gabriel continues to receive compensation for 6 months after his termination.

The HR administrator enters these dates when completing the **Terminate Employee** task:

- **Notification Date:** January 22
- **Termination Date:** April 21
- **Last Day of Work:** January 22
- **Pay Through Date:** October 22

Workday reports the termination in a DSN in April with a paid and unworked notice period from January 22 - April 21.

#### Example 4: Termination with Worked Notice Period

When you enable localized fields in the **Maintain Localization Settings** task in the Staffing area for France, Workday displays specific notice period fields.

Beatrice submits her resignation on January 29. Her contract requires a 3-month notice period ending on April 30.

The HR administrator enters these dates when completing the **Terminate Employee** task:

- **Notification Date:** January 29
- **Termination Date:** April 30
- **Notice Period Start Date:** February 1
- **Last Day of Work:** April 30

Workday reports the termination in a DSN in April with a paid and worked notice period from February 1 - April 30.

[Terminate Employees](#)

### Concept: Workers with Previous DSNs from Other Payroll Systems (FRA)

You can use Workday to ensure a coherence in reported worker data between generated DSNs and other DSNs previously submitted to net-entreprises.fr from other payroll systems.

#### Event Order

When a worker has previous event DSNs created by another payroll system, you can define a minimum order number. This ensures that Workday continues to increase the reported order numbers on new event DSNs.

1. Access the **View DSN Rubric Configuration** task.
2. On the row for DSN rubric S20.G00.05.004, click **Maintain**.
3. Complete the **Event DSN Minimum Order Number** field.

#### Temporary Technical Number (NTT)

Workday generates an NTT for workers who don't have an SSN. Workday bases the NTT on the worker's:

- Gender.
- Company SIREN.
- Employee ID number.

Once generated, Workday uses the same NTT for a worker during their entire employment with a company.

When a worker has an existing NTT from another payroll system, you can modify the generated NTT by accessing the **Edit DSN Worker Information** task.

### Reference: DSN Statuses (FRA)

#### DSN Statuses

The DSN status provides information on an individual DSN report for an establishment.

| Status           | Description                                    |
|------------------|------------------------------------------------|
| <i>Cancelled</i> | You canceled the DSN.                          |
| <i>Draft</i>     | You haven't run data verifications on the DSN. |

| Status                      | Description                                                                                                                                                                                                                                                                                                                                                                                                                          |
|-----------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <i>In Error</i>             | Workday found some data exceptions during the <b>Run DSN Preparation</b> task.                                                                                                                                                                                                                                                                                                                                                       |
| <i>In Progress</i>          | <p>The DSN has no exceptions, but the underlying payroll results don't have a status of <i>Complete</i>.</p> <p>The DSN remains <i>In Progress</i> during and after a test submission unless net-entreprises.fr rejects it.</p> <p>If you manually enter details into a DSN with the status <i>Ready for Submission</i>, Workday automatically changes the status to <i>In Progress</i>.</p>                                         |
| <i>Passed</i>               | <p>Net-entreprises.fr accepted and validated the DSN in a real submission.</p> <p>You can't modify the content of the DSN.</p>                                                                                                                                                                                                                                                                                                       |
| <i>Ready for Submission</i> | <p>The DSN has no exceptions, and the underlying payroll results have a status of <i>Complete</i>.</p> <p>The DSN remains <i>Ready for Submission</i> during and after a test submission unless net-entreprises.fr rejects it.</p> <p>You can't modify a DSN with a <i>Ready for Submission</i> status when it's in a real submission.</p>                                                                                           |
| <i>Rejected</i>             | <p>DSN-val or net-entreprises.fr rejected the DSN either in a test or real submission.</p> <p>In the <b>Run DSN Preparation</b> task, you can select the <b>Include DSN with Rejected Status</b> check box so you don't have to manually update the DSN status from <i>Rejected</i> to <i>In Progress</i>.</p> <p>When you use <i>DSN Polling (Machine to Machine)</i>, the DSN is rejected when a CRM 11 returns the status KO.</p> |
| <i>Submitted</i>            | <p>You submitted the DSN to authorities in a real submission.</p> <p>You can no longer modify the DSN in Workday.</p>                                                                                                                                                                                                                                                                                                                |

### DSN Submission Statuses

The DSN submission status provides information on a DSN submission containing 1 or more DSN reports.

| DSN Submission Status | Description                                                                                                                                                                                                                                 |
|-----------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <i>Completed</i>      | <p>Represents one of these situations:</p> <ul style="list-style-type: none"> <li>A DSN in the submission has a status of <i>Rejected</i>.</li> <li>Net-entreprises.fr accepted and validated all of the DSNs in the submission.</li> </ul> |

| DSN Submission Status | Description                                                                                                                                                                                                                                                                          |
|-----------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <i>Draft</i>          | You created the DSN submission but haven't generated the file.                                                                                                                                                                                                                       |
| <i>In Progress</i>    | Represents one of these situations: <ul style="list-style-type: none"> <li>You generated the DSN submission file.</li> <li>DSN-val raised no exceptions for any of the DSNs in the submission file.</li> <li>You submitted the DSN submission file to net-entreprises.fr.</li> </ul> |

### DSN Deposit Statuses

The DSN deposit status provides information on the status of a deposit of DSN submissions on the net-entreprises.fr portal.

| DSN Deposit Status                        | Description                                                                                                                                                      |
|-------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <i>Deposit Rejected</i>                   | The net-entreprises.fr portal failed to receive the deposit. Example: Interrupted connection during the deposit attempt.                                         |
| <i>Invalid File Structure</i>             | The net-entreprises.fr portal received the deposit, but identified the uploaded file as something other than a DSN deposit.                                      |
| <i>Potential Anomalies</i>                | The deposit passed the initial technical verifications, but net-entreprises.fr portal detected potential functional errors.                                      |
| <i>Responses Received</i>                 | The deposit passed the initial technical and functional verifications. Workday recommends that you verify detailed responses from the net-entreprises.fr portal. |
| <i>Technical Verification Errors</i>      | The net-entreprises.fr portal identified errors in the DSN-val data requirements.                                                                                |
| <i>Technical Verification In Progress</i> | The net-entreprises.fr portal accepted the DSN deposit and is verifying the DSN-val data requirements.                                                           |
| <i>Waiting for Response</i>               | The net-entreprises.fr portal successfully received the deposit and is analyzing it.                                                                             |

- [What do I need to do if my establishment changes SIRET?](#)
- [How does Workday report terminations for workers without previous payroll results in Workday?](#)
- [How can I see comptes rendus métiers \(CRMs\)?](#)
- [How does Workday report retro benefit calculations?](#)
- [How does Workday handle DSN reporting with mixed results?](#)
- [How can I find a zip archive of a Workday-generated DSN? Or individual Excel files?](#)

#### How do I delete a DSN?

You can't delete a DSN, but you can change its status to *Cancelled*.

1. Select **DSN > Update Status** from the related actions menu of the DSN.
2. On the **Next Status** prompt, select *Cancelled*.

#### The authorities have rejected my DSN submission file. What do I do next?

When your DSN doesn't meet the specified data requirements, DSN-val or the authorities might reject it.

If the rejection is the result of:

- A manual deposit, see [Manually Deposit DSN Submissions \(FRA\)](#).
- An automatically generated DSN, then the DSN status is set to **Rejected** by the *DSN Polling (Machine-to-Machine)* integration.

To resubmit the corrected DSN file:

1. Access the **Find DSN** task to view a list of generated DSNs.
2. Correct any errors and rerun a pay calculation.
3. Access the **Run DSN Preparation** task, and select the **Include DSN with Rejected Status** check box.
4. Access the **Create DSN Submission** task to generate the DSN submission file.

#### What date does Workday use for data included in DSNs?

In the **Preview Worker** or **Preview Header** report in a DSN, you can view these dates:

- **Effective Date:** The reference date used to retrieve worker, establishment, or event data. Example: For a monthly DSN, Workday reports the business title as of the period end date.
- **DSN Processing Moment:** The DSN generation date.
- **Latest Payroll Calculation:** The date of the payroll calculation results used in the DSN. Workday only displays it when it's different from the **DSN Processing Moment**.

**When can I create a manual entry?**

You can create a manual entry when a DSN has one of these statuses:

- *Error.*
- *In Progress.*
- *Ready For Submission* (if the DSN isn't already included in a real submission).

Workday supports manual entries for all DSN blocks, except:

- S21.G00.00
- S21.G00.01
- S21.G00.02
- S21.G00.13
- S21.G00.23
- S21.G00.82
- S21.G00.90

**How can I edit or inactivate a manual entry?**

1. Access the **Find DSN** task to view a list of generated DSNs.
2. In a DSN, access the **DSN Manual Entries** tab.
3. From the related actions menu of a manual entry, select **Manual Entry for DSN > Edit**.
4. (Optional) To delete the manual entry, select **Inactive**.
5. Click **Run DSN Preparation** for the modification or deletion of the manual entry to take effect.

Example: You create a block 78 with Manual Entry, and then 2 child blocks 79 and 81. When you select the **Inactive** check box for Manual Entry on block 78 and run the **Run DSN Preparation** task, Manual Entry for the child blocks 79 and 81 is inactivated.

**How do I process additional pay for a terminated worker?**

To report the additional pay, cancel and replace the initial termination DSN. Workday automatically includes the additional pay in the next monthly DSN after the additional payment.

**How do I report additional pay when I manage a worker's termination outside of Workday?**

When you manage a worker's termination outside of Workday, you can still report any additional pay in a Monthly DSN:

1. Access the **Find DSN** task to view a list of generated DSNs.
2. From the related actions menu of a DSN, select **DSN > Preview Worker**.
3. In the right pane, navigate to block S21.G00.51.
4. Click **Add Manual Entry for S21.G00.51**.
5. Add the dates of the last subperiod before termination.
6. Click **Run DSN Preparation** for the modification to take effect.

To cancel and replace the initial termination DSN, Workday recommends that you manually provide

the updated Attestation Employeur (AE) on [net-entreprises.fr](https://net-entreprises.fr).

**How do I modify an absence after generating an Absence DSN?**

If you haven't submitted the Absence DSN, cancel the Absence DSN before modifying the absence. You can then create a new Absence DSN. Regenerating the same DSN after modifying an absence can result in the DSN having multiple errors.

If you've already submitted the Absence DSN, you can cancel and replace it. Refer to the DSN technical specifications for guidance on specific cases.

**How do I identify the company bank account used for payments?**

For contributions, income tax withholding, and IJSS subrogation payments, Workday declares the **Default Bank Account** in the **Edit Bank Routing Rule** task.

**How do I verify that the salary tax is reported in the December monthly DSN?**

You can access the **Salary Tax Summary** report to view the salary tax details for each pay period. Workday reports yearly salary tax amounts in the December monthly DSN.

**How do I prepare my monthly and yearly salary tax forms in Workday?**

You can use the **Salary Tax Summary** report when preparing your monthly and yearly salary tax form submissions. The report extracts data only and doesn't output it in a final format. Transform the data to an appropriate form for submission and ensure that your reporting complies with regulations.

**How do I report international transfers?**

Workday identifies and reports workers transferring into or out of a French company. Workday uses the SIREN **Tax ID Type** on the **Tax IDs** tab of the **Edit Company Tax Details** task to determine if a company is French.

| Type of Transfer     | DSN Reporting                                                                                                                                                                                                                                   |
|----------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Transfer to France   | In S21.G00.40.001, Workday reports the worker's transfer date as the contract start date.                                                                                                                                                       |
| Transfer from France | The month of the transfer, Workday reports a termination in block S21.G00.62 of the monthly DSN. For transfers, Workday uses the termination reason <i>998 - Work Contract Transfer to another Establishment without Contract Termination</i> . |

| Type of Transfer | DSN Reporting                               |
|------------------|---------------------------------------------|
|                  | Workday doesn't generate a termination DSN. |

**Does Workday report on-demand additional payments in a DSN?**

When generating a monthly DSN, Workday includes any on-demand additional payments that target the current month in the monthly DSN, and also on-demand, prior period payments not previously reported in a DSN.

**What do I need to do if my establishment changes SIRET?**

To ensure accurate DSN reporting, Workday recommends that you create a new establishment when your establishment's SIRET changes.

You can then move all active workers to the new establishment. This will enable you to accurately report complementary pay to terminated workers from the old establishment.

**How does Workday report terminations for workers without previous payroll results in Workday?**

FCTU reporting typically requires you to report payroll results for the previous and current month in DSN block S21.G00.50. When you have a termination or retro termination in the first month of payroll results, Workday declares:

- The payroll results of the current month only in block S21.G00.50.
- A date 1 month in the future for rubric S21.G00.62.020.

This applies:

- To workers with a contract start date before the first month of payroll results.
- Regardless of whether the worker has a payroll history.

Workday never uses history payroll results in DSN block S21.G00.50.

**How can I see comptes rendus métiers (CRMs)?**

Access the **View DSN Responses (CRM)** report to verify the content of multiple CRMs of the same type. Workday supports reporting of these CRMs: 11, 20, 21, 22, 42 and 44.

**How does Workday report retro benefit calculations?**

For a retro calculation of benefits, Workday reports Cancel for a set of blocks 78, 79, and 81 and generates a Replace set of blocks 78, 79, and 81 with the new values.

When retro differences impact a previous quarter, we report:

- A block 55 for each combination of Benefit Provider/Risk Holder/Benefit Contract/Quarter. If the establishment is the company's headquarters, the block 55 reports the amount to pay. Otherwise, the blocks 55 report an amount equal to 0.

- A block 20 for each combination of Benefit Provider/Risk Holder. If the establishment is the company's headquarters, the blocks 20 report the sum of the blocks 55 for the Benefit Provider/Risk Holder. Otherwise, they report an amount equal to 0.

#### How does Workday handle DSN reporting with mixed results?

DSN reporting can contain mixed results, such as:

- Regular on-cycle and off-cycle payroll results.
- Results from the current period and prior period.
- Workers with different period schedules.
- Workers with different URSSAF contribution adjustments.

In these cases, Workday reports:

- 1 DSN block S21.G00.20 per monthly DSN for DGFIP, and URSSAF.
- 1 DSN block S21.G00.20 per quarter for each benefit provider.
- 1 DSN block S21.G00.22 per period reported in a monthly DSN.
- 1 DSN block S21.G00.23 per CTP and per month.
- 1 DSN block S21.G00.20 per period for AGIRC-ARRCO.

For Pôle Emploi Contributions for expatriates, Workday reports as many blocks S21.G00.20 as periods with a regularization payment.

#### How can I find a file archive of a Workday-generated DSN? Or individual Excel files?

When you use the *DSN Deposit (Machine to Machine)* integration to generate your DSNs, you also have access to a file archive of your DSN.

Access the **View DSN Submission** task. You can download the zip file from the **Status** section.

If Workday generates your DSN with the *DSN Deposit (Machine to Machine)* integration and you select **Generate Excel File**, then you can also view the individual Excel and text files in the **View DSN** task on the **DSN Submissions** tab in the *Excel File* and *DSN File* columns.

## Troubleshooting: DSN Reporting (FRA)

This topic provides strategies for diagnosing and resolving these DSN reporting issues:

- [Corrected data doesn't display in a DSN.](#) on page 1673
- [DSN rubric value is incorrect.](#) on page 1673
- [Manual entry doesn't display in a DSN.](#) on page 1673
- [Can generate monthly DSNs, but not event-based DSNs.](#) on page 1673
- [DSN doesn't report event or change in worker information.](#) on page 1674
- [DSN blocks S21.G00.78, S21.G00.79, and S21.G00.81 are missing benefit plan deductions.](#) on page 1674

**Corrected data doesn't display in a DSN.**

**Cause:** You corrected the worker or company data in Workday, but you haven't rerun the **Run DSN Preparation** task.

**Solution:****Steps**

1. [Calculate On-Cycle Payroll](#) on page 618.
2. Access the **Run DSN Preparation** task.

Security: These domains in the FRA Payroll functional area:

- *Process: DSN (Run) - FRA*
- *Process: DSN (Submission) - FRA*

**DSN rubric value is incorrect.**

**Cause:** You're missing required data for the rubric value, and unable to enter the required data in Workday. Example: After completing payroll. When possible, Workday recommends that you work with your HR or payroll administrator to enter the required data instead of following these steps.

**Solution:****Steps**

Security: These domains in the FRA Payroll functional area:

- *Process: DSN (Run) - FRA*
- *Process: DSN (Submission) - FRA*

1. Access the **Find DSN** task.
2. From the related actions menu of the affected DSN, select **DSN > View Exceptions**.  
Identify the required data for the rubric in the **Description** column.
3. Access the DSN rubric with the exception.  
Click:
  - **Preview** to access rubrics in the body of the DSN.
  - **Preview Header** to access rubrics in the header of the DSN.
4. Click **Add Manual Entry**.
5. Enter a new value for the rubric.
6. Click **Run DSN Preparation** to regenerate your DSN.

**Manual entry doesn't display in a DSN.**

**Cause:** You haven't rerun the **Run DSN Preparation** task after adding or editing the manual entry.

**Solution:** Security: These domains in the FRA Payroll functional area:

- *Process: DSN (Run) - FRA*
- *Process: DSN (Submission) - FRA*

Access the **Run DSN Preparation** task.

**Can generate monthly DSNs, but not event-based DSNs.**

**Cause:** You haven't configured an issuer for all DSN natures.

**Solution:**

**Steps**

Security: *Setup: Payroll (DSN) - FRA* domain in the FRA Payroll functional area.

1. Access the **Edit Establishment FRA Reporting** task for your DSN issuer.
2. Select the missing DSN natures in the **DSN Natures** prompt.

**DSN doesn't report event or change in worker information.**

| Cause                                                                                                                                                                                                                                                                                                                                                              | Solution                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| The event or change occurred before the worker's first payroll results in Workday. For a change in contract or worker information, Workday reports information starting from the worker's first payroll result. A worker's first payroll results for Workday Payroll for France are the first nonhistorical payroll results for a regular run category for France. | <ol style="list-style-type: none"> <li>1. Access the <b>Find DSN</b> task.<br/><br/>From the related actions menu of the affected DSN, select either: <ul style="list-style-type: none"> <li>• <b>DSN &gt; Preview Header</b> to access rubrics in the header of the DSN.</li> <li>• <b>DSN &gt; Preview Worker</b> to access rubrics in the body of the DSN related to a worker.</li> </ul> In the right pane, navigate to block S21.G00.30 or S21.G00.40, and click <b>Create [DSN Block]</b>.<br/><br/>Enter the missing values.<br/><br/>Security: These domains in the FRA Payroll functional area: <ul style="list-style-type: none"> <li>• <i>Process: DSN (Run) - FRA</i></li> <li>• <i>Process: DSN (Submission) - FRA</i></li> </ul> </li> <li>2. <a href="#">Calculate On-Cycle Payroll</a> on page 618.</li> <li>3. ## Statutory Leave and Absence (FRA)

### Steps: Set Up Reclassification Leaves (FRA)

#### Context

Earned income and reclassification allowances are subject to different statutory calculations during these phases of a reclassification leave:

- Notice period.
- Legal period.
- Extension beyond the legal period.

You can set up Workday to:

- Pay the appropriate earnings during each phase of reclassification leave.
- Exempt reclassification allowances paid during the legal period from common law contributions.
- Subject reclassification allowances paid during the legal period to CSG/CRDS on replacement income.
- Subject reclassification allowances to complementary retirement contributions.

## Steps

### 1. Access the **Maintain Leave Families** task.

Add a new row and enter **Reclassification** in the **Leave Family Name** field.

Security: *Set Up: Leave of Absence* domain in the Time Off and Leave functional area.

### 2. [Create Leave Types](#).

Create a leave type for each phase of reclassification leave.

From the **Leave Payment Type** prompt, select *France* and then a payment type associated with reclassification leave:

- *France - FRA\_RC - Reclassification Leave - No Contributions*. Workday doesn't calculate the AGIRC-ARRCO ceiling for leaves based on this leave payment type.
- *France - FRA\_RC\_CONT - Reclassification Leave - With Contributions*. Workday calculates the AGIRC-ARRCO ceiling for leaves based on this leave payment type.
- *France - FRA\_RC\_EX - Reclassification Leave - Extension*
- *France - FRA\_RC\_N - Reclassification Leave - Notice*

### 3. Access the **Maintain Absence Mapping for Payroll France** task.

For **DSN Rubric Code** *S21.G00.65.001*, map your company's leave types to the **DSN Rubric Value** for reclassification leave.

Security: *Set Up: Payroll - FRA* domain in the FRA Payroll functional area.

### 4. Create a separate earning for the payment during each of the reclassification periods. Example:

Payment in lieu of notice, reclassification allowance during the legal period, reclassification allowance during an extended period.

For earnings representing the legal reclassification allowance during the legal period, select *FRA Adds to CSG/CRDS on Replacement Income Taxable Base and Subtracts from Common Law Contributions Taxable Bases* from the **Groups** prompt on the **Non-Effective Dated** tab.

You can use Workday-delivered instance set comparison calculations to determine when a worker is eligible. Example: *Leave Payment Type equals Reclassification Leave – Legal Period – No Contributions*.

See [Steps: Create Earnings](#) on page 222.

### 5. [Set Up Pay Component Eligibility](#) on page 236.

Edit the pay component eligibility on your deductions for contingency fund contributions.

You can use Workday-delivered instance set comparison calculations to determine when a worker is eligible. Example: *Leave Payment Type equals Reclassification Leave – Legal Period – With Contributions*.

## Result

When you process a payroll calculation, Workday:

- Pays the appropriate earning during each reclassification period.
- Unless specified, exempts reclassification allowances for the legal period from common law contributions, and subjects them to CSG/CRDS on replacement income.

## Example

Julie, the payroll administrator creates:

These statutory leave types:

| Statutory Leave Type                  | Associated with Leave Payment Type                                        |
|---------------------------------------|---------------------------------------------------------------------------|
| Reclassification Leave - Legal Period | <i>France - FRA_RC_CONT - Reclassification Leave - With Contributions</i> |
| Reclassification Leave - Extension    | <i>France - FRA_RC_EX - Reclassification Leave - Extension</i>            |

These earnings:

| Earning                                | Calculation                          | Added to Pay Component Groups                                                                                                                                                                                   | Worker Eligibility                                                                          |
|----------------------------------------|--------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------|
| Health Care Contribution (Deduction)   | Based on reclassification allowance. | <i>FRA Statutory ER [FRA]</i>                                                                                                                                                                                   | <i>Leave Payment Type equals Reclassification Leave – Legal Period – With Contributions</i> |
| Reclassification allowance - Legal     | 65% of the base salary               | <i>FRA Adds to Gross [FRA]</i><br><i>FRA Adds to CSG/CRDS on Replacement Income Taxable Base and Subtracts from Common Law Contributions Taxable Bases</i><br><i>FRA Adds to AGIRC-ARRCO Taxable Base [FRA]</i> | <i>Leave Payment Type equals Reclassification leave - Legal period - With Contributions</i> |
| Reclassification allowance - extension | 80% of the base salary               | <i>FRA Adds to Gross [FRA]</i>                                                                                                                                                                                  | <i>Leave Payment Type equals Reclassification leave - Extension</i>                         |

### Next Steps

Set up the run category to process earnings for workers on a reclassification leave.

Place workers on leave with the appropriate leave type when they are on reclassification leave.

### Related Information

#### Tasks

[Place Workers on Leave](#)

## Example: Configure Reclassification Leaves for the Notice Period (FRA)

This example illustrates how to create a leave type and earning for the notice period of a reclassification period.

### Context

You want to manage payroll for workers on reclassification leave. You work with your absence administrator to create a leave type for the notice period of a reclassification leave. During the notice period, your workers continue to receive their normal salary.

### Prerequisites

Create a leave family called *Reclassification*.

Create a calculation that returns the value of the notice indemnity for the reclassification notice period, called *Reclassification Notice Indemnity*.

Security:

- *Set Up: Leave of Absence* domain in the Time Off and Leave functional area.
- *Set Up: Payroll Calculations (Payroll - Specific)* domain in the Core Payroll functional area.

## Steps

1. Access the **Create Leave Type** task.

Enter these values on the **Details** tab:

| Option                         | Description                                                                                |
|--------------------------------|--------------------------------------------------------------------------------------------|
| <b>Leave Type</b>              | Reclassification - Notice Period                                                           |
| <b>Leave Family</b>            | <i>Reclassification</i>                                                                    |
| <b>Leave Payment type</b>      | Select <i>France</i> and then <i>France - FRA_RC_N - Reclassification Leave - Notice</i> . |
| <b>Enabled for Worker Type</b> | <i>Employee</i>                                                                            |

In the **Leave Impacts** section, leave the **Payroll Effect** check box clear.

2. Enter these values on the **Balance/Leave Taken** tab:

| Option                 | Description     |
|------------------------|-----------------|
| <b>Unit of Time</b>    | <i>Days</i>     |
| <b>Days to Include</b> | <i>All Days</i> |

3. Click **OK**.

## Result

You can now place workers on leave for the notice period of a reclassification leave. Workers on this type of leave continue to receive their standard pay.

## Next Steps

In the **Maintain Absence Mapping for Payroll France** task, map the leave type to the absence value 625 - *Reclassification* to declare the reclassification leave in DSN reporting.

## Related Information

### Tasks

[Steps: Set Up Leave of Absence](#)

[Steps: Set Up DSN Reporting \(FRA\)](#) on page 1613

## Example: Configure Reclassification Leaves with Contributions (FRA)

This example illustrates how to create a leave type and reclassification earning subject to contributions.

## Context

You want to manage payroll for workers during the legal period of a reclassification leave. During the legal period, your workers receive a reclassification allowance instead of their standard pay. The workers' reclassification allowances are:

- Exempt from social security contributions.
- Subject to the CSG/CRDS on replacement income.
- Subject to complementary retirement and health care contributions.

## Prerequisites

Create a leave family called *Reclassification*.

Create a calculation that returns the value of the reclassification allowance, called *Reclassification Allowance*.

Configure your run category for workers on leave.

Security:

- *Set Up: Leave of Absence* domain in the Time Off and Leave functional area.
- *Set Up: Payroll Calculations (Payroll - Specific)* domain in the Core Payroll functional area.
- *Set Up: Payroll - Pay Group Specific* domain in the Core Payroll functional area.

## Steps

1. Access the **Create Leave Type** task.

Enter these values:

| Option                         | Description                                                                                          |
|--------------------------------|------------------------------------------------------------------------------------------------------|
| <b>Leave Type</b>              | Reclassification - Legal Period - Contributions                                                      |
| <b>Leave Family</b>            | <i>Reclassification</i>                                                                              |
| <b>Leave Payment type</b>      | Select <i>France</i> and then <i>France - FRA_RC_CONT - Reclassification Leave - Contributions</i> . |
| <b>Enabled for Worker Type</b> | <i>Employee</i>                                                                                      |

In the **Leave Impacts** section, select the **Payroll Effect** check box.

2. Access the **Create Earning** task.

Enter these values:

| Option                    | Description                                                                            |
|---------------------------|----------------------------------------------------------------------------------------|
| <b>Name</b>               | Reclassification Allowance - No Contributions                                          |
| <b>Code</b>               | Reclass_Legal_No_Cont                                                                  |
| <b>Effective Date</b>     | Enter today's date.                                                                    |
| <b>Worker Eligibility</b> | <i>Leave Payment Type equals Reclassification Leave - Legal Period - Contributions</i> |
| <b>Calculation</b>        | <i>Reclassification Allowance</i>                                                      |

On the **Non-effective dated** tab, select these pay component groups from the **Groups** prompt:

- *FRA Adds to AGIRC-ARRCO Taxable Base [FRA]*
- *FRA Adds to CSG/CRDS on Replacement Income Taxable Base and Subtracts from Common Law Contributions Taxable Base [FRA]*
- *FRA Adds to Gross [FRA]*
- *FRA CSG/CRDS Reduction Calculation Activation [FRA]*

Select any custom pay component groups related to health insurance and supplementary retirement insurance.

3. Access the **Edit Run Category** task for your run category.

On the **Nonactive (On Cycle, On Demand Replacement)** tab, add this row:

| Pay Component to Calculate                           | Status          | Leave Types                                            |
|------------------------------------------------------|-----------------|--------------------------------------------------------|
| <i>Reclassification Allowance - No Contributions</i> | <i>On Leave</i> | <i>Reclassification - Legal Period - Contributions</i> |

4. Click **OK**.

### Result

You can now place workers on leave for the legal period of a reclassification leave. Workers on this type of leave receive a reclassification allowance instead of their regular pay. The reclassification allowance is subject to complementary retirement and health contributions.

### Next Steps

In the **Maintain Absence Mapping for Payroll France** task, map the new leave type to the absence value 625 - *Reclassification* to declare the reclassification leave in DSN reporting.

#### Examples

[Example: Set Up Pay Run Category for Workers on Leave \(FRA\)](#) on page 144

## Example: Configure Reclassification Leaves without Contributions (FRA)

This example illustrates how to create a leave type and earning for the legal period that exceeds the notice period of a reclassification leave.

### Context

You want to manage payroll for workers during the legal period of a reclassification leave. During the legal period, your workers receive a reclassification allowance instead of their standard pay. The workers' reclassification allowances are only subject to the CSG/CRDS on replacement income.

### Prerequisites

Create a leave family called *Reclassification*.

Create a calculation that returns the value of the reclassification allowance, called *Reclassification Allowance*.

Configure your run category for workers on leave.

Security:

- *Set Up: Leave of Absence* domain in the Time Off and Leave functional area.
- *Set Up: Payroll Calculations (Payroll - Specific)* domain in the Core Payroll functional area.
- *Set Up: Payroll - Pay Group Specific* domain in the Core Payroll functional area.

## Steps

1. Access the **Create Leave Type** task.

Enter these values:

| Option                         | Description                                                                                        |
|--------------------------------|----------------------------------------------------------------------------------------------------|
| <b>Leave Type</b>              | Reclassification - Legal Period - No Contributions                                                 |
| <b>Leave Family</b>            | <i>Reclassification</i>                                                                            |
| <b>Leave Payment type</b>      | Select <i>France</i> and then <i>France - FRA_RC - Reclassification Leave - No Contributions</i> . |
| <b>Enabled for Worker Type</b> | <i>Employee</i>                                                                                    |

In the **Leave Impacts** section, select the **Payroll Effect** check box.

2. Enter these values on the **Balance/Leave Taken** tab:

| Option                 | Description     |
|------------------------|-----------------|
| <b>Unit of Time</b>    | <i>Days</i>     |
| <b>Days to Include</b> | <i>All Days</i> |

3. Click **OK**.

4. Access the **Create Earning** task.

Enter these values:

| Option                    | Description                                                                               |
|---------------------------|-------------------------------------------------------------------------------------------|
| <b>Name</b>               | Reclassification Allowance - No Contributions                                             |
| <b>Code</b>               | Reclass_Legal_Cont                                                                        |
| <b>Effective Date</b>     | Enter today's date.                                                                       |
| <b>Worker Eligibility</b> | <i>Leave Payment Type equals Reclassification Leave - Legal Period - No Contributions</i> |
| <b>Calculation</b>        | <i>Reclassification Allowance</i>                                                         |

On the **Non-effective dated** tab, select these pay component groups from the **Groups** prompt:

- *FRA Adds to CSG/CRDS on Replacement Income Taxable Base and Subtracts from Common Law Contributions Taxable Base [FRA]*
- *FRA Adds to Gross [FRA]*
- *FRA CSG/CRDS Reduction Calculation Activation [FRA]*

5. Access the **Edit Run Category** task for your run category.

On the **Nonactive (On Cycle, On Demand Replacement)** tab, add this row:

| Pay Component to Calculate                           | Status          | Leave Types                                               |
|------------------------------------------------------|-----------------|-----------------------------------------------------------|
| <i>Reclassification Allowance - No Contributions</i> | <i>On Leave</i> | <i>Reclassification - Legal Period - No Contributions</i> |

6. Click **OK**.

## Result

You can now place workers on leave for the legal period of a reclassification leave. Workers on this type of leave receive a reclassification allowance instead of their regular pay. The reclassification allowance is only subject to the CSG/CRDS on replacement income.

## Next Steps

In the **Maintain Absence Mapping for Payroll France** task, map the new leave type to the absence value 625 - *Reclassification* to declare the reclassification leave in DSN reporting.

## Example: Configure Reclassification Leaves for an Extended Period (FRA)

This example illustrates how to create a leave type and reclassification allowance for the period that exceeds the legal duration of a reclassification leave.

### Context

You want to manage payroll for workers on an extended reclassification leave. Your workers receive a reclassification allowance instead of their regular pay. The reclassification allowance during this period is subject to all contributions.

### Prerequisites

Create a leave family called *Reclassification*.

Create a calculation that returns the value of the reclassification allowance, called *Reclassification Allowance Extension*.

Configure your run category for active workers.

Security:

- *Set Up: Leave of Absence* domain in the Time Off and Leave functional area.
- *Set Up: Payroll Calculations (Payroll - Specific)* domain in the Core Payroll functional area.
- *Set Up: Payroll - Pay Group Specific* domain in the Core Payroll functional area.

### Steps

1. Access the **Create Leave Type** task.

Enter these values:

| Option                         | Description                                                                                    |
|--------------------------------|------------------------------------------------------------------------------------------------|
| <b>Leave Type</b>              | Reclassification - Extension                                                                   |
| <b>Leave Family</b>            | <i>Reclassification</i>                                                                        |
| <b>Leave Payment type</b>      | Select <i>France</i> and then <i>France - FRA_RC_EX - Reclassification Leave - Extension</i> . |
| <b>Enabled for Worker Type</b> | <i>Employee</i>                                                                                |

In the **Leave Impacts** section, leave the **Payroll Effect** check box clear.

2. Enter these values on the **Balance/Leave Taken** tab:

| Option                 | Description     |
|------------------------|-----------------|
| <b>Unit of Time</b>    | <i>Days</i>     |
| <b>Days to Include</b> | <i>All Days</i> |

3. Click **OK**.

4. Access the **Create Earning** task.

Enter these values:

| Option                    | Description                                                         |
|---------------------------|---------------------------------------------------------------------|
| <b>Name</b>               | Reclassification Allowance - Extension                              |
| <b>Effective Date</b>     | Enter today's date.                                                 |
| <b>Worker Eligibility</b> | <i>Leave Payment Type equals Reclassification Leave - Extension</i> |
| <b>Calculation</b>        | <i>Reclassification Allowance Extension</i>                         |

On the **Non-effective dated** tab, select *FRA Adds to Gross [FRA]* from the **Groups** prompt.

5. Click **OK**.

6. Access the **Edit Run Category** task for your run category.

On the **General** tab, select *Reclassification Allowance - Extension* from the **Additional Pay Components to Calculate** prompt.

7. Click **OK**.

8. Access the **Edit Earning** task for the earning for a worker's salary.

From the **Worker Eligibility** prompt, select **Create > Create Instance Set Comparison Calculation**.

9. Enter these values:

| Option          | Description                            |
|-----------------|----------------------------------------|
| <b>Name</b>     | Not on extended reclassification leave |
| <b>Category</b> | <i>Payroll</i>                         |

10. Add this row to the **Calculation** grid:

| Source Field                                                    | Relational Operator                            | Target Instance                                                |
|-----------------------------------------------------------------|------------------------------------------------|----------------------------------------------------------------|
| <i>FRA Worker: Leave Payment Type as of Sub-Period End Date</i> | <i>NOT exact match with the selection list</i> | <i>France - FRA_RC_EX - Reclassification Leave - Extension</i> |

11. Click **OK** and then **OK**.

## Result

You can now place workers on leave for the extended period of a reclassification leave. Workers on this type of leave remain active, but receive a reclassification allowance instead of their regular pay.

## Next Steps

In the **Maintain Absence Mapping for Payroll France** task, map the new leave type to the absence value 625 - *Reclassification* to declare the reclassification leave in DSN reporting.

[Example: Set Up Pay Run Category for Active and Terminated Workers \(FRA\)](#) on page 136

## IJSS Payments and Reporting (FRA)

### Steps: Set Up IJSS Payments (FRA)

#### Prerequisites

Configure earnings and deductions. See [Steps: Create Earnings](#) on page 222 and [Steps: Create Deductions](#).

#### Context

You can configure Workday to manage payments for Indemnités Journalières de Sécurité Sociale (IJSS). You can configure Workday to manage:

- Which earnings and deductions to include when calculating income tax withholding.
- Gross IJSS calculation based on input net amounts.
- Payment and DSN reporting of employer subrogation.

#### Steps

1. [Gross Up IJSS Payments \(FRA\)](#) on page 1684.
2. (Optional) Configure employer subrogation of IJSS payments.  
See [Example: Manage Employer Subrogation for IJSS Payments \(FRA\)](#) on page 1687.
3. (Optional) For companies with employer subrogation, configure DSN reporting.  
See [Example: Report Employer Subrogation in a DSN \(FRA\)](#) on page 1688.
4. Create an earning for IJSS payments that you don't include in a gross-up earning. Example: The portion of an IJSS payment that exceeds a worker's normal net pay.  
Add the earning to the *FRA Adds to IJSS Amount Fully Taxable [FRA]* pay component group.  
See [Steps: Create Earnings](#) on page 222.

### Gross Up IJSS Payments (FRA)

#### Prerequisites

Security: *Worker Data: Payroll (Payroll Input)* domain in the Core Payroll functional area.

#### Context

When workers receive Indemnités Journalières de Sécurité Sociale (IJSS), you can configure Workday to reduce their gross salary so that they don't earn more than their standard pay. Based on pay inputs for net IJSS amounts, Workday calculates a gross IJSS amount that accounts for any applicable contributions.

When a worker directly receives IJSS payments from Social Security (employer subrogation), Workday deducts the gross up IJSS amount from the worker's gross pay.

When an employer receives IJSS payments from Social Security on behalf of the worker, Workday:

- Deducts the IJSS gross up amount from the worker's gross pay.
- Pays an IJSS net earning to the worker's net salary.

#### Steps

1. Access the **Add Payroll Input by Worker** task.
2. In the **Processing Defaults** section, select:
  - **One-time**
  - **Override**
  - **Regular Run Category**

3. As you complete the **Input** grid, consider:

| Option                      | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
|-----------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Pay Component</b>        | <p>To calculate the worker's final net salary as the usual net salary, reduced by applicable CSG/CRDS contributions, select 1 of these pay components:</p> <ul style="list-style-type: none"> <li>• <i>IJSS Gross Additional Maternity Leave [FRA]</i></li> <li>• <i>IJSS Gross Commuting Accident [FRA]</i></li> <li>• <i>IJSS Gross Maternity [FRA]</i></li> <li>• <i>IJSS Gross Paternity Leave [FRA]</i></li> <li>• <i>IJSS Gross Sickness [FRA]</i></li> <li>• <i>IJSS Gross Work Accident [FRA]</i></li> </ul> <p>To calculate the worker's final net salary as the usual net salary, select 1 of these pay components:</p> <ul style="list-style-type: none"> <li>• <i>IJSS Gross Additional Maternity Leave With No CSG Impact on Net [FRA]</i></li> <li>• <i>IJSS Gross Commuting Accident with No CSG Impact on Net [FRA]</i></li> <li>• <i>IJSS Gross Maternity With No CSG Impact on Net [FRA]</i></li> <li>• <i>IJSS Gross Paternity Leave With No CSG Impact on Net [FRA]</i></li> <li>• <i>IJSS Gross Sickness With No CSG Impact on Net [FRA]</i></li> <li>• <i>IJSS Gross Work Accident With No CSG Impact on Net [FRA]</i></li> </ul> |
| <b>Input Details - Type</b> | <p>Select:</p> <ul style="list-style-type: none"> <li>• <i>Net Amount Without Subrogation</i> to indicate that workers directly receive IJSS payments from the Social Security organization.</li> <li>• <i>Net Amount With Subrogation Taxable</i> to indicate that employer subrogation applies.</li> <li>• <i>Net Amount With Subrogation non Taxable</i> to indicate that employer subrogation applies, and the IJSS amount isn't subject to taxes. For IJSS Gross Sickness pay components only.</li> </ul> <p>Don't use the <i>Amount</i> input detail type.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

**Result**

Workday calculates these pay components:

- *IJSS Gross [FRA]* or *IJSS Gross With No CSG Impact on Net [FRA]* to calculate the gross amount to deduct from a worker's salary based.
- *IJSS Net [FRA]* to calculate the net amount based on the net pay input.

**Example: Manage Multiple IJSS Payments (FRA)**

This example illustrates how to:

- Calculate contributions and taxes on multiple Indemnités Journalières de Sécurité Sociale (IJSS) net payments.
- Distinguish between IJSS payments for different types of leaves associated with Social Security benefits.

### Context

In July, Fiona, an employee of Global Modern Services is on sick leave for 1 week, followed by maternity leave. She receives these IJSS payments directly from Social Security:

- 100 EUR for 2 days the first week.
- 1700 EUR for the rest of the month.

Global Modern Services maintains Fiona's net salary, minus CSG and CRDS taxes, during her sick leave and maternity leave. You need to calculate a gross IJSS amount and deduct it from Fiona's pay.

### Prerequisites

Set up:

- A time off and deduction for sick leave, called Time Off - Sickness.
- A time off and deduction for maternity leave, called Time Off - Maternity.
- An earning, called Maintain Salary - Sickness, to maintain salaries for eligible workers during sick leave.
- An earning, called Maintain Salary - Maternity, to maintain salaries for eligible workers during maternity leave.

Add your company's contributions to the *FRA Adds to Gross-Up Calculation [FRA]* pay component group if they both:

- Impact the net salary.
- Aren't already included in a pay component group for employee statutory taxes, employer contingency contributions, or contributions for health and contingency funds.

Security: *Worker Data: Payroll (Payroll Input)* domain in the Core Payroll functional area.

### Steps

1. Access the **Add Payroll Input by Worker** task.
2. Enter these settings:

| Option     | Setting |
|------------|---------|
| Worker     | Fiona   |
| Start Date | July 1  |
| End Date   | July 31 |

3. In the **Processing Defaults** section select:

- **One-time**
- **Override**
- **Regular Run Category**

4. Add these rows to the **Input** grid:

| Pay Component                    | Input Details - Type                          | Input Details - Value |
|----------------------------------|-----------------------------------------------|-----------------------|
| <i>IJSS Gross Sickness [FRA]</i> | <i>Net Amount Without Subrogation Taxable</i> | 100                   |

| Pay Component              | Input Details - Type                   | Input Details - Value |
|----------------------------|----------------------------------------|-----------------------|
| IJSS Gross Maternity [FRA] | Net Amount Without Subrogation Taxable | 1700                  |

Don't enter a value for the *Amount Input Detail Type*.

### Result

When you run payroll calculations for July, Fiona has these results on the **Summary** tab of her pay results:

| Pay Component               | Amount (EUR) |
|-----------------------------|--------------|
| <b>Gross</b>                |              |
| Base salary                 | 4000         |
| Time Off - Sickness         | (1000)       |
| Time Off - Maternity        | (3000)       |
| Maintain Salary - Sickness  | 1000         |
| Maintain Salary - Maternity | 3000         |
| IJSS Gross                  | (2460.40)    |

Workday calculates a gross IJSS based on the sum of Fiona's maternity and sick leave IJSS payments.

### Next Steps

You can view the gross IJSS amounts for each IJSS payment on the **Gross to Net** tab in Fiona's pay results. View the **Related Values** for the *Memo-Reference Values for IJSS* deduction. Workday calculates the gross amount for each IJSS payment, by distributing the global gross IJSS amount pro rata the net amount of each payment.

### Example: Manage Employer Subrogation for IJSS Payments (FRA)

This example illustrates how to:

- Calculate contributions and taxes for Indemnités Journalières de Sécurité Sociale (IJSS) net payments.
- Manage employer subrogation of IJSS payments.

### Context

Yannick has 1 week of sick leave beginning July 15th. He's entitled to a net IJSS payment of 100 EUR for 2 of the days of his sick leave. For eligible workers on sick leave, Global Modern Services:

- Maintains worker salaries, minus CSG and CRDS tax amounts.
- Receives IJSS payments from Social Security on behalf of the worker.

You need to:

- Pay Yannick the net IJSS amount from Social Security as part of his post-taxable salary.
- Calculate a gross IJSS amount, and deduct it from Yannick's gross pay.

### Prerequisites

Set up:

- A time off and deduction for sick leave, called Time Off - Sickness.
- An earning called Maintain Salary - Sickness, to maintain salaries for eligible workers during sick leave.
- DSN reporting for employer subrogation.

Add your company's contributions to the *FRA Adds to Gross-Up Calculation [FRA]* pay component group if they both:

- Impact the net salary.
- Aren't already included in a pay component group for employee statutory taxes, employer contingency contributions, or contributions for health and contingency funds.

Security: *Worker Data: Payroll (Payroll Input)* domain in the Core Payroll functional area.

### Steps

1. Access the **Add Payroll Input by Worker** task.
2. Enter these settings:

| Option               | Setting                    |
|----------------------|----------------------------|
| <b>Worker</b>        | <i>Yannick</i>             |
| <b>Start Date</b>    | <i>July 1</i>              |
| <b>End Date</b>      | <i>July 31</i>             |
| <b>Pay Component</b> | <i>IJSS Gross Sickness</i> |

3. In the **Processing Defaults** section select:
  - **One-time**
  - **Override**
  - **Regular Run Category**
4. Add a row to the **Input** grid, with these **Input Details**:

| Type                                       | Value |
|--------------------------------------------|-------|
| <i>Net Amount With Subrogation Taxable</i> | 100   |

Don't enter a value for the *Amount Input Detail Type*.

### Result

When you run the July pay calculation, Yannick has these results:

| Pay Component                     | Amount (EUR) |
|-----------------------------------|--------------|
| <b>Gross</b>                      |              |
| <i>Base salary</i>                | 4000         |
| <i>Time Off - Sickness</i>        | (200)        |
| <i>Maintain Salary - Sickness</i> | 200          |
| <i>IJSS Gross</i>                 | (134.57)     |
| <b>Post Taxable Net</b>           |              |
| <i>IJSS Net</i>                   | 100          |

### Example: Report Employer Subrogation in a DSN (FRA)

This example illustrates how to report subrogation in DSN for absences or return from absences.

## Context

Yannick has 1 week of sick leave beginning July 15. He has a 3-day waiting period before receiving any IJSS payments.

You have already set up employer subrogation for the IJSS payments. You need to:

- Declare Yannick's sick leave in a DSN for absences.
- Declare the dates during which the employer subrogation applies.

## Prerequisites

- Set up 2 time offs for sick leave: Time Off - Sickness, and Time Off - Sickness Waiting Period.
- In the Time Off - Sickness time off plan:
  - Create accruals for the number of days workers are eligible to have their salaries maintained.
  - Select *All Days* in the **Days to Include in Time Off Requests** field.
- Create an absence table that contains tiers for the Time Off - Sickness and Time Off - Sickness Waiting Period time offs and time off plans.
- Create deductions for each of the time offs named Sickness Deduction and Sickness Waiting Period Deduction.
- Security: *Set Up Payroll - FRA* and *Set Up: Payroll (Calculations - Payroll Specific)* domains in the FRA Payroll functional area.

## Steps

1. Access the **S21.G00.60.001** tab on the **Maintain Absence Mapping for Payroll France** task.  
Access the S21.G00.60.001 tab.
2. In the row where **DSN Rubric Value** is *01 - Sickness*, enter these values:
  - *Time Off - Sickness*
  - *Time Off - Sickness Waiting Period*
3. Access the **Edit Establishment FRA Reporting** task for Global Modern Services.  
In the **Subrogation Option** section on the **DSN Options** tab, select **Apply Social Security Allowance Subrogation**.
4. Access the **Edit Deduction** task for the *Sickness Waiting Period Deduction* deduction.  
On the **Effective Dated** tab, add this row to the **Related Calculations** grid:

| Related Calculation                                        | Groups                        |
|------------------------------------------------------------|-------------------------------|
| <i>Time Off - Sickness Waiting Period - Time Off Total</i> | <i>FRA DSN Waiting Period</i> |

## Result

Before his sick leave, the Time Off - Sickness plan balance for Yannick is 30 days.

Workday creates a DSN for Yannick's absence when you both:

- Add Yannick's time off using the sick leave absence table.
- Run the **Run DSN Preparation** task.

In the DSN, Workday reports these subrogation dates:

- Subrogation Start Date: July 18
- Subrogation End Date: August 13

Workday also reports the details of the company bank account that receives the IJSS payments, according to defined bank routing rules.

## Next Steps

Add payroll input to set up the impact of IJSS payments on the worker's salary.

## BPIJ Management (FRA)

### Steps: Set Up BPIJ (Machine to Machine) Integration (FRA)

#### Prerequisites

Security: These domains in the Integration functional area:

- *Integration Build*
- *Integration Configure*

#### Context

You can automatically import Bordereau de Paiement pour le versement des Indemnités Journalières (BPIJ) into Workday, simplifying your data input, payroll, and reporting. Workday enables machine-to-machine search and retrieval of existing BPIJ to streamline your payroll processes. Automatic BPIJ retrieval requires prior planning.

Workday recommends you plan a job and integration per DSN Issuer.

#### Steps

1. [Create Security Domains \(FRA\)](#) on page 1515.
2. Access the **Create Integration System** task.
  - a) Enter a unique **System Name**.
  - b) From the **Template, New using Template** field, select **BPIJ Search and Download**.  
Details of the integration appear on the **View Integration System** report.
3. Access the **Launch / Schedule Integration** task.
  - a) From **Integration**, select the name of your BPIJ integration system.
  - b) From **Run Frequency**, select a frequency for Workday to contact the net.entreprises.fr portal searching for BPIJ.
  - c) As you complete the task, consider:

| Option              | Description                                                                                     |
|---------------------|-------------------------------------------------------------------------------------------------|
| SIRET               | Enter the SIRET number for the person with the net.entreprises.fr credentials.                  |
| Password            | Enter the net.entreprises.fr password.                                                          |
| Authentication Only | Select this check box for troubleshooting purposes only.                                        |
| Verbose Mode        | Select this check box for troubleshooting purposes only. Otherwise, the task is time consuming. |
| DSN Issuer          | Select your establishment.                                                                      |

- d) In the **Schedule** tab, consider:

| Option              | Description                            |
|---------------------|----------------------------------------|
| Priority            | Select <i>Normal</i> .                 |
| Recurrence Interval | Select an interval to search for BPIJ. |

| Option            | Description                                                                                                                                                     |
|-------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                   | Workday recommends selecting <i>Every 3 hours</i> for performance.                                                                                              |
| Start Time        | Enter a start time.<br><br>Workday recommends you set a start time with at least a 1-hour difference from the start time set on the <b>BPIJ Scheduler</b> task. |
| Time Zone         | Select <i>GMT+01:00 Central European Time (Paris)</i> .                                                                                                         |
| Catch Up Behavior | Select <i>None</i> .                                                                                                                                            |
| Start Date        | Enter the recurrence start date. This must be after the current date.                                                                                           |

4. [Create BPIJ Schedules \(FRA\)](#) on page 1691.

### Next Steps

View the **List BPIJ by Worker** report to confirm payroll accuracy.

### Related Information

#### Tasks

[Create Integration System](#)

#### Reference

[2023R1 What's New Post: Bordereau de Paiement pour le versement des Indemnités Journalières \(BPIJ\)](#)

#### Examples

[Example: Report Employer Subrogation in a DSN \(FRA\)](#) on page 1688

### Create BPIJ Schedules (FRA)

#### Prerequisites

Security: These domains in the Integration functional area:

- *Integration Build*
- *Integration Configure*

#### Context

Workday enables you to automatically import BPIJ based on a schedule you set. You need access to the net-entreprises.fr portal account for your establishment.

To set up automatic retrieval of BPIJ, you need to create schedules in the **BPIJ Scheduler** and **Launch / Schedule Integration** tasks. When you set up the run frequency for 1 task, the starting time for the other task must have at least a 1-hour difference.

Example: Set the **BPIJ Scheduler** task to start at 12:00 and **Launch / Schedule Integration** for BPIJ to start at 13:00.

### Steps

1. Access the **BPIJ Scheduler** task.
2. As you complete the **BPIJ Criteria** tab, consider:

| Option     | Description               |
|------------|---------------------------|
| DSN Issuer | Select the establishment. |

| Option                           | Description                                                                                                                                                          |
|----------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>BPIJ Retrieval Start Date</b> | Set the date that BPIJ machine to machine will retrieve past BPIJ from the net-entreprises.fr portal.<br><br>Select a date earlier than 90 days before today's date. |

3. As you complete the **Schedule** tab, consider:

| Option                     | Description                                                                                                                                                                    |
|----------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Recurrence Interval</b> | Select the frequency to contact net.entreprises.fr.<br><br>Workday recommends selecting <i>Every 3 hours</i> for performance.                                                  |
| <b>Start Time</b>          | Enter a start time.<br><br>Workday recommends you set a start time with at least a 1-hour difference from the start time set on the <b>Launch / Schedule Integration</b> task. |
| <b>Time Zone</b>           | Select <i>GMT+01:00 Central European Time (Paris)</i> .                                                                                                                        |
| <b>Catch Up Behavior</b>   | Select <i>None</i> .                                                                                                                                                           |
| <b>Start Date</b>          | Enter the recurrence start date. This must be after the current date.                                                                                                          |

### Concept: BPIJ Reporting (FRA)

Workday provides reports to help you view BPIJ results and to help you troubleshoot the integration.

#### List BPIJ by Worker

You can use Workday BPIJ reporting as a reference to view the amounts each employee is paid from IJSS.

Workday enables you to extract information in the **List BPIJ by Worker** report. It is useful for control purposes, in particular for the accounting department and monitoring of IJSS payments by CPAM.

The **List BPIJ by Worker** report includes the:

- IJSS Net amount
- Number of IJ paid
- Payment date
- Per unit amount
- Personnel number

To view results directly related to IJSS Net, select the **Display only IJ** check box.

#### Find BPIJ Requests

You can use the **Find BPIJ Requests** report if you encounter a problem with the integration. You can change the status and reschedule the BPIJ retrieval process with this report.

From the **Search Request** related actions menu, select **Update Status**. Move the **Next Status** to **In Progress**. Workday restarts the BPIJ retrieval.

## Part-Time Therapeutic Leave in DSNs (FRA)

### Steps: Report Part-Time Therapeutic Leave in DSNs (FRA)

#### Context

You can set up Workday to declare part-time therapeutic leaves in DSN reporting.

#### Steps

1. [Create a Leave Type for Therapeutic Part Time \(FRA\)](#) on page 1694.
2. [Create a Time Off for Therapeutic Part Time \(FRA\)](#) on page 1695.
3. Create a deduction that represents the reduction in salary due to time off for part-time therapeutic leave.

On the **Non-Effective Dated** tab, from the **Groups** prompt, select *FRA DSN - Therapeutic Part Time Salary Loss [FRA]* as one of the pay component groups.

As you complete the **Related Calculations** grid on the **Effective Dated** tab, consider:

| Field                       | Description                                                                                                                                                                                                                                                                                                 |
|-----------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Related Calculation</b>  | To report the compensation loss in DSN block S21.G00.66, select one of these values: <ul style="list-style-type: none"> <li>• <i>FRA Days</i></li> <li>• <i>FRA Hours</i></li> </ul> If you select another calculation, select <i>FRA Payslip - Displayed Time Off Dates</i> from the <b>Groups</b> prompt. |
| <b>Override Calculation</b> | Select the absence component related calculation for the part-time therapeutic time off.                                                                                                                                                                                                                    |

4. Update your existing deduction for time offs and absences to include those that suspend part-time therapeutic leave and that aren't mapped.

As you update the **Related Calculations** grid on the **Effective Dated** tab, consider:

| Field                      | Description                                                                              |
|----------------------------|------------------------------------------------------------------------------------------|
| <b>Related Calculation</b> | To report the suspension of therapeutic part-time compensation, select <i>FRA Days</i> . |
| <b>Groups</b>              | Select <i>FRA Absence Days Suspending Therapeutic Part Time Leave [FRA]</i> .            |

See [Steps: Create Deductions](#) on page 227.

#### Result

Workday can now report:

- The dates of a part-time therapeutic leave in DSN block S21.G00.60.
- The loss of salary due to part-time therapeutic leave in DSN block S21.G00.66.
- Multiple blocks 66 when a worker is absent due to time off or leave during part-time therapeutic leave.

#### Next Steps

- Place a worker on part-time therapeutic leave for the total time of their part-time therapeutic leave.
- Enter time off for the days that the employee isn't at work due to part-time therapeutic leave.

## Create a Leave Type for Therapeutic Part Time (FRA)

### Prerequisites

Security: *Set Up: Leave of Absence* domain in the Time Off and Leave functional area.

### Context

You can enable Workday to set up different types of part-time therapeutic leaves.

### Steps

1. Access the **Create Leave Type** task.
2. As you complete the task for each of the 4 types of part-time therapeutic leave, consider:

| Field              | Description                                                                                                                                                                                                                                                                                                                                                                                                                                  |
|--------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Leave Type         | Enter a name that represents the reason for the leave.<br><br>Workday recommends that you use a similar name as the Leave Payment Type.                                                                                                                                                                                                                                                                                                      |
| Leave Family       | Select <b>Medical Leave</b> for part-time therapeutic leave.                                                                                                                                                                                                                                                                                                                                                                                 |
| Leave Payment Type | Link the leave type to 1 of 4 Workday-delivered leave payment types. <ul style="list-style-type: none"> <li>• <i>France - FRA_TPT_CA - Therapeutic Part Time - Commuting Accident</i></li> <li>• <i>France - FRA_TPT_OS - Therapeutic Part Time - Occupational Sickness</i></li> <li>• <i>France - FRA_TPT_SK - Therapeutic Part Time - Sickness</i></li> <li>• <i>France - FRA_TPT_WA- Therapeutic Part Time - Work Accident</i></li> </ul> |

3. Define **Eligibility Criteria** to control whether the leave type is available for selection when entering a leave request:

| Field                   | Description              |
|-------------------------|--------------------------|
| Country/Country Region  | France                   |
| Enabled for Worker Type | Select <b>~Employee~</b> |

4. Leave the **Payroll Effect** check box clear.
5. On the **Balance/Leave Taken** tab, configure balance tracking options.

Provide information Workday needs to calculate balances for therapeutic part-time leave taken:

| Field            | Description                         |
|------------------|-------------------------------------|
| Unit of Time     | Select <b>Days</b> .                |
| Calendar Display | Select <b>Do Not Show Balance</b> . |
| Days to Include  | Select <b>All Days</b> .            |

## Result

Workday uses the leave payment type to determine the rubric value when reporting a leave of absence in DSN block S21.G00.60. Example: Workday reports all leaves of absence with a sickness leave payment type under rubric value 15 - *temps partiel thérapeutique (risque maladie)*.

## Next Steps

[Create a Time Off for Therapeutic Part Time \(FRA\)](#) on page 1695.

## Create a Time Off for Therapeutic Part Time (FRA)

## Prerequisites

Security: *Set Up: Time Off (Calculations - Absence Specific)* domain in the Time Off and Leave functional area.

## Context

Create a time off to represent the time that an employee isn't at work due to part-time therapeutic leave.

## Steps

1. Access the **Create Time Off** task.

As you complete the task, consider:

| Option        | Description                                                                                                                      |
|---------------|----------------------------------------------------------------------------------------------------------------------------------|
| Code          | Enter a time off code for web services and EIB uploads.                                                                          |
| Comments      | Enter a high-level summary to explain that this time off is for therapeutic part time.                                           |
| Time Off Type | Select a time off type for sick days.                                                                                            |
| Priority      | Enter a number indicating the priority for processing the time off when multiple time offs subtract from the same time off plan. |
| Entry Option  | Select an option to specify whether workers can enter requests for the time off.                                                 |

2. For more information about time offs, see [Steps: Create a Time Off](#).

## Result

The time off you create generates the deduction that indicates when the worker is not working. Workday reports this amount in DSN block 66. You don't need to use the **Maintain Absence Mapping for Payroll France** task.

## Next Steps

See [Create Time Off Plan Overrides for Time Offs](#).

# Payroll for Australia

---

## Payroll for Australia

---

You can find more information relevant for all features throughout the Payroll Admin Guide book. Use these quick links to view topics and features specific to Payroll for Australia:

- [Bonuses and Commissions \(AUS\)](#)
- [Leave Pay \(AUS\)](#)
- [Single Touch Payroll \(AUS\)](#)
- [Superannuation \(AUS\)](#)
- [Termination Pay \(AUS\)](#)
- [Tax Setup \(AUS\)](#)
- [Withholding Orders \(AUS\)](#)

## Bonuses and Commissions (AUS)

---

### Set Up Bonuses and Commissions (AUS)

#### Prerequisites

Identify the earnings that should have PAYG withholding tax calculated using Method B(ii). Example:

- Commissions.
- Bonuses.
- Other Lump Sum payments, such as leave loading.

**Note:** You don't need to include back payment amounts that generate using the retro-pay process. Workday calculates the PAYG withholding for these amounts, based on the period in the current or previous tax year that they apply to.

#### Context

Workday calculates PAYG withholding for these earnings by averaging all additional payments made in the current tax year, over the number of pay periods in the tax year. The average is applied to the average total earnings to date.

#### Steps

1. Access the **Edit Earning** task.
2. On the **Non-Effective Dated** tab, add these pay component groups:
  - *AUS Adds to Gross [AUS]*
  - *Method B(ii) Taxable Wages [AUS]*
3. Ensure that the earning doesn't have any other Taxable Wages pay component groups associated with it.

#### Result

When you run a pay calculation with a Method B(ii) taxable earning, Workday will calculate the PAYG separately and display it on the pay result.

### Next Steps

You can use the *AUS PAYG Withholding - Bonus, Commission, Back Pay Tax [AUS]* pay component to return the total PAYG withholding amount for a worker's earnings that are taxed using Method B(ii). It includes any back-pay amounts forwarded from a retro-pay related to periods in previous tax years. It also includes the STSL withholding amount for workers who have STSL debt.

## Leave Pay (AUS)

### Map Leave Types to Pay Components (AUS)

#### Prerequisites

- Map your leave payment types to your leave types.
- Create the pay components that you need for making a leave payment.

#### Context

You can map your leave types to the correct pay components, so that workers get paid as per the correct leave payment type.

#### Steps

1. Access the **Maintain Leave Type Payment Configuration** task.
2. Select *Australia* from the **Country** field, and enter an **Effective Date**, for this configuration to be effective from.
3. Add a new row to the grid:

| Option                    | Description                                                                                                                     |
|---------------------------|---------------------------------------------------------------------------------------------------------------------------------|
| <b>Leave Types</b>        | Select the Leave Type that you're mapping.                                                                                      |
| <b>Leave Payment Type</b> | The Leave Payment Type that the Leave type is mapped to. This field will automatically fill based on the Leave type you select. |
| <b>Leave Pay Earning</b>  | Select the Leave Pay Earning component to associate with the Leave Type.                                                        |
| <b>Top-Up Earning</b>     | (Optional) Enter the top-up pay component to associate with the Leave Type.                                                     |

### Next Steps

Add the calculation for leave pay to the leave pay earning component, using the Workday delivered calculation blocks.

## Single Touch Payroll (AUS)

### Setup Considerations: Single Touch Payroll (AUS)

You can use this topic to help make decisions when planning your configuration and use of Single Touch Payroll (STP). It explains:

- Why to set it up.
- How it fits into the rest of Workday.

- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

### What It Is

Single Touch Payroll (STP) is the way that you report payroll information including tax and superannuation obligations for your employees to the Australian Taxation Office (ATO).

Workday supports STP Phase 2 reporting.

### Business Benefits

Single Touch Payroll enables you to:

- Meet the legal requirements for reporting worker salaries and wages, and superannuation liability to the ATO.
- Increase efficiency by streamlining the process of managing and submitting STP reports.
- Reduce the need for separate reporting to other agencies, such as Services Australia.

### Use Cases

Report worker payments to the ATO using STP.

### Questions to Consider

| Questions                                                       | Considerations                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
|-----------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Which earnings and deductions do you need to report to the ATO? | To ensure accurate reporting, identify the earnings and deductions to map to specific STP categories.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| How much data do you need to transfer from previous systems?    | <p>For correct YTD amounts on employee payslips and consolidated financial reporting, transfer this year's data from your previous software.</p> <p>If you start using Workday:</p> <ul style="list-style-type: none"> <li>• At the start of a tax year, you don't need to transfer YTD amounts for your payees for STP purposes.</li> <li>• During a tax year, consider transferring YTD amounts.</li> </ul> <p>Also decide whether you want to transfer YTD amounts for inactive and terminated employees, or employees terminated within the tax year.</p> <p>If you don't transfer YTD amounts, calculations that use those amounts will be incorrect. These may include Superannuation MSCB Cap calculations, and PAYG Withholding on lump sum payments including bonuses and backpays.</p> <p>If you plan to transfer your YTD amounts, confirm that your previous system allows you to generate and submit a zero dollar YTD update event, to zero out. Transferring your YTD amounts will affect how you configure your BMS ID and will add complexity.</p> |

| Questions                                                  | Considerations                                                                                                                                                                                                                                                                                                |
|------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Have you started using Workday partway through a tax year? | <p>If you started using Workday partway through a tax year, consider:</p> <ul style="list-style-type: none"> <li>• Were you previously reporting STP Phase 2?</li> <li>• Will you use the same Business Management (BMS) ID?</li> <li>• How you want worker income statements to display in MyGov.</li> </ul> |

### Recommendations

Workday Payroll for Australia and the STP function is designed to assist you with the pay and tax reporting required by the ATO. However, you should independently verify your obligations required by the Australian Taxation Office.

### Requirements

- Configure statutory tax and superannuation calculations in Workday.
- Use Workday to calculate payroll results.

### Limitations

Workday doesn't support:

- Updates for tax years that weren't submitted using Workday.
- Income types other than salary and wages or working holiday makers.

### Tenant Setup

No impact.

### Security

Configure these domains in the Australia Payroll functional area.

| Domains                             | Considerations                                                 |
|-------------------------------------|----------------------------------------------------------------|
| <i>Process: STP (Run) - AUS</i>     | Enables you to process STP data.                               |
| <i>Process: STP (Reports) - AUS</i> | Enables you to report on STP submissions.                      |
| <i>Process: STP (Approve) - AUS</i> | Enables you to approve and submit your STP reports to the ATO. |
| <i>Set Up: Payroll (STP) - AUS</i>  | Enables you to define your Single Touch Payroll configuration. |

### Reporting

| Reports or Dashboards | Considerations                                                               |
|-----------------------|------------------------------------------------------------------------------|
| All AUS STP Reports   | View all STP reports that you have generated using Workday and their status. |
| Preview AUS STP       | Verify the details of an STP report before you approve it.                   |

| Reports or Dashboards             | Considerations                                                                                                                                                                                                                             |

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships in your tenant. Learn more about the [Workday Touchpoints Kit](#) on Workday Community.

## Steps: Set Up Single Touch Payroll (AUS)

### Prerequisites

Review the setup considerations for Single Touch Payroll (STP).

### Context

To meet the requirements for reporting payroll data to the Australian Taxation Office (ATO), enable Workday Payroll for Australia to generate and submit Single Touch Payroll reports.

### Steps

1. Access the **View AUS BMS ID** task.

Generate or add an existing Business Management Software (BMS) ID.

*Security Set Up: Payroll (STP) - AUS* in the AUS payroll functional area.

2. Click **Generate AUS BMS ID**.

*Security Set Up: Payroll (STP) - AUS* in the AUS payroll functional area.

(Optional) Or, to use an Existing ID: [Enter Your Existing BMS ID](#)

3. Access the **View Company AUS Tax Reporting** task.

Configure your STP details.

*Security Payroll - Company Specific (Taxes) - AUS* in the AUS payroll functional area.

4. Select the company to set up for STP.

5. As you complete the Payer Key Identifiers grid, consider:

| Option                   | Description                                                                               |
|--------------------------|-------------------------------------------------------------------------------------------|
| <b>Effective Date</b>    | Enter the date that these settings will apply from.                                       |
| <b>Payer Branch Code</b> | Enter the number to identify the correct branch of the organization for PAYG withholding. |
| <b>Payer Post Code</b>   | Enter the postcode associated with the address for the company, registered with the ATO.  |
| <b>Payer Country</b>     | Enter the country of the payer.                                                           |

6. Complete the Working Holiday Maker Employer Registration grid.

7. In the Payer Contact Details grid, enter the name of the main company contact for the ATO. The ATO might direct questions about STP submissions to this contact.

8. [Map STP Reporting Categories \(AUS\)](#) on page 1702.

9. [../././integrations/workday-payroll-connectors/australian-taxation-office-stp-integration/Steps--Set-Up-ATO-STP-Integration.dita](#)

## Record an Existing BMS ID (AUS)

### Prerequisites

Security: *Set Up: Payroll (STP) - AUS* in the AUS Payroll functional domain.

### Context

Workday stores a record of the BMS ID from your previous payroll system.

**Note:** The record of your previous BMS ID is for your record only.

### Steps

1. Access the **Maintain AUS BMS ID** task.
2. Enter the previous BMS ID into the **Previous BMS ID** field.

### Example

### Next Steps

To view your BMS IDs, access the **View AUS BMS ID** task.

## Map STP Reporting Categories (AUS)

### Prerequisites

- Set up any earnings and deductions you require.
- Security: *Set Up: Payroll (STP) - AUS* domain in the AUS Payroll functional area.

### Context

Map your earnings and deductions to Single Touch Payroll (STP) reporting categories so that the Australian Taxation Office (ATO) knows how to treat each type of payment.

**Note:** Some payroll categories processed in your pay run aren't reportable with STP.

You can manage STP categories as:

- Workday-owned categories, which can include Workday-owned pay components already mapped to STP categories using Workday-delivered pay component groups. You can add your own custom pay components to Workday-delivered pay component groups, to include in STP reporting.
- Customer-owned categories, using the **View AUS STP Reporting Categories** task. These are usually your custom pay components and pay component groups.

You must map any pay components that you use to your customer-owned categories.

**Note:** You can't map a pay component to multiple categories.

You can't remove rows that are in use on an STP report. Editing or removing calculations from a reporting category that has been used in the past could result in incorrect reporting.

### Steps

1. Access the **View AUS STP Reporting Categories** report.
2. Click **Edit** in the row of a category that you want to add calculations to.

3. As you complete the AUS STP Reporting Category grid, consider:

| Option                                 | Description                                                                                                                                                                                                                                     |
|----------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Effective Tax Year</b>              | Enter the date from which this configuration is valid. Enter only 1 row for each Effective Tax Year.<br><br>The Effective Tax Year can't overlap with the <b>Effective Until End of Tax year</b> for any other rows.                            |
| <b>Effective Until End of Tax Year</b> | (Optional) If you want the mapping to expire at the end of a tax year, enter the year.<br><br>If you want to add another configuration after this row, enter the year. You can only have 1 row without an Effective Until End of Tax Year date. |
| <b>Calculation</b>                     | Select the earnings, deductions, pay component groups, and pay component related calculations to report under this category.                                                                                                                    |

[Single Touch Payroll Phase 2 employer reporting guidelines](#)

## Create a Submit Pay Event (AUS)

### Prerequisites

- An in-progress or completed pay calculation.
- Security: *Process STP (Run)* - AUS domain in the AUS Payroll functional domain.

### Context

A submit pay event includes the company totals for the current pay period, and the current year to date amounts for workers.

Create a submit pay event every time you make a payment to a worker, including:

- Regular pay cycles.
- Payments made outside of the regular pay cycle (on demand).
- Payments with no withheld tax.
- Payees with no net pay.

You can create a submit pay event while pay calculations are in progress. To approve a submit pay event, you need to generate it with complete pay results after running the **Run Pay Complete** task.

### Steps

1. Access the **Create AUS STP Report** task.
2. In the **Report Type** field, select *Submit Pay Event*.
3. As you complete the task, consider:

| Option            | Description                                              |
|-------------------|----------------------------------------------------------|
| <b>Company</b>    | Workday only displays companies that you have access to. |
| <b>Pay Groups</b> | Select all the pay groups that this report is for.       |

| Option                        | Description                                                                            |
|-------------------------------|----------------------------------------------------------------------------------------|
|                               | <b>Note:</b> Only select pay groups that have the same payment date and pay frequency. |
| <b>On Cycle Payment Date</b>  | Select the payment date.                                                               |
| <b>Off Cycle Payment Date</b> | Select the payment date for an off-cycle payment.                                      |

4. Use the related actions on the report to view the **Preview** task and ensure that the details are correct.

### Next Steps

To update the data in the STP report after you've created it, use the related actions on the report to access the **Refresh Data** task.

Use the **View Errors** button on the report preview to make sure the STP report will be accepted.

**Note:** If you don't submit an STP report for an off-cycle payment, the company totals won't be correctly reported to the ATO. The payee's YTD amount will be reported correctly in the next regular pay cycle.

Approve the pay event.

### Related Information

#### Tasks

[Approve an STP Pay Event \(AUS\)](#) on page 1705

## Create an Update Pay Event (AUS)

### Prerequisites

Security: *Process: STP (Run) - AUS* in the AUS Payroll functional domain.

### Context

Create an update pay event when you need to update information with the ATO, including when you need to:

- Update your BMS ID or Worker IDs when moving to Workday.
- Make STP amendments for previous finalized years.
- Complete end of tax year processes, including finalization.
- Correct misclassifications with no additional payment.

**Note:** Only use an update pay event when you aren't paying workers. Use a submit pay event if you're creating an STP report in relation to a pay calculation.

**Note:** You'll only be able to generate update pay events for the previous tax year if you have submitted STP reports for the company with Workday in the previous year. The tax year is based on the local time and date of the logged in user.

### Steps

1. Access the **Create AUS STP Report** task.
2. In the **Report Type** field, select *Update Pay Event*.
3. As you complete the task, consider:

| Option         | Description                                              |
|----------------|----------------------------------------------------------|
| <b>Company</b> | Workday only displays companies that you have access to. |

| Option                              | Description                                                                                                                                                                                                                                           |
|-------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Pay Groups</b>                   | (Optional) Select any pay groups involved in the update pay event.                                                                                                                                                                                    |
| <b>Specific Workers</b>             | (Optional) Select any specific workers involved in the update pay event.                                                                                                                                                                              |
| <b>Previously Finalized Workers</b> | (Optional) Select any previously finalized workers involved in the update pay event.                                                                                                                                                                  |
| <b>Update Date</b>                  | <p>If the update pay event is for the current tax year, select <i>Update Date</i> and enter the date.</p> <p>If the update pay event is for a previous tax year, select <i>Previous Tax Year</i>, and select the correct year from the drop-down.</p> |

4. Use the related actions on the report to view the **Preview** task and ensure that the details are correct.

### Next Steps

To update the data in the STP report after you've created it, use the related actions on the report to access the **Refresh Data** task.

Use the **View Errors** button on the report preview.

Approve the pay event.

## Approve an STP Pay Event (AUS)

### Prerequisites

Security: *Process: STP (Approve)* - AUS domain in the AUS Payroll functional area.

To approve a submit pay event:

- A completed pay calculation.
- Run the **Create AUS STP Report** task with a pay calculation that has the *Completed* status.

To approve an update pay event:

- A completed **Submit Pay Event** for the company or group of workers.

### Context

Send your payroll data to the ATO.

### Steps

1. Access the **Approve AUS STP Report** task.
2. Select the **STP Report** that you want to submit to the ATO.
3. Read the declaration statement. Check the declaration check box to sign the declaration with your Workday account credentials.

### Next Steps

Access the **All STP Reports** task to view the status of all submitted STP reports.

## Superannuation (AUS)

### Setup Considerations: Superannuation (AUS)

You can use this topic to help make decisions when planning your configuration and use of superannuation in Workday. It explains:

- Why to set it up.
- How it fits into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

#### What It Is

Workday enables you to pay superannuation to your eligible workers.

#### Business Benefits

Workday automatically calculates superannuation eligibility and tracks superannuation payments for workers, based on legislation published by the Australian Taxation Office (ATO).

You can set up Maximum Superannuation Contribution Base (MSCB) rules for Workday to use along with worker compensation packages.

#### Use Cases

- Automatically calculate superannuation on Ordinary Time Earnings (OTE).
- Calculate superannuation based on compensation.
- Make adjustments to superannuation.

#### Questions to Consider

| Questions                                                              | Considerations                                                                                                                                                                                                                                         |
|------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| How do you want to pay workers whose pay will exceed the MSCB?         | Workday recommends you use amount-based plans for these workers when your relevant superannuation configuration is <i>pay excess to gross</i> , or to <i>cap superannuation contributions</i> .                                                        |
| How do you want to pay workers with amount-based superannuation plans? | Workday doesn't automatically calculate superannuation for additional OTE components when a worker only has amount-based plans. Manually calculate the superannuation for workers with amount-based superannuation plans, and add them as a pay input. |

#### Recommendations

Use percentage-based allowance plans for allocated superannuation where possible to minimize manual inputs.

#### Requirements

You must have Workday Payroll to use the superannuation functionality.

Opt-in to the Workday 32 - Time Zone functionality. See [Concept: Roles, Time Zones, and Snapshots](#).

Use Workday Payroll to configure:

- A default superannuation fund in your Workday tenant.
- The MSCB rules for your organization.
- Superannuation choices for all workers.

### Limitations

- Workers can only have 1 active superannuation fund per worker, per company.
- Workday currently doesn't support child and spouse superannuation funds.
- Workday currently doesn't support calculated compensation plans.
- In a retro event, Workday uses the superannuation rate at the time of the event, not the current rate.
- Workday currently doesn't support stapled funds lookups. Enter stapled fund results as APRA or SMSF choice types.

### Tenant Setup

No tenant setup required.

### Security

Configure these domains in the Australia Payroll functional area:

| Domains                                                        | Considerations                                                            |
|----------------------------------------------------------------|---------------------------------------------------------------------------|
| <i>Set Up: Payroll (Superannuation) - AUS</i>                  | Enables you to configure superannuation.                                  |
| <i>Worker Data: Payroll (Company Specific) - AUS</i>           | Enables you to add worker superannuation choices on behalf of the worker. |
| <i>Self Service: Payroll (My Superannuation Choices) - AUS</i> | Enables workers to enter their own superannuation choices.                |

### Business Processes

No impact.

### Reporting

| Reports or Dashboards                        | Considerations                                                  |
|----------------------------------------------|-----------------------------------------------------------------|
| <b>View AUS Worker Superannuation Choice</b> | Use this report to review workers' superannuation fund choices. |

### Integrations

|                         |                                                              |
|-------------------------|--------------------------------------------------------------|
| <i>Get Super Choice</i> | Exports superannuation choice data from your Workday tenant. |
| <i>Put Super Choice</i> | Imports superannuation choice data into your Workday tenant. |

### Connections and Touchpoints

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships in your tenant. Learn more about the [Workday Touchpoints Kit](#) on Workday Community.

## Set Up Superannuation (AUS)

### Steps: Configure Superannuation (AUS)

#### Prerequisites

- Review the setup considerations for superannuation.
- Set up superannuation as an allowance plan, as either a percentage or amount-based plan.
- Assign allowance plans to workers, to determine their superannuation rate or amount

#### Context

You can:

- Define a default superannuation fund.
- Define how you want to treat earnings over the Maximum Superannuation Contribution Base (MSCB).
- Map allowance plans and compensation packages to superannuation guarantee and employer voluntary contributions.
- Map the superannuation pay components to ordinary time earnings.

#### Steps

1. [Set Up a Default Superannuation Fund \(AUS\)](#) on page 1708.
2. [Assign Compensation Allowance Plans to Payroll Superannuation \(AUS\)](#) on page 1710.
3. [Set Up Default Maximum Superannuation Contribution Base \(MSCB\) Rules \(AUS\)](#) on page 1709.
4. Add all of your pay components that are subject to superannuation to the **AUS Ordinary Time Earnings** pay component group.

#### Next Steps

Record superannuation choices for all workers.

#### Related Information

##### Tasks

[Add Worker Superannuation Choice \(AUS\)](#) on page 1714

### Set Up a Default Superannuation Fund (AUS)

#### Prerequisites

Security: *Set Up: Payroll (Superannuation) - AUS*.

#### Context

Workday requires a default superannuation fund so that:

- Workers can complete a superannuation choice form.
- You can run an Australian payroll calculation.

Workday uses the default superannuation fund if there aren't any active Superannuation Configuration Periods. Workday also uses the default fund if you don't specify a superannuation fund in the active superannuation configuration period.

#### Steps

1. Access the **Maintain AUS Superannuation Configuration** task.

2. As you complete the task, consider: Enter the USI of the superannuation fund.

| Option                                 | Description                                                                     |
|----------------------------------------|---------------------------------------------------------------------------------|
| <b>Default Superannuation Fund USI</b> | The USI of the default superannuation fund of the organization.                 |
| <b>Exceeds MSCB Rule</b>               | What you want to happen to a worker's superannuation that exceeds the MSCB cap. |

## Result

Workday uses the default superannuation fund when a worker makes a superannuation choice.

Adding or changing the default superannuation fund and MSCB rule only affects future superannuation choices and payroll calculations.

## Next Steps

Set up your MSCB rules and assign your compensation plans.

## Related Information

### Tasks

[Assign Compensation Allowance Plans to Payroll Superannuation \(AUS\)](#) on page 1710

[Set Up Superannuation Configuration Periods \(AUS\)](#) on page 1711

## Set Up Default Maximum Superannuation Contribution Base (MSCB) Rules (AUS)

## Prerequisites

Security: *Set Up: Payroll (Superannuation)* - AUS.

## Context

Workday requires you to have a default Maximum Superannuation Contribution Base (MSCB) rule, to define what will happen when a worker's earnings exceed the MSCB amount.

Workday uses the default MSCB rule if there aren't any active superannuation configuration periods. Workday also uses the default MSCB rule if you don't specify a rule in the active Superannuation Configuration Period.

**Note:** The MSCB rule is only effective with percent-based plans. You need to manage Amount-based plans manually, but they do contribute towards the MSCB Quarter to Date amount.

## Steps

1. Access the **Maintain AUS Superannuation Configuration** task.
2. Select the **Update Superannuation Default Configuration** option.
3. Select an option from the **Exceeds MSCB Rule** field. The options available are:

| Option                              | Description                                                                                 |
|-------------------------------------|---------------------------------------------------------------------------------------------|
| <b>Pay Excess to Taxable Income</b> | You pay any amount that exceeds the cap as taxable income to the worker.                    |
| <b>Cap Payments at MSCB</b>         | You don't pay any amount over the cap to the worker.                                        |
| <b>Ignore MSCB</b>                  | You continue paying into the worker's superannuation fund, even if they've reached the cap. |

## Next Steps

You can use superannuation configuration periods to apply different MSCB rules for specific periods of time, or for groups of workers.

## Related Information

### Tasks

[Set Up a Default Superannuation Fund \(AUS\)](#) on page 1708

[Set Up Superannuation Configuration Periods \(AUS\)](#) on page 1711

## Assign Compensation Allowance Plans to Payroll Superannuation (AUS)

### Prerequisites

- Security: *Set Up: Payroll (Superannuation) - AUS*.
- Create allowance plans for each of your superannuation components.
- Ensure that workers are eligible for superannuation.

### Context

Connect your core compensation allowance plans to your payroll superannuation components.

You can add percent-based plans or amount-based plans.

| Plan type     | Considerations                                                                                                                                                                            |
|---------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Percent-based | The worker's OTE is multiplied by the percent-based plan during the payroll calculation. Workday doesn't include the compensation basis in the allowance plan in the payroll calculation. |
| Amount-based  | Amount-based plans apply the amount, adjusted by the allowance frequency and payroll periods.                                                                                             |

If a worker is eligible for multiple allowances, they're aggregated together.

**Note:** Workday currently doesn't support calculated plans for calculating superannuation.

### Steps

1. Access the **Maintain AUS Superannuation Configuration** task.
2. Select the *Update Superannuation Default Configuration* option.
3. Complete the **Compensation Superannuation Allowance map to Payroll Calculation** section. As you complete the section, consider:

| Option                                                  | Description                                                                                                                                                                          |
|---------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Superannuation Guarantee</b>                         | Enter all allowance plans representing a superannuation guarantee amount.<br><br>Contributions in this category are categorized as Superannuation Guarantee for SuperStream and STP. |
| <b>Reportable Employer Superannuation Contributions</b> | Enter all allowance plans representing any reportable employer superannuation contributions.                                                                                         |

| Option | Description                                                                                                 |
|--------|-------------------------------------------------------------------------------------------------------------|
|        | Contributions in this category are sent to SuperStream as Employer Additional, and are sent to STP as RESC. |

## Set Up Superannuation Configuration Periods (AUS)

### Prerequisites

- Set up your [default superannuation configuration](#).
- Security: *Set Up: Payroll (Superannuation)* - AUS domain in the AUS Payroll functional area.

### Context

You can create superannuation configuration periods for different periods of time or groups of works enabling you to apply a specific:

- Default superannuation fund.
- MSCB rule.

You can add multiple rows to each configuration grid, with different restriction rules to define groups of workers to apply to each one.

When a configuration grid has multiple restricted rows, Workday evaluates them in order until there's a matching condition for each worker. When no condition matches for the worker, Workday uses the row marked as default.

When a superannuation configuration period grid is empty, Workday uses either the legislative rule or the default superannuation configuration in your tenant.

### Steps

- Access the **Maintain AUS Superannuation Configuration** task.
- Select **Add a New Configuration Period** and select a date for the configuration period to begin.
- Confirm the Effective Date and End Date of the configuration period. The dates must be within a tax year, and can't overlap with any existing configuration periods.
- Add rows in the grids and enter the details that you want to apply to the period. You can set the default superannuation fund and MSCB rules. Specify a restriction rule for each row of the table except the final row, which you must mark as *default*. To optimize performance, set up the restrictions from least to most restrictive.

## Create Superannuation Configuration Restriction Rules (AUS)

### Prerequisites

Security: *Set Up: Payroll (Superannuation)* - AUS.

### Context

Create superannuation restriction rules to use when you set up superannuation configuration periods.

When you create a restriction rule, consider when the dimension is applied to a worker and when the task is completed.

Example: You want to create a restriction rule related to a worker's superannuation choice. If the restriction is based on the Pay Group dimension, and the worker's pay group is assigned after they've completed their superannuation choice, the restriction won't work because the pay group hasn't been assigned when they make a superannuation.

## Steps

1. Access the **Create AUS Superannuation Configuration Restriction** task.
2. Enter a **Name** for the restriction.
3. Select a **Logical Operator**. The operator you select applies to everything you enter into the Restriction Conditions grid.
4. In the **Restriction Conditions** grid, enter:

| Option                          | Description                                                                                                                                                                                                                                                                             |
|---------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Dimension or Restriction</b> | Select an element to apply the rule to: <ul style="list-style-type: none"> <li>• <b>Dimension:</b> Workday delivered elements that rules can be applied to.</li> <li>• <b>Restriction:</b> Another Superannuation Configuration Restriction that you have set up in Workday.</li> </ul> |
| <b>Relational Operator</b>      | Select a relational operator to define how the dimension or restriction is compared to a worker.                                                                                                                                                                                        |
| <b>Comparison Value</b>         | Enter a comparison value, if applicable, to be compared with the dimension or restriction.                                                                                                                                                                                              |

## Next Steps

Use your Superannuation Configuration Restriction in a Superannuation Configuration Period.

## Assign Multiple Default Superannuation Funds (AUS)

### Prerequisites

Security: *Set Up: Payroll (Superannuation) - AUS.*

### Context

You can assign default superannuation funds to a specific group of workers using restriction rules within a superannuation configuration period. Workday evaluates a worker against each of the restriction rules in order until there's a matching rule.

## Steps

1. Access the **Maintain AUS Superannuation Configuration** task.
2. Select **Add a New Configuration Period** or **Update a Configuration period**, and enter an **Effective Date**.
3. For each superannuation fund, add an entry to the **Default Superannuation Fund** grid and add the details and restriction.

| Option                                 | Description                                                                                                                                                                   |
|----------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Default Superannuation Fund USI</b> | The USI of the superannuation fund.                                                                                                                                           |
| <b>Default</b>                         | The row that Workday uses if none of the restrictions match a worker.<br><br>Mark the final row of the grid as Default. You can't mark any other rows of the grid as Default. |
| <b>Restriction</b>                     | Use an existing restriction, or create a new one to define which workers this superannuation fund applies to.                                                                 |

### Example

A collective agreement within your organization can define a certain superannuation fund as the default fund, which is different from the default fund of the organization. You can set up a Superannuation Configuration Restriction Rule to identify workers with the assigned collective agreement, and provide a different default superannuation fund to other workers in your organization.

### Adjust MSCB Threshold Configuration (AUS)

#### Prerequisites

Security: *Set Up: Payroll (Superannuation) - AUS.*

#### Context

You can assign alternative Maximum Superannuation Contribution Base (MSCB) limits or MSCB Excess rules to groups of workers using restriction rules within a superannuation configuration period. Workday evaluates a worker against each of the restriction rules in order until there's a matching rule.

If you leave the grid blank, the legislated MSCB rate from the advanced lookup table will apply, and the default MSCB rule for the tenant will apply.

#### Steps

1. Access the **Maintain AUS Superannuation Configuration** task.
2. Access the superannuation configuration period that you're adjusting the MSCB configuration for.
3. In the **Maximum Superannuation Contribution Base Configuration** grid, add a new row. Add the details and restriction.

| Option                             | Description                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Quarterly Contribution Base</b> | Enter the MSCB limit per quarter. OTE over the MSCB limit is subject to the MSCB rule.                                                                                                                                                                                                                                                                                                                                                            |
| <b>Exceeds MSCB Rule</b>           | <p>Select the treatment of any OTE exceeding the contribution base.</p> <ul style="list-style-type: none"> <li>• Pay excess to Taxable Income.</li> <li>• Cap payments at MSCB.</li> <li>• Ignore MSCB.</li> </ul> <p><b>Note:</b> MSCB rules only apply to percent-based allowance plans. Amount-based plans contribute to the quarterly MSCB, but Workday doesn't apply the rule to amount-based earnings exceeding the contribution limit.</p> |
| <b>Default</b>                     | <p>Mark the final row of the grid as Default.</p> <p>Workday uses the default if no other restrictions apply to the worker.</p>                                                                                                                                                                                                                                                                                                                   |
| <b>Restriction</b>                 | Use an existing restriction, or create a new one to define which workers this configuration applies to.                                                                                                                                                                                                                                                                                                                                           |

### Example

A group of workers in your organization have rules from a prior agreement that are different from your default method of treating earnings over the MSCB. You can use superannuation configuration restriction rules to identify these workers and apply different MSCB rules in the pay calculation.

## Superannuation Choice (AUS)

### Add Worker Superannuation Choice (AUS)

#### Prerequisites

- Ensure you have a default superannuation fund set up in your Workday tenant.
- Security: *Worker Data: Payroll (Company Specific)* - AUS in the AUS Payroll functional area.

#### Context

Workers can have 1 active superannuation choice per company, and the choice applies to their:

- Superannuation Guarantee contributions.
- Reportable Employer Superannuation Contributions.
- Employee Voluntary superannuation contributions (Salary Sacrifice and employee post-tax contributions).

**Note:** Configure Employee Voluntary contributions at the same time as a worker's superannuation choice. Voluntary contributions must be in monetary amounts, not percentage amounts. Workday processes Employer Voluntary contributions in each pay run, but not in retro pay runs.

**Note:** Workday doesn't support spouse or child superannuation contributions.

#### Steps

1. Access the **Add Worker AUS Superannuation Choice** task.
2. Select the worker, the effective date, and the company.
3. Select a **Choice Type**:

| Option                      | Description                                                                                                                                                                                                          |
|-----------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>APRA or Public Funds</b> | Select when a worker requests a fund that isn't SMSF. Requires the: <ul style="list-style-type: none"> <li>• USI of the fund.</li> <li>• Member number.</li> </ul>                                                   |
| <b>SMSF</b>                 | Select when a worker selects an SMSF fund. Requires the: <ul style="list-style-type: none"> <li>• ABN of the SMSF.</li> <li>• Trustee confirmation.</li> <li>• Member number.</li> <li>• Banking details.</li> </ul> |
| <b>Employer Fund</b>        | Select if the worker doesn't make a choice, or selects the default superannuation fund. Member number is optional.                                                                                                   |

#### Next Steps

If you've calculated and not finalized the payroll, recalculate the worker's pay result.

### Create and Manage Superannuation Funds (AUS)

#### Context

Workday creates a superannuation fund when a worker makes a superannuation choice. You need to add additional details to the superannuation fund in Workday so that it's properly processed with SuperStream.

## Steps

1. Access the **Edit AUS Superannuation Fund** task.
2. Find the superannuation fund that you want to manage by entering the ABN or USI of the fund.
3. Fill in the details of the fund. As you complete the task, consider the **Fund Type**:

| Option    | Description |
|-----------|-------------|
| APRA Fund | SUP         |
| SMSF Fund | SMF         |

## Result

When you change the details of a superannuation fund, Workday changes the fund details for all workers who have selected the fund.

## SuperStream (AUS)

### Setup Considerations: SuperStream (AUS)

You can use this topic to help make decisions when planning your configuration and use of SuperStream in Workday. It explains:

- Why to set it up.
- How it fits into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

### What It Is

Workday enables you to send your superannuation payments and data to worker superannuation funds using SuperStream, using a Superannuation Clearing house with a SAFF file.

### Business Benefits

SuperStream enables you to:

- Meet the legal requirements for sending superannuation payments and payment information.
- Increase your efficiency by streamlining the process of managing and submitting superannuation payments and information.

### Use Cases

Each time you pay superannuation to your workers, send the payment and information with Superstream.

### Questions to Consider

|                           |                                                                                                                                                                                                                      |
|---------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Processing Frequency      | You can run SuperStream in Workday for a single period, or for multiple periods. Consider how your organization processes superannuation payments, and the legislative requirements and deadlines that apply to you. |
| Clearing House processing | Consider how the customer clearing house processes payments. Can they process SAFF files and payment arrangements to clear funds?                                                                                    |

## Recommendations

Workday Payroll for Australia and the Single Touch Payroll function is designed to assist you with the pay and tax reporting required by law. However, you should independently verify your obligations required by the Australian Taxation Office and other relevant authorities.

## Requirements

- A complete pay period.
- You've configured your tax details in the **Edit AUS Company Tax Details** task.
- You've configured the SuperStream integration system and an integration system user. See [Steps: Set Up SuperStream Integration](#).

## Limitations

Workday can't:

- Process negative amounts.
- Mark payments as Sent in Workday.

If you don't set up the SuperStream integration system and an integration system user, government ID masking may restrict the data that is sent in the SAFF file. Example: masked TFNs won't be sent.

## Tenant Setup

- Create an integration system with the SuperStream template.
- Enable the SAFF service in the SuperStream integration.

## Security

|                                             |                                                                     |
|---------------------------------------------|---------------------------------------------------------------------|
| <i>Process: SuperStream (Run) - AUS</i>     | Enables you to generate SuperStream data.                           |
| <i>Process: SuperStream (Reports) - AUS</i> | Enables you to review SuperStream data.                             |
| <i>Process: SuperStream (Approve) - AUS</i> | Enables you to select a SuperStream event in an integration system. |

## Reporting

To preview a SuperStream report, run the **Preview SuperStream** report.

## Connections and Touchpoints

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships in your tenant. Learn more about the [Workday Touchpoints Kit](#) on Workday Community.

## Other Impacts

### Create SuperStream Event (AUS)

#### Prerequisites

Security: *Process: SuperStream (Run) - AUS* domain in the AUS Payroll functional domain.

Set up an integration system and an integration system user. See [Steps: Set Up SuperStream Integration](#)

## Context

Create a SuperStream event whenever a superannuation choice is created. Link superannuation choices to the fund so that the worker's superannuation is paid correctly.

## Steps

1. Access the **Create AUS SuperStream** task.
2. Select the Company and the Contribution Types to report.
3. Enter the Pay Period Start and End dates and create the report. Workday will display you a summary of the workers and periods, and the SAFF file value.
4. Access the **Preview AUS SuperStream** task.
5. Select the SuperStream report that you created in step 3.
6. Review the contribution data to ensure it's correct.
7. Run the SuperStream integration system.
8. Select the SuperStream report that you created in step 3 and run the integration.

## Result

The SAFF file is in the *Files* tab of the integration output.

**Note:** If you create a SuperStream event without setting up an integration system and an integration system user, government ID masking may mask data, including TFNs. Masked data won't be sent in the SAFF file.

## Next Steps

If you enabled the validation report, review it after generating the SAFF file. Data that is modified or truncated to meet file output requirements is summarized in the validation report.

## Superannuation and Single Touch Payroll (AUS)

Workday delivered pay components are reported to the ATO using STP. Workday delivered pay components are mapped to the STP categories.

If you wish to create new pay components, make sure that you map them to the STP categories so that they're reported correctly. You can map pay components to these pay component groups:

|                                                                                |                                                                                                    |
|--------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------|
| <i>AUS Superannuation Employer Contributions [AUS]</i>                         | Used to report contributions to the Superannuation Liability STP category.                         |
| <i>AUS Regular Superannuation Employee Pre Tax Salary Sacrifice (SS) [AUS]</i> | Used to report contributions to the Sacrifice Type S STP category.                                 |
| <i>AUS Bonus Superannuation Employee Pre Tax Salary Sacrifice (SS) [AUS]</i>   | Used to report contributions to the Sacrifice Type S STP category.                                 |
| <i>AUS Reportable Employer Superannuation Contributions (RESC) [AUS]</i>       | Used to report contributions to the Reportable Employer Superannuation Contributions STP category. |

**Note:** Map Employee paid salary sacrifice to:

- *AUS Superannuation Employee Pre Tax Salary Sacrifice (SS) [AUS]*
- *AUS Reportable Employer Superannuation Contributions (RESC) [AUS]*

Refer to ATO guidance for further information on mapping categories.

## Termination Pay (AUS)

---

### Steps: Set Up Termination Pay (AUS)

#### Prerequisites

Security: *Set Up: Payroll (Termination)* - AUS in the AUS Payroll functional area.

#### Context

You can use Workday to manage Employee Termination Payments (ETP) and the associated tax. Workday provides pay component groups for you to map to your termination payment earnings to calculate and report ETP taxes to the Australian Taxation Office (ATO).

#### Steps

1. [Map Termination Reasons to ATO Cessation Types \(AUS\)](#) on page 1718.
2. [Create Termination Payments \(AUS\)](#) on page 1719.
3. Edit run categories.

#### Next Steps

#### Related Information

##### Tasks

[Map Termination Reasons to ATO Cessation Types \(AUS\)](#) on page 1718

[Create Termination Payments \(AUS\)](#) on page 1719

### Map Termination Reasons to ATO Cessation Types (AUS)

#### Prerequisites

Security: *Set Up: Payroll (Termination)* - AUS in the AUS Payroll functional area.

#### Context

Map the termination reasons that you use in Workday to the cessation reasons that the Australian Taxation Office (ATO) uses, so that terminations are correctly reported in the STP process.

**Note:** If you don't map termination reason to an ATO Cessation Type, the default cessation type will be used.

#### Steps

1. Access the **Maintain AUS Payroll Termination Configuration** task.
2. Select the configuration period or effective date that you're setting up the termination configuration for.
3. Enter a default cessation type. The default type is used if an unmapped termination reason is used.
4. For each termination reason in the grid, select an ATO Cessation type.
5. If the termination reason is for Invalidity, select the **Cessation Type: Invalidity** checkbox. When this checkbox is selected, an additional tax-free portion is applied to the worker's termination pay.

#### Next Steps

**Related Information****Tasks**

[Steps: Set Up Termination Pay \(AUS\)](#) on page 1718

**Create Termination Payments (AUS)****Prerequisites**

Security: *Set Up: Payroll (Calculations - Payroll Specific)* domain in the Core Payroll functional area.

**Context**

Set up the termination earnings and deductions so that they're linked to the correct pay component groups. Workday uses the worker's TFN declaration to determine the correct tax rate to apply to termination payments.

**Steps**

1. Access the **Edit Earning** task for each earning or deduction that represents ETP or ETP tax.
2. On the **Non-Effective Dated** tab, select the pay component group that matches the earning or deduction.

| <b>Pay Component Group</b>                                         | <b>Purpose</b>                                                                                                                                                                                                                                 |
|--------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <i>AUS Genuine Redundancy and Early Retirement Scheme Payments</i> | For genuine redundancy and early retirement scheme payments that are to be treated as Lump Sum D if they are below the Lump Sum D limit. Otherwise to be taxed using the ETP cap.                                                              |
| <i>AUS ETP Excluded Payments (ETP Type R)</i>                      | For earnings that are to be treated as ETP excluded payments and reported to the ATO as ETP Type R payments. These payments are subject only to the ETP cap and taxed concessional up to the cap.                                              |
| <i>AUS ETP Non-Excluded Payments (ETP Type O)</i>                  | For earnings that are to be treated as ETP non-excluded payments and reported to the ATO as ETP Type O payments. These payments are subject to the lesser of the Whole of Income cap or the ETP cap, and are taxed concessional up to the cap. |
| <i>AUS Taxable Unused Leave Payments at Termination</i>            | For unused leave payment earnings that are taxed at marginal rates and reported to the ATO as Unused Leave Payments.                                                                                                                           |
| <i>AUS Normal Gross for Marginal Tax</i>                           | For unused leave payment earnings that are to be treated as normal gross when calculating the marginal tax.                                                                                                                                    |
| <i>AUS Lump Sum A Taxable - Type R</i>                             | For earnings that are taxed and reported to the ATO as Lump Sum A - Type R.                                                                                                                                                                    |
| <i>AUS Lump Sum A Taxable - Type T</i>                             | For earnings that are taxed and reported to the ATO as Lump Sum A - Type T.                                                                                                                                                                    |

| Pay Component Group           | Purpose                                                            |
|-------------------------------|--------------------------------------------------------------------|
| <i>AUS Lump Sum B Taxable</i> | For earnings that are taxed and reported to the ATO as Lump Sum B. |

**Note:** Don't map the termination payment earnings and deductions to the *AUS PAYG Taxable Wages* pay component group.

If you need to manually override any amount, you can use the pay component related calculation *Lump Sum D* in the *ETP Type R Tax*.

### Next Steps

Create an earning to identify 5% of Lump Sum B payments to add to the *AUS Lump Sum A Taxable - Type R* or *AUS Lump Sum A Taxable - Type T*, depending on the termination reason.

You can use the **View Payroll Tax/Allowance Data** report to view tax data for termination payments.

## Tax Setup (AUS)

### Steps: Set Up Taxes (AUS)

#### Prerequisites

All workers have effective tax declaration details recorded in Workday.

#### Context

Workday provides and maintains information on valid tax data and deductions, as required by the Australian Taxation Office (ATO). You need to enter company and worker-specific tax data for PAYG tax.

#### Steps

1. Access the **Edit AUS Company Tax Reporting** task and enter your STP key identifiers and contact details.
2. If the organization is registered to employ Working Holiday Makers, fill in the details in the Working Holiday Maker Employer Registration Grid.

| Option                                           | Description                                                                |
|--------------------------------------------------|----------------------------------------------------------------------------|
| <b>Election</b>                                  |                                                                            |
| <b>Effective Date</b>                            | The date that the company registration is effective from.                  |
| <b>Registered Working Holiday Maker Employer</b> | Select if the organization is registered to employ working holiday makers. |

3. [Set Up Worker Taxes \(AUS\)](#) on page 1721.

## Set Up Worker Taxes (AUS)

### Prerequisites

Obtain a worker's details from their:

- Tax file number declaration form (N3092).
- Online commencement form.
- Standard choice super form.
- Other employee tax documentation.
- (Optional) Withholding declaration form (N3093).

### Context

Enter these tax details for a worker to enable calculation of regular Pay As You Go (PAYG) withholding.

- Tax File Number.
- Residency Status.
- Tax Free Threshold.
- Study and Training Support Loans (STSL).

### Steps

1. Access the **Add Worker AUS Tax Details** task and select the worker to add details for.
2. Enter the **Tax Declaration Details**. As you complete the task, consider:

| Option                    | Description                                                                                                                                                                                                                                  |
|---------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Effective Date</b>     | Enter the date that the tax declaration should take effect.                                                                                                                                                                                  |
| <b>Declaration Type</b>   | Select the type of declaration that the worker submitted: <ul style="list-style-type: none"> <li>• TFN.</li> <li>• Withholding.</li> </ul> If the worker hasn't provided a declaration, ensure they've provided an Exemption Claimed reason. |
| <b>TFN Provided</b>       | Select this check box if the worker has provided their Tax File Number.<br><br><b>Note:</b> If the worker has provided a TFN and you don't select this check box, Workday calculates their tax as if they haven't provided any tax details.  |
| <b>Exemption Claimed</b>  | Select the reason that the worker is exempt from providing their Tax File Number.                                                                                                                                                            |
| <b>Payment Basis</b>      | Select the basis that you employ the worker on.                                                                                                                                                                                              |
| <b>Tax Residency</b>      | Select the worker's tax residency.                                                                                                                                                                                                           |
| <b>Country of Origin</b>  | Select the worker's country of origin if the worker is a Working Holiday Maker.                                                                                                                                                              |
| <b>Tax Free Threshold</b> | Select this check box if the worker has claimed the Tax Free Threshold.                                                                                                                                                                      |

| Option                                               | Description                                            |
|------------------------------------------------------|--------------------------------------------------------|
| <b>Student and Training Support Loan (STSL) Debt</b> | Select this check box if the worker has STSL debt.     |
| <b>Worker Signed Date</b>                            | Enter the date that the worker signed the declaration. |

3. Enter the **Medicare Levy Variations** details. As you complete the task, consider:

| Option                                                  | Description                                                                                                                         |
|---------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------|
| <b>Effective Date</b>                                   | Enter the date that the Medicare Levy Variation should take effect.                                                                 |
| <b>Inactive</b>                                         | Select if the variation is inactive.                                                                                                |
| <b>Additional Medicare Levy Surcharge Withholding %</b> | Select the tier of withholding exemption for the worker.                                                                            |
| <b>Medicare Levy Exemption</b>                          | Select the type of exemption the worker has: <ul style="list-style-type: none"> <li>• <i>Full</i></li> <li>• <i>Half</i></li> </ul> |
| <b>Medicare Levy Reduction</b>                          | Select if the worker is eligible for a Medicare Levy Reduction.                                                                     |
| <b>Spouse</b>                                           | Select if the worker has a spouse.                                                                                                  |
| <b>Combined Weekly Income Below Limit</b>               | Select if the worker and their spouse's weekly income is below the eligibility threshold for an exemption.                          |
| <b>Number of Dependent Children</b>                     | Enter the number of dependent children that the worker has.                                                                         |
| <b>Worker Signed Date</b>                               | Enter the date that the worker signed the declaration.                                                                              |

4. Enter the **PAYG Upward Variations** details. As you complete the task, consider:

| Option                                     | Description                                                         |
|--------------------------------------------|---------------------------------------------------------------------|
| <b>Effective Date</b>                      | Enter the date that the Medicare Levy Variation should take effect. |
| <b>Inactive</b>                            | Select if the variation is inactive.                                |
| <b>Additional PAYG Withholding per Pay</b> | Enter the amount of additional PAYG to withhold.                    |
| <b>Worker Signed Date</b>                  | Enter the date that the worker signed the declaration.              |

## Fringe Benefits Tax (AUS)

### Concept: Record Fringe Benefits Tax (AUS)

You can record Reportable Fringe Benefits Amounts (RFBA) for workers incrementally throughout the year, or as a one-off input at the end of the Fringe Benefit Tax (FBT) year. Workday reports your YTD Reportable Fringe Benefits Amounts to the ATO in every STP submission.

You can record RFBA by doing a pay input using the Workday delivered pay component: **AUS Reportable Fringe Benefits (FBT)**. RFBA that you report in Workday doesn't impact a worker's gross-to-net pay.

**Note:** The FBT year runs from 1st April to the 31st March. Don't enter FBT accumulated between 1st April and the 30th June into Workday until the new tax year starts on the 1st July to avoid FBT being reported to the ATO in the incorrect period.

Workday reports the YTD sum of all the pay components in the pay component group to the ATO: **All Reportable Fringe Benefits Amounts (FBT/RFBA)**. If you create your own FBT earnings, ensure that you add them to this pay component group so that they're reported to the ATO.

Workday delivers the pay balance: **All AUS Reportable Fringe Benefits Amounts (FBT/RFBA) - YTD** to sum all pay components in the pay component group for reporting purposes.

## Set Up Foreign Employment Income (FEI) and Inbound Assignees to Australia (IAA) Tax Reporting (AUS)

### Prerequisites

These domains in the AUS Payroll functional area:

- *Set Up: Payroll (STP) - AUS*
- *Set Up: Payroll*

### Context

Workday enables you to record and report workers' Foreign Employment Income (FEI) and the income of Inbound Assignees to Australia (IAA) to the Australian Taxation Office (ATO) using Single Touch Payroll (STP).

### Steps

1. Access the **View AUS STP Reporting Categories** task.
2. For these reporting categories, use the Edit button to add the calculation you want to use:

| Reporting Category                    | Available Calculations                                                                                                                                                                                                                      |
|---------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Reportable Gross Amount</b>        | <ul style="list-style-type: none"> <li>• <b>AUS - FEI/IAA Reportable Gross for an AUS/Foreign Resident affecting GTN and STP</b></li> <li>• <b>AUS - FEI/IAA Reportable Gross for an AUS/Foreign Resident affecting only STP</b></li> </ul> |
| <b>Overtime Amount</b>                | <ul style="list-style-type: none"> <li>• <b>AUS - FEI/IAA Overtime for an AUS/Foreign Resident affecting GTN and STP</b></li> <li>• <b>AUS - FEI/IAA Overtime for an AUS/Foreign Resident affecting only STP</b></li> </ul>                 |
| <b>Bonuses and Commissions Amount</b> | <ul style="list-style-type: none"> <li>• <b>AUS - FEI/IAA Bonus for an AUS/Foreign Resident Affecting GTN and STP</b></li> <li>• <b>AUS - FEI/IAA Bonus for an AUS/Foreign Resident affecting only STP</b></li> </ul>                       |
| <b>Directors' Fees Amount</b>         | <ul style="list-style-type: none"> <li>• <b>AUS - FEI/IAA Directors Fees for an AUS/ Foreign Resident affecting GTN and STP</b></li> <li>• <b>AUS - FEI/IAA Directors Fees for an AUS/ Foreign Resident affecting only STP</b></li> </ul>   |

3. Access the **Edit Run Category** task and select a run category.
4. Add the relevant FEI and IAA calculations to the **Additional Pay Components to Calculate** field.

**Result****Next Steps**

Add pay inputs to the earnings and deductions for a worker. Add the amount in Australian dollars. Add the income stream code of FEI or IAA, and the worker's tax residency country code as worktags on the earnings and deductions.

Pay inputs that you add for the pay components that affect Gross to Net, will be shown on the worker's payslip. Pay inputs that you add for pay components that affect the STP report only won't be shown on the worker's payslip.

**Note:** Zero values aren't reported in STP reports. If the YTD value is zero, the value column will be empty.

**PAYG for Working Holiday Makers (AUS)**

Workday enables you to tax workers who are working holiday makers using the Working Holiday Maker tax rate. The Working Holiday Maker status for workers and employers, and the workers' income type is reported to the Australian Taxation Office using Single Touch Payroll.

To use the Working Holiday Maker tax rate, ensure that:

- The workers have a TFN Declaration declaring themselves as a working holiday maker.
- The company's Working Holiday Maker Employer Registration status is recorded in the **Edit AUS Company Tax Reporting** task.

**Note:**

If the employer isn't registered as a working holiday maker employer, Workday will use the Foreign Resident tax rate for working holiday makers.

The pay calculation for working holiday makers requires a YTD taxable amount. When you begin using Workday Payroll for Australia, ensure that you include workers' YTD Taxable Amounts when uploading your pay history.

**Withholding Orders (AUS)**

---

**Setup Considerations: Income Withholding Orders (AUS)**

You can use this topic to help make decisions when planning your configuration and use of Australian income withholding orders. It explains:

- Why to set it up.
- How it fits into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

**What It Is**

Workday enables you to process income withholding orders using rules that follow Australian legislation. You can process:

- Child support.

- Court orders.
- Section 72A orders.
- 

### Business Benefits

Workday helps you to comply with withholding order requirements by:

- Determining the amount to withhold from the worker's earnings.
- Applying withholding limits and setting priorities for what to withhold.
- Override the withholding order calculation rules in accordance with legislative changes.
- Providing visibility into the calculation rules that Workday uses to calculate withholding orders.
- Providing Workday-delivered statutory pay components for each withholding type.
- Dynamically displaying the required fields for each type of withholding order you record.
- Beginning automatic deductions during payroll processing once you record a withholding order.
- Calculating multiple withholding orders based on the rules for each order type and state or territory.
- Aggregating withholding amounts to avoid exceeding limits for withholding orders.

### Use Cases

- Payroll administrators can view active and inactive withholding orders directly from the worker's profile.
- For workers who have multiple withholding orders, and the total amount to withhold exceeds the protected earnings limit, Workday uses statutory rules to calculate the amount to withhold per order. You can override the amount if required.
- You can override the applicable legislation for court orders.
- When a worker has multiple withholding orders, you can change the order in which they're processed.
- You can enter amended support orders with different dates. Workday creates a new record for the amended order, and retains the original order.

### Questions to Consider

| Questions                                                                                   | Considerations                                                                                                                                                                                                                                                                                                                                                               |
|---------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| For workers with multiple withholding orders, which ones have higher priority?              | <p>When a worker has multiple withholding orders, Workday assigns the same processing priority to all orders of the same type. Workday uses the order date as the sorting method. Unless you override the priority, orders will be processed according to their dates.</p> <p>By default, Workday will process section 72a and child support orders before court orders.</p> |
| How will the money be disbursed?                                                            | <p>Workday doesn't process disbursements during the pay run. You need to run a separate process. Consider when and how to run the settlement process.</p>                                                                                                                                                                                                                    |
| Do you want workers to be able to see attachments and comments on their withholding orders? | <p>The ability to view the withholding order, any attachments, and comments are controlled by different security domains.</p> <p>The domain to view the withholding order is:<br/><i>Worker Data: Payroll (Withholding Orders) - AUS.</i></p>                                                                                                                                |

| Questions | Considerations                                                                                                                    |
|-----------|-----------------------------------------------------------------------------------------------------------------------------------|
|           | The domain to see attachments and comments on the withholding order is: <i>Worker Data: Payroll (Income Withholding Orders)</i> . |

### Recommendations

Terminate withholding orders for workers who are terminated or transfer out of a company after their final pay in a company. This avoids unintentional deductions if the worker is rehired.

If the worker's employing company changes, contact the deduction recipient to inform them of the change.

### Requirements

Add earnings and deductions to the pay component groups that Workday uses to calculate disposable income.

### Limitations

You can't delete withholding orders that Workday has calculated as part of a payroll, even if the payroll isn't complete yet. You can inactivate the order instead.

### Tenant Setup

Define IDs for deduction recipients. Workday will use the IDs during processing and with integrations on the **Edit Tenant Setup - Financials** task.

### Security

| Domains                                                 | Considerations                                                      |

## Integrations

You can use these web services when creating a custom integration for withholding order processing to or from a third-party application:

- Get Australia Withholding Orders (Web Service)
- Put Australia Withholding Orders (Web Service)

## Connections and Touchpoints

Create and set up bank accounts to pay third-party deduction recipients.

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships in your tenant. Learn more about the [Workday Touchpoints Kit](#) on Workday Community.

## Concept: Withholding Orders (AUS)

### Withholding Order Types

Workday provides rules for processing these types of withholding orders:

- Section 72A Orders.
- Child Support.
- Court Orders.

### Withholding Order Deductions Calculation

Based on state and federal rules, Workday:

- Determines the amount to withhold.
- Determines the applicable protected earnings.
- Applies the withholding limit to protected earnings.
- Sets the withholding order priority.
- Follows statutory rules to determine what to withhold for each order when:
  - A worker has multiple orders.
  - The amount to withhold exceeds the protected earnings amount.

Workday applies the applicable legislation to withholding orders. The applicable legislation manages these criteria:

- Protected earnings.
- Maximum amount to withhold.
- Deduction of a single or multiple orders in a single pay run.

You can view the details for each withholding order type and applicable legislation in the **View Payroll Withholding Order Data** report.

### Withholding Order Priority

When a worker has multiple withholding orders, the withholding order priority indicates the order that Workday processes them.

Workday delivers these withholding order priorities, with lower numbers indicating a higher priority:

- 200 - Section 72A Orders.
- 300 - Child Support.
- 400 - Court Orders.

You can override the delivered withholding order priorities using the **Withholding Order > Override Priority** related action on the withholding order.

### View Withholding Orders

You can view active and past withholding orders in the **Pay > Withholding Orders** tab on the worker profile.

## Steps: Set Up Withholding Orders (AUS)

### Prerequisites

Security: *Worker data (Garnishee Orders) - AUS*

### Context

Review the setup considerations for AUS withholding orders.

Set up withholding orders to begin automatic deductions during payroll processing.

### Steps

1. [Set Up Pay Component Groups to Calculate Disposable Income \(AUS\)](#)
2. [Create Deduction Recipient](#)
3. Record a withholding order:
  - [Record a Child Support or Section 72A Withholding Order \(AUS\)](#).
  - [Record a Court Order \(AUS\)](#).
4. (Optional) [Override Legislation Rule \(AUS\)](#)
5. (Optional) [Override Withholding Order Priority \(AUS\)](#).
6. (Optional) [Override Protected Earnings \(AUS\)](#).

### Next Steps

You can:

- Override the defaults for each withholding order type. See the **All Payroll Withholding Order Data** report for the limits on each type of withholding order.
- Override the processing order of withholding orders.
- Delete withholding orders that don't have any payroll input or completed results, using the related action. **Withholding Order > Delete**.

Use these web services to integrate with third-party vendors that manage withholding orders:

- Get Australia Withholding Orders (Web Service).
- Put Australia Withholding Orders (Web Service).

## Set Up Pay Component Groups to Calculate Disposable Earnings (AUS)

### Prerequisites

Security: *Set Up: Payroll (Calculations - Payroll Specific)*

Create the earnings and deductions that you use to calculate disposable income.

### Context

Workday uses disposable earnings to derive the income that withholding orders can be deducted from. Workday determines which pay component groups to resolve during processing based on:

- Applicable legislation.
- Order type.
- Any overrides that have been applied at the order level.

### Steps

1. Add earnings to the Workday provided pay component groups:

- Access the **Edit Earning** task.
- On the **Non-Effective Dated** tab, select the appropriate pay component groups in the **Groups** field.

| Earnings                                                               | Pay Component Group            |
|------------------------------------------------------------------------|--------------------------------|
| Earnings paid to employees regularly, such as base pay and hourly pay. | <i>AUS Adds to Gross [AUS]</i> |
| One-time or occasional earnings.                                       | <i>AUS Adds to Gross [AUS]</i> |

2. Add deductions to the Workday provided pay component groups:

- Access the **Edit Deduction** task.
- On the **Non-Effective Dated** tab, select the appropriate pay component groups in the **Groups** field.

| Deductions                                                               | Pay Component Group                                                 |
|--------------------------------------------------------------------------|---------------------------------------------------------------------|
| All pre-tax deductions.                                                  | <i>AUS Pre Tax Deductions [AUS]</i>                                 |
| All pre-tax deductions that are deducted after child support deductions. | <i>AUS Excluded Pre Tax Deductions from Withholding Order [AUS]</i> |

### Result

Workday subtracts a worker's protected earnings from their disposable earnings, to determine the maximum amount that can be withheld.

### Example

Disposable Earning Calculation:

- Disposable earnings - protected earnings = maximum amount for deductions.
- + Periodic earnings
- + One time payments or irregular earnings
- - All pre-tax deductions
- + Excluded deductions
- - PAYG taxes
- = Disposable income

## Related Information

### Tasks

[Steps: Create Deductions](#) on page 227

[Steps: Create Earnings](#) on page 222

## Create Deduction Recipient

### Prerequisites

Set up the bank accounts to pay third-party deduction recipients.

Security: *Worker Data: Payroll (Income Withholding Orders)* domain in the Core Payroll functional area.

Security: (Optional) *Set Up: Payroll Third-Party Payments* domain in the Core Payroll functional area.

### Context

Record information for a third-party deduction recipient, including the:

- Recipient
- Contact information
- Method of payment
- Bank account details

Select a deduction recipient when creating:

- a withholding order or making an ad hoc payment (CAN, FRA, USA)
- a court order or making an ad hoc payment (UK)
- a withholding order (AUS)

**Note:** For Workday Payroll for Australia, Workday doesn't settle during the pay run process. Create a settlement run for payroll third-party payments to settle.

Workday delivers 2 web services that you can use when creating a custom integration for garnishment processing to or from a third-party application:

- *Put Deduction Recipients* loads deduction recipient information into Workday.
- *Get Deduction Recipients* retrieves information from Workday.

### Steps

1. Access the **Create Deduction Recipient** task.
2. Enter the recipient **Name**.
3. (Optional) For Payroll for the U.S., enter an **Alternate Deduction Recipient Name**.  
For national deduction recipients with multiple locations, such as the Internal Revenue Service (IRS), create an alternate deduction recipient to associate with a different address. When entering withholding orders, you can select the original or alternate deduction recipient and associated address.
4. (Optional) Enter an **External Entity ID** that helps you identify the recipient.  
Enter a payee ID for a withholding order.
5. (Optional) Define IDs for deduction recipients.  
The **Deduction Recipient ID** field displays when you've configured it on the **Edit Tenant Setup - Financials** task. Select an ID Definition from the **ID Generator for Deduction Recipient** field in the **Business Entity Sequence ID** section. Workday uses the ID during processing and with integrations.
6. Select the **Payment Type**.
7. Select the **Country** for the deduction recipient. This field isn't effective dated and is required, so you must update it when editing existing deduction recipients.

8. Add contact information for the recipient.

Selecting the **Visibility > Public** check box makes the contact information visible in Workday.

9. Add a **Settlement Bank Account** and enter information for the receiving account.

You can only have 1 active settlement bank account at a time.

10.(Optional) Select the **Inactive** option to deactivate a specific snapshot of a deduction recipient. To deactivate the entire deduction recipient, you must deactivate all snapshots.

11.(Optional) Select the **Enable Payroll Third-Party Payments** option to generate and settle payments for Involuntary Withholding Order or Court Order deductions. For more information, see: [Concept: Payroll Third-Party Payments](#).

12.(Optional) The **Always Separate Payment** option is enabled by default when you select **Enable Payroll Third-Party Payments**. This option generates a separate payment for each payable item in a settlement run. If the payable item and payment have a 1:1 relationship when you generate an electronic payment for an Income Withholding Order or Court Order deduction recipient, we recommend you keep this option enabled.

13.(Optional) Select a **Category**. These categories are configured through the **Maintain Payroll Third-Party Payments Categories** task. You can reference these categories in bank routing rules, settlement filtering, and the **Maintain Remittance Setup Rule** task. Workday generates both a Workday ID and a Reference ID for each payroll third-party payment category. You can customize the Reference ID, but not the Workday ID. You can use Reference IDs when running the Put Payroll Deduction Recipient and Put Bank Routing Rules web services. You can't remove a category while it's assigned to a deduction recipient or referenced in bank routing rules.

## Next Steps

Access the **View Deduction Recipient** report. To see the **Deduction Recipient ID**, select **Integration IDs > View IDs** from the related actions menu of the deduction recipient.

When creating or editing a deduction recipient, you can view future, current, and previous deduction recipient snapshots. The section under the **Effective Dated Details** header represents the deduction recipient snapshot. Snapshots enable you to:

- Enter an effective date when creating or editing a deduction recipient.
- View the configuration as of a specific effective date of a deduction recipient.
- Make configuration changes as of a specific date without impacting prior configurations.
- Deactivate a deduction recipient.

You can add rows to a deduction recipient snapshot only if they're dated after the current effective snapshot. When you add a new snapshot, Workday copies the configuration of the prior snapshot to the newly added snapshot.

To remove a deduction recipient, access the **Delete Deduction Recipient** task. You can only delete deduction recipients that have never been in use.

## Record Withholding Orders (AUS)

### Record a Child Support or Section 72A Withholding Order (AUS)

#### Prerequisites

Security: *Worker Data: Payroll (Withholding Orders)* - AUS domain in the AUS Payroll functional area.

#### Context

Record a Child Support or Section 72A withholding order to begin deductions during payroll processing.

#### Steps

1. Access the **Record AUS Withholding Order for Worker** task.
2. Enter the worker name and select *Child Support Order (AUS)* or *Section 72A Order (AUS)*.
3. As you complete the task, consider:

| Option                        | Description                                                                                                                                                                                                                                                                                                  |
|-------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Entry Type</b>             | <ul style="list-style-type: none"> <li>• <i>Original Order</i>: Select when you enter a withholding order for the first time.</li> <li>• <i>Amended</i>: Select when you are updating an existing withholding order.</li> <li>• <i>Terminate</i>: Select when you are ending a withholding order.</li> </ul> |
| <b>Order Number</b>           | The number to identify the withholding order through its lifecycle. Once you have chosen an Order Number, you can't change it.                                                                                                                                                                               |
| <b>Order Date</b>             | Issue date of the withholding order.                                                                                                                                                                                                                                                                         |
| <b>Received Date</b>          | The date and time that your organization received the withholding order.                                                                                                                                                                                                                                     |
| <b>Effective Date</b>         | The date that deductions commence. The <b>Effective Date</b> must be on or after the <b>Order Date</b> .                                                                                                                                                                                                     |
| <b>Company</b>                | <p>Workday automatically fills the <b>Company</b> with the worker's company on the <b>Date Received</b>.</p> <p>You can't change the company once there are completed pay results that include the withholding order.</p>                                                                                    |
| <b>Order Period Frequency</b> | Frequency of the pay period amount as indicated on the order. Workday converts the amount to deduct in each pay period when the worker's pay frequency differs from the frequency on the withholding order.                                                                                                  |
| <b>Issued In</b>              | Child Support and Section 72A orders are issued at a Federal level.                                                                                                                                                                                                                                          |
| <b>Deduction Recipient</b>    | The recipient of the withholding deduction.                                                                                                                                                                                                                                                                  |

4. As you complete the Deductions Amount section, consider:

| Option            | Description                                                                                                                             |
|-------------------|-----------------------------------------------------------------------------------------------------------------------------------------|
| Amount Type       | Select <i>Amount on Order</i> . The actual amount on the order aligned to the period frequency specified on the order will be deducted. |
| Pay Period Amount | The amount deducted per pay period.                                                                                                     |

5. As you complete the Protected Earnings section, consider:

| Option                      | Description                                                                               |
|-----------------------------|-------------------------------------------------------------------------------------------|
| Override Protected Earnings | Workday uses the legislated protected earnings based on the Applicable Legislation value. |
| Amount Type                 | Only available when you check the <b>Override Protected Earnings</b> check box.           |
| Pay Period Amount           | Only available when you check the <b>Override Protected Earnings</b> check box.           |

### Next Steps

**Note:** You can't edit or delete a withholding order that has been used in a calculation. Use the *Amend* or *Terminate* **Entry Type** instead.

- **Run Pay Calculation** and review the results to ensure that the correct amounts are deducted. You can use the related action **View Deduction History** on the withholding order to view the deduction amount for each pay period.
- View details for calculating withholding orders using **View Payroll Withholding Order Data**.
- To stop a withholding order, select the **Terminate Order** check box on the withholding order.

### Record a Court Order (AUS)

#### Prerequisites

Security: *Worker Data: Payroll (Withholding Orders)* - AUS domain in the AUS Payroll functional area.

#### Context

Record a court order to begin deductions during payroll processing.

#### Steps

1. Access the **Record AUS Withholding Order for Worker** task.
2. Enter the worker name and select *Court Order (AUS)*.
3. As you complete the task, consider:

| Option     | Description                                                                                                                                                                                                                     |
|------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Entry Type | <ul style="list-style-type: none"> <li>• <i>Original Order</i>: Select when you enter a withholding order for the first time.</li> <li>• <i>Amended</i>: Select when you are updating an existing withholding order.</li> </ul> |

| Option                        | Description                                                                                                                                                                                                                             |
|-------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                               | <ul style="list-style-type: none"> <li><i>Terminate</i>: Select when you are ending a withholding order.</li> </ul>                                                                                                                     |
| <b>Order Number</b>           | <p>Use the number on the order from the issuing authority.</p> <p>If there isn't a number from the issuing authority, enter a number.</p> <p>Once you choose an order number, you can't change it.</p>                                  |
| <b>Order Date</b>             | Issue date of the withholding order.                                                                                                                                                                                                    |
| <b>Received Date</b>          | The date and time that your organization received the withholding order from the issuing authority.                                                                                                                                     |
| <b>Effective Date</b>         | The date that deductions commence. The <b>Effective Date</b> must be on or after the <b>Order Date</b> .                                                                                                                                |
| <b>Company</b>                | <p>Workday automatically fills the <b>Company</b> with the company that the worker was in on the <b>Received Date</b>.</p> <p>You can't change the company once there are completed pay results that include the withholding order.</p> |
| <b>Order Period Frequency</b> | Frequency of the pay period amount as indicated on the order. Workday converts the amount to deduct in each pay period when the worker's pay frequency differs from the frequency on the withholding order.                             |
| <b>Issued In</b>              | The state/territory that the withholding order has been issued in, or Federal for federal orders.                                                                                                                                       |
| <b>Deduction Recipient</b>    | The recipient of the withholding deduction.                                                                                                                                                                                             |

4. As you complete the **Deductions Amount** section, consider:

| Option                   | Description                                                                                                                             |
|--------------------------|-----------------------------------------------------------------------------------------------------------------------------------------|
| <b>Amount Type</b>       | Select <i>Amount on Order</i> . The actual amount on the order aligned to the period frequency specified on the order will be deducted. |
| <b>Pay Period Amount</b> | The amount deducted per pay period.                                                                                                     |

5. As you complete the **Protected Earnings** section, consider:

| Option                             | Description                                                                               |
|------------------------------------|-------------------------------------------------------------------------------------------|
| <b>Override Protected Earnings</b> | Workday uses the legislated protected earnings based on the Applicable Legislation value. |
| <b>Amount Type</b>                 | Displays when you check the <b>Override Protected Earnings</b> check box.                 |
| <b>Pay Period Amount</b>           | Displays when <b>Override Protected Earnings</b> is checked.                              |

## Next Steps

**Note:** You can't edit or delete a withholding order that has been used in a calculation. Use the *Amend* or *Terminate Entry Type* instead.

- Access the **Run Pay Calculation** task and review the results to ensure that the correct amounts are deducted. You can use the related action **View Deduction History** on the withholding order to view the deduction amount for each pay period.
- View details for calculating withholding orders on the **View Payroll Withholding Order Data** report.
- To stop a withholding order, select the **Terminate Order** check box on the withholding order.

### Tasks

[Override Protected Earnings \(AUS\)](#) on page 1736

## Override Legislation Rule (AUS)

### Prerequisites

Security: *Setup: Payroll (Withholding Orders)* - AUS domain in the AUS Payroll functional area.

### Context

You can manually override the Workday assigned default legislation rule for court orders.

Child Support and Section 72A orders default to *Federal*.

**Note:** You can't amend a withholding order once it has been processed in a payroll calculation.

If you want to change the legislation rule for only 1 withholding order, you can:

- Select the desired rule in the **Legislation Rule** field when you initially record the withholding order.
- For an existing withholding order, select the related action **Withholding Order > Edit**, then select the desired rule in the **Legislation** field.

### Steps

1. When creating a withholding order, set the **Issued In State** to the state of the order, or to Federal for federal orders.
2. The **Legislation Rule** will default to the **Issued State**. You can change it to:

| Option                | Description                                                                  |
|-----------------------|------------------------------------------------------------------------------|
| <b>Resident State</b> | The state that the residential address of the worker is in.                  |
| <b>Work State</b>     | The address of the workplace of the primary position of the worker.          |
| <b>Federal</b>        | Workday ignores all addresses. The rules for a child support order are used. |

### Result

Workday applies the legislation rule that you selected to this withholding order.

## Next Steps

Run the pay calculation.

If you have already calculated a pay result for the worker, run the pay calculation again.

## Override Withholding Order Priority (AUS)

### Prerequisites

Record multiple withholding orders for a worker.

### Context

When a worker has multiple withholding orders, Workday assigns a processing priority to each order, based on the rules of the issuing agencies. Workday delivers this priority:

- 200 - Section 72A Orders.
- 300 - Child Support.
- 400 - Court Orders.

If multiple withholding orders have the same priority, the **Order Received Date** determines the priority, with older orders having priority over newer ones.

You can override the default priority order assigned to any order type.

You can view the processing priorities for a worker's withholding orders on the **Withholding Orders for Worker** report.

### Steps

1. Access the **Withholding Orders for Worker** report.
2. Select **Withholding Order > Override Priority** from the related actions menu of a withholding order. The **Override Withholding Order** task displays.
3. Enter a number in the **Priority Override** field to replace the **Priority Default**. A lower number indicates a higher priority.

**Note:** When you override the withholding order priority, Workday doesn't update the priority order when you terminate a withholding order.

### Next Steps

You can access the **Withholding Orders for Worker** report to view all of a worker's withholding orders and the priority of them.

## Override Protected Earnings (AUS)

### Prerequisites

Security: *Setup: Payroll (Withholding Orders)* - AUS domain in the AUS Payroll functional area.

### Context

You can override the legislated protected earnings amount manually. Example, if the withholding order specifies specific protected earnings that might be different from the legislated values.

**Note:** When you override the protected earnings amount, Workday won't update the protected amount for the withholding order if there are any legislated adjustments to the amount. Manually make any adjustments to the protected earnings amount to ensure that you're compliant.

You can review the default protected earnings amounts that Workday uses by using the **View Lookup Table (Workday Owned)** report, search for **AUS Withholding Order**, and select the state or territory.

## Steps

1. When you record a withholding order, in the **Protected Earnings** section, check the **Override Default Amount** check box.
2. In the **Amount Type** field, select the applicable type.
3. Enter the new protected earnings amount in the **Pay Period Amount** field.

**Note:** The amount aligns with the withholding order frequency. Workday maintains the protected earnings rates for each state or territory. You can view the rates at these lookup tables:

- *AUS Withholding Order - ACT Court Order Protected Earnings*
- *AUS Withholding Order - Federal Child Support Protected Earnings*
- *AUS Withholding Order - NSW Court Order Protected Earnings*
- *AUS Withholding Order - WA Court Order Protected Earnings*

## A

### Academic Date Range

The period of time associated with a student recruiting cycle.

### Academic Level

The level of an educational objective that a student can pursue at an institution, such as:

- Undergraduate, Graduate, or Professional at a university.
- Associates or Baccalaureate at a community college.

### Academic Unit

A Workday organization type that represents a school, college, university, or other unit of your institution. These units can recruit prospective students, admit students, offer programs of study or courses, or administer financial aid. Academic units are also used with academic appointments in Workday.

### Academic Unit Hierarchy

A hierarchical grouping of academic units primarily used for roll-up reporting.

### Accounting Cash

A group of cash ledger accounts that you can use to check cash balances against during settlement.

### Accounting Cash Pool

One or more primary balancing worktag hierarchies that you can use to pool cash ledger balances for cash balance checks during settlement.

|                                     |                                                                                                                                                                                                                                                         |
|-------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Active Candidate</b>             | A person with an application for a specific job requisition. Candidates must be linked to a job requisition for Workday to initiate a job application event.                                                                                            |
| <b>All Ledgers Journal</b>          | An accounting journal that's not configured as a single ledger for the given company and is posted to both primary and alternate ledgers.                                                                                                               |
| <b>Applicant Pool</b>               | A subset of applications in an application grouping. Applicant pools enable you to control and adjust workload for application reviewers.                                                                                                               |
| <b>Application Grouping</b>         | A grouping of applications for the same admitting level of an academic unit and the same anticipated start date. Groupings can have 1 or more application pools, with an admissions counselor assigned to each pool.                                    |
| <b>Auto-fill</b>                    | A time entry option that copies time blocks from a worker's schedule or from a previous week when entering time.                                                                                                                                        |
| <b>Award</b>                        | A contract agreement with your sponsor in the form of funding to perform an activity for a public purpose. It defines how to capture direct and facilities and administration costs, recognize revenue, and bill your sponsor.                          |
| <b>Award Costs Processing (ACP)</b> | Processing facilities and administration costs and revenue recognition related to spend transactions on awards.                                                                                                                                         |
| <b>Award Credits</b>                | Percentage of award or award lines you allocate to specific worktags for reporting purposes.                                                                                                                                                            |
| <b>Award Line</b>                   | A line of authorized amount associated with a grant on an award. It includes information on the line's effective date, spend restrictions, basis limit, salary cap, and facilities and administration cost rates for expenditures charged to the grant. |
| <b>Award Tasks</b>                  | Administrative tasks that you do or track for a sponsor to support the terms of your award contract. Example: Quarterly progress report, financial report.                                                                                              |
| <b>Aggregation Security Group</b>   | A security group that grants access rights to members of an included set of security groups. Revokes access of members of any excluded security groups.                                                                                                 |
| <b>Approve</b>                      | An action in a business process that designated participants select to progress the event to the next step.                                                                                                                                             |
| <b>Assignable Roles</b>             | Positions you can assign to organization roles.                                                                                                                                                                                                         |

|                                         |                                                                                                                                                                                                                                                                                                                          |
|-----------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Basis Limit</b>                      | The maximum amount of direct costs you can use to calculate facilities and administration costs.                                                                                                                                                                                                                         |
| <b>Base Pay Element</b>                 | <p>The compensation components that are included in the calculation of base pay for the purposes of determining the compa-ratio and target penetration.</p> <p>Example: Include both base pay and bonuses in the base pay calculation for compa-ratio.</p>                                                               |
| <b>Benefit Credit Bundle</b>            | A defined group of benefit credits that you can award together.                                                                                                                                                                                                                                                          |
| <b>Benefit Defaulting Rule</b>          | A rule that identifies the benefit plans, coverage targets, and coverage amounts that employees receive by default when they do not complete an enrollment event.                                                                                                                                                        |
| <b>Benefit Event Rules</b>              | These rules specify coverage increase limits, EOI requirements, waiting periods, and other rules and conditions of enrollment for benefits enrollment events.                                                                                                                                                            |
| <b>Benefit Event Type</b>               | Identifies the events that trigger benefit enrollment, such as open enrollment, new hires, or the birth of a child. It also identifies the coverage types to make available to employees for when an event of this type occurs.                                                                                          |
| <b>Benefit Group</b>                    | A group of employees who qualify for benefits based on eligibility rules. Employees must be included in a benefit group to enroll in a benefit plan.                                                                                                                                                                     |
| <b>Business Object</b>                  | Objects used to store data in Workday (such as organizations or workers). A business object has <i>fields</i> and <i>instances</i> , which are analogous to rows and columns in a spreadsheet. Workday links related business objects: a worker is associated with a position, the position to a job profile, and so on. |
| <b>Business Process Definition</b>      | The tasks that compose a business process, the order in which they must be done, and who can do them.                                                                                                                                                                                                                    |
| <b>Business Process Instance</b>        | A business process that the initiator has started. The <i>Hire Employee for Organization X</i> business process definition becomes an instance when the initiator uses it to hire an employee.                                                                                                                           |
| <b>Business Process Security Policy</b> | A business process security policy secures the steps and process-wide actions including view, rescind, cancel and correct. It specifies which security groups have access to each action.                                                                                                                                |

**C**

|                                     |                                                                                                                                                                                                                                                                                                                                                     |
|-------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Calculated Time</b>              | Result of applying time calculations to a worker's reported time. Automates application of company or regulatory rules.                                                                                                                                                                                                                             |
| <b>Calendar-Based Time Entry</b>    | A time entry method that uses the time entry calendar as the focal point for entering, editing, and submitting time.                                                                                                                                                                                                                                |
| <b>Cancel (business process)</b>    | Canceling a business process stops the workflow in progress and reverses changes made to data. You can't cancel a completed business process; you must rescind it. A securable action in a business process security policy.                                                                                                                        |
| <b>Candidate</b>                    | Candidates include both prospects and active candidates.                                                                                                                                                                                                                                                                                            |
| <b>Candidate Pipeline</b>           | All active candidates.                                                                                                                                                                                                                                                                                                                              |
| <b>Candidate Pool</b>               | Candidates grouped together based on specific criteria.                                                                                                                                                                                                                                                                                             |
| <b>Cascading Leave</b>              | A sequence of related leave types that are linked together. When an employee meets the conditions defined for ending a leave, Workday generates a return from leave request and a separate request for the next leave.                                                                                                                              |
| <b>Company</b>                      | Companies are organizations within Workday that represent the internal business entities within your enterprise. In Workday Financial Management, companies are the primary organization for all business processes. A Company is considered the level at which one holds a balanced set of books and should reflect Legal Entities where possible. |
| <b>Company Hierarchy</b>            | Defines a parent-child or reporting relationship between Companies in your organizations. The way that you structure your hierarchies influences many important Workday functions, especially role assignments, planning, and reporting.                                                                                                            |
| <b>Compensation Basis</b>           | A grouping of compensation components, such as salary, commission, and allowance plans, that define estimated earnings for an employee population.                                                                                                                                                                                                  |
| <b>Compensation Component</b>       | The umbrella term for compensation packages, grades, grade profiles, and plans that can be associated with compensation eligibility rules.                                                                                                                                                                                                          |
| <b>Compensation Defaulting Rule</b> | A rule that establishes the criteria for how compensation components default to worker compensation during staffing transactions (such as hire or job change).                                                                                                                                                                                      |
| <b>Compensation Element</b>         | Compensation elements link Compensation to Payroll. When a compensation element is attached to a plan that is assigned to an employee, Workday                                                                                                                                                                                                      |

|                                      |                                                                                                                                                                                                                                                         |
|--------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                      | can determine which earnings to use to pay the employee.                                                                                                                                                                                                |
| <b>Compensation Package</b>          | A grouping of compensation guidelines (grades, grade profiles, and their associated steps) and plans that you can assign to workers as a set. Packages provide a quick view of the eligible plans for a particular job or group of employees.           |
| <b>Compensation Rule</b>             | Guidelines for determining which workers are eligible for which components of compensation.                                                                                                                                                             |
| <b>Compensation Step</b>             | A specific monetary amount within a grade or grade profile.                                                                                                                                                                                             |
| <b>Compensation Target Rule</b>      | A rule used to segment your employee population for assignment of compensation plans.                                                                                                                                                                   |
| <b>Conditional Calculation</b>       | Time calculation that tags time blocks that meet certain conditions.                                                                                                                                                                                    |
| <b>Conditions</b>                    | Conditions are one or more logical matches that are resolved to True or False and used to decide if some action should be taken. You can add conditions to steps in a business process to determine if the step should run.                             |
| <b>Connection Map</b>                | A tool on a customer profile that enables you to establish and manage the relationships between business entities and ship-to addresses.                                                                                                                |
| <b>Connector</b>                     | A set of 1 or more integration templates that provide a framework for building integrations in a particular functional area. The integration can support a specific type of data, or can support a specific endpoint (example: Salesforce.com or Okta). |
| <b>Consolidated Billing Schedule</b> | A billing schedule type that allows you to combine all charges for multiple projects or services within a specific billing period into one invoice.                                                                                                     |
| <b>Contextual Custom Report</b>      | A custom report created from the related actions menu of a Workday object by selecting <b>Reporting &gt; Create Custom Report from Here</b> . Simplifies choices of data and fields to those related to the context of the object.                      |
| <b>Contract Rate Sheet</b>           | A document that outlines the contract billing hourly rates for roles such as the engineer, manager, or consultant, with the option to add billing rules for specific contract considerations.                                                           |
| <b>Conversation Tag</b>              | A descriptor, such as Dietary Restrictions or Special Needs that you can assign to an engagement conversation to identify its topic. You can search for conversations by conversation tag.                                                              |
| <b>Conversation Topic</b>            | A conversation tag or recruiting event name that you can associate with an engagement conversation to make conversations easier to find.                                                                                                                |
| <b>Correct (business process)</b>    | Correcting a business process changes a specification or data in the workflow while in                                                                                                                                                                  |

|                                                    |                                                                                                                                                                                                                                                                                  |
|----------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                                    | progress. A securable action in a business process security policy.                                                                                                                                                                                                              |
| <b>Cost Reimbursable Spend</b>                     | A billing item that Workday creates to help you bill your sponsor for award-related spending. The cost reimbursable spend amount includes both the original spend amount and any overhead costs Workday calculates based on your award costs configurations.                     |
| <b>Coverage Target</b>                             | Defines whether a specific health care plan or insurance plan applies only to the employee or also to the dependents, spouse, family, and so on.                                                                                                                                 |
| <b>Cross Plan Dependency</b>                       | Limits the coverage options available to workers during an enrollment event based on their choice of other benefit plans and coverage amounts.<br><br>Example: You can limit coverage in a specific plan to a percentage of the total coverage in 1 or more other benefit plans. |
| <b>Custom Report</b>                               | Reports not delivered by Workday and built using the Workday Report Writer. Can be created new or by copying another standard or custom report.                                                                                                                                  |
| <b>Customer Payment Matching</b>                   | A feature that uses historical payment applications to suggest customer invoices and adjustments that match customer payments with insufficient remittance advice.                                                                                                               |
| <b>Customer Refund Payments in Settlement Runs</b> | A refund payment generated by the settlement run with a payment date that reflects the date you settle the refund.                                                                                                                                                               |
| <a href="#">Back to Top</a>                        |                                                                                                                                                                                                                                                                                  |
| <b>D</b>                                           |                                                                                                                                                                                                                                                                                  |
| <b>Dashboard (landing pages)</b>                   | A specialized landing page containing a set of pre-configured worklets for a functional area that you can copy or modify. You can add additional custom worklets to dashboards using the report writer.                                                                          |
| <b>Data Source</b>                                 | A data source defines a set of business object instances for reporting purposes. Allows reporting access to all business objects related to those in the data source.                                                                                                            |
| <b>Day Breaker</b>                                 | The time of day on which a worker's work day and work week begins. Defines the 24-hour period over which daily time calculations execute and the 168-hour period over which weekly time calculations execute. Unless otherwise specified, the default day breaker is 12am.       |
| <b>Deny (business process)</b>                     | When you deny a business process, the business process is terminated and all Workday data is restored to its state before the business process started. To restart the business process, you need                                                                                |

|                                 |                                                                                                                                                                                                     |
|---------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                 | to submit the process again, and redo all previously completed steps.                                                                                                                               |
| <b>Depreciation Profile</b>     | A configuration that determines how Workday depreciates assets by defining a depreciation method, convention, and useful life.                                                                      |
| <b>Designation</b>              | An attribute, such as Community Learning Partner, Honors, or STEM, that you can associate with educational institutions and external associations to make them easy to find and report on.          |
| <b>Discrete Composite Asset</b> | A combination of related but distinct assets for which you can individually track cost, depreciation, and lifecycle events.                                                                         |
| <b>Disposition</b>              | Status of candidates that have been rejected for hire or declined a job during the job application event.                                                                                           |
| <b>Domain</b>                   | A collection of related securable items such as actions, reports, report data, report data sources, or custom report fields. Each domain is secured by a domain security policy.                    |
| <b>Domain Security Policy</b>   | A collection of related securable elements of different types and user-specified security groups that have access to elements of each type.                                                         |
| <b>Dynamic Period</b>           | A date that identifies the anticipated start date for a student of online education or other asynchronous learning.                                                                                 |
| <a href="#">Back to Top</a>     |                                                                                                                                                                                                     |
| <b>E</b>                        |                                                                                                                                                                                                     |
| <b>Educational Taxonomy</b>     | A taxonomy scheme and set of codes you can assign to programs of study and their concentrations to meet state, local, or other classification requirements.                                         |
| <b>Effort Grant</b>             | The sponsor funded grant associated with the worker's certified effort.                                                                                                                             |
| <b>Effort Recertification</b>   | The process you use to recertify an employee's effort in response to payroll accounting changes that occur after you last certified the effort.                                                     |
| <b>Eligible Investigator</b>    | A type of role that you can use to assign individuals to awards, grants, and grant hierarchies, so that the role assignments remain intact even when the person's position or organization changes. |
| <b>Engagement Action Item</b>   | Defines a requirement that must be met for an application for admission to be considered complete. Example: Submit transcripts.                                                                     |
| <b>Engagement Item</b>          | An engagement email or printed engagement item. You can include engagement items in engagement plans and use them to support student recruiting events.                                             |

|                                           |                                                                                                                                                                                                                                                                                                                                     |
|-------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Enrollment Event Rule</b>              | A rule that defines coverage start and end dates, waiting periods, coverage increase limits, Evidence of Insurability requirements, and other coverage rules and conditions. Rules ensure that the benefits process presents only the options that each employee is eligible for based on the event type.                           |
| <b>Enterprise Interface Builder (EIB)</b> | An integration tool that enables you to create simple, secure, and customizable integrations with Workday. Alternately, an EIB is a simple integration created by the integration tool. An EIB consists of an integration system, an integration data source, an integration transformation, and an integration transport protocol. |
| <b>Estimate at Completion (EAC)</b>       | Includes all the hours logged and approved for the project, as well as the future hours the worker expects to complete.                                                                                                                                                                                                             |
| <b>Estimate to Completion (ETC)</b>       | Includes the future hours the worker expects to complete.                                                                                                                                                                                                                                                                           |
| <b>Event</b>                              | A business process transaction that occurs within your organization, such as hiring or terminating an employee.                                                                                                                                                                                                                     |
| <b>External Association</b>               | A nonprofit, community-based, or other noneducational organization that you can associate with student prospects or identify as a location for recruiting events.                                                                                                                                                                   |
| <b>External Engagement Item</b>           | Used to send and track third-party engagement items for recruiting events, communication plans, or ad hoc communications.                                                                                                                                                                                                           |
| <a href="#">Back to Top</a>               |                                                                                                                                                                                                                                                                                                                                     |
| <b>F</b>                                  |                                                                                                                                                                                                                                                                                                                                     |
| <b>Fast Path</b>                          | A streamlined approach to moving applications for admission from submission to matriculation as quickly as possible.                                                                                                                                                                                                                |
| <b>Field Overrides</b>                    | A tool that lets you customize integration systems that are based on a connector template. Field overrides are managed through an integration service. They use calculated fields or report fields to supply values to an integration system. Example: member IDs in benefit provider integrations.                                 |
| <b>Financial Aid Period Record</b>        | A record containing data such as academic unit, academic level, and program of study for a student that Workday uses to process financial aid for an academic period.                                                                                                                                                               |
| <b>Functional Area</b>                    | A collection of domain or business process security policies that are related to the same set of product features, for example, Benefits or Compensation.                                                                                                                                                                           |

[Back to Top](#)

**G****Grade Profile**

A breakdown of a compensation grade by functional task, geographical region, or other categorization your business requires. A profile enables you to assign more granular compensation ranges to workers.

**Grant**

A worktag you use to charge award-related expenditures to an award line.

[Back to Top](#)

**H****Headcount Plan**

Provides visibility into the number of workers necessary to achieve your business goals within a specified period of time.

[Back to Top](#)

**I****Individual Target**

An individual bonus or merit target for a worker during a compensation review process that overrides the target defined on the compensation plan.

**Integration Attribute**

An integration component that specifies the tenanted value of a data element in Workday. Example: Plan Sponsor Name is a type of attribute in benefit provider integrations.

**Integration Data Source**

Indicates the type of data that Workday receives from or exports to an external system and its location.

**Integration Event**

The record of an integration process. Every integration—current or past, involving the import or export of data, successful or not—gets recorded as an integration event. The integration event contains all the information about the integration process, including its status.

**Integration Map**

An integration component that specifies how values in Workday map to values in an external system. Example: Pay Rate Frequency is a type of map in third-party payroll integrations.

**Integration Service**

A group of related integration attributes, maps, and XSLT that provides a framework to transform Workday data into the format required by an external system.

**Integration System**

A tenanted definition of an integration between Workday and an external system based on a template that provides the methodology for communicating data.

**Integration Template**

A collection of integration services that enables communication between Workday and an external

system. Workday provides integration templates in categories such as Benefits, Financials, HCM, Payroll, Payroll Interface, Procurement, Recruiting, Security, and Settlement. Many of the delivered templates contain default values for attributes, as well as prompt values for attributes and maps, to define the integration further.

### **Integration Transformation**

Converts data into a format that Workday or a receiving external system can understand. Workday provides some delivered transformations, and you can also create custom transformations.

### **Integration Transport Protocol**

Controls how Workday exports data to an external endpoint or service or imports the data from an external endpoint or service. Workday supports several types of transport protocols, including email, FTP and SFTP, HTTP/SSL, Workday attachments, and Workday Web Services.

### **Intersection Security Group**

A security group whose members are other security groups. Members associated with all included security groups are granted access through an intersection security group.

### **Initiation Step**

The first step of a business process.

[Back to Top](#)

## **J**

### **Job-Based Security Group**

A security group that includes one or more job-related attributes or objects including job profile, job family, job category, management level, or exempt/non-exempt status.

### **Job Management Staffing Model**

A structure that defines 1 set of hiring restrictions for all jobs in a supervisory organization, with no specific limits on the number of jobs that can be filled.

### **Job Profile**

The generic features and characteristics of a job or position, such as management level, pay rate type, compensation, skills, and other qualifications.

[Back to Top](#)

## **K**

### **Knowledge Article**

An article that is accessible to workers in your organization based on the assigned article audience. You can use these articles to document, share, and manage HR information specific to your organization.

### **Knowledge Article Audience**

A group of employees that can view designated Knowledge articles. Their access to articles is determined by condition rules assigned to the audience.

[Back to Top](#)

## L

### **Landing Page**

Landing pages display a collection of worklets. Landing pages may have different display formats (grid or bubble) and support different functions. The Home landing page is intended for common worklets, such as self-service worklets.

### **Leave Family**

A set of similar leave of absence types. Example: A company-specific family includes disability leave and bereavement leave, while a separate regulatory family includes jury duty and family medical leave.

### **Leave of Absence Rule**

A rule that defines worker eligibility for leaves of absence.

### **Line Tax Rate Application (LTRA)**

A collection of tax amounts that apply to a given transaction line or supplier invoice line split on a taxable document.

### **Linked Customer Contracts**

Child customer contracts that you associate with a parent customer contract for revenue allocation purposes.

### **Linked Leave**

A leave type that shares an entitlement with other leave types or time offs. Eligibility rules, validation rules, and supporting data reference the combined balance of the associated leave types and time offs. Also known as coordinated leaves and time off.

### **Location Membership Security Group**

A security group whose members are any workers assigned to that location.

[Back to Top](#)

## M

### **Match and Merge**

A process that helps eliminate duplicate student prospect information in Workday.

### **Micro-edit**

The ability to edit existing time blocks or add time blocks directly to a day by clicking the time entry calendar.

### **Multiplier-Based Coverage**

Insurance coverage based on multiples of salary, such as 1x, 2x, or 3x salary.

[Back to Top](#)

## N

### **Nonbillable**

A nonbillable project is an internal project that you don't invoice customers for.

[Back to Top](#)

## O

**Object Class**

The spend categories that award sponsors agree to reimburse award recipients for maintaining their projects.

**On-Account Document**

A document that's generated when you place a payment amount on an existing customer account. You can apply on-account documents to future payments.

**Organization Security Group**

A security group whose members are any workers assigned to that organization.

[Back to Top](#)

## P

**Parent Customer Contract**

A customer contract that you associate with a child customer contract so you can add contract lines across contracts to the same schedule. When you view the parent customer contract, Workday displays the child customer contracts as linked contracts.

**Passive Event**

Events that result from the passage of time rather than from a specific change to employee data.

**Payment Group**

The payments that result from a settlement run.

**Payment Tax Rate Application (PTRA)**

A collection of tax amounts that apply to a given payment on a taxable document.

**Position Management Staffing Model**

A structure that defines different staffing rules and restrictions for each position in an organization.

**Position Restrictions**

The attributes and conditions that apply to an unfilled position in a supervisory organization that uses the position management staffing model. Example: Job profile, location, qualifications, and worker type.

**Pre-Hire**

In Staffing, an individual you're tracking before employment. In Recruiting, a candidate who is in the *Offer*, *Employment Agreement*, *Background Check*, or *Ready for Hire* stage.

**Procurement Contract**

Contracts enable your organization to define preferred suppliers, analyze spend for better control, and standardization. They also allow your organization to implement contractual spend to better negotiate and enforce discounts and other supplier terms.

**Procurement Contract Type**

A procurement contract in Workday is always associated with a Contract Type that dictates how the contract can be used across the procure-to-pay chain. Example: when a Contract Type has the **Scheduled Purchase Orders** option set, Workday can use the contract to automatically

**Pro Forma Effort Certification**

create purchase orders based on a predefined schedule.

A report you can run before you run effort certification to review estimated effort based on salaries and wages that payroll accounting attributes to grants. It allows you to take corrective action, such as payroll accounting adjustments, prior to certifying employee effort, to ensure a more seamless certification process.

**Project Advanced Labor Costing**

Prorating project labor costs using standard or fully burdened costing.

**Project Asset**

A container that captures separate, ongoing costs of a capital project in progress. You can associate multiple projects assets with a project to track costs over the life of a project.

**Project Billing Rate Sheet**

A document that outlines the hourly or daily rates charged per project role, with the option to be more specific based on defined categories such as Region, Skill Level, and Project Size.

**Project Plan Phase**

A phase in the project plan that represents a stage in the project work. Example: Plan and Strategize. A project plan organizes projects into sequenced phases and tasks. A project phase is generally project agnostic, but when you add that phase into a project plan, it becomes a project plan phase.

**Project Plan Task**

The work details in a project plan phase. Example: Define Project Objectives.

**Project Transaction Source**

The source of project billing transactions. Example: Supplier Invoice, Expense, or Time.

**Prospect**

Someone you are interested in tracking who isn't associated with a specific job. You can use tags, prospect types, and prospect statuses to help track these individuals.

[Back to Top](#)

**Q****Quick Add**

A time entry option that enables you to create a time block and copy it to multiple days in a week.

[Back to Top](#)

**R****Recipient Threshold**

The maximum number of prospects to whom you can send an engagement item at the same time without requiring approval.

**Recruiting Cycle**

A recruiting period for 1 or more academic levels of an academic unit. You associate recruiting cycles with campaigns to measure the effectiveness of each campaign per recruiting cycle.

|                                  |                                                                                                                                                                                                                                                                           |
|----------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Reference ID</b>              | A unique identifier used to look up data for integration purposes.                                                                                                                                                                                                        |
| <b>Reference Pay Range</b>       | A range of pay established for a compensation grade or grade profile.                                                                                                                                                                                                     |
| <b>Related Customer Contract</b> | A customer contract that you associate with another customer contract for reporting purposes. When you create a customer contract, you can associate 1 related customer contract with it. The related customer contract must share the same company and sold-to customer. |
| <b>Reported Time</b>             | A worker's time that has been entered, but has not had any time calculations applied.                                                                                                                                                                                     |
| <b>Revenue Category</b>          | An attribute in customer contracts and billing used to search for and report on goods and services you sell. Also a dimension in account posting rule types for customer contracts, billing, and accounts receivable that drives accounting behavior.                     |
| <b>Risk Insight</b>              | Provides the reason why Workday identifies an expense report with a High or Medium risk level. Reasons may include 1 or more of these: Amount Anomaly, Duplicate Expense, and Incorrect Expense Item.                                                                     |
| <b>Risk Level</b>                | The value (Low, Medium, and High) that Workday provides from risk evaluation. Workday provides default risk levels, which can also be configured based on Risk Score.                                                                                                     |
| <b>Risk Score</b>                | The numerical value (0 to 100) that Workday provides from risk evaluation. The score helps identify anomalous expense reports.                                                                                                                                            |

[Back to Top](#)

## S

|                                          |                                                                                                                                                                                                                                                                                                                                                       |
|------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Salary Over the Cap Basis</b>         | A worktag type representing the effort grant on over-the-cap salaries when you have salary over the cap enabled on your tenant. For the portion of salary that's over the cap, the Salary Over the Cap Basis worktag identifies the effort grant, while the Grant worktag, if applied, identifies the grant on the salary over the cap suballocation. |
| <b>Salary Over the Cap Suballocation</b> | Worktags and their distribution percentages that you want to allocate on the portion of salary that's over the salary cap.                                                                                                                                                                                                                            |
| <b>Single Ledger Journal</b>             | An accounting journal that's a single primary or alternate ledger currency for the given company.                                                                                                                                                                                                                                                     |
| <b>Source</b>                            | The duplicate record that you want to merge in the Duplicate Management Framework.                                                                                                                                                                                                                                                                    |
| <b>Spend Category</b>                    | A logical grouping to search and report on acquired items and services. Also a dimension in account                                                                                                                                                                                                                                                   |

|                                         |                                                                                                                                                                                                                                                                                                                                              |
|-----------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                         | posting rules for procurement and spend that drives accounting behavior.                                                                                                                                                                                                                                                                     |
| <b>Staffing Model</b>                   | <p>A structure that defines how jobs and positions are created and filled in a supervisory organization. Workday supports 2 kinds of staffing models:</p> <ul style="list-style-type: none"> <li>• Job management.</li> <li>• Position Management.</li> </ul>                                                                                |
| <b>Staffing Organization</b>            | An organization category that includes supervisory organizations, matrix organizations, or retiree organizations.                                                                                                                                                                                                                            |
| <b>Stage</b>                            | A value, such as Lead, Inquirer, or Applicant, that identifies where a student prospect is in the recruitment or admissions process.                                                                                                                                                                                                         |
| <b>Student Financials Period Record</b> | A record containing data such as academic unit, academic level, and program of study for a student that Workday uses to process student financials transactions for an academic period.                                                                                                                                                      |
| <b>Student Prospect Profile</b>         | A worklet that displays information for a prospective student, including contact information and recruitment details.                                                                                                                                                                                                                        |
| <b>Student Prospect Type</b>            | A value, such as First Year or Adult Returning, that you can assign to prospective students and use to match student prospects to admissions counselors automatically.                                                                                                                                                                       |
| <b>Student Recruiting Region</b>        | Workday term for recruiting territory. A recruiting region can represent a geographical area, 1 or more schools, or schools in selected school districts.                                                                                                                                                                                    |
| <b>Student Tags</b>                     | An attribute, such as Veteran, Athlete, or Scholarship Recipient, that you can assign to student prospects. You can use tags to match student prospects to recruiters automatically, find prospects, and use as criteria for associating engagement plans with prospects.                                                                    |
| <b>Supplier Contract</b>                | Contracts enable your organization to define preferred suppliers, analyze spend for better control, and standardization. They also allow your organization to implement contractual spend to better negotiate and enforce discounts and other supplier terms.                                                                                |
| <b>Supplier Contract Type</b>           | A supplier contract in Workday is always associated with a Contract Type that dictates how the contract can be used across the procure-to-pay chain. Example: when a Contract Type has the <b>Scheduled Purchase Orders</b> option set, Workday can use the contract to automatically create purchase orders based on a predefined schedule. |
| <b>System User</b>                      | An account associated with and required to launch a Connector or Studio integration. Workday delivered integrations and custom integrations                                                                                                                                                                                                  |

**Staffing Organization**

require a system user account for authentication and web service calls. A system user account is not associated with a person in Workday.

An organization category that includes supervisory organizations, matrix organizations, or retiree organizations.

[Back to Top](#)

**T****Target**

The record into which you want to merge the source in the Duplicate Management Framework.

**Tax Code**

A combination of tax rates that you select on transaction lines.

**Tax Rate Application (TRA)**

A collection of tax amounts across all lines on a taxable document with the same tax applicability, tax code, tax option, tax point date, tax rate, and tax recoverability.

**Tax Recovery Pro Rata Factor Percentage**

A company-specific percentage that modifies the tax recoverabilities that you configure for the tenant.

**Termination Adjustment**

A time off adjustment that automatically sets the remaining balance of a worker's time off plan to zero upon the worker's termination.

**Time Block**

A time block carries information about a portion of time, such as the number of hours worked or in/out times. Time blocks can be reported or calculated, but only calculated time blocks are pulled into Workday Payroll.

**Time Calculation**

A set of rules to apply time calculation tags to calculated time blocks for Payroll or other purposes. Example: You could create a time calculation to convert regular hours into overtime hours automatically if a worker works more than 40 hours in a week.

**Time Calculation Tag**

Workday applies calculation tags to time blocks during time calculations. The tags map to payroll earnings to drive how time blocks are paid and can be included in time off and accrual calculations. You can also use them to display time and time off totals on the time entry calendar.

**Time Clock Event**

A time clock event describes a worker's actions, such as a check-in or check-out, on the web time clock or an external time clock. Workday matches time clock events to form time blocks, which workers can edit and submit.

**Time Code Group**

The primary use of a time code group is to determine which time entry codes a worker is eligible for. Time code groups are assigned to a worker or to a position through eligibility rules.

|                              |                                                                                                                                                                                                                                                   |
|------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Time Entry Calendar</b>   | A set of self-service pages that workers use to enter, edit, and submit time, when using calendar-based time entry. When using high volume time entry, workers can view and submit time from the time entry calendar.                             |
| <b>Time Entry Code</b>       | A time entry code describes the type of time a worker enters, such as worked time or meal allowance. To use time entry codes, you must attach them to time code groups, except for the default time entry code assigned to a time entry template. |
| <b>Time Entry Template</b>   | A template defines how a worker's time entry calendar is configured. Workers are matched to time entry templates through eligibility rules.                                                                                                       |
| <b>Time Entry Validation</b> | Errors or warnings that prevent users from entering invalid time. Critical validations prevent a user from submitting time. Warnings display when entering time but don't prevent the worker from submitting time.                                |
| <b>Time Off</b>              | The rules that apply to a specific type of time off, including eligibility rules, whether adjustments are allowed, and limits that differ from the time off plan.                                                                                 |
| <b>Time Off Plan</b>         | The rules for entering and tracking 1 or more related time offs. Identifies the unit of time, eligibility requirements, whether to track balances, and if time offs are position-based or worker-based.                                           |
| <b>Time Period Schedule</b>  | A time period schedule defines which dates are available for entry at a given time and defines which dates are paid in which pay periods. They can line up with pay periods, or, in more complex scenarios, they can be paid on a lag.            |
| <b>Time Proration Rule</b>   | A rule that prorates employees' target compensation in a bonus or merit increase compensation event according to time-based criteria, such as leave of absence or time since hire.                                                                |
| <b>Time Shift</b>            | A grouping of consecutive time blocks that you can use in standard overtime calculations, time block conditional calculations, and validations.                                                                                                   |
| <a href="#">Back to Top</a>  |                                                                                                                                                                                                                                                   |
| <b>U</b>                     |                                                                                                                                                                                                                                                   |
| <b>Unbillable</b>            | An unbillable transaction is a billing transaction that has an issue preventing it from being billed. You can't take action on the transaction until you resolve the issue.                                                                       |
| <b>Unnamed Resources</b>     | Placeholders for project resources that you can use to assign tasks and perform resource forecasting without specific resource assignments.                                                                                                       |

[Back to Top](#)**V****Value-Based Project**

A customer contract line type that you use when your project billing installment values are not known at the time of contract creation.

[Back to Top](#)**W****Wave Picking**

Enables you to group picking lists together in groups to better organize and prioritize your inventory picking process

**Week Breaker**

The day of the week on which a worker's work week begins. Defines the 7-day period over which weekly time calculations execute. Unless otherwise specified, the default week breaker is Sunday at 12am.

**Work Schedule Calendar**

A calendar that defines the days and hours that a worker is scheduled to work. In Time Tracking, work schedule calendars affect time entry options, calendar displays, and time calculations.

**Workday Studio**

An Eclipse-based development environment that enables you to build more complex integrations with Workday.

**Workday Web Services**

Workday's public API. Based on open standards, Workday Web Services (WWS) provide the core method for integration with Workday.

**Worker**

An employee or a contingent worker.

**Worklets**

Mini applications represented by clickable icons in Workday, providing quick and easy access to tasks and data that you access regularly. Example: the Inventory or Time Off worklets, or a worklet based on a report.

[Back to Top](#)**X****No Entries**[Back to Top](#)**Y****No Entries**[Back to Top](#)

**Z****Zone Picking**

A method of picking for orders from different zones at an inventory site. In Workday, you can split a stock request into multiple zone picking lists for more efficient picking and shipping. You can then ship the zone picking lists separately or merge them before shipment.
