| Set Up the Pay Cycle Event Business Process.....                | 181 |
| Example: Configure the Pay Cycle Event Business Process.....    | 182 |

## **Payroll History..... 185**

|                                                                             |     |
|-----------------------------------------------------------------------------|-----|
| Setup Considerations: Payroll History.....                                  | 185 |
| Steps: Prepare and Load Payroll History.....                                | 190 |
| Concept: What Payroll History to Load.....                                  | 191 |
| Steps: Load Payroll History by Batch.....                                   | 207 |
| Enter or Correct Payroll History for a Worker.....                          | 208 |
| FAQ: Payroll History.....                                                   | 209 |
| Troubleshooting: Unable to Load Payroll History for Terminated Workers..... | 211 |

## **Earnings, Deductions, and Other Calculations..... 211**

|                                                                                |     |
|--------------------------------------------------------------------------------|-----|
| Setup Considerations: Earnings and Deductions.....                             | 211 |
| Create Earnings and Deductions.....                                            | 216 |
| Setup Considerations: Earning and Deduction Limits.....                        | 216 |
| Steps: Create Earnings.....                                                    | 222 |
| Steps: Create Deductions.....                                                  | 227 |
| Create Pay Component Groups.....                                               | 230 |
| Create Deduction Recipient.....                                                | 232 |
| Add Earnings or Deductions to Pay Component Groups.....                        | 234 |
| Set Up Pay Component Eligibility.....                                          | 236 |
| Enter Earning or Deduction Calculations.....                                   | 238 |
| Create Related Calculations.....                                               | 239 |
| Set Up Pay Component Related Calculations.....                                 | 241 |
| Set Up Earning or Deduction Limits.....                                        | 247 |
| Override Earning or Deduction Limits for Workers.....                          | 248 |
| Override Withholding Order Priority.....                                       | 250 |
| Enter Pay Component Calculations Based on Absence Management Totals.....       | 251 |
| Map Earnings to Compensation Elements.....                                     | 252 |
| Map Earnings to Time Tracking Totals.....                                      | 253 |
| Map Pay Components to Benefit Plans.....                                       | 253 |
| Example: Create Advanced Lookup Tables for Benefit Rates (FRA).....            | 255 |
| Set Up Cost Allocations for Earnings.....                                      | 256 |
| Set Up Cost Allocations for Employee Deductions.....                           | 258 |
| Checklist: Review Pay Component Setup.....                                     | 259 |
| FAQ: Earnings and Deductions.....                                              | 260 |
| Reference: Compare Pay Components, Groups, Accumulations, and Balances.....    | 262 |
| Reference: Payroll Configuration Reports.....                                  | 264 |
| Reference: Related Calculations for Benefit Earnings and Deductions (USA)..... | 266 |
| Troubleshooting: One-Time Payments.....                                        | 268 |
| Proration.....                                                                 | 269 |
| Setup Considerations: Payroll Proration.....                                   | 269 |
| Steps: Set Up Proration.....                                                   | 276 |
| Set Up Proration Calculations.....                                             | 277 |
| Concept: Off-Cycle Payments and Proration.....                                 | 280 |
| Concept: Payroll Input and Proration.....                                      | 281 |
| Concept: Multiple Jobs and Proration.....                                      | 281 |
| Concept: Pay Component Configurations for Subperiods.....                      | 282 |
| Concept: Pay Component Proration Calculation.....                              | 283 |
| Reference: Midperiod Changes Causing Proration.....                            | 284 |

|                                                                                           |     |
|-------------------------------------------------------------------------------------------|-----|
| Example: Set Up Pay Component Proration for Leave of Absence.....                         | 287 |
| Troubleshooting: Proration.....                                                           | 288 |
| Concepts: Earnings and Deductions.....                                                    | 290 |
| Concept: Effective Dating for Earnings and Deductions.....                                | 290 |
| Concept: Inactivate Earning and Deduction Definitions.....                                | 291 |
| Concept: Delete Calculations.....                                                         | 293 |
| Concept: Worktags for Payroll Calculations.....                                           | 293 |
| Concept: Position-Based Earnings and Deductions.....                                      | 295 |
| Concept: Payroll Custom Worktags.....                                                     | 296 |
| Concept: Compensation Elements and Payroll Processing.....                                | 297 |
| Concept: Time Off Earnings.....                                                           | 298 |
| Payroll Calculations.....                                                                 | 300 |
| Steps: Create Custom Fields for Payroll and Absence Calculations.....                     | 300 |
| Concept: Payroll Calculations.....                                                        | 301 |
| Concept: Date Calculations for Payroll.....                                               | 301 |
| Concept: Numeric Calculations for Payroll.....                                            | 302 |
| Concept: Boolean Calculations for Payroll.....                                            | 304 |
| Concept: AND and OR Setup for Boolean Calculations.....                                   | 305 |
| Example: Calculate Worker Age as of July.....                                             | 306 |
| Example: Create a Lookup Table for Cost of Living Percentages.....                        | 307 |
| Example: Create Step-Based Conditions for Bonuses Based on Cost of Living.....            | 308 |
| Example: Create a Step-Based Calculation for Bonuses Based on Cost of Living.....         | 309 |
| Pay Accumulations and Balances.....                                                       | 311 |
| Create Pay Accumulations.....                                                             | 311 |
| Setup Considerations: Pay Balances.....                                                   | 313 |
| Create Pay Balances.....                                                                  | 317 |
| Gross Up Wages and Taxes.....                                                             | 319 |
| Setup Considerations: Gross-Up Calculations.....                                          | 319 |
| Steps: Set Up Gross-Up Calculations.....                                                  | 323 |
| Set Up Gross-Up Earnings.....                                                             | 325 |
| Concept: Net Amounts for Gross Ups.....                                                   | 327 |
| Example: Calculate Gross Bonus Amount Based on Net Pay Input.....                         | 328 |
| Example: Add Net Pay Input for a Gross-Up Earning.....                                    | 329 |
| Example: Gross Up One-Time Payment Amount.....                                            | 330 |
| Example: Gross Up at a Company-Defined Percentage (USA).....                              | 332 |
| Example: Gross Up a Noncash Payment Amount.....                                           | 333 |
| Example: Create an Offset Deduction for Noncash Gross Ups.....                            | 334 |
| FAQ: Net to Gross Ups.....                                                                | 335 |
| Voluntary Deductions.....                                                                 | 335 |
| Steps: Set Up Voluntary Deductions.....                                                   | 335 |
| Set Up Voluntary Deduction Elections.....                                                 | 336 |
| Concept: Voluntary Deductions.....                                                        | 339 |
| Example: Create a Charitable Contribution Deduction.....                                  | 339 |
| Example: Set Up Custom Worktags for Voluntary Deductions.....                             | 340 |
| Example: Enable a Voluntary Deduction for Self Service.....                               | 341 |
| Flexible Payment and Deduction Options.....                                               | 342 |
| Setup Considerations: Flexible Payment and Deduction Options.....                         | 342 |
| Steps: Set Up Flexible Payment and Deduction Options.....                                 | 347 |
| Example: Set Up a Deduction to Recoup an Outstanding Balance on Termination<br>(CAN)..... | 350 |
| Example: Set Up a Deduction to Recoup an Outstanding Balance on Termination (FRA)....     | 351 |
| Example: Set Up a Deduction to Recoup an Outstanding Balance on Termination (UK).....     | 352 |
| Example: Set Up a Deduction to Recoup an Outstanding Balance on Termination (USA)....     | 353 |
| FAQ: Flexible Payment and Deduction Options.....                                          | 354 |
| Pay On-Demand.....                                                                        | 357 |

# Payroll

---

Welcome to the Payroll Administrator Guide, where you can learn how to configure and use Workday Payroll.

The majority of the guide covers the core, or global, parts of Payroll. The core topics in the table of contents are arranged to lead you through actions to take before using payroll, when you run payroll, and finally any post payroll processing actions.

Where topics don't apply to all countries, the topic title includes the relevant country ISO codes. The guide also includes dedicated areas for these payroll products and countries:

- [Payroll for the U.S.](#) on page 955
- [Payroll for Canada](#) on page 1269
- [Payroll for the UK](#) on page 1399
- [Payroll for France](#) on page 1509
- [Payroll for Australia](#) on page 1696

To learn more about how to use our documentation, [click here](#) or watch this video.

## Payroll Considerations

---

### Setup Considerations: Payroll

---

You can use this topic to make decisions when planning your configuration and use of Workday Payroll. It explains:

- Why to set it up.
- How it fits into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

#### What It Is

Workday Payroll provides a comprehensive platform that enables you to manage your entire payroll process, including:

- Gathering and entering required payroll inputs. Examples: Benefits, earnings, and deductions from third-party systems.
- Integrating with third-party providers.
- Calculating gross pay, taxes, and deductions.
- Conducting audits before and after payroll processing.
- Generating accounting entries for payroll transactions.
- Paying employees.
- Providing payslips both online or on mobile devices.
- Providing reports and tools to assist you in your reporting requirements.

You can use Workday to manage payroll for:

- Australia

- Canada
- France
- United Kingdom
- United States

### Business Benefits

Workday Payroll provides several business processes and configurable dashboards that enable you to coordinate payroll tasks between multiple role-based users, which:

- Reduce time-consuming manual processes.
- Ensure accountability among different payroll and HR partners.

When you use other Workday products like Absence Management, Time Tracking, and Finance on the same platform as Payroll, you can exchange and report on real-time data. This enables you to manage your workforce based on accurate labor cost data.

Workday also provides:

- Tax and compliance updates, enabling you to easily follow and adapt to regulatory changes.
- Configurable audits that ensure accurate payroll results.
- Employee self-service functionality to enable employees to view their data and take action. Example: Modify payment elections.

You can use configurable security policies to limit who views specific payroll data.

### Use Cases

You can use Workday Payroll for:

- Regular, on-cycle, payroll.
- Off-cycle payments and adjustments outside of the standard payroll.
- Court orders.
- Garnishments.
- Gross-up earnings.
- International assignments.
- Mergers and acquisitions.
- Payments for terminated workers and workers on leave of absence.
- Retroactive payroll.
- Single legal entity company relationships.
- Taxation for a mobile workforce.
- Workers with multiple positions.
- Withholding orders.

### Questions to Consider

Review additional detailed setup considerations for each specific configuration area.

| Question                         | Considerations                                                                                                                                                                                                                                                                                                                                                                                                 |
|----------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Who do you need to pay and when? | <p>You can configure:</p> <ul style="list-style-type: none"> <li>• Pay groups to identify a group of workers to process in a payroll run.</li> <li>• Period schedules to determine the payment frequency. Multiple pay groups can use the same period schedule as long as they have the same payment frequency.</li> <li>• Run categories to identify what to pay for each worker and payment type.</li> </ul> |

| Question                                                                  | Considerations                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
|---------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                                                           | To manage a larger group of workers, you can create a pay run group. This enables you to process and report on multiple pay groups and run categories together.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| What kind of payments do you want to process?                             | <p>You can use on-cycle payroll processing to make regular payments for predefined periods.</p> <p>You can use different types of off-cycle payments to process payments to workers outside of their regular payroll schedule. Examples:</p> <ul style="list-style-type: none"> <li>• On-demand payments to adjust or replace a worker's standard on-cycle pay.</li> <li>• Manual payments to record a payment made outside of Workday.</li> <li>• Reversals to record a negative version of a completed payment that you haven't reconciled with a bank statement.</li> </ul> <p><b>Note:</b> Workday Payroll for France doesn't support reversals.</p> |
| What do you need to calculate for your workers' pay?                      | <p>You can configure pay components to:</p> <ul style="list-style-type: none"> <li>• Use calculations specific to the needs of your company.</li> <li>• Retrieve values from other parts of Workday, such as compensation or benefits.</li> <li>• Automatically calculate appropriate taxes.</li> </ul>                                                                                                                                                                                                                                                                                                                                                  |
| Who completes different payroll processing tasks, and in what order?      | <p>You can configure the <i>Pay Cycle Event</i> business process to:</p> <ul style="list-style-type: none"> <li>• Specify the sequence of payroll processing tasks in your organization.</li> <li>• The roles responsible for their completion.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                               |
| Which historical payroll data do you need from external systems?          | <p>To ensure accurate payroll calculations, you can load historical payroll data from external systems. This enables you to:</p> <ul style="list-style-type: none"> <li>• Include payroll history in quarter-to-date and year-to-date calculations.</li> <li>• Apply limits and self-correcting logic to correct amounts when you start using Workday Payroll.</li> </ul> <p>You can add or correct payroll history at any time. However adding or changing historical results for a worker can impact calculations and results that use historical balances.</p>                                                                                        |
| How do you want to allocate employee earnings and employer-paid expenses? | You can configure Workday Payroll to assign costs to cost centers, locations, or other organization types to help you monitor and manage costs.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| How do you pay employees?                                                 | You can define a payment type for each method of payment, such as:                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

| Question                                                   | Considerations                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
|------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

| How do you want to manage retroactive payroll changes?         | <p>Depending on the country, you can configure and use retroactive payroll processing to manage these types of supported events:</p> <ul style="list-style-type: none"> <li>• Benefit changes, including changes to rates and deductions.</li> <li>• Compensation changes.</li> <li>• Hires.</li> <li>• Leaves of absence.</li> <li>• Other data changes.</li> <li>• Payroll input.</li> <li>• Terminations.</li> <li>• Time entry.</li> <li>• Time off.</li> </ul> <p>Workday doesn't support all retroactive changes for all countries. You can view the supported changes by country on the <b>All Supported Payroll Retro Transaction Types</b> report.</p> <p>When you process a retroactive change, Workday recalculates the payroll results for the specified prior periods and transfers any differences to the current payroll period.</p> |
| What regulatory payroll reporting requirements do you have?    | <p>You can configure Workday to help you manage:</p> <ul style="list-style-type: none"> <li>• Quarterly and year-end tax reporting for Payroll for the U.S.</li> <li>• Year-end tax and Record of Employment (ROE) reporting for Payroll for Canada.</li> <li>• Real Time Information (RTI) and P60 reporting for Payroll for the UK.</li> <li>• Déclaration Sociale Nominative (DSN) reporting for Payroll for France.</li> <li>• Single Touch Payroll (STP) reporting for Payroll for Australia.</li> </ul>                                                                                                                                                                                                                                                                                                                                       |
| How do you want to analyze payroll results?                    | <p>Workday calculates a payroll result for a worker for a given period and run category.</p> <p>To define additional dimensions, you can use custom or standard worktags that help you analyze and calculate payroll results.</p> <p>You can define worktags to:</p> <ul style="list-style-type: none"> <li>• Track transactions. Example: Track loan repayments.</li> <li>• Filter pay accumulations or balances for a specific dimension. Example: View an accumulation for one specific type of loan.</li> </ul>                                                                                                                                                                                                                                                                                                                                 |
| For which time periods do you want to view aggregated results? | <p>You can configure payroll balances to calculate aggregated values for a combination of pay components, pay component groups, and pay accumulations for a given period of time. For each</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |

| Question                                                        | Considerations                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
|-----------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                                                 | payroll balance, you can specify the period of time over which to aggregate the results.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| What do you want to audit payroll results for?                  | <p>You can configure payroll audits before closing your pay period to:</p> <ul style="list-style-type: none"> <li>• Identify possible issues.</li> <li>• Reconcile payroll.</li> </ul> <p>You can configure audits that:</p> <ul style="list-style-type: none"> <li>• Analyze payroll results for workers within a single period.</li> <li>• Compare payroll results for workers between multiple periods.</li> </ul> <p>You can also limit the worker population to audit only specific workers. Example: Workers in a specific cost center or region.</p>                                                                                                                                                                                                                 |
| Do you need to comply with the Fair Labor Standards Act (FLSA)? | <p>You can configure Workday to help you comply with the Fair Labor Standards Act (FLSA) to pay employees at the required rate for overtime hours. Workday supports overtime calculation for these work period durations:</p> <ul style="list-style-type: none"> <li>• 7-day, for a standard workweek.</li> <li>• 14-day, for healthcare workers on a 14-day workweek.</li> <li>• 7- to 28-day, for public safety workers whose workweeks can vary from 7 to 28 days.</li> </ul> <p>Workday FLSA payroll processing enables:</p> <ul style="list-style-type: none"> <li>• FLSA work periods that cross pay periods.</li> <li>• Look-back processing of FLSA eligible bonuses.</li> <li>• Manual and on-demand payroll results to accumulate by FLSA work period.</li> </ul> |
| Do you want to validate a minimum net pay amount?               | <p>You can define a static minimum net pay amount for each run category. By default the value is zero. You can configure Workday to track arrears when a worker doesn't have enough pay to both:</p> <ul style="list-style-type: none"> <li>• Cover all deductions.</li> <li>• Meet the minimum net pay.</li> </ul> <p>You can then define different priorities and rules determining how and when to recoup arrears.</p>                                                                                                                                                                                                                                                                                                                                                   |

## Recommendations

For optimal performance, when configuring what to process in payroll, use eligibility criteria to process only what is necessary. Examples: Configure eligibility criteria to have Workday only process the pay components that apply to workers in the run.

Consider performance impacts when creating pay components and pay component related calculations. A larger number of pay components and related calculations result in longer payroll calculations.

Use the **Tenant Analyzer** report to verify your tenant configuration against Workday recommendations.

## Requirements

Configure company and worker data in HCM.

For certain payroll calculations, you must provide data from within Workday or external integrations for these areas:

- Absence
- Benefits
- Compensation
- Time Tracking

Regardless of whether you use Financial Management in Workday, you must create and regularly maintain accounting configurations related to payroll transactions, including:

- Account sets and account posting rules.
- Fiscal schedules, posting intervals, and years.
- Journal source mapping.
- Types, account types, periods, and years for ledgers.

## Limitations

- Workday doesn't report tax information directly to government organizations for Payroll for the U.S. or Payroll for Canada.
- While you can use Workday to help you meet payroll compliance, you must verify that your payroll is compliant with requirements for the regions in which you operate.

## Tenant Setup

You can use the **Edit Tenant Setup - Payroll** task to enable different countries for Workday Payroll, as well as configure tenant-wide options for:

- Configuration and electronic signature text for year-end tax documents.
- Costing allocations.
- Disabling the payroll result profile.
- Displaying national IDs on withholding elections.
- Electronic signature text for year-end tax documents.
- Enabling continuous payroll calculations.
- ID sequence generators and partial fees for U.S. withholding orders.
- Payroll accounting.
- Payroll commitments.
- Payslip viewing, printing, and self-service layout (for report design layouts).
- Retroactive processing.
- W-2/W-2C form alignments.

You can use the **Edit Tenant Setup - Global** task to enable self service payment elections for specific countries.

You can use the **Edit Tenant Setup - HCM** task to enable multiple jobs.

## Security

You can use:

- Constrained, role-based security groups to provide payroll partners access only to the specific pay groups to which they're assigned.
- User-based security groups to provide payroll administrators with access to all pay groups across organizations. Consider also using user-based security groups for calculation and settlement

administrators to provide them with a system-wide access without enabling them to see employee-level payroll data.

- Segment-based security groups to provide payroll administrators access to calculations only within their area and institution. You can also use segment-based security groups to restrict access to specific country options on certain tasks.

To view the different security domains for payroll, access the **Domain Security Policies for Functional Area** report and select a Payroll functional area. Workday recommends that you identify and grant the minimum level of security that a worker needs.

| Functional Areas | Considerations                                                                                                                                                                                                                                                                                                                                                                                                               |

| USA Payroll      | <p>Security domains in this functional area enable users to configure and use features like these:</p> <ul style="list-style-type: none"> <li>Company tax data.</li> <li>Withholding orders.</li> <li>Worker tax data.</li> <li>W-2, W-2R, W-2GU, and W-2VI boxes and employee forms.</li> <li>Payroll commitments.</li> </ul> <p>And are specific to Payroll for:</p> <ul style="list-style-type: none"> <li>The U.S.</li> <li>Puerto Rico</li> <li>Guam</li> <li>Virgin Islands</li> </ul>                                                       |

To enable nonpayroll administrators to report on payroll data, you can create pay component security segments that control the visibility of earning and deduction results in custom reports. You can add the nonpayroll administrators to segment-based security groups that have access to the defined segments.

### Business Processes

| Area       | Business Processes                                                                                                                                                                                                                                                     | Considerations                                                                                                                                                                                                                                                                                                                       |

## Reporting

To view the available reports for Workday Payroll, access the **Workday Standard Reports** report, and select one of these report categories:

| Report Categories          | Considerations                                                                                                         |
|----------------------------|------------------------------------------------------------------------------------------------------------------------|
| Payroll Processing/Results | Use reports in this category to report on payroll results for individuals or groups of workers.                        |
| Payroll Worker Data        | Use reports in this category to audit and report on individual worker data such as payment elections or tax elections. |
| Set Up Payroll             | Use reports in this category to verify and see a summarized view of your payroll configuration.                        |

You can also use the **Pay Cycle Command Center** dashboard to help you review and manage payroll data for a single or multiple pay periods at a time.

## Integrations

Workday provides multiple web services and integrations for common payroll inputs and configurations. Consider these fundamental web services and integrations when configuring Workday Payroll.

| Web Service                                | Considerations                                                                                                                                                                                               |
|--------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <i>Assign Costing Allocation</i>           | Use to assign costing allocations to workers by batch.                                                                                                                                                       |
| <i>Change No Retro Processing Prior To</i> | Use to change the no retro processing prior to (NRPT) date for multiple workers.                                                                                                                             |
| <i>Import Payroll Input</i>                | Use to load payroll input by batch.                                                                                                                                                                          |
| <i>Import Payroll Off-Cycle Payment</i>    | Use to load off-cycle payments by batch. Workday loads these payments as unprocessed. Run the <b>Run Off-cycle Pay Calculation</b> task to process batches of off-cycle payments after loading the payments. |
| <i>Put Payroll History Payment</i>         | Use to load historical payroll payments by batch.                                                                                                                                                            |
| <i>Put Period Schedule</i>                 | Use to load periods for a period schedule by batch.                                                                                                                                                          |

You can also use each of these web services to create an Enterprise Interface Builder (EIB).

| Integration                                                                                                                                                     | Considerations                                                                                                                                                                                                                                 |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <i>ADP Check Print (Enhanced Performance)</i>                                                                                                                   | For Payroll for the U.S, you can use this integration to outsource to ADP: <ul style="list-style-type: none"> <li>• Full Service Direct Deposits (FSDD).</li> <li>• Printing of payroll checks, advice slips, and mail label files.</li> </ul> |
| <i>Annual Tax Filing - CRA (T4)</i><br><i>Annual Tax Filing - CRA (T4A)</i><br><i>Annual Tax Filing - RQA (RL -1)</i><br><i>Annual Tax Filing - RQA (RL -2)</i> | For Payroll for Canada, use to generate year-end tax forms for Canadian workers.                                                                                                                                                               |
| <i>BLS Electronic Data Reporting - MWR</i>                                                                                                                      | For Payroll for the U.S.<br><br>Use to generate a Multiple Worksite Report for submission to the United States Department of Labor, Bureau of Labor Statistics (BLS).                                                                          |
| <i>Core Connector: Payroll Check Printing (Enhanced Performance)</i>                                                                                            | Use to send checking data to banks that don't support existing checking integrations.                                                                                                                                                          |

| <i>Service Canada ROE Outbound</i><br><i>Service Canada ROE Inbound</i>                           | For Payroll for Canada, use to generate and retrieve Record of Employment (ROE) files from a computer accessible to the integration system. This integration doesn't support direct connection to Service Canada.                                                                                                                                           |
| <i>Single Touch Payroll (Australia)</i>                                                           | For Payroll for Australia, use to send Single Touch Payroll (STP) reports to the Australian Taxation Office (ATO).                                                                                                                                                                                                                                          |
| <i>SuperStream (Australia)</i>                                                                    | For Payroll for Australia, use to send superannuation funds and data to workers' superannuation funds.                                                                                                                                                                                                                                                      |
| <i>Worker Payroll Input Async</i>                                                                 | Use to import files with worker payroll data from an external server into Workday. Example: Time off values.                                                                                                                                                                                                                                                |
| <i>Worker Time Off Inbound</i>                                                                    | Use to import time card data for your workers into Workday.                                                                                                                                                                                                                                                                                                 |
| <i>WPN - Ceridian Check Printing</i>                                                              | Use to outsource printing of payroll checks, advice slips, or banking services to Ceridian.                                                                                                                                                                                                                                                                 |

Workday also supports integrations with several electronic payment service providers and protocols, including:

- Automated Clearing House (ACH).
- Bankers' Automated Clearing Services (BACS).
- Australian Banking Association (ABA).

### Connections and Touchpoints

| Touchpoint | Consideration                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
|------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Absence    | <p>When you configure time off plans to track balances in Absence Management, you can retrieve the units for approved time off as part of earning and deduction calculations. Use absence component-related calculations (ACRCs) to associate absence plans to earnings and deductions. Ensure that you map all absence plans with an impact on payroll to an earning or deduction.</p> <p>When you configure leaves of absence, you can select whether to pay workers their normal salary while on leave. For workers on a leave type that impacts payroll, Workday only pays a worker:</p> |

## Setup Considerations: Payroll and Benefits

You can use this topic to help make decisions when planning your configuration and use of Workday Payroll and Workday Benefits. It explains:

- Why to set them up.
- How they fit into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

### What They Are

When used together, Workday Payroll and Workday Benefits enable you to integrate worker benefits with their associated costs, including:

- Defining benefit plans.
- Configuring payroll earnings and deductions for benefits.
- Integrating with third-party benefit providers to handle contribution amounts.

**Note:** This topic only discusses how Workday Payroll interacts with Workday Benefits. It doesn't address how Cloud Connect for Third-Party Payroll (CCTPP) interacts with Workday Benefits.

### Business Benefits

Reduce the risk of errors from manual entries by using Workday to pull the latest values automatically into Payroll from Benefits.

Configure security policies to prevent unauthorized users from viewing confidential benefit and payroll data.

### Use Cases

- Process 401 (k), Health Savings, and Spending Account contributions through payroll.
- Process any benefit plan credits and surcharges through payroll.
- Deduct benefit plan costs for health care and insurance through Payroll.
- Configure biweekly pay schedule for 26 paychecks in a year, with HSA and spending account deductions twice a month.

- Coordinate benefits changes for leave of absence transitions from short-term disability to long-term disability.
- Process benefit changes that result from salary changes.
- Automatically enroll workers into a benefit plan based on eligibility rules.

### Questions to Consider

| Questions                                                                                                                  | Considerations                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
|----------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Do you need to apply deduction limits to benefit amounts?                                                                  | <p>If you need to apply a deduction limit to benefit amounts, configure this limit in Payroll. Example: Federal limits on retirement plans or health savings accounts.</p> <p>If you don't use Workday Payroll, work with your payroll provider to set limits.</p>                                                                                                                                                                                                                                                                                                                                          |
| Do you need to create a new deduction or earning? Or, can you reuse an existing one?                                       | <p>When your benefits plans change, you can reuse earnings and deductions.</p> <p><b>Note:</b> Don't remove the mapping between an old benefit plan and the associated earning or deduction.</p> <p>When you remove the mapping for a worker with a supported retro event, Workday tries to rescind all deductions ever calculated for the worker in the retro recalculation.</p> <p>Workday recommends that you leave the old plan mapped to the deductions. You can remove the benefit plan from the benefit plan year.</p> <p>If you create a new plan, map it to the deductions as the active plan.</p> |
| Does your weekly or biweekly payroll overlap payroll years at the end of the year?                                         | <p>Workday automatically processes a deduction if the pay period end date is on or after the deduction begin date.</p> <p>To prevent Workday from using benefit deduction rates from the wrong year, you might need to modify how Workday applies the deduction begin date.</p> <p>When you create or edit deductions in Payroll, you can select the coverage or cost as of the payment date. Workday processes the deduction if the payment date is on or after the deduction begin date. Workday doesn't consider in which pay period the deduction starts.</p>                                           |
| Do you want Workday to adjust the final paycheck to meet the worker's annual deduction goal for HSA and spending accounts? | <p>You can configure a benefit group so that Workday Payroll adjusts deductions in the final pay period to meet annual goals.</p> <p>To adjust the final paycheck, you must configure the deduction to occur in the final pay period of that year.</p> <p>To enable this deduction adjustment option:</p>                                                                                                                                                                                                                                                                                                   |

| Questions                                                                                             | Considerations                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
|-------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                                                                                       | <ul style="list-style-type: none"> <li>• The worker must be enrolled in an HSA or spending account plan in the final pay period of the year.</li> <li>• The HSA or spending account must be in a benefit plan year using this calendar year (with end date of December 31).</li> <li>• The deduction must be an HSA or spending account plan.</li> <li>• You must calculate remaining deductions based on the payment date as opposed to the period end date.</li> </ul>                                                                                                                                       |
| Do you need to manage Déclaration Sociale Nominative (DSN) reporting for France?                      | <p>You can use Workday Payroll for France to declare benefits information in DSN reporting. To do so, you must:</p> <ul style="list-style-type: none"> <li>• Map benefit contributions to DSN blocks.</li> <li>• Enter additional benefit data, such as coverage targets, when setting up the French company tax configuration.</li> </ul> <p>To ensure correct DSN reporting, when setting up health care plans, don't map the same deduction to more than 1 health care benefit plan reported as prevoyance in a DSN. Use the plan that you report as mandatory health and disability coverage in a DSN.</p> |
| Do you have UK-based workers?                                                                         | <p>UK legislation means that you must provide a pension plan for workers who match specific criteria.</p> <p>You can combine eligibility assessments in Payroll with a pension plan in Benefits. Based on the assessment results, you can enroll eligible workers into the plan.</p>                                                                                                                                                                                                                                                                                                                           |
| Do you match U.S. worker 401(k) contributions?                                                        | <p>You can configure set contributions on the benefit plan. If you calculate employer matches based on the worker's contributions, set up the calculation on the payroll deduction.</p>                                                                                                                                                                                                                                                                                                                                                                                                                        |
| Do you enable your workers to give some of their pay regularly to an outside benefit plan or charity? | <p>Occasionally it's impractical to provide a benefit plan, such as when it would only apply to a few workers. In that case, Workday provides alternative functionality that enables workers to request that you take voluntary deductions or flexible payments from their pay.</p> <p>Example: A worker wants to donate to a specific charity, or to pay back a relocation expenses loan provided by the business.</p>                                                                                                                                                                                        |
| When do you want to begin and end payroll deductions for a benefit plan?                              | <p>You can set up enrollment event rules to specify when to begin or end payroll deductions. You can specify when to deduct from a worker's pay by configuring:</p>                                                                                                                                                                                                                                                                                                                                                                                                                                            |

| Questions | Considerations                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

|           | <ul style="list-style-type: none"> <li>• The coverage begin date, which determines when coverage by the benefit plan starts for a worker.</li> <li>• The deduction begin date, which Workday uses to determine the pay period to start withholding deductions from a worker's pay.</li> </ul> <p>Workday only withholds deductions for workers covered by a plan. It uses the combination of the coverage begin date and the deduction begin date to determine when the first deduction occurs.</p> <p>Similarly, you can configure when to stop payroll deductions based on a:</p> <ul style="list-style-type: none"> <li>• Coverage end date.</li> <li>• Deduction end date.</li> </ul> |

## Recommendations

### Performance

Workday recommends creating the minimum number of earnings and deductions to optimize performance.

To maximize performance, set up earnings and deductions using precise criteria to streamline payroll processing. Use specific eligibility criteria so that Workday runs calculations only for applicable workers and pay and benefit groups.

### Selection Criteria

To prevent possible calculation mismatches, Workday recommends that you use the same selection criteria when you create rules that:

- Enroll workers into a plan in Workday Benefits.
- Calculate worker contributions in Workday Payroll.

### Global Payroll and Benefits

Workday recommends that you use Workday Benefits to integrate with Workday Payroll.

Workday Payroll for the UK customers who don't have a license to use Workday Benefits can use limited benefits features to support the set up of UK pension auto-enrolment.

If calculating payroll with Workday Payroll for France, Workday recommends using advanced lookup tables to store benefit rates to meet plan requirements.

### Health Savings Accounts and Spending Accounts

To simplify the enrollment experience and deduction configurations for catch-up HSA plans, Workday recommends that employers create a separate plan for each of these age groups:

- Workers under 55.
- Workers 55 and older.

## Benefit Earnings and Deductions

Workday strongly recommends that you avoid using a plan for all workers with an add-on plan for workers 55 and older.

If you use a deduction schedule different from the pay frequency, use both override and custom scheduling in Payroll to ensure correct deductions. Example: You use a biweekly pay schedule for 26 paychecks in a year, but take HSA and spending account deductions twice a month.

Workday recommends that you avoid removing a benefit plan from earnings and deductions. These changes can result in the over- or under-payment of prior deductions, or a lump sum deduction. Instead, remove the benefit plan from the plan year.

Example: You remove an old benefit plan from the deduction and add the new plan. When you run retro calculations, Workday recalculates and attempts to rescind all prior deductions for the worker, resulting in incorrect calculation values.

Consider leaving out HSA and spending plans from retro calculations. Unwanted retro calculations might occur after plan changes or when a worker meets their annual goal.

Avoid using benefit plans labeled with **Do Not Use**. Benefit administrators can mark benefit plans with this label to hide obsolete benefit plans based on an effective date. The **Benefit Plan** prompt displays on the **Non-Effective Dated** tab for these tasks:

- **Create Deduction.**
- **Create Credit.**

Workday appends the effective date of future-dated benefit plans to the **Do Not Use** label.

## Requirements

Set up your benefit plans before creating the associated earnings and deductions.

If managing DSN reporting, provide the group policy number on the benefit plan and the provider ID.

## Limitations

- Workday Payroll doesn't support effective dating of deductions and earnings. Instead, Workday Benefits enables you to record an effective date between benefit plans and deductions and earnings.
- To avoid processing a retroactive payroll calculation, you can make plans unavailable to workers after a certain date using:
  - Benefits eligibility rules.
  - Plan year definitions.
- Workday Payroll for the UK doesn't support pension auto-enrolment in prior pay periods. If you run payroll in arrears, you can either turn off the pension auto-enrolment feature or ensure you monitor the process and make the necessary adjustments.
- Workday Payroll for Australia doesn't support superannuation configured with Workday Benefits.

## Tenant Setup

To determine allowable YTD payroll contributions, you can select an additional HSA coverage target option on the **Edit Tenant Setup - HCM** task. This option also enables you to configure family or individual IRS limits in Workday Payroll for the additional coverage target.

## Security

| Domains                                                                                       | Considerations                                                              |
|-----------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------|
| <i>Manage: Benefits for Organizations</i> in the Benefits functional area.                    | Enables you to create benefit groups.                                       |
| <i>Set Up: Benefits</i> in the Benefits functional area.                                      | Enables you to create benefit plans and set up enrollment.                  |
| <i>Set Up: Payroll (Calculations - Payroll Specific)</i> in the Core Payroll functional area. | Enables you to create and modify earnings and deductions.                   |
| <i>Set Up: Tenant Setup - HCM</i> in the Systems functional area.                             | Enables you to enable the Benefits mobile app and configure tenant options. |

You can enable the benefits administrator and the benefits partner to view benefit plan deductions for workers. You can apply segmented security to custom reports based on these segmented data sources:

- **Earning/Deduction Payroll Balances for Organization**
- **Earning/Deduction Payroll Balances for Worker**
- **Earning/Deduction Payroll Results for Organization (As of Sub Period End Date)**
- **Earning/Deduction Payroll Results for Organization, Worker, Period and Date Range (As of Sub Period End Date)**
- **Earning/Deduction Payroll Results for Worker (As of Sub Period End Date)**

## Business Processes

| Business Processes                         | Considerations                                                                                                                                                                                                                                                                                    |

| <i>Change Benefits</i>                     | Add as step to other business processes, such as <i>Change Job</i> or <i>Termination</i> . Launches the <i>Change Benefits for Life Events</i> business process, which uses the <i>If there is an effect on employee benefits?</i> condition rule to determine whether to create a benefit event. |
| <i>Change Benefits for Life Event</i>      | Enables users to change benefits for life events, including births, divorce, and promotion.                                                                                                                                                                                                       |
| <i>Change Benefits for Open Enrollment</i> | Enables you to open enrollment for benefits. You can add step-related worklets with the <b>Business Process &gt; Maintain Step Related Worklets</b> related action on the <b>Change Benefits for Open Enrollment</b> task.                                                                        |
| <i>Change Job</i>                          | Enables you to change to a worker's position, such as promotion or a transfer, which can affect their benefits. You can add a step to launch the <i>Change Benefits for Life Events</i> business process to initiate a benefit event.                                                             |

## Reporting

| Reports                                              | Considerations                                                                                                                                                                                      |
|------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>All Deductions</b><br><b>All Earnings</b>         | Use these reports to verify any pay component configurations, such as which benefit plan the pay component references.                                                                              |
| <b>Benefits Eligibility by Benefit Group</b>         | Use this report to view future-dated benefits groups.                                                                                                                                               |
| <b>DSN Benefits Contributions by Establishment</b>   | Use this report to compare benefit amounts aggregated by benefit plan and population with the aggregated payroll amounts. (For French Payroll Déclaration Sociale Nominative (DSN) reporting only.) |
| <b>View Benefit Eligibility Rule Results</b>         | Use this report to determine why someone is or isn't meeting an eligibility rule. It can be useful when troubleshooting issues with deductions and credits.                                         |
| <b>View Workers in Multiple Benefit Groups Audit</b> | Use this task with an effective date to ensure that employees are only eligible for 1 benefit group. It can be useful when troubleshooting issues with deductions and credits.                      |

## Integrations

| Integration                               | Considerations                                                                                                                                                                             |
|-------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <i>Cloud Connect for Benefits</i>         | Workday offers integration templates for benefit providers through Cloud Connect for Benefits (CCB).                                                                                       |
| <i>Change Benefits</i>                    | This web service loads workers' benefit elections and retirement savings plans.                                                                                                            |
| <i>Enroll in Retirement Savings Plans</i> | This web service loads workers' retirement savings plan elections. It enrolls workers, updates existing elections, and carries forward prior elections unless they are explicitly changed. |

## Connections and Touchpoints

| Touchpoint                    | Consideration                                                                                                                                                                                                                                                                                                                                                                          |
|-------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Absence                       | When you configure time off plans to track balances in Absence Management, you can retrieve the units for approved time off as part of earning and deduction calculations. Use absence component-related calculations (ACRCs) to associate absence plans to earnings and deductions. Ensure that you map all absence plans that can impact payroll or benefits earnings or deductions. |
| HCM Staffing and Compensation | Provide worker and job-related data for payroll and benefit processing, such as: <ul style="list-style-type: none"> <li>• Worker status.</li> <li>• Personal information.</li> </ul>                                                                                                                                                                                                   |

| Touchpoint | Consideration                                                      |
|------------|--------------------------------------------------------------------|
|            | Provide salary changes that can trigger benefit enrollment events. |

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships in your tenant. Learn more about the [Workday Touchpoints Kit](#) on Workday Community.

## Setup Considerations: Payroll Security

---

You can use this topic to help make decisions when planning your configuration and use of payroll security. It explains:

- Why to set it up.
- How it fits into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

### What It Is

Configurable payroll security:

- Offers a simple and customizable method to protect payroll data from unauthorized access or manipulation.
- Enables you to control access to payroll data, based on user roles and responsibilities, like:
  - View payslips and payment dates.
  - Set up company taxes.

Payroll security policies enable you to secure access to:

- Integrations with third-party organizations for wage garnishments.
- Pay calculation results reports and reporting items.
- Pay cycle worklets.
- Payslip configuration tasks.
- Report data sources (RDS) for payslips.
- Run pay calculation background processes.
- Termination business processes.

## Business Benefits

Configure payroll security permissions to:

- Automate permission assignments for payroll data by grouping users based on similar attributes, saving you the effort of setting up permissions individually.
- Manage access to payroll integrations, reports, and data using a single security model. This model makes it easier to maintain access at scale.
- Meet company standards for auditing permissions in Workday using built-in audit trails.
- Limit access for nonpayroll users to only the payroll data they need to perform their jobs.

## Use Cases

- Automatically add new users to a defined security group based on their position, such as:
  - A user-based group for payroll administrators.
  - Managers who need to review overtime or costing information.
  - HR administrators who need to access aggregated payroll results and other nonsensitive portions of data.
- Provide different levels of access for different types of users in the same tenant. Example: Workers can only view their own payslips, but managers can view payslips for all their direct reports.

## Questions to Consider

| Question                                                                                | Considerations                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
|-----------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| How do you want to determine who can view items and perform actions in Workday Payroll? | <p>Workday provides different types of security groups to enable you to address your payroll requirements. Workday groups similar items and actions into different security policies. While you can't change the items and actions secured to security policies, you can change the security groups associated with the security policies.</p> <p>You can use these types of security groups to control who has access and what they have access to:</p> <ul style="list-style-type: none"> <li>• Role-based.<br/>Example: Payroll partner. Has access to selected payroll tasks and to view selected data for the pay groups they support.</li> <li>• Segment-based.<br/>Example: Administrator for payroll business processes. Has access to create and maintain payroll business processes. This security is a decentralized version of Business Process Administrator.</li> <li>• User-based.<br/>Example: Payroll administrator. Has access to view payroll data and perform payroll tasks for all workers in all pay groups.</li> </ul> <p>Members in security groups with the unconstrained context type can access all secured data instances.</p> |

| Question                                                                       | Considerations                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|--------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| What level of permission do you want to provide to payroll tasks and reports?  | <p>Workday groups similar tasks and reports into security domains. To provide access to the tasks and reports, set View or Modify permission on the security policies that secure them.</p> <p>Workday typically designates reports and reporting items with View access. Users with Modify permissions can access all tasks and reports secured to the domain.</p>                                                                               |
| What level of permission do you want to provide to payroll business processes? | You can set different permissions on both the security policies and steps for payroll business processes. Example: Provide employees access to the <i>Initiate</i> action on a business process.                                                                                                                                                                                                                                                  |
| Do third-party resources need access to your Workday tenant?                   | <p>You can use Service Centers to grant third-party contracted organizations access to your Workday tenant while protecting sensitive data. Representatives from those organizations:</p> <ul style="list-style-type: none"> <li>• Have limited access to your Workday tenant.</li> <li>• Can support a subset of workers in your organization.</li> <li>• Aren't workers, but can perform tasks in Workday within a predefined scope.</li> </ul> |

## Recommendations

When possible, use Workday-delivered payroll security groups instead of creating your own. Doing so helps to ensure that the security group has access to the payroll-specific data and tasks needed to perform their role. Workday-delivered payroll security groups also enable you to:

- Benefit from banking setup questions and feedback about terminee security groups captured on Workday Community.
- Use Workday-verified security configurations for accounting and tax setup.

Grant access only to information and resources users require to accomplish their job functions.

Use Workday-delivered reports to:

- Ensure that you provide users with correct permissions.
- Create and submit year-end tax data to government agencies.

Grant unconstrained access to business process administrators on the **Business Process Definitions** report data source (RDS). Configure access to these domains as appropriate to ensure that all business process administrators can build custom reports using this RDS:

- *Administration*
- *Definition View*
- *Manage: Business Process Definitions*

Review all requirements for security groups and security policies before setting up security.

## Requirements

To set permissions for domains and business processes, enable the Workday Payroll functional area and its security policies. Enabling a functional area doesn't automatically enable all the security policies in that area.

## Limitations

You can't:

- Change the actions available on security policies for business processes.
- Change the items within domains.
- Delete security policies.
- Move domains or business processes from 1 functional area to another.

## Tenant Setup

No impact.

## Security

| Functional Areas            | Considerations                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
|-----------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Banking and Settlement      | <p>Security domains in this functional area enable you to:</p> <ul style="list-style-type: none"> <li>• Manage bank account transfers, ad hoc transactions, positive pay files, and payment returns.</li> <li>• Print checks, payslips, and pay advices.</li> <li>• Review bank statements and manage reconciliations.</li> <li>• Settle payments electronically and by credit card.</li> <li>• Set up financial institutions and bank accounts.</li> <li>• Set up and manage prenoting and escheatment.</li> <li>• Set up and process outsourced banking and print services.</li> <li>• View account, check, and direct deposit registers.</li> </ul> |

| Worktags         | <p>Security domains in this functional area enable you to manage Workday-delivered and custom worktags. You can:</p> <ul style="list-style-type: none"> <li>• Configure primary, additional, and required worktag types for taggable transaction types.</li> <li>• Enable worktag types for related worktag taggable types.</li> <li>• Retrieve and load default and allowed values using web services for any related worktag taggable type.</li> </ul> |

You're responsible for testing and validating that security domain settings meet your business needs.

### Business Processes

Workday doesn't secure business processes to domains, but each business process definition has its own business process security policy.

You associate each step within a business process definition with a security group.

Workday enables you to configure segment-based security groups with access to view and manage specific business process definitions. Business process segmentation applies only to business process definitions.

Segment-based security groups can include any type of security group, including role-based security groups. When you use a role-based security group, the member can only maintain business processes affiliated with the organizations they have an assigned role for. Example: A payroll partner's role in:

- Absence Requests
- Benefit Enrollments
- Compensation Changes
- Job Changes
- One Time Payments
- Terminations
- Time Entry and submission

Secure the segment-based security group to the *Manage: Business Process Definitions* security domain. This domain only includes tasks related to defining business processes.

Workday doesn't enable segmented security on these business process components:

- Calculated dates
- Checklists
- Rules
- To Dos

### Reporting

| Dashboard or Report                                                  | Considerations                                                              |

| <b>Web Service Security Audit</b> report                            | View the security groups that can run web service tasks.                                                              |

## Integrations

Workday provides several security domains that secure access to integration templates and integration systems. These domains separate the permissions to configure an integration from the permissions to run an integration and view integration output. You can also segment integration templates and integrations, then grant access separately for each segment.

All integrations access Workday data using web service operations and Reports-as-a-Service. Workday secures these items to various security domains:

- Custom reports.
- RDSs.
- Report fields.
- Web service operations.

Integrations and applications that access Workday must have Get and Put access to the domains that include the web service operations. Also, they must have the View access to the domains that include the RDSs and report fields. In addition, outbound EIBs require access to the custom report that they use as an RDS. These accounts can control permissions:

- Associated Integration System User (ISU) account (for Connectors, Studio integrations, and external applications).
- The role of the person who runs an EIB integration. Example: Payroll administrator.

### Connections and Touchpoints

| Touchpoint             | Consideration                                                                                                                                                                                                                                                                                                                                                                                                                                                              |

## Setup Considerations: Time Off Calculations for Payroll

---

You can use this topic to help make decisions when planning your configuration and use of time off calculations in Absence Management with Workday Payroll. It explains:

- Why to set them up.
- How they fit into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

### What They Are

Time off calculations provide paid and unpaid time off totals for workers for a given period of time. You can use these calculations in earnings for Workday Payroll processing so that you can pay workers for the time off.

### Business Benefits

Workday Payroll seamlessly integrates with Absence Management to enable you to pay workers for time off or record unpaid time off.

Absence Management automatically creates calculations for time off that you can use as inputs to payroll calculations, helping ensure you have up-to-date information in your payroll calculations. You don't have to use integrations to load absence data.

### Use Cases

You can create earnings in Workday Payroll to:

- Pay a worker for a single paid time off.
- Pay a worker for position-based time offs, which can include multiple jobs, each with different rates of pay.
- Reduce a worker's base pay for time off, to avoid double payment of time off. Example: Base an earning calculation on the total time off for a type of absence.

- Track hours worked for reporting purposes.

### Questions to Consider

| Questions                                                          | Consideration                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
|--------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| What time off inputs do you use in your payroll calculations?      | <p>When you create time offs, Workday automatically creates Absence Component Related Calculations (ACRCs) that you can use as inputs to payroll calculations to configure time off earnings. ACRCs retrieve the amount of approved time off units (days or hours) in the current payroll period for a worker, where xxx is the time off name:</p> <ul style="list-style-type: none"> <li>• <i>xxx - Time Off Paid</i></li> <li>• <i>xxx - Time Off Unpaid</i></li> <li>• <i>xxx - Time Off Total</i></li> </ul> <p>Example: When defining an earning for paid vacation, you can select:</p> <ul style="list-style-type: none"> <li>• <i>Time Off Paid (Units) * Rate</i> as the calculation rule.</li> <li>• <i>Time Off Paid (Units)</i> as a related calculation.</li> <li>• <i>Vacation - Time Off Paid</i>, the automatically generated ACRC, for the override value.</li> </ul> <p>The <i>Time Off Paid</i> and <i>Time Off Unpaid</i> ACRC values depend on what is above and below the lower limit on the time off plan. These calculations aren't necessarily what's paid and unpaid in payroll. That depends on how you create your earnings and set up your Pay Component Related Calculations (PCRCs) on the Payroll side.</p> |
| What calculations do you use to pay workers during their time off? | <p>Workday Payroll considers workers on time off to be active and continues to apply their standard earnings and deductions during their time off. Use ACRCs to configure specific earnings and deductions for workers based on the amount of time off taken. Examples: You can create:</p> <ul style="list-style-type: none"> <li>• Deductions to reduce a worker's salary based on the amount of time off taken.</li> <li>• Earnings to pay a worker for the amount of time off taken.</li> </ul> <p>To discontinue a worker's pay during their time off, consider creating a leave type with payroll effect enabled. Alternatively, you can create deductions to deduct pay.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| How do you want to handle time off that has occurred in the past?  | <p>When you enter time off for a worker after you complete payroll, you can run a retroactive payroll calculation. When you enter retroactive time off, the retro pay calculation recalculates:</p> <ul style="list-style-type: none"> <li>• Paid or unpaid time off earnings directly affected by the change.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

| Questions                                                            | Consideration                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
|----------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                                                      | <ul style="list-style-type: none"> <li>Earnings indirectly affected by the change. Example: A time off that reduces base pay earnings.</li> </ul> <p>Workday then:</p> <ul style="list-style-type: none"> <li>Reports the differences between the original and recalculated payroll results.</li> <li>Transfers any differences to the current period.</li> </ul> <p>Retro gets the latest value for the period from Absence based on the latest configuration. If you change your time off plan, effective dated changes use the configuration validations in effect at the time of the time off request. While effective dated changes don't trigger retro, Workday detects these changes when you process retro payroll.</p> <p>Absence events that trigger retro to run for a completed period include:</p> <ul style="list-style-type: none"> <li>Absence Input Change</li> <li>Absence Limit Override Change</li> <li>Calculated Balance Override</li> <li>Correct Time Off</li> <li>Enter Time</li> <li>Request Time Off</li> </ul>                           |
| What earnings and deduction-related time offs do you need to set up? | When creating earnings or deductions-related time offs, ensure that you configure them to recalculate in any retroactive calculations.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| How do you handle time off corrections?                              | <p>You can correct approved time off for workers on their behalf in Absence Management.</p> <p>Add payroll input to adjust payroll calculations, but Workday recommends that you first modify the information in Absence.</p> <p>When you correct a time off that you've already processed in payroll, run a retroactive calculation to account for the correction in a completed payroll period. When the period is still in progress, you can just run pay calculation.</p> <p>When you correct a time off that changes worker pay during a calculation run that hasn't completed, Workday identifies the pay result as requiring recalculation. When payroll runs again, Workday recalculates the result.</p> <p>On the <b>Run Pay Calculation</b> task, you can limit calculations to workers with payroll-impacting events by selecting:</p> <ul style="list-style-type: none"> <li><b>Smart Calculation:</b> Workday automatically detects the change.</li> <li><b>Smart Calculation Based on Events:</b> You need to select a time off event type.</li> </ul> |

| Questions                                                                                                                          | Consideration                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
|------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| What waiting periods do you want to implement to prevent new employees taking paid time off until they pass a probationary period? | <p>You can define eligibility rules on time off plans. Eligibility determines who can take time off and when.</p> <p>Example: You want workers to be eligible for a plan but not able to take paid time off until they reach 90 days of employment. Eligibility rules drive the time off visibility for your workers.</p> <p>You can create an absence table with a tier for each plan, each with a different rate of pay. Configure your payroll to apply the appropriate rate of pay to each time off tier. When a worker is eligible for some but not all tiers, Workday deducts time off from tiers they're eligible for. In this case, you can add a tier that pays employees zero percent of their salary when they've less than 90 days continuous service.</p> |
| How do you want to limit the amount of paid time off that employees can take?                                                      | <p>You can define:</p> <ul style="list-style-type: none"> <li>• Lower limits on time off plans. Workday processes the time off up to and including the lower limit as paid time off. Any hours that exceed the limit are unpaid.</li> <li>• Time off validations for workers when they request time off.</li> </ul> <p>Example: You only want to pay your employees for what they accrue in their Absence balance and nothing more. The <i>Maximum Unpaid Time Off Units Allowed</i> validation enables you to:</p> <ul style="list-style-type: none"> <li>• Place a limit on the amount of unpaid time off that a worker can request.</li> <li>• Prevent employees requesting unpaid time off by selecting 0 (zero).</li> </ul>                                       |
| How do you want to pay workers who change jobs within the company?                                                                 | <p>Configure these accrual options that dictate whether to prorate accruals when eligibility changes occur midperiod:</p> <ul style="list-style-type: none"> <li>• Front-loaded: As transfers, promotions, and other staffing changes occur in your organization, workers might lose eligibility for an accrual that they've already received. You can automate the proration of a worker's front-loaded accrual when the worker loses accrual eligibility due to a job change.</li> <li>• Based on as-of-date: You can automate the proration of a worker's accrual based on the date of transfer.</li> <li>• None.</li> </ul>                                                                                                                                        |
| How do you want to handle time off for workers with multiple positions?                                                            | Configure your tenant for multiple jobs and create position-based earnings to calculate paid or unpaid time for position-based time off plans. When you                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |

|----------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                                                                  | <p>run pay calculation, Workday Payroll retrieves time off units for the:</p> <ul style="list-style-type: none"> <li>• Relevant position, when the earning and time off plan are position-based.</li> <li>• When the earning is worker-based but the time off plan is position-based, the worker's: <ul style="list-style-type: none"> <li>• Processing position (CAN, USA).</li> <li>• Primary position (FRA, UK).</li> </ul> </li> <li>• Worker, when the earning is position-based but the time off plan is worker-based. The position-based earning resolves separately for each of the worker's positions, and it uses the time off units for the worker in each calculation.</li> </ul> <p>Example: When a worker requests 8 hours off, Workday uses 8 hours in the earning calculation for each position.</p> <p>Use calculations to support the proration of time off units across positions to prevent Payroll paying employees twice for the same time off. Example: Prorate units based on full-time equivalent (FTE) and scheduled weekly hours.</p> |
| How do you want to handle termination payouts when employees leave your company? | <p>You can configure time off plans with:</p> <ul style="list-style-type: none"> <li>• Time offs that pay out the time off balance to the employee when employees terminate midway through the calendar year.</li> <li>• Accruals that recoup time taken that's over the earned amount at time of termination.</li> </ul> <p>Example: You can create nested arithmetic calculations for Absence that calculate the accrual amounts.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

### Recommendations

Define negative earnings rather than deductions to calculate the value of unpaid time off and reduce gross pay.

When creating and editing earnings or deductions, add comments to clarify their usage. Example: Explain that workers earn different rates of pay for each position, and the corresponding hourly rate or base pay for salaried workers.

### Requirements

Use ACRCs in earnings and deductions but for accurate calculations, don't reference other earnings or deductions that refer to ACRCs indirectly.

### Limitations

You can only use time off plans that track balances with Workday Payroll.

## Tenant Setup

To enable you to create position-based time off plans and earnings, configure your Workday tenant to support multiple jobs on the **Edit Tenant Setup - HCM** task.

| <b>Time Off Results by Period for Workers</b> | <ul style="list-style-type: none"> <li>• Accruals, paid, and unpaid time off for each period.</li> <li>• Time offs to pay out when a worker is terminated.</li> </ul>                                                        |
| <b>View Payroll Results</b>                   | Displays calculated payroll results on the worker profile. To verify that complex or new configurations are displaying expected results, including earnings, view worker results on this report before completing a payroll. |
| <b>View Period Schedule</b>                   | Enables you to identify the: <ul style="list-style-type: none"> <li>• Time off plans in Absence that use the period schedule.</li> <li>• Pay group usage in Payroll.</li> </ul>                                              |
| <b>View Time Off Balance</b>                  | Displays paid time off year to date.                                                                                                                                                                                         |

### Integrations

| Web Services               | Considerations                                                                                                     |
|----------------------------|--------------------------------------------------------------------------------------------------------------------|
| <i>Get Payroll Results</i> | Enables you to view pay results for specific workers and companies, and pay calculations for specific date ranges. |
| <i>Put Period Schedule</i> | Enables you to specify a period schedule for a time off plan. The period schedule must exist in Workday.           |

### Connections and Touchpoints

| Touchpoint              | Consideration                                                                                                                                                                                                                                                                                                                                                                                           |
|-------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Calculations            | <p>You can share calculations between the Absence and Payroll functional areas. These high-level categories of calculations reference the same calculation engine:</p> <ul style="list-style-type: none"> <li>• Absence</li> <li>• Payroll</li> <li>• Generic</li> </ul> <p>You can create simple calculations, or nest calculations by selecting an existing calculation as an operand of another.</p> |
| Earnings and deductions | A payroll calculation can reference a time off plan through an ACRC and tie calculated hours to an earning. Example: A USA vacation earning is a payroll calculation that includes a worker eligibility rule. The rule limits the population to workers with ACRCs not equal to zero for the subperiod it's calculating.                                                                                |

| Touchpoint                          | Consideration                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|-------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Holiday calendar and work schedules | These components influence how Workday counts units of time so that a worker's time off doesn't overlap on nonworkdays or company holidays.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| Time off requests                   | Time off transactions are directly related to how Workday records a worker's absence. Time off plans that track balances pass time off to Workday Payroll for use in payroll calculations when: <ul style="list-style-type: none"> <li>Workers request or correct time off.</li> <li>You enter time off requests on behalf of a worker or correct their time off.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| Period schedules                    | Absence Management and Workday Payroll can share period schedules that dictate: <ul style="list-style-type: none"> <li>How often you enable your workers to accrue time off in a time off plan.</li> <li>The start and end dates of the periods that retrieve and process time off.</li> <li>The time period for tracking, reporting, and monitoring time for existing balances or liability.</li> <li>Whether to calculate eligibility reporting weekly or monthly.</li> </ul> <p>Period schedules and accrual frequencies can impact how time off is available during a pay period for payroll.</p> <p>Period schedules are useful when defining employee eligibility rules for a time off plan.<br/>Example: You want employees to be full-time as of the start date to be eligible for the time off period.</p> |

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships in your tenant. Learn more about the [Workday Touchpoints Kit](#) on Workday Community.

## Setup Considerations: Payroll Global Deployment

---

You can use this topic to help make decisions when planning your configuration and use of payroll global deployment. It explains:

- Why to set it up.
- How it fits into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

### What It Is

Workday provides payroll software for Australia, Canada, France, the UK, and the U.S.. For workers in other countries, you can use Workday third-party payroll connectors. These connectors provide templates for bidirectional integrations that bring third-party payroll data into and out of Workday for global reporting. You can use Workday to:

- Help manage a current global deployment.
- Prepare for future global growth.

### Business Benefits

A global payroll deployment in Workday provides:

- Flexibility to connect to different third-party payroll providers using integrations.
- A unified global experience for both employees and administrators.
- Localized experiences for workers, enabling them to use Workday in their local language. Workday delivers translations in over 30 languages.
- Integrations that support complex payroll use cases, and detect and report changes to worker data that are relevant to payroll.
- A hire-to-pay solution for employees that enables employees to see their HR and pay information, such as payslips and tax documents, in Workday.
- An integration template that helps you reconcile worker data used in payroll processing between Workday and your third-party provider to ensure accurate payments for your workers.
- A global view of external payroll results within Workday. Provides powerful insights, such as analytics on global labor costs. Helps you with your business decisions.

### Use Cases

- Use integration templates to integrate to global third-party payroll providers with Workday.
- Your workers can view their payroll information, such as third-party payslips and year-end tax documents, directly in Workday. Help support a mobile workforce.
- Gain a full view of your global workforce, such as employee salaries, benefits, and employer contributions. You can combine both Workday Payroll data and third-party payroll data in dashboards and reports.

## Questions to Consider

| Questions                                                           | Considerations                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

Those calculations help pull in absence hours when calculating payroll earnings.</li> </ul> |
| What is the currency elected for the worker or the company?      | The default country selection determines the currency. When a worker is in a pay group with a currency that isn't equivalent to the worker's company currency, Workday converts the currency using the default exchange rate for display purposes. You can set the default exchange rate as of the period end date.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| What third-party products do you need to integrate with?         | Plan to work with vendors to set up and maintain those integrations, if required.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| Which historical payroll data do you need from external systems? | <p>To improve your payroll calculations, you can load historical payroll data from external systems. This data enables you to:</p> <ul style="list-style-type: none"> <li>• Include payroll history in quarter-to-date and year-to-date calculations.</li> </ul> <p>For Payroll for the UK, the tax year is from April 6th to April 5th of the next year.</p> <p>To calculate superannuation contributions, PAYG, and calculations that use the average normal gross, you may need to have data from the beginning of the tax year.</p> <ul style="list-style-type: none"> <li>• Apply limits and self-correcting logic to correct amounts when you start using Workday Payroll.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                     |

| Do you have employees who travel internationally for work?             | <p>When a worker from another country is on international assignment in Canada or the U.S., you can pay them in their host country using Payroll for either:</p> <ul style="list-style-type: none"> <li>• Their entire pay.</li> <li>• Only selected expenses, such as housing allowance. You continue to pay their base pay in their home country using third-party payroll.</li> </ul>                                                                                                                                                                      |
| What data do you want to collect?                                      | <p>Your data requirements might vary depending on the countries you need to support payroll for. Plan to create custom reports if required.</p> <p>For Payroll for France, your Workday setup must contain the required data to avoid errors and missing data in DSN declarations.</p> <p>See: <a href="#">Reference: DSN Data Requirements (FRA)</a> on page 1603.</p> <p>For Payroll for the UK, your Workday setup must contain the required data to avoid errors and missing data, such as partner and dependent information for shared parental pay.</p> |
| What do you need to customize for your employees at the country level? | <p>You can configure Workday to create a global experience for your employees, by localizing the:</p> <ul style="list-style-type: none"> <li>• Language of the product at the country level.</li> <li>• Currency.</li> </ul>                                                                                                                                                                                                                                                                                                                                  |
| Are you implementing Payroll for France and another country?           | <p>Payroll for France recommends that you disable payslip viewing in self-service for all workers. As payslip self-service is a tenant-level setting, Workday recommends that you create an intersection security group for French employees.</p>                                                                                                                                                                                                                                                                                                             |
| What global analytics do you want to report on?                        | <p>You can report on items such as the:</p> <ul style="list-style-type: none"> <li>• Number of employees paid.</li> <li>• Variants by pay group and employee.</li> <li>• Average cost per employer by pay group.</li> </ul>                                                                                                                                                                                                                                                                                                                                   |
| What payroll accounting categories do you need to set up?              | <p>When using Payroll for multiple countries, you can set up multiple charts of accounts, such as a primary and secondary. You might need to set up multiple charts of accounts because the standards for charts of accounts can differ by country, such as U.S. and France.</p>                                                                                                                                                                                                                                                                              |
| When do you need to audit your payroll?                                | <p>You can review the payroll run results and the audit log. You can schedule the payroll audits and they're:</p> <ul style="list-style-type: none"> <li>• Date and time stamped.</li> <li>• Configurable.</li> </ul>                                                                                                                                                                                                                                                                                                                                         |

| Questions                                                     | Considerations                                                                                                                                                                                                                                                                                                                                                                                              |
|---------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| How do you want to group your workers for payroll processing? | <p>Set up a separate pay group for each country. Workday uses the country that you configure to determine the currency to use when processing the employee's payroll results. A pay run group can't include pay groups for multiple countries.</p> <p>After you process payroll for a pay group, you can't change the country on the pay group. To change the country, you must create a new pay group.</p> |

## Recommendations

When implementing across multiple countries, Workday recommends:

- Naming objects with a standard naming convention based on country as well as using the country field when possible. This convention helps you easily identify and maintain different objects during implementation and production.
- Use different period schedules for each country, when applicable. This configuration helps you avoid issues, such as when pay dates for different holidays don't align across countries.
- Creating a separate run category for each country that you're implementing to help you process each item. Most countries have country-specific pay accumulations and pay component groups.

## Requirements

Configure company and worker data in Workday Human Capital Management (HCM) for each country.

For certain payroll calculations, you must provide data from within Workday or external integrations for these areas:

- Absence.

Payroll for the UK customers must use Workday Absence for UK statutory holiday pay, Statutory Sick Pay, and Statutory Parental Pay. Statutory Parental Pay includes:

- Statutory Adoption Pay
- Statutory Maternity Pay
- Statutory Parental Bereavement Pay
- Statutory Paternity Pay
- Statutory Shared Parental Pay

Payroll for France customers must use Workday Absence for Déclaration Sociale Nominative (DSN) reporting.

Payroll for Australia customers must use Workday Absence for Leave payments.

- Benefits

Payroll for the UK customers must use Workday Benefits for pension auto-enrolment.

Payroll for France customers must use Workday Benefits to report health insurance and contingency fund contributions.

- Compensation

Payroll for Australia customers must use Compensation for Superannuation.

- Time Tracking

Regardless of whether you use Financial Management in Workday, you must create and regularly maintain accounting configurations related to payroll transactions, including:

- Account sets and account posting rules.

- Fiscal schedules, posting intervals, and years.
- Journal source mapping.
- Types, account types, periods, and years for ledgers.

For the UK, use the same pay frequency when there are multiple run categories to avoid incorrect taxation due to conflicting period schedules.

For Canada, you might need to configure period schedules at least 53 weeks into the past. This configuration accommodates historical data loaded for Record of Employment (ROE) periods.

For France, you must set up a work schedule calendar for workers for DSN reporting.

### Limitations

- Workday doesn't report tax information directly to government organizations for:
  - Payroll for Canada.
  - Payroll for the U.S.
  - Countries supported through third-party payroll providers.

Workday provides the necessary reports for you to do so manually.

- While you can use Workday to help you meet payroll compliance, you must verify that your payroll is compliant with requirements for the regions in which you operate.
- After you process payroll for a pay group, you can't change the country on the pay group. To change the country, you must create a new pay group.

### Tenant Setup

On the **Edit Tenant Setup - Global** task you can:

- Set countries where you allow worker payment elections in Workday-supported and other countries. Payment election types include payroll and expense reimbursement pay types.
- Create translations in Workday-supported and other languages. If you're deploying Workday in multiple languages, you must create and maintain translations specific to your configuration and business data.
- Manage personal data for workers, based on country.

On the **Edit Tenant Setup - HCM** task, select *Multiple Jobs* in the **Position Setup Options** field if you plan to use multiple jobs for Canada and the U.S.

On the **Edit Tenant Setup - Payroll** task, enable all Workday Payroll countries for which you've bought Workday Payroll.

On the **Edit Tenant Setup - System** task, you can configure:

- Local time zones at the tenant, location, and user levels.
- The currencies available for selection, and maintain currency conversion rates.
- Country-specific settings, locales, and languages to enable localization for countries to help you comply with local regulatory requirements.

### Security

You can use:

- Constrained, role-based security groups to provide payroll partners access only to the specific pay groups to which you assign them. Example: Payroll partners only see country information, such as a U.S. payroll partner not being able to view France pay group results.
- User-based security groups to provide payroll administrators with access to all pay groups across organizations. Consider also using user-based security groups for calculation and settlement administrators to provide them with a system-wide access without enabling them to see employee-level payroll data. Example: Payroll administrators can see global information.

To view the different security domains for payroll, access the **Domain Security Policies for Functional Area** report and select a payroll functional area. Workday recommends that you identify and grant the minimum level of security that a worker needs.

| Functional Areas | Considerations                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

| <b>Payroll Compliance Updates Dashboard</b>                                                                                                                                                                                                                                       | <p>Gives you quick visual insight into the compliance-related updates that are most important to you. You can quickly identify whether a compliance-related update potentially impacts your employees and take appropriate action. Example: Alerting employees, spot-checking payroll results, or being ready to answer questions.</p>                                                                                                                                                                                                                                                                                                                                                                                                                               |
| <b>Global Library</b>                                                                                                                                                                                                                                                             | <p>Displays sample configurations and common compliance requirements. You can use this report when adding on another Workday product area or expanding into new countries or regions. The report is a preconfigured profile of 2 types of configurations:</p> <ul style="list-style-type: none"> <li>• Workday delivered and maintained statutory guidance configurations. Example: State minimum wages, tax calculations, withholding and court order data, address and name formats.</li> <li>• Sample configurations. On the sample configuration tabs, you'll see a description of how to implement them.</li> </ul> <p>You can also add this report as a menu item to the <b>Pay Cycle Command Center</b> and <b>Payroll Compliance Updates</b> dashboards.</p> |

| Reports or Dashboards                                | Considerations                                                                                                                                                                                                                             |
|------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Tenant Analyzer</b> Dashboard                     | Enables you to verify your tenant configuration against Workday recommendations, for Workday: <ul style="list-style-type: none"> <li>• Absence</li> <li>• Financials</li> <li>• HCM</li> <li>• Payroll</li> <li>• Time Tracking</li> </ul> |
| <b>All Supported Payroll Retro Transaction Types</b> | Workday doesn't support all retroactive changes for Australia, Canada, France, the UK, or the U.S.<br><br>You can use the report to view the supported retroactive changes by country.                                                     |

## Integrations

| Integrations                                     | Considerations                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
|--------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <i>Payroll Effective Change Interface (PECI)</i> | Full-stack integration, which transmits payroll changes for workers and includes the effective date and data entry date for each change. Enables you to load third-party payroll data into and out of Workday. You can configure the integration to suit your needs.<br><br>Within PEGI, you can use the: <ul style="list-style-type: none"> <li>• <i>Event-Driven Integration for Third-Party Payroll</i> integration service.</li> <li>• <i>Payroll Interface Integration Command Center</i>.</li> </ul> |
| <i>Worker Effective Change Interface (WECI)</i>  | Enables you to load worker data, including time off and LOA. You can configure the integration to suit your needs.                                                                                                                                                                                                                                                                                                                                                                                         |
| <i>Payroll Interface</i>                         | Enables you to load third-party payroll data into and out of Workday, such as payroll organizations that have different: <ul style="list-style-type: none"> <li>• Pay frequencies.</li> <li>• Earnings and deductions.</li> <li>• External processing requirements.</li> </ul> You can configure the integration to suit your needs.<br><br>For Payroll for Australia, enables you to use: <ul style="list-style-type: none"> <li>• Single Touch Payroll (STP).</li> <li>• SuperStream.</li> </ul>         |
| <i>Global Payroll Reconciliation</i>             | Requires the <i>Payroll Effective Change Interface (PECI)</i> integration. Enables you to compare payroll data in Workday with data in your third-party payroll system and provides options for reconciliation.                                                                                                                                                                                                                                                                                            |

| Integrations                            | Considerations                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

### Connections and Touchpoints

| Touchpoint     | Considerations                                                                                                    |
|----------------|-------------------------------------------------------------------------------------------------------------------|
| Pay Run Groups | When you calculate payroll or run reports, you can select the pay run group instead of the individual pay groups. |

| Touchpoint                             | Considerations                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|----------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                        | <p>A pay run group can't include pay groups for multiple countries.</p> <p>Payroll administrators have access to all pay run groups. However, payroll partners can only process and report on a pay run group if you assign them to all of its pay groups.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| Payslips                               | <p>For each country, you need to maintain payroll payslip configuration. You can include up to 7 configurable sections on employee payslips. Workday automatically includes sections for:</p> <ul style="list-style-type: none"> <li>• Employee information.</li> <li>• Pay period dates.</li> </ul> <p>If you have a license to use Workday Payroll in more than 1 country, define a separate payslip configuration for each country. Make sure that payslips meet the consolidated requirements of all regions.</p> <p>For France Payroll, Workday provides a standard layout that you can use.</p> <p>For Payroll for Australia, Workday provides a standard layout that you can use which includes superannuation information by default.</p> |
| Gross-Up Earnings                      | <p>When you have Workday Payroll enabled for multiple countries, you can only select a single country for a gross-up earning. Create an earning per country.</p> <p>Payroll for Australia doesn't support gross-ups.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| Workday Human Capital Management (HCM) | <p>Period schedules for all countries.</p> <p>Multiple employment or multiple jobs. Workday recommends you configure your tenant for additional jobs if you need support for multiple jobs now or in the future.</p> <p>There's some worker data collection in France that the government prohibits, such as ethnicity. You might need to set that data up for global deployment.</p> <p>For France, you must set up establishments as a sub category of a company.</p>                                                                                                                                                                                                                                                                           |
| Workday Financial Management           | <p>Set up travel profiles, define payment election options, maintain payment elections, set up company tax IDs, set up expenses, and create project billing rate sheets.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships in your tenant. Learn more about the [Workday Touchpoints Kit](#) on Workday Community.

## Set Up Payroll Processing

---

### Setup Considerations: Payroll Dashboards

---

You can use this topic to help make decisions when planning your configuration and use of payroll dashboards. It explains:

- Why to set them up.
- How they fit into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

**What They Are**

Payroll dashboards consolidate payroll data and actionable items in 1 place. Workday delivers these preconfigured dashboards:

- Pay Cycle Command Center: To review and manage payroll data for 1 or multiple pay periods.
- Payroll Compliance Updates: To review compliance updates.
- Pay: To enable workers to access their payroll data.
- For Payroll for France, DSN Command Center: To manage and track your generated DSNs, verify reported payroll data, and access DSN tasks.
- For Payroll for Canada and the U.S., Payroll Year End: To access common year-end tasks, review past-year statistics and year-end forms, and run year-end business processes.

You can also create an unlimited number of custom dashboards.

**Business Benefits**

Payroll dashboards help to increase operational efficiency and save time by enabling you to:

- Review strategic payroll trends and metrics and identify issues that require action.
- Run tasks and reports most relevant to you from 1 location.

- Quickly assess the payroll status of your company with a payroll process overview.
- Review delivered and future compliance updates in 1 location.
- Enable workers to engage with their payroll and find answers without having to ask pay partners using employee self-service (ESS).

### Use Cases

Use payroll dashboards to:

- Compare pay periods to confirm that payroll results are consistent.
- Track trends, drill down on pay components, and investigate anomalies.
- Plan for compliance updates that impact pay to notify workers in advance or address their questions.
- Reconcile pay results with the number of workers.
- Track amounts that go into suspense accounts.

Enable workers to run the Pay dashboard to understand:

- Why their gross-to-net is the same but their holiday pay is different.
- How much they contribute for taxes or voluntary deductions.
- Confirm a compensation change.

### Questions to Consider

| Questions                                                         | Considerations                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
|-------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Which countries do pay partners process payroll for?              | <p>You can preconfigure fields to display by country and relevance to pay partners on each dashboard. Example: You can display certain run categories and pay periods.</p> <p>You can also provide pay partners access to configure their own dashboards.</p>                                                                                                                                                                                                                                 |
| What information do you want to display on the Workday Home page? | <p>You can configure the Home page to increase operational efficiency by:</p> <ul style="list-style-type: none"> <li>• Selecting which worklets to display and in which order by role. Example: If 1 person manages payroll and time tracking, you can include Payroll and Time Tracking worklets on their Home page.</li> <li>• Renaming existing worklets using the <b>Configure Home Page Content</b> task.</li> <li>• Grouping dashboards by usage frequency.</li> </ul>                  |
| What data do you want to verify when running payroll?             | <p>The Pay Cycle Command Center dashboard contains preconfigured worklets that provide an overview of payroll data relevant to each processing phase. You can:</p> <ul style="list-style-type: none"> <li>• Compare trends between pay periods and identify anomalies.</li> <li>• Verify the status of payroll results and drill down on them.</li> <li>• Review retro differences in earnings and deductions.</li> <li>• Review debit and credit amounts for each ledger account.</li> </ul> |

| Questions                                          | Considerations                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
|----------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                                    | <ul style="list-style-type: none"> <li>Reconcile payroll results with payments.</li> </ul> <p>You can also configure custom worklets that display data from custom reports. Example: You can copy the <b>Payroll Input Not Processed</b> report and configure it to display on the Pay Cycle Command Center dashboard.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| How do you keep track of payroll processing tasks? | <p>The Pay Cycle Command Center dashboard contains preconfigured worklets that provide access to tasks and reports grouped by payroll processing phases. Examples:</p> <ul style="list-style-type: none"> <li>Preparation, such as running retro pay calculations and mass importing payroll inputs.</li> <li>Processing, such as running and completing payroll and running reports to audit payroll results.</li> <li>Postcomplete, such as running accounting and creating settlement runs.</li> <li>Manage worker data, such as assigning pay groups and adding tax elections by country.</li> </ul> <p>You can edit the Pay Cycle Command Center dashboard or create a custom one to meet your organizational needs. Example: You can:</p> <ul style="list-style-type: none"> <li>Reorder or group tasks and reports based on usage.</li> <li>Add or remove worklets.</li> <li>Configure standard and custom reports as worklets.</li> <li>Add external links such as regulatory documents.</li> <li>Add announcements and menus for specific groups based on condition rules.</li> </ul> |
| How do you learn about payroll compliance updates? | <p>The Payroll Compliance Updates dashboard provides compliance information for each supported payroll country, listing:</p> <ul style="list-style-type: none"> <li>Delivered updates related to taxes and court orders or withholding orders, to help you assess whether you need to change the configured pay component. Example: Unchanged payroll results can suggest you need to create new taxable deductions.</li> <li>Upcoming updates related to taxes and court orders or withholding orders, to help you plan communications to impacted workers based on the affected population size.</li> <li>Updates related to lookup tables and minimum wages.</li> </ul> <p>You can drill down on each update to review the impacted workers, pay components, or the effective date.</p>                                                                                                                                                                                                                                                                                                     |

| Questions                                                               | Considerations                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
|-------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                                                         | <p>When you process payroll for multiple countries, consider configuring a different preset effective date for each country to account for differences in tax year dates.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| <p>What are your regulatory reporting requirements? (CAN, FRA, USA)</p> | <p>For Payroll for France, you can configure the DSN Command Center dashboard to:</p> <ul style="list-style-type: none"> <li>• Manage and track your generated DSNs.</li> <li>• Verify reported payroll data.</li> <li>• Quickly access related DSN tasks in Workday.</li> </ul> <p>For Payroll for Canada and the U.S., you can configure the Payroll Year End dashboard for easy access to:</p> <ul style="list-style-type: none"> <li>• Routine year-end tasks.</li> <li>• Current estimates for year-end forms.</li> <li>• Past year-end form statistics.</li> <li>• Year-end business processes.</li> <li>• Statuses of business processes and year-end forms, and the name of the person responsible for the next step.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                  |
| <p>What information do you want to make available to workers?</p>       | <p>The Pay dashboard contains preconfigured worklets that workers access through ESS to view:</p> <ul style="list-style-type: none"> <li>• Payslips and payment dates.</li> <li>• Comparisons of earnings and deductions between 2 pay periods to identify trends and review pay distribution.</li> <li>• Pay history over the last 3 months as configured on worker payslips.</li> <li>• Earning and deduction history over the last 3 months.</li> </ul> <p>The dashboard displays only pay component or pay history results for workers who have payroll results for the previous 3 months.</p> <p>You can add routine tasks to the Pay dashboard based on business needs. | Questions | Considerations                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|-----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           | <ul style="list-style-type: none"> <li>The country to display. Workday displays the primary job country by default for workers in multiple countries.</li> <li>Which earnings and deductions to display. Example: Base pay plus bonus or hourly and overtime pay.</li> </ul> <p>Use the Pay dashboard rather than the <b>Pay</b> worklet, which only includes some of the dashboard content. Example: Workers can't elect voluntary deductions on the worklet.</p> |

## Recommendations

To ensure that the dashboards display the most up-to-date data, before accessing payroll admin dashboards:

- Configure continuous payroll calculations and enable an automatic stop to save the step of pausing the calculations.
- To ensure that pay calculations include all updates, verify integrations and run a full payroll recalculation.

Access the Payroll Compliance Updates dashboard at least once per week and before processing regular pay to plan for compliance changes.

For best ESS experience, when you configure the Pay dashboard:

- Set the worklet size to 1X for **Recent Payslips** and **Compare Periods**.
- Set the worklet size to 2X for **Earnings/Deductions History** and **Pay History**, especially for workers on weekly or biweekly pay periods who have more pay results.
- Sign in to Workday using proxy access to verify the layout and data displayed.

## Requirements

No impact.

## Limitations

You can't access cross-functional reports, such as Time Tracking dashboards, on the Pay dashboard.

## Tenant Setup

Configure the **Edit Tenant Setup - Payroll** task to set:

- Selectable default countries on the dashboards.
- Payslip options for ESS using the Pay dashboard.

## Security

| <i>Process: DSN (Run) - FRA</i> in the FRA Payroll functional area.               | Enables users to access the DSN Command Center dashboard.                                                                                                                                                                                                     |
| <i>Security Configuration</i> in the System functional area.                      | Enables users to manage proxy access policies to verify the Pay dashboard layout.                                                                                                                                                                             |
| <i>Self-Service: My Pay Dashboard</i> in the Core Payroll functional area.        | Enables users to access the Pay dashboard through ESS. Each self-service task requires appropriate security access. Example: To view and print payslips, configure the <i>Self-Service: Payroll (My Payslips)</i> domain in the Core Payroll functional area. |
| <i>Set Up: Tenant Setup: Worklets</i> in the System functional area.              | Enables users to configure dashboards.                                                                                                                                                                                                                        |
| <i>Set Up: Payroll (Taxes View)</i> in the Core Payroll functional area.          | Enables users to access the Payroll Compliance Updates dashboard and other data related to taxes.                                                                                                                                                             |

## Business Processes

You can add tasks to the dashboards to initiate business processes. Example: You can add a task for the *Request Time Off* business process to the Pay dashboard.

For Payroll for the U.S., you can only run the *W-2 Year End Process* business process from the Payroll Year End dashboard.

For Payroll for Canada, you can only run these year-end business processes from the Payroll Year End dashboard:

- *RL-1 Year End Process*
- *T4 Year End Process*

## Reporting

| Reports or Dashboards                           | Considerations                                                                                                                                                                                                                                                                                                                                                                                                        |
|-------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Custom Report Exceptions by Owner</b> report | Identify and troubleshoot exceptions for reports that you enable as worklets but that are unavailable on dashboards.                                                                                                                                                                                                                                                                                                  |
| <b>Global Library</b> report                    | <p>Add this report to the Pay Cycle Command Center and Payroll Compliance Updates dashboards to view sample configurations and common compliance requirements. Workday delivers the report with 2 types of configurations:</p> <ul style="list-style-type: none"> <li>• Statutory guidance configurations that Workday delivers and maintains. Example: State minimum wages, tax calculations, withholding</li> </ul> |

| Reports or Dashboards                          | Considerations                                                                                                                                                          |
|------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                                | and court order data, address and name formats. <ul style="list-style-type: none"> <li>• Sample configurations.</li> </ul>                                              |
| Maintain Dashboards report                     | Create custom dashboards, and add to and edit preconfigured dashboards.                                                                                                 |
| Payroll Compliance Update Documentation report | Add this report to the Payroll Compliance Updates dashboard to review compliance updates in Workday by country. The report includes links to external regulatory sites. |
| Settlement dashboard                           | Review settlement activities in your organization such as the unsettled payroll payments by amount.                                                                     |

## Integrations

When workers belong to external pay groups, you can display their external pay data on the Pay dashboard by:

- Enabling the corresponding domains for third-party payroll.
- Using the *External Payroll Documents* integration and the *External Payroll Results Inbound* integration.

Examples: External pay results, payslips, or tax documents.

## Connections and Touchpoints

| Features               | Considerations                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Retro pay calculations | When you run retro for terminations or hires in prior periods where workers have no payroll activity, Workday generates pay results of zero for those periods. The ESS Pay dashboard hides payslips associated with these retro events.                                                                                                                                                                                                            |
| Tasks and reports      | On Workday-delivered or custom dashboards, you can add: <ul style="list-style-type: none"> <li>• Reports as optional or required worklets.</li> <li>• Tasks as menu items for quick access.</li> </ul> Example: You can configure the <b>Payroll Audit Exception Summary</b> report as a worklet on the Pay Cycle Command Center dashboard. You can then drill down on the status and severity values and view individual audit exception details. |

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships in your tenant. Learn more about the [Workday Touchpoints Kit](#) on Workday Community.

## Steps: Set Up Payroll Processing

---

### Prerequisites

Create earnings and deductions.

### Context

Before loading your company payroll history into Workday, create a structure for holding the information and calculating payroll. The setup defines rules for who to pay, what to pay, and when to pay employees.

### Steps

1. Access the **Edit Tenant Setup - Payroll** task and select the countries where you're licensed and plan to use Workday Payroll.
2. [Set Up Payroll and Time Tracking Period Schedules](#) on page 149.  
Period schedules group pay periods for a pay frequency, such as weekly, biweekly, or monthly. They identify the start date, end date, and payment date for each pay period.
3. Specify the criteria employees must meet for a run type, such as a regular or bonus run, and identify the earning and deductions to process.  
See [Steps: Set Up Pay Run Categories](#) on page 98.
4. [Set Up Pay Groups](#) on page 169 and assign workers to them.  
Pay groups aggregate workers for payroll processing and reporting. They identify the run categories and corresponding period schedules for a pay group.
5. For Payroll for France, map types of workers to preconfigured payroll calculations.  
See [Map Staffing Information to Payroll Calculations \(FRA\)](#) on page 1510.
6. (Optional) Set up pay run groups.  
Pay run groups enable you to perform tasks, such as pay calculation, for multiple pay groups as a single action.  
See [Concept: Pay Groups and Pay Run Groups](#) on page 176.

## 7. (Optional) Set up Payroll dashboards, such as:

- **Payroll Compliance Updates:** Gives you quick visual insight into compliance updates.
- **Pay Cycle Command Center:** Enables you to quickly access the information you need for each phase of a pay cycle, from preparation, to processing, to post-complete processing.
- **Pay:** Enables your employees to understand their pay and access common payroll information including their recent payslips, depending on your payslip employee self-service configuration.
- Use of the **Recent Payslips** worklet in the **Pay** dashboard isn't recommended for Payroll for France.

Search on *Pay* in the **Maintain Dashboards** task to see a complete list of available dashboards for payroll and to configure them.

See [Steps: Set Up Dashboards and Landing Pages](#).

## 8. Access the **Tenant Analyzer** task to verify your payroll configurations in terms of Workday recommendations.

## Setup Considerations: Continuous Payroll Calculation

---

You can use this topic to help make decisions when planning your configuration and use of continuous payroll calculation. It explains:

- Why to set it up.
- How it fits into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

### What It Is

You can automate the calculation of on-cycle payroll for regular run categories. The calculation runs every 5 minutes, updating workers' pay results as pay-impacting events occur. Continuous payroll calculation processes the same pay-impacting events as the smart calculation feature, and workers with these pay result statuses:

- *Requires Recalculation*
- *Requires Recalculation Due to Retro*
- *Waiting to Pick up Retro Difference*

### Business Benefits

- You can run manual calculations less often and they'll take less time to process, streamlining payroll processing.

- You don't have to wait for a batch calculation to see current pay results.
- By running smaller calculation jobs, you can free up processing resources for other jobs.
- You can reduce the time it takes to prepare for period-end audits.

### Use Cases

Keep workers' payroll results up to date throughout the pay period as pay-impacting events occur.

### Questions to Consider

| Question                                                                          | Consideration                                                                                                                                                                                                                                                                                                                                                                         |
|-----------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Do you run smart calculation frequently during the period?                        | If yes, consider enabling continuous payroll calculation. It processes the same pay-impacting events as smart calculation, so you don't need to run smart calculation to keep pay results updated.                                                                                                                                                                                    |
| Do you receive integrations during working hours?                                 | If yes, consider the impact of continuous calculations on other payroll tasks. While continuous payroll calculation processes the integration, Workday: <ul style="list-style-type: none"> <li>• Might block related actions on a payroll result (Example: putting a pay result on hold, canceling a pay result).</li> <li>• Queues other jobs such as retro calculations.</li> </ul> |
| Do you use pay run groups, or have many pay groups with the same period schedule? | When you enable auto calculation of initial pay results, Workday runs the initial calculation only for pay groups that are complete by the scheduled start time.<br><br>You can run a smart calculation to start the period for any pay groups that you complete later.                                                                                                               |
| Do you need time after the last calculation each period to do final audits?       | You can: <ul style="list-style-type: none"> <li>• Pause calculations for the period manually.</li> <li>• Stop continuous calculations automatically each period, before the payment date.</li> </ul>                                                                                                                                                                                  |

### Recommendations

- When you want to stop a calculation, pause the pay groups that are in progress and let the current run finish. Aborting a continuous calculation job could cause errors in accounting and future payroll calculations.
- To prevent continuous calculation from processing a worker, put the worker's pay result on *Hold*.
- When you need to restart calculations after the automatic stop time has passed, use the **Update Continuous Payroll Calculation Status** report.

### Requirements

Run a full payroll calculation at period end to capture configuration changes and to pick up workers who don't yet have pay results.

### Limitations

The continuous payroll calculation job:

- Processes only workers and pay components from regular run categories. You'll need to run payroll calculations manually for nonregular run categories.
- Processes only worker-based events. It doesn't process configuration changes or Workday maintenance updates.
- Omits workers with no pay results for the period, unless it finds a pay-impacting event for the worker.

### Tenant Setup

Use the **Edit Tenant Setup - Payroll** task to enable continuous payroll calculation in your tenant.

### Security

| Domain                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | Considerations                                                                                                                                                                                                                                                                                                           |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <i>Set Up: Tenant Setup - Payroll</i> in the System functional area.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | Users secured to this domain can enable continuous payroll calculation.                                                                                                                                                                                                                                                  |

| <ul style="list-style-type: none"> <li>• <i>Reports: Pay Calculation Results for Pay Group (Results) - CAN</i> in the CAN Payroll functional area.</li> <li>• <i>Reports: Pay Calculation Results for Pay Group (Results) - FRA</i> in the FRA Payroll functional area.</li> <li>• <i>Reports: Pay Calculation Results for Pay Group (Results) - UK</i> in the UK Payroll functional area.</li> <li>• <i>Reports: Pay Calculation Results for Pay Group (Results) - USA</i> domain in the USA Payroll functional area.</li> <li>• <i>Reports: Pay Calculation Results for Pay Group (Results) - AUS</i> domain in the Australia Payroll functional area.</li> </ul> | Users secured to any of these domains can access the <b>Continuous Payroll Calculation Pipeline</b> report to view workers with unprocessed events.                                                                                                                                                                      |
| <i>Process: Run Batch Calculations (Pay Calculation)</i> in the Core Payroll functional area.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | Users secured to this domain can access the: <ul style="list-style-type: none"> <li>• <b>Update Continuous Payroll Calculation Status</b> report to pause continuous payroll calculations.</li> <li>• <b>Process Monitor for Continuous Payroll</b> report to view the status of continuous calculation jobs.</li> </ul> |

### Business Processes

If you use the *Pay Cycle Event* business process, evaluate how it fits with continuous payroll calculation. You can't initiate the business process for a pay group and period after continuous calculation creates on-cycle pay results.

## Reporting

| Reports or Dashboards                               | Considerations                                                                                                                                                                                                                                                       |
|-----------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Update Continuous Payroll Calculation Status</b> | <p>You can use the report to:</p> <ul style="list-style-type: none"> <li>• Pause continuous calculation for a pay group.</li> <li>• View the current status of continuous calculation.</li> <li>• Restart continuous calculation after an automatic stop.</li> </ul> |
| <b>Continuous Payroll Calculation Pipeline</b>      | Use to see how many workers and events are waiting to be recalculated, before you pause continuous payroll calculations for your final audit.                                                                                                                        |

## Integrations

You can use the *Put Period Schedule* web service to mass upload initial calculation and automatic stop settings for continuous calculation.

## Connections and Touchpoints

| Features                                             | Considerations                                                                                                                                                                                                                               |
|------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Enterprise Interface Builder (EIB) integrations      | You don't have to pause continuous calculations while EIB data uploads. Continuous payroll calculation processes time entries and other payroll inputs as Workday receives the data.                                                         |
| <b>Process Monitor for Continuous Payroll</b> report | Workday processes accounting updates as part of the continuous calculation job. You won't see a separate accounting job.                                                                                                                     |
| Period Schedules                                     | <p>As part of the period schedule, you can configure Workday to automatically:</p> <ul style="list-style-type: none"> <li>• Calculate initial pay results each period.</li> <li>• Stop continuous calculations before period end.</li> </ul> |

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships in your tenant. Learn more about the [Workday Touchpoints Kit](#) on Workday Community.

## Other Impacts

As soon as you enable continuous payroll calculation in your tenant, Workday begins launching the continuous calculation job for all pay groups that have:

- The status *In Progress*.
- Had a full calculation run for the current period.

## Related Information

### Tasks

[Configure Continuous Payroll Calculation](#) on page 83

## Configure Continuous Payroll Calculation

---

### Prerequisites

- Use the **Edit Tenant Setup - Payroll** task to enable continuous payroll calculation.
- Security: *Set Up: Payroll - Pay Group Specific* in the Core Payroll functional area.

### Context

You can use continuous payroll calculation to automate payroll processing for regular run categories.

After you enable continuous payroll calculation, you can configure Workday to automatically:

- Run a full calculation to open each period. Continuous payroll calculation starts after a full calculation has run.
- Stop running continuous calculation at the end of each period, so you can complete final audits.

### Steps

1. Access the **Edit Period Schedule** task.
2. As you complete the **Continuous Payroll Calculation** section, consider:

| Option                                                           | Description                                                          |
|------------------------------------------------------------------|----------------------------------------------------------------------|
| <b>Enable Auto Calculation of Initial Pay Results for Period</b> | Select to automatically run a full calculation to start each period. |
| <b>Default # of Days After Period Start Date</b>                 | For each period, sets when to run the initial calculation.           |
| <b>Enable Automatic Stop</b>                                     | Select to stop continuous calculations each period.                  |
| <b>Default # of Days Before Payroll Payment Date</b>             | For each period, sets when to stop continuous calculations.          |

### Result

The initial full calculation for the period runs for all pay groups that share the period schedule. You'll need to run the initial calculation manually for pay groups that aren't in a *Complete* status at the auto calculation time.

### Next Steps

Review the **Auto Calc Initial Results** and **Automatic Stop** dates and times on each period. Change dates and times on periods to reflect holidays or other exceptions.

## Set Up Pay Modeling

---

### Prerequisites

- Security: *Set Up: Payroll (Model My Pay)* in the Core Payroll functional area. See: [Steps: Enable Functional Areas and Security Policies](#).
- Ensure there is at minimum one payroll result and one payslip available for the current year.

## Context

Before workers can model their pay or you can model pay on a worker's behalf, use the **Maintain Model My Pay Configurations** task to configure:

- Categories on the **Model My Pay** and **Model Pay for Worker** tasks, such as Earnings, PreTax Deductions, Post Tax Deductions, and Tax Elections.
- Pay components and related calculations within those categories.

## Steps

1. Access the **Maintain Model My Pay Configurations** task.
2. (Optional) In the **Disclaimer** field, customize the default message that Workday displays to workers on their modeled results.
3. From the **Enable for Model My Pay** prompt, select the categories to make available for modeling.
4. As you complete the tabs, select the **Enabled** checkbox for the pay components you want employees to be able to model.
5. Add a related calculation or an amount override to the row to enable adjustments or overrides.  
In pay modeling, Workday uses the original reference pay values for related calculations unless you adjust the related calculation.
6. Enable the *Self-Service: Payroll (Model My Pay)* domain in the Core Payroll functional area to enable the **Model My Pay** task for workers.
7. Enable the *Worker Data: Payroll (Model My Pay)* domain in the Core Payroll functional area to enable the **Model Pay for Worker** task. This task enables you to model a worker's pay on their behalf.

## Result

When a worker uses the **Model My Pay** task or you use the **Model Pay for Worker** task, Workday displays a summary of the difference between a worker's reference pay and modeled pay with:

- Reference Pay breakdown.
- Modeled Pay breakdown.
- Gross and Net pay.
- Earnings.
- Employee taxes.
- Taxable wages.
- Deductions.

## Example

You want to enable workers to model hypothetical changes to their hours.

1. Configure the Hourly Pay component so that workers can view estimates of their pay based on their hours.
2. Access the **Maintain Model My Pay Configurations** task.
3. Select **Earnings** from the **Enable for Model My Pay** prompt.
4. Select the **Hourly Pay** check box on the **Earnings** tab.
5. Add these related calculations to the row:
  - *Hours (unprorated)*
  - *Rate*
6. In the **Rate** row, select the **Display Only** check box.

If the worker doesn't model any changes to their hours, Workday uses the existing hours from input, scheduled hours, or time entry.

If you don't add Hours and Rate to Hourly Pay, then Workday bases Hourly Pay on the pay component configuration and doesn't use any override values that have changed in the original reference result.

## Concept: Pay Modeling

---

You can configure pay modeling to enable workers to make hypothetical changes to their pay and view their results. Workers can use the **Model My Pay** task to adjust their tax elections, deductions, and earnings as the basis for their hypothetical pay. Workday displays a gross-to-net approximation based on these changes to determine how they affect pay calculations.

You can configure employee access to the **Model My Pay** task on the:

- **Pay** worklet- Access the **Configure Worklet** task and add Model My Pay to the **Actions** area for the Pay worklet. For more information, see: [Set Up Worklets](#).
- **Pay** dashboard- Access the **Maintain Dashboards** report and edit the Pay dashboard. For more information, see: [Configure Dashboard Content](#).
- **Benefits and Pay Hub**- Access the **Maintain Hubs** report. For more information, see: [Set Up Hubs](#).
- **My Payslips** report.

You can also model a worker's pay on their behalf with the **Model Pay for Worker** task, secured to the *Worker Data: Payroll (Model My Pay)* domain in the Core Payroll functional area. Once enabled, the task includes workers in:

- Pay groups
- Unconstrained groups

#### Limitations

Workers can only:

- Model existing on-cycle pay results in the regular run category with a start and end date within the current tax year.
- Model categories you have enabled in the **Maintain Model My Pay Configurations** task.
- Add eligible earnings from the pay component settings for their pay group.
- Model tax elections made through Employee Self-Service (ESS). Note that workers can't make changes to local tax elections.
- Model pay components with a calculation worktag of *Tax Authority* or *Position*.
- For Payroll for the U.S., model results for a U.S. state with pay results completed after you added the state. Example: A worker can model what their pay would be if they lived in Nevada, but only for pay results completed after you added Nevada.

For Payroll for the U.S., Workday recommends that FLSA workers model hours instead of amounts for pay calculations that affect FLSA wages and hours.

## Concept: Intelligent Prompt Recommendations for Payroll

Workday's Form Completion Assistant uses machine learning to provide intelligent prompt recommendations for payroll when you create:

- Manual payments.
- On-demand payments.
- Pay calculations.
- Pay group assignments.
- Payroll inputs.

Using prompt recommendations improves data accuracy and can help you complete tasks more efficiently. Workday displays up to 5 recommendations for each supported prompt based on a combination of your most recently used and most frequently used selections. Workday doesn't display invalid selections for a prompt and can update recommendations based on the values in other fields.

To view the supported prompts and tasks, see [Reference: Form Completion Assistant](#).

### Opting Out of Prompt Recommendations

Workday enables Form Completion Assistant prompt recommendations by default. You can opt out of recommendations for payroll by accessing the **Payroll** section of the **Maintain Machine Learning Prompt Recommendations** task and clearing the **Enable Machine Learning Recommendations** check boxes for any or all of these categories:

- **Off Cycle Payments**
- **Payroll Input**
- **Proposed Pay Group**
- **Run Pay Calculation**

You can opt back in to intelligent prompt recommendations for payroll by reselecting the check boxes.

## Reference: Tenant Analyzer

The **Tenant Analyzer** (secured to the *Set Up: Tenant Setup - Tenant Analyzer* domain in the System functional area) is a preconfigured profile of reports for reviewing your payroll, absence, reporting, and financial management configurations to enable you to:

- Verify your tenant configuration against Workday recommendations.
- Troubleshoot performance issues.

As your tenant grows, you can also use **Tenant Analyzer** to get a quick inventory of your payroll, absence, reporting, and financial management setup.

## Reference: Pay Dashboard for Employee Self-Service

The **Pay** dashboard enables employees to understand their pay, track pay trending, and access common payroll information.

Security: *Self-Service: My Pay Dashboard* domain in the Core Payroll functional area.

The dashboard provides these worklets:

| Worklet                     | Description                                                                                                                                                                                                                                                                                                                    |
|-----------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Recent Payslips             | Displays the next payment date for regular payroll plus the last 5 payslips. Employees can drill into and view the payslip details or print the payslip if you configure that functionality on the <b>Edit Tenant Setup – Payroll</b> task.                                                                                    |
| Compare Periods             | Displays: <ul style="list-style-type: none"> <li>Earnings and deductions for the most recent 2 pay periods so employees can easily compare and identify if anything has changed.</li> <li>The difference between the 2 pay periods in the <b>Change Amount</b> field.</li> </ul> Employees can also compare any 2 pay periods. |
| Pay History                 | Displays pay periods for the last 3 months and includes the sections you configure on the <b>Maintain Payroll Payslip Configuration</b> task. Employees can easily see trends in their earnings, pretax deductions, employee taxes, post-tax deductions, and net pay.                                                          |
| Earnings/Deductions History | Displays pay periods for the last 3 months. Includes 6 earnings or deductions that employees can configure from earnings and deductions that have displayed on a payslip within the past 13 months. Employees can also see results for different pay periods, earnings, or deductions.                                         |

You can add worklets to the dashboard and additional items to its menu.

Add additional menu items on the dashboard for common Time Off tasks.

1. Access the **Maintain Dashboards** report.
2. On the **Pay** row, select **Edit**.
3. On the **Menu** section, add a new row and label it *My Time*.
4. Add these tasks:
  - *Time Off Balance*
  - *Request Time Off* (This task initiates the Request Time Off business process.)

## Reference: Pay Cycle Command Center Dashboard

The **Pay Cycle Command Center** dashboard (secured to the *Management Dashboard: Pay Cycle Command Center* domain in the Core Payroll functional area) enables you to access information needed for each phase of a pay cycle quickly.

The dashboard provides these default worklets to help you review and manage payroll data for a single or multiple pay periods at a time:

| Worklet                   | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
|---------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Results Status</b>     | <p>For the periods and pay groups you select, displays summarized payroll results counts by status, such as:</p> <ul style="list-style-type: none"> <li>• <b>In Progress</b></li> <li>• <b>Requires Recalculation</b></li> <li>• <b>On Hold</b></li> <li>• <b>In Error</b></li> <li>• <b>Complete</b></li> </ul> <p>You can drill down to the details and take action from there.</p>                                                                                                                                                                         |
| <b>Compare Periods</b>    | <p>Enables you to compare pay component trends for selected periods and prior periods to identify anomalies that need resolution.</p> <p>Includes a <b>View More</b> option to:</p> <ul style="list-style-type: none"> <li>• Filter the dashboard results based on a subset of pay components or pay component groups.</li> <li>• Returns pay component-related calculations.</li> <li>• Filter based on on-cycle versus off-cycle results.</li> </ul>                                                                                                        |
| <b>Retro Differences</b>  | <p>Displays chart and table views that provide insight into pay cycle preparation and processing so you can view retro differences (earnings/deductions):</p> <ul style="list-style-type: none"> <li>• Targeted to selected pay periods.</li> <li>• Targeted and picked up by a payroll result in selected pay periods.</li> <li>• Targeted and not yet picked up by a payroll result in selected pay periods.</li> </ul> <p>Use the <b>View More</b> option to filter the dashboard results based on a subset of pay components or pay component groups.</p> |
| <b>Period Trending</b>    | <p>Displays summarized gross and net values for current plus prior 5 periods to identify trends and anomalies. You can then select <b>View More</b> to increase or decrease the number of periods you want to go back.</p>                                                                                                                                                                                                                                                                                                                                    |
| <b>Accounting Summary</b> | <p>Displays summarized debit and credit amounts for each ledger account posting. Example: Salaries and wages.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                             |

| Worklet                                  | Description                                                                                                  |
|------------------------------------------|--------------------------------------------------------------------------------------------------------------|
| <b>Reconciliation (Results/Payments)</b> | Displays summarized counts and amounts for payroll results, separated by payment type and settlement status. |

You can also configure the dashboard prompts and add additional items to its menu.

1. Access the **Maintain Dashboards** report.
2. On the **Pay Cycle Command Center** row, select **Edit**.
3. Set up dashboard default behavior for in-progress periods and associated pay groups on the **Prompts** section:

| Prompt Field                                   | Label for Prompt                               | Default Type                              | Default Value                                            |
|------------------------------------------------|------------------------------------------------|-------------------------------------------|----------------------------------------------------------|
| <b>Country</b>                                 | <i>Country</i>                                 | <i>Determine default value at runtime</i> | <i>Payroll Supported and Viewable Default Country</i>    |
| <b>Periods</b>                                 | <i>Period</i>                                  | <i>Determine default value at runtime</i> | <i>Periods In-Progress Viewable for Default Country</i>  |
| <b>Pay Run Groups and/or Pay Group Details</b> | <i>Pay Run Groups and/or Pay Group Details</i> | <i>Determine default value at runtime</i> | <i>Pay Group Details for Default In Progress Periods</i> |

4. On the **Menu** section, add a new row and label it *Global Library*.
5. Add the **Global Library** report to the **Task** field.

## Pay Run Categories

### Setup Considerations: Payroll Run Categories

You can use this topic to help make decisions when planning your configuration and use of run categories. It explains:

- Why to set them up.
- How it fits into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

For full configuration details, see task instructions.

#### What They Are

Run categories define which workers and pay components to process in payroll and retro payroll calculations.

When you create a pay group, you indicate which run categories and period schedules are available for payroll calculations. For each pay group, you define 1 run category for regular payroll, but you can set up

additional run categories for nonregular payroll. Example: Configure separate run categories for regular and bonus payroll calculations.

### Business Benefits

Run categories provide control over who and what to pay in a payroll calculation, while saving you the time and effort of manually entering what to pay each worker. They're a key component to payroll processing. You must create at least 1 run category to process payroll in Workday.

You can also use run categories to manage the performance of nonregular payroll calculations. Example: For bonuses that impact only a subset of employees, create a separate run category to only process the impacted workers.

### Use Cases

Use run categories to indicate which types of workers to process in payroll. Examples:

- Active workers with payroll inputs.
- Terminated workers with retro differences or retro events.

Include multiple types of workers in the same run category, and then define what to pay each type of worker.

Examples:

- Regular payroll for workers who are active, terminated, or on leave.
- Severance pay or vacation payouts for eligible terminated workers (CAN, FRA, UK, USA).
- Short-term disability for eligible workers on leave (CAN, FRA, UK, USA).
- Benefit and retirement deductions for workers on leave (CAN, FRA, UK, USA).
- Retirement deductions for bonus payments (CAN, FRA, UK, USA).
- Termination payments including unused leave for eligible terminated workers (AUS).
- Worker's Compensation payments for eligible workers on leave (AUS).
- Superannuation or other payments for workers on leave (AUS).
- Superannuation salary sacrifice deductions for bonus payments (AUS).

### Questions to Consider

| Question                                                                                                    | Considerations                                                                                                                                                                                                                                                                                                                                                                                                  |
|-------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Who do you want to process?                                                                                 | For nonregular payroll, you can maximize payroll calculations by only processing the impacted employee groups.                                                                                                                                                                                                                                                                                                  |
| Do you need to automatically calculate any additional pay components with bonuses or intermittent payments? | <p>If yes, configure the <b>Off Cycle (On Demand Additional, Manual)</b> tab to support on-demand additional pay.</p> <p>For Payroll for the U.S., if you regularly have a large number of bonuses to process with supplemental tax rates, consider creating a separate nonregular run category and selecting the <b>Non Regular Taxation</b> option. You can then process the bonuses as on-cycle payroll.</p> |
| What pay components do you need to process for terminated workers or workers on leave?                      | Include any pay components for terminated workers or workers on leave on the <b>Nonactive (On Cycle, On Demand Replacement)</b> tab.                                                                                                                                                                                                                                                                            |

| Question                                                                                                                                         | Considerations                                                                                                                      |
|--------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------|
|                                                                                                                                                  | Workday automatically processes several pay components for non-active workers. Examples: Retro differences, one-time payroll input. |
| How do you want to handle recurring payments on a schedule different from your regular payroll? Example: Quarterly bonuses.                      | You can create a separate run category to use with a different period schedule.                                                     |
| How do you want to handle recurring payments that require separate checks or deposits, without processing them as on-demand additional payments? | Set up a separate run category for each separate recurring payment.                                                                 |
| What kinds of payment elections do you want to offer your employees?                                                                             | Define different payment elections for each run category that the worker is associated with.                                        |

### Recommendations

Use the most specific payroll processing status that applies when identifying workers to process, to produce better performance than a generic status with selection criteria. Example: On Leave with One-Time Payroll Input.

### Requirements

Understand how Workday applies processing statuses to workers. Example: When a worker is active on the period start date but terminated midperiod, Workday processes them as an active worker. See [Reference: Payroll Processing Statuses for Run Categories](#) on page 110.

### Limitations

- Payroll for the UK supports a single run category approach. This is to ensure PAYE and National Insurance are calculated correctly, using balance totals from completed pay results. Using multiple run categories can cause unexpected results.
- You can only have 1 regular run category for each pay group, but multiple pay groups can share the same run category.
- Changing a run category configuration doesn't trigger payroll recalculations when you're using the **Smart Calculation** option on a payroll run.
- You can't define effective dates for run category settings. When processing retro events, Workday recalculates all pay components configured for the run category at the time of the process. This includes any pay components that you added or removed since the original calculation.
- Regardless of the run category configuration, Workday only resolves pay components for workers who meet the eligibility defined for those pay components.
- In some cases, such as when processing retro differences or payroll inputs, Workday overrides the run category settings.

### Tenant Setup

No impact.

### Security

Users secured to the *Set Up: Payroll - Pay Group Specific* domain in the Core Payroll functional area can set up run categories.

## Business Processes

No impact.

## Reporting

You can run the **Tenant Analyzer** report to verify your run category setup against Workday recommendations.

You can use the **All Run Categories** report data source when creating custom reports to report on run categories.

## Integrations

No impact.

## Connections and Touchpoints

| Feature                                   | Considerations                                                                                                          |
|-------------------------------------------|-------------------------------------------------------------------------------------------------------------------------|
| Arrears processing                        | Net pay validations and arrears processing start when a result reaches the minimum net pay defined on the run category. |
| Off-cycle payments                        | The run category determines which pay components to process as part of off-cycle payments.                              |
| Pay components                            | You can restrict a pay component so that it resolves only on certain run categories.                                    |
| Pay groups<br>Period schedules            | When configuring a pay group, you define which run categories and period schedules to process.                          |
| Supplemental taxation (CAN, FRA, UK, USA) | The run category determines whether to apply supplemental taxation. Only applicable on nonregular run categories.       |

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships in your tenant. Learn more about the [Workday Touchpoints Kit](#) on Workday Community.

## Other Impacts

You can only run a pay calculation for 1 run category at a time. As a result, workers have separate payroll results for each run category that they're processed in. When you create a separate run category for a bonus, workers receive:

- A separate check or direct deposit for the bonus.
- A separate payslip for the bonus.

To reduce the number of separate payments or payslips a worker receives, consider grouping workers in the fewest number of run categories possible.

## Steps: Set Up Pay Run Categories

### Prerequisites

- Review setup considerations for run categories.
- Define gross and net pay accumulations.
- Security: *Set Up: Payroll - Pay Group Specific* domain in the Core Payroll functional area.

### Context

A run category defines processing instructions for a pay run including:

- Who has a pay result.
- Which pay components automatically resolve in a run.
- When a pay component resolves, based on the type of run.

**Note:** Payroll for the UK supports a single run category approach. This is to ensure PAYE and National Insurance are calculated correctly, using balance totals from completed pay results. Using multiple run categories can cause unexpected results.

### Steps

1. Access the **Create Run Category** task.

Specify the run category usage:

| Option                           | Description                                                                                                                                                                                                                                                                                                                                                                                                                  |
|----------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

| <b>Used in Payroll Interface</b> | Select when using a third-party payroll application.                                                                                                                                                                                                                                                                                                                                                                         |
| <b>Regular Run Category</b>      | <p>Indicates that the run category is for a regular payroll run rather than a bonus or other type of run.</p> <p>A pay group can have multiple run categories, but only one regular run category.</p>                                                                                                                                                                                                                        |

2. [Identify Who to Process in Run Categories](#) on page 99.
  3. [Set Taxation and Processing Rules for Run Categories](#) on page 101.
- Define taxation and minimum net pay for on-cycle and off-cycle pay.

#### 4. Identify what to pay in different types of payments.

- [Identify What to Pay in On-Cycle and On-Demand Replacement Pay](#) on page 102.
- [Identify What to Pay in On-Demand Additional Pay](#) on page 106.
- For Payroll for Australia, Canada, the UK, and the U.S., for manual payments, Workday processes the input from the **Run Manual Payment for Worker** task, and any statutory employer taxes. In some cases, Workday also calculates taxes configured on the run category.

See [Create Manual Payments](#) on page 678.

- Workday Payroll for France doesn't support manual payments.

#### 5. [Maintain Payment Election Rules](#).

Add the run category to a payment election rule.

### Result

When you calculate on-cycle or off-cycle payroll, Workday refers to the run category to determine who and what to process for the pay period.

### Next Steps

Assign the run category to pay groups.

Inform users of conditions that you defined for automatically calculating pay components.

## Identify Who to Process in Run Categories

### Prerequisites

Security: *Set Up: Payroll - Pay Group Specific* domain in Core Payroll functional area.

### Context

You can identify which workers to process in a payroll run. Workday creates a payroll result for processed workers, even if it's a zero result.

You can process any combination of:

- Active workers.
- Workers on leave (leave type has a payroll effect).
- Terminated workers.

You can define additional selection criteria for each status.

For Payroll for Australia, France, and the UK, create at least one regular run category. For example: *Regular (AUS)*, *Regular (FRA)*, *Regular (GBR)*,

### Steps

1. Access the **Create Run Category** task.

2. As you complete the **Workers to Process** section on the **General** tab, consider:

Workers selected for processing must also meet requirements for worker eligibility on pay components.

| Option                    | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
|---------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Status</b>             | <p>Identify the type of workers to process. Example: Active workers, workers on leave, terminated workers.</p> <p>See <a href="#">Reference: Payroll Processing Statuses for Run Categories</a> on page 110.</p> <p>To improve processing time, select the most specific status that applies. See <a href="#">Reference: Calculations for Pay Run Categories</a></p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| <b>Selection Criteria</b> | <p>Identify any additional criteria for each status when processing workers. Example: Type of leave, type of contract. Narrowing the population of workers to process optimizes performance.</p> <p>You can select Workday-owned calculations that return a value of true or false, or create your own calculations. Use calculations that reference the run category, pay accumulation, or worker as opposed to calculations that reference a pay component. See <a href="#">Reference: Calculations for Pay Run Categories</a> on page 110.</p> <p>Workers must satisfy all criteria that you specify in the same row (AND logic). If you define criteria in separate rows, they must meet criteria in at least 1 row (OR logic).</p> <p>If a status has no selection criteria, Workday processes all workers with that status, including workers without payroll input.</p> <p>For Payroll for Canada, the UK, and the U.S, you typically don't need to define selection criteria for the <i>Active</i> status. For Payroll for France, for the <i>Active</i> status in a regular run category.</p> |

## Result

When processing payroll, Workday processes workers who meet the criteria on the **General** tab.

## Example

You want to set up the run category to process all workers who are active, on leave, or terminated and who have one-time payroll input.

In the **Workers to Process** grid, add a row for each **Status**:

- *Active with One-Time Payroll Input*
- *On Leave with One-Time Payroll Input*
- *Terminated with One-Time Payroll Input*

Workers with payroll input who are considered *Active* for the March (monthly) pay period include:

- Jane, who was terminated March 16 (active on the period start date).

- John, who returned from leave on March 25 (active on the period end date).
- Adrian, who is on a position-based leave (with payroll effect) from February 15 through April 15 for one of her 2 jobs in the processed pay group.

Carlos has jobs in different pay groups:

- Job 1, the primary job, is in pay group X and is *Active*
- Jobs 2 and 3, in pay group Y, are on position-based leave. Carlos is considered *On Leave* when you process pay group Y, because all his jobs in that pay group are on position-based leave.

## Set Taxation and Processing Rules for Run Categories

### Prerequisites

Security: *Set Up: Payroll - Pay Group Specific* domain in the Core Payroll functional area.

### Context

You can define supplementary taxation and minimum net pay amounts for on-cycle and off-cycle payments associated with the run category.

### Steps

1. Access the **Edit Run Category** task.
2. In the **Payroll Processing** section on the **General** tab, enter instructions for taxation and minimum net pay.

| Option                                            | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
|---------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Non Regular Taxation (USA)</b>                 | <p>Select to use a supplemental tax rate. This option isn't available for a regular run category.</p> <p>You can use the <b>Supplemental Taxation</b> check box on the <b>Run On Demand Payment for Worker</b> task to override this option for additional payments.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |

## Identify What to Pay in On-Cycle and On-Demand Replacement Pay

### Prerequisites

- Define gross and net pay accumulations.
- Define who to pay for the run category.
- Security: *Set Up: Payroll - Pay Group Specific* domain in the Core Payroll functional area.

### Context

Define which pay components and pay component groups to calculate for active and non-active workers processed by the run category in:

- On-cycle runs.
- On-demand replacement payments.

Active workers are active on the period start or end date. Example: A worker who is terminated midperiod is considered active. Workday processes workers with multiple jobs as active when:

- At least 1 job in the pay group is active. Example: Workers with an *Active* status in the **Workers to Process** section.
- The job in the pay group is ended, but they have an active job in another pay group. Example: Workers with an *Ended Additional Job* status in the **Workers to Process** section.

Non-active workers are workers who are either:

- Terminated on the period start date.
- On-leave with payroll effect for the entire pay period.

### Steps

1. Access the **Edit Run Category** task.

2. In the **Gross/Net** section, specify which pay components to calculate for active workers in on-cycle runs, or on-demand replacement payments.

| Option                                              | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

(AUS)</i></li> <li>• <i>FRA Net Pay [FRA] .(FRA)</i></li> </ul>                                                                                                                                                                                                                                                                                                                                                 |
| <b>Additional Pay Components to Calculate</b>       | <p>Select earnings and deductions that aren't part of a worker's gross or net pay, but are related to the result.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| <b>Additional Pay Component Groups to Calculate</b> | <p>Select pay component groups that aren't part of a worker's gross or net pay, but are related to the result. Examples:</p> <p>Payroll for Australia:</p> <ul style="list-style-type: none"> <li>• <i>All AUS Reportable Fringe Benefits Amounts (FBT/RFBA) [AUS]</i></li> <li>• <i>AUS Superannuation Employer Contributions [AUS].</i></li> </ul> <p>Payroll for France:</p> <ul style="list-style-type: none"> <li>• <i>FRA Employer Taxes Provision [FRA]</i></li> <li>• <i>FRA Statutory Taxes ER [FRA]</i></li> </ul> <p>Payroll for Canada and the U.S.:</p> <ul style="list-style-type: none"> <li>• <i>Employer Paid Benefits</i></li> <li>• <i>Non Cash Taxable Benefits</i></li> <li>• <i>Statutory Taxes (ER)</i></li> </ul> |

3. (Optional) On the **Nonactive (On Cycle, On Demand Replacement)** tab, specify which pay components to calculate for non-active workers in on-cycle or on-demand replacement pay.

Regardless of the run category configuration, Workday automatically processes these pay components for the non-active workers processed by the run category:

- One-time or bonus payments from Workday Compensation, for workers who meet pay component eligibility.
- One-time payroll input, for workers who meet pay component eligibility.
- Employer and employee statutory taxes (CAN, UK, US).

| Option                                   | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
|------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Pay Components to Calculate</b>       | <p>Select a pay component that belongs to the gross, net, or additional pay components specified on the <b>General</b> tab.</p> <p>Examples: <i>Base Pay</i> or a retirement or superannuation deduction.</p> <p>To process on-going payroll input for non-active workers, select the pay component here.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| <b>Pay Component Groups to Calculate</b> | <p>For Payroll for Canada, the UK, and the U.S., select a pay component group that belongs to the gross, net, or additional pay components groups specified on the <b>General</b> tab, such as <i>Healthcare Benefits Deductions</i>.</p> <p>For Payroll for France, select a pay component group that belongs to the gross, net, or additional pay components groups specified on the <b>General</b> tab. Examples: <i>FRA Statutory Taxes EE - Deductible from Tax [FRA]</i>, <i>FRA Statutory Taxes EE - Submitted to Tax [FRA]</i> or <i>FRA Statutory Taxes ER [FRA]</i>.</p> <p>If you frequently process the same set of deductions for additional payments, you can create a pay component group and assign it to multiple run categories.</p> |
| <b>Status</b>                            | <p>Specify whether to calculate the pay component for workers who are on leave or terminated.</p> <p>Create only 1 line for each pay component (or pay component group) and status combination.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| <b>Leave Types</b>                       | <p>(Optional) When the <b>Status</b> is <i>On Leave</i>, select the leave types for which to calculate the pay component. You can only select leave types with payroll effect enabled.</p> <p>When you leave this field empty, Workday calculates the specified pay component for all leave types with payroll effect enabled.</p>                                                                                                                                                                                                                                                                                                                                                                                                                     |
| <b>Processing Criteria</b>               | <p>Define any additional criteria for calculating the pay component or pay component group.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

| Option | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
|--------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|        | <p>When multiple criteria apply at the same time (AND logic), enter them on the same row. When multiple criteria apply individually (OR logic), enter them on different rows.</p> <p>If you don't define processing criteria for a status, Workday processes the pay component for all workers with that status.</p> <p>Some Workday-owned calculations are too broad to use as processing criteria. Example: Don't use <i>Payroll Input Exists for an Earning that is Part of Gross Pay Accumulation for the Run Category</i>, as processing criteria.</p> |

## Result

Your run category is configured to identify which pay components to calculate for on-cycle and on-demand replacement payments.

## Example

In on-cycle or on-demand replacement payments, you want to pay:

- Severance pay to terminated workers who have a pay through date or termination date that falls in the period.
- 80% leave pay to workers with short-term disability leave.

Add 2 lines to the **Pay Components to Process** on the **Nonactive (On Cycle, On Demand Replacement)** tab of your run category:

| Pay Components to Calculate | Status            | Leave Types                  | Processing Criteria                                                                                                                                                                                                   |

## Identify What to Pay in On-Demand Additional Pay

### Prerequisites

- Define who to pay for the run category.
- Define what to pay in on-cycle runs.
- Security: *Set Up: Payroll - Pay Group Specific* domain in the Core Payroll functional area.

### Context

You can configure Workday to automatically process certain pay components and pay component groups when a worker has an on-demand additional payment.

For Payroll for Canada, the UK, and the U.S., regardless of the run category settings, Workday automatically processes these pay components along with an on-demand additional payment:

- Employer statutory taxes.
- Employee statutory taxes.

### Steps

1. Access the **Edit Run Category** task.
2. On the **Off Cycle (On Demand Additional, Manual)** tab, add a section to specify which pay components to calculate automatically for on-demand additional payments.

| Option                                   | Description                                                                                                                                                                                                                                                                                                                                   |
|------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Pay Components to Calculate</b>       | Select a pay component that belongs to the gross, net, or additional pay components specified on the <b>General</b> tab of the run category.<br><br>To process one-time or on-going payroll input for an on-demand additional payment, select the <b>Load or Refresh Input</b> check box on the <b>Run On Demand Payment for Worker</b> task. |
| <b>Pay Component Groups to Calculate</b> | Select a pay component group that belongs to the gross, net, or additional pay components groups specified on the <b>General</b> tab.<br><br>If you frequently process the same set of deductions for additional payments, you can create a pay component group and assign it to multiple run categories.                                     |
| <b>Type of Run</b>                       | Select <i>On Demand Payment</i> .                                                                                                                                                                                                                                                                                                             |
| <b>Off Cycle Reasons</b>                 | (Optional) When you only want the component to resolve for off-cycle additional payments that are made for a specific reason, select the reason here.                                                                                                                                                                                         |

3. For each section, add one or more rows to indicate who the pay components should resolve for. You must add at least 1 row with a **Status** for the pay component to process.

| Option        | Description                                                                                           |
|---------------|-------------------------------------------------------------------------------------------------------|
| <b>Status</b> | Specify whether to calculate the pay component for employees who are active, on leave, or terminated. |

| Option                     | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
|----------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                            | Only use each status once per section. Example: A section identifying a pay component for on-demand payments can't have 2 lines that refer to the <i>Terminated Status</i> .                                                                                                                                                                                                                                                                                                                                         |
| <b>Leave Types</b>         | <p>When the <b>Status</b> is <i>On Leave</i>, select the leave types the pay component applies to. You can only select leave types with payroll effect enabled.</p> <p>When you leave this field empty, Workday calculates the specified pay component for all leave types with payroll effect enabled.</p>                                                                                                                                                                                                          |
| <b>Processing Criteria</b> | <p>Define additional criteria for calculating the pay component or pay component group.</p> <p>When multiple criteria apply at the same time (AND logic), enter them on the same row. When multiple criteria apply individually (OR logic), enter them on different rows.</p> <p>Some Workday-owned calculations are too broad to use as processing criteria. Example: Don't use <i>Payroll Input Exists for an Earning that is Part of Gross Pay Accumulation for the Run Category</i>, as processing criteria.</p> |

### Example

Payroll for Canada, the UK, and the U.S.:

You offer employees the possibility to contribute a percentage of their salary to a retirement savings plan. You want to take this deduction for any additional pay or bonuses that are paid as on-demand additional payments.

Add 1 row to the **Pay Components to Process** grid on the **Off Cycle (On Demand Additional, Manual)** tab of your run category.

| Pay Components to Calculate            | Type of Run              | Off Cycle Reasons                     | Status        |
|----------------------------------------|--------------------------|---------------------------------------|---------------|
| <i>Retirement Savings Contribution</i> | <i>On Demand Payment</i> | <i>Additional Pay</i><br><i>Bonus</i> | <i>Active</i> |

When you process a bonus on-demand additional payment for a worker who is eligible for the retirement savings contribution, Workday processes:

- The on-demand additional bonus.
- The retirement savings contribution.
- Employer and employee statutory taxes.

| On Leave<br>Terminated | Pay components on the <b>Nonactive (On Cycle, On Demand Replacement)</b> tab that are configured for an <i>On Leave</i> or <i>Terminated</i> status. | <p>For Payroll for Australia, Canada, the UK, and the U.S, all employer and employee statutory taxes.</p> <p>All one-time or bonus payments from Workday Compensation.</p> <p>All one-time payroll input.</p> <p>To process on-going payroll input, select the pay component on the <b>Nonactive (On Cycle, On Demand Replacement)</b> tab of the run category.</p> <p>Regardless of the pay components listed on the <b>Nonactive (On Cycle, On Demand Replacement)</b> tab, Workday automatically processes retro differences for:</p> <ul style="list-style-type: none"> <li>Terminated workers, who are processed by the run category.</li> <li>Workers on leave who are processed by the run category.</li> </ul> |

### On-Demand Replacement

Workday automatically processes some pay components in addition to the pay components entered when creating the on-demand payment.

| Type of Worker         | Processed When Configured                                                                                                                            | Automatically Processed                                                                                                                                  |
|------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------|
| Active                 | Pay components in the <b>Gross/Net</b> section on the <b>General</b> tab of the run category.                                                        |                                                                                                                                                          |
| On Leave<br>Terminated | Pay components on the <b>Nonactive (On Cycle, On Demand Replacement)</b> tab that are configured for an <i>On Leave</i> or <i>Terminated</i> status. | <p>Off-cycle input entered on the payment.</p> <p>For Payroll for Australia, Canada, the UK, and the U.S, all employer and employee statutory taxes.</p> |

| Type of Worker | Processed When Configured | Automatically Processed                                   |
|----------------|---------------------------|-----------------------------------------------------------|
|                |                           | All one-time or bonus payments from Workday Compensation. |

You can use the **Load/Refresh Input** option to include one-time or ongoing pay input in an on-demand replacement payment.

### On-Demand Additional

Workday automatically processes some pay components in addition to the pay components entered when creating the on-demand payment.

| Type of Worker                   | Processed When Configured                                                                                                                  | Automatically Processed                                                                                                                            |
|----------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------|
| Active<br>On Leave<br>Terminated | Pay components on the <b>Off Cycle (On Demand Additional, Manual)</b> tab that are configured for an <i>On Demand Payment</i> type of run. | For Payroll for Australia, Canada, the UK, and the U.S., all employer and employee statutory taxes.<br><br>Off-cycle input entered on the payment. |

You can use the **Load/Refresh Input** option to include one-time or ongoing pay input in an on-demand additional payment.

### Manual

For Payroll for Australia, Canada, the UK, and the U.S., Workday automatically processes some pay components in addition to the pay components entered when creating the manual payment.

| Type of Worker                   | Processed When Configured                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | Automatically Processed                                                      |

## Reference: Payroll Processing Statuses for Run Categories

You can use payroll processing statuses to identify which workers to process for a run category.

| Type of Status                                                                    | Applies when:<br>(Single Job)                                                                                                                                                                                                                                                                                                                                                    | Applies when:<br>(Multiple Jobs)                                                                                                                                                                                                               |
|-----------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Active<br>Example: Active with One-time Payroll Input                             | A worker is active on the period start or end date.                                                                                                                                                                                                                                                                                                                              | At least 1 job in the pay group has an active status on the period start or end date.                                                                                                                                                          |
| Ended Additional Job<br>Example: Ended Additional Job with One-time Payroll Input | Ended Additional Job statuses only apply to workers with multiple jobs.                                                                                                                                                                                                                                                                                                          | A worker who has both: <ul style="list-style-type: none"> <li>An active job in another pay group.</li> <li>An ended job in the processed pay group.</li> </ul>                                                                                 |
| On Leave<br>Example: On Leave with One-time Payroll Input                         | A worker is on leave with payroll effect on the period start and end dates (the entire pay period).<br><br>To enable payroll effect for a leave type, select <b>Payroll Effect</b> on the <b>Edit Leave Type</b> task in Absence management.<br><br>If the worker's leave type doesn't have payroll effect, they're considered active and continue to receive their regular pay. | A worker is either: <ul style="list-style-type: none"> <li>On a worker-based leave with payroll effect in the processed pay group.</li> <li>On a position-based leave with payroll effect for every job in the processed pay group.</li> </ul> |
| Terminated (AUS, CAN, FRA, USA)<br>Example: Terminated with Pay Through Date      | A worker has a terminated status on the period start date.                                                                                                                                                                                                                                                                                                                       | All jobs are ended on the period start date.                                                                                                                                                                                                   |

## Reference: Calculations for Pay Run Categories

When defining run categories, you can use Workday-owned calculations to select workers and process pay components. You can also use these calculations and report fields as building blocks for your own calculations.

**Instance Value Calculations**

| <b>Name</b>                                                                                                        | <b>Worker Selection (General Tab)</b> | <b>Pay Components</b> |
|--------------------------------------------------------------------------------------------------------------------|---------------------------------------|-----------------------|
| <i>One-time or Bonus Payment Exists for an Earning that is part of Gross Pay Accumulation for the Run Category</i> | Y                                     | N                     |
| <i>One-time or Bonus Payment Exists for Pay Component</i>                                                          | N                                     | Y                     |
| <i>One-time Payroll Input Exists for the Run Category</i>                                                          | Y                                     | N                     |
| <i>One-time On-Cycle Position Based Payroll Input Exists for the Worker and Period</i>                             | Y                                     | Y                     |
| <i>Ongoing Payroll Input Exists for the Run Category</i>                                                           | Y                                     | N                     |
| <i>Pay Through Date for Worker (CAN, FRA, USA)</i>                                                                 | Y                                     | N                     |
| <i>Pay Through Date for Employment (CAN, FRA, USA)</i>                                                             | Y                                     | N                     |
| <i>Payroll Input Exists for an Earning That Is Part of Gross Pay Accumulation for the Run Category</i>             | Y                                     | N                     |
| <i>Payroll Input Exists for Pay Component</i>                                                                      | N                                     | Y                     |
| <i>Payroll Input (Onetime) Exists for Pay Component</i>                                                            | N                                     | Y                     |
| <i>Payroll Input (Ongoing) Exists for Pay Component</i>                                                            | N                                     | Y                     |
| <i>Worker on Leave with Payroll Effect (Sub Period)</i>                                                            | N                                     | Y                     |
| <i>Worker: Primary Job: Worker is Terminated as of Period Start Date</i>                                           | Y                                     | N                     |
| <i>Time Off Exists for Worker (Jobs in Pay Group) for Pay Period</i>                                               | Y                                     | N                     |
| <i>Time Entry Approved Hours Exist for an Earning That Is Part of Gross Pay Accumulation for the Run Category</i>  | Y                                     | N                     |

**Value Comparison Calculations**

For Payroll for Canada, France, and the U.S:

| Name                                          | Worker Selection (General Tab) | Pay Components |
|-----------------------------------------------|--------------------------------|----------------|
| Worker: Pay Through Date >= Period End Date   | Y                              | Y              |
| Worker: Pay Through Date >= Period Start Date | Y                              | Y              |

### Logic Calculations

| Name                                                                         | Worker Selection (General Tab) | Pay Components |
|------------------------------------------------------------------------------|--------------------------------|----------------|
| Worker: Terminated Workers with One-time Payroll Input for Period            | Y                              | N              |
| Worker: Terminated Workers with Ongoing Payroll Input for Period             | Y                              | N              |
| Worker: Terminated Workers with One-time Payroll Input (Earnings) for Period | Y                              | N              |

## FAQ: Pay Run Categories

- [How can we take medical deductions for employees on leave without pay?](#)
- [Is the order that we list pay components on a run category important?](#)
- [If an employee meets 2 sets of criteria for the same pay component, will Workday process the pay component twice?](#)
- [How do I configure Workday Payroll to calculate partial pay for employees who are on leave?](#)
- [We want to create a separate run category for bonus runs. Are there any setup requirements unique to bonus runs? \(USA\)](#)
- [Can I edit or delete a run category?](#)

**How can we take medical deductions for employees on leave without pay?**

On the **Nonactive (On Cycle, On Demand Replacement)** tab of the **Create Run Category** task, select deductions for a leave type. Don't select earnings.

**Note:** Deductions can go into arrears depending on your rules for arrears processing.

**Is the order that we list pay components on a run category important?**

No. Workday doesn't refer to the run category to determine the order for processing pay components.

**If an employee meets 2 sets of criteria for the same pay component, will Workday process the pay component twice?**

No. Workday resolves a pay component for an employee only once, even when the employee meets 2 sets of criteria for the same component.

**How do I configure Workday Payroll to calculate partial pay for employees who are on leave?**

To calculate partial pay, such as 80% of salary for employees who are on sabbatical:

1. Create an earning called *80% Base Pay* that uses calculation logic to return the partial pay amount.
2. Select the new earning on the **Nonactive (On Cycle, On Demand Replacement)** tab of the **Create/Edit Run Category** task.
3. Select a status of *On Leave*, and the leave type for sabbatical.
4. Verify that the **Payroll Effect** option is enabled on the **Create Leave Type** task.

**We want to create a separate run category for bonus runs. Are there any set up requirements unique to bonus runs? (USA)**

For Payroll for the U.S., when bonus payments are subject to a supplemental tax rate, select the **Non Regular Taxation** check box when defining the run category.

**Can I edit or delete a run category?**

Yes, but be careful. Editing a run category doesn't affect any periods already processed. You can only delete a run category when it's not:

- Assigned to pay groups.
- Referenced in pay component eligibility (an earning or deduction definition).

## Pay for Non-Active Workers

### Setup Considerations: Pay for Terminated Workers

You can use this topic to make configuration decisions for pay for terminated workers. It explains:

- Why to set it up.
- How this feature fits into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

### What It Is

Workday enables you to process payments for terminated workers, including benefits, bonuses, and corresponding taxes.

### Business Benefits

Workday Payroll helps you comply with regulations by calculating taxes, and reduces manual processing by enabling you to process payments for:

- All terminated workers.

- Different sets of terminated workers based on characteristics that you define.

When you have country-specific reporting requirements, Workday streamlines report preparation within 1 system.

You can also configure payroll tasks for nonpayroll administrators to reduce manual effort in paying terminated workers, such as ending ongoing payroll inputs.

### Use Cases

You can configure payments to workers with:

- A single terminated job (AUS, CAN, USA).
- Multiple terminated jobs in the same company (AUS).
- Multiple jobs, some or all of which you terminated (CAN, USA).

You can process payments for:

- Noncash taxable benefits (USA).
- One-time or bonus payments from Workday Compensation.
- Payout for time off plans.
- Reportable Fringe Benefit Amounts (AUS).
- Retirement contributions (CAN, USA).
- Salary continuance.
- Severance pay (CAN, USA).
- Severance pay and other termination payments (AUS).
- Superannuation contributions (AUS).
- Termination allowances (FRA).

### Questions to Consider

| Questions                                                         | Considerations                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
|-------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Do you need to continue payments to the worker after termination? | <p>For Payroll for Canada, France, and the U.S., you can select pay through dates after the pay period end date to pay workers after the termination. When the pay through date is in the same pay period as the termination date, you can process payments to workers by:</p> <ul style="list-style-type: none"> <li>• Adding a payroll input effective between the termination date and the pay through date. Make sure that you select specific eligibility criteria in calculations.</li> <li>• Running an off-cycle payment for the subperiod of the termination or the next pay period.</li> <li>• Changing the pay through date to the pay period end date when it doesn't affect any payment amounts.</li> </ul> <p>In Workday HCM, you can <a href="#">Create Severance Worksheets for Workers</a> where you also select the pay through dates. Workday Payroll uses that date instead of the one on the <i>Termination</i> business process.</p> <p>For Payroll for Australia and the UK, you can process payments to workers by running an on-</p> |

| Questions                                                  | Considerations                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

| What kinds of data do you need to provide to terminated workers? (AUS, UK)          | <p>For Payroll for Australia, you can report payments made to a terminated worker and the taxes withheld as part of the STP report to the ATO. The STP report includes the cessation type and date.</p> <p>For Payroll for the UK, you can create P45s for 1 or multiple terminated workers to provide them with their tax codes and taxable earnings. Make sure that you complete payroll for those workers before generating P45s.</p>                                                               |
| Do you need to meet reporting requirements when you terminate workers? (CAN)        | <p>Workday populates Record of Employment (ROE) data for workers:</p> <ul style="list-style-type: none"> <li>• Who you terminate.</li> <li>• Who have insurable earnings for at least 1 pay period.</li> </ul> <p>You can create an ROE for those workers by accessing the <b>Create ROE Data for Events</b> task.</p>                                                                                                                                                                                 |
| What kinds of termination allowances do you need to process upon termination? (FRA) | <p>Depending on their contract type, workers might receive additional amounts upon termination. Example: Fixed-term contracts can include a termination allowance to pay when you terminate them.</p> <p>You can create earnings for termination allowances using eligibility criteria based on the worker status and contract type. Examples: Mutual agreements or legal severance allowances. When you run payroll, Workday calculates income tax and social contributions for those allowances.</p> |
| Do you need to meet reporting requirements when you terminate workers? (FRA)        | <p>Workday Payroll France provides payroll calculations and DSN reporting configurations that enable you to comply with French regulations.</p> <p>You can configure and generate termination DSNs for terminated workers, based on their termination reason.</p> <p>Workday also provides calculations for severance indemnities that you can use to pay worker legal severance allowances.</p>                                                                                                       |
| What kinds of termination payment do you need to process? (AUS)                     | <p>You can pay unused leave payments and other termination payments, including:</p>                                                                                                                                                                                                                                                                                                                                                                                                                    |

| Questions | Considerations                                                                                                                                                                        |
|-----------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           | <ul style="list-style-type: none"> <li>• Pay in lieu of notice.</li> <li>• Severance pay including redundancy entitlements.</li> <li>• Compensation.</li> <li>• Ex-gratia.</li> </ul> |

## Recommendations

To optimize performance, use the most specific payroll processing status on the run category to identify terminated workers to process. Example: Use the *Terminated with One-time Payroll Input* status instead of the *Terminated* status with the **Payroll Input (Onetime) Exists for Pay Component** selection criteria.

For Payroll for Australia and the UK, load historical data for all terminated workers who have payroll results in the current tax year to avoid inaccurate calculations and reporting.

For Payroll for Australia, set up separate pay components for voluntary and involuntary terminations to avoid inaccurate calculations. Set up pay components for each cessation type, according to the reporting requirements of the ATO. Example: For unused annual leave accrued after August 1993, set up 2 pay components::

- Redundancy.
- Nonredundancy.

For Payroll for Australia, set up separate time offs to track time off accrual. Example: A time off payment to pay out unused annual leave accrued before 1993, and another for annual leave accrued after 1993.

For Payroll for France, avoid inaccurate calculations and reporting by:

- Loading historical data for termination allowances. Examples: Basis for fixed term allowances or nonmonthly bonuses for legal severance allowance calculations.
- Verifying your staffing and organizational data at each termination when preparing DSN reporting.

## Requirements

For Payroll for Australia and the UK, configure run categories to include terminated workers when processing payroll. Define the specific worker statuses, such as *Terminated*, and select which pay components to calculate for those workers. Also select specific statuses before paying terminated workers who have retroactive events.

For Payroll for Canada and the U.S., configure run categories to include terminated workers when processing payroll. Define the specific worker statuses, such as *Terminated with Pay Through Date*, and select which pay components to calculate for those workers. Also select specific statuses before paying terminated workers who have:

- Multiple jobs, such as when you end their additional jobs and their primary job remains active.
- Retroactive events.

For Payroll for France, configure run categories to include terminated workers when processing payroll. Define the specific worker statuses, such as *Terminated with Pay Through Date*, and select which pay components to calculate for those workers. Also select specific statuses before paying terminated workers who have retroactive events.

Complete any on-demand replacement payments for terminated workers before removing them from a company or pay group.

## Limitations

### Midperiod Terminations

For Payroll for Australia and the UK, when you terminate workers midperiod, Workday creates

a subperiod that ends on the termination date. Workday doesn't process any bonus or one-time payments from Workday Compensation when the payments occur after the termination date.

For Payroll for Canada, France, and the U.S., when you terminate workers midperiod, Workday creates a subperiod that ends on the termination date. When the pay through date is on or after the pay period end date, Workday creates a subperiod after the termination date. Workday doesn't process any bonus or one-time payments from Workday Compensation when both the:

- Pay through date is in the same pay period as the termination date.
- Payments occur after the termination date.

### Next Period On-Demand Payments

You need to complete a worker's current pay result before you create a next period on-demand payment. When you use a related action to complete the results, you can't cancel the completion.

You can create a next period on-demand payment for a worker who doesn't have a pay result in the current period. But you can't then create a current or prior period result for the worker.

### Terminated Worker Data

After you terminate workers, Workday disassociates some pieces of worker information such as the work location. To access this information, you can create calculations that retrieve worker data before and on the termination date. Example: You want to pay earnings post-termination and use the worker's previous work location as eligibility criteria.

For Payroll for the U.S., Workday disassociates the work state from terminated workers. To pay workers who change states after their termination, select the new state on the on-demand payment.

### Termination Reasons

For Payroll for Australia, Workday doesn't support death as a termination reason, and Workday doesn't support payments and reporting of payments to death beneficiaries.

### Tenant Setup

You can use the **Edit Tenant Setup - Payroll** task to:

- Disable processing pay components with retroactive differences for terminated workers.
- Select which end date to suggest on the task for ending workers' ongoing payroll inputs as part of a termination. That date is editable on the task.

For Payroll for Australia, use the **Maintain AUS Termination Configuration** task to map your organization's termination reasons to their corresponding ATO cessation types.

| Business Processes           | Considerations                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
|------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <i>End Payroll Inputs</i>    | You can add this business process to the <i>Termination</i> business process so that other Workday users can end workers' ongoing payroll inputs as part of a termination.                                                                                                                                                                                                                                                                                                                                                                                                                            |
| <i>On Demand Event (USA)</i> | You can add this business process to the <i>Termination</i> business process so that other Workday users can issue final pay. Example: You can configure payment types and dates that HR partners can select when they terminate workers and review payment information.                                                                                                                                                                                                                                                                                                                              |
| <i>Termination</i>           | <p>You can configure additional steps on this business process such as:</p> <ul style="list-style-type: none"> <li>• A <i>Deactivate Worker Payment Elections</i> service step to disable payment elections for terminated workers. This step can prevent payment errors when you rehire the worker.</li> <li>• An <i>On Demand Information for Termination</i> action step to run the <i>On Demand Event</i> business process as a subprocess.</li> <li>• A <i>Review End Payroll Inputs by Worker</i> action step to run the <i>End Payroll Inputs</i> business process as a subprocess.</li> </ul> |

## Reporting

| Reports                                                                | Considerations                                                                                                                                                                                                                                                  |
|------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Pay Calculation Results - Outstanding Arrears Balance Composite</b> | View outstanding arrears balances summarized by pay period for terminated workers.<br><br>This report is secured to the same <i>Reports: Pay Calculation Results (Reports: Indexed Data Source Filters)</i> domain as other indexed report data source filters. |
| <b>Tenant Analyzer</b>                                                 | Verify your run category configuration against Workday recommendations for optimizing performance.                                                                                                                                                              |

You can use these report data sources when creating custom reports on terminated workers:

- **All Active and Terminated Workers**
- **All Contingent Workers**
- **All Terminated Employees**
- **All Workers**
- **Terminations**

## Integrations

For Payroll for Australia and the UK, you can load payroll inputs through the Enterprise Interface Builder (EIB) with an effective date after the termination date.

For Payroll for Canada, France, and the U.S, you can load payroll inputs through the (EIB) with an effective date after the pay through date. Example: You can mass load stock option exercises. Workday processes those inputs except when the pay through date takes place between the termination date and the end of the full pay period.

You can use the *Terminate Employee* web service to end workers' ongoing payroll inputs as part of a termination.

|                              | Workday creates multiple subperiods within the pay period. In that case, you can run on-demand payments to pay workers for each subperiod in that pay period.                                                                                       |
| Retro pay calculations       | You can process payroll differences due to retroactive terminations, including rescinding or correcting terminations retroactively. Workday supports retroactive terminations even in prior periods where workers have no existing payroll results. |
| Staffing (CAN, FRA, UK, USA) | You can configure the <i>Termination</i> business process to include payroll tasks such as ending ongoing payroll inputs.                                                                                                                           |

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships in your tenant. Learn more about the [Workday Touchpoints Kit](#) on Workday Community.

### Other Impacts

For Payroll for Australia, Canada, and the U.S., when workers have 1 job, they have a *Terminated* status after you terminate that job. When they have multiple jobs, they have this status after you terminate all jobs.

### Setup Considerations: Pay for Workers on Leave

You can use this topic to help make decisions when planning your configuration and use of pay for workers on leave. It explains:

- Why to set it up.
- How it fits into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

### What It Is

You can process payroll for workers on leave by defining:

- Which leave types impact their payroll.
- Which earnings to pay during the leave.

- Which deductions to calculate and put into arrears during the leave.
- When to pay earnings.

Processing payments to workers on leave also includes related compliance calculations and preparing for regulatory reporting.

### Business Benefits

Workday Payroll seamlessly integrates with Workday Absence Management to enable you to process payments to workers on leave based on absence data entered by your HR partners.

Workday also helps you comply with country-specific requirements by:

- Calculating taxes on the payments.
- Streamlining report preparation within 1 system.

### Use Cases

You can process payments to workers on leave for:

- Benefit and retirement deductions.
- Bereavement.
- Earnings differences due to statutory leave (FRA, UK).
- Multiple jobs (CAN, USA).
- Parental or family leave.
- Partial pay for a sabbatical leave.
- Short-term disability.
- Sick leave (CAN, UK, USA).

You can also process payroll for workers who move from 1 leave type to another, such as from paid to unpaid parental leave.

### Questions to Consider

| Questions                                                                 | Considerations                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

|                                                                                    | <p>For Payroll for Canada, Workday populates Record of Employment (ROE) data for workers:</p> <ul style="list-style-type: none"> <li>On a leave of absence after you submit the <i>Request Leave of Absence</i> business process.</li> <li>With insurable earnings for at least 1 pay period.</li> </ul> <p>You can create an ROE for those workers using the <b>Create ROE Data for Events</b> task.</p> <p>For payroll for the UK, to meet the legal requirements for reporting payroll data and National Insurance (NI) contributions, you can:</p> <ul style="list-style-type: none"> <li>Prepare Real Time Information (RTI) Full Payment Submission (FPS).</li> <li>Submit RTI reporting directly to HMRC through the HMRC RTI online service.</li> </ul> <p>When workers request or return from leave midperiod, Workday generates 1 RTI FPS submission per subperiod created for the leave. In this case, access the <b>Run UK RTI FPS</b> task to launch an RTI FPS integration for each submission, in ascending order. Wait for the acceptance of each submission before sending the next one.</p> |
| How do you want to manage payslips and checks for workers on leave? (CAN, UK, USA) | <p>For Payroll for Canada and the U.S., you can configure how many checks to provide to workers on leave when:</p> <ul style="list-style-type: none"> <li>They request or return from leave midperiod.</li> <li>The leave is a worker-based leave.</li> </ul> <p>You can select <i>Pay Component</i> as the <b>Proration Type</b> for the <i>Leave of Absence GTN with Tenant Override</i> payroll proration event category on the <b>Maintain Payroll Proration Override</b> report. This setting enables you to generate 1 check for the whole pay period. You can't switch back to gross-to-net proration after you enable pay component proration and completed payroll.</p> <p>For Payroll for the UK, you can send paper versions of P60 forms to workers on leave who elect to receive paper copies of their payslips.</p>                                                                                                                                                                                                                                                                             |

## Recommendations

To optimize performance, Workday recommends that you configure:

- Run categories using the most specific payroll processing status to identify workers to process. Example: Use *On Leave with One-time Payroll Input* instead of *On Leave* with the **Payroll Input (Onetime) Exists for Pay Component** selection criteria.
- Pay components with eligibility criteria so that they only calculate for eligible workers. Example: Configure disability pay, or parental leave only for eligible workers.

Avoid inaccurate calculations and reporting by loading payroll history before placing workers on leave. For Payroll for the UK, also load year-to-date tax amounts for each statutory type.

For Payroll for the UK, configure Statutory Sick Pay (SSP) as time off rather than leaves of absence to enter different pay rates for each leave period. Only create a leave type for SSP to manage long-term sickness, which also requires a time off configuration for short-term sickness.

## Requirements

For Payroll for Canada, France, the UK, and the U.S, configure leave types to have payroll effect in Workday Absence Management.

For Payroll for Australia, configure leave payment types for each leave type in Workday Absence management.

Configure run categories by:

- Including statuses for workers on leave when processing on- or off-cycle payments. Example: *On Leave with One-time Payroll Input*.
- Selecting which pay components to calculate for those workers. Example: Disability pay (CAN, FRA, UK).
- Selecting which pay components to calculate for those workers. Example: Disability pay or 401K (USA).
- Selecting which pay components to calculated for those worker. Example: Parental leave (AUS).
- Selecting specific statuses before paying workers that have multiple jobs. Example: You end their additional jobs and their primary job remains active (CAN, USA).

To apply pay component proration to an earning for workers on leave, set up the earning as position-based when you use a position-based leave.

## Limitations

You can't directly reference report fields related to the Leave Request Event business object in Workday Payroll calculations, such as the leave reason.

Payroll for Canada doesn't support the ROE feature with cascading leaves of absence.

For Payroll for Canada, all leave types trigger ROEs, including the ones without payroll effect enabled in Workday Absence Management. Example: Paid leave.

Payroll for the UK doesn't support cascading leave types linked to statutory payments.

For Payroll for France, Workday considers workers on therapeutic leave as still active. To ensure accurate calculations and DSN reporting, configure this leave type using a combination of:

- A leave type without payroll effect to use when placing the worker on part-time therapeutic leave.
- A time off plan to represent the actual time that the worker isn't at work due to the leave.

## Tenant Setup

On the **Edit Tenant Setup - Payroll** task, you can disable processing pay components with retro differences for workers on leave in the scope of the run category. Workday then uses your pay component configuration from the **Nonactive (On Cycle, On Demand Replacement)** tab on the run category when processing retro events.

| <i>Set Up: Payroll (Calculations - Payroll Specific)</i> in the Core Payroll functional area. | Enables you to configure payroll-specific components such as earnings and deductions to calculate for workers on leave. |
| <i>Set Up: Payroll (Reporting)</i> in the Core Payroll functional area.                       | Enables you to configure reporting options related to payslip printing.                                                 |
| <i>Set Up: Settlement</i> in the Banking and Settlement functional area.                      | Enables you to configure settlement options related to payslip printing.                                                |
| <i>Set Up: Tenant Setup - Payroll</i> in the System functional area.                          | Enables you to configure tenant-wide parameters.                                                                        |

### Business Processes

| Business Processes                                                             | Considerations                                                                                                                                                                                                                                                                                                                                                                                                                      |
|--------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <i>Assign Costing Allocation</i>                                               | <p>Configure as a subprocess of the <i>Request Leave of Absence</i> business process to allocate costs for positions on leave.</p> <p>You can't use this subprocess to allocate costs for workers on leave. Add a step condition to the <i>Request Leave of Absence</i> business process to skip costing for worker-based leaves. Otherwise, worker-based leave requests stop the business process and you need to cancel them.</p> |
| <i>Request Leave of Absence</i><br><i>Request Return from Leave of Absence</i> | Configure a <i>To Do</i> step on the <i>Request Leave of Absence</i> business process to enable workers to change their printing options. Example: Workers can elect to receive printed copies of their payslips or year-end forms while on leave.                                                                                                                                                                                  |

### Reporting

| Reports or Dashboards                                                          | Considerations                                                                                                                                                                  |
|--------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>All Pay Results Blocking Tenant Proration Option Changes</b> (CAN, UK, USA) | Use to identify and complete any in-progress payroll or retro payroll results before enabling pay component proration on the <b>Maintain Payroll Proration Override</b> report. |
| <b>Tenant Analyzer</b>                                                         | Use to verify your run category configuration against Workday recommendations for workers on leave to optimize performance.                                                     |
| <b>Workers on Leave</b>                                                        | Use to identify workers on leave and check that any existing ongoing payments they have are still applicable during the leave.                                                  |

| Reports or Dashboards               | Considerations                                                                                            |
|-------------------------------------|-----------------------------------------------------------------------------------------------------------|
| <b>Workers Returning from Leave</b> | Use to identify workers that returned from leave and check that you configure payroll correctly for them. |

## Integrations

No impacts.

## Connections and Touchpoints

| Features               | Considerations                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
|------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Absence Management     | <p>Workday Payroll processes leave types configured in Workday Absence Management with payroll effect enabled.</p> <p>When configuring cascading leaves, make sure that the leave periods don't overlap.</p>                                                                                                                                                                                                                                                                               |
| Arrears                | <p>You can recoup arrears for pay components processed for workers on leave. You can also reduce arrears balance with a payroll input, such as when workers pay deductions using personal checks. Configure run categories so that workers on leave have a pay result that Workday can use to track arrears.</p>                                                                                                                                                                           |
| Pay components         | <p>Workday applies pay component eligibility criteria when processing payments for workers on leave. When workers go on leave midperiod, Workday creates multiple subperiods, and you can configure:</p> <ul style="list-style-type: none"> <li>• Pay component proration, resulting in 1 gross-to-net result that includes separate pay component values for each subperiod.</li> <li>• Gross-to-net proration, resulting in separate gross-to-net amounts for each subperiod.</li> </ul> |
| Payroll input          | <p>You can use payroll inputs to override the base pay for workers on leave. Example: Configure a payroll input to pay a reduced amount during the leave period instead of using proration.</p>                                                                                                                                                                                                                                                                                            |
| Retro pay calculations | <p>You can process:</p> <ul style="list-style-type: none"> <li>• Supported retro events you enter while the worker is on leave in the current period.</li> <li>• Retro leave requests or returns.</li> </ul> <p>The retro pay calculation doesn't support multiple returns from leave in 1 leave event. To return workers or correct returns from multiple leave types, do so for each type in a separate event.</p>                                                                       |
| Run categories         | <p>For Payroll for Australia, France, and the UK, run categories determine which pay components and workers to process on subperiod start dates.</p>                                                                                                                                                                                                                                                                                                                                       |

| Features                | Considerations                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
|-------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                         | <p>Workers have a nonactive status when they're on leave with payroll effect for the entire pay period.</p> <p>Workday applies the configuration from the <b>Nonactive (On Cycle, On Demand Replacement)</b> tab to process non-active workers .</p> <p>For Payroll for Canada and the U.S., run categories and eligibility determine which pay components and workers to process on subperiod start dates. Single-job workers have a nonactive status when they're on leave with payroll effect for the entire pay period. When they have multiple jobs, Workday considers them as nonactive when they're either on a:</p> <ul style="list-style-type: none"> <li>• Worker-based leave in the processed pay group.</li> <li>• Position-based leave for every job in the processed pay group.</li> </ul> <p>Workday applies the configuration from the <b>Nonactive (On Cycle, On Demand Replacement)</b> tab on the run category to process non-active workers.</p> <p>For all countries, when workers are on leave without payroll effect enabled, Workday Payroll considers them active, and ignores these tabs on the run category:</p> <ul style="list-style-type: none"> <li>• The configuration from the <b>Nonactive (On Cycle, On Demand Replacement)</b> tab.</li> <li>• Any configuration you define for <i>On Leave</i> statuses on the <b>General</b> and <b>Off Cycle (On Demand Additional Manual)</b> tabs.</li> </ul> |
| Tax configuration (USA) | <p>Workday delivers compliance updates that you can use to calculate pay for workers on leave. Some delivered configurations require that you enable it for the company. Example: To use a new state medical leave, configure it in the <b>Other</b> section of the <b>Edit Company State and Local US Tax Reporting</b> task.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| Time Tracking           | <p>Workers can enter and submit time through Workday Time Tracking while they're on leave. You can also create a time validation to prevent submission.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| Union rates (USA)       | <p>Workday enables you to define tax rates for unions and override default tax authorities for paid family and medical leave. You can enter a unique rate in the <b>Union Rate</b> tab of the <b>Edit Company State and Local US Tax Reporting</b> task.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

## Concept: Pay for Workers on Leave

When the run category of a pay group includes conditions for paying workers on leave, Workday applies these rules.

### Workers with Single Job on Leave

For Payroll for Canada, France, the UK, and the U.S, when a worker is on a leave of absence for part of a period, and paid while on leave, Workday automatically prorates earnings during the on-cycle payroll. The leave type must be configured with **Payroll Effect** selected.

To set up reduced pay for workers on leave, configure the base pay component for workers on leave to pay a reduced amount. You can view the base pay component for workers on leave on the **Nonactive (On Cycle, On Demand Replacement)** tab of the run category.

#### Example: Worker on Leave for Partial Period

The current monthly pay period is 2012-01-01 to 2012-01-31. Using Payroll for Canada or the U.S., Sam is placed on short-term disability, or using Payroll for France or the UK, Sam is placed on short-term sickness. He receives 80% of his pay during his leave. For the January pay period, Workday calculates gross-to-net amounts for these subperiods:

- 2012-01-01 to 2012-01-03 (100% of pay)
- 2012-01-04 – 2012-01-24 (80% of pay)
- 2012-01-25 – 2012-01-31 (100% of pay)

### Workers with Multiple Jobs on Leave

For Payroll for Canada and the U.S., Workday considers the type of leave when determining which pay components to process for workers with a status of *On Leave*.

| Type of Leave                        | Pay Components Processed                                                                          |
|--------------------------------------|---------------------------------------------------------------------------------------------------|
| Both position-based and worker-based | Workday considers the union of both leave types when determining which pay components to process. |

| Type of Leave  | Pay Components Processed                                                                |
|----------------|-----------------------------------------------------------------------------------------|
| Position-based | The leave type for the primary job applies when processing worker-based pay components. |

Workday processes worker-based pay components according to the worker status. If the worker has multiple jobs, the status of the primary position prevails.

**Example: Worker on Both Position-Based Leave and Worker-Based Leave**

Charles has 2 jobs and is on these leave types for the entire month of April:

- Worker-based leave type A
- Position-based leave type B (for primary job of carpenter)
- Position-based leave type C (for additional job of painter)

Your run category specifies that on-cycle payrolls are to calculate:

| Leave Type   | Calculations                                           |
|--------------|--------------------------------------------------------|
| Leave Type A | Retirement and Retirement Employer Match Contributions |
| Leave Type B | Non-active Leave Pay                                   |
| Leave Type C | Medical Deductions                                     |

For the April pay period, Charles' status for payroll processing is *On Leave* because he was on a leave of absence on the period start and end dates.

Workday processes these calculations for his jobs:

| Job       | Calculations                                                     |
|-----------|------------------------------------------------------------------|
| Carpenter | Retirement and Retirement Employer Match<br>Non-active Leave Pay |
| Painter   | Retirement and Retirement Employer Match<br>Medical Deductions   |

Assuming that Retirement and Retirement Employer Match are worker-based pay components, Workday resolves them only once.

**Example: Worker on Position-Based Leave Only**

Charles has 2 jobs and is on these leave types for the entire month of April:

- Position-based leave type A (for primary job of carpenter)

- Position-based leave type B (for additional job of painter)

Workday calculates:

| Job       | Calculations         |
|-----------|----------------------|
| Carpenter | Non-active Leave Pay |
| Painter   | Medical Deductions   |

### Concept: Pay for Terminated Workers

When the run category of a pay group includes conditions for paying terminated workers, or workers with ended additional jobs, Workday applies these rules.

### Terminated Workers on Salary Continuance

For Payroll for France, Canada, and the U.S., Workday generates 2 sub-periods and 2 gross-to-nets when you terminate a worker mid-period who has a pay through date before the period end date. This enables you to process pay for terminated workers:

- After the termination date.
- In the same pay period as the termination.

#### Example: Single Job with Mid-Period Termination

The current monthly pay period is 2012-01-01 to 2012-01-31. Jacques is terminated on 2012-01-03 and has a **Pay Through Date** of 2012-03-31. For the January pay period, Workday calculates a separate gross-to-net amount for these subperiods:

- 2012-01-01 to 2012-01-03.
- 2012-01-04 to 2012-01-31.

If the **Pay Through Date** was 2012-01-18, Workday would calculate the gross-to-net for the first subperiod only:

- 2012-01-01 to 2012-01-03.
- 2012-01-04 to 2012-01-18.

### Workers with Ended Additional Jobs

For Payroll for Canada and the U.S., when a worker has multiple jobs, the status of the primary job impacts how Workday treats ended additional jobs.

| Status of Primary Job | Impact on Ended Additional Jobs                                                                                                                                                                                                                                                                        |
|-----------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Terminated            | Workday can process ended jobs that are in the same pay group, up to the <b>Pay Through Date</b> of the primary job.                                                                                                                                                                                   |
| Active                | When the primary and additional jobs are in the same pay group, you can configure Workday to pay the additional job up to its pay through date. On the <b>Edit Run Category</b> task, configure the <b>Nonactive (On Cycle, On Demand Replacement)</b> tab to pay non-active workers in on-cycle runs. |

| Status of Primary Job | Impact on Ended Additional Jobs                                                                                                                                                                                                                                                                                                                                                                         |
|-----------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                       | When the primary and additional jobs are in different pay groups, you can configure Workday to continue to pay the ended additional job. On the <b>Edit Run Category</b> task for the additional job, select an <i>Ended Additional Job</i> status in the <b>Workers to Process</b> section. Workday considers the worker as active and uses the pay component configuration on the <b>General</b> tab. |

#### Example: Multiple Jobs Terminated with Different Pay Through Dates

Alan has 2 jobs in the same pay group. Both jobs terminate on 2012-01-10:

- Primary job: Pay Through Date is 2012-03-10.
- Secondary job: Pay Through Date is 2012-04-10.

Workday automatically pays Alan until 2012-03-10. Add payroll input to pay Alan's secondary job from 2012-03-11 to 2012-04-10.

#### Example: Secondary Job in Different Pay Group than Primary Job Ends

Melinda's secondary job, which is in a different pay group from Melinda's primary job, ends on 2012-01-10 with a **Pay Through Date** of 2012-04-10. Workday continues to pay the primary job during on-cycle processing.

To continue to pay Melinda's secondary job:

1. Access **Edit Run Category** task for the run category for the secondary job.
2. In the **Workers to Process** section, add the *Ended Additional Job with Pay Through Date* status.

#### Workers with Ended Additional Jobs

For Payroll for the UK, when a worker has multiple jobs, the status of the primary job impacts how Workday treats ended additional jobs.

| Status of Primary Job | Impact on Ended Additional Jobs                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|-----------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Terminated            | Workday can process ended jobs that are in the same pay group, up to the <b>Termination Date</b> of the primary job.                                                                                                                                                                                                                                                                                                                                                                                                  |
| Active                | <p>When the primary and additional jobs are in the same pay group, you can configure Workday to pay the additional job up to its termination date. On the <b>Edit Run Category</b> task, configure the <b>Nonactive (On Cycle, On Demand Replacement)</b> tab to pay non-active workers in on-cycle runs.</p> <p>When the primary and additional jobs are in different pay groups, you can configure Workday to continue to pay the ended additional job. On the <b>Edit Run Category</b> task for the additional</p> |

| Status of Primary Job | Impact on Ended Additional Jobs                                                                                                                                                                        |
|-----------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                       | job, select an <i>Ended Additional Job</i> status in the <b>Workers to Process</b> section. Workday considers the worker as active and uses the pay component configuration on the <b>General</b> tab. |

**Example: Multiple Jobs Terminated with Different Termination Dates**

Alan has 2 jobs in the same pay group. Both jobs terminate on 2012-01-10:

- Primary job: Termination Date is 2012-03-10.
- Secondary job: Termination Date is 2012-04-10.

Workday automatically pays Alan until 2012-03-10. Add payroll input to pay Alan's secondary job from 2012-03-11 to 2012-04-10.

**Example: Secondary Job in Different Pay Group than Primary Job Ends**

Melinda's secondary job, which is in a different pay group from Melinda's primary job, ends on 2012-01-10 with a **Termination Date** of 2012-04-10. Workday continues to pay the primary job during on-cycle processing.

To continue to pay Melinda's secondary job:

1. Access **Edit Run Category** task for the run category for the secondary job.
2. In the **Workers to Process** section, add the *Ended Additional Job with One-time Payroll Input* status.

[Terminate Employees](#)

**Reference**

[2023R1 What's New Post: Records of Employment \(ROEs\) for Workers with Multiple Jobs](#)

**Example: Set Up Pay Run Category for Active and Terminated Workers**

This example illustrates how to:

- Only process active and terminated workers in a regular run category.
- Define a different set of pay components for active workers and terminated workers.

**Context**

Global Modern Services (GMS) wants to configure a run category to process active workers, and terminated workers that either:

- Are on salary continuance.
- Have one-time payroll input.
- Have a one-time or bonus payment from Workday Compensation.

GMS wants to calculate these pay components for terminated workers on salary continuance:

- Severance.
- Noncash taxable benefits.
- Retirement contributions for workers with more than 1 year of service.

GMS also wants to calculate these pay components with on-demand additional payments:

- Retirement contributions for terminated workers receiving an on-demand additional payment with a *Final Check (Severance)* reason.
- Retirement and employer match to retirement plans for active workers receiving any type of on-demand additional payment.

### Prerequisites

- Define *Gross* and *Net* pay accumulations.
- Create these pay components:
  - *Retirement Contribution*
  - *Retirement Employer Match*
  - *Severance Pay*
- Security: *Set Up: Payroll - Pay Group Specific* domain in the Core Payroll functional area.

### Steps

1. Access the **Create Run Category** task.
2. In the **Workers to Process** section of the **General** tab, select these statuses:
  - *Active*
  - *Terminated with Pay Through Date*
  - *Terminated with One-Time Payroll Input*
  - *Terminated with One-Time Compensation Payment*
3. In the **Gross/Net** section, select these values to define what to calculate for active workers in on-cycle runs:

| Option                                              | Description                                                                                                                                                                                 |
|-----------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Gross Pay Accumulation</b>                       | <i>Gross</i>                                                                                                                                                                                |
| <b>Net Pay Accumulation</b>                         | <i>Net</i>                                                                                                                                                                                  |
| <b>Additional Pay Component Groups to Calculate</b> | Select these 3 groups: <ul style="list-style-type: none"> <li>• <i>Employer Paid Benefits</i></li> <li>• <i>Non Cash Taxable Benefits</i></li> <li>• <i>Statutory Taxes (ER)</i></li> </ul> |

4. On the **Nonactive (On Cycle, On Demand Replacement)** tab, define what to calculate for terminated workers in on-cycle and on-demand replacement payments:

| Pay Component to Calculate                                         | Pay Component Groups to Calculate | Status            | Processing Criteria                                                                     |
|--------------------------------------------------------------------|-----------------------------------|-------------------|-----------------------------------------------------------------------------------------|
| <i>Severance Pay</i>                                               | <i>Non Cash Taxable Benefits</i>  | <i>Terminated</i> | <i>Worker: Pay Through Date &gt;= Period Start Date</i>                                 |
| <i>Retirement Contribution</i><br><i>Retirement Employer Match</i> |                                   | <i>Terminated</i> | <i>Worker: Pay Through Date &gt;= Period Start Date</i><br><i>Seniority &gt; 1 year</i> |

Processing criteria for the retirement pay components are on the same row because workers must meet both conditions (AND conditions). In addition to the selected pay components, Workday automatically processes one-time payroll input and one-time or bonus payments from Workday Compensation.

5. On the **Off Cycle (On Demand Additional, Manual)** tab, define what to calculate for active and terminated workers in on-demand additional payments:

| Pay Component to Calculate                                         | Type of Run      | Off-Cycle Reasons              | Status            |
|--------------------------------------------------------------------|------------------|--------------------------------|-------------------|
| <i>Retirement Contribution</i>                                     | <i>On Demand</i> | <i>Final Check (Severance)</i> | <i>Terminated</i> |
| <i>Retirement Contribution</i><br><i>Retirement Employer Match</i> | <i>On Demand</i> |                                | <i>Active</i>     |

## Result

Workday processes these workers in the monthly on-cycle payroll for March:

- Charles, terminated on February 28 whose pay through date is March 31. Charles receives severance pay if he's eligible for it, but not base pay.
- Mike, terminated on March 5 whose pay through date is April 15. Workday considers Mike an active worker for March and creates 2 subperiods with separate gross-to-net amounts:
  - March 1 - 5: Prorated salary for the days Mike is active.
  - March 6 - 31: Base pay, noncash taxable benefits, retirement contribution, and employer match to retirement plan for the days after his termination.
- Daniel, terminated on March 5 whose pay through date is March 10. Workday prorates his salary for the March 1-5 subperiod. You need to enter payroll input to pay the March 6 - 10 subperiod.

Susan is on a leave of absence from March 1 through April 15. Workday doesn't process her because she doesn't meet the selection criteria on the **General** tab.

## Example: Set Up Pay Run Category for Active and Terminated Workers (FRA)

This example illustrates how to process active and terminated workers with different pay components in the same run category.

## Context

Global Modern Services needs a run category to process:

- Active workers.
- Terminated workers who have:
  - A one-time payroll input.
  - A one-time or bonus payment.

Global Modern Services also needs to calculate statutory taxes on all payments.

Global Modern Services needs to configure a pay component group for additional payments that is based on worker eligibility criteria.

## Prerequisites

Security: *Set Up: Payroll - Pay Group Specific* domain in Core Payroll functional area.

## Steps

1. Access the **Create Run Category** task.
2. Enter GMS All and Terminated in the **Name** field.
3. Select **France** from **Run Category ~Country~**.
4. On the **General** tab, add rows for these statuses in the **Workers to Process** grid:
  - *Active*
  - *Terminated with One-time Payroll Input*
  - *Terminated with One-time Compensation Payment*
5. In the **Gross/Net** section, select these values:

| Option                                              | Description                                                                                                                                                                                                                                |
|-----------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Gross Pay Accumulation</b>                       | <i>FRA Gross [FRA]</i>                                                                                                                                                                                                                     |
| <b>Net Pay Accumulation</b>                         | <i>FRA Net Pay [FRA]</i>                                                                                                                                                                                                                   |
| <b>Additional Pay Components to Calculate</b>       | <i>Memo - Salary Increase Due to Contribution Reductions [FRA]</i>                                                                                                                                                                         |
| <b>Additional Pay Component Groups to Calculate</b> | <ul style="list-style-type: none"> <li>• <i>FRA Employer Taxes Provision [FRA]</i></li> <li>• <i>FRA Statutory Taxes EE - Deductible from Tax - Excluded from Gross Up [FRA]</i></li> <li>• <i>FRA Statutory Taxes ER [FRA]</i></li> </ul> |

6. On the **Nonactive (On Cycle, On Demand Replacement)** tab, add a row to the **Pay Components to Process** grid and select these values:

| Pay Components to Calculate                                                                                                                                                      | Pay Component Groups to Calculate                                                                                                                                                                                                                                                                                                                                                                                                                                              | Status            |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------|
| <ul style="list-style-type: none"> <li>• <i>IJSS Gross [FRA]</i></li> <li>• <i>Memo - Reference Values for IJSS [FRA]</i></li> <li>• <i>TAX Withholding Tax [FRA]</i></li> </ul> | <ul style="list-style-type: none"> <li>• <i>FRA Adds to Net [FRA]</i></li> <li>• <i>FRA Employer Taxes Provision [FRA]</i></li> <li>• <i>FRA Statutory Taxes EE - Deductible from Tax [FRA]</i></li> <li>• <i>FRA Statutory Taxes EE - Deductible from Tax - Excluded from Gross Up [FRA]</i></li> <li>• <i>FRA Statutory Taxes EE [FRA] - Submitted to Tax [FRA]</i></li> <li>• <i>FRA Statutory Taxes ER [FRA]</i></li> <li>• <i>FRA Subtracts from Net [FRA]</i></li> </ul> | <i>Terminated</i> |

For terminated workers, Global Modern Services uses one-time payroll inputs to enter any additional gross pay. Workday processes one-time payroll inputs for the gross or net accumulation on the **General** tab.

7. On the **Off Cycle (On Demand Additional, Manual)** tab, add a row to the **Pay Components to Process** grid and select these values:

| Pay Components to Calculate | Pay Component Groups to Calculate                                                                                                                                                                                                                                                                                                                                                                         | Type of Run       | Status               |
|-----------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------|----------------------|
| TAX Withholding Tax [FRA]   | <ul style="list-style-type: none"> <li>FRA Statutory Taxes EE - Deductible from Tax - Excluded from Gross Up [FRA]</li> <li>FRA Statutory Taxes EE - Submitted to Tax [FRA]</li> <li>FRA Statutory Taxes EE - Deductible from Tax [FRA]</li> <li>FRA Statutory Taxes ER [FRA]</li> <li>FRA Adds to Net [FRA]</li> <li>FRA Employer Taxes Provision [FRA]</li> <li>FRA Subtracts from Net [FRA]</li> </ul> | On Demand Payment | Active<br>Terminated |

8. Click **OK** and **Done**.

## Result

Workday calculates pay results in the monthly on-cycle payroll for:

- Active workers based on the pay components configured in the **General** tab.
- Terminated workers with a one-time payroll input for additional payments.
- Statutory taxes for all payments in the run category.

## Related Information

### Example: Set Up Pay Run Category for Active and Terminated Workers (UK)

This example illustrates how to:

- Only process active and terminated employees in a regular run category.
- Include Workday-delivered statutory calculations in a regular payroll process.

## Context

Global Modern Services wants to set up a run category to process:

- All active workers.

- Terminated workers who either:
  - Are on salary continuance.
  - Have one-time payroll input.
  - Have a one-time or bonus payment from Workday Compensation.

Global Modern Services needs to calculate:

- Statutory taxes on all payments to active or terminated workers.
- Employer paid benefits for active workers.

Global Modern Services also needs to assess workers for pensions auto enrolment during on-cycle and off-cycle runs. They need to assess workers that were active during the pay period.

### Prerequisites

Security: *Set Up: Payroll - Pay Group Specific* domain in Core Payroll functional area.

### Steps

- Access the **Create Run Category** task.
- In the **Name** field, enter Regular (GBR).
- Select the **Regular Run Category** check box.
- In the **Workers to Process** grid on the **General** tab, enter these statuses:
  - Active*
  - Terminated with One-Time Payroll Input*
  - Terminated with One-Time Compensation Payment*
- In the **Gross/Net** section, select these settings to define what to calculate for active workers in on-cycle runs:

| Option                                              | Settings                                                                                                                                 |
|-----------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Gross Pay Accumulation</b>                       | <i>GBR Gross [GBR]</i>                                                                                                                   |
| <b>Net Pay Accumulation</b>                         | <i>GBR Net [GBR]</i>                                                                                                                     |
| <b>Additional Pay Components to Calculate</b>       | <i>GBR Pensions Auto Enrolment Assessment [GBR]</i>                                                                                      |
| <b>Additional Pay Component Groups to Calculate</b> | <ul style="list-style-type: none"> <li><i>GBR Employer Paid Benefits [GBR]</i></li> <li><i>GBR Statutory Taxes (ER) [GBR]</i></li> </ul> |

- Leave the **Nonactive (On Cycle, On Demand Replacement)** tab empty.

**Note:** For terminated workers, Global Modern Services uses one-time payroll inputs to enter any additional gross pay. Workday always calculates statutory taxes for on-cycle and on-demand replacement payments.

- On the **Off Cycle (On Demand Additional, Manual)** tab, define what to calculate for active and terminated workers in on-demand additional payments:

| Option                             | Settings                                            |
|------------------------------------|-----------------------------------------------------|
| <b>Pay Components to Calculate</b> | <i>GBR Pensions Auto Enrolment Assessment [GBR]</i> |
| <b>Type of Run</b>                 | <i>On Demand Payment</i>                            |
| <b>Off Cycle Reasons</b>           | <i>Additional Pay</i>                               |

| Option | Settings |
|--------|----------|
| Status | Active   |

**Note:** Workday always calculates statutory taxes for on-demand additional payments.

## Result

Alice is an active employee at Global Modern Services. When Global Modern Services processes monthly on-cycle payroll for March, Workday calculates pay results for Alice based on the pay components in these pay component groups and accumulations:

- *GBR Gross [GBR]*
- *GBR Net [GBR]*
- *GBR Employer Paid Benefits [GBR]*
- *GBR Statutory Taxes (ER) [GBR]*

Workday also uses the calculations in *GBR Pensions Auto Enrolment Assessment [GBR]* pay component group to assess Alice for pensions auto enrolment.

Charles, a Global Modern Services employee, was terminated on January 15th after 2 years of employment. When Global Modern Services processes monthly on-cycle payroll for March, Workday processes Charles because he has a bonus in March entered as a one-time payroll input. Workday calculates all statutory taxes on the amount he received.

[Identify What to Pay in On-Cycle and On-Demand Replacement Pay](#) on page 102

## Example: Set Up Pay Run Category for Active and Terminated Workers (AUS)

This example illustrates how to:

- Only process active and terminated employees in a regular run category.
- Include Workday-delivered statutory calculations in a regular payroll process.

## Context

Global Modern Services wants to set up a run category to process:

- All active workers.
- Terminated workers who either:
  - Have one-time payroll input.
  - Have a one-time or bonus payment from Workday Compensation.

Global Modern Services needs to calculate:

- Statutory taxes on all payments to active or terminated workers.
- Employer paid benefits for active workers.

## Prerequisites

Security: *Set Up: Payroll - Pay Group Specific* domain in Core Payroll functional area.

## Steps

1. Access the **Create Run Category** task.

2. In the **Name** field, enter *Regular (AUS)*.
3. Select the **Regular Run Category** check box.
4. In the **Workers to Process** grid on the **General** tab, enter these statuses:
  - *Active*
  - *Terminated with One-Time Payroll Input*
  - *Terminated with One-Time Compensation Payment*
5. In the **Gross/Net** section, select these settings to define what to calculate for active workers in on-cycle runs:

|                                                     |                                                                                                                                                                                                                         |
|-----------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Gross Pay Accumulation</b>                       | <i>AUS Gross [AUS]</i>                                                                                                                                                                                                  |
| <b>Net Pay Accumulation</b>                         | <i>AUS Net [AUS]</i>                                                                                                                                                                                                    |
| <b>Additional Pay Components to Calculate</b>       | <i>AUS ETP Taxable Type R Payment Above Lump Sum D Threshold [AUS]</i><br><br><i>AUS Lump Sum D (ETP Tax Free) Payment [AUS]</i>                                                                                        |
| <b>Additional Pay Component Groups to Calculate</b> | <ul style="list-style-type: none"> <li>• <i>All AUS Reportable Fringe Benefits Amounts (FBT/RFBA) [AUS]</i></li> <li>• <i>AUS Superannuation Employer Contributions [AUS]</i></li> <li>• <i>Memo entries</i></li> </ul> |

6. Leave the **Nonactive (On Cycle, On Demand Replacement)** tab empty.
7. On the **Off Cycle (On Demand Additional, Manual)** tab, define what to calculate for active and terminated workers in on-demand additional payments:

|                                    |                          |
|------------------------------------|--------------------------|
| <b>Pay Components to Calculate</b> |                          |
| <b>Type of Run</b>                 | <i>On Demand Payment</i> |
| <b>Off Cycle Reasons</b>           | <i>Additional Pay</i>    |
| <b>Status</b>                      | <i>Active</i>            |

[Concept: Pay for Terminated Workers](#) on page 132

#### Tasks

[Identify What to Pay in On-Cycle and On-Demand Replacement Pay](#) on page 102

### Example: Set Up Selection Criteria for Workers on Leave (FRA)

This example illustrates how to run payroll calculations only for workers who are on parental leave.

#### Context

In Global Modern Services, workers on parental leave are:

- Covered by health insurance.
- Eligible for bonuses.

Workers on other types of leave, such as sabbaticals, aren't eligible for these benefits.

You want to run payroll calculations for workers who are on parental leave, but not other types of leave.

## Prerequisites

Security:

- *Set Up: Payroll - Pay Group Specific* domain in Core Payroll functional area.
- *Set Up: Payroll (Calculations - Generic)* domain in the Core Payroll functional area.
- *Set Up: Time Off (Calculations - Generic)* domain in the Time Off and Leave functional area.

## Steps

1. Access the **Edit Run Category** task.
2. On the **General** tab, in the **Workers to Process** grid, click **+** to add a row.
3. From the **Status** prompt, select *On Leave*.
4. Add a row in the **Selection Criteria** section, and select **Create > Create Instance Set Comparison Calculation**.
5. Workday opens the **Create Instance Set Comparison Calculation** task, enter these settings:

| Option                     | Settings                                |
|----------------------------|-----------------------------------------|
| <b>Name</b>                | <i>Worker on Parental Leave</i>         |
| <b>Category</b>            | <i>Payroll</i>                          |
| <b>Source Field</b>        | <i>Leave Types for Worker</i>           |
| <b>Relational Operator</b> | <i>in the selection list</i>            |
| <b>Target Instance</b>     | <i>Family Leave &gt; Parental Leave</i> |

6. Click **OK** to return to the **Edit Run Category** task.

## Next Steps

On the **Nonactive (On Cycle, On Demand Replacement)** tab, define the calculations for the workers on parental leave.

### Example: Set Up Pay Run Category for Workers on Leave

This example illustrates how to:

- Set up a run category for workers on leave.
- Define a different set of pay components to process in both on-cycle and off-cycle payroll runs.

## Context

Global Modern Services (GMS) wants to configure a run category to process workers on leave who:

- Have one-time payroll input, or a one-time or bonus payment from Workday Compensation.
- Are on a paid leave for sabbatical or short-term disability.

GMS wants to calculate these pay components:

- Leave pay for workers on short-term disability. You configure this earning to pay at 80% of the regular amount.
- Nonactive leave pay for workers on sabbatical.
- Retirement contributions for regular workers on a sabbatical or short-term disability.
- Healthcare deductions and employer paid benefits for all workers on sabbatical or short-term disability.

GMS also wants to run on-demand additional payments to workers on short-term disability for the processed subperiod to pay:

- Retirement contributions.
- Employer match to retirement plans.

## Prerequisites

- Enable leave types with the **Payroll Effect** option on the **Create Leave Type** task.
- Create these pay components:
  - *Leave Pay (80%)*
  - *Nonactive Leave Pay*
  - *Retirement Contribution*
  - *Retirement Employer Match*
- Create the *Healthcare Deductions* pay component group.
- Create an instance set comparison calculation to identify multiple leave types.
- Security: *Set Up: Payroll - Pay Group Specific* domain in the Core Payroll functional area.

## Steps

1. Access the **Create Run Category** task.
2. Enter *Workers on Leave* in the **Name** field.
3. In the **Workers to Process** section of the **General** tab, specify these criteria:

| Status          | Selection Criteria                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
|-----------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <i>On Leave</i> | Because workers can meet any of the 3 criteria, select each of these calculations on a separate row (OR conditions): <ul style="list-style-type: none"> <li>• <i>Paid Leave Type = Sabbatical or STD</i></li> <li>• <i>Payroll Input Exists for an Earning that is Part of Gross Pay Accumulation for the Run Category</i></li> <li>• <i>Onetime or Bonus Payment Exists for an Earning that is Part of Gross Pay Accumulation for the Run Category</i></li> </ul> |

4. On the **Nonactive (On Cycle, On Demand Replacement)** tab, enter these values:

| Pay Component to Calculate     | Pay Component Groups to Calculate                             | Status          | Leave Types                                       | Processing Criteria                    |
|--------------------------------|---------------------------------------------------------------|-----------------|---------------------------------------------------|----------------------------------------|
| <i>Leave Pay (80%)</i>         |                                                               | <i>On Leave</i> | <i>Short-term disability</i>                      |                                        |
| <i>Nonactive Leave Pay</i>     |                                                               | <i>On Leave</i> | <i>Sabbatical</i>                                 |                                        |
| <i>Retirement Contribution</i> |                                                               | <i>On Leave</i> | <i>Short-term disability</i><br><i>Sabbatical</i> | <i>Worker Employee Type is Regular</i> |
|                                | <i>Healthcare Deductions</i><br><i>Employer Paid Benefits</i> | <i>On Leave</i> | <i>Short-term disability</i><br><i>Sabbatical</i> |                                        |

In addition to the selected pay components, Workday automatically processes one-time payroll input for the pay period and any one-time payments or bonuses from Workday Compensation.

5. On the **Off Cycle (On Demand Additional, Manual)** tab, enter these values:

| Pay Component to Calculate                                     | Type of Run | Status   | Leave Types              | Processing Criteria                                    |
|----------------------------------------------------------------|-------------|----------|--------------------------|--------------------------------------------------------|
| Retirement<br>Employer Match<br><br>Retirement<br>Contribution | On Demand   | On Leave | Short-term<br>disability | Worker on Leave<br>with Payroll Effect<br>(Sub Period) |

6. Click **OK** and **Done**.

## Result

You process monthly on-cycle payroll for March. Workday calculates these pay components for Donna, a part-time worker, who's on leave for short-term disability from March 1 through April 15:

- *Leave Pay (80%)*
- *Healthcare Deductions*
- *Employer Paid Benefits*

Workday also calculates these pay components for Gloria, who's on leave for short-term disability from March 4 to March 24:

- March 1 - 3: Regular pay (prorated)
- March 4 - 24: *Leave Pay (80%)* (prorated), *Healthcare Deductions*, *Employer Paid Benefits*
- March 25 - 31: Regular pay (prorated)

Jim is a worker on personal leave for the entire month of March. Workday doesn't calculate anything for him because he doesn't meet the selection criteria for processing.

## Example: Set Up Pay Run Category for Workers on Leave (FRA)

This example illustrates how to:

- Set up a negative net pay advance for workers who are on unpaid leave, but still subject to deductions.
- Use payroll inputs for one-time bonuses for workers on leave.

## Context

You want to set up payroll calculations for workers on parental leave.

Workers on parental leave are unpaid, but are subject to these pay deductions:

- Monthly premium payments for health insurance coverage that continues during their leave.
- Taxes on contingency payments.
- Ongoing debts, or advance repayments.

Workers on parental leave are also eligible for bonuses paid during their leave.

During their leave, workers have a net salary of zero, and will owe Global Modern Services any unpaid amounts upon their return to work.

To pay health insurance premiums, Global Modern Services deducts 100 EUR per month from worker net pay. The *Health insurance premium* deduction is associated with the *FRA Statutory Taxes EE - Deductible from Tax [FRA]* pay component group.

Workday provides these pay components to avoid having a negative net salary for workers on leave:

| Pay Component                                                                                                               | Use                                                                                     |
|-----------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------|
| Deduction: <i>Repayment of Previous Negative Net Salary [FRA]</i> in the <i>FRA Subtracts from Net</i> pay component group. | Deducts the negative net pay advance from the net salary when a worker returns to work. |
| Earning: <i>Negative Net Pay Advance [FRA]</i> in the <i>FRA Adds to Net [FRA]</i> pay component group.                     | Creates an advance when the net pay is negative.                                        |

### Prerequisites

Security: *Set Up: Payroll - Pay Group Specific* domain in Core Payroll functional area.

### Steps

1. Access the **Edit Run Category** task.

See [Example: Set Up Selection Criteria for Workers on Leave \(FRA\)](#) on page 141.

2. On the **Nonactive (On Cycle, On Demand Replacement)** tab, enter these values:

| Pay Components to Calculate                                                                                                                                                      | Pay Component Groups to Calculate                                                                                                                                                                                                                                                                                                                                                                                                                                        | Status          |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------|
| <ul style="list-style-type: none"> <li>• <i>IJSS Gross [FRA]</i></li> <li>• <i>Memo - Reference Values for IJSS [FRA]</i></li> <li>• <i>TAX Withholding Tax [FRA]</i></li> </ul> | <ul style="list-style-type: none"> <li>• <i>FRA Adds to Net [FRA]</i></li> <li>• <i>FRA Statutory Taxes EE - Deductible from Tax [FRA]</i></li> <li>• <i>FRA Statutory Taxes EE - Deductible from Tax - Excluded from Gross Up [FRA]</i></li> <li>• <i>FRA Employer Taxes Provision [FRA]</i></li> <li>• <i>FRA Statutory Taxes EE - Submitted to Tax [FRA]</i></li> <li>• <i>FRA Statutory Taxes ER [FRA]</i></li> <li>• <i>FRA Subtracts from Net [FRA]</i></li> </ul> | <i>On Leave</i> |

For workers on leave, Global Modern Services uses one-time payroll inputs to enter any additional gross pay. Workday processes one-time payroll inputs that belong to the gross or net accumulation on the **General** tab.

3. On the **Off Cycle (On Demand Additional, Manual)** tab, enter these values:

| Pay Components to Calculate      | Pay Component Groups to Calculate                                                | Type of Run              | Status          |
|----------------------------------|----------------------------------------------------------------------------------|--------------------------|-----------------|
| <i>TAX Withholding Tax [FRA]</i> | <ul style="list-style-type: none"> <li>• <i>FRA Adds to Net [FRA]</i></li> </ul> | <i>On Demand Payment</i> | <i>On Leave</i> |

| Pay Components to Calculate | Pay Component Groups to Calculate                                                                                                                                                                                                                                                                                                                                          | Type of Run | Status |
|-----------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------|--------|
|                             | <ul style="list-style-type: none"> <li>FRA Employer Taxes Provision [FRA]</li> <li>FRA Statutory Taxes EE - Deductible from Tax [FRA]</li> <li>FRA Statutory Taxes EE - Deductible from Tax - Excluded from Gross Up [FRA]</li> <li>FRA Statutory Taxes EE - Submitted to Tax [FRA]</li> <li>FRA Statutory Taxes ER [FRA]</li> <li>FRA Subtracts from Net [FRA]</li> </ul> |             |        |

4. Click **OK** and **Done**.

### Result

Marie is on unpaid parental leave for the entire month of February. During her leave of absence, she has a salary of zero. Marie will owe Global Modern Services the monthly premiums when she returns to work in March. Workday calculates:

| Pay Period                       | Results                                                                                                                                                                     |
|----------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| February (unpaid parental leave) | <ul style="list-style-type: none"> <li>Net Pay: 0 EUR</li> <li>Negative Net Pay Advance: 109.7 EUR, representing health insurance premiums plus statutory taxes.</li> </ul> |
| March (return to work)           | Net salary minus the repayment of 109.7 EUR.                                                                                                                                |

Steve is also on unpaid parental leave for the month of February. He receives a 1000 EUR bonus using a one-time pay input. During his leave of absence, Workday calculates:

| Pay Period | Results                                                           |
|------------|-------------------------------------------------------------------|
| February   | Net Pay: Bonus amount minus premium payments and statutory taxes. |

### Example: Set Up Pay Run Category for Workers on Leave (UK)

This example illustrates how to pay workers on maternity leave by setting up a run category.

#### Context

Ella, the Global Modern Services (GMS) payroll administrator, wants to be able to pay workers on maternity leave. She sets up a run category to enable her to identify and include those workers in a payroll run.

Eligible workers receive statutory maternity pay through payroll, and GMS provides additional payments to complete the worker's salary. Workers on maternity leave are eligible for employer-paid benefits, and regular assessment for pensions auto-enrolment.

#### Prerequisites

- Create an earning named *GMS Maternity* to complete a worker's salary during their leave.
- Create a *Statutory Maternity Leave* family leave type that is linked to the *United Kingdom - GBR SMP - Maternity* leave payment type.
- Security: *Set Up: Payroll - Pay Group Specific* domain in the Core Payroll functional area.

#### Steps

1. Access the **Edit Run Category** task.
2. From the **Run Category** prompt, select *Regular (GBR)*.
3. On the **General** tab, in the **Workers to Process** grid, click + to add a row.
4. From the **Status** prompt, select *On Leave*.
5. On the **Nonactive (On Cycle, On Demand Replacement)** tab, enter these values:

| Option                                   | Settings                                                                                      |
|------------------------------------------|-----------------------------------------------------------------------------------------------|
| <b>Pay Components to Calculate</b>       | <i>GBR Pensions Auto Enrolment Assessment [GBR]</i><br><i>GBR SMP</i><br><i>GMS Maternity</i> |
| <b>Pay Component Groups to Calculate</b> | <i>GBR Employer Paid Benefits [GBR]</i>                                                       |
| <b>Status</b>                            | <i>On Leave</i>                                                                               |

6. Click **OK** and **Done**.

#### Result

When Ella processes the GMS monthly on-cycle payroll for March, Workday calculates these pay components for Sarah, a full-time employee who started maternity leave on March 22:

- March 1 - 21: Regular pay (prorated).
- March 22 - 31: *GBR SMP*, *GMS Maternity*, and all pay components in the *GBR Employer Paid Benefits [GBR]* pay component group.

Workday also assesses Sarah for pensions auto-enrolment.

### Example: Set Up Pay Run Category for Workers on Leave (AUS)

This example illustrates how to pay workers on maternity leave by setting up a run category.

## Context

Ella, the Global Modern Services (GMS) payroll administrator, wants to be able to pay workers on maternity leave. She sets up a run category to enable her to identify and include those workers in a payroll run.

Eligible workers receive statutory maternity pay through payroll, and GMS provides additional payments to complete the worker's salary. Workers on maternity leave are eligible for employer-paid benefits, and regular assessment for pensions auto enrolment.

## Prerequisites

- Create 2 leave types:
  - *AUS Parental Leave - Full pay* with the Leave Payment Type *Australia - AUS\_FULL\_PAY - Full Pay*
  - *AUS Parental Leave - Unpaid* with the Leave Payment Type *Australia - AUS\_UNPAID Unpaid*

Select the *Payroll Effect* check box for both.
- Create 2 earnings:
  - *GMS AUS Parental Leave - Full Pay*
  - *GMS AUS Parental Leave - Unpaid*
- Access the **Maintain AUS Leave Type Payment Configuration** task, and map the 2 new earnings to the 2 new leave types.
- Security: *Set Up: Payroll - Pay Group Specific* domain in the Core Payroll functional area.

## Steps

1. Access the **Edit Run Category** task.
2. From the **Run Category** prompt, select *Regular (AUS)*.
3. On the **General** tab, in the **Workers to Process** grid, click + to add a row.
4. From the **Status** prompt, select *On Leave*.
5. On the **Nonactive (On Cycle, On Demand Replacement)** tab, enter these values:

|                                    |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |

## Period Schedules

---

### Set Up Payroll and Time Tracking Period Schedules

#### Prerequisites

Review setup considerations for period schedules.

When using Workday Payroll and Time Tracking, determine whether to create shared period schedules for both.a

Security:

- *Set Up: Payroll - Pay Group Specific* domain in Core Payroll functional area.
- *Set Up: Payroll Interface* domain in the Payroll Interface functional area.
- *Set Up: Pay On-Demand*
- *Set Up: Period Schedule* domain in the Projects functional area.
- *Set Up: Time Tracking* domain in Time Tracking functional area.

#### Context

You can define consecutive periods for payroll processing and time tracking, such as weekly or monthly. When the dates for time periods and pay periods match, you can use the same schedule for payroll and time tracking. Pay groups with the same frequency can use the same period schedule.

You can set up existing period schedules for Pay On-Demand to define when workers can request early payment and the payment date auto-adjust function for weekends.

For one-time payments, Workday recommends creating on-demand payments for 1 or multiple workers instead of creating multiple short period schedules.

**Note:** Ensure that you have at least 1 period in your period schedule with dates before the effective date of your first Workday Payroll or HR transactions.

When you have specific requirements beyond payment dates or time tracking dates, you can create a custom field using the **Create Custom Object** task. Then you can:

- Add the field to a period schedule, such as for a hire cutoff date.
- Add the field to 1 or more pay periods, such as for a payroll cutoff date. Periods don't inherit custom objects you define at the period schedule level.

You can use these web services to load or retrieve period schedules:

- *Put Period Schedule*
- *Get Period Schedules*

## Steps

1. Access the **Create Period Schedule** task.

As you complete the task, consider:

| Option                          | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

|                                 | <ul style="list-style-type: none"> <li>• <b>Days From Period End Date to Close Requests</b> - When you enter the number of days in this field, Workday populates the actual date in the <b>Close Requests</b> field in the <b>Pay On-Demand</b> section of the Period Schedule.</li> <li>• <b>Payment Date Auto Adjust</b> - Complete to prevent payment dates from falling on a weekend. The payment date of a Pay On-Demand request is determined by these fields: <ul style="list-style-type: none"> <li>• Default Offset</li> <li>• Saturday</li> <li>• Sunday</li> </ul> <p><b>Default Offset</b> indicates the number of days Workday adds to the Pay-On Demand request date to determine the Payment Date. If the Payment Date derived from the Default Offset falls on a Saturday or Sunday, Workday adds the value in the <b>Saturday</b> or <b>Sunday</b> fields to the Payment Date.</p> <p>Example: You configure these fields:</p> <ul style="list-style-type: none"> <li>• Default Offset = 1</li> <li>• Saturday = 2</li> <li>• Sunday = 1</li> </ul> <p>A worker makes a Pay On-Demand request on Saturday, 1/1. The Default Offset of 1 indicates a Payment Date of Sunday, 1/2. However, since 1/2 falls on a Sunday, and the value for Sunday is 1, the actual Payment Date is Monday, 1/3.</p> <p><b>Note:</b> To prevent Pay On-Demand requests from processing when a pay period crosses a calendar year, manually change the <b>Open Requests</b> dates for those pay periods.</p> </li> </ul> |
| <b>Periods</b>                  | <p>Enter the <b>Period Start Date</b>, <b>Period End Date</b>, and when it differs from the period end date, the <b>Payroll Payment Date</b>.</p> <p>After saving the period schedule, you can configure Workday to select a payment date based on a number of days after the period end date. Select <b>Period Schedule &gt; Edit</b> from the related actions menu of the period schedule, and enter a value for the <b>Payment Date Offset Days Default</b> field. Adjust any payment dates that fall on a holiday.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| <b>Accounting Date Override</b> | <p>Enter a date between the period start date and 31 days after the period end date. Depending on your configuration, Workday sets the new override date as the initial accounting date for these on-cycle and off-cycle operational journals:</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

| Option | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
|--------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|        | <ul style="list-style-type: none"> <li>• Fringe Actuals</li> <li>• On-Demand Additional</li> <li>• On-Demand Replacement</li> <li>• Payroll Actuals</li> <li>• Payroll Accounting Adjustments</li> </ul> <p>Example: For the month of August, your period start date is 2020-08-17 and the period end date is 2020-08-30. You can then select an accounting date that falls within the range of 2020-08-17 and 2020-09-30.</p> <p>When you select the <b>Off-Cycle - Use Payment Date as Accounting Date</b> check box from the <b>Payroll Accounting</b> section on the <b>Edit Tenant Setup - Payroll</b> task, and also enter an <b>Accounting Date Override</b> on the period schedule, Workday uses the override date as the initial accounting date for off-cycle payments.</p> |

2. Select **Period Schedule > Edit** from the related actions menu of the period schedule.
3. (Optional) Select **Additional Data > Edit** from the related actions menu of the period schedule or of each period. Then select the custom field from the **Custom Object** prompt.
4. When creating a shared period schedule with Workday Time Tracking, define which workers to assign for time tracking purposes:
  - a) Expand the **Time Tracking** section.
  - b) To create a shared period schedule for Workday Time Tracking, select all conditions that workers must meet... on the worker eligibility prompt. For **Worker Eligibility**, select all conditions that workers must meet to have the schedule assigned.

You can select from rules created with the **Create Time Tracking Eligibility Rules** task.

5. When creating a shared period schedule with Workday Time Tracking, specify the dates available for time entry:

As you complete the task, consider:

6. The **Open Request** and **Close Request** fields in the **Pay On-Demand** section automatically populate when you enter **Days After Period Start Date to Open Requests** and **Days From Period Start Date to Close Requests**. You can override these dates.
7. (Optional) Complete the **Payroll GL Accruals** section to create a forward accrual for the period. You can't update accrual options when payroll calculations are in progress for the period.

| Option                        | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
|-------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Create Forward Accrual</b> | <p>When a pay period spans multiple reporting periods, Workday estimates payroll costs through the end of a financial reporting period.</p> <p>Workday:</p> <ul style="list-style-type: none"> <li>• Calculates forward accrual as <math>\text{Tax Amount} \times \frac{\text{Sum of Accrued Earnings}}{\text{Total Earnings}} \times \text{Forward Accrual Ratio}</math>.</li> <li>• Creates forward accrual as a ratio of <b>Days to Accrue</b> over <b>Days in Basis</b>.</li> </ul> <p>Workday excludes:</p> |

| Option                       | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                              | <ul style="list-style-type: none"> <li>Retro earnings.</li> <li>Earnings with <b>Exclude from Forward Accrual</b> selected on the <b>Non-Effective Dated</b> tab of the <b>Edit Earning</b> task.</li> <li>Expenses, when selected from the <b>Maintain Payroll Accounting Options</b> task.</li> </ul> <p>Forward accrual doesn't calculate off-cycle results for on-demand or manual payments.</p> <p>To ensure that you include employer expenses in forward accruals, use the <i>Employer Paid Benefits</i> pay component group for a pay component.</p> <p>When you've configured Pay On-Demand for workers with multiple jobs, Workday calculates forward accruals for multiple gross-to-nets within a pay period as the sum of all employer-paid statutory taxes, including all on-demand results in the pay period.</p> |
| <b>Days to Accrue</b>        | Number of days in the pay period for which to estimate payments.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| <b>Days in Basis</b>         | Number of work or calendar days in a full financial reporting period, typically the most recent full pay period.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| <b>Accrual Date</b>          | <p>Date on which to create the forward accrual. Used for the accounting entry, this date is typically the last day of the accounting period.</p> <p>You can also set the accrual date on or after the pay period start date.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| <b>Accrual Reversal Date</b> | Any day after the accrual date. Typically the first day of the next accounting period.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

8. (Optional) Add a row to the **Payroll Settlement Date Overrides** section to define different payment dates per country. Example: Define override dates for countries with different bank schedules to ensure that payments occur on bank working days.

| Option               | Description                                                                                                                                                                                                                |
|----------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Country</b>       | Workday applies the <b>Override Date</b> when the bank account receiving the payment is in this country. You can view the bank account country on the <b>Bank Account</b> task.                                            |
| <b>Override Date</b> | <p>Overrides the <b>Payroll Payment Date</b>. For on-cycle payments only.</p> <p>Workday applies the <b>Override Date</b> during settlement, but displays the default payment date on the payroll results and payslip.</p> |

## Result

Workday assigns a sequential **Period Number** to each period that has a payment date in the same calendar year.

You can't delete a period designated as the first processing period in the **Override First Processing Period** field of the **View Pay Group** report.

When you view or edit period schedules, Workday displays the **Canadian Annualization Factors** tab. It lists the factors, derived from the **Period Number** counts, that it uses to annualize and deannualize wages and taxes. For partial year schedules, Workday uses the annualization factor for the pay period frequency.

## Next Steps

Add periods to build out the schedule. You can:

- Add periods individually with the **Edit Period Schedule** task.
- Generate multiple periods with the **Generate Period Schedule Periods** task. For each period, Workday automatically populates relevant dates.
- Load periods with the *Put Period Schedule* web service. Enter all relevant dates in the EIB spreadsheet.

Assign pay period schedules to pay groups.

To ensure that workers don't qualify for more than 1 period schedule, periodically review the **Audit - Workers with Multiple Time Period Schedules** report.

Access the **Period Schedule - UK Payroll Pay and Tax Period Report** report to view for each payroll period:

- The period number based on counted periods.
- The tax period number.

## Edit Additional Periods on Period Schedules

### Prerequisites

[Set Up Payroll and Time Tracking Period Schedules](#) on page 149.

### Context

When you access the **Edit Period Schedule** task, Workday displays a maximum of 100 periods that includes the past and the future dates based on the current date. You might want to manually edit a period that is not one of the 100 periods that are currently displaying. You can use the pop-up tasks to edit or view those additional periods, and search for all periods based on the criteria you select.

## Steps

1. Access the **Edit Period Schedule** task.
2. Click the **Edit Additional Periods** button to access the **Edit Additional Period Schedule** task in a pop-up.

Use the task to edit additional periods for a selected period schedule with a specific date range. You can also select the **Used in Payroll** check box and the **Period Date Indicator** field to refine your task results further.

**Note:** Workday doesn't automatically apply the Payment Date Auto-Adjust, Payroll, Continuous Payroll Calculation, and Pay On-Demand settings to all the periods in the Period Schedule grid. Review and then apply the required settings to the existing periods in the grid or any additional periods that you select.

3. (Optional) Click the **View Additional Periods** button to access the **View Additional Period Schedule** task in a pop-up.

## Generate Periods for Period Schedules

### Prerequisites

Security:

- *Set Up: Payroll (Pay Group Specific)* in the Core Payroll functional area.
- *Set Up: Payroll Interface* in the Payroll Interface functional area.
- *Set Up: Period Schedule* in the Project Tracking functional area.
- *Set Up: Time Off (Calculations - Absence Specific)* in the Time Off and Leave functional area.
- *Set Up: Time Tracking* in the Time Tracking and Time Tracking Hub functional areas.

Create a period schedule with at least 1 period configured within it. For more information, see [Set Up Payroll and Time Tracking Period Schedules](#).

### Context

After you create period schedules, you can automatically extend existing period schedules for up to 2 years instead of manually adding new periods. This increases efficiency and reduces the likelihood of errors.

## Steps

1. Access the **View Period Schedule** or **Edit Period Schedule** task.
2. Select the **Period Schedule** option in the **Actions** menu.
3. Select the **Generate Periods** option.
4. Enter the number of periods that you want to add to the period schedule. You can add a maximum of 2 years of periods.
5. (Optional) Enter a value in the **Payment Date Offset Days Default** field to set the Payroll Payment Date. Otherwise, the value will correspond to the existing period schedule.

**Note:** The **Adjusted Payment Date** column displays a selected checkbox when you've configured Workday to automatically adjust payment dates that fall on weekends or holidays. See: [2025R1 Feature Release Note: Period Schedules and Holiday Calendar](#).

### Result

Workday adds the periods you configured to the existing period schedule.

**Note:** The **Generate Period Schedule Periods** task automatically defines the Period Start Date, Period End Date, and Payroll Payment Date for generated periods. When you enable continuous payroll calculation, the task also defines dates and times for the initial calculation and the automatic stop.

Next Steps

Assign pay period schedules to pay groups.

To ensure that workers don't qualify for more than 1 period schedule, periodically review the **Audit - Workers with Multiple Time Period Schedules** report.

[Set Up Period Schedules for Time Tracking](#)

Concept: Data Entry in Period Schedule EIB Spreadsheets

To upload a period schedule, you can create an EIB based on the *Put Period Schedule* web service. You can then enter data in a spreadsheet that corresponds to the inbound EIB.

These examples illustrate how to complete the EIB spreadsheet for the *Put Period Schedule* web service.

Examples: Add A New Period Schedule

You want to upload a period schedule with a monthly frequency from January 2018 to April 2018. You're going to use the period schedule for Workday Payroll, and Absence Management.

Add these rows to the EIB spreadsheet:

| Spreadsheet Key | Period Schedule ID | Period Schedule Name | Frequency | Usage         | Period Data - Row ID | Period Start Date | Period End Date | Period Payroll Payment Date | Period ID |
|-----------------|--------------------|----------------------|-----------|---------------|----------------------|-------------------|-----------------|-----------------------------|-----------|
| 1               |                    | MONTHLY              | Monthly   | Usage_Payroll | 1                    | 2018-01-01        | 2018-01-31      | 2018-01-31                  | Period_1  |
| 1               |                    |                      |           | Usage_Absence | 2                    | 2018-01-01        | 2018-01-31      | 2018-01-31                  | Period_2  |
| 1               |                    |                      |           |               | 3                    | 2018-02-01        | 2018-02-28      | 2018-02-28                  | Period_3  |
| 1               |                    |                      |           |               | 4                    | 2018-03-01        | 2018-03-31      | 2018-03-31                  | Period_4  |

If you leave the **Period Schedule ID** blank, Workday generates a new reference ID when you import the sheet. This new reference ID can cause duplicate period schedules if you run the same EIB spreadsheet multiple times.

The **Payroll Payment Date** field is only for Workday Payroll and Workday Payroll Interface usage.

Example: Modify Existing Period Schedule

You want to modify the payroll payment date for a period in an existing period schedule.

Enter these columns in the EIB spreadsheet:

| Spreadsheet Key | Period Schedule ID | Period Schedule Name | Frequency | Usage | Period Data (Row ID) | Period Start Date | Period End Date | Period Payroll Payment Date | Period ID |
|-----------------|--------------------|----------------------|-----------|-------|----------------------|-------------------|-----------------|-----------------------------|-----------|
| 1               | MONTHLY            | Monthly              | Monthly   |       |                      | 2018-01-01        | 2018-01-31      | 2018-02-28                  | Period_3  |

Ensure that the **Period Schedule ID** and **Period ID** fields refer to the existing period schedule and period. When you enter a new **Period Schedule ID** or leave the field empty, Workday creates a new period schedule.

### Example: Create Forward Accruals

You have a biweekly period schedule for January and February. You want to set up forward accruals for the last period of each month when there are remaining days in the month after the period end date.

Enter these columns in the EIB spreadsheet:

| Period Data (Row ID) | Period Start Date | Period End Date | Payroll Payment Date | Payroll Accrual Date | Days in Month | Days in Basis | Accrual Date | Accrual Reversal Date | Period ID |
|----------------------|-------------------|-----------------|----------------------|----------------------|---------------|---------------|--------------|-----------------------|-----------|
| 1                    | 2018-01-01        | 2018-01-19      | 2018-01-19           |                      |               |               |              |                       | 2         |
| 2                    | 2018-01-20        | 2018-02-02      | 2018-02-02           |                      | 10            |               | 2018-01-31   |                       | 12-01     |
| 3                    | 2018-02-03        | 2018-02-16      | 2018-02-16           |                      |               |               |              |                       | 4         |
| 4                    | 2018-02-17        | 2018-03-02      | 2018-03-02           |                      | 10            |               | 2018-02-28   |                       | 03-01     |

## Use Put Period Schedule EIB

### Prerequisites

- Verify you're using the latest web service version.
- Security:
  - *Set Up: Payroll – Pay Group Specific* domain in the Core Payroll functional area.
  - *Set Up: Time Off (Calculations – Absence Specific)* in the Time Off and Leave functional area.
  - *Set Up: Payroll Interface* in the Core Payroll functional area.
  - *Set Up: Period Schedule* in the Core Payroll functional area.

### Context

To create multiple period schedules or add periods to an existing schedule, you can create an EIB integration based on the Put Period Schedule web service. You can then enter data in a spreadsheet that corresponds to the inbound EIB.

### Steps

1. Set up an inbound EIB named Put Period Schedule EIB using the Put Period Schedule web service. For more information, see [Set Up Inbound EIB](#).
2. Select **Template Model>Edit** from the related actions menu of the EIB.
3. Click **Edit Template with Data Options**.

4. Select the **Condition Rule Filter** option in the **Filter** section.
5. Add a rule condition. Example: for a semi-monthly period schedule, enter:
  - a) **Source External Field or Condition Rule:** Period Schedule Name
  - b) **Relational Operator:** equal to
  - c) **Comparison Type:** Value specified in this filter
  - d) **Comparison Value:** Semi-monthly
6. Regenerate the template.
7. Select the **Generate Spreadsheet with Data** option. Workday populates the spreadsheet with the period schedule(s) you configured in the filter.
8. As you populate the EIB input spreadsheet, consider:

| Option                                                                                                          | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
|-----------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Spreadsheet Key field in the All section</b>                                                                 | Specify a unique value for each period schedule.                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| <b>Add Only field in the All section</b>                                                                        | Set to <b>Y</b> if you're only adding new schedules and not existing ones.                                                                                                                                                                                                                                                                                                                                                                                                                   |
| <b>Period Schedule ID field in the Period Schedule Data (All) section</b>                                       | <ul style="list-style-type: none"> <li>If updating an existing schedule, enter its reference ID.</li> <li>If creating a new schedule, either enter a reference ID of your choice, or leave the field blank and Workday will assign a value.</li> </ul>                                                                                                                                                                                                                                       |
| <b>Frequency field in the Period Schedule Data (All) section</b>                                                | Schedule frequency. To find the reference ID value, run the <i>View Reference IDs</i> report and select the <i>Frequency</i> business object.                                                                                                                                                                                                                                                                                                                                                |
| <b>Usage field in the Period Schedule Data (All) section</b>                                                    | Enter all usages that apply to the schedule, using a new row for each usage. To find the reference ID values, run the <i>Integration IDs</i> report and select the <i>Period Schedule Usage</i> business object.                                                                                                                                                                                                                                                                             |
| <b>Row ID field in the Period Data+ (All &gt; Period Schedule Data) section</b>                                 | Enter a unique Row ID value for each period start and end date.                                                                                                                                                                                                                                                                                                                                                                                                                              |
| <b>Period Start Date and Period End Date fields in the Period Data+ (All &gt; Period Schedule Data) section</b> | Enter the period start date and end date in the YYYYMMDD format. You can also specify time, if needed. Example: 2021-02-01T00:00:00 or 2021-02-01.                                                                                                                                                                                                                                                                                                                                           |
| <b>Payroll Payment Date field in the Period Data+ (All &gt; Period Schedule Data) section</b>                   | Enter the payroll payment date in format YYYYMMDD. You can also specify time, if needed.                                                                                                                                                                                                                                                                                                                                                                                                     |
| <b>Period ID field in the Period Data+ (All &gt; Period Schedule Data) section</b>                              | <ul style="list-style-type: none"> <li>If updating an existing period, specify the reference ID of the period.</li> <li>If creating a new period, you can either enter the reference ID of your choice, or leave the field blank and Workday will assign a value. Don't use reference ID value that is already in use as it will overwrite an existing period. To find values currently in use, run the <i>Reference IDs report</i> and select the <i>Period</i> business object.</li> </ul> |

For more information, see [Concept: Data Entry in Period Schedule EIB Spreadsheets](#).

## Result

The Put Period Schedule web service uploads the new or existing periods into Workday and uses the data you entered in the EIB spreadsheet.

## Next Steps

Assign pay period schedules to pay groups.

To ensure that workers don't qualify for more than 1 period schedule, periodically review the **Audit - Workers with Multiple Time Period Schedules** report.

## FAQ: Editing Period Schedule Dates

### How do I change a period payment date?

After you start processing payroll for a period, you can't change the period payment date. To change the period payment date when payroll is in progress:

1. Access the **Run Pay Cancel** task to cancel payroll.
2. Access the **Edit Period Schedule** task, and change the payment date for a period.
3. Access the **Run Pay Calculation** task to calculate payroll again.

### How do I change the period dates for a period schedule?

To change the dates for a period schedule, we recommend that you both:

- Create a new pay group.
- Move workers to the new pay group on the date the change occurs.

If you alter the existing period schedule for the pay group instead, you might impact retro, proration, and FLSA calculations.

### How can I add dates to periods when I extend the schedule?

When adding periods with the **Edit Period Schedule** task, enter dates with each period you add.

When you generate periods for an existing schedule with the **Generate Period Schedule Periods** task, Workday automatically populates relevant dates. For more information, see [Generate Periods for Period Schedules](#).

When you use the *Put Period Schedule* web service to add periods, you can enter all relevant dates for each new period in the EIB spreadsheet. For more information, see [Use Put Period Schedule EIB](#).

**Example: Configure Payroll Cutoff Dates for Pay Periods**

This example illustrates how to create payroll cutoff dates using custom objects.

**Context**

Global Modern Services pays their workers monthly. You want to create a payroll cutoff date to use in payroll calculations.

**Prerequisites**

Security: *Custom Object Management* domain in the System functional area.

**Steps**

1. Access the **Create Custom Object** task.
2. Enter these values and click **OK**, then **Next**:

| Option             | Description                |
|--------------------|----------------------------|
| Workday Object     | <i>Period</i>              |
| Custom Object Name | <i>Payroll Cutoff Date</i> |

3. In **Field Definitions**, click **Add**.
4. Enter these values and click **Next**:

| Option      | Description                |
|-------------|----------------------------|
| Field Label | <i>Payroll Cutoff Date</i> |
| Field Type  | <i>Date</i>                |

5. In **Permissions**, add these domains, then click **Next**:
  - *Set Up: Payroll - Pay Group Specific*
  - *Set Up: Time Tracking*
6. Confirm your changes and click **OK**.
7. Make no changes on the **Activate Custom Object** task and click **OK**.
8. Click **Done**.

**Next Steps**

Add payroll cutoff dates to period schedules for each pay period.

**Related Information**

[Set Up Payroll and Time Tracking Period Schedules](#) on page 149

**Example: Add Payroll Cutoff Dates to Pay Periods**

This example illustrates 1 way to add payroll cutoff dates to each pay period.

## Context

You want to exclude one-time payments from payroll calculations after the 25th of each month. You also want to receive a notification each time someone initiates a one-time payment.

## Prerequisites

- Security:
  - *Set Up: Payroll - Pay Group Specific* domain in the Core Payroll functional area.
  - *Set Up: Time Tracking* domain in the Time Tracking functional area.

## Steps

1. Access the **View Period Schedule** task.
2. Select *Monthly* from the **Period Schedule** field and click **OK**.
3. From the related actions menu of each period, select **Additional Data > Edit** and click **OK**.
4. Select *Payroll Cutoff Date* on the **Custom Object** prompt and click **OK**.
5. Enter the next occurring 25th of the month in the **Payroll Cutoff Date** field and click **OK**.

## Next Steps

Create a calculated field that retrieves the payroll cutoff date you added to each pay period. Then, configure it on the *Request One-Time Payment* business process.

# Pay Groups

---

## Setup Considerations: Pay Groups

You can use this topic to help make decisions when planning your configuration and use of pay groups. It explains:

- Why to set them up.
- How they fit into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

## What They Are

Pay groups are organization types that define which workers and pay components to process in payroll and retro payroll calculations, and the payment frequency. You can secure pay groups to roles in your company to control who can configure and run payroll and which workers the role can access.

## Business Benefits

Using pay groups reduces manual processing by enabling you to process a set of selected workers in a single payroll or retro payroll run. Workday also provides the flexibility to restrict access to payroll results through configurable security on pay groups.

## Use Cases

Define eligibility for the earnings and deductions to calculate for workers from different divisions, departments, companies, or supervisory organizations:

- With different period schedules, such as weekly, biweekly, or monthly.
- In different countries.
- Whose payroll you want different roles in your organization to manage.

Refine calculations by also creating pay groups for subsets of workers such as:

- Pre-hires receiving signing bonuses in advance.
- Terminated workers receiving post-termination pay.
- For Payroll for Canada, France, the UK, and the U.S., workers on unpaid assignments.
- For Payroll for Canada, France, the UK, and the U.S., exempt and nonexempt workers across companies.

Select run categories for the pay group to indicate which types of workers to process, such as terminated workers or workers on leave.

## Questions to Consider

| Questions                                                                                    | Considerations                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
|----------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| For Payroll for Canada and the U.S., which jobs do workers have that you process in payroll? | <p>Single-job workers can only belong to 1 pay group. A worker can have multiple pay groups when:</p> <ul style="list-style-type: none"> <li>• They have multiple jobs.</li> <li>• They're on an international assignment to the U.S. from a non-Workday payroll system. They can have an external pay group for their home country and a U.S. pay group for the international assignment.</li> </ul>                                                                                                  |
| How many pay groups do you want to process in the same payroll run?                          | <p>When pay groups share the same period schedule and country, you can process them together in pay run groups. When using Workday Payroll features, select those pay run groups instead of the individual pay groups.</p> <p>Example: Configure security for:</p> <ul style="list-style-type: none"> <li>• Payroll partners to process and report on pay run groups only when they have access to all included pay groups.</li> <li>• Payroll administrators to access all pay run groups.</li> </ul> |
| How do you want to assign pay groups to workers?                                             | <p>You can assign pay groups:</p> <ul style="list-style-type: none"> <li>• One at a time, using the <b>Assign Pay Group</b> task. For Payroll for Canada and the U.S., you can process workers with multiple jobs.</li> </ul>                                                                                                                                                                                                                                                                          |

| Questions                                                                                        | Considerations                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|--------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                                                                                  | <ul style="list-style-type: none"> <li>• In bulk. For existing employees, you can use the <i>Assign Pay Group</i> web service. Example: Reorganizations, seasonal promotions, or mergers and acquisitions.</li> <li>• Automatically when you fill a position. Set up an assignment rule for each pay group, and configure the <i>Assign Pay Group</i> business process as a subprocess of staffing business processes. Example: <i>Hire</i>, <i>Change Job</i>.</li> </ul> <p>For Payroll for Australia, the UK, and France, you can assign a worker to only 1 pay group.</p>                                      |
| How do you want Workday to propose pay groups for workers?                                       | <p>You can set up:</p> <ul style="list-style-type: none"> <li>• Pay group assignment rules based on worker characteristics. Example: Configure rules to assign a pay group automatically based on the worker's company and city.</li> <li>• Position restrictions that assign pay groups based on position. Pay group assignment rules supersede pay groups resulting from position assignments.</li> </ul> <p>The <i>Assign Pay Group</i> web service doesn't refer to the assignment rules or position restrictions you set up in your tenant. You must submit the pay group for each worker.</p>                |
| For Payroll for Canada, what are the reporting requirements for workers who transfer pay groups? | <p>Workday populates Record of Employment (ROE) data for workers:</p> <ul style="list-style-type: none"> <li>• Whose pay group transfer results in a change in pay frequency or schedule.</li> <li>• With insurable earnings for at least 1 pay period.</li> </ul> <p>You can create an ROE for those workers by accessing the <b>Create ROE Data for Events</b> task.</p>                                                                                                                                                                                                                                         |
| Who should have access to which pay groups?                                                      | <p>Base your pay groups to the particular roles you want to secure them to. Examples: payroll partner, custom roles. You can assign 1 or more payroll partners to 1 or more pay groups.</p> <p>Payroll administrators can access and manage all pay groups in your organization.</p> <p>Configure security groups to determine who can view the pay groups and their members. You can also create more advanced security groups to combine factors and limit access based on those combinations. Example: Create security groups to grant a finance administrator and a payroll partner access to a pay group.</p> |
| How many countries are you processing in payroll?                                                | <p>Create 1 pay group per country that you want to process because:</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

| Questions                     | Considerations                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
|-------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                               | <ul style="list-style-type: none"> <li>Countries determine the default currency in payroll calculations for the pay group.</li> <li>After you run payroll for a pay group, you can't change the country.</li> </ul> <p>When you process a company whose currency is different from the pay group currency, Workday uses the default exchange rate.</p>                                                                                                         |
| What's your payroll schedule? | <p>Create 1 pay group per payment frequency, because you can assign only 1 period schedule per pay group and run category. You can select a different:</p> <ul style="list-style-type: none"> <li>Initial payroll processing period at the pay group level. Example: When you implement Workday Payroll midyear.</li> <li>Payroll processing frequency at the earning or deduction level. Example: To pay biweekly wages based on an annual amount.</li> </ul> |

### Recommendations

For best performance, set up:

- Pay group detail eligibility on earnings and deductions when processing multiple pay groups. This configuration enables you to restrict calculations to a subset of workers in the selected pay group.
- Pay groups to process 150,000 workers or fewer.
- Automatic assignment rules for each pay group.

When loading history as a result of an acquisition, create a pay group for workers paid by the acquired organization. This pay group enables you to keep the workers separate for auditing until you confirm that the loaded data is accurate. After you complete that verification, you can move them to appropriate pay groups in the new organization.

For Payroll for Canada and the U.S., to avoid unexpected results from retro, proration, and Fair Labor Standards Act (FLSA) calculations when updating pay groups, don't change:

- Pay group assignment dates. Instead, rescind the original assignment and reassign the pay group with the new date.
- Pay group assignments after opening a period when pay components have a calculation proration method of *None of the above*.

### Requirements

Understand how to set up configurable security in Workday.

Assign companies to workers.

### Limitations

- You can't delete pay groups or pay run groups after you include them in a payroll run. You also can't delete or change the period schedule or run categories from those pay groups. You can inactivate pay groups after you move all of their workers to another pay group.
- When workers transfer pay groups during a pay period, Workday doesn't apply the worker eligibility criteria used to process a pay component only once per pay period.

- Workday doesn't support retroactive pay group changes, or pay group changes for workers with future-dated primary job switches.
- To complete or cancel payroll or retro payroll calculations fully for a pay group, do so at the pay group level. Example: Canceling retro results for each worker individually doesn't update the pay group retro pay calculation status to *Not Yet Started*.
- You can't use the same pay group for both Payroll Interface and Workday Payroll. When external pay groups have the **Used in Payroll Interface** check box selected, you can't clear it. To use an external pay group configuration in Workday Payroll, create a new pay group with the check box unchecked.
- Payroll for Australia, France, and the UK don't support multiple jobs. When workers have multiple jobs, only assign their primary position to a pay group.
- For Payroll for Canada, Workday doesn't calculate Canada ROE for workers transferring to a pay group in the current period.

## Tenant Setup

On the **Edit Tenant Setup - Payroll** task, you can enable:

- Which countries are available for selection in payroll processing when creating pay groups.
- Workday to process retro differences from another pay group in the workers' primary pay group.

## Security

You can create role-based security groups (unconstrained). Then you can select the associated roles when creating pay groups to control who can access the related payroll data.

You can use these report data sources when creating custom reports to report on pay groups:

- **All Pay Groups**
- **All Pay Group Detail In Progress X Days Before Payment Date**
- **Pay Calculation Retro Result Lines for Pay Group**
- **Pay Calculation Result Summary for Period and Pay Run Group**
- For Payroll for Australia, **Workers for AUS Pay Groups**
- For Payroll for France, **Workers for FRA Pay Groups**
- For Payroll for the UK, **Workers for UK Pay Groups**

## Integrations

To assign pay groups to multiple workers in 1 operation, use the *Assign Pay Group* web service. The web service is the initiating step of the *Assign Pay Group* business process, so it triggers the steps and approvals of the existing workflow. To complete the assignments automatically, bypassing the steps and approvals, select **Automatic Processing** on the EIB spreadsheet.

## Connections and Touchpoints

| Features                              | Considerations                                                                                                                                                                                                                                                                                                                                                                                                             |
|---------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Accounting                            | Workday Payroll converts the currency after net pay validation. When you set pay groups and company accounting to different currencies, Workday calculates payroll in the pay group currency and passes the results to accounting in both currencies. The results are then available for reporting.                                                                                                                        |
| Continuous payroll calculations       | <p>After you enable continuous payroll calculations in your tenant, Workday runs it for all pay groups that have:</p> <ul style="list-style-type: none"> <li>• The <i>In Progress</i> status.</li> <li>• Had a full payroll run for the current period.</li> </ul> <p>When you enable automatic calculation of initial pay results, Workday runs it only for pay groups that are complete by the scheduled start time.</p> |
| For Payroll for France, DSN reporting | To ensure appropriate security configurations for DSN reporting, assign the same pay group to all workers from the same establishment.                                                                                                                                                                                                                                                                                     |
| Financials                            | <p>You can filter journal lines to search for the ones using a worker's pay group worktag. You can also use pay groups in settlements in:</p> <ul style="list-style-type: none"> <li>• Bank routing rules to determine which source bank accounts issue payroll payments.</li> <li>• Filters to limit the settlement run to include payroll payments from 1 pay group.</li> </ul>                                          |
| Payroll inputs                        | <p>When adding payroll inputs, you can:</p> <ul style="list-style-type: none"> <li>• Use related calculations in a currency other than the pay group currency.</li> <li>• Enable Workday to convert the value to the pay group currency.</li> </ul>                                                                                                                                                                        |

| Features                           | Considerations                                                                                                                                                                                                                                                                                                                                                                     |
|------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Payslips                           | For each pay group, you can configure when to display payslips in employee self-service based on the payment date.                                                                                                                                                                                                                                                                 |
| Period schedules<br>Run categories | When configuring pay groups, define which period schedules and run categories to process. A pay group can have multiple run categories, but only 1 regular run category.                                                                                                                                                                                                           |
| Proration                          | When workers with multiple jobs transfer pay groups or companies, Workday manages proration: <ul style="list-style-type: none"> <li>• With pay component proration instead of gross-to-net proration.</li> <li>• By prorating only the position-based pay components, and not the worker-based pay components.</li> </ul>                                                          |
| Retro pay calculations             | You can configure a tenant-level setting to either: <ul style="list-style-type: none"> <li>• Forward retro differences to the workers' primary pay group.</li> <li>• Treat the events as unsupported and process retro differences manually in the original pay group.</li> </ul> After you run retro, you can update the target pay group to another based on worker eligibility. |
| Staffing                           | You can assign pay groups to workers when managing jobs and positions as part of HCM business processes.<br><br>You can change the effective date for pay group assignments as part of the <b>Request Worker Start Date Correction</b> task when updating a worker's hire date.                                                                                                    |
| Student                            | You can identify which pay groups to evaluate in work-study costing for student workers.                                                                                                                                                                                                                                                                                           |

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships in your tenant. Learn more about the [Workday Touchpoints Kit](#) on Workday Community.

[Set Up Payroll and Time Tracking Period Schedules](#) on page 149

## Set Up Pay Groups

#### Prerequisites

- Set up run categories.

- Set up period schedules.
- Security: *Set Up: Payroll - Pay Group Specific* domain in the Core Payroll functional area.

## Context

You can create pay groups to aggregate workers for payroll processing done by your own company. You can base pay groups on:

- Shared pay period schedules.
- Pay run categories. Example: Regular and Bonus, GBR Regular, Regular (FRA).

For Payroll for France, to ensure appropriate security configurations for DSN reporting, Workday recommends that you group all workers from the same establishment in the same pay group.

When you create a pay group, you can assign it to one or more run categories. Run categories determine who and what to process. For each run category you assign, you can specify:

- The period schedule.
- The initial processing period.
- When payslips become viewable to workers through self-service pages.
- Who can access and view the pay group.

## Steps

1. Access the **Create Pay Group** task.
2. As you complete this header, consider:

| Option                      | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

| <b>Name</b>                 | <p>Workday uses effective-dating for the pay group name.</p> <p>You can change the name and apply effective dating by selecting <b>Organization &gt; Edit Name/ Code</b> from the related actions menu of the pay group.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| <b>Include Code in Name</b> | Select to add the code as a suffix to the pay group name.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| <b>Visibility</b>           | <p>Specify who can view the pay group and its members:</p> <ul style="list-style-type: none"> <li>• <i>Role Assignees</i>: Workers assigned to a role in the pay group.</li> <li>• <i>Everyone</i>: All employees.</li> <li>• <i>Role Assignees of Current and Superiors</i>: Workers assigned to a role in the pay group or a superior pay group can view the pay group and its subordinate pay groups.</li> <li>• <i>Role Assignees and Members</i>: All members and workers assigned to a role in the pay group.</li> </ul> <p>Workers secured to the <i>Set Up: Payroll - Pay Group Specific</i> domain in the Core Payroll functional area can view the pay group and its members regardless of the <b>Visibility</b>.</p> |

3. As you complete the **Pay Group Options** section, consider:

| Option                           | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
|----------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Used in Payroll Interface</b> | Don't select this check box for pay groups used by Workday Payroll.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| <b>Country</b>                   | <p>Determines the currency that Workday uses for the pay group. You can select countries that are listed as <b>Enabled Countries</b> on the <b>Edit Tenant Setup - Payroll</b> task.</p> <p>When the country currency is different from the currency of a company or worker payment election, Workday uses the default exchange rate to convert it. You can set the default exchange rate as of the period end date on the <b>Maintain Currency Conversion Rates</b> task.</p> <p>After you process payroll for a pay group, you can't change the country. To change the country, create a new pay group.</p> |

4. As you complete the **Pay Group Details** section, consider:

| Option                                  | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
|-----------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Run Category</b>                     | <p>The run category defines the payroll processing rules for the pay group and a defined period schedule.</p> <p>You can only calculate payroll for the run category and period schedule combinations, known as pay group details, that you define for a pay group.</p> <p>You can only select 1 regular run category for a pay group.</p>                                                                                                                                    |
| <b>Pay Run Groups</b>                   | <p>(Optional) If you want to process and track the pay group at the same time as other pay groups, select a pay run group. Only add pay group details that share the same period schedule to a pay group.</p> <p>When you process payroll, you can select pay run groups instead of, or in addition to pay group details.</p> <p>You can add a pay group to a pay run group later on by accessing the <b>Create Pay Run Group</b> task or <b>Edit Pay Run Group</b> task.</p> |
| <b>Override First Processing Period</b> | <p>Defines the first period that you can process with Workday Payroll.</p> <p>You can specify an <b>Override First Processing Period</b> when the first period that you process for Workday Payroll isn't the first period in the period schedule. Examples:</p> <ul style="list-style-type: none"> <li>The first period in the period schedule is January 4 - 10, but you don't begin processing until January 11 - 17.</li> </ul>                                           |

| Option                                           | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
|--------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                                  | <ul style="list-style-type: none"> <li>You're using the same period schedule for Workday Payroll and Absence Management, but you start calculating absence balances on January 1st, and processing payroll on July 1st.</li> </ul> <p>This field also controls the periods for which you can load payroll history. You can only load payment history for periods before the <b>Override First Processing Period</b>. Example: For a midyear payroll implementation, you can import historical payroll data for periods before the go-live date.</p> |
| <b>Days from Payment Date to Display Payslip</b> | <p>Defines when to display payslips in employee self-service, based on a number of days before or after the payment date. Regardless of this field, you can only view payslips when the payroll status is <i>Complete</i>.</p> <p>Examples:</p> <ul style="list-style-type: none"> <li>To display payslips at midnight on the payment date, enter zero.</li> <li>To display payslips the day before the payment date, enter -1.</li> </ul>                                                                                                          |

5. On the **Assign Roles** tab, consider:

| Option                                 | Description                                                                                                                                                                                                                                                                                                                                                    |
|----------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Role</b>                            | <p>Add a row for each organization role that needs to initiate, manage, and oversee payroll processing for the pay group. You can only select organization roles that are enabled for the <i>pay group</i> organization type.</p> <p>To enable an organization role for a specific type of organization, access the <b>Maintain Assignable Roles</b> task.</p> |
| <b>Restricted to Single Assignment</b> | <p>Select to restrict the assignment to a single position.</p> <p>To restrict an organization role to a single assignment, access the <b>Maintain Assignable Roles</b> task.</p>                                                                                                                                                                               |
| <b>Assigned To</b>                     | Select 1 or more positions assigned to the role.                                                                                                                                                                                                                                                                                                               |

### Next Steps

Assign workers to pay groups.

To edit the pay group, access the **View Pay Group** report. Select **Organization > Edit Organization** from the related actions menu of the pay group.

**Related Information**

**Concepts**

[Concept: Pay Groups and Pay Run Groups](#) on page 176

[Concept: Currency Conversion](#) on page 430

**Tasks**

[Steps: Set Up Pay Run Categories](#) on page 98

[Set Up Payroll and Time Tracking Period Schedules](#) on page 149

[Create Pay Group for Third-Party Payroll](#)

**Steps: Set Up Pay Group Automatic Assignments**

**Prerequisites**

- Review setup considerations for pay groups.
- Create a pay group.

**Context**

You can set up rules to propose a default pay group for worker when assigning a pay group either:

- During certain business processes.
- With the **Assign Pay Group** task.

Workday recommends that you define an automatic assignment rule for each pay group.

**Note:** A pay group automatic assignment rule supersedes any pay groups that default from a position assignment.

**Steps**

1. Access the **Create Pay Group Automatic Assignment Rule** task.

Create a rule with 1 or more conditions.

Example: To automatically assign a pay group for workers for Company A in City 1, add these **Rule Conditions**:

| And/Or  | Source External Field or Condition Rule | Relational Operator       | Comparison Type                | Comparison Value |
|---------|-----------------------------------------|---------------------------|--------------------------------|------------------|
| [blank] | Company - Current                       | any in the selection list | Value specified in this filter | Company A        |
| And     | Location -Current                       | any in the selection list | Value specified in this filter | City 1           |

Security: *Set Up: Tenant Setup - Payroll* domain in the System functional area.

2. Access the **Test Pay Group Automatic Assigned Rule** report to test the automatic assignment rule.

From the **Worker Event** prompt, select the event associated with an *Assign Pay Group* business process that you want to test.

Security: *Set Up: Tenant Setup - Payroll* domain in the System functional area.

Workday displays the **Result** of the condition rule.

3. Access the **View Pay Group** report and select **Organization > Edit Organization** from the related actions menu on the pay group.

Add a row to the **All Pay Group Assignment Rules** grid, and select your automatic assignment rule from the **Pay Group Automatic Assignment Rule** prompt. You can only have 1 active rule per pay group.

Security: *Set Up: Payroll - Pay Group Specific* domain in the Core Payroll functional area.

4. Configure the *Assign Pay Group* business process in the Core Payroll functional area.  
(Optional) Add the *Review Pay Group Assignment* action to enable a pay administrator to review and override the proposed pay group. If you don't add a review step, Workday automatically assigns the pay group from the assignment rule.
5. (Optional) Add the *Assign Pay Group* business process as a subprocess to a staffing transaction.
  - a) Add *Assign Pay Group* after the staffing change step, such as *Change Organization Assignments*.
  - b) From the **Group** prompt, select the role responsible for the pay group assignment, such as the payroll administrator.

## Result

Workday uses the pay group automatic assignment rule to determine the pay group for each eligible worker either. Workday displays a **Proposed Pay Group** on:

- The business process notification for the *Assign Pay Group* business process.
- The **Assign Pay Group** task.

When either no pay group or multiple pay groups match the automatic assignment rule, the **Proposed Pay Group** field is left blank and you must select a pay group.

### Tasks

[Steps: Configure Business Process Definitions](#)

## Assign Workers to Pay Groups

### Prerequisites

- Assign the worker to a company.
- Configure the *Assign Pay Group* business process and security policy in the Core Payroll functional area.

### Context

You can assign a worker to a pay group using one of these methods:

- The **Assign Pay Group** task.
- The *Assign Pay Group* business process.
- A staffing transaction, such as *Hire* or *Edit Position* that includes *Assign Pay Group* business process as a subprocess.

Workday enables machine learning prompt recommendations to help you more quickly select proposed pay groups on the **Assign Pay Group** task. See [Concept: Intelligent Prompt Recommendations for Payroll](#).

You can view business processes that support pay group assignments on the **Allowed Subprocess For** tab of the *Assign Pay Group* business process definition.

You can use the *Assign Pay Group* web service to bulk load pay group assignments. Configure the web service as the initiating step of the *Assign Pay Group* business process.

## Steps

1. Assign a pay group by either:

- Accessing the **Assign Pay Group** task.
- Accessing the notification in your **My Tasks** for assignments made as part of a staffing event.

2. As you complete the task, consider:

| Option                    | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
|---------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Effective Date</b>     | You can't change a pay group assignment for a worker who has a future-dated primary job switch.                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| <b>Position</b>           | <p>Only displays when a worker has multiple positions.</p> <p>Select the position to which the pay group change applies. Secondary positions have a plus sign (+) after the position name.</p> <p>For Payroll for France, Workday recommends assigning only the primary position to a pay group.</p>                                                                                                                                                                                                                                    |
| <b>Proposed Pay Group</b> | <p>Workday automatically populates a <b>Proposed Pay Group</b> when you've set up pay group automatic assignment rules.</p> <p>Workday leaves this field blank when:</p> <ul style="list-style-type: none"> <li>• No automatic assignment rule matches the employee.</li> <li>• Automatic assignment rules identify multiple matching pay groups.</li> </ul> <p>If you're using automatic assignment rules, you can only edit the <b>Proposed Pay Group</b> if the <i>Assign Pay Group</i> business process includes a review step.</p> |

3. For workers with multiple positions, select any other positions in the **Other Jobs** section that you want to apply to the same pay group.

If the selected position doesn't meet the criteria for the pay group assignment rule, Workday displays an error message. Clear the check box for the selected position to proceed with the pay group assignments for the other positions selected on the task. You can later manually assign the pay group by running the **Assign Pay Group** task for the position in error.

## Result

For pay groups assigned with the **Assign Pay Group** task, Workday generates a separate approval task for each position with a new proposed pay group.

## Next Steps

Review the **Audit - Country Exceptions for Pay Group** report for employees with a primary work address in a country that differs from the pay group country.

## Concept: Pay Groups and Pay Run Groups

Pay groups identify a group of workers to process in a payroll run. Pay run groups enable you to process and report on multiple pay groups and run categories together.

### Pay Groups

Pay groups identify:

- Who to pay.
- How often to pay.
- Which payments to process.

In addition, pay groups:

- Can define eligibility for earnings, deductions, and other pay components. Example: Make an earning available to workers in selected pay groups.
- Are associated with 1 country, which controls the default currency.
- Are an organization type, like a company or supervisory organization. To control who can set up and run payroll and which employees the role can access, secure them to organization roles.
  - One or more Payroll Partners can manage the payroll process for a pay group. The same partner can be responsible for multiple pay groups.
  - The Payroll Administrator role can access all pay groups in an organization. Payroll Partners can access only the pay groups they're assigned to.

Pay group members:

- Must share a processing schedule, such as weekly or monthly.
- Can belong to different divisions, departments, companies, or supervisory organizations. Example: You can create pay groups for exempt and nonexempt workers across companies.
- Can belong to only 1 pay group, unless they have multiple jobs or are on international assignment from a non-Workday payroll system. For international assignment, they can have an external pay group for their home country and a pay group for the international assignment.

### Pay Run Groups

A pay run group identifies a set of pay groups with selected run categories that you can process and report on together. Examples: Regular monthly, executive monthly, and other monthly pay groups. When you calculate payroll or run reports, you can select the pay run group instead of the individual pay groups. To define pay run groups, use the **Create Pay Run Group** task.

- Run categories within each pay group must share a period schedule.
- A pay run group can't include pay groups from more than 1 country.
- Payroll Administrators have access to all pay run groups.
- Payroll Partners can process and report on a pay run group only when you assign them to all of its pay groups.

### Related Information

#### Tasks

[Set Up Pay Groups](#) on page 169

## Concept: Data Entry in Assign Pay Group EIB Spreadsheets

To assign pay groups to multiple employees, you can create an Enterprise Interface Builder (EIB) based on the *Assign Pay Group* web service. You can then enter data in a spreadsheet that corresponds to the inbound EIB and upload it to Workday.

The web service is the initiating step of the *Assign Pay Group* business process, so it triggers the steps and approvals of the existing workflow.

## Security

If you haven't already done so, assign security groups that you want to create and launch EIBs:

| Domain                    | Permissions                   | Example               |
|---------------------------|-------------------------------|-----------------------|
| <i>Integration Build</i>  | Enables users to create EIBs. | Payroll Administrator |
| <i>Integrations: EIBs</i> | Enables users to launch EIBs. | Payroll Partner       |

Edit the security policy for the *Assign Pay Group* business process. Add the appropriate security groups to the **Assign Pay Group (Web Service)** initiating action section. Example: Payroll Administrator.

## Worker Data

Workday doesn't generate an EIB spreadsheet prepopulated with worker data. To streamline data entry, you can run a custom report that includes these columns:

- Employee ID
- Pay Group
- Position ID

Run the report for the desired workers, export the report in Excel format, and copy the data to the EIB spreadsheet.

## Processing Instructions

You can use the **Processing Instruction** prompt on the Overview tab to specify the level of workflow automation on the *Assign Pay Group* business process. Select:

- **Manual Processing** or leave the prompt blank to trigger the review and approval workflow.
- **Automatic Processing** to complete the pay group assignments automatically, bypassing the reviews, approvals, and other steps.
- 1 of the **Run Now** options to begin manual or automatic processing before the EIB spreadsheet finishes loading.

## Other Considerations

You need to specify the pay group for each worker. The web service doesn't refer to automatic assignment rules or position restrictions you set up.

Workday recommends that you limit the number of workers that you process at a time to 500,000 or fewer.

Pay group assignment doesn't set the worker's pay result status to *Requires Recalculation*. After loading pay group assignments, use the **Run Pay Calculation** task to recalculate both the old and new pay groups.

## Pay Cycle Event

---

### Setup Considerations: The Pay Cycle Event Business Process

You can use this topic to help make decisions when planning your configuration and use of the *Pay Cycle Event* business process. It explains:

- Why to set it up.
- How it fits into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

#### What It Is

The *Pay Cycle Event* business process routes tasks to authorized users based on their membership in security groups, organization hierarchy, and conditional logic. You can specify the sequence of payroll processing tasks in your organization and the roles responsible for their completion. You can also access a step-by-step audit of who performed or approved which steps and when.

#### Business Benefits

The *Pay Cycle Event* business process streamlines payroll processing and enforces accountability by enabling you to configure notifications. This also ensures that each role in your organization effectively performs all payroll steps. *The Pay Cycle Event* business process:

- Streamlines payroll processing.
- Enforces accountability by enabling you to configure notifications.
- Eliminates confusion about the order of steps.
- Enforces separation of duties and accountability because only assigned security groups can perform specific tasks in the process.
- Reinforces the desired process, which is particularly useful when training new employees.
- Can be modified as business requirements change.

#### Use Cases

You can:

- Configure notifications to enable faster processing and ensure that each role in your organization performs all payroll steps.
- Access report reviews and audit steps to reduce the likelihood of errors.

#### Questions to Consider

| Question                                                                    | Considerations                                                                                                                                      |
|-----------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------|
| Do you require the review of reports and audits to catch processing errors? | You can add report and audit reviews as <i>To Dos</i> in the business process.                                                                      |
| How do you define payroll processing roles and responsibilities?            | The <i>Pay Cycle Event</i> business process enables you to specify who does what and to keep an audit trail of each task and when it was completed. |

| Question                                   | Considerations                                                                                                                      |
|--------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------|
| Do you separate payroll processing duties? | Using this business process not only enforces separation of duties, it notifies each role when a task is ready for them to perform. |

### Recommendations

Use this business process with the Pay Cycle Command Center (PCCC) to access payroll processing tasks and reports.

### Requirements

No impact.

### Limitations

You can't:

- Use the *Pay Cycle Event* business process when the pay period is in progress.
- Include batch jobs for retro calculations.
- Run off-cycle calculations.
- Run recalculations.
- Run settlement.

### Tenant Setup

No impact.

### Security

| Domain                                                                                        | Considerations                                                                         |
|-----------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------|
| <i>Business Process Administration</i> in the System functional area.                         | View and modify business process definitions.                                          |
| <i>Manage: Business Process Definitions</i> in the System functional area.                    | View and modify all aspects of a business process, such as adding steps or conditions. |
| <i>Process: Run Batch Calculations (Pay Calculation)</i> in the Core Payroll functional area. | Run and schedule payroll calculations.                                                 |
| <i>Process: Run Batch Cancel (Pay Cancel)</i> in the Core Payroll functional area.            | Cancel a payroll calculation for a pay group or pay run group.                         |

### Business Processes

No impact.

### Reporting

You can include custom reports in the business process, as well as any of these delivered reports:

| Report                                            | Description                                                                                                                                                                                              |
|---------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Audit Pay Calculation Results for a Period</b> | View pay calculation results meeting predefined selection criteria for all of the workers in a pay run group or pay group during a specified period. Enables you to identify and correct payroll errors. |

| Report                                                                               | Description                                                                                                                                                                                  |
|--------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Audit - Pay Calculation Results Comparison to a Prior Period (By Worker)</b>      | Compare pay calculation results for each position for a given period to the results for a prior period for a pay run group or pay group. Enables you to identify and correct payroll errors. |
| <b>Audit - Pay Calculation Results Comparison to a Prior Period (By Pay Group)</b>   | Compare pay calculation results for a specific pay group and period to the results for a prior period. Enables you to identify and correct payroll errors.                                   |
| <b>Audit - Pay Calculation Results Comparison to a Prior Period (Period Summary)</b> | Compare summary pay calculation results for a given period to the summary results for a prior period. Enables you to identify and correct payroll errors.                                    |
| <b>Employee Data Changes Between Date Range</b>                                      | View data changes entered during a specified date range.                                                                                                                                     |
| <b>Pay Cycle Command Center</b>                                                      | Provides access to common tasks and reports used to process payroll.                                                                                                                         |
| <b>Payroll Accounting by Company/Period</b>                                          | Perform a pre-payroll accounting audit.                                                                                                                                                      |
| <b>Payroll Audit Exceptions</b>                                                      | Filter by status levels and severity counts, view audit exception details, and track the progress of audits.                                                                                 |
| <b>Payroll Input Not Processed</b>                                                   | Audit unprocessed pay input entries.                                                                                                                                                         |

## Integrations

You can use the *Import Payroll Input* web service to load payroll inputs from a third-party provider.

## Connections and Touchpoints

| Features                      | Considerations                                                                                                                                                                                                                                        |
|-------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Pay groups and pay run groups | Pay groups enable you to group workers for payroll processing, and to define the eligibility rules for earnings and deductions.<br><br>You can set up pay run groups to process and report on payroll results for multiple pay groups together.       |
| Payroll accounting            | Workday automatically generates payroll accounting entries as part of the calculation process.                                                                                                                                                        |
| Period schedules              | Payroll calculations interact with the period schedule to determine period start and end dates and payment date. If you use the continuous calculation feature, you can also configure when to automatically run the first calculation of the period. |
| Run categories                | Run categories define which pay components and types of workers to process in payroll calculations.                                                                                                                                                   |

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships in your tenant. Learn more about the [Workday Touchpoints Kit](#) on Workday Community.

## Set Up the Pay Cycle Event Business Process

### Prerequisites

Security: *Business Process Administration* or *Manage: Business Process Definitions* domain in the System functional area.

### Context

You can use the *Pay Cycle Event* business process to specify the sequence of payroll processing tasks in your organization and the roles responsible for their completion. Using the business process enforces accountability and segregation of duties. The event history displays a step-by-step audit of who approved which steps and when.

Using the *Pay Cycle Event* business process doesn't restrict you from using other Workday-delivered payroll tasks, such as **Run Pay Calculation** or **Run Retro Pay Calculation**. But you can't use the business process when the pay period is already *In Progress*.

**Note:** Pay groups and pay periods are only available for payroll processing in the *Pay Cycle Event* business process if you haven't already initiated payroll processing for them.

### Steps

1. Navigate to the organization to associate with the *Pay Cycle Event* business process.
2. On the organization, select the related action **Business Process** > **Create, Copy, or Link Definition**.
3. Set the **Effective Date** when this business process becomes available for use. If you specify a future date, you can't use the custom definition to create an instance until the effective date.
4. Select the **Business Process Type** *Pay Cycle Event*.
5. Select **Copy existing Definition** > **Pay Cycle Event (Default Definition)**.
6. Select the **Due Date**, which is the number of days in which you want the event completed after initiation.
7. Add or delete rows to modify the business process according to the requirements of your organization. Consider at least these steps:

| Step Type | Options                                                                                                                                                                                    |
|-----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Action    | <ul style="list-style-type: none"> <li>• <i>Review Pay Calculation Results</i></li> <li>• <i>Review Payroll Input</i></li> </ul>                                                           |
| Approval  | <ul style="list-style-type: none"> <li>• <i>Approval</i></li> <li>• <i>Approval Chain</i></li> <li>• <i>Consolidated Approval</i></li> <li>• <i>Consolidated Approval Chain</i></li> </ul> |
| Batch/Job | <ul style="list-style-type: none"> <li>• <i>Payroll Run Pay Calculation</i></li> <li>• <i>Payroll Run Pay Complete</i></li> </ul>                                                          |
| Checklist | <ul style="list-style-type: none"> <li>• <i>New Hire</i></li> <li>• <i>Review Pending Operational Transactions</i></li> </ul>                                                              |

| Step Type        | Options                                                                                                                                               |
|------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------|
|                  | <ul style="list-style-type: none"> <li>• <i>Create Checklist</i></li> </ul>                                                                           |
| Integration      |                                                                                                                                                       |
| Report           | <ul style="list-style-type: none"> <li>• Standard Reports</li> <li>• Custom Reports</li> </ul>                                                        |
| Report Group     | <ul style="list-style-type: none"> <li>• <i>All Report Groups</i></li> <li>• <i>My Report Groups</i></li> <li>• <i>Create Report Group</i></li> </ul> |

| Service          | <ul style="list-style-type: none"> <li>• <i>Document Delivery</i></li> <li>• <i>Document Retrieval</i></li> </ul>                                     |
| To Do            | <ul style="list-style-type: none"> <li>• <i>All Active To Do Types</i></li> <li>• <i>Create To Do</i></li> </ul>                                      |

### Next Steps

- Set up security for the *Pay Cycle Event* business process.
- Configure custom reports to include in the business process.
- To inactivate all or part the business process, access the **Inactivate Business Process Definition** task and specify the business objects for which you want to deactivate the custom business process. When you inactivate a custom business process for all business objects, Workday completely removes it and you can't reactivate it. For more information, see: [Concept: Business Process Management](#).

## Example: Configure the Pay Cycle Event Business Process

This example illustrates 1 way to configure the *Pay Cycle Event* business process.

### Context

To ensure that Workday always performs certain steps when processing payroll, you configure the *Pay Cycle Event* business process to reflect the specific process. You configure the *Pay Cycle Event* business process for the CAN Semi-monthly pay group to reflect the steps in your payroll processing checklist.

### Steps

1. Access the **Pay Cycle Event (Default Definition)** business process definition. From the related actions menu, select **Business Process > Copy or Link Business Process Definition**.
  - a) Select **Copy Workflow Definition to Business Object**.
  - b) Select the appropriate pay group.
2. Modify the business process to include these steps:

| Order | Type              | Specify                                                                                                                                                                                                                         |
|-------|-------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| a     | <i>Initiation</i> | <p>A business process always starts with an <b>Initiation</b> step. Choose one of the following options:</p> <ul style="list-style-type: none"> <li>• <b>Submit:</b> Records the current actions taken for this step</li> </ul> |

| Order | Type          | Specify                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|-------|---------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|       |               | <p>and enables the business process to continue to the next step.</p> <ul style="list-style-type: none"> <li>• <b>Save for Later:</b> Saves input for this step for review or changing later. Workday saves data temporarily so that it reappears when you reopen the step. However, Workday doesn't submit the data until you click <b>Submit</b>.</li> </ul> <p>For more information, see: <a href="#">Concept: Initiation Step</a>.</p> |
| b     | <i>To Do</i>  | <p><i>Update Prenotes</i></p> <p>(Not used in the UK.)</p> <p>You can update individual prenote payments to mark them as errors, cancel, reverse the accounting, or to mark them as complete.</p>                                                                                                                                                                                                                                          |
| b     | <i>Report</i> | <p><i>Business Process Transactions Awaiting Action</i></p> <p>View business processes awaiting action, who it's waiting for, how long it has been waiting, and how many days past due.</p>                                                                                                                                                                                                                                                |
| c     | <i>To Do</i>  | <p><i>Run Retro Pay Calculation</i></p> <p>Recalculate earnings and deductions for workers with supported retroactive changes for a completed period. Workday calculates the difference between prior and recalculated results and includes it with the worker's current payroll results.</p>                                                                                                                                              |
| d     | <i>To Do</i>  | <p><i>Retro Calculation Processing Report</i></p> <p>Enables you to analyze the cause of your retro processing and the retro effect on your payroll results. You can also use this report to perform these actions on the retro results of 1 or more workers:</p> <ul style="list-style-type: none"> <li>• Complete</li> <li>• Suspend</li> <li>• Cancel</li> </ul>                                                                        |

| Order | Type             | Specify                                                                                                                                                                                                                                                                                    |

## Payroll History

---

### Setup Considerations: Payroll History

---

You can use this topic to help make decisions when planning your configuration and use of Payroll History. It explains:

- Why to set it up.
- How it fits into the rest of Workday.

- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

### What It Is

Payroll history is a record of payments made to your employees before you started using Workday Payroll. You load this data into Workday to establish starting balances for employees.

### Business Benefits

Payroll history increases accuracy in payroll calculations by enabling you to include previous pay details for your employees. You can use payroll history to incorporate data from external sources, providing more flexibility in your payroll calculations.

### Use Cases

To ensure accurate payroll calculations, you can load historical payroll data from external, or legacy, systems. Example: You start using Workday Payroll part way through the financial year so require payroll history to reconcile the current tax year.

Loading the data enables you to include payroll history in year-to-date calculations. For Canada, the UK, and the U.S., Workday also enables you to include quarter-to-date calculations.

### Questions to Consider

| Questions                                                                                     | Considerations                                                                                                                                                                                                                                                                                                                                                                                                                               |
|-----------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| How many times do you want to load payroll history?                                           | <p>Workday recommends that you load history at least twice. Example, into a test area and then into your live area in Workday.</p> <p>Ensure you can repeat the load with the same parameters and data each time to avoid introducing errors. Load the history as at the final pay period in your legacy payroll system.</p>                                                                                                                 |
| I'll start using payroll from the beginning of a new tax year, do I need to load any history? | <p>Yes, if you have any pay-related items that don't fall within a single tax year.</p> <p>Examples include:</p> <ul style="list-style-type: none"> <li>• Court or withholding orders with an outstanding balance.</li> <li>• Employee loan balances and repayments for transportation season tickets.</li> </ul>                                                                                                                            |
| Do you have any employees with multiple historical records in the same company?               | <p>Workday recommends that you sum up an employee's data, from their latest period of employment, to load correctly. Instead of totals for every payroll run, provide summed values.</p> <p>For Payroll for the UK only, when an employee has multiple periods of employment, you should load the summed history for each employment period. Example. For an employee who was hired, terminated, and rehired, load 2 periods of history.</p> |

| Questions                                                                                                                   | Considerations                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|-----------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                                                                                                             | Each period of employment has its own related payroll ID and year to date payroll amount.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| Which pay periods do you need to load history for?                                                                          | <p>Workday doesn't restrict you from loading multiple periods. However, to prevent possible gaps or overrides in the data, it's good practice to load and calculate history in period sequence order.</p> <p>For Payroll for the U.S. only, Workday recommends that you load payroll history for the current tax year only. For completed quarters, load history by quarter. Where you have partial quarters, load history by pay period.</p> <p>For Payroll for Canada, France, and the UK, due to the potential time and effort to extract, load, and reconcile payroll history, Workday recommends that you load 1 history record per period of employment. Each record includes year to date values covering the tax periods within that period of employment, instead of loading history records for each pay period within the tax year.</p> |
| For Payroll for Australia, do you process payroll calculations that require a worker's pay history to calculate accurately? | <p>Load workers' YTD amounts for:</p> <ul style="list-style-type: none"> <li>• PAYG Taxable Wages.</li> <li>• Regular PAYG and STSL withheld.</li> <li>• Taxable Wages and PAYG withheld from Bonuses, Commissions, or Backpays that relate to a prior financial year that have had PAYG calculated using ATO Schedule 5 - Method B(ii).</li> <li>• Taxable Wages and PAYG withheld from any back payments applied to specific periods in the current tax year using Schedule 5 - Method B(i) for back payments applied to specific periods in the current tax year.</li> </ul> <p>If you aren't loading full YTD pay history, consider using memo earnings to load the YTD amounts against, to avoid impact on STP reporting.</p>                                                                                                                 |
| For Payroll for Australia, how will you ensure that your transferred YTD figures don't result in duplicate STP reporting?   | <p>Due to the potential time and effort to extract, load, and reconcile payroll history and mapping of legacy payroll items against category in Workday, Workday recommends that you only load the non-reportable pay-related items required to support calculations that rely on payroll history.</p> <p>If you decide to load history for STP reportable items:</p> <ul style="list-style-type: none"> <li>• Create a \$0 pay event in your previous payroll system before you begin reporting in Workday.</li> <li>• Load the history for all reportable pay-related items and reconcile them before your first STP reporting even in Workday.</li> </ul>                                                                                                                                                                                       |

## Recommendations

To improve performance and reduce the amount of checking to do after loading data, Workday recommends that you only load the historical data required for current payroll calculations and reporting.

To ensure that any historical data that affects current pay is available, Workday recommends loading historical payroll payments before running your first pay calculation. Example: Employee loan repayments for loans that still have outstanding balances.

When loading history as a result of an acquisition:

- For Payroll for Australia, Canada, France, and the U.S., create a separate pay group for employees paid by the acquired organization. This pay group enables you to keep the employees separate for auditing until you've checked all their history data correctly loaded into Workday. After loading their payroll history, move them to the pay group they'll belong to in the new organization.
- For Payroll for the UK only, when loading history as a result of an acquisition, use your sandbox preview to test and reconcile the payroll history. After you confirm that all data loaded correctly, replicate your actions in your Workday production tenant.

To prevent errors or omissions in pay group reconciliation reports, load payroll history before recording that employees are terminated or placed on leave.

After loading your history data, audit employees' records to ensure that their Period End Date is after their Hire Date of Employee.

After loading, audit employees to ensure that they are in the tenant. Example: Compare names/ID to their Employee ID using a report from the tenant.

## Requirements

Before running your first pay calculation in Workday:

- For Payroll for the U.S. only, if you're starting midquarter or midyear, load historical payments from your external, or legacy, payroll system.
- For Payroll for Canada, France, and the UK, if you're starting midyear, load historical payments from your external, or legacy, payroll system.

For each external, or legacy, payroll ID that you load, you must assign a Workday ID, such as an employee ID, to be able to run a history payment for the employee.

## Limitations

You can add or correct payroll history at any time. However adding or changing historical results for an employee can impact calculations and results that use their historical balances.

For Payroll for Australia, changing historical results for an employee can cause incorrect STP reporting.

After you complete payroll history, you can change the completed history manually on an employee by employee basis. If you need to correct details for multiple employees after loading history, you can load a correction history file. The correction file contains the differences between the original, completed payroll history file and the correct values that should be held in Workday.

Before modifying payroll history for 1 employee, using **Run History Payment for Worker**:

- For Payroll for Australia, assign an AUS pay group before loading a payroll ID and running the history payment.
- For Payroll for the UK, assign a UK pay group before loading a payroll ID and running the history payment

## Tenant Setup

No impact.

## Security

|------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <i>Pay Calculation (History): Ad Hoc Actions</i> in the Core Payroll functional area.          | Enables you to record or correct payroll history for 1 employee.                                                                                                                                  |
| <i>Process: Load, Calculate, Cancel, Complete History</i> in the Core Payroll functional area. | Enables you to mass load employees' payroll history.                                                                                                                                              |
| <i>Worker Data: Payroll (Company Specific) - UK</i> in the UK Payroll functional area.         | For Payroll for the UK only, enables you to load history for: <ul style="list-style-type: none"> <li>• Holiday pay.</li> <li>• Pensions auto-enrolment.</li> <li>• Statutory Sick Pay.</li> </ul> |

## Business Processes

No impact.

## Reporting

Run the **Pay Calculation Processing Report** to process history payments. You can use the search facets to filter and apply these mass actions for the selected history payment results on the report:

- Cancel
- Complete
- Recalculate

## Integrations

You can use these web services to mass upload and retrieve employees' pay history:

- *Get\_Payroll\_History\_Payments*
- *Import\_Payroll\_History\_Payment*
- *Put\_Payroll\_History\_Payment*

For Payroll for the UK only, you can also use these web services:

- *Get\_Payroll\_Holiday\_Pay\_History*
- *Get\_Payroll\_SSP\_History*
- *Get\_Pensions\_Auto\_Enrolment\_External\_Assessment\_History*
- *Import\_Payroll\_Holiday\_Pay\_History*
- *Put\_Payroll\_SSP\_History*
- *Put\_Pensions\_Auto\_Enrolment\_External\_Assessment\_History*

## Connections and Touchpoints

Payroll connects to several other areas within Workday. Depending on the parts of Workday that you use, check or set up details in different areas when you load payroll history.

| Touchpoint | Consideration                                                                                                                       |

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships in your tenant. Learn more about the [Workday Touchpoints Kit](#) on Workday Community.

#### Related Information

##### Concepts

[Concept: What Payroll History to Load](#) on page 191

##### Tasks

[Steps: Load Payroll History by Batch](#) on page 207

## Steps: Prepare and Load Payroll History

### Prerequisites

- Review setup considerations for payroll history.
- Set up all pay components, including those used in statutory calculations and withholding orders (also known as court orders in Australia and the UK).

### Context

Before running your first pay calculation in Workday, you can load historical payroll payments from external systems.

Payroll history is payroll data:

- For dates on or after the worker's hire date.
- For periods before the **Override First Processing Period** for the worker's pay group.

When you load history before your first calculation, Workday:

- Includes the history data in year-to-date calculations. For Australia, Canada, the UK, and the U.S., Workday also includes the history data in quarter-to-date and year-to-date calculations.
- Apply limits and self-correcting logic to the correct amounts when you go live.

You can add and correct history after running Workday payroll.

## Steps

1. Determine the scope of the historical data, including:

- Which periods the data covers.
- Which data and calculations to load.

See [Concept: What Payroll History to Load](#) on page 191.

2. Create payroll periods for historical data.

See [Set Up Payroll and Time Tracking Period Schedules](#) on page 149.

3. Load historical data.

- [Steps: Load Payroll History by Batch](#) on page 207.
- [Enter or Correct Payroll History for a Worker](#) on page 208.

4. Access the **Pay Calculation Results for Worker** and **Pay Calculation Results for Group of Workers** reports to verify results.

Security: *Reports: Results for Worker (Pay Calculation)* and *Reports: Pay Calculation Results for Pay Group (Results)* domains in the country-specific Payroll functional area.

Example: *Reports: Results for Worker (Pay Calculation) - USA* and *Reports: Results for Worker (Pay Calculation) - USA* domains in the USA Payroll functional area.

5. Access the **Run History Pay Complete** task.

Complete your historical pay results. If you have results for multiple periods, complete results in chronological period sequence.

Security: *Process: Load, Calculate, Cancel, Complete History* domain in the Core Payroll functional area.

**Note:** You can't reverse or cancel completed payroll history. If necessary, you can modify completed history results or zero-out results, using the **Run History Payment for Worker** task.

## Concept: What Payroll History to Load

---

Workday uses historical data to establish starting balances for workers and uses these starting balances in:

- Calculations based on pay balances.
- Year-to-date and other reporting.

The data to load depends on the specific situation of your company. Workday recommends that you only load the historical data required for current payroll calculations and reporting.

### Data Aggregations and Scope

#### Payroll for Canada

Workday recommends that you aggregate historical earnings and deductions for a worker by payroll account number and province. Then load:

- Payroll history for the current tax year only.

- Year-to-date history for completed periods.

Load the aggregated year-to-date amounts into the period immediately preceding the first pay period you'll process in Workday Payroll. Example: The pay period is semimonthly and your Workday implementation date is July 1. Load the year-to-date payroll history amounts into the pay period ending June 30th.

To issue ROEs from Workday, enter ROE insurable amounts and hours from historical pay periods through the *Import ROE Prior Period History Results* web service.

## Payroll for France

Load data for all workers who are:

- Active or on leave the month of the effective date of your first Workday Payroll transactions.
- Terminated before that effective date but still eligible for pay calculations, such as complementary pay.

When possible, instead of loading monthly indicators for each pay component, load 1 aggregated balance for either the:

- Calendar year.
- Time off accumulation period or other balance periods.

Example: If the effective date of your first Workday Payroll transaction is in September:

- Create historical pay periods starting from September of the previous year.
- For statutory contribution calculations load 1 aggregated, enter the year-to-date value of the URSSAF contribution bases (January-August) in the *Memo - Reference Values for URSSAF [FRA]* deduction.

## Payroll for the UK

- Load history for the current tax year only.
- When possible, instead of loading monthly indicators, load 1 aggregated balance for each pay component in the historical pay period immediately preceding the first processing period.
- Load data for all workers who have payroll results in the current tax year, including terminated employees.

## Payroll for the U.S.

- Load payroll history for the current tax year only.
- Load by quarter for completed quarters.
- Load by pay period for partial quarters.

When loading by quarter, if the pay period is semimonthly, you can define:

- Quarterly periods for any full quarters before the effective date of your first Workday Payroll transactions.
- Semimonthly periods after that effective date.

Example: The effective date is July 1, so you load payroll history for:

- January 1 - March 31
- April 1 - June 30

You then set up these period schedule dates for payroll calculations after the effective date of your first Workday Payroll transactions:

- July 1 - July 15
- July 16 - July 31

### Types of Data to Load

When determining what data to load, consider which pay components contribute to:

- Year-to-date reporting.
- Pay balances used in payroll calculations.

Incomplete payroll history can result in incorrect pay balances for workers, and adversely impact payroll calculations or reporting relying on those balances.

The examples in the following tables provide suggestions for types of historical data to load for different countries. Ensure that you've identified all payroll calculations that rely on historical data.

For Payroll for the U.S., to ensure correct reporting for jurisdictions that tax work and resident amounts, always include both Work City and Resident City when you load payroll. Example: To report the Political Subdivision (PSD) code for Pennsylvania resident and work cities accurately, always include both Work City and Resident City.

#### Payroll for Australia

| Data for       | Examples of the Types of Data to Load                                                                                                                                                                                                                                   |
|----------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Payslip        | Loading payslip YTD isn't required. However, if you choose to load YTD history, you also need to load the values for the PAYG and Superannuation Guarantee pay components, so that the taxable gross and ordinary time earnings are displayed correctly on the payslip. |
| Superannuation | Load the YTD of these calculations: <ul style="list-style-type: none"> <li>• <i>AUS Superannuation Additional Employer Reportable (SV) [AUS]</i></li> </ul>                                                                                                             |

| Data for         | Examples of the Types of Data to Load                                                                                                                                                                                                                         |
|------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                  | <ul style="list-style-type: none"> <li>• <i>AUS Superannuation Employee Post Tax Member (SM) [AUS]</i></li> <li>• <i>AUS Superannuation Employee Pre Tax Salary Sacrifice (SS) [AUS]</i></li> <li>• <i>AUS Superannuation Guarantee (SG) [AUS]</i></li> </ul> |
| Tax calculations | Load the YTD PAYG taxable amount for each worker, to calculate tax for back pays related to prior tax years, bonuses, commissions, and other lump sum payments.                                                                                               |

### Payroll for Canada

| Data for                                            | Examples of the Types of Data to Load                                                                                                                                                                                                                                                                                                                                                              |
|-----------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Bonus wages paid before your Workday implementation | Load the <i>Bonus Taxable Wages</i> related calculation for these pay components: <ul style="list-style-type: none"> <li>• <i>Federal Income Tax (FIT) [CAN]</i></li> <li>• <i>Province Income Tax (PIT) [CAN]</i></li> <li>• <i>Province Income Tax (QC-PIT) [CAN]</i></li> </ul>                                                                                                                 |
| Bonus year-to-date earnings                         | To calculate the K2, K2P, and K2Q credits properly, load the <i>Bonus Subject Wages</i> related calculation for these pay components: <ul style="list-style-type: none"> <li>• <i>Canada Pension Plan (CPP) [CAN]</i></li> <li>• <i>Employment Insurance - EI [CAN]</i></li> <li>• <i>Quebec Parental Insurance Plan - QPIP [CAN]</i></li> <li>• <i>Quebec Pension Plan (QPP) [CAN]</i></li> </ul> |

| Loans and withholding orders               | Workday recommends that you create withholding orders and loans with the current balance for the month. Ensure that the current balance corresponds to the effective date of your first Workday Payroll transactions. In this case, don't load historical data for loans and withholding orders.                                                                                                                                                                                                                                                       |

## Steps: Load Payroll History by Batch

### Prerequisites

Security: *Process: Load, Calculate, Cancel, Complete History* domain in the Core Payroll functional area.

### Context

You can use Enterprise Interface Builder (EIB) to load historical payments for multiple workers, during:

- A midyear implementation of Workday.
- The acquisition of another organization.

Loading payroll history occurs in 2 phases:

| Phase                                                                   | Description                                                                                                                                                                                                |
|-------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Data load ( <i>Put Payroll History Payment</i> web service).            | Workday loads the values of individual earnings and deductions (not pay accumulations or pay balances) directly into the payroll results.                                                                  |
| Historical pay calculations ( <b>Run History Pay Calculation</b> task). | Workday: <ul style="list-style-type: none"> <li>• Calculates gross and net amounts, bypassing limits.</li> <li>• Derives pay accumulations and pay balances.</li> <li>• Applies worktag values.</li> </ul> |

When you have historical data for multiple pay periods, load and calculate history in period sequence.

When loading history as a result of an acquisition, create a separate pay group for workers paid by an acquired organization. After loading their payroll history, move them to the pay group they'll belong to in the new organization.

### Steps

#### 1. [Set Up Inbound EIB](#).

Select *Put Payroll History Payment* from the **Web Service Operation** prompt.

#### 2. Prepare the EIB spreadsheet and launch the EIB spreadsheet upload.

See [Steps: Set Up EIBs Using Templates from Web Service Operations](#).

#### 3. Access the **Pay Calculation Off-cycle Inputs for Group of Workers** report to review history in the staging tables.

The report includes history payments that you haven't calculated yet, plus any calculated results.

Security: *Reports: Pay Calculation Results for Pay Group (Results)* domain in the Core Payroll functional area.

#### 4. Access the **Run History Pay Calculation** task to calculate history payments.

### Next Steps

If the original results were incorrectly loaded, you can cancel the calculated results using the **Run History Pay Cancel** task. Canceling history removes the source data.

## Enter or Correct Payroll History for a Worker

---

### Prerequisites

Security: One of these domains in the Core Payroll functional area:

- *Pay Calculation (History): Ad Hoc Actions*
- *Process: Load, Calculate, Cancel, Complete History*

### Context

You can add or modify payroll history for 1 worker. Example: Correcting or adding payments after loading payroll history by batch.

Corrections don't change data, such as limits, on any production payroll results that are already complete. However, for Canada, the UK, or the U.S., self-correcting taxes could adjust in the next payroll you run. For Australia, consider how the correction will affect the STP report and the related YTD amounts for workers.

**Note:** Adding or changing historical results for a worker can impact existing calculations and results that use historical balances. When you change payroll history, verify any current calculation results and correct them as necessary.

Example: When you correct a history payment of a worker in a prior pay group, Workday deletes the history payment. If you need to correct a history payment of a worker that no longer is in the same pay group, you must move the worker back to the prior pay group to enter the correction or create a new history payment in the current pay group.

Administrators and partners who need to enter payments for themselves must use the *Put Payroll History Payment* web service instead of the **Run History Payment for Worker** task.

### Steps

1. Access the **Run History Payment for Worker** task.

| Option                            | Description                                                                                               |
|-----------------------------------|-----------------------------------------------------------------------------------------------------------|
| <b>Third Party Sick Pay</b>       | Applies to U.S. only.                                                                                     |
| <b>History Period</b>             | You can only select periods before the <b>Override First Processing Period</b> defined for the pay group. |
| <b>Existing Payment</b>           | To update an existing payment, select its payment ID.                                                     |
| <b>Create New History Payment</b> | Select to add, rather than edit, a history payment.                                                       |

Workday displays existing history payments in the **History Payments Summary** section.

2. (Optional) In the **Override Payroll Worktags** section, select override values for default worktags.

Default worktag values are based on the worker's primary job. Unless you select override values, Workday applies the worktags to the history payment based on the history period or subperiod end date.

Workday adds any related worktags in addition to selected override values. You can remove any related worktags you don't want.

For France, the UK, and the U.S., workers must have a company assignment. If no company displays, enter a worktag override.

For Canada, for the **Province Authority (Work)**, you can override the reference worktag of the same name with another province. If the worker works outside of Canada, you can select *United States* or *Other* for any other country.

Canadian workers must have a company assignment, payroll reference number, and work province. If any of these worktags don't display, enter a worktag override.

3. Under **Inputs**, add a row per **Pay Component** and enter **Input Details**:

| Option               | Description                                                                                                                                                                                                                                                                                                                                                                                                                                      |
|----------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Pay Component</b> | Applies to the U.S. only<br><br>For third-party payments, you can only select from taxes and third-party sick pay earnings.                                                                                                                                                                                                                                                                                                                      |
| <b>Type</b>          | To enter the amount of the earning, deduction, tax, or withholding order, select <i>Amount</i> , and enter the amount in the <b>Value</b> field.<br><br>You can also enter values for related calculations that make up the amount. Example: For Canada, the UK, or the U.S. this might be <i>Rate</i> and <i>Hours</i> ; for France it might be <i>Taxable Wages</i> . Workday stores the related values, but doesn't use them in calculations. |

4. (Optional) In the **Gross and Net Amounts** section, override the Workday-calculated net pay amount, gross pay amounts, or both.

- Select the **Use Override** check box for the net or gross pay.
- Enter the **Override Gross Amount** or **Override Net Amount**.

## Result

In payroll results, the payment type is reported as *History*.

## Next Steps

Complete the historical payroll result by selecting **Pay Calculation > Complete** from the related actions menu of the history pay result.

## FAQ: Payroll History

### Where is payroll history used?

Workday includes history results in:

- Pay balances.
- Normal payroll results.
- Single Touch Payroll (STP) reporting for Australia.
- T4 and RL-1 results for Canada.
- Quarterly and annual tax filing for the U.S.
- W-2 results for the U.S.

History results don't generate:

- Accounting results.
- Payments.
- Company PAYG Liability reporting through STP for Australia.
- DSN reporting for France.
- Payslips or advices for France.
- Payslips (including self-service), advices, or ACH files for Canada or the U.S.
- Payslips (including self-service) or advices for the UK.
- Periodic tax filing for Canada, the UK, or the U.S.

**Can I load history payments for periods dissimilar to the worker's regular payroll?**

Yes, you can load history payments with a run category different from a worker's run category only if you process the worker's history in the relevant company and tax year.

**For which pay periods can I load payroll history?**

Load payroll history for periods before the **Override First Processing Period** specified for a worker's pay group.

**How can I modify completed payroll history?**

To edit completed payroll history for 1 worker, access the **Run History Payment for Worker** task.

You can't use the *Put Payroll History Payment* web service to edit completed payroll history. Instead, use it to load new history payments by batch that represent the difference between the completed payroll history and the results you want.

**How can I load payroll history for a worker who had more than 1 legacy payroll ID in the same tax year, in Payroll for the UK?**

Use the *Put Payroll ID* web service to load the worker's legacy details. For each legacy payroll ID, assign a unique Workday payroll ID. Then, load the worker's year to date payroll history for each Workday payroll ID.

**How does Workday apply worktag overrides with proration, in Payroll for the U.S.?**

Workday determines the default worktag values for uploaded payments based on the end date of a history period.

You can specify subperiod dates within a period for payments that represent a partial period. In this case, Workday applies the default worktag values based on the subperiod end date.

Example: Andrew transfers companies midperiod, and receives 1 payment from his former company and another from his new company. The subperiod end date recorded for each payment ensures that Workday assigns the correct worktag values.

**What worker data is necessary for payroll history, in Payroll for the U.S.?**

Workers must have a pay group assignment date and a company assignment date that is on or before the begin date of the subperiod for which you're loading history. A pay group assignment for the full period isn't necessary.

## Troubleshooting: Unable to Load Payroll History for Terminated Workers

---

**Cause:** The terminated worker doesn't have a pay group assigned as of the termination date.

**Solution:**

### Steps

1. [Assign Workers to Pay Groups](#) on page 174.  
Enter an **Effective Date** that's on or before the termination date.
2. Load historical data.  
See [Steps: Load Payroll History by Batch](#) on page 207.
3. (Optional) [Enter or Correct Payroll History for a Worker](#) on page 208.  
Add or modify payroll history for a worker.

## Earnings, Deductions, and Other Calculations

---

### Setup Considerations: Earnings and Deductions

---

You can use this topic to help you make decisions when planning your configuration and use of earnings and deductions. It explains:

- Why to set them up.
- How they fit into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

### What They Are

Earnings and deductions, together referred to as pay components, enable you to calculate what to pay or deduct from wages when you process payroll. You can configure earnings and deductions to specify which workers are eligible for them, and for different elements of payroll processing. Examples:

- Proration of earnings.
- Gross up of earnings.
- Scheduling of pay component resolution.
- Retro recalculations.
- FLSA period resolution.
- Tax resolution for multiple jurisdictions.
- Applicable limits.
- Effective date resolution.
- Benefit plan application.
- Pay component exclusion from forward accrual.
- Allocation reporting periods for Record of Employment reporting.
- Which run categories and pay groups can use the pay component.
- Which pay component groups (PCGs) the pay component adds to.

## Business Benefits

Earnings and deductions add flexibility to your payroll processing by enabling you to configure complex payroll calculations according to your business needs. You can configure Workday Payroll to easily retrieve values from other parts of Workday, reducing the need for manual entries and the associated risk of error.

## Use Cases

To reduce compliance risk and manual entries, you can set up earnings and deductions to use data from these areas to process payroll:

- Compensation.
- Benefits.
- Payroll input.
- Time off.
- Workday Time Tracking.

Allocate earnings and employee-paid deductions across organizations types and locations. Examples:

- Cost centers.
- Grants.
- Projects.

Set up related calculations within earnings and deductions to specify:

- PCGs.
- Default calculations.
- Override calculations.
- Limit details.
- Payslip configuration and layout.
- Whether to apply percentage splits.
- Whether to allow pay input.
- Reporting parameters.

Set up employee self-service (ESS) voluntary deductions, such as charity donations.

## Questions to Consider

| Question                                                                      | Considerations                                                                                                                                                                                                                                                                                                 |
|-------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| What eligibility criteria can you use for processing earnings and deductions? | <p>You can use precise eligibility criteria to streamline your payroll processing. You can base eligibility on the:</p> <ul style="list-style-type: none"> <li>• Run category.</li> <li>• Pay group.</li> <li>• Worker.</li> </ul> <p>You can use Workday-delivered or custom worker eligibility criteria.</p> |
| How do you control the frequency of earnings and deductions?                  | <p>You can control when a pay component resolves by using eligibility criteria. Example:</p> <ul style="list-style-type: none"> <li>• On the first pay period of the month.</li> <li>• When you enter payroll input.</li> </ul> <p>You can use an override to determine your preferred frequency.</p>          |

| Question                                                                                      | Considerations                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
|-----------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| How do you configure earnings and deductions for workers with multiple jobs?                  | <p>When you have workers with multiple jobs, configure earnings and deductions as position-based rather than worker-based.</p> <p>You can't change a worker-based pay component to position-based. Instead, add a new pay component with a position worktag.</p>                                                                                                                                                                                                                                                                                                              |
| How do you want to prorate earnings or deductions when a midperiod change creates subperiods? | <p>You can set up earnings and deductions to prorate based on days worked, calendar days, or annual days. Alternatively, you can choose to have no proration.</p> <p>When you prorate a pay component, Workday processes it proportionately as a prorated gross-to-net calculation for each subperiod.</p>                                                                                                                                                                                                                                                                    |
| Do you want to recalculate earnings or deductions during retroactive payroll calculations?    | <p>You can determine whether Workday recalculates earnings and deductions during a retroactive payroll calculation. When you run retro calculations, Workday reprocesses only earnings and deductions associated with supported retroactive changes in completed pay periods.</p> <p>Example: A worker receives a pay increase effective at the beginning of the previous pay period. You run retro to recalculate payroll for the worker for the completed pay period and pick up the change in pay. Workday calculates and pays the difference in the next payroll run.</p> |
| How do you apply a limit?                                                                     | <p>You can configure pay components to take account of deduction limits. Example: A 401(k) pretax deduction includes a wage limit on the pay component related calculation (PCRC) for base amounts and the total annual contribution.</p>                                                                                                                                                                                                                                                                                                                                     |
| How do you apply a limit?                                                                     | <p>You can configure pay components to take account of deduction limits. Example: The RRSP deduction includes an annual contribution limit based on the calendar year.</p>                                                                                                                                                                                                                                                                                                                                                                                                    |
| Do you need to group together multiple earnings and deductions for other calculations?        | <p>You can assign the earning or deduction to PCGs.</p> <p>Each selected group sums the values of the earnings or deductions it contains during payroll processing.</p> <p>Example: Workday uses the PCGs to apply taxation and determine which earnings are subject to Income Withholding Orders or health care taxes.</p>                                                                                                                                                                                                                                                   |
| Do you need to withhold taxes for earnings?                                                   | <p>You can add PCGs to an earning to determine how the withholding is calculated.</p> <p>Example: When you use the <i>Federal Taxable (Do Not Withhold Taxes) [USA]</i> PCG, Workday adds</p>                                                                                                                                                                                                                                                                                                                                                                                 |

| Question | Considerations                                                                           |
|----------|------------------------------------------------------------------------------------------|
|          | the earning to federal taxable wages but doesn't withhold taxes in payroll calculations. |

### Recommendations

To aid processing performance, create the minimum number of earnings and deductions.

To maximize payroll processing performance, configure earnings and deductions using specific eligibility criteria to ensure that Workday calculates only applicable run categories, pay groups, and workers.

### Requirements

Set up benefit and compensation plans and Workday Time Tracking, where applicable, before you configure earnings and deductions. When you use an external time tracking system, ensure that it's set up to export payroll input to Workday.

### Limitations

When you change an earning or deduction after Workday processes it in a payroll calculation, Workday doesn't trigger retro or smart calculation.

You can't change a worker-based pay component to position-based. Instead, add a new pay component with a position worktag.

### Tenant Setup

You can select tenant-wide proration configuration on the **Edit Tenant Setup - Payroll** task to enable pay component proration when workers go on leave or return from leave in the middle of a pay period.

### Security

| Domain                                                                                               | Considerations                                                                                  |
|------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------|
| <i>Set Up: Payroll (Calculations - Payroll Specific)</i> domain in the Core Payroll functional area. | Enables you to create and modify earnings and deductions.                                       |
| <i>Set Up: Calculations - Generic</i> domain in the Core Payroll functional area.                    | Enables you to run reports related to payroll calculation data.                                 |
| <i>Worker Data: Payroll (Limit Overrides)</i> domain in the Core Payroll functional area.            | Enables you to view and maintain payroll limit overrides.                                       |
| <i>Set Up: Payroll (FLSA) - USA</i> domain in the USA Payroll functional area.                       | Enables you to set up and modify FLSA work period calendars, calendar events, rules, and types. |

### Business Processes

No impact.

## Create Earnings and Deductions

### Setup Considerations: Earning and Deduction Limits

You can use this topic to help make decisions when planning your configuration and use of earning and deduction limits. It explains:

- Why to set them up.
- How they fit into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

**Note:** Although it's possible to use earning and deduction limits in Payroll for France, these are rarely used in France.

## What They Are

Limits enable you to define when Workday stops processing earnings and deductions based on a maximum value that you can configure.

## Business Benefits

Limits:

- Make it easier for you to comply with regulatory requirements by stopping contributions automatically, such as for retirement or health saving deductions.
- Reduce manual effort required to adjust the workers' net pay for those requirements by enabling you to configure employer and employee limits.
- Provides you with greater control and flexibility by enabling you to apply them on 1 or more pay components.

## Use Cases

You can configure limits on pay components such as:

- Charitable contributions (CAN, UK, USA).
- Combined employer and employee contribution amounts.
- Flexible spending account contributions (CAN, USA).
- Health saving account (HSA) contributions (USA).
- Loan repayments.
- Retirement plan contributions such as a 401(k) (USA) and RRSP (CAN).
- Transportation reimbursements.

You can also configure limits on related calculations, such as:

- A 415 wage limit for retirement accounts (USA).
- For taxable and nontaxable redundancy earnings (UK).
- for the year's maximum pensionable earnings (CAN).

## Questions to Consider

| Questions                                                   | Considerations                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
|-------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| What types of earnings and deductions do you need to limit? | <p>For Payroll for Canada, the UK, and the U.S., Workday delivers legislative limits in tax tables that you can use when configuring earnings and deductions. Examples:</p> <ul style="list-style-type: none"> <li>• Contribution limits for retirement plans.</li> <li>• Contribution limits for HSAs for family or individual plans (USA).</li> <li>• Elective deferral limits for retirement accounts.</li> </ul> <p>You can also use these calculations to build your own limits, such as to process employer contribution matches for retirement accounts.</p> <p>Inactive pay components and manual payments don't contribute to limits.</p> <p>Limits for position-based pay components apply to each position.</p> |

| Questions                                             | Considerations                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
|-------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| How many earnings or deductions do you want to limit? | <p>You can configure limits that consider 1 earning, or multiple using pay accumulations.</p> <p>Example: You can build limits on a retirement plan deduction to consider:</p> <ul style="list-style-type: none"> <li>• Combined employee contributions and an employer match.</li> <li>• Contributions from previous companies and year-to-date contributions in the current company.</li> <li>• Pretax contributions before post-tax contributions when workers elect to both.</li> </ul> <p>You can also configure limits on related calculations, such as to define wage limits.</p>                                                                                                                                                                                                                                                                                                                                                                 |
| Which periods do you want to apply limits to?         | <p>Limits always apply to a balance period such as year-to-date. You can use Workday-delivered balance periods or create your own to build limits over specific pay periods. Example: You can use a balance period for the current year based on payment dates for statutory limits that reset each tax year.</p> <p>When you use the current period as the balance period, Workday applies all amounts towards the period limit. Example: You configure a limit per period on an earning. A worker has retro differences processed in the current payroll for the same earning. Workday applies both the retro earning and the current earning towards the limit.</p>                                                                                                                                                                                                                                                                                   |
| Who do you want to apply limits for?                  | <p>When you configure limits, they apply to all workers eligible for the earning, deduction, or related calculation. You can define overrides for workers and pay components to:</p> <ul style="list-style-type: none"> <li>• Ignore a limit.</li> <li>• Apply a different limit.</li> </ul> <p>Example: You hire a worker midyear and want to account for what they already contributed to their retirement account in their previous job. You can configure an override for that worker to ignore the limit applied for all other workers and use a memo deduction instead.</p> <p>When you configure multiple limits on pay components, Workday applies the override against all limits. Example: You configure an elective deferral annual limit and an annual contribution limit on an employee retirement deduction. When you define an override limit for a worker who has that deduction, Workday overrides both related calculation limits.</p> |

| Questions            | Considerations                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
|----------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Do you use Benefits? | <p>You can configure certain limits in Benefits or Workday Payroll depending on how you implement benefit plans:</p> <ul style="list-style-type: none"> <li>• When limits don't apply to wages, configure them in Benefits.</li> </ul> <p>Example: For Payroll for Canada, France, the UK, and the U.S., contribution percentages to retirement plans or goal amounts for health savings accounts don't apply to wages.</p> <ul style="list-style-type: none"> <li>• When limits apply to wages, configure them in Payroll. Example: Workday takes employee contribution to retirement plans calculated based on eligible wages, up to a limit for the year for the benefit.</li> <li>• When you manage workers' benefits through payroll input or a third-party provider, configure limits on the payroll side.</li> </ul> |

### Recommendations

- Use Workday-delivered calculations as limits before creating your own, as Workday maintains the delivered regulatory amounts, such as for:
  - Balance periods.
  - Retirement plan limits (CAN, UK, USA).
- Use lookup tables to store and maintain limits to reduce manual updates.
- Configure a new effective date when updating limits on pay components because limits are specific to periods of time. When you don't add a new effective date, Workday applies the limit to the current pay period. Example: The current pay period is December and you want to configure a limit starting next year. When you don't add a new effective date and process payroll for December, Workday applies the limit to December.
- Build calculations on pay components instead of using limits so that Workday evaluates separately on on-cycle, off-cycle, and retro results in the current period.

### Requirements

For Payroll for Canada and the U.S., map earnings and deductions to plans and other sources, such as compensation or benefit plans, or time tracking totals. When you have multiple benefit plans with different limits, don't map the benefit plans to the same deduction. Mapping 1 plan to 1 deduction ensures accurate limit calculations. Verify the accuracy of your statutory calculations because Workday doesn't deliver all regulatory limits. Examples:

- For Payroll for Canada, Workday delivers limits for RRSP retirement plans, but doesn't deliver limits for noncash gifts workers can receive in a year.
- For Payroll for the U.S., Workday delivers limits for 401K retirement plans, but doesn't deliver IRS transit limits.

For Payroll for the UK, map earnings and deductions to plans or other sources for the value that the pay component calculates, such as compensation or benefit plans.

### Limitations

Workday doesn't support all types of worker data in custom Payroll calculations so you can't configure limits based on those types. Example: You can't configure limits based on union membership types.

For Payroll for Canada, when companies merge or go through acquisitions, Workday doesn't carry over amounts contributing to regulatory limits. You can enter these amounts manually.

For Payroll for the U.S., Workday doesn't deliver limit calculations for HSA contributions that prorate for a midyear switch from family to single coverage. You can configure payroll limit overrides to account for the proration.

### Tenant Setup

For Payroll for the U.S., you can access the **Edit Tenant Setup - HCM** task to include additional HSA coverage target options. You can then select the family or employee limit as the IRS limit for those additional targets.

No impact for Payroll for Australia, Canada, France, or the UK.

## Steps: Create Earnings

### Prerequisites

- For Payroll for Canada, the UK, and the U.S., for position-based earnings, configure your Workday tenant to support multiple jobs.
- Security: *Set Up: Payroll (Calculations - Payroll Specific)* domain in the Core Payroll functional area.

### Context

You can set up earnings to calculate values such as:

- 401(k) loan earning (USA).
- Base pay or allowance.
- Benefits such as employer contributions to health care or insurance.
- FLSA earnings (USA).
- Gross up earnings (CAN, FRA, UK, USA).
- Hours from Workday Time Tracking.
- Paid and unpaid time off.
- Tip earnings (USA).
- Values entered through payroll input.

## Steps

1. Access the **Create Earning** task.
2. Enter the earning identification information:

| Option                      | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

| <b>Name</b>                 | Enter how the earning displays on payroll results.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| <b>Code</b>                 | To use with other Workday applications, enter a code of up to 20 characters. Example: You're configuring integrations in HCM for importing payroll data.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| <b>Default Payslip Name</b> | <p>Enter the name of the earning to display on payslip configurations. You can override this field on <b>Maintain Payroll Payslip Configuration</b>.</p> <p>For Payroll for France:</p> <p>When you use the <i>Payslip to Print - FRA</i> standard report to create a payslip layout, you can display aggregated pay components on the payslip.</p> <p>To configure an aggregated line, define a <b>Default Payslip Name</b> that:</p> <ul style="list-style-type: none"> <li>• Is identical for all pay components to be aggregated.</li> <li>• Contains characters between square brackets.</li> </ul> <p>On the payslip, Workday displays the text between square brackets as the payslip name for aggregated pay components.</p> |

3. Specify the **Country** that you can use the earning for.

When you leave this field blank:

- You can use the earning in any country.
- Workday uses the currency of the pay group for calculations.
- Workday displays all options for the countries included in your tenant setup.

4. [Set Up Pay Component Eligibility](#) on page 236.

Define eligibility criteria to determine when Workday calculates the earning. Example: Restrict the earning to specific workers or run categories.

5. [Enter Earning or Deduction Calculations](#) on page 238.

Define the calculation that returns the final earning values.

6. On the **Effective Dated** tab, consider these optional features, which require additional setup.

| Option                       | Description                                                                                                                                                                                                                                                                                                                                                                                                 |
|------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Calculation Proration</b> | <p>Determines how to prorate the earning when a midperiod event results in multiple subperiods.</p> <p>For Payroll for Australia, if none of the proration options apply, but you still need to prorate, the proration calculation can be set to <i>None</i>. You can determine the proration behavior with related calculations.</p> <p>See <a href="#">Set Up Proration Calculations</a> on page 277.</p> |

| Option                             | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
|------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Gross-Up Calculation</b>        | <p>For Payroll for Canada, France, the UK, and the U.S.</p> <p>Enables you to calculate a gross amount based on an input net amount.</p> <p>See <a href="#">Set Up Gross-Up Earnings</a> on page 325.</p>                                                                                                                                                                                                                                                                                                                     |
| <b>Retro Calculation</b>           | <p>Enables you to configure whether Workday recalculates the earning during retroactive calculations. By default, Workday recalculates earnings during retro payroll calculations.</p> <p>See <a href="#">Steps: Set Up Retro Processing</a> on page 825.</p>                                                                                                                                                                                                                                                                 |
| <b>FLSA/Flat Sum Bonus</b>         | <p>For Payroll for the U.S.</p> <p>Contains options that enable you to:</p> <ul style="list-style-type: none"> <li>• Calculate results by FLSA period on a specific results tab.</li> <li>• Manage coverage dates that span multiple FLSA periods.</li> <li>• Indicate that the earning is a flat sum bonus.</li> </ul> <p>See <a href="#">Steps: Set Up Payroll for the Fair Labor Standards Act (USA)</a> on page 960.</p>                                                                                                  |
| <b>Multiple Work Jurisdictions</b> | <p>For Payroll for the U.S.</p> <p>Determines whether to split the earning calculation based on tax allocation percentages defined for different work jurisdictions.</p> <p>See <a href="#">Set Up Ongoing Multiple Work Jurisdictions (USA)</a> on page 1160.</p>                                                                                                                                                                                                                                                            |
| <b>Calculation Worktag</b>         | <p>Enables you to tag the earning with supplemental information such as company, position, location, or loan number. You can then reference the worktag to:</p> <ul style="list-style-type: none"> <li>• Guide the calculation of pay components.</li> <li>• Associate pay component values for aggregation or accounting.</li> <li>• Limit values displayed for accumulation.</li> <li>• Limit values displayed for reporting.</li> </ul> <p>See <a href="#">Concept: Worktags for Payroll Calculations</a> on page 293.</p> |
| <b>Holiday Pay</b>                 | <p>For Payroll for the UK.</p> <p>Enables you to split an earning into weekly periods for statutory holiday pay calculations. You can use this for:</p> <ul style="list-style-type: none"> <li>• Earnings that you include when calculating statutory holiday pay.</li> </ul>                                                                                                                                                                                                                                                 |

| Option | Description                                                                                                                                                                                             |
|--------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|        | <ul style="list-style-type: none"> <li>Earnings that shadow source earnings used to calculate holiday pay.</li> </ul> <p>See <a href="#">Steps: Set Up Statutory Holiday Pay (UK)</a> on page 1463.</p> |

7. (Optional) In the **Calculation Worktag** section, add worktags for supplemental information such as company, position, or location. As you complete the section, consider:

| Option                     | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
|----------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Calculation Worktag</b> | <p>When you configure an earning with a calculation worktag, Workday requires you to enter the worktag also on payroll input.</p> <p>For Payroll for Canada and the U.S., to create a position-based earning or deduction for multiple jobs, or for U.S. international assignments, select the <i>Position</i> worktag.</p> <p>You can't change the calculation worktag after you:</p> <ul style="list-style-type: none"> <li>Include the earning or deduction in a payroll or retro calculation.</li> <li>Add payroll input for the earning or deduction.</li> </ul>                                                                                                                                                        |
| <b>Include Input</b>       | <p>Select this check box to resolve the earning whenever Workday processes payroll input for the associated worktag.</p> <p>Example: You can add a Shift worktag to these earnings to track shift hours:</p> <ul style="list-style-type: none"> <li>Hourly pay by shift: An earning that tracks shift work entered as payroll input from a third-party time and attendance system.</li> <li>Pay differential: An earning to calculate the pay differential based on the shift hours.</li> </ul> <p>You can then select the <b>Include Input</b> check box on the pay differential earning. This ensures that Workday resolves the pay differential earning when you enter pay input for the hourly pay by shift earning.</p> |

8. [Set Up Pay Component Related Calculations](#) on page 241.  
Configure Workday to automatically calculate related calculations as part of an earning or deduction.
9. (Optional) [Set Up Earning or Deduction Limits](#) on page 247.  
Define limits for the earning calculation.
10. (Optional) Base earning calculations on compensation elements or absence totals:
- [Map Earnings to Compensation Elements](#) on page 252.
  - [Enter Pay Component Calculations Based on Absence Management Totals](#) on page 251.
  - [Map Earnings to Time Tracking Totals](#) on page 253.
11. [Add Earnings or Deductions to Pay Component Groups](#) on page 234.  
Add earnings to a group of pay component groups, which you can then use in run categories or other configurations. Example: Define which pay components add to the gross pay.

12. On the **Non-Effective Dated** tab, consider these optional features.

| Option          | Description                                                                                                                                                                                                                                                                                                                                                                                |
|-----------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Benefits</b> | <p>Enables you to link an earning to a benefit plan.</p> <p>You can then set up enrollment event rules in HCM to specify when to begin or end payroll deductions based on the benefit plan.</p> <p>See:</p> <ul style="list-style-type: none"> <li>• <a href="#">Map Pay Components to Benefit Plans</a> on page 253.</li> <li>• <a href="#">Create Enrollment Event Rules</a>.</li> </ul> |
| <b>Costing</b>  | <p>Enables you to specify how to allocate all instances of an earning for all employees across:</p> <ul style="list-style-type: none"> <li>• Cost centers.</li> <li>• Projects.</li> <li>• Grants.</li> <li>• Other organization types and locations.</li> </ul> <p>See <a href="#">Set Up Cost Allocations for Earnings</a> on page 256.</p>                                              |
| <b>ROE</b>      | <p>For Payroll for Canada.</p> <p>Enables you to identify how to report an earning for ROE reporting.</p> <p>See <a href="#">Set Up Earnings for ROE Reporting</a> on page 1338.</p>                                                                                                                                                                                                       |

## Result

The earning is available for use in payroll processing upon the effective date.

## Next Steps

When you modify a pay component after you've processed it in a retro pay calculation, either:

- Move the **No Retro Processing Prior To** date after the date of your edit.
- Create a new effective-dated snapshot for the earning.

## Steps: Create Deductions

### Prerequisites

- For position-based deductions, configure your Workday tenant to support multiple jobs.
- Security: *Set Up: Payroll (Calculations - Payroll Specific)* domain in Core Payroll functional area.

### Context

You can set up deductions to retrieve values such as:

- Absence deductions.
- Employee 401(k) contributions (USA).
- Employee and employer medical or disability insurance contributions (FRA).
- Employee medical contributions (CAN, UK, USA).
- Loan deductions (AUS).
- Values entered through payroll input.
- Withholding taxes (CAN, UK, USA).

### Steps

1. Access the **Create Deduction** task.
2. Enter the deduction identification information:

| Option                      | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
|-----------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Name</b>                 | Enter how the deduction displays on payroll results.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| <b>Code</b>                 | To use with other Workday applications, enter a code of up to 20 characters. Example: You're configuring integrations in HCM for importing payroll data.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| <b>Default Payslip Name</b> | <p>Enter the name of the deduction to display on payslip configurations. You can override this field on <b>Maintain Payroll Payslip Configuration</b>.</p> <p>For Payroll for France:</p> <p>When you use the <i>Payslip to Print - FRA</i> standard report to create a payslip layout, you can display aggregated pay components on the payslip.</p> <p>To configure an aggregated line, define a <b>Default Payslip Name</b> that:</p> <ul style="list-style-type: none"> <li>• Is identical for all pay components to be aggregated.</li> <li>• Contains characters between square brackets.</li> </ul> <p>On the payslip, Workday displays the text between square brackets as the payslip name for aggregated pay components.</p> |

3. Specify the **Country** that you can use the deduction for.

When you leave this field blank:

- You can use the deduction in any country.
- Workday uses the currency of the pay group for calculations.
- Workday displays all options for the countries included in your tenant setup.

4. [Set Up Pay Component Eligibility](#) on page 236.

Define eligibility criteria to determine when Workday calculates the deduction. Example: Restrict the deduction to specific workers or run categories.

5. [Enter Earning or Deduction Calculations](#) on page 238.

Define the calculation that returns the final deduction values.

6. On the **Effective Dated** tab, consider these optional features, which require additional setup.

| Option                             | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
|------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Calculation Proration</b>       | Determines how to prorate the deduction when a midperiod event results in multiple subperiods.<br><br>See <a href="#">Set Up Proration Calculations</a> on page 277.                                                                                                                                                                                                                                                                                                                                                                                         |
| <b>Retro Calculation</b>           | Enables you to configure whether Workday recalculates the deduction during retroactive calculations.<br><br>See <a href="#">Steps: Set Up Retro Processing</a> on page 825.                                                                                                                                                                                                                                                                                                                                                                                  |
| <b>Multiple Work Jurisdictions</b> | For Payroll the U.S. This field determines whether to split the deduction calculation based on tax allocation percentages defined for different work jurisdictions.<br><br>See <a href="#">Set Up Ongoing Multiple Work Jurisdictions (USA)</a> on page 1160.                                                                                                                                                                                                                                                                                                |
| <b>Calculation Worktag</b>         | Enables you to tag the deduction with supplemental information such as company, position, location, or loan number. You can then reference the worktag to: <ul style="list-style-type: none"> <li>• Guide the calculation of pay components.</li> <li>• Associate pay component values for aggregation or accounting.</li> <li>• Limit values displayed for:               <ul style="list-style-type: none"> <li>• Accumulation.</li> <li>• Reporting</li> </ul> </li> </ul><br>See <a href="#">Concept: Worktags for Payroll Calculations</a> on page 293. |

7. (Optional) In the **Calculation Worktag** section, add worktags for supplemental information such as company, position, or location. As you complete the section, consider:

| Option                     | Description                                                                                                                 |
|----------------------------|-----------------------------------------------------------------------------------------------------------------------------|
| <b>Calculation Worktag</b> | When you configure a deduction with a calculation worktag, Workday requires you to enter the worktag also on payroll input. |

| Option               | Description                                                                                                                                                                                                                                                                                                                                                                                            |
|----------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                      | <p>For Payroll for Canada and the U.S., to create a position-based deduction for multiple jobs, or for U.S. international assignments, select the <i>Position</i> worktag.</p> <p>You can't change the calculation worktag after you:</p> <ul style="list-style-type: none"> <li>• Include the deduction in a payroll or retro calculation.</li> <li>• Add payroll input for the deduction.</li> </ul> |
| <b>Include Input</b> | Select this check box to resolve the deduction whenever Workday processes payroll input for the associated worktag.                                                                                                                                                                                                                                                                                    |

8. [Set Up Pay Component Related Calculations](#) on page 241.

Configure Workday to automatically calculate related calculations as part of a deduction.

9. (Optional) [Set Up Earning or Deduction Limits](#) on page 247.

Define limits for the deduction calculation.

10. [Add Earnings or Deductions to Pay Component Groups](#) on page 234.

Add deductions to a group of pay component groups, which you can then use in run categories or other configurations. Example: Define which pay components add to the gross pay.

11. On the **Non-Effective Dated** tab, consider these optional features.

| Option          | Description                                                                                                                                                                                                                                                                                                                                                                               |
|-----------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Benefits</b> | <p>Enables you to link deduction to a benefit plan.</p> <p>You can then set up enrollment event rules in HCM to specify when to begin or end payroll deductions based on the benefit plan.</p> <p>See:</p> <ul style="list-style-type: none"> <li>• <a href="#">Map Pay Components to Benefit Plans</a> on page 253.</li> <li>• <a href="#">Create Enrollment Event Rules</a>.</li> </ul> |
| <b>Costing</b>  | <p>Enables you to specify how to allocate all instances of a deduction for all employees across:</p> <ul style="list-style-type: none"> <li>• Cost centers.</li> <li>• Projects.</li> <li>• Grants.</li> <li>• Other organization types and locations.</li> </ul> <p>See <a href="#">Set Up Cost Allocations for Employee Deductions</a> on page 258.</p>                                 |
| <b>ROE</b>      | <p>For Payroll for Canada:</p> <p>You can use these fields to identify the allocation reporting period for ROE reporting.</p> <p><b>Allocation Reporting Period:</b> To include deduction amounts for all deductions that you configure with an EI Taxable pay component</p>                                                                                                              |

| Option | Description                                                                                                                                                                                                                                        |
|--------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|        | group, such as EI Taxable [CAN], select <i>Period Earned</i> or <i>Period Paid</i> .<br><br><b>Allocation Reporting Period Retro:</b> Workday automatically populates the reporting period with the same value as the Allocation Reporting Period. |

## Result

The deduction is available for use in payroll processing upon the effective date. You can also set it as a voluntary deduction for employee self-service.

## Next Steps

When you modify a pay component that you've processed in a retro calculation, either:

- Move the **No Retro Processing Prior To** date after the date of your edit.
- Create a new effective-dated snapshot for the earning.

## Create Pay Component Groups

### Prerequisites

To see which pay component groups Workday delivers, review the **View Pay Component Group** report.

Security: *Set Up: Payroll (Calculations - Payroll Specific)* domain in Core Payroll functional area.

### Context

A pay component group is a set of earnings, deductions, and pay component-related calculations that return an aggregate value for the period or subperiod.

Workday uses pay component groups for calculations and reporting. It delivers them for deductions, such as for taxes and withholding orders, and others for earnings, such as all earnings that add to gross pay and employer-paid benefits. You can also create your own pay component groups.

Pay component groups don't represent values over multiple periods or support subtraction. To calculate one or more pay component balances over time, use a pay balance instead. To perform subtraction, use a pay accumulation or arithmetic calculation instead.

**Note:** Pay component groups always filter by worktag. However, you can configure pay accumulations to not filter by worktags.

## Steps

1. Access the **Create Pay Component Group** task.
2. Complete the task:

| Option                                                      | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
|-------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Pay Component Group Code</b>                             | Enter a unique code to use when migrating pay component groups with object transporter.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| <b>Pay Component Usage</b>                                  | Select the types of pay components to include in the group.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| <b>Target Single Subperiod for a Prorated Pay Component</b> | <p>When a primary pay component references another pay component (Example: Base pay references holiday pay), you must select the <b>Target Single Subperiod for a Prorated Pay Component</b> check box on the <b>Create Pay Component Group</b> or the <b>Create Pay Accumulation</b> task. Selecting this check box sets the referenced pay component (Example: Holiday pay) to target a single subperiod of the prorated primary pay component.</p> <p>To prevent any negative impacts on retro calculations, you must create a new:</p> <ul style="list-style-type: none"> <li>• Pay component group and enable <b>Target Single Subperiod for a Prorated Pay Component</b>.</li> <li>• Effective dated snapshot for your primary pay component referencing the cloned pay component group.</li> </ul> |
| <b>Adds to Group</b>                                        | Select the pay components to include.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

The **Exceptions for Taxes** and **Exceptions for Withholding Orders** tabs don't apply to Payroll for Australia and France.

3. (Optional) For Payroll for Canada, the UK, and the U.S., on the **Exceptions for Taxes** tab, identify any earnings or deductions that are subject to a different tax treatment in specific tax jurisdictions.

Examples:

- In Canada, the pay in lieu of notice earning is subject to workers compensation in all provinces except British Columbia, Quebec, Saskatchewan, and Yukon. To create this rule for the *Workers Compensation Exempt* pay component group, select the 4 provinces in the **Payroll Tax Authority** field. Then select *Pay in Lieu of Notice [CAN]* in the **Include Pay Component(s)** field.
- In the United States, all states except Pennsylvania reduce state taxable income by the amount of 401(k) deductions. To create this rule for the *State Withholding Taxable Reduction [USA]* pay component group, select *Pennsylvania* as the **Payroll Tax Authority** and 401(k) deductions in the **Exclude Pay Component(s)** field.

4. (Optional) For Payroll for Canada, the UK, and the U.S., on the **Exceptions for Withholding Orders** tab, specify exceptions to the disposable earnings calculation for withholding orders.

Example: In the United States, all states except Louisiana reduce disposable earnings for withholding orders by medical expenses including dental and vision. To create this rule for the *Withholding Order (All): Medical Insurance [USA]* pay component group, select:

| Option               | Value            |
|----------------------|------------------|
| <b>Tax Authority</b> | <i>Louisiana</i> |

| Option                          | Value                                                                                                                                                                                                                                         |
|---------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Withholding Order Type</b>   | <p>Leave this field blank and Workday applies the exception to all types for this state where the type doesn't follow federal withholding.</p> <p>If you select specific types, Workday applies the exception to only the types selected.</p> |
| <b>Exclude Pay Component(s)</b> | <i>Dental and Vision</i>                                                                                                                                                                                                                      |

## Create Deduction Recipient

### Prerequisites

Set up the bank accounts to pay third-party deduction recipients.

Security: *Worker Data: Payroll (Income Withholding Orders)* domain in the Core Payroll functional area.

Security: (Optional) *Set Up: Payroll Third-Party Payments* domain in the Core Payroll functional area.

### Context

Record information for a third-party deduction recipient, including the:

- Recipient
- Contact information
- Method of payment
- Bank account details

Select a deduction recipient when creating:

- a withholding order or making an ad hoc payment (CAN, FRA, USA)
- a court order or making an ad hoc payment (UK)
- a withholding order (AUS)

**Note:** For Workday Payroll for Australia, Workday doesn't settle during the pay run process. Create a settlement run for payroll third-party payments to settle.

Workday delivers 2 web services that you can use when creating a custom integration for garnishment processing to or from a third-party application:

- *Put Deduction Recipients* loads deduction recipient information into Workday.
- *Get Deduction Recipients* retrieves information from Workday.

### Steps

1. Access the **Create Deduction Recipient** task.
2. Enter the recipient **Name**.

3. (Optional) For Payroll for the U.S., enter an **Alternate Deduction Recipient Name**.  
For national deduction recipients with multiple locations, such as the Internal Revenue Service (IRS), create an alternate deduction recipient to associate with a different address. When entering withholding orders, you can select the original or alternate deduction recipient and associated address.
4. (Optional) Enter an **External Entity ID** that helps you identify the recipient.  
Enter a payee ID for a withholding order.
5. (Optional) Define IDs for deduction recipients.  
The **Deduction Recipient ID** field displays when you've configured it on the **Edit Tenant Setup - Financials** task. Select an ID Definition from the **ID Generator for Deduction Recipient** field in the **Business Entity Sequence ID** section. Workday uses the ID during processing and with integrations.
6. Select the **Payment Type**.
7. Select the **Country** for the deduction recipient. This field isn't effective dated and is required, so you must update it when editing existing deduction recipients.
8. Add contact information for the recipient.  
Selecting the **Visibility > Public** check box makes the contact information visible in Workday.
9. Add a **Settlement Bank Account** and enter information for the receiving account.  
You can only have 1 active settlement bank account at a time.
10. (Optional) Select the **Inactive** option to deactivate a specific snapshot of a deduction recipient. To deactivate the entire deduction recipient, you must deactivate all snapshots.
11. (Optional) Select the **Enable Payroll Third-Party Payments** option to generate and settle payments for Involuntary Withholding Order or Court Order deductions. For more information, see: [Concept: Payroll Third-Party Payments](#).
12. (Optional) The **Always Separate Payment** option is enabled by default when you select **Enable Payroll Third-Party Payments**. This option generates a separate payment for each payable item in a settlement run. If the payable item and payment have a 1:1 relationship when you generate an electronic payment for an Income Withholding Order or Court Order deduction recipient, we recommend you keep this option enabled.
13. (Optional) Select a **Category**. These categories are configured through the **Maintain Payroll Third-Party Payments Categories** task. You can reference these categories in bank routing rules, settlement filtering, and the **Maintain Remittance Setup Rule** task. Workday generates both a Workday ID and a Reference ID for each payroll third-party payment category. You can customize the Reference ID, but not the Workday ID. You can use Reference IDs when running the Put Payroll Deduction Recipient and Put Bank Routing Rules web services. You can't remove a category while it's assigned to a deduction recipient or referenced in bank routing rules.

## Next Steps

Access the **View Deduction Recipient** report. To see the **Deduction Recipient ID**, select **Integration IDs > View IDs** from the related actions menu of the deduction recipient.

When creating or editing a deduction recipient, you can view future, current, and previous deduction recipient snapshots. The section under the **Effective Dated Details** header represents the deduction recipient snapshot. Snapshots enable you to:

- Enter an effective date when creating or editing a deduction recipient.
- View the configuration as of a specific effective date of a deduction recipient.
- Make configuration changes as of a specific date without impacting prior configurations.
- Deactivate a deduction recipient.

You can add rows to a deduction recipient snapshot only if they're dated after the current effective snapshot. When you add a new snapshot, Workday copies the configuration of the prior snapshot to the newly added snapshot.

To remove a deduction recipient, access the **Delete Deduction Recipient** task. You can only delete deduction recipients that have never been in use.

**Add Earnings or Deductions to Pay Component Groups****Prerequisites**

Security: *Set Up: Payroll (Calculations - Payroll Specific)* domain in *Core Payroll* functional area.

**Context**

Each group sums the values of the earnings or deductions that it contains. Adding frequently used pay components to groups is convenient for when you're creating payslips and other reports. Some commonly used groups are:

For Payroll for Australia:

- *AUS Adds to Gross [AUS]*
- *AUS PAYG Taxable Wages [AUS]*
- *AUS Post Tax Deductions [AUS]*
- *AUS Statutory Taxes (EE) [AUS]*
- *AUS Superannuation Employer Contributions [AUS]*

For Payroll for Canada, the UK, and the U.S.:

- *Adds to Gross*
- *Base Pay*
- *Employee Cost (Pre-Tax)*
- *Employee Cost (Post-Tax)*

For Payroll for France:

- *FRA Adds to Gross [FRA]*
- *FRA Subtracts from Gross [FRA]*
- *FRA Statutory Taxes EE - Deductible from Tax [FRA]*
- *FRA Statutory Taxes EE - Submitted to Tax [FRA]*
- *FRA Statutory Taxes ER*

**Steps**

1. Access the **Create Earning** or **Create Deduction** task.
2. In the **Groups** field on the **Non-Effective Dated** tab, select one or more groups to add the pay component to, or select *Create*.

For Payroll for Canada, you can only configure 1 Canada Revenue Agency income tax pay component group for an earning.

**Note:** To ensure that Workday calculates Health Tax Contributions for Quebec workers correctly when pension amounts are present, configure applicable RPP deductions with the pay component group *Other Quebec Deductions (F2) [CAN]*.

**Result**

Each selected group sums the values of the earnings or deductions it contains during payroll processing.

**Example**

You can add these groups to earnings:

For Payroll for Australia:

- *AUS Adds to Gross [AUS]*
- *AUS PAYG Taxable Wages [AUS]*
- *Method B (ii) Taxable Wages [AUS]*
- *AUS Pre Tax Deductions [AUS]*
- *AUS Post Tax Deductions [AUS]*
- *AUS Ordinary Time Earnings [AUS]*

For Payroll for Canada:

- *Adds to Gross [CAN USA]*
- *CNESST Taxable [CAN]*
- *Compensation Tax Taxable [CAN]*
- *CPP Taxable [CAN]*
- *EI Taxable [CAN]*
- *Income Taxable (Withhold Taxes) [CAN]*
- *Income Taxable T4A-RCA [CAN]*
- *Labour-Sponsored Funds (LCF/LCP) [CAN]*
- *Lump Sum Taxable T4A-RCA [CAN]*
- *Manitoba Health Taxable [CAN]*
- *Newfoundland and Labrador Health Taxable [CAN]*
- *ONEHT Taxable [CAN]*
- *Pensionable Wages [CAN]*
- *Pension Income RL-2 [CAN]*
- *Quebec Lump Sum Taxable RL-2*
- *Quebec Taxable (Withhold Taxes) [CAN]*
- *Vacation Earnings [CAN]*
- *WSDRF Taxable [CAN]*
- *QPIP Taxable [CAN]*
- *QHSF Taxable [CAN]*
- *Withholding Order (All): Periodic Earnings Canada [CAN]*

For Payroll for the U.S.:

- *Adds to Gross [CAN USA]*
- *Federal Taxable (Withhold Taxes) [USA]*
- *FICA Taxable [USA]*
- *FUI Taxable [USA]*
- *FLSA Wages [USA]*
- *SUI Taxable [USA]*
- *State Withholding Taxable (Withholding Taxes) [USA]*
- *Local Withholding Taxable (Withholding Taxes) [USA]*
- *401(k) Earnings [USA]*
- *Withholding Orders (All): Periodic Earnings [USA]*

## Set Up Pay Component Eligibility

### Prerequisites

Add the pay component to a pay component group.

Security: *Set Up: Payroll (Calculations - Payroll Specific)* domain in the Core Payroll functional area.

### Context

Using precise criteria can reduce the time to calculate payroll. When you don't configure pay component eligibility, Workday calculates the pay component for every:

- Run category.
- Pay group.
- Worker.
- Pay run.

When workers aren't eligible for a pay component, their pay results can display a zero value for that component.

**Note:** Changing the eligibility criteria of pay components that are part of payroll results can affect retro pay calculations. For a pay component in a prior period, Workday applies the current worker eligibility criteria to the worker's data on the retroactive event effective date.

### Steps

1. Access the **Create Earning** or **Create Deduction** task.
2. As you complete the **Criteria** section of the **Effective Dated** tab, consider:

| Option                              | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
|-------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Run Category Eligibility</b>     | <p>When you use more than 1 run category and the pay component applies to only some of them, select those categories.</p> <p>When the <b>Country</b> field on the pay component is:</p> <ul style="list-style-type: none"> <li>• Empty, select any run category.</li> <li>• Populated, select run categories associated with no country, or with at least 1 of the listed countries.</li> </ul>                                                                                                                                                                                                                                                                           |
| <b>Pay Group Detail Eligibility</b> | The pay component only applies to workers in that pay group.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| <b>Worker Eligibility</b>           | <p>You can see all available calculations on these reports:</p> <ul style="list-style-type: none"> <li>• <b>All Instance Set Comparison Calculations</b></li> <li>• <b>All Instance Value Calculations</b></li> <li>• <b>All Logic Calculations</b></li> <li>• <b>All Value Comparison Calculations</b></li> </ul> <p>To create your own worker eligibility rules, select <i>Create</i> from the <b>Worker Eligibility</b> prompt and 1 of these calculations:</p> <ul style="list-style-type: none"> <li>• <i>Create Instance Set Comparison Calculation</i></li> <li>• <i>Create Logic Calculation</i></li> <li>• <i>Create Value Comparison Calculation</i></li> </ul> |

| Option            | Description                                                                                                                                                                                                                                                                                                                            |
|-------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                   | When you add the criteria in 1 row, workers must meet all conditions of that row. When you add criteria in multiple rows, workers must meet all conditions of at least 1 row.                                                                                                                                                          |
| <b>Scheduling</b> | <p>You can control when a pay component resolves, such as:</p> <ul style="list-style-type: none"> <li>On the first pay period of the month by selecting <i>Scheduling: First Period of Month (based on Payment Date)</i>.</li> <li>When you enter payroll input by selecting <i>Payroll Input Exists for Pay Component</i>.</li> </ul> |

### Example

These examples illustrate how Workday applies the **Worker Eligibility** field.

#### Workers Meet All Conditions (CAN, UK, USA)

You give a worker a midperiod promotion and a raise. The worker contributes to their retirement plan, but you don't configure the retirement deduction for proration. To prevent the deduction from resolving twice for the pay period, select these conditions on the same row:

- Benefits: Benefit Plan Percentage Exists (and <> 0)*
- Pay Component Not Previously Paid in Period*

#### Workers Meet 1 Condition

You want to resolve an earning only for workers with an hourly pay rate type or a payroll input. To do so, select these conditions on each row:

- Pay Rate Type as of Period Start Date = Hourly*
- Pay Rate Type as of Period End Date = Hourly*
- Payroll Input Exists for Pay Component*

#### Workers Meet 1 or More Conditions

You want to exclude workers hired and terminated midperiod, and only process workers that have either an:

- Hourly pay rate type as of the period begin date, and payroll input.
- Hourly pay rate type as of the period end date, and payroll input.

To do so, select these conditions per row:

- Pay Rate Type as of Period Start Date = Hourly and Payroll Input Exists for Pay Component*
- Pay Rate Type as of Period End Date = Hourly and Payroll Input Exists for Pay Component*

### Next Steps

Enter earnings and deductions calculations.

**Enter Earning or Deduction Calculations****Prerequisites**

- Set up pay component eligibility on earnings or deductions.
- Security: *Set Up: Payroll (Calculations - Payroll Specific)* domain in the Core Payroll functional area.

**Context**

You can create payroll calculations that return the final earning or deduction values on administrative payroll results and worker payslips.

**Steps**

1. Access the **Create Earning** or **Create Deduction** task.
2. In the **Calculation Details** section of the **Effective Dated** tab, consider:

| Option                       | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |

[Steps: Set Up Payroll Input](#) on page 583

## Create Related Calculations

### Prerequisites

- Access the **All Related Calculations** report to determine whether Workday delivers the related calculation you need.
- Security:
  - Set Up: Calculations - Generic* domain in the Core Payroll functional area.
  - Set Up: Time Off (Calculations - Generic)* domain in the Time Off and Leave functional area.

### Context

Related calculations help define how Workday calculates the value of an earning or deduction. They pull in values that your company commonly uses for more complex calculations. You can use Workday-owned related calculations, such as *Rate* and *Amount*, or you can create your own.

When you associate a related calculation with an earning or deduction, Workday creates a pay component related calculation. You can use the same related calculation in multiple earnings and deductions.

You can also assign non-numeric data types to your related calculations, including text, date, and boolean.

### Steps

- Access the **Create Related Calculation** task.
- Enter values in these fields:
  - Name**
  - Code**
  - Category**
  - Comment**, if applicable

3. (Optional) If you want to incorporate non-numeric data in your related calculation, use the **Input Value Type** tab to assign 1 of the following input value types to your related calculation:

- *Boolean*
- *Date*
- *Numeric*
- *Text*

This determines the type of related calculation you can enter through payroll input. When creating or editing a related calculation, you can enter a default value on the **Value** tab that is the same data type as the input value type. Note that if you select *Text* as your input value type, you must also add an input value lookup table.

4. As you complete the **Value** tab, consider:

| Option                                                                                             | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
|----------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Currency Related</b>                                                                            | Enables currency conversion for payroll input that uses this related calculation. When you enter payroll input in a currency other than the pay group currency, Workday converts the value to the pay group currency.                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| <b>Prorate Using Days Worked</b><br><b>Prorate Using Calendar Days</b><br><b>None of the above</b> | <p>Specify how to prorate the value of a pay component related calculation that uses this related calculation.</p> <p>Ensure that the proration method is consistent with the proration method for the pay component.</p> <p>For related calculations on earnings and deductions with <b>Prorate Using Annual Working Days</b> selected, select either:</p> <ul style="list-style-type: none"> <li>• <b>Prorate Using Days Worked</b></li> <li>• <b>Prorate Using Calendar Days</b></li> </ul> <p>For Payroll for Australia, if you select <b>None of the above</b>, you can set up proration when you map calculations to pay components, based on the individual calculations.</p> |

5. On the **Retro Adjustment Type** tab, select **Bring Forward Difference** to forward any differences found during a retro calculation to the current period. This doesn't apply to rates.

When you leave the **Bring Forward Difference** check box clear, Workday pulls the full amount of the related calculation for the worker into the current period. Example: The full amount of base pay or time off hours.

6. For the Payroll for the U.S., on the **Multiple Work Jurisdictions** tab, select **Do Not Apply Percentage Splits** to prevent Workday from splitting the calculation for multiple work jurisdictions. When left clear, Workday splits the related calculation according to the percentages defined in the **Tax Allocations** tab on the **Add Worker US Tax Elections** task.

Applies when you use the related calculation to define:

- A taxable earning.
- An imputed earning.
- A pretax deduction.

When you select **Do Not Apply Percentage Splits**, Workday applies the setting by default to all pay component related calculations that use the related calculation. You can override this setting for a

specific pay component related calculation in the **Related Calculations** section on the **Create Earning** or **Create Deduction** task.

A **Do Not Apply Percentage Splits** check box is also available for pay components. Consider when to split the entire pay component versus the pay component related calculation.

7. (Optional) Select the **Hide on Retro Results?** setting if you don't want the pay component related calculation to display on retro results.

### Next Steps

Add the related calculation to the definition of a pay component.

## Set Up Pay Component Related Calculations

### Prerequisites

- Create an earning or deduction.
- Create a related calculation or identify an existing one to use.
- Security: *Set Up: Payroll (Calculations - Payroll Specific)* domain in the Core Payroll functional area.

### Context

You can configure Workday to automatically calculate related calculations as part of an earning or deduction. When you add a related calculation to an earning or deduction definition, Workday creates a pay component related calculation (PCRC).

Example: The *Hourly Pay* earning uses a calculation of *Hours (unprorated) \* Rate*, where *Hours (unprorated)* and *Rate* are related calculations. When you assign the related calculations to the earning, Workday forms 2 new PCRCs:

- *Hourly Pay - Hours (unprorated)*
- *Hourly Pay - Rate*

**Note:** To display hours on the **Actuals** tab of a worker's pay result, add the *General Ledger: Hours* pay component group to any *Hours* related calculation.

When the pay component uses *Position* as a calculation worktag, Workday resolves the pay component separately for each valid position. To include positions the worker no longer holds, Workday recommends using a pay accumulation as the related calculation. Note: While pay component groups always filter by worktag, you can configure pay accumulations not to filter by worktag.

You can also use non-numeric related calculations in pay component calculations. You can choose from:

- Date type related calculations that return dates.
- Numeric, Boolean, and text type related calculations that return numeric values.

You can't change the input value type of a related calculation once the related calculation has been used in a pay component.

For Payroll for the U.S., you can't use non-numeric related calculations for FLSA earning amounts.

## Steps

1. Access the **Edit Earning** or **Edit Deduction** task.
2. In the **Related Calculations** grid on the **Effective Dated** tab, add a row for each pay component related calculation. Complete the **Related Calculations** grid:

| Option                      | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
|-----------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Related Calculation</b>  | <p>Select a related calculation to calculate as part of the pay component. Example: Select <i>Hours</i> and <i>Rate</i> for an <i>Hours * Rate</i> earning calculation.</p> <p>If you select a Workday-owned calculation, ensure that it meets your requirements for proration, retro processing, and other conditions.</p> <p>If you configure proration for the related calculation, either by days worked or calendar days, and link it to a pay component with proration exceptions, the <b>Pay Components Not Subject to Proration (Exception)</b> field displays when you view the pay component related calculation. You can't configure this field directly, either in <b>Edit Earning</b> or <b>Edit Deduction</b>.</p> <p>(Optional) If you select a related calculation that you use to report hours, select the <b>Aggregate</b> check box. Workday then combines hours from pay inputs into a consolidated result line, improving pay calculation performance and enhancing pay result readability.</p> |
| <b>Default Calculation</b>  | <p>Displays the default calculation defined on the <b>Create Related Calculation</b> task.</p> <p>When the default calculation is <i>Payroll Input</i>, select the <b>Input Allowed?</b> check box on the <b>Related Calculations</b> grid.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| <b>Override Calculation</b> | <p>(Optional) Override the default calculation with a different calculation or amount. Example: You can select <i>Timesheet: Approved Hours for Earning</i> to retrieve the value for <i>Hours (unprorated)</i> from Workday Time Tracking.</p> <p>If you select <i>Payroll Input</i>, also select the <b>Input Allowed?</b> check box on the <b>Related Calculations</b> grid.</p> <p>If you are using non-numeric data in your related calculation (Boolean, date, or text), you must enter an override calculation for a related calculation that is the same data type as the input value type of the related calculation.</p> <p>Note: Override and default calculations for non-numeric related calculations don't display on payroll results, but are still used to calculate pay component amounts.</p>                                                                                                                                                                                                      |

3. (Optional) Complete the **Limit Details** section of the **Related Calculations** grid:

| Option                       | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
|------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Value</b>                 | Select a calculation, balance, or other element that serves as a limit for the value of the PCRC.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| <b>Based On</b>              | <p>When left blank, Workday compares the value of the PCRC against the limit value.</p> <p>You can also compare an aggregated amount, including the current PCRC, against the limit value. Select a pay accumulation or select <b>Create &gt; Create Pay Accumulation</b> from the prompt.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| <b>Include Current Value</b> | <p>Applies to limits based on pay accumulations. Select which PCRCs to process before the PCRC of the current row when evaluating a limit.</p> <p>On the row for:</p> <ul style="list-style-type: none"> <li>The PCRC to take first, leave the <b>Include Current Value</b> field blank.</li> <li>The PCRC to take second, select the first PCRC.</li> <li>The PCRCs to take third, select the first and second PCRCs.</li> </ul> <p>Example: You can configure the order in which Workday evaluates a limit based on the sum of PCRCs A, B, and C. If you want Workday to resolve A first, then B, and finally C, then:</p> <ul style="list-style-type: none"> <li>For the related calculation A, leave the <b>Include Current Value</b> field blank.</li> <li>For the related calculation B, select A from the <b>Include Current Value</b> prompt.</li> <li>For the related calculation C, select A and B from the <b>Include Current Value</b> prompt.</li> </ul> |

4. (Optional) If you want to limit how a related calculation resolves for a worktag, complete the **Limit Filter Worktags** section of the **Related Calculations** grid:

| Option                                                 | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
|--------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Default Filter Worktags</b>                         | <p>When you assign a worktag limit to a related calculation, you can apply the limit at a worktag value level for a worktag dimension.</p> <p>Example: You create a related calculation tracking the amount paid toward the original amount requested for a 401k loan. You also add 2 payroll inputs for the 401k loan deduction specifying loan numbers 1 and 2. When you assign the 401k Loan number custom worktag dimension as a default filter worktag, the amount paid toward the loans is tracked separately by loan number.</p> |
| <b>Condition</b><br><b>Conditional Filter Worktags</b> | Use these fields to configure a set of worktags for the limit, different from the worktags you configured as default.                                                                                                                                                                                                                                                                                                                                                                                                                   |

| Option | Description                                                                   |
|--------|-------------------------------------------------------------------------------|
|        | These worktags override the default if the conditions you configure are true. |

5. Complete the **Results** section of the **Related Calculations** grid:

| Option                                        | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
|-----------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Do Not Store / Do Not Store if Zero</b>    | <p>Select whether to store the value of the PCRC with each calculation. Select:</p> <ul style="list-style-type: none"> <li><i>Do Not Store</i> to improve performance when the PCRC is only used in an intermediary calculation.</li> <li><i>Do Not Store if Zero</i> or <i>None of the above</i> to store the PCRC calculated value for later use. You can then display the calculated value, report on it, or make it available to other calculations.</li> </ul> <p>Workday doesn't process retro differences that you generate for the PCRC in the target period when:</p> <ul style="list-style-type: none"> <li>You select <i>Do Not Store if Zero</i>.</li> <li>The pay component amount is zero.</li> </ul> <p>To process retro on the PCRC in the target period regardless of the pay component value, select <i>None of the above</i>.</p> <p>When you select <b>Input Allowed?</b>, Workday stores payroll input for the PCRC regardless of your selection.</p> |

|------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                          | <p>To use the <b>Default Calculation</b> setting from the related calculation, select <i>None of the Above</i> or select an option to override it.</p> <p>The <i>Do Not Apply</i> option is available for pay components and for individual PCRCs. Determine whether to split the entire pay component or the PCRC.</p>                                                                                                                       |
| <b>Retro Adjustment Type</b>             | <p>Displays when you select <b>Bring Forward Difference</b> on the <b>Create Related Calculation</b> task.</p> <p>Indicates whether the <b>Run Retro Pay Calculation</b> task forwards the difference between the original value and the recalculated value to the current period. When clear, Workday uses the full amount of the recalculated pay component related calculation in the current period instead of the retro differences.</p> |
| <b>Pay Component Related Calculation</b> | Displays the PCRC that results from defining the related calculation for the pay component.                                                                                                                                                                                                                                                                                                                                                   |

## Result

You can:

- Select pay component related calculations in pay component groups, pay accumulations, and pay balances.
- Display pay component related calculations on payroll result reports and employee payslips.

When you run a payroll calculation, Workday calculates the pay component related calculations.

## Set Up Earning or Deduction Limits

### Prerequisites

Map the pay components to a plan or other source for the value that the earning or deduction is calculating:

- Compensation.
- Time off.
- Time tracking.
- Benefits.
- Payroll input.

To set multiple limits on pay components, create a pay accumulation that sums the limited pay components.

Security: *Set Up: Payroll (Calculations - Payroll Specific)* domain in the Core Payroll functional area.

### Context

You can define 1 or more limits for an earning or deduction.

For position-based earnings or deductions (when *Position* populates the **Calculation Worktag** field), the limits apply to each position.

When you use the current period as the balance period, Workday applies all amounts towards the period limit. Example: You configure a limit on the employer match percentage for retirement plans. When you run payroll, some workers reach that limit in on-cycle payroll. Then, if you run on-demand bonus payments for those workers, Workday doesn't process further employer contributions. Conversely, if you run on-demand payments first for the workers, Workday applies the limit on those payments before on-cycle payroll.

### Steps

1. Access the **Limits** section of the **Effective Dated** tab on the **Create Earning** or **Create Deduction** task.
2. As you complete the task, consider:

| Option                       | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
|------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Value</b>                 | The limit that applies to the pay component.                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| <b>Balance Period</b>        | The period to which the limit applies. Example: A month-to-date (MTD) or year-to-date (YTD) balance period.                                                                                                                                                                                                                                                                                                                                                                                          |
| <b>Based On</b>              | <p>To limit only the current pay component itself, leave this field blank. Workday automatically uses the value of the current pay component.</p> <p>To limit the combined value of multiple pay components, including the current one, select the pay accumulation that sums them, or select <b>Create &gt; Create Pay Accumulation</b> from the prompt.</p> <p>You can't base a limit on a pay balance. Use the <b>Balance Period</b> field to identify the period to which the limit applies.</p> |
| <b>Include Current Value</b> | Use this field only when the limit applies to a pay accumulation. It tells Workday the order in                                                                                                                                                                                                                                                                                                                                                                                                      |

| Option | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
|--------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|        | <p>which to resolve the pay components as the pay accumulation nears its limit. Workday considers the values of the pay components only on the current pay result.</p> <p>You can list multiple pay components in any order. Workday examines all of the pay components in the pay accumulation, and processes the one where <b>Include Current Value</b> is empty first. It then examines the remaining pay components and determines which one has no pay components left to process before it, and processes that one, and so forth. To control the order to take the pay components when the accumulation reaches the limit:</p> <ul style="list-style-type: none"> <li>• On the pay component to take first, leave the <b>Include Current Value</b> field blank.</li> <li>• On the pay component to take second, select the first pay component.</li> <li>• On the pay component to take third, select the first and second pay components.</li> </ul> <p>Example: The limit is based on a pay accumulation that sums the year-to-date values of pay components A and B. You want Workday to resolve A first:</p> <ul style="list-style-type: none"> <li>• On A, don't select a value.</li> <li>• On B, select A.</li> </ul> <p>If the accumulation includes a third pay component, and you want Workday to resolve A and B first:</p> <ul style="list-style-type: none"> <li>• On A, don't select a value.</li> <li>• On B, select A.</li> <li>• On C, select A and B.</li> </ul> <p>Workday processes:</p> <ul style="list-style-type: none"> <li>• A first, because it's empty.</li> <li>• B second, after processing A.</li> <li>• C third, after processing A and B.</li> </ul> |

## Override Earning or Deduction Limits for Workers

### Prerequisites

Define a limit for an earning or deduction.

Security: *Worker Data: Payroll (Limit Overrides)* domain in the Core Payroll functional area.

## Context

You can configure Workday to either:

- Ignore a defined limit for a pay component for a given worker.
- Apply a different limit for a pay component for a given worker.

You can use these web services to mass load or retrieve limit overrides:

- *Get Payroll Limit Overrides*
- *Put Payroll Limit Override*

## Steps

1. Access the **Maintain Payroll Limit Overrides for Worker** task.
2. As you complete the task, consider:

| Option                          | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
|---------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Ignore Limits for</b>        | Select 1 or more earnings, deductions, or pay component related calculations.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| <b>Position</b>                 | For position based pay components, the limits apply to both the worker and their position. If a worker moves positions, you must reset the limit override value accordingly.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| <b>Use Limit Override Value</b> | Select the check box to enter a limit that differs from the limit defined for the pay component.<br><br>Clear the check box to apply no limit to the worker.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| <b>Limit Override Value</b>     | If you selected <b>Use Limit Override Value</b> , enter the positive or negative limit to apply for the worker.<br><br>Workday only overrides the <b>Value</b> of the limit defined on the <b>Create Earning</b> or <b>Create Deduction</b> task. Workday still calculates the value to compare against the limit, using these fields on the <b>Limits</b> section of the pay component: <ul style="list-style-type: none"> <li>• <b>Balance Period</b></li> <li>• <b>Based on</b></li> <li>• <b>Include Current Value</b></li> </ul> When you override a limit for a pay component with multiple limits, the override replaces all limit values on the pay component. In this case, you can alternatively create a memo pay component to add to a pay accumulation for the limit. Adjust the memo pay component amount to calculate the balance of the amount that is already taken. |

## Result

You can see the settings on the **View Payroll Limit Overrides for Worker** report.

## Example

For Payroll for Canada, France, the UK, and the U.S.:

You hire Paul midyear. A retirement plan deduction has an annual limit of 17,500 and Paul has had deductions taken through his previous company.

To prevent Paul from exceeding the annual limit, calculate a new limit for him by subtracting their year-to-date deduction amount from 17,500. Enter the result as Paul's **Limit Override Value**. Set the:

- **Start Period** to the first period to process with Workday Payroll.
- **End Period** to the last period of the year.

## Override Withholding Order Priority

### Prerequisites

Record multiple withholding orders for a worker.

Security: *Worker Data: Payroll (Income Withholding Orders)* domain in the Core Payroll functional area.

### Context

This topic provides instructions for withholding order priority for these countries:

- Payroll for Canada
- Payroll for France
- Payroll for the U.S.

You can view the processing priorities for a worker's withholding orders on the **Withholding Orders for Worker** report.

For Payroll for Canada, when a worker has multiple income withholding orders (IWOs), Workday assigns a processing priority to each order based on the rules of the issuing agencies. Workday delivers this priority:

- 200 - Federal Tax Levy
- 201 - Province Tax Levy
- 300 - Family Maintenance Order
- 400 - Garnishment Order
- 500 - Wage Assignment Order

For Payroll for the U.S., when a worker has multiple IWOs, Workday assigns a processing priority to each order based on the rules of the issuing agencies. Workday delivers this priority:

- 200 - Support
- 201 - Lump Sum
- 300 - Bankruptcy
- 400 - Federal Tax Levy
- 500 - Creditor Garnishment
- 500 - Federal Administrative Wage Assignment
- 500 - State Tax Levy
- 500 - Student Loan
- 600 - Wage Assignment

For Payroll for the U.S., if 2 IWOs have the same priority, the order date determines the priority. However, support orders always have the highest priority (200), even when a worker has multiple orders. You can override the default priority order assigned to any order type except support orders.

### Steps

1. Access the **Withholding Orders for Worker** report.
2. Select **Withholding Order > Override Priority** from the related actions menu of an IWO.  
The **Override Priority Withholding Order** task displays.

3. Enter a number in the **Priority Override** field to replace the **Priority Default**.

For Payroll for Canada and the U.S., the lower the number, the higher the priority.

[Steps: Set Up Withholding Orders \(USA\)](#) on page 1241

[Steps: Set Up Withholding Orders \(CAN\)](#) on page 1323

## Enter Pay Component Calculations Based on Absence Management Totals

#### Prerequisites

- Set up time off plans and time off codes, and identify the absence component related calculation for the time off codes. See [Steps: Set Up Time Off Plans](#).
- Define the pay component calculation. See [Concept: Payroll Calculations](#) on page 301.
- Security: *Set Up: Payroll (Calculations - Payroll Specific)* domain in the Core Payroll functional area.

#### Context

You can use time off totals from Absence Management as a basis for calculating:

- Earnings (AUS, CAN, UK, USA).
- Pay components (FRA).

Example: Use totals for the *Paid Vacation* time off in an earning calculation.

#### Steps

- For Payroll for Australia, Canada, the UK, and the U.S., access the **Create Earning** task.  
For Payroll for France, access the **Create Earning** or **Create Deduction** task.
- Complete the **Calculation Details** section of the **Effective Dated** tab:

| Option                | Description                                                                                                                                                                                                   |
|-----------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Calculation           | Select a rule for calculating time off with an operand that refers to an amount of time. Example: <i>Time Off Paid (Units) * Rate</i> .                                                                       |
| Input Amount Allowed? | (Optional) For earnings that don't come from Workday Time Tracking or a time off plan, configure the earning to allow payroll input. See <a href="#">Enter Earning or Deduction Calculations</a> on page 238. |

## Map Earnings to Compensation Elements

### Prerequisites

Create an earning, including any relevant related calculations in the **Calculation Details** section. See [Steps: Create Earnings](#).

[Create Compensation Elements](#), such as:

- Bonus
- Commission
- Hourly
- Salary
- Superannuation (AUS)

Security: *Set Up: Payroll (Calculations - Payroll Specific)* domain in the Core Payroll functional area.

### Context

You can configure Workday to process midperiod events using proration by mapping an earning to a compensation element (like a bonus or commission). Proration divides a payroll period into subperiods with separate payroll calculations before and after the event. Mapping the applicable earning to a compensation element ensures Workday retrieves the correct rates, percentages, and amounts to process the event.

Example: A worker receives a mid-period raise. You configure the relevant earning that includes the worker's pay to include **Compensation Change** to account for the update in pay.

### Steps

1. Access the **Create Earning** task.
2. Complete the task:

| Option                                        | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
|-----------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Events Causing Pay Component Proration</b> | For earnings with a defined proration method and a proration calculation.<br><br>Select <b>Compensation Change</b> to prorate the earning amount in response to compensation changes for a worker.                                                                                                                                                                                                                                                                                                                                                                         |
| <b>Compensation Element</b>                   | Select 1 or more compensation elements.<br><br><b>Note:</b> For Payroll for the U.S., set up all earnings attached to a specific compensation element the same way for FLSA. Make sure that you don't use an FLSA-specific and a non-FLSA specific earning for the same compensation element. Example: 2 bonus earnings have the compensation element <i>Spot Bonus</i> , but 1 is FLSA-specific and the other is non-FLSA specific. This configuration causes Workday to process non-FLSA earnings by FLSA periods, even though this earning isn't subject to FLSA wages. |

**Map Earnings to Time Tracking Totals****Prerequisites**

- For earnings that refer to time reported in Workday Time Tracking, [Create Time Calculation Tags](#).
- Define the pay component calculation. See [Steps: Set Up Time Off Plans](#).
- Security: *Set up: Payroll (Calculations - Payroll Specific)* domain in the Core Payroll functional area.

**Context**

You can use time off entered in time tracking as a component in earning calculations.

**Steps**

1. Access the **Create Earning** task.
2. Access the **Time** section of the **Effective Dated** tab.
3. In the **Time Calculation Tag** field, specify which hours to retrieve.

Examples:

For Payroll for Australia, to have the *Ordinary Hourly Pay* earning pay time blocks tagged with the *Regular* time calculation tag, select *Regular*.

For Payroll for Canada, the UK, and the U.S., to have the *Hourly Pay* earning pay time blocks tagged with the *Regular* time calculation tag, select *Regular*.

For Payroll for France, to have the *Complementary hours* earning pay time blocks tagged with the *Regular* time calculation tag, select *Regular*.

| <b>Benefit Plan</b>                     | <p>Select an employer-paid benefit, such as <i>Health Care</i> or <i>Insurance Plans</i>.</p> <p>For Payroll for Canada and the U.S., for multiple benefit plans with different limits, Workday recommends that you don't map the benefit plans to the same earning or deduction.</p> <p>For Payroll for France, to ensure correct DSN reporting, when setting up health care plans, don't map the same deduction to more than 1 health care benefit plan reported as prevoyance in a DSN.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| <b>Benefit Group Coverage</b>           | <p>For earnings only.</p> <p>Select the group that the plan covers.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| <b>Coverage/Cost as of Payment Date</b> | <p>When cleared, Workday takes the deduction if the pay period end date is on or after the deduction begin date.</p> <p>When selected, Workday takes the deduction if the payment date is on or after the deduction begin date. Workday doesn't consider in which pay period the deduction begins.</p> <p>Workday doesn't prorate a worker's benefits when they change midperiod.</p> <p>Example: For weekly or bi-weekly pay periods that cross benefit plan years at the end of the year, use the check box to determine whether you use rates from 1 year or the next. In this way, you can prevent issues caused by using deduction rates from the wrong year.</p> <p>The check box applies to the deduction all year round. Don't select or clear the setting just to affect a cross-year result.</p> <p>Because there's no effective date, if the deduction is configured to recalculate in retro, changing the setting part way through a year can adversely affect your retro calculations.</p> |

3. (Optional) For Payroll for France, on the **Effective Dated** tab, in the **Worker Eligibility** grid, add *Employee Enrolled in Benefit Plan as of Sub Period End Date* when you need to calculate different earnings or deductions for each subperiod.

For retro benefits, use the *Worker's Health Care Coverage Target as of Sub Period End Date (Benefits)* report field in the **Create Lookup Table** task to calculate benefits contributions by subperiod when a benefit plan changes during the pay period. See [Example: Create Advanced Lookup Tables for Benefit Rates \(FRA\)](#) on page 255.

**Next Steps**

[Set Up Cost Allocations for Earnings](#) on page 256

For Payroll for France, when you store benefit rates in an advanced lookup table, configure the deduction calculation to use a lookup calculation for the lookup table containing the rates.

#### Examples

[Steps: Set Up Benefits](#)

## Example: Create Advanced Lookup Tables for Benefit Rates (FRA)

This example illustrates how to store additional benefit rates in an advanced lookup table.

### Context

Julie the payroll administrator needs to create payroll calculations based on benefit rates for a health care coverage plan. Because each health care coverage target has both a flat amount and a rate, Julie needs to store the rates in an advanced lookup table.

### Prerequisites

- Define 2 health care coverage targets: *Employee - Basic Option* and *Employee - Premium Option*.
- Create a health care benefit plan.

Security:

- *Set Up: Payroll (Calculations - Generic)* domain in the Core Payroll functional area.
- *Set Up: Time Off (Calculations - Generic)* domain in the Time Off and Leave functional area.

### Steps

1. Access the **Create Lookup Table** task.
2. Select **Advanced Lookup Table - Report Field Search Criteria**.
3. Complete these options:

| Option                              | Value                                                      |
|-------------------------------------|------------------------------------------------------------|
| <b>Name</b>                         | Health Care Coverage Rates                                 |
| <b>Category</b>                     | <i>Payroll</i>                                             |
| <b>Report Field Search Criteria</b> | <i>Worker's Health Care Coverage Target (FRA Benefits)</i> |
| <b>Effective Date</b>               | Enter today's date.                                        |

4. Click **OK** to create the lookup table.
5. Access the **Lookup Tables > Column Labels** task from the related actions menu of the lookup table.  
Add these rows:

| Display on Page | Display                       |
|-----------------|-------------------------------|
| Selected        | EE Contribution - Flat Amount |
| Selected        | ER Contribution - Flat Amount |
| Selected        | EE Contribution - Rate        |
| Selected        | ER Contribution - Rate        |

6. Access the **Edit Lookup Tables** task to return to the *Health Care Coverage Rates* lookup table.

In the **Table Data** tab, add these rows:

| Search Value                     | EE Contribution - Flat Amount | ER -Contribution - Flat Amount | EE Contribution - Rate | ER Contribution - Rate |
|----------------------------------|-------------------------------|--------------------------------|------------------------|------------------------|
| <i>Employee - Basic Option</i>   | 35                            | 40                             | .01                    | .02                    |
| <i>Employee - Premium Option</i> | 35                            | 40                             | .015                   | .03                    |

7. Access the **Create Lookup Calculation** task.

a) Enter these values:

- **Name:** Health rate - EE Flat Amount
- **Category:** *Payroll*

b) In the **Calculation** grid, add this row:

| Lookup Table                      | Column                               | Period Date Indicator        |
|-----------------------------------|--------------------------------------|------------------------------|
| <i>Health Care Coverage Rates</i> | <i>EE Contribution - Flat Amount</i> | <i>Based on Payment Date</i> |

Create a similar lookup calculation for the ER contribution flat amount, and the EE and ER contribution rates.

### Next Steps

Create 4 deductions, each one using a lookup table calculation to retrieve the health care coverage rates.

[Create Health Care Plans](#)

## Set Up Cost Allocations for Earnings

### Prerequisites

Enable worktags for cost allocations.

Security: *Set Up: Payroll (Calculations - Payroll Specific)* domain in Core Payroll functional area.

### Context

You can specify how to allocate all instances of an earning for all employees across:

- Cost centers.
- Projects.
- Grants.
- Other organization types and locations.

### Steps

1. Access the **Create Earning** or **Edit Earning** task.
2. Access the **Costing** section of the **Non-Effective Dated** tab.
3. To override a forward accrual for a pay period that spans multiple financial reporting periods, select the **Exclude from Forward Accrual** check box.
4. Click the **Add** button for each set of costing instructions that you want to enter for different time periods.

5. As you complete a set of costing instructions, consider:

| Field                                       | Description                                                                                                                                                                                                                                                                                                                                                       |
|---------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Start Date</b><br><b>End Date</b>        | Dates must not overlap previous or future instructions.                                                                                                                                                                                                                                                                                                           |
| <b>Default From Organization Assignment</b> | Select to use the cost center, fund, or other organizations assigned to the employee.                                                                                                                                                                                                                                                                             |
| <b>Costing Company</b>                      | Enter a costing company for the specified pay component. The <b>Costing Company</b> column is only available when you select the <b>Intercompany Accounting - Enable</b> check box in the <b>Payroll Accounting</b> section on the <b>Edit Tenant Setup - Payroll</b> task.                                                                                       |
| <b>Costing Override Worktag</b>             | Lists all worktags identified as <b>Required</b> under <b>Payroll Costing Allocation</b> on the <b>Maintain Worktag Usage</b> task.<br><br>You can also select from other worktags that are enabled for payroll costing.<br><br>If you have set up related worktags, Workday adds the one you select and its related worktags. You can remove any you don't want. |
| <b>Distribution Percent</b>                 | The sum of all rows must equal 100%.                                                                                                                                                                                                                                                                                                                              |

### Example

To split a bonus earning for all workers across cost centers 0001, 0002, and the worker's default cost center, add 3 rows:

| Default from Organization Assignment | Costing Override Worktag | Distribution Percent |
|--------------------------------------|--------------------------|----------------------|
| Selected                             | Not applicable.          | 34                   |
|                                      | <i>Cost Center: 0001</i> | 33                   |
|                                      | <i>Cost Center: 0002</i> | 33                   |

### Next Steps

- To edit cost allocations for earnings, access either the **Edit Earning** or the **Edit Earning and Employee Deduction Cost Allocations** task.
- To view all cost allocations defined for earnings and employee deductions, access the **All Earnings and Employee Deductions Costing Allocations** report.
- You can create custom reports on costing allocations for earnings and employee deductions using the *Earnings and Employee Deductions Costing Allocations* report data source.

## Set Up Cost Allocations for Employee Deductions

### Prerequisites

- Enable worktags for cost allocations.
- Security: *Set Up: Payroll (Calculations - Payroll Specific)* domain in Core Payroll functional area.

### Context

You can specify how to allocate all instances of an employee-paid deduction for all employees across:

- Cost centers.
- Projects.
- Grants.
- Other organization types and locations.

### Steps

1. Access the **Create Deduction** or **Edit Deduction** task, and select the employee-paid deduction.  
You can't define costing on a deduction that you've configured as a primary balancing worktag.
2. Access the **Costing** section of the **Non-Effective Dated** tab.
3. Click the **Add** button for each set of costing instructions that you want to enter for different time periods.
4. As you complete a set of costing instructions, consider:

| Field                                       | Description                                                                                                                                                                                                                                                                                                                                                          |
|---------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Start Date</b><br><b>End Date</b>        | Dates must not overlap previous or future instructions.                                                                                                                                                                                                                                                                                                              |
| <b>Default From Organization Assignment</b> | Select to use the cost center, fund, or other organizations assigned to the employee.                                                                                                                                                                                                                                                                                |
| <b>Costing Company</b>                      | Enter a costing company for the specified pay component. The <b>Costing Company</b> column is only available when you select the <b>Intercompany Accounting - Enable</b> check box in the <b>Payroll Accounting</b> section on the <b>Edit Tenant Setup - Payroll</b> task.                                                                                          |
| <b>Costing Override Worktag</b>             | Lists all worktags identified as <b>Required</b> under <b>Payroll Costing Allocation</b> on the <b>Maintain Worktag Usage</b> task.<br><br>You can also select from other worktags that you've enabled for payroll costing.<br><br>If you have set up related worktags, Workday adds the one you select and its related worktags. You can remove any you don't want. |
| <b>Distribution Percent</b>                 | The sum of all rows must equal 100%.                                                                                                                                                                                                                                                                                                                                 |

### Example

To split an employee-paid deduction for all workers across cost centers 0001, 0002, and the worker's default cost center, add 3 rows:

| Default from Organization Assignment | Costing Override Worktag | Distribution Percent |
|--------------------------------------|--------------------------|----------------------|
| Selected                             | Not applicable.          | 34                   |
|                                      | <i>Cost Center: 0001</i> | 33                   |
|                                      | <i>Cost Center: 0002</i> | 33                   |

### Next Steps

- To edit cost allocations for earnings, access the **Edit Earning and Employee Deduction Cost Allocations** task.
- To view all cost allocations defined for earnings and employee-paid deductions, access the **All Earnings and Employee Deductions Costing Allocations** report.

## Checklist: Review Pay Component Setup

This topic provides a checklist that you can use to help you process payroll efficiently after you create new pay components.

| Make sure you                                                                                                         | Refer                                                                                                                                                                                       |
|-----------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Add the new pay component or the new pay component group to the run category.                                         | <a href="#">Identify What to Pay in On-Cycle and On-Demand Replacement Pay</a> on page 102                                                                                                  |
| Add the new pay component group to the payslip configuration if you want the pay component to be visible on payslips. | For Payroll for Australia, Canada, the UK, and the U.S., see <a href="#">Define Payslips</a> on page 468.<br>For Payroll for France, see <a href="#">Define Payslips (FRA)</a> on page 476. |
| Add the new pay component to the account posting rules set.                                                           | <a href="#">Set Up Account Posting Rules</a>                                                                                                                                                |
| Set deduction priorities, net pay validations, and arrears if the deduction impacts the employee pay.                 | <a href="#">Setup Considerations: Net Pay Validation and Arrears</a> on page 389                                                                                                            |
| Consider if the new pay component requires a tax authority exception. (CAN, USA)                                      | <a href="#">Define Tax Authority Exceptions from Pay Component Groups (USA)</a> on page 1137                                                                                                |

| Make sure you                                                                                                                                                                                                                                                               | Refer                                                                                                                                                                                                                                          |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Consider if the new pay component needs requires year-end mapping. (CAN, UK, USA)                                                                                                                                                                                           | <a href="#">Reference: Year-End Form Box Mappings (CAN)</a> on page 1303<br><a href="#">Map Earnings and Deductions to W-2 Boxes (USA)</a> on page 1140<br><a href="#">Setup Considerations: Year-End Payroll Processing (UK)</a> on page 1399 |
| Consider impacts to systems outside Workday, such as integrations or accounting system that needs to be updated.                                                                                                                                                            | <a href="#">Map Fields for Custom Reporting of Pay Results</a> on page 759                                                                                                                                                                     |
| Consider impacts to reports or calculation fields whether you'd need to include or exclude the new pay component. Example: You build a custom report to view specific earnings or deductions, consider if the new pay component needs to be added to the report definition. |                                                                                                                                                                                                                                                |
| Add the appropriate pay component if you're using pay component segment security.                                                                                                                                                                                           | <a href="#">Example: Control Visibility of Earning and Deduction Results</a> on page 761                                                                                                                                                       |

## FAQ: Earnings and Deductions

**Do I need to create a separate set of earnings and deductions for each benefit plan?**

No. Minimize the time that you spend setting up and maintaining your benefit calculations by creating a few practical earnings and deductions. Example: If employees can select only 1 plan within a coverage type, you can define 1 set of earnings and deductions that calculates costs across all plans within that type.

**How can I set up an earning to process for a worker even when the worker isn't eligible?**

Set up the earning to accept payroll input by adding 1 of these eligibility rules to the **Worker Eligibility** field in the **Criteria** section of the **Effective Dated** tab on the **Create Earning** task:

- *Payroll Input Exists for Pay Component*
- *Payroll Input (Onetime) Exists for Pay Component*
- *Payroll Input (Onetime or Ongoing) Exists for Pay Component (Sub Period)*
- *Payroll Input (Period Specific) Exists for Pay Component*
- *Payroll Input (Onetime) Exists for Pay Component (Sub Period)*
- *Payroll Input (Ongoing) Exists for Pay Component*

Add the eligibility rule as a separate row from the other worker eligibility criteria so that it's an OR condition. You can then use **Add Payroll Input by Worker** to process the earning regardless of whether the payee meets eligibility criteria.

**How can I create an earning that doesn't affect net pay or taxes?**

A memo earning is an earning created solely for reporting purposes that doesn't affect net pay or employee and employer taxes.

To create a memo earning, create an earning as you normally would but, in the **Groups** field of the **Non-Effective Dated** tab, don't add the pay component group:

- *Adds to Gross (CAN, USA)*
- *AUS Adds to Gross [AUS]*
- *FRA Adds to Gross [FRA]*
- *GBR Adds to Gross [GBR]*

Add the earning to **Additional Pay Components to Calculate** on the **Edit Run Category** task.

For Payroll for France, if you need to include the earning in a pay component group that impacts the net pay or taxes, Workday recommends that you define the earning calculation as zero, and stock the reporting calculations in the pay component related calculations.

**How can we remedy a situation where our QC-PIT results in Workday don't match the expected result in our legacy application? (CAN)**

Configure the RRSP deduction with the pay component group: *Other Quebec Deductions (F2) [CAN]*.

Workday uses this pay component group to calculate the Health Tax Contribution for Quebec workers. Without it, the tax calculates at a higher amount when a worker has a pension amount that reduces their pre-tax income.

**How can I view all related calculations?**

You can access the **View Related Calculation (Workday Owned)** report to view a list of all the related calculations that Workday provides.

You might find these other standard payroll reports useful:

- **All Pay Component Related Calculations**
- **All Related Calculations**
- **View Related Calculation**

To view other payroll reports, access the **Workday Standard Reports** report and select **Set Up Payroll**.

**How does Workday Payroll know when to take a Workday Benefits benefit plan deduction?**

By default, Workday takes a deduction if the pay period end date is on or after the deduction begin date. When you map benefit plans to deductions using 1 of these tasks, use the **Coverage/Cost As Of Payment Date** check box on the **Non-Effective Dated** tab to control when to apply coverage and rates for a benefit:

- **Create Deduction**
- **Create Earning**
- **Edit Deduction**

- **Edit Earning**

If you select the check box, Workday takes the deduction when the payment date is on or after the deduction begin date.

Example: For weekly or bi-weekly pay periods that cross benefit plan years at the end of the year, use the check box to determine whether you use rates from 1 benefit year or the next. In this way, you can prevent issues caused by using deduction rates from the wrong year.

The check box applies to the deduction all year round. Don't select or clear the setting just to affect a cross-year result.

Because there's no effective date, if the deduction is configured to recalculate in retro, changing the setting part way through a year can adversely affect your retro calculations.

### Elective Deferral Limits Related Calculations

Workday delivers these related calculations you can use to define elective deferral limits in earnings and deductions:

| Related Calculation                                                                            | Description                                                                                                                                                                                                                                                                             |
|------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <i>Elective Deferral Annual Catch-Up Limit for 401(k), 403(b), 457(b) and 408(k) SEP Plans</i> | A Workday owned lookup calculation. Returns a numeric value for the annual catch-up contribution limit for SEP plans for the year: <ul style="list-style-type: none"> <li>• 401k</li> <li>• 403b</li> <li>• 457b</li> <li>• 408k</li> </ul>                                             |
| <i>Elective Deferral Annual Limit for 401(k), 403(b), 457(b) and 408(k) SEP Plans</i>          | A Workday owned lookup calculation that returns a numeric value for the annual contribution limit for SEP plans for the year: <ul style="list-style-type: none"> <li>• 401k</li> <li>• 403b</li> <li>• 457b</li> <li>• 408k</li> </ul> Doesn't include the catch-up contribution limit. |
| <i>401k Annual Limit (including catch-up if worker over 50 years of age)</i>                   | A Workday owned conditional calculation that returns a numeric value for the 401k annual contribution limit (including catch-up limit if applicable) for the year.                                                                                                                      |

**Section 415 Limits Related Calculations**

Workday delivers these related calculations you can use to define Section 415 limits in earnings and deductions:

| Related Calculation                    | Description                                                                                                       |
|----------------------------------------|-------------------------------------------------------------------------------------------------------------------|
| <i>Section 415 eligible wage limit</i> | A Workday owned lookup calculation. Returns a numeric value for the Section 415 eligible wage limit for the year. |

**Health Savings Accounts Limits Related Calculations**

Workday delivers these related calculations you can use to define Health Savings Account (HSA) limits in earnings and deductions:

| Related Calculation                                                             | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|---------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <i>Benefits: HSA Maximum Annual Contribution Limit (without Catch-UP Limit)</i> | <p>A Workday owned conditional calculation. Returns the minimum of the HSA plan contribution maximum and the IRS limit, if there's a contribution maximum on the HSA benefit plan definition. If no contribution maximum exists on the HSA plan, Workday uses the IRS limit.</p> <p>Doesn't include the catch-up contribution limit.</p> <p>There are 2 lookup tables based on coverage (employee or family) for the IRS limit amount. To look up the rate, use the year of the payment date.</p> <p>Workday uses family limit values if you're bringing deductions directly into payroll using payroll input (instead of tracking the HSA benefit plan in Workday). If you need employee limit values, create new calculations to accommodate the limits.</p> |

| Related Calculation                                                                          | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
|----------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <i>Benefits: HSA Catch-Up Maximum Annual Contribution Limit (if workers is &gt;= age 55)</i> | <p>A Workday owned arithmetic calculation. Returns the sum of the <i>Benefits: HSA Maximum Annual Contribution Limit (without Catch-Up Limit)</i> and <i>Benefits: HSA Catch-Up Maximum Annual Contribution Limit (if worker is &gt;= age 55)</i>.</p> <p>The assumption is that there's no contribution maximum on the HSA benefit plan definition for the catch-up limit, so Workday uses the IRS Limit for catch-up contributions.</p> <p>Workday uses family limit values if you're bringing deductions directly into payroll using payroll input (instead of tracking the HSA benefit plan in Workday). If you need employee limit values, create new calculations to accommodate the limits.</p> |

## Troubleshooting: One-Time Payments

### Payroll not processing one-time payments.

Workday loads one-time payments, but doesn't include them in the current payroll period.

| Cause                                                                                                   | Solution                                                                                                |
|---------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------|
| The scheduled payment date of the one-time payment is prior to the dates of the current payroll period. | Run retroactive payroll.<br>See <a href="#">Steps: Process Retro Payroll</a> on page 827.               |
| The scheduled payment date of the one-time payment is after the dates of the current payroll period.    | Process payroll for the next payroll period.<br>See <a href="#">Steps: Process Payroll</a> on page 613. |

### Payroll processing one-time payment multiple times.

**Cause:** There are multiple run categories with shared pay periods corresponding to the effective date of the one-time payment.

**Solution:** Create a separate earning for each run category.

From the **Run Category Eligibility** prompt, select a run category to restrict each earning to 1 run category.

See [Steps: Create Earnings](#) on page 222.

## Proration

---

### Setup Considerations: Payroll Proration

You can use this topic to help make decisions when planning your configuration and use of payroll proration. It explains:

- Why to set it up.
- How it fits into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

#### What It Is

In response to certain midperiod events, Workday divides a payroll period into subperiods with separate payroll calculations before and after the event. Example: Compensation changes.

For other midperiod events, Workday creates a subperiod to reflect accurately the portion of the pay period that you employed the worker. Example: Hire, termination.

When creating multiple pay periods, Workday can apply:

- Pay component proration, resulting in 1 gross-to-net result that includes separate pay component values for each subperiod.
- Gross-to-net proration, resulting in separate gross-to-net amounts for each subperiod.

You can configure:

- How Workday calculates pay component values for each subperiod.
- In some cases, whether Workday uses gross-to-net or pay component proration.

#### Business Benefits

Prorating payroll calculations makes it easier to pay workers accurately, as it takes into account midperiod payroll changes when they occur.

Configuring how Workday calculates payroll amounts for each subperiod provides you with the flexibility to adapt your calculations for different scenarios.

#### Use Cases

You can prorate earnings and deductions to reflect midperiod:

- AGIRC-ARCCO tax election changes (FRA).
- Company or pay group transfers.

- Compensation changes.
- Changes to full-time equivalent or working time (FRA).
- Hires or terminations.
- Job changes.
- Changes in scheduled weekly hours in position (AUS).
- Leaves of absence.
- Changes to Military Spouse Residency Relief status (USA).
- Primary work state changes (USA).
- State changes for employees with tax allocations for multiple ongoing work jurisdictions (USA).

### Questions to Consider

| Questions                                                                   | Considerations                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
|-----------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Which earning and deduction amounts do you want to prorate?                 | <p>For each earning and deduction, you can either:</p> <ul style="list-style-type: none"> <li>• Define a method to prorate pay component amounts based on the calendar or working days in the subperiod.</li> <li>• Process the pay component in full for each subperiod or once per pay period using worker eligibility criteria.</li> </ul> <p>When you don't select a proration method, Workday processes the pay component in full for each subperiod where the payment applies. When deciding whether to prorate a pay component, consider whether the inputs to the calculation already reflect the subperiod.</p> <p>For Payroll for Australia, you can also use related calculations and override calculations to set up proration rules that fit your requirements.</p> |
| For prorated pay components, how do you want to calculate prorated amounts? | <p>You can configure Workday to prorate calculation amounts based on:</p> <ul style="list-style-type: none"> <li>• Calendar days.</li> <li>• Working days in the period.</li> <li>• Working days in the year, where you define the number of working days in the year.</li> <li>• The calculation method that you configure for the related calculations (AUS).</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                       |
| Do you want separate payments for a leave of absence (LOA)?                 | <p>By default, Workday uses gross-to-net proration to manage subperiods for LOAs entered in Workday Absence Management, creating a separate payment and payslip for each subperiod.</p> <p>You can configure Workday Payroll to use pay component proration for LOAs, which results in 1 payment and 1 payslip for the entire period.</p> <p>For Payroll for Australia, Workday recommends using Workday-delivered calculations to make payment when workers are on LOA.</p>                                                                                                                                                                                                                                                                                                     |

| Questions                                                                                          | Considerations                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

| When do you want a midperiod compensation change to take effect?                                   | <p>Workday applies midperiod compensation changes entered through Workday Compensation to the entire payroll period where the change occurs.</p> <p>To reflect the compensation change midperiod, you can configure Workday Payroll to apply pay component proration to compensation changes.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| Do your employees have multiple jobs (CAN, USA)?                                                   | <p>When you configure multiple jobs, Workday manages pay group or company changes with pay component proration.</p> <p>When workers with multiple jobs change their pay group or company, Workday prorates position-based, not worker-based, pay components.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| Are you using holiday hours as part of your calculation?                                           | <p>When creating a calculation that uses holiday hours from holiday calendars as inputs, Workday recommends using Workday-delivered instance value calculations. Example: <i>Worker: Holiday Hours (from Holiday Calendar) for Worker during Sub-Period.</i></p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| Which related calculations do you want to prorate?                                                 | <p>Workday recommends:</p> <ul style="list-style-type: none"> <li>• Prorating related calculations that return amounts for an entire pay period. Examples: Salary from Workday Compensation, scheduled hours.</li> <li>• Not prorating related calculations that return amounts for the subperiod. Examples: Rates, hours worked for the subperiod, time off hours.</li> </ul> <p>To avoid double proration, Workday doesn't directly prorate a pay component amount when the earning has a pay component related calculation (PCRC) with a selected proration method. Workday applies this rule regardless of whether you use the PCRC in the calculation for the pay component.</p> <p>When you select a proration method for a related calculation that is different from the pay component proration method, Workday uses the pay component proration method.</p> |
| Are you using FLSA to pay a bonus to workers on LOA (USA)?                                         | <p>Select the appropriate <b>FLSA Bonus Allocation Across Coverage Dates</b> rule when you configure the bonus earning. Workday then calculates bonus amounts for FLSA-eligible workers on LOA based on your configuration.</p> <p>See: <a href="#">Concept: FLSA Bonus Allocation</a> on page 968.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| Do you want to prorate midperiod changes for FTE/ Working Time or ARRCO-AGIRC tax elections (FRA)? | <p>You can configure a payroll proration override to prorate midperiod changes for FTE/Working Time or ARRCO-AGIRC tax elections. You can access the <b>Maintain Payroll Proration Override</b> task to</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

| Questions                                                                                                                      | Considerations                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

|                                                                                                                                | <p>opt into these features. Workday doesn't enable them by default.</p> <p>A retroactive change in FTE/Working Time or ARRCO-AGIRC tax elections doesn't trigger a retroactive calculation. When the retro is triggered by another event, FTE/Working Time or ARRCO-AGIRC tax election changes are included in the calculation.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| <p>How does Workday apply a referenced pay component when the primary pay component is subject to pay component proration?</p> | <p>When a primary pay component references another pay component (Example: Base Pay references Holiday Pay), you must select the <b>Target Single Subperiod for a Prorated Pay Component</b> check box on the <b>Create Pay Component Group</b> or the <b>Create Pay Accumulation</b> task. Selecting this check box sets the referenced pay component (Example: Holiday Pay) to target a single subperiod of the prorated primary pay component.</p> <p>To prevent any negative impacts on retro calculations, you must:</p> <ul style="list-style-type: none"> <li>• Create a new pay component group or pay accumulation and enable Target Single Subperiod for a Prorated Pay Component.</li> <li>• Create a new effective dated snapshot for your primary pay Component referencing the cloned pay component group or pay accumulation.</li> </ul> <p>If there are pay accumulations or pay component groups nested within, you must enable each level to target a subperiod accurately.</p> <p>When the reference pay component subperiod or period end date doesn't fall into a subperiod of the primary pay component, Workday applies the reference pay component to the first subperiod of the primary pay component. See <a href="#">Concept: Pay Component Proration Calculation</a></p> <p>For FLSA workers, Workday recommends that you enable <b>Target Single Subperiod for a Prorated Pay Component</b> feature only when the hours are prorated.</p> <p>It's recommended that pay inputs target the reduction to the correct FLSA subperiod. Otherwise, the reduction might go into the wrong subperiod and might impact your FLSA overtime calculation (over or under stated) because it lowers the wages for the wrong week.</p> |

### Recommendations

Workday recommends enabling pay component proration for LOAs when gross-to-net proration results in negative gross pay.

**Requirements**

No impact.

**Limitations**

| Limitation                                 | Details                                                                                                                                                                                                                                                                            |

|-------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Absence Management      | <p>Workday creates multiple subperiods in response to midperiod LOAs.</p> <p>Pay component proration settings don't impact balance or accrual proration from Absence Management.</p> <p>When you create calculations with time off amounts as inputs, Workday recommends retrieving the time off amounts directly from ACRCs. Workday recommends that you don't reference other PCRCs in the earning or deduction definition. Example: When you reduce a worker's salary by amounts for paid time off, reference the time off ACRCs, instead of the PCRCs from time off earnings.</p> |
| Compensation            | <p>Workday can create multiple subperiods in response to midperiod compensation changes.</p> <p>Pay component proration settings don't impact time-based proration for merit and bonus awards from Compensation.</p>                                                                                                                                                                                                                                                                                                                                                                  |
| FLSA calculations (USA) | Workday uses a pay component's proration method (calendar or work days) to prorate FLSA                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

| Features                               | Considerations                                                                                                                                                                                                                                                                                                                                                                                                                             |
|----------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                        | <p>calculations. Workday prorates pay component amounts using this formula: (Number of days in FLSA period/Number of days in coverage period).</p> <p>When you select <b>None of the above</b> as the proration method, Workday divides the pay component amount by the number of FLSA periods in the coverage dates.</p>                                                                                                                  |
| Labor costing                          | <p>When you enable midperiod costing, Workday uses the proration method specified on earnings to prorate midperiod changes to cost allocations.</p> <p>Workday prorates midperiod costs for deductions based on calendar days, regardless of the deduction's proration method.</p> <p>Workday doesn't support the <b>Prorate Using Annual Working Days</b> proration method for midperiod costing. Workday uses calendar days instead.</p> |
| On-demand payments                     | <p>Workday manages the proration of on-demand payments differently depending on the payment type:</p> <ul style="list-style-type: none"> <li>• Workday prorates on-demand replacement payments over all eligible subperiods, based on the selected proration method.</li> <li>• Workday doesn't prorate on-demand additional payments. You must create separate payments or separate inputs for each subperiod.</li> </ul>                 |
| Payroll input                          | <p>Workday manages the payroll input for multiple subperiods depending on the input type:</p> <ul style="list-style-type: none"> <li>• For one-time inputs, Workday processes the entire input in the subperiod that includes the payroll input <b>End Date</b>.</li> <li>• For ongoing inputs, Workday resolves the pay component in each subperiod.</li> </ul>                                                                           |
| Retro pay calculations                 | <p>The retro pay calculation applies the same proration method that you define for the pay component for payroll calculations. For LOAs, when you change the calculation method from gross-to-net to pay component proration, do so for all of their effective-dated definitions. This practice prevents unexpected results in the prior period that retro recalculates.</p>                                                               |
| Payroll Processing Position (CAN, USA) | <p>For workers with multiple jobs, Workday creates multiple subperiods, when either the:</p> <ul style="list-style-type: none"> <li>• Primary position changes work states midperiod.</li> <li>• Additional position is the processing position and changes work states midperiod.</li> </ul>                                                                                                                                              |

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships in your tenant. Learn more about the [Workday Touchpoints Kit](#) on Workday Community.

### Other Impacts

When you don't select a proration method for an earning or deduction, you can configure whether Workday creates:

- Multiple gross-to-net results for LOAs.
- A single gross-to-net result for LOAs.

Example: You can enable pay component proration for LOAs on hour-based earnings where the related calculations directly return subperiod amounts.

[2021R2 What's New Post: Proration Events for France](#)

#### Examples

[Example: Set Up Pay Component Proration for Leave of Absence](#) on page 287

## Steps: Set Up Proration

### Prerequisites

Review setup considerations for payroll proration.

### Context

In response to certain midperiod events, Workday divides a payroll period into subperiods with separate payroll calculations before and after the event.

You can configure how Workday calculates pay component values for each subperiod. In some cases you can configure whether Workday applies:

- Gross-to-net proration.
- Pay component proration.
- No proration (FRA).

### Steps

1. Access the **Maintain Days Worked by Work Shift** task to assign days to shifts when you want to prorate by days worked.  
Security: *Set Up: Payroll (Proration - Work Shift Days Worked)* domain in the Core Payroll functional area.
2. (Optional) Access the **Maintain Payroll Proration Override** report.
  - a) Access the row of an editable event category, and click **Edit**.
  - b) From the **Proration Type** prompt, select the type of proration to apply.  
You can't modify a payroll proration type when there are payroll results in progress.  
Security: *Set Up: Payroll* domain in the Core Payroll functional area.
3. [Set Up Proration Calculations](#) on page 277.

## Result

When you calculate payroll, Workday divides a payroll period into subperiods with separate payroll calculations before and after the event and prorates pay component values across subperiods.

When you enable midperiod costing for your tenant:

- Workday prorates costing allocation by the proration type on the pay component.
- Costing always prorate regardless of pay component proration.

Example: If you set a pay component to prorate by calendar days and your pay period is 6/1 - 6/15, then there's 15 total days in the period. If there's a costing change on 6/8, then 7 days (6/1-6/7) of the total 15 go to the first costing. The other 8 days (6/8-6/15) go to the second costing.

## Next Steps

To identify workers with prorated results, access the **Proration Changes for Group of Workers** report.

[2021R2 What's New Post: Proration Events for France](#)

## Set Up Proration Calculations

### Prerequisites

Security: *Set Up: Payroll (Calculations - Payroll Specific)* domain in the Core Payroll functional area.

### Context

When a midperiod change creates subperiods, you can configure Workday to prorate the pay component and related calculation amounts in each subperiod.

When configuring proration calculations, ensure that you define a proration method for both the pay component and the relevant related calculations.

### Steps

1. Access the **Edit Earning** or **Edit Deduction** task.
2. As you configure the **Calculation Proration** section, consider:

| Option                             | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
|------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Prorate Using Days Worked</b>   | <p>Prorates by the formula: (Number of days worked in the subperiod)/(Number of working days in the full period).</p> <p>Example: You hire a worker on 6/5 with a 6/1 - 6/15 period for a semimonthly payroll. With 11 working dates from Monday - Friday, Workday uses a proration factor of 7/11.</p> <p>Workday refers to an employee's assigned work shift to determine the number of work days to use in the proration factor. When you don't assign a work shift, Workday uses Monday through Friday as work days.</p> |
| <b>Prorate Using Calendar Days</b> | Dependent on the number of days in the month.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |

| Option                                   | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
|------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                          | Example: For a person hired mid month for June payroll, Workday uses a proration factor of 15/30 for the monthly period.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| <b>Prorate Using Annual Working Days</b> | <p>Prorates using the formula: <math>(\text{Days Worked} * \text{Periods in the Year}) / (\text{Annual Days} * (\text{Days in Work Shift}/5))</math>.</p> <p>Define the annual days for the proration factor in the <b>Calculation for Annual Days Worked</b> prompt.</p> <p>Workday uses an employee's work shift to determine:</p> <ul style="list-style-type: none"> <li>The days worked.</li> <li>The proration factor denominator.</li> </ul> <p>When you don't assign a work shift, Workday uses Monday through Friday as work days.</p> <p>Example: You define 260 annual days worked for a full-time position working Monday through Friday. For an employee hired mid month for a monthly payroll, Workday uses a proration factor of <math>(11*12)/(260)</math>.</p> <p>Workday doesn't support the <b>Prorate Using Annual Working Days</b> option when:</p> <ul style="list-style-type: none"> <li>Managing midperiod labor costing. Workday uses calendar days instead (CAN, FRA, UK, USA).</li> <li>Allocating an FLSA bonus across employment. Workday uses the number of FLSA periods within coverage dates instead (USA).</li> </ul> |
| <b>None of the above</b>                 | <p>No proration. Workday processes the pay component in full in each subperiod. To process the pay component only once per pay period, select 1 of these calculations in the <b>Worker Eligibility</b> grid:</p> <ul style="list-style-type: none"> <li><i>Pay Component: Not Previously Paid in Period</i></li> <li><i>Pay Component: Not Previously Paid in Period (by Company)</i></li> </ul> <p>For Payroll for Australia, Workday recommends you choose this option.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

3. As you complete the task, consider:

| Option                                        | Description                                                                                                                                                                                                                                                                                            |

Select <i>Compensation Change</i> to enable pay component proration for a midperiod change to a worker's compensation.</p> <p>By default, Workday applies gross-to-net proration for leave of absences. When enabled on the</p> |

| Option                      | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
|-----------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                             | <p><b>Maintain Payroll Proration Override</b> report, you can select <i>Worker-based Leave</i> to use pay component proration for a leave of absence. To do so, you must identify a country in the earning.</p> <p>For Payroll for Australia, Workday doesn't apply proration by default for leave of absences. Workday recommends that you enable leave of absence as a pay component proration event, and then select worker-based leave for the leave of absence.</p> |
| <b>Compensation Element</b> | When setting up pay component proration for a midperiod compensation change, select the compensation element for the earning.                                                                                                                                                                                                                                                                                                                                            |

4. Set the proration method for the related calculations listed in the **Related Calculations** grid.

For Payroll for Canada, France, the UK, and the U.S.:

- Select **Related Calculation > Edit** from the related actions menu of a related calculation.
- On the **Value** tab, select a proration method.

Ensure that you select a proration method that is consistent with the proration method for the pay component.

For earnings and deductions with the **Prorate Using Annual Working Days** proration method, select 1 of these methods for the related calculations:

- **Prorate Using Days Worked**
- **Prorate Using Calendar Days**

For Payroll for Australia, Workday recommends that you configure proration in the Pay Component Related Calculations. When you configure calculations for a Pay Component Related Calculation, you can use Workday delivered calculations to derive the values for a sub-period. For example:

- *PC Sub Period: Scheduled Working Hours, excluding non-working time, in a Sub Period as per Worker's Schedule*
- *Job: Weekly Scheduled Hours (as of Sub Period End Date)*
- *Compensation: Compensation Element Value (using PC Freq Override - No Rounding)*

## Result

When you calculate payroll, Workday prorates pay component values across subperiods and rounds the:

- Proration factor to 6 decimals. Workday rounds 0.0000005 and above up, and below 0.0000005 down.
- The final result based on the rounding rule defined for the calculation. When there's no defined rounding rule, Workday rounds the final prorated result to 2 decimals. Workday rounds 0.005 and above up, and below 0.005 down.

For Payroll for the U.S., Workday uses separate rounding logic for multiple work jurisdiction allocations for payroll input.

## Next Steps

You can access the **Edit Calculation Proration and Events Causing Pay Component Proration** task to verify and edit proration settings for all earnings or deductions.

If you configured proration calculations in Pay Component Related Calculations, you can access the **Edit Earning** or **Edit Deduction** task to verify and edit the proration settings.

**Related Information****Tasks**

[Steps: Create Earnings](#) on page 222

**Concept: Off-Cycle Payments and Proration**

When Workday creates subperiods due to a midperiod change, how you handle proration of off-cycle payments depends on the payment type.

**On-Demand Replacement Payments**

When you process an on-demand replacement payment and all subperiods are available, Workday prorates the result over the subperiods. The proration is similar to the on-cycle payment it replaces.

When the worker is eligible for the replacement payment for only 1 subperiod, Workday assigns the payment to this subperiod. If you enter an event that generates a new subperiod, you can run another replacement payment for that subperiod.

Example: A worker is terminated midperiod, and you need to pay for time worked.

**On-Demand Additional Payments**

Workday doesn't prorate on-demand additional payment amounts. You must manually calculate the prorated amounts for each subperiod

For a period that has gross-to-net proration, create a separate payment for each subperiod. For each payment, enter:

- The **Sub-Period Target Date** for each subperiod.
- The prorated amounts that you calculated.

Example: A worker is terminated midperiod and you need to pay for accumulated vacation time in the termination period.

For a period that has pay component proration, create a single payment, with rows in the **Input** grid for each subperiod. On each row, enter:

- The prorated amount that you calculated.
- The **End Date** to target the row to the appropriate subperiod.

Example: A worker ends an additional job midperiod, and you need to pay for accumulated vacation time.

**Manual Payments**

For Payroll for Canada, the UK, and the U.S., Workday doesn't prorate amounts for manual payments. You must manually calculate and enter the prorated amounts for each subperiod.

## Concept: Payroll Input and Proration

Payroll input you enter using these tasks doesn't cause proration:

- **Add Payroll Input.**
- **Add Payroll Input by Worker.**

When you add payroll input for a period with multiple subperiods, Workday processes them as follows:

| Type of Payroll Input | Proration                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
|-----------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| One-time              | Workday processes the entire input in the subperiod that includes the payroll input <b>End Date</b> .                                                                                                                                                                                                                                                                                                                                                                          |
| Ongoing               | <p>By default, Workday resolves the pay component in each subperiod. For gross-to-net proration, you can set worker eligibility for the pay component to resolve only once per pay period. Workday prorates the amounts to each subperiod only when you set up the pay component for proration.</p> <p>For terminated workers, Workday applies the payment to the worker's last subperiod when the start and end dates of the payment are after the termination subperiod.</p> |

## Concept: Multiple Jobs and Proration

This topic applies to:

- Payroll for the U.S.
- Payroll for Canada

Workday prorates payroll results in response to midperiod changes in a worker's job or company. When a worker has:

- A single job, Workday applies gross-to-net proration.
- Multiple jobs, Workday applies pay component proration.

When calculating subperiod results for a worker with multiple jobs, Workday prorates both position and worker-based pay components.

When you switch a worker's primary job midperiod, Workday assigns the *Requires Re-calculation* status to all subperiods.

### Example: Midperiod Company Transfer with Multiple Jobs

Laura has multiple positions. For her position at Alma Mater University, she receives these earnings each pay period:

- *Base Pay by Position* (a position-based pay component) of 1000.
- *Staff Benefits Credit* (a worker-based pay component) of 20.

On March 25, her job at Alma Mater University (company) transfers to Alma Mater Foundation. For the March 18 - March 31 pay period, Laura has 2 gross-to-net pay results for her job:

For Alma Mater University:

| Pay Component         | Subperiod           | Amount |
|-----------------------|---------------------|--------|
| Base Pay by Position  | March 18 - March 24 | 500    |
| Staff Benefits Credit |                     | 20     |

For Alma Mater Foundation:

| Pay Component         | Subperiod           | Amount |
|-----------------------|---------------------|--------|
| Base Pay by Position  | March 25 - March 31 | 500    |
| Staff Benefits Credit |                     | 20     |

Laura receives her standard pay for any additional jobs not impacted by the pay group change.

## Concept: Pay Component Configurations for Subperiods

You typically define pay component calculations to return an amount for an entire pay period. When you have subperiods in a pay period, there are a few methods to prevent the pay component from resolving with its full amount for each subperiod.

| Option                                                               | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
|----------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Define a proration method for pay components.                        | The pay component resolves at each subperiod, but returns an amount that is prorated for the subperiod.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| Use eligibility criteria to process a pay component once per period. | <p>For gross-to-net proration only.</p> <p>When creating a pay component, select 1 of these options from the <b>Worker Eligibility</b> prompt:</p> <ul style="list-style-type: none"> <li><i>Pay Component: Not Previously Paid in Period</i></li> <li><i>Pay Component Not Previously Paid in Period (by Company)</i></li> </ul> <p>The pay component then resolves for a subperiod with the amount defined for the entire period, but only when the pay component hasn't already resolved.</p> <p><b>Note:</b> These eligibility criteria don't apply to proration caused by pay group changes. To avoid duplicate results, make pay group changes before you open the pay period.</p> |
| Deduct days not worked during the period (FRA)                       | <p>In the case of midperiod hires or terminations, you can calculate a worker's pay for the entire pay period based on the worker schedule. You can then create a deduction to subtract the equivalent pay for unworked hours.</p> <p>See <a href="#">Example: Create Deductions for New Hires and Terminated Employees (FRA)</a> on page 1534.</p>                                                                                                                                                                                                                                                                                                                                      |

## Calculations and Subperiods (FRA)

When setting up calculations, you can use report fields that return either:

- A value for the subperiod.
- A value for the period.

All calculations resolve for each subperiod. This could potentially result in different values for logic or instance value comparison calculations in each subperiod.

Example: A worker has a midperiod company change and also changes from Collective Agreement A to Collective Agreement B. If you select:

- The report field *Collective Agreement as of Sub Period End Date*, Workday returns different collective agreements values for each subperiod.
- The report field *Collective Agreement as of Period End Date*, Workday returns the same collective agreement for each subperiod.

## Concept: Pay Component Proration Calculation

When a primary pay component references another pay component (Example: Base Pay references Holiday Pay), you must select the **Target Single Subperiod for a Prorated Pay Component** check box on the **Create Pay Component Group** or the **Create Pay Accumulation** task. Selecting this check box sets the referenced pay component (Example: Holiday Pay) to target a single subperiod of the prorated primary pay component.

If you enter the reference pay component via a pay input and the input end date is within the period; Workday uses the input end date. **Example:** Jake Lee has a midperiod compensation change on 1/10/24. There's a pay input for a holiday on 1/1/24. Base Pay is configured for pay component proration on a compensation change and Holiday Pay isn't. Workday calculates:

- Primary pay component Base Pay subperiod 1 (1/1-1/9).
- Primary pay component Base Pay subperiod 2 (1/10-1/31).
- Reference pay component Holiday Pay entered via input (start and end date is 1/1) will target primary pay component subperiod 1.

If you don't enter the referenced pay component via input or the input end date is outside of the period; Workday uses the subperiod of the reference pay component or period end date to determine the target subperiod of the primary pay component. **Example:** Jake Lee has a midperiod compensation change on 1/10/24. There's a holiday on 1/1/24. Base Pay is configured for pay component proration on a compensation change and Holiday Pay is not. Workday calculates:

- Primary pay component Base Pay subperiod 1 (1/1-1/9).
- Primary pay component Base Pay subperiod 2 (1/10-1/31).
- Reference pay component Holiday Pay not entered via input will have a period end date of 1/31, and will target primary pay component subperiod 2.

When the reference pay component subperiod or period end date doesn't fall into a subperiod of the primary pay component, Workday applies the reference pay component to the first subperiod of the primary pay component. **Example:** Jake Lee's:

- Primary pay component (Base Pay) proration events: Compensation change and Leave of Absence.
- Reference pay component (Holiday Pay) proration events: None
- Pay Group: Executive (Monthly)
- Pay Period: 1/1/24 - 1/31/24

Sequence of events:

1. January 1st is a Holiday
2. Jake Lee goes On Leave effective 1/5
3. Return from Leave effective 1/10
4. Compensation Change for Jake Lee effective 1/15
5. Jake Lee goes On Leave effective 1/31
6. Return from Leave effective 2/1

Workday Calculates:

- Base Pay subperiod 1: 1/1 - 1/4
- Base Pay subperiod 2: 1/10 - 1/14
- Base Pay subperiod 3: 1/15 - 1/30
- Holiday Pay has no subperiod, so period end date is 1/31
- Reduction wages for holiday pay is applied to the Base Pay subperiod 1/1 - 1/4

### Reference: Midperiod Changes Causing Proration

Workday creates multiple subperiods in responses to these midperiod changes:

For Payroll for Australia:

| Type of Change                      | What's Prorated |
|-------------------------------------|-----------------|
| Hire worker                         | Gross-to-net    |
| Terminate worker                    | Gross-to-net    |
| Switch primary job                  | Gross-to-net    |
| Pay group                           | Gross-to-net    |
| Company                             | Gross-to-net    |
| Leave request (worker-based leave). | Pay component   |
| Leave return (worker-based leave).  | Pay component   |
| Compensation change                 | Pay component   |
| Change in scheduled weekly hours    | Pay component   |

For Payroll for Canada:

| Type of Change     | What's Prorated | What's Prorated When Using Multiple Jobs |
|--------------------|-----------------|------------------------------------------|
| Hire worker        | Gross-to-net    | Gross-to-net                             |
| Terminate worker   | Gross-to-net    | Gross-to-net                             |
| Add job            | Not applicable  | Pay component                            |
| End job            | Not applicable  | Pay component                            |
| Switch primary job | Gross-to-net    | Gross-to-net                             |
| Pay group          | Gross-to-net    | Pay component                            |

| Type of Change                                                                         | What's Prorated                                                                                                                                                                                                                          | What's Prorated When Using Multiple Jobs |
|----------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------|
|                                                                                        | If you change a worker's work province midperiod, and also make a company or pay group transfer, Workday processes multiple gross-to-nets, but only processes the province of employment for the one in effect at the end of the period. |                                          |
| Company                                                                                | Gross-to-net                                                                                                                                                                                                                             | Pay component                            |
| Leave request (worker-based leave).                                                    | Gross-to-net<br>Pay component                                                                                                                                                                                                            | Gross-to-net<br>Pay component            |

### Example: Set Up Pay Component Proration for Leave of Absence

This example illustrates how to set up pay component proration for a leave of absence for the following:

- Payroll for the U.S.
- Payroll for the UK
- Payroll for Canada
- Payroll for Australia

#### Context

Jake goes on medical leave from 2017-01-10 to 2017-01-27. You want to enable pay component proration for Jake's base pay so that he receives a single paycheck for the pay period.

#### Prerequisites

Create an earning for a worker's basic salary named *Base Pay (Position)*, based on a compensation element.

#### Steps

1. Access the **Maintain Payroll Proration Override** report.

You can drill into the **Payroll Proration Event Category** to edit the tenant settings.

Security: *Set Up: Payroll* domain in the *Core Payroll* functional area.

## 2. Select the **Country / Territory**.

This page displays the proration settings in effect for the selected country or territory and proration event category.

You can't enable pay component proration for leave of absence when there are in-progress pay results or in-progress retro pay results. To view in-progress results, run the *All Pay Results Blocking Tenant Proration Option Changes* report. You can't change the proration type after it's enabled and you've run and completed retro or completed payroll.

Security: *Set Up: Payroll* domain in the Core Payroll functional area.

## 3. Access the **Edit Earning** task for the *Base Pay (Position)* earning.

Enter these values:

| Option                                 | Value                                                                                                      |
|----------------------------------------|------------------------------------------------------------------------------------------------------------|
| Calculation Proration                  | Select <i>Prorate by Calendar Days</i> to prorate Jake's pay by the number of calendar days in the period. |
| Events Causing Pay Component Proration | <i>Worker-based Leave</i>                                                                                  |

In the **Related Calculations** grid, verify that the relevant related calculations, such as salaried compensation or hours, have a *Prorate by Calendar Days* **Proration Method**.

Security: *Set Up: Payroll (Calculations - Payroll Specific)* domain in the Core Payroll functional area.

## 4. Select **Time and Absence > Place Worker on Leave** from Jake's related actions menu.

Select a **Leave Type** of *Medical Leave > Illness or Injury*.

Enter a **First Day of Leave** of 2017-01-10.

Security: Configure the *Request Leave of Absence* business process and security policy in the Time Off and Leave functional area.

## 5. Select **Time and Absence > Return Worker from Leave** from Jake's related actions menu.

Enter a **First Day Back at Work** of 2017-01-28.

Security: Configure the *Request Return from Leave of Absence* business process and security policy in the Time Off and Leave functional area.

## 6. Access the **Run Pay Calculation** task, and select Jake's pay group.

### Result

Jake's pay result displays 2 separate result lines for each subperiod. He'll receive one combined paycheck for the pay period.

| Pay Component   | Subperiod                |
|-----------------|--------------------------|
| <i>Base Pay</i> | 2017-01-01 to 2017-01-09 |
| <i>Base Pay</i> | 2017-01-28 to 2017-01-31 |

## Troubleshooting: Proration

**Workday doesn't prorate workers' pay after benefit changes.**

Workday doesn't create multiple subperiods in response to midperiod benefit changes.

| Cause                                                                                                                       | Solution                                                                                                                                          |
|-----------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------|
| Workers have midperiod benefit changes that need an adjustment to a specific amount for the period where the changes occur. | <a href="#">Add Payroll Input for Workers</a> on page 589.<br>Add one-time payroll inputs to adjust the amount paid in the relevant period.       |
| Workers have midperiod benefit changes that take effect in the next pay period.                                             | <a href="#">Create Enrollment Event Rules</a> .<br>Configure the enrollment event rule to pay workers for the period after they meet eligibility. |

### Workday doesn't prorate workers' pay after they move from hourly to salaried positions.

**Cause:** The earning eligibility is based on the pay rate type, and changes occur midperiod. Workday doesn't create multiple subperiods for earnings based on midperiod position changes.

**Solution:** Configure the earning to prorate based on a midperiod change in compensation.

#### Steps

Security: These domains in the Core Payroll functional area:

- *Process: Run Batch Calculations (Pay Calculation)*
  - *Set Up: Payroll (Calculations - Payroll Specific)*
1. Access the **Edit Earning** task.
  2. Select your country from the **Country** prompt.
  3. Select *Compensation Change* from the **Events Causing Pay Component Proration** prompt.
  4. Access the **Run Pay Calculation** task.

### Unable to edit the proration type for leaves of absence on the Maintain Payroll Proration Override report.

| Cause                                                                                                                                 | Solution                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

## Concepts: Earnings and Deductions

### Concept: Effective Dating for Earnings and Deductions

You can create effective dated definitions of a pay component when you have a change in policy, such as a change in worker eligibility for an earning.

#### Create a New Effective-Dated Pay Component Definition

You must provide an effective date when you first create an earning or deduction.

For Payroll for Canada, the UK, and the U.S., Workday sets all earnings and deductions created before the effective dating feature release (mid-Workday 23, 2014-12-06) with the effective date of 2000-01-01.

To create a new effective dated definition of an existing earning or deduction:

1. Access the **Edit Earning** or **Edit Deduction** task.
2. Select **Add New Effective Date**.
3. Enter the new effective date.

When you click **OK**, you can see a subtab on the **Effective Dated** tab for each pay component definition.

#### Example: Tool Allowance (AUS)

Global Modern Services has a tool allowance earning that is effective as of the default date 2000-01-01. The calculation is for *Hours Worked x Rate* at a rate of 0.87. As of 2024-01-01, the rate goes up to 0.93.

The Payroll Administrator accesses the **Edit Earning** task for the *Tool Allowance* earning and selects the **Add New Effective Date** option to create a new definition with the effective date 2024-01-01. They enter the new rate of 0.93 in the **Override Calculation** field for the **Rate Related Calculation**.

#### Example: Union Dues Deduction (CAN, USA)

Global Modern Services has a union dues deduction that is effective as of the default date 2000-01-01. The calculation is for *Hours Worked x Rate*, at a rate of 0.05. As of 2014-01-01, the rate goes up to 0.07.

The Payroll Administrator accesses the **Edit Deduction** task for the *Union Dues* deduction and selects the **Add New Effective Date** option to create a new definition of the deduction with the effective date 2014-01-01. She enters the new rate of 0.07 in the **Override Calculation** field for the **Rate Related Calculation**.

#### Example: Union Subscriptions Deduction (UK)

Global Modern Services has a union subscriptions deduction that is effective as of the default date 2000-01-01. The calculation is for *Hours Worked x Rate*, at a rate of 0.05. As of 2014-01-01, the rate goes up to 0.07.

The Payroll Administrator accesses the **Edit Deduction** task for the *Union Subscriptions* deduction and selects the **Add New Effective Date** option to create a new definition of the deduction with the effective date 2014-01-01. She enters the new rate of 0.07 in the **Override Calculation** field for the **Rate Related Calculation**.

## Copy Earnings and Deductions

An earning or deduction is always effective-dated, even if only once when it's created, so you're actually copying a snapshot of the earning or deduction in time.

To copy a pay component snapshot as of an effective date: From the related actions menu of the **View Earning** or **View Deduction** report, select **Calculation > Copy** and select the date of the snapshot you want to copy. Workday requires that you change at least the **Code** field to make a copy.

Once the copy opens, you can delete a pay component related calculation (PCRC) by selecting the minus sign for that row.

## How Workday Applies the Effective Date

Workday uses the effective dated definition that is the same or earlier than:

- The pay period end date for your company's pay components.
- The resolve effective date setting for Workday-delivered pay components. You can view the **Resolve Effective Date** on the **Non-Effective Dated** tab of the **View Earning** or **View Deduction** report.

If you add or edit an earning or deduction in the middle of a pay period, it applies to the whole pay period. Workday doesn't prorate effective dating.

For Payroll for France, non-effective dated features always apply.

## Retroactive Payroll Processing

If you add or edit an earning or deduction definition with a retroactive effective date, it resolves for workers with supported retroactive events. However, it doesn't cause a retroactive event.

Pay component related calculations (PCRCs) aren't effective dated. You can change some fields for the PCRC after it's calculated, but if you modify the effective date of 1 PCRC, the change applies to all effective dates. Workday recommends you review your current effective dates before making changes.

Example (CAN, USA): You retroactively change a union dues rate. When you initiate a supported retroactive event, those workers with that event receive the union dues update retroactively.

Example (UK): You retroactively change a union subscriptions rate. When you initiate a supported retroactive event, those workers with that event receive the union subscriptions update retroactively.

### Tasks

[Steps: Create Earnings](#) on page 222

[Steps: Create Deductions](#) on page 227

## Concept: Inactivate Earning and Deduction Definitions

To prevent a pay component definition from processing to a result, select the **Inactive** check box on the **Edit Earning** or **Edit Deduction** task. Workday:

- Considers the pay component to be inactive for the entire pay period, since Workday doesn't prorate inactive and active status.
- Carries pay balances and pay accumulations forward regardless of the pay component active or inactive status.
- Continues to process arrears for inactivated deductions for both on-cycle and off-cycle payments. To update the arrears balance for an inactive pay component, use the **Flat Amount Limit (When No Current Deduction)** field on the **Edit Net Pay Validation/Arrears** task.
- Excludes inactive earnings from payroll commitments.

An inactive pay component in the **Include Current Value** field on a pay component or pay component-related calculation:

- Has no current result.
- Doesn't contribute to the limit.

### Retroactive Considerations

When a worker has a supported retroactive event:

- Workday resolves a retroactive change to a pay component according to the pay component status as of the retro target period.
- If you change a pay component status for a completed period, Workday always considers worker eligibility criteria. Therefore, regardless of the **Retro Calculation** setting, the retro pay calculation generates retro differences for that pay component and that period. Example: You inactivate a deduction for a completed period and leave the **Recalculate During Retro** check box empty on the deduction definition. When you run a retro pay calculation for that period, Workday refunds the deduction in the current period.
- Retroactively changing a pay component definition causes retro differences. Changing an earning or deduction definition itself doesn't create a supported retro event. Example: You retroactively change a union dues rate on an active deduction definition. When you initiate a supported retroactive event, those workers with that event receive the union dues update retroactively.

### Current Status Field on the View Earning and View Deduction Reports

Workday displays the status of pay components as of the current day in the **Current Status** field on the **View Earning** and **View Deduction** reports.

If you create a future-dated pay component, and select the **Inactive** check box:

- The **Inactive** field displays *Yes*.
- The **Current Status** field displays *Active* until the effective date.

### Status Field in Reports and Web Services

If at least 1 pay component is inactive, the **Status** field displays on these reports and web services. The *Inactive* status for the pay component displays as of the current day.

Reports:

- **All Pay Component Related Calculations**
- **All Earnings**
- **All Deductions**

Web Services:

- *Get Deductions*
- *Put Deductions*

### Pay Component Names in Prompts

Workday keeps inactive pay components available to you, so you can use them for such situations as prior periods or arrears balances. To help you make an informed decision about processing an inactive pay component, Workday appends the name with the term (*Inactive*). Example: *Basic Life - EE (Inactive)*.

#### Tasks

[Steps: Create Earnings](#) on page 222

[Steps: Create Deductions](#) on page 227

## Reference

[The Next Level: Crisis Management Solution: Stopping Benefit Deductions in Payroll](#)

## Concept: Delete Calculations

You can delete single calculations, if they aren't referenced elsewhere. Access the **Delete Calculation** task to delete:

- Earnings and their associated Pay Component Related Calculations (PCRCs).
- Deductions and their associated PCRCs.
- Date calculations.
- Numeric calculations.
- True or false calculations.
- Pay accumulations.
- Pay balances.
- Pay component groups.

The **Delete Calculation** task is secured by the *Calculation: Delete* domain in the Core Payroll and Time Off and Leave functional areas.

If you want to delete a calculation that doesn't display in the prompt, review the calculation definition and remove the Usage.

## Considerations for Earnings and Deductions

Workday displays an error message and prevents you from deleting the calculation when it has been used in:

- Payroll input.
- Result lines.
- Retro result lines.
- Commitment or obligation results.

You can't delete earnings and deductions that use these components, even if you delete, cancel, or rescind them:

- Benefit group benefit credits (waived coverage credits).
- Payroll accounting adjustments.
- Payroll commitment rules.

If you're unable to delete a pay component, Workday recommends you to first **Inactive** the earning or deduction using the **Edit Earning** or **Edit Deduction** task.

## Concept: Worktags for Payroll Calculations

Use worktags to tag pay components with supplemental information, such as company, position, location, or loan number. You can reference them later to:

- Guide the calculation of pay components.
- Associate pay component values for aggregation or accounting.
- Limit values displayed for accumulation.
- Limit values displayed for reporting, such as on the **Payroll Register by Period** report.

Example: Create a worktag for workers with multiple loans to keep track of the initial loan disbursement and subsequent repayments for each loan.

A worktag has 2 parts:

- Type (sometimes called a *dimension*), such as *Loans*.
- Valid values, such as *Loan1* and *Loan2*.

Example: If an earning has a worktag type, such as *Loans*, you must enter a valid value, such as *Loan1*, in payroll input to complete the set up. If you don't, Workday displays an error message and stops you from proceeding.

Workday offers:

- Workday-owned worktags, such as the *Location* worktag type with valid values such as *London*, *Montreal*, *New York*, and *Paris*.
- Custom worktags that you can create, such as a *Loans* worktag type with valid values such as *Loan1*, *Loan2*, and *Loan3*.

The same payroll worktag can fill either or both of these purposes:

- As a calculation worktag, it causes earnings and deductions to resolve multiple times, based on different valid values for a worker. You can use worktags in payroll input to initiate multiple iterations. Example: A worker has 3 loans, *Loan1*, *Loan2*, and *Loan3* on separate rows of payroll input. The loan disbursement earning and the repayment deduction each run 3 times: once for each loan. Running fewer pay components enables Workday to run more efficiently.
- As a filter worktag, it tracks and retrieves values from earnings and deductions to associated accumulations and balances based on matching valid values. Example: *Loan1* limits an accumulation and balance to retrieve only *Loan1* values from an earning or deduction so that the accumulation and balance of *Loan1* are distinct from other loans.

Worktags are available in several places throughout Workday:

| Location                                                                                                                                                                                                                           | Field                                                                                                                              | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |

**Concept: Position-Based Earnings and Deductions**

To make the *Position* worktag type available on earnings and deductions, access the **Edit Tenant Setup – HCM** task. From the **Position Setup Options** prompt, select *Multiple Jobs*.

For Payroll for the U.S., use this setting for both multiple jobs and international assignments. You can pay a worker from a non-Workday payroll system for only 1 international assignment at a time.

- When you set up an earning or deduction, select *Position* for the **Calculation Worktag**. Workday calculates the earning or deduction separately for each position processed.

Examples of position-based earnings and deductions include base pay and union dues. Use only position-based earnings and deductions for international assignments.

- Select *Position* for the **Calculation Worktag** on all pay components that are referred to by other position-based pay components.

This configuration ensures that all calculations use values for the correct position. Example: A position-based *Overtime Earnings* pay component refers to a *Sick Pay* pay component. Adding the position worktag to Sick Pay ensures that Workday uses the correct rate of pay when calculating sick pay.

- If you don't select the *Position* worktag, Workday considers the earning or deduction worker-based. Workday resolves worker-based earnings once for each gross-to-net amount, for each pay group, unless you add worker eligibility criteria.

For worker-based earnings or deductions in Payroll for Canada and the U.S., the worker's payroll processing position determines eligibility, unless you define rules to look across jobs. If a deduction is based on gross pay (Example: 10% of gross pay), Workday sums the earnings from all positions in the same company for the gross pay.

For worker-based earnings or deductions in Payroll for France and the UK, the worker's primary position determines eligibility, unless you define rules to look across jobs. If a deduction is based on gross pay (Example: 10% of gross pay), Workday sums the earnings from all positions in the same company for the gross pay.

Once a payroll result or payroll input exists for the earning or deduction, you can't add or remove the *Position* worktag.

## Concept: Payroll Custom Worktags

You can use custom worktags in earnings, deductions, and payroll journal entries. You can also use them in payroll calculations. However, you can't use custom worktags for payroll costing allocations and accounting adjustments.

### Multiple Custom Worktags

To help manage the resolution of complex calculations, such as pensionable earnings, use multiple custom worktags. They enable you to define a set of worktag types that require valid values when you use payroll input with that pay component.

For Payroll for Canada, the UK, and the U.S., Workday displays a separate resolution on the worker's payslip for each like set of worktag values.

If you're using multiple custom worktag types, you can't combine them with other worktag types, such as *Position*.

#### Example:

Global Modern Services uses 3 custom worktags: Campaign, Channel, and Business Unit, when entering its pensionable wage earnings. The payroll administrator enables the 3 as custom worktag types, and includes these values for each row of payroll input.

| Date       | Campaign | Channel | Business Unit | Amount |
|------------|----------|---------|---------------|--------|
| 2013-09-30 | 10       | 1       | 30            | 100    |
| 2013-10-01 | 10       | 1       | 30            | 150    |

| Date       | Campaign | Channel | Business Unit | Amount |
|------------|----------|---------|---------------|--------|
| 2013-10-02 | 10       | 1       | 30            | 25     |
| 2013-10-02 | 10       | 1       | 60            | 30     |
| 2013-10-03 | 11       | 1       | 60            | 60     |
| 2013-10-04 | 10       | 2       | 60            | 110    |

The employer contribution for the worker's pension is based on these amounts. Workday combines the display of the first 3 amounts as 275, because all 3 are for Campaign 10, Channel 1, and Business Unit 30. The other 3 display separately, because they are unlike sets of values: with either a different campaign (10 or 11) or a different channel (1 or 2).

| Pay Period End Date | Campaign | Channel | Business Unit | Amount |
|---------------------|----------|---------|---------------|--------|
| 2013-10-04          | 10       | 1       | 30            | 275    |
| 2013-10-04          | 10       | 1       | 60            | 30     |
| 2013-10-04          | 11       | 1       | 60            | 60     |
| 2013-10-04          | 10       | 2       | 60            | 110    |

## Concept: Compensation Elements and Payroll Processing

When you create an earning, the **Compensation Element** section of the **Effective Dated** tab enables you to map the earning to 1 or more compensation elements so that Workday can retrieve the correct:

- Amounts
- Percentages
- Rates

When the compensation element belongs to a one-time payment plan, the payroll process also:

- Costs the one-time payment according to worktag values assigned through Compensation.
- Creates a separate result line for each one-time payment the worker receives, such as a referral bonus. Payslips report the aggregate amount of the earning.
- Creates separate result lines when you map an earning to both a one-time and recurring compensation element, and the worker receives both.
- Updates the calculation status of a result to *Requires Recalculation* if Compensation modifies or rescinds a worker's payment request when the payment is in progress.

When the compensation element is for period activity pay, academic periods defined in Compensation control the timing of payments. You can't map the same earning to a compensation element for period activity pay or another type. During the payroll process:

- Workday creates a separate result line for each period activity payment that a worker receives. Payslips report the aggregate amount of the earning.

- If Compensation modifies or rescinds a worker's period activity pay when a payment is in progress, Workday updates the calculation status of a result to *Requires Recalculation*.

## Concept: Time Off Earnings

You can create earnings to calculate workers' paid and unpaid time off. For Payroll for France, you can create earnings and deductions. When you configure time off plans to track balances in Workday Absence Management, earnings can use Workday-provided calculations to retrieve units for approved time off. Payroll for France also includes deductions in Workday-provided calculations for time off plan configurations.

### Calculations for Paid and Unpaid Time Off Units

Workday Absence Management automatically creates 3 absence component related calculations each time you add a time off to a time off plan. Use them, with 3 related calculations provided by Workday Payroll, to configure earnings that retrieve the number of paid and unpaid time off units.

| Related Calculation            | Absence Component Related Calculation | Amount Retrieved                                                                             |
|--------------------------------|---------------------------------------|----------------------------------------------------------------------------------------------|
| <i>Time Off Paid (Units)</i>   | <i>xxx - Time Off Paid</i>            | Number of paid days or hours approved for an employee in the current payroll period.         |
| <i>Time Off Unpaid (Units)</i> | <i>xxx - Time Off Unpaid</i>          | Number of unpaid days or hours approved for an employee in the current payroll period.       |
| <i>Time Off Total (Units)</i>  | <i>xxx - Time Off Total</i>           | Sum of paid and unpaid days or hours approved for an employee in the current payroll period. |

Examples:

#### Payroll for Canada, France, and the U.S.:

When defining an earning for paid vacation, you can use a calculation rule of *Time Off Paid (Units)* \* *Rate*. Select *Time Off Paid (Units)* as a related calculation. For the override value, select *Vacation-Time Off Paid*, the automatically generated, absence component related calculation.

The related calculations and associated absence component related calculations they create result in different amounts retrieved. The abbreviation, *xxx*, represents the name of the time off, such as *Vacation*.

For Payroll for France, you can configure your own absence rules through calculated fields. See [Workday Community: Absence Calculations for Payroll](#).

#### Payroll for the UK:

When defining an earning for paid holiday, you can use a calculation rule of *Time Off Paid (Units)* \* *Rate*. Select *Time Off Paid (Units)* as a related calculation. For the override value, select *Vacation-Time Off Paid*, the automatically generated, absence component related calculation.

The related calculations and associated absence component related calculations they create result in different amounts retrieved. The abbreviation, *xxx*, represents the name of the time off, such as *Holiday*.

### Vacation Pay (CAN)

For vacation earnings, configure a separate earning for the vacation pay accrual and the vacation payment.

### Position-Based Time Off

Payroll for France recommends assigning only the primary position to a pay group.

When your tenant configuration supports multiple jobs, you can create position-based earnings to calculate paid or unpaid time for position-based time off. When you run the pay calculation process, Workday Payroll retrieves time off units:

| Position Based             | Worker Based               | Retrieves                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
|----------------------------|----------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Earning and time off plan. |                            | Time-off units for the relevant position.                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
|                            | Earning and time off plan. | Time-off units for the worker.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| Time off plan.             | Earning.                   | Time-off units for the worker's: <ul style="list-style-type: none"> <li>• Payroll processing position (CAN, USA).</li> <li>• Primary position (AUS, FRA, UK).</li> </ul>                                                                                                                                                                                                                                                                                                                                               |
| Earning.                   | Time off plan.             | Time-off units for the worker. The position-based earning resolves separately for each of the worker's positions, and it uses the time off units for the worker in each calculation.<br><br>Example: If a worker requests 8 hours off, Workday uses 8 hours in the earning calculation for each position.<br><br>You can use calculations to support the proration of time off units (such as units based on FTE and Scheduled Weekly Hours) across positions to prevent paying employees twice for the same time off. |

### Unpaid Time Off (CAN, UK, USA)

Create pay components to calculate the value of unpaid time off only if:

- Your time off plans allow requests for unpaid time.
- You're reducing base pay or salary by the value of the unpaid hours or days.

To process unpaid time off, you can either:

- Configure base pay earnings to subtract unpaid time off from an employee's regular wages.
- Subtract unpaid time off directly from Gross or Net pay accumulations.

Workday recommends that you define negative earnings rather than deductions to calculate the value of unpaid time off.

### Unpaid Time Off (FRA)

Workday recommends that for each time off you:

- Create a deduction to reduce base pay by the value of unpaid hours or days.
- Create an earning for the payment of the time off.

On the pay results and the payslip, you see the reduction for time off, and the compensation for paid time off as 2 separate lines.

For partially paid absences, create these pay components:

- A deduction for the entire duration of the time off.
- An earning for the duration of the time off that is paid.

## Payroll Calculations

---

### Steps: Create Custom Fields for Payroll and Absence Calculations

#### Prerequisites

Review the requirements for custom fields in calculations.

#### Context

You can create custom fields to retrieve data for Workday calculations. You can use calculated fields as inputs to instance value calculations.

#### Steps

1. [Create Custom Field Types](#).

## 2. Create and Edit Custom Object Definitions.

Create custom fields.

From the **Category** prompt, select *Payroll* or *Time Off*.

From the **Authorized Usage** prompt, select *Calculation Engine (Payroll/Absence)*.

In the **Permissions** section, select:

- *Set Up : Calculations - Generic*
- *Set Up: Payroll (Calculations - Payroll Specific)*

### Related Information

#### Concepts

[Concept: Requirements for Custom Fields in Calculations](#)

## Concept: Payroll Calculations

You can create numeric, boolean, and date calculations that work with Workday Payroll calculations such as:

- Pay component groups.
- Pay accumulations and balances.
- Earnings and deductions for payroll.

You can create simple calculations, or you can nest calculations within each other by selecting an existing calculation as an operand of another. The nesting automatically determines the order of operation, unless you use the **Order** in the calculation.

## Concept: Date Calculations for Payroll

You can create date calculations to cover several common payroll calculations.

### Example: Find Defined Date of Current Calendar Year

To determine worker eligibility for certain bonuses, you want to find October 31st of the current calendar year based on the payment date.

1. Access the **Create Build Date Calculation** task.
2. Complete these fields:

| Year                                     | Month     | Day       |
|------------------------------------------|-----------|-----------|
| <i>Year:<br/>Payment Date<br/>- Year</i> | <i>10</i> | <i>31</i> |

If the payment date is 2017-05-31, the calculation resolves to 2017-10-31.

### Example: Find Defined Date of Previous Calendar Year

You want to find October 31 of the previous year, based on the payment date. You've already created

a build date calculation, *Date: Oct 31 of Current Year (based on Payment Date)*, that returns October 31st of the current year.

1. Access the **Create Date Increment/Decrement Calculation** task.
2. Complete these fields:

| Start Date                                                  | Year | Month | Day |
|-------------------------------------------------------------|------|-------|-----|
| <i>Date: Oct 31 of Current Year (based on Payment Date)</i> | -1   |       |     |

#### Related Information Reference

[Reference: Date Calculations](#)

## Concept: Numeric Calculations for Payroll

You can create numeric calculations to cover several common payroll calculations.

#### Example: Percentage of Prorated Base Salary

You want to find a 50% of a prorated salary. You've already created:

- *Base (prorated)* as a related calculation on earnings.
- *0.5* as a constant value calculation.

1. Access the **Create Arithmetic Calculation** task.
2. Complete these fields:

| 1st Operand            | Operator        | 2nd Operand |
|------------------------|-----------------|-------------|
| <i>Base (prorated)</i> | <i>Multiply</i> | <i>0.5</i>  |

#### Example: Premium Based on Type of Shift

You want to find the shift allowance percentage based on the shift they work.

- If they work 1st shift, they receive a premium of 6% per pay period.
- If they work 2nd shift, they receive a premium of 10% per pay period.
- If the shift isn't specified, they receive 5% per pay period.

You've already created 2 instance set comparison calculations, to determine the type of shift worked:

- *Worker's Shift = 1st Shift*
- *Worker's Shift = 2nd Shift*

1. Access the **Create Conditional Calculation** task and complete these fields:

| Order    | Condition                         | Result |
|----------|-----------------------------------|--------|
| <i>a</i> | <i>Worker's Shift = 1st Shift</i> | 6      |
| <i>b</i> | <i>Worker's Shift = 2nd Shift</i> | 10     |

2. Select 5 from the **Default Response** prompt.

#### Example: Dependent Age at Calendar Start Date

You want to determine the age of a dependent at the start of the calendar year.

1. Access the **Create Date Difference** task.
2. Complete these fields:

| Interval    | Start Date                      | End Date                                                                 |
|-------------|---------------------------------|--------------------------------------------------------------------------|
| <i>Year</i> | <i>Dependent: Date of Birth</i> | <i>Date: Current Calendar Year End Date (based on Period Start Date)</i> |

#### Example: Reference Period for Bonus

You want to calculate the starting month for a 3-month reference period.

1. Access the **Create Date Increment/Decrement Calculation** task and enter these values:

| Option            | Value                                                                   |
|-------------------|-------------------------------------------------------------------------|
| <b>Name</b>       | Current Calendar Month End Date (based on Period End Date) - 3 Months   |
| <b>Start Date</b> | <i>Date: Current Calendar Month End Date (based on Period End Date)</i> |
| <b>Month</b>      | -3                                                                      |

2. Access the **Create Date Extract** task and enter these values.

| Interval     | Date                                                                         |
|--------------|------------------------------------------------------------------------------|
| <i>Month</i> | <i>Current Calendar Month End Date (based on Period End Date) - 3 Months</i> |

When the period end date is 2017-07-31, the calculation returns 4.

**Related Information****Reference**[Reference: Numeric Calculations](#)**Concept: Boolean Calculations for Payroll**

You can create boolean calculations to cover several common payroll calculations.

**Example: Identify Regular Employees**

As part of eligibility criteria, you want to identify workers who are regular employees. You want to include workers who are regular at either the period start or end date.

1. Access the **Create Instance Set Comparison Calculation** task and complete these fields:

| Field                      | Value                                            |
|----------------------------|--------------------------------------------------|
| <b>Name</b>                | Employee Type is Regular (as of Period End Date) |
| <b>Source Field</b>        | <i>Employee Type as of Period End Date</i>       |
| <b>Relational Operator</b> | <i>in the selection list</i>                     |
| <b>Target Instance</b>     | <i>Regular</i>                                   |

2. Access the **Create Instance Set Comparison Calculation** task and complete these fields:

| Field                      | Value                                              |
|----------------------------|----------------------------------------------------|
| <b>Name</b>                | Employee Type is Regular (as of Period Start Date) |
| <b>Source Field</b>        | <i>Employee Type as of Period Start Date</i>       |
| <b>Relational Operator</b> | <i>in the selection list</i>                       |
| <b>Target Instance</b>     | <i>Regular</i>                                     |

3. Access the **Create Logic Calculation** task and complete these fields.

| Operand   | Operand                                                                                                                  |
|-----------|--------------------------------------------------------------------------------------------------------------------------|
| <i>Or</i> | <i>Employee Type is Regular (as of Period End Date)</i><br><br><i>Employee Type is Regular (as of Period Start Date)</i> |

**Example: Identify Hourly Workers**

As part of eligibility criteria, you want to identify workers who are paid on an hourly basis.

1. Access the **Create Instance Set Comparison Calculation** task.

## 2. Complete these fields:

| Source Field                                 | Relational Operator          | Target Instance |
|----------------------------------------------|------------------------------|-----------------|
| <i>Pay Rate Type as of Period Start Date</i> | <i>in the selection list</i> | <i>Hourly</i>   |

**Example: Hire Date After July**

You want to determine if the hire date of a worker is later than July.

1. Access the **Create Value Comparison Calculation** task.
2. Complete these fields:

| 1st Operand                            | Operator            | 2nd Operand |
|----------------------------------------|---------------------|-------------|
| <i>Month: Worker Hire Date - Month</i> | <i>greater than</i> | <i>7</i>    |

**Related Information Reference**

[Reference: Boolean Calculations](#)

**Concept: AND and OR Setup for Boolean Calculations**

You can use AND and OR logic to set up conditions that identify workers, such as:

- **Worker Eligibility** and **Scheduling** fields on the **Effective Dated** tab of the **Create Earning** and **Create Deduction** tasks.
- **Selection Criteria** field for workers to process on the **Create Run Category** task.

**OR Conditions**

To set up an OR condition, put each condition on a separate row. A worker must satisfy only 1 condition for the pay component or worker selection to resolve.

You want to resolve an earning for an allowance when a worker is either:

- Enrolled in a compensation plan.
- Has payroll input.

1. Access the **Edit Earning** task.
2. Add 2 rows to the **Worker Eligibility** field.

Click the plus sign to put each condition in a separate row.

|                                                               |
|---------------------------------------------------------------|
| <b>Worker Eligibility</b>                                     |
| <i>Compensation: Compensation Value Exists and &lt;&gt; 0</i> |
| <i>Payroll Input Exists for Pay Component</i>                 |

**AND Conditions**

To set up an AND condition, keep all conditions in the same row. Workers must satisfy all criteria in the row for the pay component or worker selection criteria to resolve.

You want to resolve a deduction for an amount-based benefit deduction only if the deduction hasn't already resolved in a previous subperiod of the period.

- 1. Access the **Edit Deduction** task.
- 2. Add 1 row to the **Worker Eligibility** field.

| Worker Eligibility                                              |
|-----------------------------------------------------------------|
| <i>Benefits: Employee Cost (Post-tax) Exists and &lt;&gt; 0</i> |
| <i>Pay Component Not Previously Paid in Period</i>              |

**Related Information**

**Tasks**

[Set Up Pay Component Eligibility](#) on page 236  
[Identify Who to Process in Run Categories](#) on page 99

**Reference**

[Reference: Boolean Calculations](#)

**Example: Calculate Worker Age as of July**

This example illustrates how to create nested calculations.

**Context**

To determine worker eligibility for bonuses, you want to identify workers who are 25 or younger on July 31st of the year when the bonus is paid.

As calculations have limited numbers of operands, you need to create multiple calculations and nest them. The nesting determines the order of operation, if you don't specify an **Order** in the calculation.

To calculate July 31st of the year of the worker's payment, you need to:

- Determine the year of the payment date.
- Calculate July 31st of that year.

Then to calculate a worker's age, you need to calculate the difference between:

- The worker's date of birth.
- July 31st of the year of the worker's payment.

**Prerequisites**

Security:

- *Set Up: Calculations - Generic* domain in the Core Payroll functional area.
- *Set Up: Time Off (Calculations - Generic)* domain in the Time Off and Leave functional area.

**Steps**

- 1. Access the **Create Build Date Calculation** task.

Enter these settings:

| Option          | Value                                              |
|-----------------|----------------------------------------------------|
| <b>Name</b>     | Date: July 31 Current Year (based on Payment Date) |
| <b>Category</b> | <i>Payroll</i>                                     |
| <b>Year</b>     | <i>Year: Payment Date - Year</i>                   |

| Option | Value |
|--------|-------|
| Month  | 7     |
| Day    | 31    |

2. Access the **Create Date Difference Calculation** task.

Enter these settings:

| Option     | Value                                                      |
|------------|------------------------------------------------------------|
| Name       | Worker Age as of July Current Year (based on Payment Date) |
| Category   | <i>Payroll</i>                                             |
| Interval   | <i>Year</i>                                                |
| Start Date | <i>Worker: Date of Birth</i>                               |
| End Date   | <i>Date: July 31 Current Year (based on Payment Date)</i>  |

### Example: Create a Lookup Table for Cost of Living Percentages

This example illustrates how to create an advanced lookup table to store the cost of living based on a worker's primary work state.

#### Context

Your company has workers in California, Florida, New York, Pennsylvania, and South Carolina. You're preparing to create a calculation for bonuses based on the cost of living in each state. You want to create a lookup table with these percentages:

- *California: 25%*
- *Florida: 20%*
- *New York: 25%*
- *Pennsylvania: 20%*
- *South Carolina: 15%*

#### Steps

1. Access the **Create Lookup Table** task.
2. Select *Advanced Lookup Table - Report Field Search Criteria*.
3. Enter these values:

| Option                       | Description                                    |
|------------------------------|------------------------------------------------|
| Name                         | <i>Bonus Percent (Based on Cost of Living)</i> |
| Category                     | <i>Payroll</i>                                 |
| Report Field Search Criteria | <i>Worker Primary Work State</i>               |
| Effective Date               | Select the effective date for the calculation. |

4. Remove the first row from the **Values** grid.  
If you don't remove the first row, you won't be able to save the table.
5. Click **OK**.
6. From the related actions menu of the lookup table, select **Lookup Table > Column Labels**.

7. Enter these values:

| Display on Page | Display Name         |
|-----------------|----------------------|
| Selected        | <i>Bonus Percent</i> |

8. Click **OK**.

9. Click **Done**.

10. Access the **Edit Lookup Table** task.

11. From the **Lookup Table** prompt, select *Bonus Percent (Based on Cost of Living)*.

12. Enter these values in the **Values** grid.

| Search Value          | Bonus Percent | Default  |
|-----------------------|---------------|----------|
| <i>California</i>     | <i>0.25</i>   |          |
| <i>Florida</i>        | <i>0.20</i>   |          |
| <i>New York</i>       | <i>0.25</i>   |          |
| <i>Pennsylvania</i>   | <i>0.20</i>   |          |
| <i>South Carolina</i> | <i>0.15</i>   |          |
|                       | <i>0.10</i>   | Selected |

13. Click **OK**.

### Next Steps

Create step-based conditions and a step-based calculation for bonuses based on the cost of living.

## Example: Create Step-Based Conditions for Bonuses Based on Cost of Living

This example illustrates how to create step-based conditions in preparation for creating a bonus based on cost of living.

### Context

Your company wants to create a bonus for workers based on the cost of living in their state. They want to:

- Only include hourly workers.
- Provide an extra bonus for workers with hourly wages that are greater than 1000.

In preparation for creating a step-based calculation, you want to create these step-based calculation conditions:

- A condition to identify when workers aren't hourly.
- A condition to identify workers with hourly wages greater than 1000.

### Steps

1. Access the **Create Step Based Calculation Condition** task.

2. Enter these values:

| Option                  | Description          |
|-------------------------|----------------------|
| <b>Name</b>             | Worker is Not Hourly |
| <b>Category</b>         | <i>Payroll</i>       |
| <b>Logical Operator</b> | <i>AND</i>           |

3. In the **Conditions** grid, enter these values and click **OK**:

| Operand 1 (Type Value)                                      | Operator                     | Operand 2 (Type Value)                       |
|-------------------------------------------------------------|------------------------------|----------------------------------------------|
| Select: <i>Source Field</i><br>Select: <i>Pay Rate Type</i> | <i>in the selection list</i> | <i>Target Instance(s)</i><br><i>Salaried</i> |

4. Click **OK**.

5. Access the **Create Step Based Calculation Condition** task.

Enter these values:

| Option                  | Description         |
|-------------------------|---------------------|
| <b>Name</b>             | Hourly Wages > 1000 |
| <b>Category</b>         | <i>Payroll</i>      |
| <b>Logical Operator</b> | <i>AND</i>          |

6. In the **Conditions** grid, enter these values and click **OK**:

| Operand 1 (Type Value)                                        | Operator            | Operand 2 (Type Value)                            |
|---------------------------------------------------------------|---------------------|---------------------------------------------------|
| Select: <i>Calculation</i><br>Select: <i>Hourly Pay [USA]</i> | <i>greater than</i> | Select: <i>Calculation</i><br>Select: <i>1000</i> |

7. Click **OK**.

### Next Steps

Create a step-based calculation for bonuses based on the cost of living.

## Example: Create a Step-Based Calculation for Bonuses Based on Cost of Living

This provides an example of 1 way to create a step-based calculation.

### Context

Your company has workers in California, Florida, New York, Pennsylvania, and South Carolina. You want to create a step-based calculation to give hourly workers bonuses based on the cost of living in their state. The amount of the bonus for these workers is a percentage of their wages for the pay period and is based on the cost of living in their state.

Remote workers who live in other states receive a 10% bonus.

Workers with wages greater than 1000 receive 100 plus the percentage based on the cost of living.

You want to round bonuses to 0.05.

### Prerequisites

- Create an advanced lookup table for the cost of living, named Bonus Percent (based on Cost of Living). Base the table on report field search criteria, and use the worker's primary work state as the search criteria.
- Create a step-based condition, named Worker is Not Hourly, that identifies nonhourly workers.
- Create a step-based condition, named Hourly Wages > 1000, that identifies where a worker's hourly wages are greater than 1000.
- Create a calculation called *Hourly Wages* that returns a worker's hourly wages.

Security:

- *Set Up: Calculations - Generic* domain in the Core Payroll functional area.
- *Set Up: Time Off (Calculations - Generic)* domain in the Time Off and Leave functional area.

## Steps

1. Access the **Create Step Based Calculation** task and enter these values:

| Option          | Description                        |
|-----------------|------------------------------------|
| <b>Name</b>     | <i>Graduated Bonus Calculation</i> |
| <b>Category</b> | <i>Payroll</i>                     |

2. Add these steps to the **Step Details** grid:

**Note:** Use the plus in the far left column to add each row as a new step, as opposed to adding a row to the **Operations** sections within a step. The step numbers aren't visible until you click **OK** and save the calculation.

| Step | Condition                     | Operation       | Type                       | Value                                                                                                                                                                                  |
|------|-------------------------------|-----------------|----------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

| 6    |                               | <i>Max</i>      | <i>Numeric</i>             | <i>1500</i>                                                                                                                                                                            |

3. Click **OK**.

## Result

When you launch a payroll calculation with this calculation, Workday:

- Returns a result of 0 for salaried workers.
- Retrieves the hourly wages for workers paid with an hourly rate.
- Calculates a percentage of the workers' hourly wages based on their primary work state.
- Adds 100 to the bonus for workers with hourly wages greater than 1000.
- Rounds the bonus amounts to 0.05.
- Applies a maximum of 1500 to the bonus amount.

# Pay Accumulations and Balances

---

## Create Pay Accumulations

**Prerequisites**

- Create earnings and deductions.
- Security: *Set Up: Payroll (Calculations - Payroll Specific)* domain in the Core Payroll functional area.

**Context**

A pay accumulation is a set of earnings, deductions, pay component-related calculations, pay component groups, or other pay accumulations for which Workday can calculate a total. You specify which values to add or subtract.

Pay accumulations return a value for a single gross-to-net result. They don't represent multiple periods of time (such as month-to-date or quarter-to-date) or multiple results for the same period. Example: A worker receives a regular paycheck and an on-demand additional payment for the current period. The pay accumulation returns a single value for each, not the combined result.

**Note:** Use a pay balance, not a pay accumulation, to retrieve a value that represents multiple periods of time or multiple results for the same period.

Workday delivers several predefined pay accumulations, such as:

- *AUS Gross* (AUS)
- *AUS Net* (AUS)
- *EI Wages by Company* (CAN)
- *Federal Taxable Wages by Company* (USA)
- *FRA Gross* (FRA)
- *FRA Net Pay* (FRA)
- *FRA Taxable Net* (FRA)
- *FRA Total Statutory Taxes EE* (FRA)
- *FRA Total Statutory Taxes ER* (FRA)
- *GBR Gross* (UK)
- *GBR Net* (UK)
- *Gross Wages (T4) by Company/Province* (CAN)
- *Local Withholding Subject Wages by Company* (USA)

Define accumulations for net and gross pay and set up additional accumulations as needed. Example: For fiscal reporting.

**Steps**

1. Access the **Create Pay Accumulation** task.
2. As you complete the task consider:

| Field | Description                                                                                                            |
|-------|------------------------------------------------------------------------------------------------------------------------|
| Code  | Used with other Workday applications. Example: When you're configuring integrations in HCM for importing payroll data. |

| Field                                                | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
|------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Type                                                 | For gross or net pay; otherwise, leave this field blank.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| Filter Worktags                                      | <p>To calculate the accumulation for one or more worktag values, select the worktag types to include. To calculate without regard to worktag values, don't select a filter worktag. This is useful as an alternative to pay component groups, which always filter by worktag.</p> <p>Example: When you reference a pay accumulation, select <i>Company</i> in order to return the value for the company associated with the worker's gross to net pay calculation.</p> <p>For Payroll for the UK, Payroll ID, when referenced, returns the value associated to the employee.</p> <p>When an accumulation has multiple worktags, such as company and cost center, Workday summarizes the values and displays a single row on the <b>View Results</b> report for each combination of worktag values.</p> <p>For Payroll for Canada and the U.S., the <i>Position</i> worktag is available if your Workday tenant is configured for multiple jobs.</p> |
| Target Single Subperiod for a Prorated Pay Component | <p>When a primary pay component references another pay component (Example: Base Pay references Holiday Pay), you must select the <b>Target Single Subperiod for a Prorated Pay Component</b> check box on the <b>Create Pay Component Group</b> or the <b>Create Pay Accumulation</b> task. Selecting this check box sets the referenced pay component (Example: Holiday Pay) to target a single subperiod of the prorated primary pay component.</p> <p>To prevent any negative impacts on retro calculations, you must:</p> <ul style="list-style-type: none"> <li>• Create a new pay accumulation and enable Target Single Subperiod for a Prorated Pay Component.</li> <li>• Create a new effective dated snapshot for your primary pay component referencing the cloned pay accumulation.</li> </ul> <p>If there are pay accumulations or pay component groups nested within, you must enable each level to target a subperiod accurately.</p> |

3. On the **Add and Subtract Calculations** tab, select the pay components that add to, or subtract from, the pay accumulation.

4. (Optional) To restrict the display of the accumulation value on the **Pay Accumulations/Balances** tab on the **Payroll Result** report and custom reports, use the **Calculate/Display Exceptions** tab.

Select an **Option**:

- *Calculate and display only if specified Earning/Deduction exists.* Displays the value only if one of the specified earnings or deductions is calculated. If you specify a pay accumulation, Workday applies this option to the specified balance period, not the results.
- *Calculate but do not display.*

### Next Steps

- Assign gross and net pay accumulations to run categories.
- As you add new earnings or deductions, include them in pay accumulations as appropriate.
- To determine the source of the accumulation, access the **Edit Pay Accumulation** task and check the **Usage** tab.
- You can view pay accumulation definitions with the **All Pay Accumulations**, **View Pay Accumulation**, and **View Pay Accumulation (Workday Owned)** reports. To view pay accumulation values in custom reports, map pay accumulations to report fields.

Use the **Delete Calculation** task to delete a calculation that isn't in use. See the **Usage** tab on the calculation to determine if and where it is in use. The tab doesn't display if it isn't in use.

## Setup Considerations: Pay Balances

You can use this topic to help make decisions when planning your configuration and use of pay balances. It explains:

- Why to set them up.
- How they fit into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

### What They Are

Pay balances calculate the value of 1 or more pay component results over a period of time. You can set up pay balances to include a combination of:

- Deductions.
- Earnings.
- Pay accumulations.
- Pay component related calculations (PCRCs).
- Pay component groups.

## Business Benefits

The pay balance feature makes it easy to cover a variety of audits and calculations by providing flexibility on the:

- Inputs you include in the calculation.
- Period you use for aggregations.

Pay balances also provide transparent calculations that are easy to troubleshoot. You can view the:

- Components of each pay balance.
- Calculations each pay balance impacts.

Workday automatically recalculates pay balances every time you view a report or page, ensuring that you have accurate, up-to-date information.

## Use Cases

- Calculate payroll inputs, such as average weekly hours paid.
- Compare individual payroll results to month-to-date or year-to-date totals in your auditing process.
- Track open-ended loan repayments.
- Validate year-to-date pay.

## Questions to Consider

| Questions                                                              | Considerations                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| What balances do you want to display on your workers' payroll results? | When creating a pay balance, you can decide whether or not to display the aggregated results or other balances on worker payroll results. Example: You can display year-to-date tax contributions on worker results to help with payroll verifications.                                                                                                                                                                                                                                                                                                                                                                                            |
| Over what time period do you want to aggregate results?                | <p>When configuring a pay balance, the balance period determines when to aggregate results. Examples: Month-to-date, year-to-date. You can also exclude values from the current gross-to-net calculation.</p> <p>To create an ongoing aggregation of values, you can use a balance period with an end date set to the current period start, end, or payment date.</p> <p>If you only need to return aggregated values for a single pay period, consider creating a pay accumulation or a pay component group instead of a pay balance.</p> <p>Pay balances that you create during or after the specified balance period sum the entire period.</p> |
| Do you want to display aggregated results on a worker's payslip?       | <p>To display aggregated results on a worker's payslip, you can either:</p> <ul style="list-style-type: none"> <li>• Use the balance-period mapping feature to display payslip results for different balance periods.</li> <li>• Modify your Report Designer payslip layout to include pay balance information.</li> </ul>                                                                                                                                                                                                                                                                                                                         |

| Questions                                                             | Considerations                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|-----------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                                                       | You can't use the <b>Maintain Payslip Configuration</b> task to display payroll balances on worker payslips.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| Which values do you want to include in the pay balance?               | <p>When creating a pay balance, you can determine which calculations to include in the balance.</p> <p>When creating a pay balance, you can return results based on a worktag value such as a specific region or position.</p> <p>For retroactive payroll results, you can configure pay balances to either:</p> <ul style="list-style-type: none"> <li>• Include all retro differences.</li> <li>• Only include retro differences when they're from a period that falls within the balance period.</li> <li>• Exclude all retro differences.</li> </ul> <p>When you have related company relationships, you can include values from the worker's company or from related companies, or both.</p> |
| How do you aggregate results for statutory reporting or calculations? | <p>Workday delivers several read-only:</p> <ul style="list-style-type: none"> <li>• Pay balances.</li> <li>• Balance periods.</li> </ul> <p>You can customize Workday-delivered pay balances by adding earnings and deductions to pay component group included in the pay balance.</p> <p>When Workday delivers a balance period for statutory calculations, you can associate a custom pay balance with the Workday-owned balance period to provide inputs.</p>                                                                                                                                                                                                                                  |
| How do you want to use your pay balances with other calculations?     | <p>When creating custom calculations, you can use a pay balance as an operand. You can also add the pay balance as an override calculation for a PCRC in a memo earning and then reference the PCRC result in a calculation.</p> <p>Workday always includes the current gross-to-net calculation when displaying pay balances on payroll results. However, you can configure a pay balance to exclude current gross-to-net values in calculations that reference the pay balance.</p>                                                                                                                                                                                                             |

### Recommendations

To ensure correct pay balance values, only include position-based pay components in a pay balance using worktag filtering based on position worktags.

For Payroll for the UK, Workday recommends associating UK Payroll ID worktags with pay balances to ensure accurate reporting to HMRC.

### Requirements

No impact.

## Limitations

You can't configure Workday to display a pay balance for only some workers in a pay group. You can display each pay balance for all or none.

You can't effective-date pay balance configurations. Create a new pay balance rather than edit existing balances to avoid impacting calculations and reports that reference the balance.

When displaying payroll balance amounts on worker results, Workday doesn't display a negative sign for negative amounts.

You can't edit pay balances delivered by Workday.

Workday doesn't store pay balances for prior periods but instead recalculates balances when you run a report or view a page. To retrieve the balance from a prior period, create a balance period based on the prior period start and end dates.

You can't configure eligibility for pay balances. Workday automatically calculates payroll balances for workers who:

- Are in a pay group associated with the country of the balance.
- Have earnings that contribute to the balance.

## Tenant Setup

No impact.

## Security

| Domains                                                                                                                                                                                                                               | Consideration                          |

## Reporting

| Reports                 | Considerations                                                                                                                                                                                                                                                              |
|-------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>All Pay Balances</b> | Use to: <ul style="list-style-type: none"> <li>• Browse for existing pay balances in your tenant that you can reuse.</li> <li>• Verify the consistency of configurations across multiple pay balances.</li> <li>• View which calculations a pay balance impacts.</li> </ul> |
| <b>Tenant Analyzer</b>  | Use to identify potential issues when configuring or referencing pay balances.                                                                                                                                                                                              |

You can use these report data sources:

- **All Pay Balances for Payroll** to report on payroll balance configurations.

- **Earnings/Deductions Payroll Balances for Organizations** to report on the value of individual pay balances.

There are also multiple ways to report on aggregated values of payroll results that don't rely directly on pay balances. Examples:

- Create matrix or composite reports.
- Map balance periods to payroll results.
- Map report fields to balance periods.
- Run the **Pay Balance Summary** standard report.

## Integrations

You can use these web services to load or retrieve in pay balances in bulk:

- *Get Pay Balances*
- *Put Pay Balance*

## Connections and Touchpoints

| Features        | Considerations                                                                                  |
|-----------------|-------------------------------------------------------------------------------------------------|
| Balance periods | Balance periods determine the period of time over which to aggregate calculations.              |
| Payroll history | Payroll balances can take into account payroll history amounts that fall in the balance period. |

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships in your tenant. Learn more about the [Workday Touchpoints Kit](#) on Workday Community.

## Create Pay Balances

### Prerequisites

- Review setup considerations for pay balances.
- Security: *Set Up: Payroll (Calculations - Payroll Specific)* domain in the Core Payroll functional area.

### Context

Over a balance period that includes multiple gross-to-net results (such as quarter-to-date, year-to-date, or fiscal periods), you can configure pay balances to calculate a combination of:

- Earnings.
- Deductions.
- Pay accumulations.
- Pay component groups.
- Pay component related calculations.

Workday recommends that you don't change existing pay balances that you process in retro. Instead, create pay balances with a new effective date. This practice helps ensure accurate retro pay calculations.

### Steps

1. Access the **Create Pay Balance** task.
2. As you complete the task, consider:

| Option                                                             | Description                                                                                                                                                                                                                                                                                                                                                                                             |
|--------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Display on Result</b>                                           | When selected, Workday displays the pay balance on the <b>Pay Accumulations / Balances</b> tab of the <b>View Payroll Result</b> report.                                                                                                                                                                                                                                                                |
| <b>Country</b>                                                     | The <b>Edit Tenant Setup - Payroll</b> task controls the countries available for selection.                                                                                                                                                                                                                                                                                                             |
| <b>Filter Worktags</b>                                             | To calculate the pay balance based on worktags, select them from the prompt. The <i>Position</i> worktag is available when you enable your tenant to support multiple jobs.<br><br>Example: You can filter pay balance values by region by selecting that worktag type.                                                                                                                                 |
| <b>Exclude Values from Current Gross to Net During Calculation</b> | When selected, calculations that reference the pay balance exclude the current gross-to-net amount.<br><br>Pay balances displayed on workers' payroll results always include the value from the current gross-to-net, regardless of this check box.                                                                                                                                                     |
| <b>Include All Retro Values in Current Gross to Net</b>            | When selected, the pay balance includes all retro differences in the current gross-to-net regardless of the period that they're from.                                                                                                                                                                                                                                                                   |
| <b>Include All Retro Values Based on Earned Period</b>             | When selected, the pay balance only includes the retro differences within the current pay balance period.<br><br>Because this option isn't effective-dated, Workday recommends that you leave it clear for existing pay balances. Instead, create new balances and apply the setting. This practice helps prevent impacting calculations that reference the pay balance.                                |
| <b>None of the above</b>                                           | When selected, the pay balance excludes all retro differences.<br><br>This option is only available when you select the <b>Exclude Values from Current Gross to Net During Calculation</b> check box.<br><br>Workday doesn't support this option for pay components that you process in retro. Therefore, Workday recommends that you use it only for pay components that you don't calculate in retro. |
| <b>Pay Component</b>                                               | Select the pay components to include in the pay balance. For position-based pay balances, select                                                                                                                                                                                                                                                                                                        |

| Option                | Description                                                                                                                                                                                                                                                                                                                                                                                                |
|-----------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                       | position-based pay components. Ensure that they reference only position-based pay components.                                                                                                                                                                                                                                                                                                              |
| <b>Balance Period</b> | <p>Select the time period over which to sum the values. You can use a Workday-owned balance period or create your own.</p> <p>Workday automatically recalculates pay balances every time you view them. Example: In July, you create a pay balance with a <i>YTD - Current Calendar Year</i> balance period. When you view the pay balance in July, Workday sums the values from January through July.</p> |

### Example

#### Create a Pay Balance for an Open-Ended Executive Loan Repayment

Create a deduction called *Executive Loan Repayment*. When you create the pay balance:

- From the **Pay Component** prompt, select *Executive Loan Repayment*.
- From the **Balance Period** prompt, select *Open Ended based on Period End Date*.

#### Create a Pay Balance for Year-to-Date Gross Pay

Create a pay accumulation called *Gross Pay*. When you create the pay balance:

- From the **Pay Component** prompt, select *Gross Pay*.
- From the **Balance Period** prompt, select *YTD - Current Calendar Year (based on Payment Date)*.

### Next Steps

Access the **Delete Calculation** task to delete a calculation that isn't in use. The **Usage** tab displays how Workday uses calculations, and is available only for calculations that are in use.

## Gross Up Wages and Taxes

### Setup Considerations: Gross-Up Calculations

This topic provides information for planning the gross-up calculation configuration for these countries:

- Payroll for Canada

- Payroll for France
- Payroll for the UK
- Payroll for the U.S.

You can use this topic to help make decisions when planning your configuration and use of gross-up calculations. It explains:

- Why to set it up.
- How it fits into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

### What It Is

Gross up calculations enable you to calculate a gross amount for an earning, based on a defined net amount.

### Business Benefits

Workday's gross-up functionality makes it easy to gross up calculations, by determining the appropriate tax rate, even in the case of progressive tax rates. This functionality ensures that you're accurately covering all taxes when grossing up a payment amount.

Workday has optimized the gross-up algorithm for performance, making it easy to perform multiple gross-up calculations for a large population.

The gross-up calculation is also highly configurable, making it easy for you to adapt it to your needs.

### Use Cases

You can use gross-up calculations to calculate taxes and other contributions for payments with a guaranteed net amount, such as:

- Benefits in kind.
- Bonuses.
- Gift cards.
- Hiring or relocation bonuses.

### Questions to Consider

| Questions                                                  | Considerations                                                                                                                                                                                                                                                             |
|------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| How do you want to provide the net amount?                 | <p>You can provide the net amount for gross ups through:</p> <ul style="list-style-type: none"> <li>• Manual payments.</li> <li>• On-demand payments.</li> <li>• Payroll inputs.</li> </ul>                                                                                |
| Which taxes do you want to include in gross ups? (UK, USA) | <p>When configuring a gross-up earning, the gross-up type determines which taxes Workday includes when calculating gross-ups.</p> <p>You can add other taxable pay component groups according to your tax requirements.</p> <p>You can gross up calculations based on:</p> |

| Questions                                                                  | Considerations                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
|----------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                                                            | <ul style="list-style-type: none"> <li>• Employer and employee national insurance (NI) contributions only (UK).</li> <li>• Tax Only (UK).</li> <li>• Both NI contributions and taxes (UK).</li> <li>• A company-specific percentage (USA).</li> <li>• All taxes (USA).</li> <li>• Specific combinations of Federal, State, OASDI, and Medicare (USA).</li> </ul> <p>For Payroll for the UK, as you can only gross up supplemental earnings, Workday automatically applies the supplemental tax rate.</p>        |
| In which order do you want Workday to process gross-up calculations?       | When a worker has multiple gross-up earnings in the same pay calculation, you can define the order in which Workday processes them.                                                                                                                                                                                                                                                                                                                                                                             |
| What is an acceptable tolerance for rounding in gross-up calculations?     | <p>By default, Workday accepts a maximum difference of 0.01 between the input and calculated net amounts. You can modify the gross-up tolerance. If the gross-up calculation produces a net amount within the tolerance, it stops calculating.</p> <p>For Payroll for Canada and the U.S., due to the defined tolerance, in some cases the input and calculated net amounts can be different. You can choose to reallocate the differences to a worker's withholding tax to result in accurate net results.</p> |
| What kinds of earnings do you want to gross up?                            | <p>For gross-up earnings, Workday returns the full gross amount including net plus taxes. As a result the net portion of the gross-up impacts a worker's net pay.</p> <p>For imputed earnings or benefits in kind, Workday recommends that you create:</p> <ul style="list-style-type: none"> <li>• The gross up earning.</li> <li>• An offset earning that deducts the net amount from a worker's net pay.</li> </ul>                                                                                          |
| What other calculations do you use the net amount as input for? (CAN, USA) | <p>If you want to use the net amount in other payroll calculations, add the <i>Net Amount (for Gross Up)</i> pay component related calculation to the:</p> <ul style="list-style-type: none"> <li>• <i>Gross Up: Net Amount [CAN]</i> pay component group.</li> <li>• <i>Gross Up: Net Amount [USA]</i> pay component group.</li> </ul>                                                                                                                                                                         |
| Which amounts do you want to display on the worker's payslip?              | When you include a gross-up earning on a payslip configuration, Workday displays the gross amount. To display the net amount, you can create a memo earning based on the <i>Net Amount (for Gross-Up)</i> pay component related calculation.                                                                                                                                                                                                                                                                    |

| Questions | Considerations                                                                                                                               |
|-----------|----------------------------------------------------------------------------------------------------------------------------------------------|
|           | You can also use the <b>Maintain Payroll Payslip Configuration</b> task to display the <i>Net Amount (for Gross-Up)</i> related calculation. |

### Recommendations

Consider your performance requirements when configuring the number of gross ups per worker. You might experience longer calculation times if you include a large number of gross ups per worker. To ensure optimal performance, Workday limits the number of different gross-up earnings per worker to 4 for a payroll calculation. You can, however, have an unlimited number of net inputs for the same gross-up earning.

### Requirements

Create separate gross-up earnings for each Payroll country.

For Payroll for the U.S, when configuring gross-up earnings, you must also set up supplemental taxation for the earning.

### Limitations

- Workday retroactive pay doesn't recalculate gross-up earnings.
- You can't gross up an amount to cover retirement, benefit, or other voluntary or nontax deductions.
- You can only gross up net amounts to cover all taxes. You can't gross up based on different taxes individually (CAN).
- You can only gross up net amounts to cover all taxes and contributions. You can't gross up based on different taxes or contributions individually (FRA).
- Create separate earnings for calculations to gross up and calculations not to gross up. You can't add gross-up amounts to an earning that isn't configured for gross-ups.
- Workday doesn't support gross-up calculations for international assignments.

### Tenant Setup

No impact.

### Security

| Domains                                                                                       | Considerations                                                                                                                                                                                                                                                                              |
|-----------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <i>Set Up: Payroll (Calculations - Payroll Specific)</i> in the Core Payroll functional area. | Enables users to define: <ul style="list-style-type: none"> <li>• Which earnings to gross up, and which taxes to use in the gross-up calculation.</li> <li>• The order in which to calculate multiple gross-ups.</li> <li>• The tolerance for rounding in gross-up calculations.</li> </ul> |

### Business Processes

No impact.

### Reporting

No impact.

## Integrations

You can use these web services to mass upload net amounts for gross-up calculations:

- *Import Payroll Input*
- *Import Payroll Off-Cycle Payment*

## Connections and Touchpoints

| Features                                              | Considerations                                                                                                                                                                 |
|-------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Ongoing Multiple Work Jurisdictions (OMWJ) (CAN, USA) | Workday splits gross-up earnings based on a worker's OMWJ allocations. Workday generates a result for each work jurisdiction.                                                  |
| One Time Payments in Compensation                     | You can gross up one-time payment amounts by selecting a compensation element to which a gross-up earning is assigned.                                                         |
| Fair Labor Standards Act (FLSA) Calculations (USA)    | When calculating a gross-up earning for a bonus that crosses multiple FLSA periods, Workday allocates the earning to the appropriate FLSA periods based on the coverage dates. |

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships in your tenant. Learn more about the [Workday Touchpoints Kit](#) on Workday Community.

## Steps: Set Up Gross-Up Calculations

### Prerequisites

Review setup considerations for gross-up calculations.

### Context

This topic provides instructions for setting up gross-up calculations for these countries:

- Payroll for Canada
- Payroll for France
- Payroll for the UK
- Payroll for the U.S.

You can configure Workday to calculate a gross amount for an earning, based on a defined net amount. You can use gross-up calculations to offset an employee's liability for taxes or contributions when you want to guarantee a given net amount. Examples: gift cards, bonuses.

You can calculate multiple gross-ups in a single pay calculation, including multiple inputs for the same gross-up earning. To ensure optimal performance, Workday limits the number of different gross-up earnings per worker to 4 for a payroll calculation. You can, however, have an unlimited number of net inputs for the same gross-up earning.

Workday retroactive pay doesn't recalculate gross-up earnings.

## Steps

1. Access the **Maintain Payroll Gross-Up Configurations** task.

As you complete the task, consider:

| Option                                 | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
|----------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Gross-up tolerance</b>              | <p>Define an acceptable variation between input net amounts and calculated net amounts in gross-up calculations. Workday generates an error when the difference between the input and calculated net amounts is greater than the defined tolerance. By default, Workday provides a tolerance of 0.01.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| <b>Apply additional cents to taxes</b> | <p>For Payroll for Canada, select to reallocate any differences between the input and calculated net amount to a worker's withholding tax. Applies when input and calculated net amounts are different due to a gross-up tolerance.</p> <p>Workday allocates the additional amount to the first withholding tax on the payroll result, based on this order of priority:</p> <ul style="list-style-type: none"> <li>• Federal Income Tax (FIT) [CAN]</li> <li>• Province Income Tax (PIT) [CAN]</li> <li>• Province Income Tax (QC-PIT) [CAN]</li> <li>• Federal Income Tax (FIT T4A) [CAN]</li> <li>• Province Income Tax (PIT T4A) [CAN]</li> <li>• Province Income Tax (QC-PIT RL-2) [CAN]</li> <li>• Federal Income Tax T4A-RCA (FIT T4A-RCA) [CAN]</li> <li>• Province Income Tax T4A-RCA (PIT T4A-RCA) [CAN]</li> <li>• Federal Income Tax Non-Resident (FIT-NR) [CAN]</li> </ul> <p>For Payroll for the U.S., select to reallocate any differences between the input and calculated net amount to a worker's withholding tax. Applies when input and calculated net amounts are different due to a gross-up tolerance.</p> <p>Workday allocates the additional amount to the first withholding tax that the worker is eligible for, based on this order of priority:</p> <ul style="list-style-type: none"> <li>• Federal</li> <li>• State Work</li> <li>• State Home</li> </ul> |
| <b>Gross-Up Priorities</b>             | <p>Determines the order in which Workday calculates earnings with gross-up calculations. When you select <b>Always Gross-Up</b> on an earning, Workday automatically adds the earning to the <b>Gross-Up Priorities</b> section. Workday recommends that you verify the priority order of the earnings in this section after creating gross-up earnings.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

| Option | Description                                                   |
|--------|---------------------------------------------------------------|
|        | Workday only displays earnings based on the selected country. |

Security: *Set Up: Payroll (Calculations - Payroll Specific)* domain in the Core Payroll functional area.

2. [Add Earnings or Deductions to Pay Component Groups](#) on page 234.

For Payroll for France, add statutory taxes that are deductible from tax to the *FRA Statutory Taxes EE - Deductible from Tax - Excluded from Gross Up* pay component group. Workday excludes these taxes from the gross-up calculation.

3. [Set Up Gross-Up Earnings](#) on page 325.
4. Enter the net amount for the gross-up earning.  
See [Concept: Net Amounts for Gross Ups](#) on page 327.

### Result

After a payroll calculation, Workday displays Yes in a **Grossed Up** column on the worker's payroll results for grossed up earnings.

## Set Up Gross-Up Earnings

### Prerequisites

- If the source of your earning is a one-time payment plan, set up the plan.
- Security: *Set Up: Payroll (Calculations - Payroll Specific)* domain in the Core Payroll functional area.

### Context

This topic provides instructions for setting up gross-up calculations for these countries:

- Payroll for Canada
- Payroll for France
- Payroll for the UK
- Payroll for the U.S.

You can configure an earning to calculate a gross amount based on an input net amount.

You can use gross-up earnings to offset employee liability for:

- A company-specific percentage (USA).
- All taxes (USA).
- Specific combinations of Federal, State, OASDI, and Medicare (USA).
- PAYE taxes (UK).
- National Insurance contributions (UK).
- Both PAYE and National Insurance contributions (UK).

For Payroll for the U.S., you can only gross up supplemental earnings.

For Payroll for the UK, Workday doesn't include a worker's student loan, postgraduate loan, or court orders in gross up calculations, which can result in a reduction of the final amount paid to the worker.

For Payroll for France, you can use gross-up earnings to offset employee liability for contributions and taxes in these pay component groups:

- *FRA Statutory Taxes EE - Deductible from Tax [FRA]*

- *FRA Statutory Taxes EE - Submitted to Tax [FRA]*
- *FRA Statutory Contingency Contributions ER*
- *FRA Adds to Gross-Up Calculation [FRA]*

You can't gross up an earning to cover voluntary or nontax deductions.

### Steps

1. Access the **Create Earning** task.
2. As you complete the task, consider:

| Option                       | Description                                                                                                                                                                                                                                                                                                                                                                                                                 |
|------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Country</b>               | Required when you have Workday Payroll enabled for multiple countries. You can only select a single country for a gross-up earning.                                                                                                                                                                                                                                                                                         |
| <b>Calculation</b>           | Select <i>Grossed Up Amount</i> (CAN, FRA, USA).<br>Select <i>Payroll Input</i> (UK).                                                                                                                                                                                                                                                                                                                                       |
| <b>Input Amount Allowed?</b> | Keep the check box clear for gross-up earnings.                                                                                                                                                                                                                                                                                                                                                                             |
| <b>Always Gross-Up</b>       | Select to enable Workday to gross up the earning.                                                                                                                                                                                                                                                                                                                                                                           |
| <b>Gross-Up Type</b>         | For Payroll for the U.S., select a gross-up type. If you select <i>Company Specific Percentage</i> , enter the flat tax rate for the gross-up in the <b>Gross-Up Percentage</b> prompt.<br><br>For Payroll for Canada, select <i>All Taxes [CAN]</i> .<br><br>For Payroll for the UK, select what you want to offset. Example: PAYE taxes, NI contributions.<br><br>For Payroll for France, Select <i>All Taxes [FRA]</i> . |

3. In the **Related Calculations** section of the **Effective Dated** tab, add a row with these settings:

| Option                      | Description                                                                                                                                                                                                                                                                                                                                                                           |
|-----------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Related Calculation</b>  | Select <i>Net Amount (for Gross-Up)</i> .                                                                                                                                                                                                                                                                                                                                             |
| <b>Groups (CAN, USA)</b>    | You can add this related calculation to the <i>Gross Up: Net Amount [CAN USA]</i> pay component group, in order to reference it in another calculation.                                                                                                                                                                                                                               |
| <b>Default Calculation</b>  | Automatically populates <i>Payroll Input</i> . This setting, along with selecting <b>Input Allowed?</b> enables you to enter the net amount on one of these tasks: <ul style="list-style-type: none"> <li>• <b>Add Payroll Input by Worker.</b></li> <li>• <b>Create On Demand Payment for Worker.</b></li> </ul> See <a href="#">Concept: Net Amounts for Gross Ups</a> on page 327. |
| <b>Override Calculation</b> | To retrieve the net amount from a calculation or other source in Workday, select a calculation. Overrides the <b>Default Calculation</b> setting.                                                                                                                                                                                                                                     |

4. From the **Groups** prompt on the **Non-Effective Dated** tab, select:

- *Adds to Gross [CAN USA]*, and either *Supplemental Earnings - Standard* or *Supplemental Earnings - Alternate* (CAN, USA).
- *GBR Adds to Gross* (UK).
- *GBR Nlable Pay* (UK).
- *GBR Taxable Pay* (UK).
- A pay component group that is part of the gross pay accumulation (FRA).
- 

5. For Payroll for Canada, as you complete the **Non-Effective Dated** tab, consider:

| Option                             | Description                                                                                                                                                   |
|------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Groups</b>                      | Select: <ul style="list-style-type: none"> <li>• <i>Adds to Gross [CAN USA]</i>.</li> <li>• All pay component groups needed to match T4 reporting.</li> </ul> |
| <b>Allocation Reporting Period</b> | Select how to report the gross-up earning.                                                                                                                    |

#### Tasks

Steps: [Create Earnings](#) on page 222

## Concept: Net Amounts for Gross Ups

When you select *Payroll Input* as the **Default Calculation** on a gross up earning, there are several different ways to provide the net amount.

### Payroll Input

On the **Add Payroll Input by Worker** task, enter these **Input Details**:

| Type                             | Value                 |
|----------------------------------|-----------------------|
| <i>Net Amount (for Gross-Up)</i> | Enter the net amount. |

You can enter a negative value in the **Value** field. Example: To reverse a net overpayment of 100, enter a -100 pay input for a gross up. For Payroll for the U.S., Workday displays a warning for negative pay input.

### On-Demand Payment

On the **Run On Demand Payment for Worker** task, enter these **Input** values:

| Type                             | Value                 |
|----------------------------------|-----------------------|
| <i>Net Amount (for Gross-Up)</i> | Enter the net amount. |

### Manual Payment

For Payroll for Canada, the UK, and the U.S., on the **Run Manual Payment for Worker** task, enter these **Input** values:

| Type                      | Value                            |
|---------------------------|----------------------------------|
| Amount                    | Enter the grossed up amount.     |
| Net Amount (for Gross-Up) | (Optional) Enter the net amount. |

For manual payments, Workday records the entered amounts, but doesn't calculate the grossed up amount.

**Related Information**

**Example: Calculate Gross Bonus Amount Based on Net Pay Input**

This example illustrates how to set up a gross-up calculation and provide the net amount through payroll input.

**Context**

You want to recognize Kelly with a 5000 award for outstanding service. You want Kelly to get the full 5000, so you need to gross up the amount to include taxes. You're managing the one-time award through a pay input paid with the regular January pay.

**Prerequisites**

Security: *Set Up: Payroll (Calculations - Payroll Specific)* domain in the Core Payroll functional area.

**Steps**

1. Access the **Create Earning** task.
2. Enter these values:

| Option  | Description                                                     |
|---------|-----------------------------------------------------------------|
| Name    | Award                                                           |
| Code    | AWARD                                                           |
| Country | Select the country for which you're creating the pay component. |

3. Enter these values on the **Effective Dated** tab:

| Option               | Description                                             |
|----------------------|---------------------------------------------------------|
| Effective Date       | The effective date of the earning.                      |
| Calculation          | Grossed Up Amount (CAN, FRA, USA)<br>Payroll Input (UK) |
| Input Amount Allowed | Unchecked                                               |
| Always Gross Up      | Checked                                                 |

| Option               | Description                                                                                                           |
|----------------------|-----------------------------------------------------------------------------------------------------------------------|
| <b>Gross Up Type</b> | <i>All Taxes [FRA] (FRA)</i><br><i>All Taxes [CAN] (CAN)</i><br><i>All Taxes [GBR] (UK)</i><br><i>All Taxes (USA)</i> |

4. Add a row to the **Related Calculation** grid.

| Related Calculation              | Default Calculation  | Input Allowed? |
|----------------------------------|----------------------|----------------|
| <i>Net Amount (for Gross-Up)</i> | <i>Payroll Input</i> | Selected       |

5. On the **Non-Effective Dated** tab:

From the **Groups** prompt, select:

Payroll for France:

- *FRA Adds to Gross [FRA]*

Payroll for Canada:

- *Adds to Gross [CAN]*
- All pay component groups needed to match T4 reporting.

Payroll for the U.S.:

- *Adds to Gross [USA]*
- Either *Supplemental Earnings - Standard [USA]* or, *Supplemental Earnings - Alternate [USA]*

Payroll for the UK:

- *GBR Adds to Gross [GBR]*
- *GBR Nlable Pay [GBR]*
- *GBR Taxable Pay [GBR]*

From the **Allocation Reporting Period** prompt:

Payroll for Canada: *Period Earned*.

6. Click **OK**.

7. Add payroll input for the Award earning.

See [Example: Add Net Pay Input for a Gross-Up Earning](#) on page 329.

## Result

When you run the January payroll calculation, Workday calculates:

- Net award amount: 5000.
- Gross award amount: 5000 plus taxes (CAN, UK, USA).
- Gross award amount: 5000 plus taxes and contributions (FRA).

## Example: Add Net Pay Input for a Gross-Up Earning

This example illustrates how to use a payroll input to provide the net amount for a gross-up earning.

## Context

You want to recognize Kelly with a 5000 award for outstanding service. You've created a gross-up earning to ensure that Kelly receives the full 5000. You now need to enter a pay input to specify the amount of the award.

**Prerequisites**

- Create a gross-up earning, based on payroll input, named *Award*.
- Security: *Worker Data: Payroll (Payroll Input)* domain in the Core Payroll functional area.

**Steps**

1. Access the **Add Payroll Input by Worker** task and enter these values:

| Option               | Description  |
|----------------------|--------------|
| Workers              | Kelly        |
| Start Date           | January 1    |
| End Date             | January 31   |
| Pay Component        | <i>Award</i> |
| One-time             | Selected     |
| Override             | Selected     |
| Regular Run Category | Select       |

2. Click **OK**.

3. Enter these values on the **Input** grid:

| Option                | Description                        |
|-----------------------|------------------------------------|
| Input Details - Type  | <i>Net Amount (for Gross - Up)</i> |
| Input Details - Value | 5000                               |

**Related Information****Tasks**

[Add Payroll Input for Workers](#) on page 589

**Example: Gross Up One-Time Payment Amount**

This example illustrates how to gross up a gift card paid through a one-time payment.

**Context**

You want to award Javier a 100 gift card as a one-time merit award. Global Modern Services covers all taxes, so Javier will receive the full amount. You're creating the earning as part of a one-time payment in Workday Compensation. You want to use the net amount from the one-time payment plan.

**Prerequisites**

- Set up an *Incentive award* compensation element, and attach it to one-time payment plan for gift cards.
- Security: *Set Up: Payroll (Calculations - Payroll Specific)* domain in the Core Payroll functional area.

**Steps**

1. Access the **Create Earning** task.
2. Enter these values:

| Option | Description          |
|--------|----------------------|
| Name   | Gift Card (Gross-up) |
| Code   | GIFT                 |

| Option  | Description                 |
|---------|-----------------------------|
| Country | Select the payroll country. |

3. Enter these values on the **Effective Dated** tab:

| Option               | Description                                                                                                           |
|----------------------|-----------------------------------------------------------------------------------------------------------------------|
| Effective Date       | The effective date of the earning.                                                                                    |
| Worker Eligibility   | <i>Compensation: Compensation Element Value Exists and &lt;&gt; 0</i>                                                 |
| Calculation          | <i>Grossed Up Amount</i>                                                                                              |
| Always Gross-Up      | Checked                                                                                                               |
| Gross-Up Type        | <i>All Taxes (USA)</i><br><i>All Taxes [CAN] (CAN)</i><br><i>All Taxes [GBR] (UK)</i><br><i>All Taxes [FRA] (FRA)</i> |
| Compensation Element | <i>Incentive award</i>                                                                                                |

4. Add a row to the **Related Calculation** grid with these settings:

| Related Calculation              | Default Calculation  | Override Calculation                                       | Input Allowed? |
|----------------------------------|----------------------|------------------------------------------------------------|----------------|
| <i>Net Amount (for Gross-Up)</i> | <i>Payroll Input</i> | <i>Compensation: Compensation Element Value Annualized</i> | Checked        |

5. On the **Non-Effective Dated** tab:

From the **Groups** prompt, select:

Payroll for France:

- *FRA Adds to Gross [FRA]*

Payroll for Canada:

- *Adds to Gross [CAN]*
- All pay component groups needed to match T4 reporting.

Payroll for the U.S.:

- *Adds to Gross [USA]*
- Either *Supplemental Earnings - Standard [USA]* or, *Supplemental Earnings - Alternate [USA]*

Payroll for the UK:

- *GBR Adds to Gross [GBR]*
- *GBR Niable Pay [GBR]*
- *GBR Taxable Pay [GBR]*

From the **Allocation Reporting Period** prompt:

Payroll for Canada: *Period Earned*.

### Next Steps

Request a one-time payment for Javier with an amount of 100.

To exclude the value of the imputed income from the gross pay calculation, create a post-tax deduction that subtracts the grossed-up amount from gross pay.

**Related Information****Tasks**[Steps: Manage One-Time Payments](#)**Example: Gross Up at a Company-Defined Percentage (USA)**

This example illustrates how to gross up amounts at a company-defined percentage.

**Context**

You want to give George a 1000 USD spot award. Global Modern Service's policy is to gross up spot awards at 35%, regardless of state and local tax requirements. As a result, some employees can receive more or less than 1000 USD.

**Steps**

1. Access the **Create Earning** task.

Security: *Set Up: Payroll (Calculations - Payroll Specific)* domain in the Core Payroll functional area.

2. Enter these values:

| Option | Description |
|--------|-------------|
| Name   | Spot Award  |
| Code   | S_AWARD     |

3. Enter these values on the **Effective Dated** tab:

| Option               | Description                        |
|----------------------|------------------------------------|
| Effective Date       | The effective date of the earning. |
| Calculation          | <i>Grossed Up Amount</i>           |
| Input Amount Allowed | Unchecked                          |
| Gross Up Type        | <i>Company Specific Percentage</i> |
| Gross-Up Percentage  | 35                                 |

4. Add a row to the **Related Calculation** grid.

| Related Calculation              | Default Calculation  | Input Allowed? |
|----------------------------------|----------------------|----------------|
| <i>Net Amount (for Gross-Up)</i> | <i>Payroll Input</i> | Checked        |

5. From the **Groups** prompt on the **Non-Effective Dated** tab, select:

- *Adds to Gross [CAN USA]*, and
- Either *Supplemental Earnings - Standard [USA]* or *Supplemental Earnings - Alternate [USA]*.

**Note:** You can add other taxable pay component groups according to your tax requirements.

6. Click **OK**.

7. Access the **Add Payroll Input by Worker** task, and enter these values:

| Option        | Description       |
|---------------|-------------------|
| Worker        | <i>George</i>     |
| Start Date    | January 1         |
| End Date      | January 31        |
| Pay Component | <i>Spot Award</i> |

| Option               | Description |
|----------------------|-------------|
| One-time             | Selected    |
| Override             | Selected    |
| Regular Run Category | Selected    |

Security: *Worker Data: Payroll (Payroll Input)* domain in the Core Payroll functional area.

8. Click **OK**.

9. Enter these values on the **Input** grid.

| Option                | Description                      |
|-----------------------|----------------------------------|
| Input Details - Type  | <i>Net Amount (for Gross-Up)</i> |
| Input Details - Value | 1000                             |

## Result

When you run the January payroll calculation, Workday uses a total tax rate of 35% to:

- Calculate a gross-up percentage of 65%.
- A company-specific gross-up amount of 1538.46 USD. ( $1000/0.65 = 1538.46$ )

| Pay Calculation                  | Result                    |
|----------------------------------|---------------------------|
| Total tax rate                   | 35%                       |
| Gross-up percentage              | $1 - 0.35 = 0.65$         |
| Company-specific gross-up amount | $1000/0.65 = 1538.45$ USD |

Workday then applies state and local taxes to the company-specific gross-up amount.

| Pay Calculation                                    | Result (USD) |
|----------------------------------------------------|--------------|
| Company specific gross-up amount                   | 1538.45      |
| $1538.46 * \text{OASDI Rate (6.2\%)}$              | (95.38)      |
| $1538.46 * \text{Medicare Rate (1.45\%)}$          | (22.30)      |
| $1538.46 * \text{Federal Withholding Rate (25\%)}$ | (384.61)     |
| $1538.46 * \text{State Withholding Rate (9.3\%)}$  | (143.08)     |
| Actual Net Pay                                     | 893.08       |

## Example: Gross Up a Noncash Payment Amount

This example illustrates how to gross up a noncash payment using an earning and a deduction.

### Context

You want to give Emeline a gift card of 200 for her outstanding work. This is a noncash taxable income, but you don't want her to net pay reduced by any taxes due. You're managing the payment in December through payroll input using:

- A noncash gross-up earning.
- A net deduction to offset the amount.

### Steps

1. Create a gross-up earning, named *Noncash Award (Gross Up)* for the gift card based on a net pay input.

See [Example: Calculate Gross Bonus Amount Based on Net Pay Input](#) on page 328.

2. Create a net deduction to offset the grossed-up amount.

See [Example: Create an Offset Deduction for Noncash Gross Ups](#) on page 334.

3. Access the **Add Payroll Input by Worker** task and enter these values:

| Option                      | Description    |
|-----------------------------|----------------|
| <b>Workers</b>              | <i>Emeline</i> |
| <b>Start Date</b>           | December 1     |
| <b>One-Time</b>             | Selected       |
| <b>Override</b>             | Selected       |
| <b>Regular Run Category</b> | Selected       |

Security: *Worker Data: Payroll (Payroll Input)* domain in the Core Payroll functional area.

4. Click **OK**.

5. Enter these values on the **Input** grid:

| Pay Component                   | Input Details - Type              | Input Details - Value |
|---------------------------------|-----------------------------------|-----------------------|
| <i>Noncash Award (Gross Up)</i> | <i>Net Amount (for Gross- Up)</i> | 200                   |
| <i>Noncash Award (Offset)</i>   | <i>Amount</i>                     | 200                   |

### Result

When you run the December payroll calculation, Workday calculates:

- Gross award amount: 200 plus taxes and contributions.
- Net offset deduction: 200

This results in a net award amount of zero.

## Example: Create an Offset Deduction for Noncash Gross Ups

This example illustrates how to create a deduction to offset a noncash gross-up earning.

### Context

You want to give employees gift cards, which are noncash taxable income. You've created a gross-up earning to calculate the taxes on the gift card. You also need to create a post-tax deduction to exclude the value of the gift card from the gross pay.

### Prerequisites

- Add the Post Tax Deductions pay component group on the run category.
- Security: *Set Up: Payroll (Calculations - Payroll Specific)* domain in the Core Payroll functional area.

**Steps**

1. Access the **Create Deduction** task.
2. Enter these values:

| Option         | Description                                                     |
|----------------|-----------------------------------------------------------------|
| <b>Name</b>    | Noncash Award (Offset)                                          |
| <b>Code</b>    | NONCASHOFF                                                      |
| <b>Country</b> | Select the country for which you're creating the pay component. |

3. Enter these values in the **Effective Dated** tab:

| Option                      | Description                          |
|-----------------------------|--------------------------------------|
| <b>Effective Date</b>       | The effective date of the deduction. |
| <b>Calculation</b>          | <i>Payroll Input</i>                 |
| <b>Input Amount Allowed</b> | Unchecked                            |

4. From the **Groups** prompt on the **Non-Effective Dated** tab, select *Post Tax Deductions*.
5. Click **OK**.

**FAQ: Net to Gross Ups**

**Why are the gross pay result amounts different for 2 workers who receive the same net to gross up amount?**

Workday accepts a maximum difference of 0.01 between the input and calculated net amounts but you can modify the gross-up tolerance. If the gross-up calculation produces a net amount within the tolerance, it stops calculating. The defined tolerance and the worker's tax elections can cause the input and calculated net amounts to be different. You can select to reallocate the differences to a worker's withholding tax to result in accurate net results.

[Steps: Set Up Gross-Up Calculations](#) on page 323

**Voluntary Deductions**

---

**Steps: Set Up Voluntary Deductions****Prerequisites**

- Create pay components for voluntary deductions and add them to the regular run category.
- Configure each pay component so that:
  - It allows payroll input at either the deduction level or the related calculation level.
  - It's available for the country for which you're setting up voluntary deductions.

**Context**

This section applies to:

- Payroll for Canada
- Payroll for France
- Payroll for the U.S.
- Payroll for the UK

You can configure voluntary deductions for workers to elect through employee self-service (ESS) on their **Pay** dashboard.

### Steps

1. (Optional) Create custom worktag types and values.

You can create custom worktags to help classify voluntary deductions. Specify the worktag usage **Payroll**.

See [Steps: Define Custom Worktags](#).

2. [Set Up Voluntary Deduction Elections](#) on page 336.

3. Access the **Domain Security Policies for Functional Area** report.

Select **Domain Security Policy** > **Enable** from the related actions menu of the **Self-Service: Payroll (My Voluntary Deductions)** domain security policy.

Security: These domains in the System functional area:

- *Security Activation*
- *Security Configuration*

4. Access the **Maintain Dashboards** task.

Add the **Voluntary Deductions** report to the menu of the **Pay** dashboard of workers.

Security: *Set Up: Tenant Setup - Worklets* domain in System functional area.

5. Access the **Configure Profile Group** task.

Add the **Voluntary Deductions** report to the **Pay** profile group of the worker profile.

Security: *Set Up: System* domain in System functional area.

### Result

Workers can use the **Voluntary Deductions** report to elect deductions based on their pay group eligibility.

## Set Up Voluntary Deduction Elections

### Prerequisites

Security: *Set Up: Payroll* domain in the Core Payroll functional area.

## Context

You can configure voluntary deductions for workers to elect through employee self-service (ESS) based on:

- Their pay group eligibility.
- The country you configure on the pay component. To enable the same deduction in several countries, create as many voluntary deduction configurations as needed. Example: To enable a deduction for both the U.S. and Canada, create 1 deduction configuration per country.

You can configure 1 election period per year for the same deduction with different amounts and date ranges.

Workers can't edit a one-time voluntary deduction after you process it in pay results.

To configure an existing ongoing pay input as a voluntary deduction, enter an end date on the pay input. You can then enable it for voluntary deduction election.

## Steps

1. Access the **Maintain Voluntary Deduction Configurations** task.
2. Enter a row for each voluntary deduction election.

| Option                                                             | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
|--------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Deduction</b>                                                   | Workday doesn't filter visible deductions that you can configure for ESS based on worker eligibility.                                                                                                                                                                                                                                                                                                                                                        |
| <b>Worktag Type</b>                                                | (Optional) Select a custom worktag type. You can set up custom Payroll worktags to help categorize voluntary deductions. Example: Create a custom worktag type <b>Campaign</b> with values <b>Africa</b> , <b>Americas</b> , and <b>Asia</b> to enable workers to specify the recipient region for an international charity.<br><br>When you select a worktag type here, Workday displays a mandatory <b>Purpose</b> prompt when workers add this deduction. |

When setting up multiple election periods for the same deduction, always enter start and end dates.                                                                                        |

| Option                           | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
|----------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Allow One-time</b>            | When you select this check box, Workday processes the deduction in full for the pay period or any subperiod that includes the <b>Effective Date</b> of the pay component.                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| <b>Allow Ongoing</b>             | <p>Workday processes the deduction in each pay period until either of these dates, if they exist:</p> <ul style="list-style-type: none"> <li>• The <b>End Date</b> that workers enter through ESS.</li> <li>• The <b>Latest Take Effect Date</b>.</li> </ul> <p>When a pay period has multiple subperiods, Workday resolves the deduction in each subperiod.</p> <p>Make sure that the period schedule includes the start and end dates of the voluntary deductions. When it doesn't, workers can't see the deduction that they enter.</p> <p>Workers can't edit voluntary deductions when a future (ongoing) configuration exists.</p> |
| <b>Value Type</b>                | <i>Percent:</i> Available only for deductions that have <b>Input Allowed?</b> selected for at least 1 related calculation.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| <b>Calculation</b>               | <p>Select a related calculation for deductions that:</p> <ul style="list-style-type: none"> <li>• You configure as a percent in this task.</li> <li>• Has more than 1 related calculation that allows payroll input.</li> </ul> <p>If the deduction only has 1 related calculation, this field displays it and you can't edit it.</p>                                                                                                                                                                                                                                                                                                   |
| <b>Minimum</b><br><b>Maximum</b> | <p>To set a fixed deduction amount, enter the same value in the <b>Minimum</b> and <b>Maximum</b> fields.</p> <p>When workers elect a deduction greater than their pay on the payment date, it results in a negative net for the pay period. You can adjust the net pay by setting up arrears processing.</p>                                                                                                                                                                                                                                                                                                                           |

## Next Steps

### Note:

Workers can edit only the end date of an ongoing deduction after you process it in pay results. They can set it to a date that's on or after the end date of either:

- The current in-progress pay period.
- The last completed pay period, when there isn't a period in progress.

When you enable the **Voluntary Deductions** report for ESS, Workday considers the workers' pay group eligibility to determine which deductions are available for election. Workday doesn't consider other worker eligibility criteria. After you process the deduction in payroll, workers can view it on their profile for 7 days after the later of the:

- Payment date.

- Payslip visibility date that you configure on the workers' pay group.

Review these reports that provide information on deductions:

| Report                                                                       | Description                                                                                                        |
|------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------|
| <b>All Deductions</b>                                                        | The <b>Enabled for Voluntary Deductions</b> report field indicates that a deduction is available for ESS election. |
| <b>Payroll Input Not Processed</b><br><b>View Payroll Input by Worker(s)</b> | The <b>Created by Worker</b> report field marks deductions that workers elected through ESS.                       |

##### Examples

[Example: Enable a Voluntary Deduction for Self Service](#) on page 341

[Example: Create a Charitable Contribution Deduction](#) on page 339

## Concept: Voluntary Deductions

You configure voluntary deductions for workers to elect through employee self-service. They can use the **Voluntary Deductions** report to make elections after you add them to the:

- **Pay** Dashboard.
- **Pay** profile group of the worker profile.

Workers can opt in to donating to a charity multiple times a year after you configure the deductions and election periods. See [Example: Enable a Voluntary Deduction for Self Service](#).

You can also enable a custom worktag to classify employee voluntary deductions. See [Example: Set Up Custom Worktags for Voluntary Deductions](#).

Workday processes voluntary deductions as adjustments on the worker's payroll result.

## Example: Create a Charitable Contribution Deduction

This example illustrates how to create a deduction for a charitable contribution that workers can elect through self-service.

### Context

You want to create a deduction that allows workers to make donations to Global Charity.

### Prerequisites

Security: *Set Up: Payroll (Calculations - Payroll Specific)* domain in Core Payroll functional area.

### Steps

1. Access the **Create Deduction** task.

2. Enter these values:

| Option | Description    |
|--------|----------------|
| Name   | Global Charity |
| Code   | GC             |

3. Enter these values on the **Effective Dated** tab:

| Option                   | Description                                   |
|--------------------------|-----------------------------------------------|
| Effective Date           | Current date                                  |
| Run Category Eligibility | <i>Regular</i>                                |
| Worker Eligibility       | <i>Payroll Input Exists for Pay Component</i> |
| Calculation              | <i>Base (unprorated) * Percent</i>            |
| Input Amount Allowed     | Select the check box.                         |

4. Add these 2 rows on the **Related Calculations** grid:

| Related Calculation      | Input Allowed? |
|--------------------------|----------------|
| <i>Base (unprorated)</i> | Selected       |
| <i>Percent</i>           | Selected       |

5. On the **Non-Effective Dated** tab, enter *Post Tax Deductions* from the **Group** prompt.

6. Click **OK**.

### Next Steps

Enable the deduction for election through self-service.

## Example: Set Up Custom Worktags for Voluntary Deductions

This example illustrates how to set up a custom worktag to classify employee voluntary deductions.

### Context

You're setting up a voluntary deduction for a charity called Way to Give. The charity enables contributors to direct their contributions to a particular cause. You want to enable workers to select the cause when they create their voluntary deductions.

### Steps

1. Access the **Enable Custom Worktags** task.

Security:

- *Set Up: Enable Worktags* domain in the Common Financial Management and Worktags functional areas.
- *Set Up: Payroll - Company Specific (Accounting)* domain in the Core Payroll functional area.

2. In an unused row, select **Custom Worktag is Enabled**.

3. In the **Worktag Name** field, enter *Giving Cause*.

4. From the **Worktag Usage** prompt, select *Payroll*.

5. Click **OK**, and then click **Done**.
6. Access the **Maintain Custom Worktag Values** report.  
Security:
  - *Set Up: Maintain Custom Worktags* domain in the Common Financial Management and Worktags functional areas.
  - *Set Up: Payroll - Company Specific (Accounting)* domain in the Core Payroll functional area.
7. From the **Custom Worktag Type** prompt, select *Giving Cause*.
8. Add a row for each of these giving causes:
  - Animal Rescue
  - Clean Water
  - Disaster Fund
  - Literacy
  - Medical Outreach
9. Click **Done**.

### Next Steps

When you configure the voluntary deduction for Way to Give, select the worktag type *Giving Cause*. Workers will see a **Purpose** prompt when they add new voluntary deductions for Way to Give.

## Example: Enable a Voluntary Deduction for Self Service

This example illustrates how to enable a deduction for election through employee self-service.

### Context

You want to enable workers to make donations to Global Charity twice a year.

### Prerequisites

- Create the deduction for the charitable contribution named My Charity.
- Create a custom worktag type called Giving Cause.
- Security: *Set Up: Payroll* domain in Core Payroll functional area.

### Steps

1. Access the **Maintain Voluntary Deduction Configurations** task.
2. From the **Country** prompt, select *United States of America*.
3. Click **OK**.
4. Add 2 rows and enter these settings for the 2 election periods:

| Deduction         | Worktag Type | Help Text            | Earliest Visible Date     | Latest Visible Date        | Earliest Take Effect Date  | Latest Take Effect Date | Value Type     | Calculation              | Maximum |
|-------------------|--------------|----------------------|---------------------------|----------------------------|----------------------------|-------------------------|----------------|--------------------------|---------|
| <i>My Charity</i> | Giving Cause | Enter a deduction by | January 1 of current year | January 31 of current year | February 1 of current year | June 30 of current year | <i>Percent</i> | <i>Base (unprorated)</i> | 0.1     |

| Deduction         | Worktag Type | Help Text                     | Earliest Visible Date  | Latest Visible Date     | Earliest Take Effect Date | Latest Take Effect Date     | Value Type | Calculation       | Maximum |
|-------------------|--------------|-------------------------------|------------------------|-------------------------|---------------------------|-----------------------------|------------|-------------------|---------|
|                   |              | January 31.                   |                        |                         |                           |                             |            |                   |         |
| <i>My Charity</i> | Giving Cause | Enter a deduction by July 31. | July 1 of current year | July 31 of current year | August 1 of current year  | December 31 of current year | Percent    | Base (unprorated) | 0.1     |

5. Click **OK**.

### Result

Workers can now use the **Voluntary Deductions** self-service report to elect the Global Charity charitable contribution, and select a specific cause from the **Purpose** prompt.

Workday processes the deduction as an adjustment on the worker's pay result.

### Next Steps

Enable access to the **Voluntary Deductions** report for workers:

- Configure the *Self-Service: Payroll (My Voluntary Deductions)* security policy in the Core Payroll functional area.
- Add the **Voluntary Deductions** report to the workers' **Pay** dashboard menu. Also add it to the **Pay** profile group of the worker profile.

## Flexible Payment and Deduction Options

### Setup Considerations: Flexible Payment and Deduction Options

You can use this topic to help make decisions when planning your configuration and use of flexible payment and deduction options. It explains:

- Why to set them up.
- How they fit into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

### What They Are

In Workday, flexible payment and deduction options provide a centralized business process to manage discretionary payments and deductions for workers through payroll. Examples:

- Advances (CAN, UK, USA)
- Donations
- Loans

## Business Benefits

You can use flexible payment and deduction options to increase efficiency in your payroll operations by:

- Reviewing workers' requests, and status and outstanding balances, at any time.
- Recording flexible payment and deduction on behalf of workers, bypassing approvals.
- Setting limits on payment and deduction request types for more control over when and how much workers can request.
- Configuring goal or target amounts as correctable, helping you avoid manual overrides and adjustments.

You can also enable workers to:

- Request their own payments and deductions, reducing manual processing.
- View the status of their requests and balances at any time, reducing the time you spend responding to queries.

## Use Cases

Set up flexible payment and deduction options for:

- Charitable donations where the worker specifies a total amount and deduction schedule.
- The cost of company-issued uniforms that the worker pays for over time.
- Advances (CAN, UK,USA) or loans (FRA) that workers can request for vacations, which they repay in deductions from their regular pay.
- Cycle-to-work schemes that reduce the worker's pretax pay (UK).

## Questions to Consider

| Questions                                                                           | Considerations                                                                                                                                                                                                                                                                                                                                                                                              |
|-------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| What types of flexible payment and deduction options do you want to support?        | You can set up flexible payment and deduction types for different use cases, such as loans, charitable contributions, and equipment reimbursements. Each type can have different options and limits. You can also set up unique earnings and deductions for each type.                                                                                                                                      |
| How do you want to make payments to workers that they'll repay?                     | You can configure a flexible payment and deduction type with both an earning and a deduction.                                                                                                                                                                                                                                                                                                               |
| How can workers request goal or target amounts (deductions that aren't repayments)? | Configure a flexible payment and deduction type with only a deduction.                                                                                                                                                                                                                                                                                                                                      |
| How do you want to manage corrections to goal or target amounts for workers?        | <p>You can configure a goal or target amount as correctable, which enables you to change the target amount even after running several pay completes.</p> <p>The deduction amount doesn't update automatically, but you can change it manually when you're correcting the business process.</p> <p>You can't access or update the number of installments because Workday doesn't store this information.</p> |
| How do you support salary sacrifice for a flexible payment and deduction option?    | You can create an earning with the calculations normally used for deductions (a negative earning). Select it as the deduction when you create the flexible payment and deduction type.                                                                                                                                                                                                                      |

| Questions                                                                                  | Considerations                                                                                                                                                                                                                                                                                                                                              |
|--------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| What period of time do you want to limit worker requests to?                               | You can configure payment and deduction types with an available date range.                                                                                                                                                                                                                                                                                 |
| How many simultaneous flexible payment and deduction requests do you want workers to have? | <p>You can configure a flexible payment and deduction type to enable only 1 active request at a time. The worker can't request that type again until Workday fully deducts the active request.</p> <p>You can't automatically prevent workers from requesting a different flexible payment and deduction type, but the approver can reject the request.</p> |
| How do you want to manage worker requests for ongoing deductions?                          | Flexible payments and deductions are for a defined amount and number of installments. You can use the voluntary deductions feature to enable ongoing deductions with no specified end date.                                                                                                                                                                 |

### Recommendations

To improve usability, create custom labels to replace the Workday default labels on flexible payment and deduction options tasks and reports.

Create keywords in your tenant to help workers find flexible payment and deduction options tasks and reports.

### Requirements

Create dedicated pay components for flexible payment and deduction options.

### Limitations

This feature doesn't support:

- Creating or updating flexible payment and deduction transactions using payroll input web services.
- Input from payroll input workbooks.
- Interest charges on outstanding balances.
- Ongoing payroll inputs.
- Payroll history payments.
- Payroll reversals.
- Proration, except for leave of absence subperiods.
- Retroactive loans and advances.
- Tracking or recouping arrears.

Workday doesn't support net pay validation for flexible deductions, which can reduce net pay below the selected minimum net pay amount even if you assign them the lowest priority order on the **Maintain Deduction Priorities** task. However, doing so can help you ensure that net pay validation iterates over the other deductions. You can also:

- Correct the goal or target amount for flexible deductions you've configured as correctable.
- Use payroll input to reduce the flexible deduction amount for the pay period.

Workday doesn't store the number of installments for flexible deductions. The goal, target, or deduction amount is deducted in every pay period until its outstanding balance reaches zero, regardless of the number of installments initially selected.

Workday doesn't support flexible payment and deduction options for workers:

- In third-party payroll pay groups.
- On international assignment.
- Who relocate from a Workday Payroll supported country to a nonsupported country.

Workers with multiple positions can request flexible payments and deductions only for their primary position.

Workday doesn't convert the currency on existing flexible payment and deduction requests when a worker moves from 1 Workday Payroll country to another. You can either:

- Manually calculate the balance and installment amounts in the currency of the new country and correct the transaction.
- Add a one-time payroll input to offset the original amount and recreate the transaction in the currency of the new country.

For Payroll for the U.S., you can't set up flexible deductions for pretax deductions if you have also enabled Ongoing Multiple Work Jurisdictions.

### Tenant Setup

You can use the **Edit Tenant Setup - Search** task to create keywords to help workers find the flexible payment and deduction options tasks and reports. Examples: Advance, Balance, Goal, Loan.

### Security

Configure these domains in the Core Payroll functional area:

| Domains                                                                | Considerations                                                                          |
|------------------------------------------------------------------------|-----------------------------------------------------------------------------------------|
| <i>Process: Flexible Payments and Deduction Options Management</i>     | Enables you to use web services to process flexible payment and deduction transactions. |
| <i>Report: Payroll (Flexible Payments and Deduction Options)</i>       | Enables you to view workers' flexible payment and deduction transactions.               |
| <i>Self-Service: Payroll (Flexible Payments and Deduction Options)</i> | Enables workers to view their own transactions.                                         |
| <i>Set Up: Payroll (Flexible Payments and Deduction Options)</i>       | Enables you to create and edit flexible payment and deduction types.                    |

### Business Processes

Configure the *Request Flexible Payment and Deduction Options* business process security policy to:

- Identify the security groups that can request, approve, and take other actions on a request.
- Set up notifications to let workers know when you take action on their requests.

Don't set up step conditions that bypass the approval step. You need to specify the payment and first deduction periods when you approve the request.

### Reporting

| Reports or Dashboards                              | Considerations                                                                                                                                                 |
|----------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>My Flexible Payments and Deductions</b> worklet | Enables workers to: <ul style="list-style-type: none"> <li>• Review the balances of existing requests.</li> <li>• Check the status of new requests.</li> </ul> |

| Reports or Dashboards                        | Considerations                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
|----------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Pay dashboard                                | You can add the <b>My Flexible Payments and Deductions</b> worklet to the <b>Pay</b> dashboard to enable easy worker access.                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| View Flexible Payments and Deductions report | <p>View flexible payment and deduction events.</p> <p>From the related actions menu of an event, you can:</p> <ul style="list-style-type: none"> <li>• Approve or deny a request.</li> <li>• Correct amounts on a request.</li> <li>• Rescind a previously approved request.</li> </ul> <p>You can use the <b>Payment/Deduction Type ID</b> from the report as a payroll worktag when you:</p> <ul style="list-style-type: none"> <li>• Adjust the request through payroll input.</li> <li>• Pay the request with an on-demand payment.</li> <li>• Use web services to process requests.</li> </ul> |

You can use the **Flexible Payment and Deduction Options** report data source to create custom reports on flexible payment and deduction events.

## Integrations

| Web Services                                    | Considerations                                                                                                  |
|-------------------------------------------------|-----------------------------------------------------------------------------------------------------------------|
| <i>Get Flexible Payment and Deduction Event</i> | Use to retrieve requests from Workday. Example: To get data from a previous bulk load that you need to rescind. |
| <i>Import Flexible Payment and Deduction</i>    | Use to bulk load requests. Example: A company-wide donation campaign.                                           |
| <i>Import Payroll Off-Cycle Payment</i>         | Use to bulk load replacement or additional payments for flexible payment and deduction events.                  |

## Connections and Touchpoints

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships in your tenant. Learn more about the [Workday Touchpoints Kit](#) on Workday Community.

## Steps: Set Up Flexible Payment and Deduction Options

### Prerequisites

Review setup considerations for flexible payment and deduction options.

### Context

You can set up the *Request Flexible Payment and Deduction Options* business process, enabling workers to:

- Request loans, advances, or other payments that they can repay with future payroll deductions. Example: A 500 loan, repaid in 5 deductions of 100 each.
- Set goal or target amounts that Workday deducts from their payroll. Example: A charitable donation of 50, deducted in the next 2 pay periods.

When you configure the business process, Workday enables payroll administrators to record flexible payment and deduction requests for workers and to correct goal or target amounts for them.

### Steps

#### 1. [Edit Business Process Security Policies.](#)

Edit the *Request Flexible Payment and Deduction Options* business process security policy in the Core Payroll functional area to grant security groups request, record, and other permissions.

#### 2. Create the *Request Flexible Payment and Deduction Options* business process default definition.

- In the **Group** column of step *b*, select the security groups that will review and approve requests.
- Optional: Add document steps to the business process. We recommend adding the Review Document step after the Request Approval step.
- Note: We don't recommend that you add any other steps to the *Request Flexible Payment and Deduction Options* business process. Limiting the selection to the recommended steps helps you to avoid data quality issues.

See [Steps: Configure Business Process Definitions.](#)

#### 3. Create earnings for payments to workers and negative earnings that Workday deducts from workers' pay. As you complete the task, consider:

| Option                                 | Description                                                                                                                                                                                                                   |
|----------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Worker Eligibility</b>              | <ul style="list-style-type: none"> <li>• When creating an earning, select <i>Flexible Payment Amount &gt; 0</i>.</li> <li>• When creating a negative earning, select <i>Flexible Deduction Amount &lt; &gt; 0</i>.</li> </ul> |
| <b>Calculation</b>                     | <ul style="list-style-type: none"> <li>• When creating an earning, select <i>Flexible Payment Amount</i>.</li> <li>• When creating a negative earning, select <i>Flexible Deduction Amount</i>.</li> </ul>                    |
| <b>Input Amount Allowed?</b>           | To enable you to enter the calculation amount through payroll input, select the check box.                                                                                                                                    |
| <b>Calculation Proration</b>           | Workday doesn't prorate flexible payment and deduction amounts. Select <i>None of the above</i> .                                                                                                                             |
| <b>Do Not Recalculate During Retro</b> | Workday doesn't support retroactive flexible payments. Select the check box.                                                                                                                                                  |

| Option                     | Description                                                                                              |
|----------------------------|----------------------------------------------------------------------------------------------------------|
| <b>Calculation Worktag</b> | Workday supports payments and deductions only to the worker's primary position. Select <i>Position</i> . |

See [Steps: Create Earnings](#) on page 222.

4. Create deductions for repayments and flexible deductions. As you complete the task, consider:

| Option                          | Description                                                                                                                                                                                                           |
|---------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Worker Eligibility</b>       | <i>Flexible Deduction Amount</i> < > 0.                                                                                                                                                                               |
| <b>Calculation</b>              | <i>Flexible Deduction Amount</i> .<br><br>If you're setting up a deduction to recoup an outstanding balance on termination, use a conditional calculation with the <i>Flexible Payment – Outstanding Balance</i> IVC. |
| <b>Input Amount Allowed?</b>    | To enable you to enter the calculation amount through payroll input, select the check box.                                                                                                                            |
| <b>Recalculate during Retro</b> | Workday doesn't support retroactive flexible deductions. Clear the check box.                                                                                                                                         |
| <b>Calculation Worktag</b>      | Workday supports flexible payments and deductions only to the worker's primary position. Select <i>Position</i> .                                                                                                     |

See [Steps: Create Deductions](#) on page 227.

5. Access the **Maintain Flexible Payment and Deduction Options** task.

As you create the types of payments and deductions that workers can request, consider:

| Option                               | Description                                                                                                                                                                |
|--------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Payment/Deduction Type</b>        | Enter the name of the payment or deduction type.                                                                                                                           |
| <b>Earning</b>                       | Select the earning for payments to workers.<br><br>For a goal or target amount with no payment to the worker (Example: charitable contributions), don't select an earning. |
| <b>Deduction</b>                     | Select the deduction or negative earning used for repayments from workers or contributions toward a goal or target amount.                                                 |
| <b>Request Between</b>               | Enter the date range that the payment and deduction type is available for workers to request. When you leave these fields blank, the request is always available.          |
| <b>Effective Between</b>             | Enter the date range for the payment to the worker. When you leave these fields blank, payment can occur in any period.                                                    |
| <b>Number of Installments</b>        | Enter the number of pay periods for a worker's loan, goal, or target amount. Enter zero in the <b>Maximum</b> field for no limits.                                         |
| <b>Allow Only One Active Request</b> | To prevent workers from requesting a pre-existing request type, select the check box.                                                                                      |

| Option                                     | Description                                                                                        |
|--------------------------------------------|----------------------------------------------------------------------------------------------------|
| <b>Allow Target Amount To Be Corrected</b> | To enable you to correct the goal or target amount for a flexible deduction, select the check box. |

Security: *Set Up: Payroll (Flexible Payments and Deduction Options)* domain in the Core Payroll functional area.

6. (Optional) [Define Deduction Priorities and Arrears Handling](#) on page 395 for the flexible deductions. As you complete the task, consider:

| Option                                        | Description                                                                                                 |
|-----------------------------------------------|-------------------------------------------------------------------------------------------------------------|
| <b>Priority Order</b>                         | Assign the lowest priority to flexible deductions so that higher-priority deductions don't go into arrears. |
| <b>Track Arrears</b><br><b>Recoup Arrears</b> | Workday doesn't support arrears on flexible payments and deductions. Don't select these check boxes.        |

7. (Optional) [Configure Dashboard Content](#).

Add the **Request Flexible Payment and Deduction Options** task and the **My Flexible Payment and Deduction Options** report to the **Pay** dashboard.

8. (Optional) [Set Up Worklets](#).

Add the **Request Flexible Payment and Deduction Options** task to the **Pay** or **Benefits** worklet.

## Result

After a worker requests a flexible payment or deduction, the business process routes the request for review.

Workday stores the granted amount and the deduction amount on each request. It doesn't store the number of installments, which can change when:

- You edit the granted or deduction amount.
- The worker skips 1 or more scheduled payments.

When a payroll administrator or other user records a flexible payment or deduction request on behalf of a worker, Workday automatically approves the request.

## Next Steps

Workday assigns each request a unique payment or deduction type ID. The ID displays on the **View Flexible Payments and Deductions** report. Use it as a payroll worktag to identify the transaction when you:

- Adjust the request through payroll input.
- Pay the request before the regular payroll date with an on-demand payment.
- Use web services to process requests.

## Related Information

### Reference

[2020R2 What's New Post: Employee Flexible Payment and Deduction Options](#)

## Example: Set Up a Deduction to Recoup an Outstanding Balance on Termination (CAN)

This example illustrates how you can set up a deduction that recoups the balance of an outstanding flexible payment and deduction option when you terminate an employee.

### Context

Global Modern Services (GMS) enables construction employees in Canada to request loans to purchase protective equipment like safety boots, which they can then repay over multiple pay periods. As a payroll administrator, you want to set up a deduction for equipment loans that recoups its outstanding balance from employees who are terminated during the repayment period.

### Prerequisites

- Create a deduction named *Flex Deduction - Equipment Loan* to use for flexible payments and deductions. See [Steps: Create Deductions](#) on page 227.
- Security: *Set Up: Payroll* in the Core Payroll functional area.

### Steps

1. Access the **Create Conditional Calculation** task.

- a) Enter these values:

| Field    | Value                              |
|----------|------------------------------------|
| Name     | <i>FPaDO Recoup on Termination</i> |
| Category | <i>Payroll</i>                     |

- b) In the **Calculation** table, enter these values:

| Field     | Value                                                 |
|-----------|-------------------------------------------------------|
| Order     | <i>a</i>                                              |
| Condition | <i>Worker is Terminated as of Sub Period End Date</i> |
| Result    | <i>Flexible Payment - Outstanding Balance</i>         |

- c) In the **Default Response** field, enter *Flexible Deduction Amount*.
- d) Click **OK** and **Done**.

2. Access the **Edit Deduction** task.

- a) From the **Deduction** prompt, select *Flex Deduction - Equipment Loan*.
- b) Click **OK**.
- c) In the **Calculation** field, enter *FPaDO Recoup on Termination*.
- d) Click **OK** twice, then click **Done**.

3. Access the **Maintain Flexible Payment and Deduction Options** task.

- a) From the **Country** prompt, select *Canada*.
- b) Click **OK**.
- c) Add a row and enter these values:

| Field                  | Value                                  |
|------------------------|----------------------------------------|
| Payment/Deduction Type | <i>Equipment Loan</i>                  |
| Deduction              | <i>Flex Deduction - Equipment Loan</i> |

- d) Click **OK** and **Done**.

## Next Steps

After running payroll, use the **View Flexible Payments and Deductions** report confirming that the balance recouped correctly.

## Example: Set Up a Deduction to Recoup an Outstanding Balance on Termination (FRA)

This example illustrates how you can set up a deduction that recoups the balance of an outstanding flexible payment and deduction option when you terminate an employee.

### Context

Global Modern Services (GMS) enables employees based in France to request loans to purchase a laptop, which they can then repay over multiple pay periods. As a payroll administrator, you want to set up a deduction for laptop loans that recoups its outstanding balance from employees who are terminated during the repayment period.

### Prerequisites

- Create a deduction named *Flex Deduction - Laptop Loan* to use for flexible payments and deductions. See [Steps: Create Deductions](#) on page 227.
- Security: *Set Up: Payroll* in the Core Payroll functional area.

### Steps

1. Access the **Create Conditional Calculation** task.

- a) Enter these values:

| Field           | Value                              |
|-----------------|------------------------------------|
| <b>Name</b>     | <i>FPaDO Recoup on Termination</i> |
| <b>Category</b> | <i>Payroll</i>                     |

- b) In the **Calculation** table, enter these values:

| Field            | Value                                                 |
|------------------|-------------------------------------------------------|
| <b>Order</b>     | <i>a</i>                                              |
| <b>Condition</b> | <i>Worker is Terminated as of Sub Period End Date</i> |
| <b>Result</b>    | <i>Flexible Payment - Outstanding Balance</i>         |

- c) In the **Default Response** field, enter *Flexible Deduction Amount*.
- d) Click **OK** and **Done**.

2. Access the **Edit Deduction** task.

- a) From the **Deduction** prompt, select *Flex Deduction - Laptop Loan*.
- b) Click **OK**.
- c) In the **Calculation** field, enter *FPaDO Recoup on Termination*.
- d) Click **OK** twice, then click **Done**.

3. Access the **Maintain Flexible Payment and Deduction Options** task.

- From the **Country** prompt, select *France*.
- Click **OK**.
- Add a row and enter these values:

| Field                         | Value                               |
|-------------------------------|-------------------------------------|
| <b>Payment/Deduction Type</b> | <i>Laptop Loan</i>                  |
| <b>Deduction</b>              | <i>Flex Deduction - Laptop Loan</i> |

- Click **OK** and **Done**.

### Next Steps

After running payroll, use the **View Flexible Payments and Deductions** report to confirm that the balance recouped correctly.

## Example: Set Up a Deduction to Recoup an Outstanding Balance on Termination (UK)

This example illustrates how you can set up a deduction that recoups the balance of an outstanding flexible payment and deduction option when you terminate an employee.

### Context

Global Modern Services (GMS) enables UK-based employees to request loans to purchase seasonal public transport tickets, which they can then repay over multiple pay periods. As a payroll administrator, you want to set up a deduction for transport loans that recoups its outstanding balance from employees who are terminated during the repayment period.

### Prerequisites

- Create a deduction named *Flex Deduction - Public Transport Loan* to use for flexible payments and deductions. See [Steps: Create Deductions](#) on page 227.
- Security: *Set Up: Payroll* in the Core Payroll functional area.

### Steps

1. Access the **Create Conditional Calculation** task.

- Enter these values:

| Field           | Value                              |
|-----------------|------------------------------------|
| <b>Name</b>     | <i>FPaDO Recoup on Termination</i> |
| <b>Category</b> | <i>Payroll</i>                     |

- In the **Calculation** table, enter these values:

| Field            | Value                                                 |
|------------------|-------------------------------------------------------|
| <b>Order</b>     | <i>a</i>                                              |
| <b>Condition</b> | <i>Worker is Terminated as of Sub Period End Date</i> |
| <b>Result</b>    | <i>Flexible Payment - Outstanding Balance</i>         |

- In the **Default Response** field, enter *Flexible Deduction Amount*.
- Click **OK** and **Done**.

**2. Access the **Edit Deduction** task.**

- a) From the **Deduction** prompt, select *Flex Deduction - Public Transport Loan*.
- b) Click **OK**.
- c) In the **Calculation** field, enter *FPaDO Recoup on Termination*.
- d) Click **OK** twice, then click **Done**.

**3. Access the **Maintain Flexible Payment and Deduction Options** task.**

- a) From the **Country** prompt, select *UK*.
- b) Click **OK**.
- c) Add a row and enter these values:

| Field                         | Value                                         |
|-------------------------------|-----------------------------------------------|
| <b>Payment/Deduction Type</b> | <i>Public Transport Loan</i>                  |
| <b>Deduction</b>              | <i>Flex Deduction - Public Transport Loan</i> |

- d) Click **OK** and **Done**.

**Next Steps**

After running payroll, use the **View Flexible Payments and Deductions** report to confirm that the balance recouped correctly.

**Example: Set Up a Deduction to Recoup an Outstanding Balance on Termination (USA)**

This example illustrates how you can set up a deduction that recoups the balance of an outstanding flexible payment and deduction option when you terminate an employee.

**Context**

Global Modern Services (GMS) enables US-based employees to request loans to purchase their uniforms, which they can then repay over multiple pay periods. As a payroll administrator, you want to set up a deduction for uniform loans that recoups its outstanding balance from employees who are terminated during the repayment period.

**Prerequisites**

- Create a deduction named *Flex Deduction - Uniform Loan* to use for flexible payments and deductions. See [Steps: Create Deductions](#) on page 227.
- Security: *Set Up: Payroll* in the Core Payroll functional area.

**Steps****1. Access the **Create Conditional Calculation** task.**

- a) Enter these values:

| Field           | Value                              |
|-----------------|------------------------------------|
| <b>Name</b>     | <i>FPaDO Recoup on Termination</i> |
| <b>Category</b> | <i>Payroll</i>                     |

- b) In the **Calculation** table, enter these values:

| Field        | Value    |
|--------------|----------|
| <b>Order</b> | <i>a</i> |

| Field     | Value                                          |
|-----------|------------------------------------------------|
| Condition | Worker is Terminated as of Sub Period End Date |
| Result    | Flexible Payment - Outstanding Balance         |

c) In the **Default Response** field, enter *Flexible Deduction Amount*.

d) Click **OK** and **Done**.

**2. Access the **Edit Deduction** task.**

a) From the **Deduction** prompt, select *Flex Deduction - Uniform Loan*.

b) Click **OK**.

c) In the **Calculation** field, enter *FPaDO Recoup on Termination*.

d) Click **OK** twice, then click **Done**.

**3. Access the **Maintain Flexible Payment and Deduction Options** task.**

a) From the **Country** prompt, select *US*.

b) Click **OK**.

c) Add a row and enter these values:

| Field                  | Value                         |
|------------------------|-------------------------------|
| Payment/Deduction Type | Uniform Loan                  |
| Deduction              | Flex Deduction - Uniform Loan |

d) Click **OK** and **Done**.

### Next Steps

After running payroll, use the **View Flexible Payments and Deductions** report to confirm that the balance recouped correctly.

## FAQ: Flexible Payment and Deduction Options

- [How can I submit a request on behalf of a worker?](#)
- [Can I change a worker's payment or deduction request?](#)
- [How can I pay a flexible payment to a worker before the regular payroll date?](#)
- [How do I collect an outstanding flexible payment and deduction balance on a terminated worker's final paycheck?](#) on page 355
- [When can I reverse approval of a worker's request?](#)
- [How can I pause a flexible deduction for 1 period?](#) on page 355
- [When does the final deduction period for a request display on the View Flexible Payments and Deductions report?](#) on page 356
- [How do I reduce the balance of a flexible payment and deduction when a worker makes a payment outside of payroll?](#) on page 356
- [How should I handle midperiod worker pay group changes?](#) on page 356

### How can I submit a request on behalf of a worker?

You can access the **Record Flexible Payment and Deduction Options** task to create a flexible payment and deduction request for a worker. Workday automatically approves the request.

### Can I change a worker's payment or deduction request?

When you review a worker's request, you can change it before approving it. After approval, correct the business process to make changes.

For loans and advances:

- You can change both payment and deduction details before the payment to the worker.
- You can change only the deduction amount after the payment to the worker.

For target or goal amount requests:

- You can change all deduction details before the first deduction.
- You can change only the deduction amount after the first deduction.

**How can I pay a flexible payment to a worker before the regular payroll date?**

You can create an on-demand payment for the early payment amount. Pay the full amount originally requested. When you run the on-demand payment:

1. Select the same **Period** as the payment period on the request.
2. Select the flexible earning pay component.
3. Select the payment or deduction type ID from the **Worktags** prompt.

**How do I collect an outstanding flexible payment and deduction balance on a terminated worker's final paycheck?**

You can set up a flexible deduction pay component that uses a conditional calculation with the *Flexible Payment – Outstanding Balance* IVC. We recommend using a condition like *Worker is Terminated as of Sub Period End Date*. You can then use this pay component when creating a flexible payment and deduction option for a worker. If this worker is terminated while there's an outstanding balance on the pay component, the balance will recoup automatically on the final paycheck.

Alternatively, you can add a one-time payroll input for the outstanding balance amount. When you add the payroll input:

1. Select the flexible deduction pay component.
2. Select the payment or deduction type ID from the **Worktags** prompt.

**When can I reverse approval of a worker's request?**

You can rescind the business process to reverse the request:

- Before payment to the worker, for a flexible payment request.
- Before the first deduction, for a goal or target amount request.

**How can I pause a flexible deduction for 1 period?**

You can add one-time payroll input for the worker to override the deduction amount to zero. When you add the payroll input:

1. Select the flexible deduction pay component.
2. Select the payment or deduction type ID from the **Worktags** prompt.

**When does the final deduction period for a request display on the View Flexible Payments and Deductions report?**

Workday populates the **Final Deduction Period** on the report when it archives the request. The archive job runs automatically at 04:00:00 GMT on the first Monday of each month. It archives completed requests that have an outstanding balance of zero and at least 1 completed pay result.

**How do I reduce the balance of a flexible payment and deduction when a worker makes a payment outside of payroll?**

You can create a manual payment to reduce the balance of a flexible payment and deduction. As you run the manual payment for the worker, select the flexible payment or deduction type ID from the **Worktags** prompt.

**How should I handle midperiod worker pay group changes?**

| Scenario                                                   | Consideration                                                                                                                                                                                                                                                                                             |
|------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| A worker changes pay groups before they receive payment.   | When the pay groups have different frequencies, Workday displays the payment in both the old and new pay groups. When you complete the period for 1 pay group, Workday sets the result status in the other pay group to Requires Recalculation. Recalculate the result to remove the extra payment.       |
| A worker changes pay groups in the final deduction period. | When both the old and new pay groups are in progress, Workday displays the deduction in both pay groups. When you complete the period for 1 of the pay groups, Workday sets the result status in the remaining pay group to Requires Recalculation. Recalculate the result to remove the extra deduction. |
| A worker changes to a pay group with a shorter pay period. | Workday prorates the deduction in the longer pay period and takes the full deduction in the shorter pay period. This could deduct more than the worker expected.<br><br>Example: Marc has a flexible deduction of 20 per pay period. When he changes pay groups on the 15th, his                          |

| Scenario | Consideration                                                                                                                                                                                                                                                                                                           |
|----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|          | <p>pay period changes from monthly to weekly. That month, Workday deducts:</p> <ul style="list-style-type: none"> <li>• 10 for the subperiod in the old pay group.</li> <li>• 20 for the first weekly period in the new pay group.</li> </ul> <p>You can add one-time payroll input to adjust the deduction amount.</p> |

## Pay On-Demand

---

### Setup Considerations: Pay On-Demand

You can use this topic to help make decisions when planning your configuration and use of pay on-demand. It explains:

- Why to set it up.
- How it fits into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

### What It Is

Pay on-demand enables workers to use employee self-service (ESS) to request early payment for a portion of accumulated wages for the pay period. For workers with multiple jobs, Workday calculates earned wages across additional jobs that are in the same pay group and company as their primary job.

When a worker submits a request, Workday initiates the *Pay On-Demand* business process that includes end-to-end payroll processing. Workday supports standard or same-day:

- Electronic Fund Transfers (EFT) payments for Payroll for Canada. When on-cycle payroll runs for the period that includes pay on-demand, Workday reduces net wages by the total of pay on-demand payments.
- Automated Clearing House (ACH) payments for Payroll for the U.S. When on-cycle payroll runs for the period with pay on-demand, Workday reduces gross and net wages by the total of on-demand payments.

### Business Benefits

- Reduce manual processing by calculating a net advance automatically, and updating accounting and the ledger for Payroll for Canada.
- Reduce manual processing by calculating employer and employee statutory taxes automatically, and updating accounting and the ledger for Payroll for the U.S.
- Encourage workers' financial health by providing them the flexibility to spend their earned wages when they need it.
- Help attract talent and reduce turnover.

### Use Cases

- Pay workers on different cadences based on their characteristics such as salaried, hourly, nonexempt, or gig workers.
- Support workers in emergencies in a time of hardship.
- Help workers avoid borrowing at high interest rates or paying overdraft fees.

### Questions to Consider

| Questions                                        | Considerations                                                                                                                                                                                                                                                                                                                                                                        |
|--------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Which workers do you want to access the feature? | You can create rule-based security groups and apply them on the business process policy for the initiating actions. Example: You can configure rules to roll out pay on-demand with pilot groups or limit access to nonexempt workers.                                                                                                                                                |
| How do you manage time entries?                  | To calculate the pay on-demand amount that workers can request, Workday uses: <ul style="list-style-type: none"> <li>• Approved time from Time Tracking.</li> <li>• Time data from external providers through payroll input. To ensure that Workday uses the most up-to-date data, you might need to load time more frequently. Then, delete inputs based on the batch ID.</li> </ul> |

### Recommendations

For annual reporting accuracy, disable pay on-demand for pay periods crossing calendar years.

### Requirements

For Payroll for Canada, to use same-day EFT payments, confirm that your organization's bank or outsourced payment provider supports them.

For Payroll for the U.S., to use same-day ACH payments, confirm that your organization's bank or outsourced payment provider supports them.

### Limitations

For Payroll for Canada, Workday doesn't guarantee or certify federal, provincial, or local regulatory compliance through use of its software.

For Payroll for the U.S., Workday doesn't guarantee or certify federal, state, or local regulatory compliance through use of its software.

We provide tools that can help your institution meet its payroll needs. You're always responsible for determining whether Workday features are appropriate for your business needs and ensuring you're compliant with your regulatory obligations.

Workday doesn't support pay on-demand for:

- Contract workers.
- Garnishments.
- International assignments.
- Multiple work jurisdictions.
- Supplemental earnings as eligible earnings.
- Tax treaties.
- Trailing payments.

When you enable a worker with a garnishment access to pay on-demand, it could result in that worker's garnishment not calculating correctly.

For Payroll for Canada, payslips don't display the number of hours worked for an on-demand payment, since the worker is taking an early payment of earned net advance wages.

For Payroll for the U.S., payslips don't display the number of hours worked for an on-demand payment, since the worker is taking an early payment of a lump sum portion of accumulated wages.

## Tenant Setup

No impact.

## Security

| Domain                                                                                                          | Description                                                                                                                                                                                                                                                   |
|-----------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <i>Report Execution</i> in the Tenant Non-Configurable functional area.                                         | Enables users to review amounts paid and recouped for pay on-demand requests.                                                                                                                                                                                 |
| <i>Reports: Pay Calculation Results for Pay Group (Results) - USA</i> in the USA Payroll functional area (USA). | Enables users to review withholding orders by workers.                                                                                                                                                                                                        |
| <i>Reports: Pay On-Demand</i> in the Core Payroll functional area.                                              | Enables users to access pay on-demand report fields and data sources.                                                                                                                                                                                         |
| <i>Self-Service: My Pay Dashboard</i> in the Core Payroll functional area.                                      | Enables users to access the Pay dashboard through ESS. Each self-service task requires appropriate security access. Example: To view and print payslips, configure the <i>Self-Service: Payroll (My Payslips)</i> domain in the Core Payroll functional area. |
| <i>Self-Service: Pay On-Demand</i> in the Core Payroll functional area.                                         | Enables workers to request pay on-demand using ESS tasks.                                                                                                                                                                                                     |

| <i>Set Up: Tenant Setup: Worklets</i> in the System functional area.                                            | Enables users to configure dashboards.<br><br>For Payroll for Canada, you can access the Pay On-Demand feature from the <b>Pay</b> dashboard, but you can't configure it from the <b>Benefits and Pay Hub</b> .                                               |

## Business Processes

You can configure the *Pay On-Demand* business process to enable payroll administrators or workers to back out requests by adding the:

- Cancel or rescind functionality on the business process.
- *Employee as Self* security group to those actions on the business process security policy.

When you rescind a request, Workday:

- Cancels the pay calculation and removes the pay result, enabling you to request what calculated in the result again.
- Changes the status of other noncomplete pay results to *Requires Re-Calculation*.
- Ignores the request in the maximum number of requests workers can submit.

You can add a conditional review step to the *Pay On-Demand* business process to monitor unsupported requests, such as workers with garnishments.

## Reporting

| Reports or Dashboards                                         | Considerations                                                                                                                                                              |
|---------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Pay dashboard                                                 | When you configure it, workers can request pay on-demand on the ESS Pay dashboard.                                                                                          |
| <b>Pay On-Demand Amounts Paid and Recouped</b> report         | Compare total amounts paid to total amounts recouped on workers' pay. Drill into each pay component for details about the payroll result, company, and associated worktags. |
| <b>Pay On-Demand Request Count</b> report                     | Review pay on-demand requests by workers, transaction statuses, and amounts.                                                                                                |
| <b>View Pay On-Demand Rule</b> report                         | Review all rules that you configure for pay on-demand.                                                                                                                      |
| <b>USA Withholding Order Results for Workers</b> report (USA) | Review withholding orders by workers to help you determine which workers you want to restrict from accessing pay on-demand tasks.                                           |
| <b>Withholding Orders for Worker</b> report (CAN)             | Review withholding orders by workers to help you determine which workers you want to restrict from accessing pay on-demand tasks.                                           |

You can use these report data sources in custom reports:

- **Pay On-Demand Requests**
- **Payroll Result Line**

## Integrations

You can use external time data that you load through payroll input. Workday recommends that you review the integration frequency and delete existing pay inputs through batch ID to avoid double-counting hours or amounts.

## Connections and Touchpoints

## Steps: Set Up Pay On-Demand

### Prerequisites

Review setup considerations for pay on-demand.

### Context

Set up pay on-demand to enable employees to use employee self-service (ESS) on desktop or mobile to request early payment of a portion of accumulated wages. You can associate the *Pay On-Demand* business process with a pay group and configure unique business processes for different pay groups.

For Payroll for Canada, to receive pay on-demand Electronic Funds Transfer (EFT) payments, employee payment elections must include a Canadian bank account. To use same-day EFT payments, confirm that your organization's bank or outsourced payment provider supports them.

For Payroll for the U.S., to receive pay on-demand Automated Clearing House (ACH) payments, employee payment elections must include a U.S. bank account. To use same-day ACH payments, confirm that your organization's bank or outsourced payment provider supports them.

### Steps

1. Access the **Create Business Process Definition (Default Definition)** task.

From the **Business Process Type** prompt, select *Pay On-Demand*.

On the *Pay On-Demand* business process, add a row with these values on the **Business Process Steps** tab:

| Order    | Type               | Specify                                           | Run As User                                                                                                       |
|----------|--------------------|---------------------------------------------------|-------------------------------------------------------------------------------------------------------------------|
| <i>b</i> | <i>Batch / Job</i> | <i>Payroll On-Demand Calculation and Complete</i> | Add any user with access to the <i>Process: Off Cycle (On Demand)</i> domain in the Core Payroll functional area. |

From the related actions menu of the *Batch/Job* step, select **Business Process > Set as Completion**.  
(Optional) Add this step and enter conditions as needed:

| Order    | Type          | Specify                     |
|----------|---------------|-----------------------------|
| <i>c</i> | <i>Action</i> | <i>Review Pay On-Demand</i> |

(Optional) Add *Notifications* to the business process. Example: Add a notification to alert the payroll administrator and the employee when a pay calculation fails.

See [Create Custom Notifications](#).

Security: These domains in the System functional area:

- *Business Process Administration*
- *Manage: Business Process Definitions*

2. [Edit Business Process Security Policies](#).

- Add *Employee as Self*. Or, create your own rule-based security groups and apply them on the business process policy for the initiating action.
- Add *Payroll Administrator* to other business process actions as required in your organization.

3. [Activate Pending Security Policy Changes](#).

4. [Edit Business Processes](#).

5. [Set Up Payroll and Time Tracking Period Schedules](#) on page 149.

Set up period schedules for pay on-demand to define:

- When workers can request pay on-demand.
- How to adjust the payment date for weekends.

6. For Payroll for Canada, create a pay on-demand net advance earning.

When you configure pay on-demand as net advance or nontaxable earnings, consider these options:

|                      | Net Advance Earning                         | Nontaxable Earning                           |
|----------------------|---------------------------------------------|----------------------------------------------|
| <b>Employee</b>      | Receives the net amount that they requested | Receives the net amount that they requested  |
| <b>Taxation Rate</b> | Standard withholding calculation.           | Regular calculation on the on-cycle results. |

When you don't configure earnings for pay on-demand, the amount available for pay on-demand is zero.

See [Example: Create a Pay On-Demand \(Net\) Earning \(CAN\)](#) on page 379.

7. For Payroll for the U.S., create a pay on-demand (gross-up) earning.

When you configure pay on-demand as gross-up or nontaxable earnings, consider these options:

|                      | Gross-Up Earning                            | Nontaxable Earning                          |
|----------------------|---------------------------------------------|---------------------------------------------|
| <b>Employee</b>      | Receives the net amount that they requested | Receives the net amount that they requested |
| <b>Taxation Rate</b> | Standard withholding rates                  | Regular rates on the on-cycle               |

When you don't configure earnings for pay on-demand, the amount available for pay on-demand is zero.

See [Example: Create a Pay On-Demand \(Gross-Up\) Earning \(USA\)](#) on page 378.

8. Create a pay on-demand offset deduction to reduce earnings by the total pay on-demand payments for the pay period.

See [Example: Create a Pay On-Demand Offset Deduction](#) on page 370.

9. [Create Pay Accumulations](#) on page 311 (USA).

To ensure that Workday recoups pay on-demand payments, configure your gross pay accumulation to subtract the total of pay on-demand payments from gross pay.

10. [Set Up Pay On-Demand Rules](#) on page 364.

11. [Define Payslips](#) on page 468.

Either:

- Create a pay component group to display the pay on-demand offset in the deduction section of the payslip.
- Create a memo earning to display the pay on-demand offset deduction as a negative earning.

12. [Define Cost Allocations for a Worker](#) on page 528.

Specify costing allocation instructions for a pay on-demand earning.

13. [Set Up Account Posting Rules](#).

Configure account posting rules for payroll earnings and payroll deductions.

14. Configure settlements to process payments.

See [Steps: Set Up Settlement](#).

15.(Optional) Add the **Pay On-Demand** task as a menu item to the **Pay** dashboard.

See [Steps: Set Up Dashboards and Landing Pages](#).

## Result

Employees can initiate the business process to create a request by:

- Selecting the **Pay** tile on mobile, then selecting **Make a Request** in the **Pay On-Demand** section.
- Accessing the **Pay On-Demand** task.
- Selecting **Pay On-Demand** from the **Pay** worklet.
- Selecting **Pay On-Demand** from the **Pay Dashboard**.

Workday:

- Generates a payroll result for each pay on-demand request using the Pay On-Demand Net Advance earning on the **Pay Input** line for Payroll for Canada.
- Generates a payroll result for each pay on-demand request using the Pay On-Demand (Gross-Up) earning on the **Pay Input** line for Payroll for the U.S.
- Doesn't take additional tax withholding amounts into consideration when calculating the pay on-demand result.
- Lists the completed date on the *Pay On-Demand* business process as the payment date unless you offset the date on the period schedule.

## Next Steps

Use the **Pay On-Demand Amounts Paid and Recouped** report to review the amounts paid to workers and recouped from gross pay.

## Related Information

### Examples

[Steps: Set Up Employee Self-Service](#)

## Set Up Pay On-Demand Rules

### Prerequisites

Create 1 or more pay on-demand earnings.

Create 1 or more pay on-demand offset deductions.

Security: *Set Up: Pay On-Demand* domain in the Core Payroll functional area.

### Context

The pay on-demand feature enables workers to request early payment of a portion of their accumulated wages through employee self-service (ESS). You can configure rules for pay on-demand requests to define:

- Which workers can request pay on-demand.
- How many requests a worker can make.
- How Workday calculates the total wages available for pay on-demand.

### Steps

1. Access the **Maintain Pay On-Demand Rules** task.

2. As you complete this task, consider:

| Option                       | Description                                                                                                                                                      |
|------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Pay Group</b>             | Configure rules for each pay group whose workers can request pay on-demand.                                                                                      |
| <b>Payroll Action Reason</b> | Select an action reason that you've set up for on-demand payments. You can create new action reasons on the <b>Create Payroll Action Reason</b> task.            |
| <b>Pay On-Demand Earning</b> | Select the earning that you created for pay on-demand. Workday uses this earning for the pay on-demand payment to the worker.                                    |
| <b>Pay On-Demand Offset</b>  | Select the deduction that you created for the pay on-demand offset. Workday uses this deduction to reduce the worker's on-cycle pay by the pay on-demand amount. |

3. As you complete the **Amounts** tab, consider:

| Option                              | Description                                                                                                                                                                                                                                                                                                                                                                                        |
|-------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Eligible Earnings</b>            | Select the earnings that can contribute to the total available wages for pay on-demand.                                                                                                                                                                                                                                                                                                            |
| <b>Eligible Deductions</b>          | Select the deductions that can reduce the available wages for pay on-demand.<br><br>To ensure an accurate available amount, Workday recommends that you include deductions that go into arrears.                                                                                                                                                                                                   |
| <b>Percent to Withhold</b>          | When you enter a percentage to withhold, Workday holds back that rate from the amount available for a pay on-demand request. Example: Enter <b>40</b> so that workers can only request up to 60% of their eligible earnings minus eligible deductions.                                                                                                                                             |
| <b>End of Day for Exempt Worker</b> | Enter a time that's the end of the work day in the employees' time zone. Employees can view their available amount for a given day only after the end of that day. This setting is only applicable to workers when Exempt Status is <b>Yes</b> in their Job Profile.<br><br><b>Note:</b> Only update this field if your intended pay on-demand population includes salaried (or exempt) employees. |

4. As you complete the **Request Restrictions** tab, consider:

| Option                                                                  | Description                                                                                                                                                                                                  |
|-------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Requests Allowed per Quarter</b><br><b>Requests Allowed per Year</b> | You can limit the number of requests an employee can make per quarter or per year, based on the payroll tax year. When a worker has met the limit, Workday displays the next date they can submit a request. |

5. Access the **Guidelines** tab to enter explanatory text that displays on ESS tasks.

#### Related Information

#### Examples

[Steps: Set Up Employee Self-Service](#)

## Concept: Pay On-Demand

Traditionally, employees receive their paychecks on scheduled payroll payment dates. The pay on-demand feature enables workers to request early payment of a portion of their accumulated wages through employee self-service (ESS).

For Payroll for Canada, Workday supports both standard and same day Electronic Fund Transfer (EFT) payments.

For Payroll for the U.S., Workday supports both standard and same day Automated Clearing House (ACH) payments.

### The Pay On-Demand Business Process

You can enable employees to initiate the business process from:

- The **Pay** tile on mobile.
- The **Pay On-Demand** task.
- The **Pay** worklet.
- The **Pay Dashboard**.

The **Pay On-Demand Request Count** report provides details about the requests by transaction statuses.

### Amount Available for Pay On-Demand

Workday calculates the amount available for pay on-demand based on rules you configure. For salaried exempt workers, Workday calculates a prorated gross based on the time you configure as the end of the working day and the worker's time zone.

To learn how Workday derives the amount, employees can click:

- **?** (the question mark) on mobile.
- **View Details** on the desktop.

Workers who use Time Tracking can see how their time worked affects the available amount.

Workday also considers the status of the employee's on-cycle pay to determine the available amount:

| On-Cycle Status        | Available Amount                 |
|------------------------|----------------------------------|
| <i>Not Yet Started</i> | Based on the current pay period. |
| <i>In Progress</i>     | Based on the current pay period. |
| <i>Completed</i>       | Based on the next pay period.    |

When workers have arrears for deductions that aren't eligible for pay on-demand, Workday recoups them on the available amount. You can configure your eligible pay components to include those deductions to reduce the workers' available amount further by current period amounts.

For workers with multiple jobs, Workday calculates earned wages across additional jobs that are in the same pay group and company as the primary job. Workers can only submit Pay On-Demand requests for additional jobs that are in the same pay group and company as their primary job.

Pay On-Demand request and pay result processing follow the rules you configure in the **Maintain Payroll Processing Position Rules** task. These rules determine which of a worker's positions to use as the default when processing pay on-demand. When a worker has multiple jobs, Workday tags new Pay On-

Demand results with Additional Job Position and Company. If you don't configure new rules, Workday continues to use the worker's primary position for processing pay on-demand for workers with multiple jobs.

For employees with gross-to-net subperiods, Workday:

- Calculates the available amount per subperiod.
- Sums all subperiod available amounts.

The calculation for the available amount is:

- Based on the number of approved hours worked as of the date of the request.
- Net - (net x percent to withhold) - past requests in the pay period.

Where the net = eligible earnings - eligible deductions.

#### Example

Marilyn is an hourly worker who has 20 approved hours in the current period.

For Payroll for Canada:

| Pay Components      | Examples          |
|---------------------|-------------------|
| Eligible earnings   | <i>Hourly Pay</i> |
| Eligible deductions | <i>Statutory</i>  |
| Percent to withhold | 40                |
| Employee's pay rate | 15 per hour       |

For Payroll for the U.S.:

| Pay Components      | Examples          |
|---------------------|-------------------|
| Eligible earnings   | <i>Hourly Pay</i> |
| Eligible deductions | <i>OASDI</i>      |
| Percent to withhold | 30                |
| Employee's pay rate | 15 per hour       |

#### Impact to On-Cycle Payroll

When you run on-cycle payroll for the period for employees who request pay on-demand, Workday reduces their pay by the total of pay on-demand payments in the period.

##### Concepts

[Setup Considerations: Pay On-Demand](#) on page 357

##### Tasks

[Set Up Gross-Up Earnings](#) on page 325

[Set Up Default Processing Position for Payroll \(CAN, USA\)](#) on page 564

##### Examples

[Steps: Set Up Employee Self-Service](#)

### Concept: Pay On-Demand Accounting

You can configure accounting for pay on-demand earning and pay on-demand offset deduction:

- As a direct expense (USA).

- As a payroll advance (CAN, USA).

For payroll advances, use these tasks:

- **Assign Costing Allocation** (USA only) - specify costing instructions for the Pay On-Demand earning across cost centers, projects, grants, locations, or other costing dimensions.
- **View Account Posting Rule Set** (CAN, USA).

Edit account posting rules to direct where pay on-demand transaction journals post to ledger accounts:

- For *Net Advance* for Payroll for Canada.
- For *Payroll Earning* and *Payroll Deduction* for Payroll for the U.S.

### Direct Expense (USA)

When you set up pay on-demand as a direct expense, you can charge the gross, employer taxes, and fringe to the worker's standard costing assignments. The pay on-demand payments completed in a pay period reduce the associated on-cycle gross.

### Payroll Advance

When you set up pay on-demand as an advance:

- The net becomes a receivable for Payroll for Canada. You can charge the net to the worker's standard costing assignments. The associated on cycle net recovery reverses the receivable.
- The gross becomes a receivable for Payroll for the U.S. You can charge the gross, employer taxes, and fringe to the worker's standard costing assignments. The associated on-cycle gross reverses the receivable.

### Example (CAN)

Diana works at the public safety department as a student intern. The gross salary is 2000. Diana makes a pay on-demand request of 200 during the biweekly pay period 2020-08-03 to 2020-08-16.

As a payroll administrator, you can use the payroll advance method:

| Accounting Method | Cost Center     | Account Posting Rule     | Pay Component               | Ledger                                      |
|-------------------|-----------------|--------------------------|-----------------------------|---------------------------------------------|
| Payroll Advance   | <i>Benefits</i> | <i>Payroll Earning</i>   | <i>Pay On-Demand</i>        | <i>Payroll On-Demand Advance Receivable</i> |
|                   | <i>Benefits</i> | <i>Payroll Deduction</i> | <i>Pay On-Demand Offset</i> | <i>Payroll On-Demand Advance Receivable</i> |

When you complete payroll for the pay on-demand request for the pay period, Workday calculates the net advance as:

|                     |     |
|---------------------|-----|
| Gross               | 250 |
| Statutory taxes     | 50  |
| Previous requests   | 50  |
| Percent to withhold | 60  |
| Net Pay             | 90  |

For on-cycle, Workday calculates gross-to-net amounts as:

|                        |      |
|------------------------|------|
| Gross pay              | 2500 |
| Statutory deductions   | 550  |
| ER benefits            | 50   |
| Voluntary deductions   | 50   |
| Pay On-Demand Recovery | 90   |
| Net pay                | 1760 |

To view journal entries, drill into the worker's *Pay On-Demand* payroll result type and click **Actuals**. For payroll advance, Workday uses the *Payroll On-Demand Advance Receivable* ledger account to post the credits and debits.

You can:

- Run the **Payroll Accounting by Period/Pay Group** report to view all accounting transactions for a specific pay period or pay group.
- Access the **Edit Earning and Employee Deduction Cost Allocations** task to edit cost allocations for earnings and deductions.

### Example (USA)

Diana works at the public safety department as a student intern. The gross salary is 2000. Diana makes a pay on-demand request of 200 during the biweekly pay period 2020-08-03 to 2020-08-16.

As a payroll administrator, you can use direct expense or payroll advance method:

| Accounting Method | Cost Center          | Account Posting Rule     | Pay Component               | Ledger                                      |
|-------------------|----------------------|--------------------------|-----------------------------|---------------------------------------------|
| Direct Expense    | <i>Public Safety</i> | <i>Payroll Earning</i>   | <i>Pay On-Demand</i>        | <i>6000: Salaries and Wages</i>             |
|                   | <i>Public Safety</i> | <i>Payroll Deduction</i> | <i>Pay On-Demand Offset</i> | <i>6000: Salaries and Wages</i>             |
| Payroll Advance   | <i>Benefits</i>      | <i>Payroll Earning</i>   | <i>Pay On-Demand</i>        | <i>Payroll On-Demand Advance Receivable</i> |
|                   | <i>Benefits</i>      | <i>Payroll Deduction</i> | <i>Pay On-Demand Offset</i> | <i>Payroll On-Demand Advance Receivable</i> |

When you complete payroll for the pay on-demand request for the pay period 2020-08-03 to 2020-08-16, Workday calculates gross-to-net amounts as:

|                |     |
|----------------|-----|
| Gross          | 200 |
| Deductions Tax | 50  |
| Net Pay        | 150 |
| ER Taxes       | 15  |

For on-cycle, Workday calculates gross-to-net amounts as:

|       |      |
|-------|------|
| Gross | 2000 |
|-------|------|

|                      |      |
|----------------------|------|
| Pay On-Demand Offset | 200  |
| Deductions Tax       | 250  |
| Deduction Voluntary  | 100  |
| Net Pay              | 1450 |
| ER Taxes             | 150  |
| ER Benefits          | 800  |

To view journal entries, drill into the worker's *Pay On-Demand* payroll result type and click **Actuals**.

- For direct expense for Payroll for the U.S., Workday uses the *6000: Salaries and Wages* ledger account to post the credits and debits.
- For payroll advance, Workday uses the *Payroll On-Demand Advance Receivable* ledger account to post the credits and debits.

You can:

- Run the **Payroll Accounting by Period/Pay Group** report to view all accounting transactions for a specific pay period or pay group.
- Access the **Edit Earning and Employee Deduction Cost Allocations** task to edit cost allocations for earnings and deductions.

## Example: Create a Pay On-Demand Offset Deduction

### Context

For Payroll for Canada, this example illustrates 1 way to configure a pay on-demand offset recovery deduction for payments already made to the employee from their net pay.

For Payroll for the U.S., this example illustrates 1 way to configure a pay on-demand offset deduction for payments already made to the employee from their gross pay.

Your company offers pay on-demand to workers, so you need to create a pay on-demand offset deduction to recoup the amount paid in advance.

To configure the deduction, you'll also create:

- Pay balances to sum pay on-demand amounts.
- Calculations for deduction eligibility and limits.

Configure the gross pay accumulation to subtract the deduction.

### Prerequisites

- Configure the *Pay On-Demand* business process.
- Create a pay on-demand net advance earning (CAN).
- Create a pay on-demand (gross-up) earning (USA).
- Security: These domains in the Core Payroll functional area:
  - *Calculation Engine: Calculations (Category Segment Security)*
  - *Set Up: Payroll (Calculations - Payroll Specific)*

**Steps**

1. Access the **Create Deduction** task.
2. Enter these values. It's important that you limit your entries to the ones listed below and complete each entry.

For Payroll for Canada:

| Option                          | Description                                                                                                              |
|---------------------------------|--------------------------------------------------------------------------------------------------------------------------|
| <b>Name</b>                     | <i>Pay On-Demand Recovery Offset</i>                                                                                     |
| <b>Code</b>                     | <i>PODRCV</i>                                                                                                            |
| <b>Default Payslip Name</b>     | <i>Pay On-Demand Recovery Offset</i>                                                                                     |
| <b>Country</b>                  | <i>Canada</i>                                                                                                            |
| <b>Effective Date</b>           | Use today's date.                                                                                                        |
| <b>Run Category Eligibility</b> | <i>Regular</i>                                                                                                           |
| <b>Calculation</b>              | <i>Payroll Input</i><br>You'll change this placeholder calculation later.                                                |

| <b>Filter Worktags</b>                                  | <p><i>Position</i></p> <p>Workday requires the worktag <i>Position</i> to support pay on-demand for workers with multiple jobs.</p> <p>Workday recommends adding filter worktags if you don't want wages recouped across certain worktags. Example: The employee changes companies midperiod. When you add the <i>Company</i> filter worktag, Workday recoups wages only from the company that paid the original pay on-demand. Otherwise, the pay on-demand offset recoups money across companies.</p> |

| <b>Country</b>                                          | <i>United States of America</i>                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| <b>Filter Worktags</b>                                  | <p><i>Position</i></p> <p>Workday requires the worktag <i>Position</i> to support pay on-demand for workers with multiple jobs.</p> <p>Workday recommends adding filter worktags if you don't want wages recouped across certain worktags. Example: The employee changes companies midperiod. When you add the <i>Company</i> filter worktag, Workday recoups wages only from the company that originally made the pay on-demand. Otherwise, the pay on-demand offset recoups money across companies.</p> |
| <b>Include All Retro Values in Current Gross to Net</b> | Select this option.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

- *Pay On-Demand Recovery Offset [CAN]* deduction (CAN).
- *Pay On-Demand Offset [USA]* deduction (USA).

You created this deduction in steps 1 - 3. Now you'll add the calculations you've created.

27. Enter these values:

For Payroll for Canada:

| Option             | Description                                            |
|--------------------|--------------------------------------------------------|
| Worker Eligibility | <i>Pay On-Demand Net Advance Balance &gt; 0 Canada</i> |

| Option             | Description                                                                                     |
|--------------------|-------------------------------------------------------------------------------------------------|
| <b>Calculation</b> | Delete <i>Payroll Input</i> .<br>Select <i>Pay On-Demand Net Advance Recovery Balance Calc.</i> |

For Payroll for the U.S.:

| Option                    | Description                                                                                |
|---------------------------|--------------------------------------------------------------------------------------------|
| <b>Worker Eligibility</b> | <i>Pay On-Demand Gross Up Balance &gt; 0</i>                                               |
| <b>Calculation</b>        | Delete <i>Payroll Input</i> .<br>Select <i>Pay On-Demand Gross Up Offset Balance Calc.</i> |

28. On the **Effective Dated** tab, enter these values in the **Limits** grid:

For Payroll for Canada:

| Value                                        | Balance Period                                    | Based On                            |
|----------------------------------------------|---------------------------------------------------|-------------------------------------|
| <i>Pay On-Demand Limit Calculation [CAN]</i> | <i>Subperiod Start Date to Subperiod End Date</i> | <i>Pay On-Demand Recovery [CAN]</i> |

For Payroll for the U.S.:

| Value                                  | Balance Period                                    | Based On                          |
|----------------------------------------|---------------------------------------------------|-----------------------------------|
| <i>Pay On-Demand Limit Calculation</i> | <i>Subperiod Start Date to Subperiod End Date</i> | <i>Pay On-Demand Offset [USA]</i> |

29. On the **Non-Effective Dated** tab, select these values from the **Groups** prompt:

For Payroll for Canada, *Post Tax Deductions*.

For Payroll for the U.S.:

- *Federal Taxable Reduction [USA]*
- *FICA Taxable Reduction [USA]*
- *FUI Taxable Reduction [USA]*
- *Gross Wages Reduction for Pay On-Demand [USA]*
- *Local Withholding Taxable Reduction [USA]*
- *State Withholding Taxable Reduction [USA]*
- *SUI Taxable Reduction [USA]*

30. Click **OK**.

31. For Payroll for the U.S.:

- Access the **Edit Pay Accumulation** task.
- From the **Pay Accumulation** prompt, select *Gross*.
- In the **Subtract from Pay Accumulation** section, select *Pay On-Demand Offset*.
- Click **OK**.

## Result

Workday automatically deducts the offset deduction from:

- Net wages to ensure the worker isn't paid twice (CAN).
- Gross wages to ensure that the worker isn't paid twice for the same hours (USA).

**Example: Create a Pay On-Demand (Gross-Up) Earning (USA)**

This example illustrates 1 way to configure a gross-up earning for pay on-demand.

**Context**

Your company offers pay on-demand to workers, so you need to create a pay on-demand gross-up earning.

**Prerequisites**

- Configure the *Pay On-Demand* business process.
- Security: *Set Up: Payroll (Calculations - Payroll Specific)* domain in the Core Payroll functional area.

**Steps**

1. Access the **Create Earning** task.
2. Enter these values in the header section:

| Option  | Description                     |
|---------|---------------------------------|
| Name    | <i>Pay On-Demand (Gross-Up)</i> |
| Code    | <i>PODGU</i>                    |
| Country | <i>United States of America</i> |

3. Enter these values on the **Effective Dated** tab:

| Option                        | Description                                                                                                         |
|-------------------------------|---------------------------------------------------------------------------------------------------------------------|
| Effective Date                | Use the current date.                                                                                               |
| Worker Eligibility            | <i>Payroll Input Exists for Pay Component</i>                                                                       |
| Calculation                   | <i>Grossed Up Amount</i>                                                                                            |
| Always Gross-Up               | Select this check box.                                                                                              |
| Gross-Up Type                 | <i>All Taxes</i>                                                                                                    |
| Do Not Calculate During Retro | Select this check box.                                                                                              |
| Calculation Worktag           | <i>Position</i><br>The worktag <i>Position</i> is required to support pay on-demand for workers with multiple jobs. |

4. Add a row to the **Related Calculations** grid and enter these values:

| Option              | Description                      |
|---------------------|----------------------------------|
| Related Calculation | <i>Net Amount (for Gross Up)</i> |
| Input Allowed?      | Select this check box.           |

5. On the **Non-Effective Dated** tab, select these values from the **Groups** prompt:

- *Adds to Gross [CAN USA]*
- *Federal Taxable (Withhold Taxes) [USA]*
- *FICA Taxable [USA]*
- *FUI Taxable [USA]*
- *Local Withholding Taxable (Withhold Taxes) [USA]*
- *State Withholding Taxable (Withhold Taxes) [USA]*
- *SUI Taxable [USA]*

6. Click **OK**.

## Result

When a worker submits a pay on-demand request, Workday calculates and pays the gross pay on-demand amount.

## Next Steps

Create a pay on-demand offset deduction.

## Example: Create a Pay On-Demand (Net) Earning (CAN)

This example illustrates 1 way to configure a Net Advance earning for pay on-demand.

## Context

Your company offers pay on-demand to workers, so you need to create a net advance earning.

## Prerequisites

- Configure the *Pay On-Demand* business process.
- Security: *Set Up: Payroll (Calculations - Payroll Specific)* domain in the Core Payroll functional area.

## Steps

1. Access the **Create Earning** task.
2. Enter these values in the header section:

| Option         | Description                      |
|----------------|----------------------------------|
| <b>Name</b>    | <i>Pay On-Demand Net Advance</i> |
| <b>Code</b>    | <i>PODNET</i>                    |
| <b>Country</b> | <i>Canada</i>                    |

3. Enter these values on the **Effective Dated** tab:

| Option                    | Description                                   |
|---------------------------|-----------------------------------------------|
| <b>Effective Date</b>     | Use the current date.                         |
| <b>Worker Eligibility</b> | <i>Payroll Input Exists for Pay Component</i> |
| <b>Calculation</b>        | <i>Payroll Input</i>                          |

| Option                          | Description                                                                                                              |
|---------------------------------|--------------------------------------------------------------------------------------------------------------------------|
| Input Amount Allowed?           | Select this check box.                                                                                                   |
| Do Not Recalculate During Retro | Select this check box.                                                                                                   |
| Calculation Worktag             | <i>Position</i><br>Workday requires the worktag <i>Position</i> to support pay on-demand for workers with multiple jobs. |

4. On the **Non-Effective Dated** tab, select *Adds to Gross*.

5. Click **OK**.

Pay On-Demand Earnings use only pay components that have the *Adds to Gross* pay component group.

### Result

When a worker submits a pay on-demand request, Workday calculates and pays the net pay on-demand amount.

### Next Steps

Create a pay on-demand offset deduction.

## Examples: Time Off Earnings

### Example: Create an Earning for a Single Time Off

This example illustrates 1 way to create an earning for a single time off for these payroll countries:

- USA
- Canada
- UK

### Context

This example is relevant to organizations in Payroll for Canada and the U.S. with employees in the U.S. and Canada that share a vacation policy.

For Payroll for Canada and the U.S., Global Modern Services wants their vacation time off tracked as a separate earning from sick time off and paid as *Rate \* Hours*. Payroll administrator Sheila, creates an earning to calculate paid time off for vacation.

For Payroll for the UK, Global Modern Services wants their holiday time off tracked as a separate earning from sick time off and paid as *Rate \* Hours*. Payroll administrator Sheila, creates an earning to calculate paid time off for holiday.

### Prerequisites

- Set up base pay earnings to subtract paid time off from regular wages or directly from Gross or Net pay accumulations.
- Security: *Set Up: Payroll (Calculations - Payroll Specific)* domain in the Core Payroll functional area.

## Steps

1. Access the **Create Earning** task.
2. **Name** the earning:
  - *PTO - Vacation Paid* (CAN, USA).
  - *Holiday - Paid* (UK).
3. In the **Criteria** section of the **Effective Dated** tab, create an eligibility rule to prevent the earning from resolving when the employee has no paid time off:
  - a) Add a row for **Worker Eligibility** and select **Create > Create Value Comparison Calculation**.
  - b) Select *Payroll* as the **Category**.
  - c) Enter these settings:

| Field              | Description                                                                                                                                                                                                                                                 |
|--------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>1st Operand</b> | <i>PTO - Vacation Paid - Time Off Paid</i> .<br>This absence component related calculation pulls paid time off hours or days into the earning calculation. <i>PTO - Vacation Paid</i> is the name of the time off definition in Workday Absence Management. |
| <b>Operator</b>    | <i>not equal to</i>                                                                                                                                                                                                                                         |
| <b>2nd Operand</b> | Select <b>By Category &gt; Common</b> , and then select <i>0</i> .                                                                                                                                                                                          |

4. Select *Hours (Unprorated) \* Rate* in the **Calculation** field on the **Calculation Details** section of the **Effective Dated** tab.
5. Select the **Override Frequency** *Hourly*.
6. Select **Prorate Using Calendar Days**.
7. Insert a row in the **Related Calculations** grid and enter these settings:

| Field                       | Description                                  |
|-----------------------------|----------------------------------------------|
| <b>Related Calculation</b>  | <i>Hours (unprorated)</i>                    |
| <b>Default Calculation</b>  | <i>Payroll Input</i>                         |
| <b>Override Calculation</b> | <i>Paid Vacation Hours - (by Position)</i> . |

8. Insert a second row and enter these settings:

| Field                       | Value                                                                         |
|-----------------------------|-------------------------------------------------------------------------------|
| <b>Related Calculation</b>  | <i>Rate</i>                                                                   |
| <b>Override Calculation</b> | <i>Compensation: Compensation Element Value (using PC Frequency Override)</i> |

9. Select the **Compensation Element**.
10. In the **Groups** field on the **Non-Effective Dated** tab, select pay components as desired.

## Example: Create an Earning for Multiple Time Offs

### Context

This example illustrates how to create an earning for multiple time offs for these payroll countries:

- USA
- Canada
- UK

Global Modern Services wants their earnings to calculate paid time off for the combined value of multiple time offs that are paid based on compensation rate. Sheila, the payroll administrator, creates an earning for all time offs paid at an hourly rate.

This example is relevant to organizations with employees in the U.S. and Canada for Payroll for Canada and the U.S. that share a vacation policy.

### Prerequisites

Set up base pay earnings to subtract paid time off from regular wages. Alternatively, you can subtract paid time off directly from Gross or Net pay accumulations.

Security: *Set Up: Payroll (Calculations - Payroll Specific)* domain in the Core Payroll functional area.

### Steps

1. Create the aggregate calculation:
  - a) Access the **Create Aggregate Calculation** task.
  - b) Complete these fields:

| Field    | Value                                                                                                                                                                                                                                                                                                                 |
|----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Category | <i>Payroll</i>                                                                                                                                                                                                                                                                                                        |
| Function | <i>Sum</i>                                                                                                                                                                                                                                                                                                            |
| Operand  | Select <i>PTO - Vacation - Time Off Paid</i> and <i>PTO - Sick Pay - Time Off Paid</i> . These absence component related calculations pull paid time off hours or days into the earning calculation. <i>PTO - Vacation Paid</i> and <i>PTO - Sick Pay</i> are the time off definitions in Workday Absence Management. |

2. Create the earning:
  - a) Access the **Create Earning** task.
  - b) Name the earning: All Time Off - Paid.
  - c) In the **Criteria** section of the **Effective Dated** tab, create an eligibility rule to prevent the earning from resolving when the employee has no paid time off.  
In the **Worker Eligibility** field, select **Create > Create Value Comparison Calculation**, and select *Payroll* as the **Category**. Add a row and enter these values:

| Field       | Value                                                 |
|-------------|-------------------------------------------------------|
| 1st Operand | Select the aggregate calculation you defined earlier. |
| Operator    | <i>not equal to</i>                                   |
| 2nd Operand | <i>0 (zero)</i>                                       |

3. Define the earning calculation in the **Calculation Details** section of the **Effective Dated** tab:

- a) Select *Time Off Paid (Units) \* Rate* in the **Calculation** field.
- b) Insert 2 rows in the **Related Calculation** section and complete these fields:

| Related Calculation          | Override Calculation                                                          |
|------------------------------|-------------------------------------------------------------------------------|
| <i>Time Off Paid (Units)</i> | Select the aggregate calculation you defined earlier.                         |
| <i>Rate</i>                  | <i>Compensation: Compensation Element Value (using PC Frequency Override)</i> |

4. Select a **Compensation Element**, such as *Base Pay*.

#### Related Information

#### Tasks

[Steps: Create Earnings](#) on page 222

### Example: Calculate Hours Not Worked

This example illustrates how to create a calculation to track hours not worked for these payroll countries:

- USA
- Canada
- UK

.

#### Context

Global Modern Services wants to identify hours not worked in order to calculate the impact of time off and holidays on salaried workers' pay.

When calculating hours not worked due to time off or holidays, you need to:

- Convert time off into hours, based on a full work day for full-time workers.
- Consider subperiods and proration.

#### Prerequisites

- Create an *Annual Vacation* time off plan in days. Workday Absence Management will then automatically create 3 absence component related calculations, including *Annual Vacation - Time Off Paid*.
- Set up worker holiday calendars.

Security:

- *Set Up: Calculations - Generic* in the Core Payroll functional area.
- *Set Up: Time Off (Calculations - Generic)* in the Time Off and Leave functional area.

#### Steps

1. Access the **Create Arithmetic Calculation** task.

Create a calculation named *Annual Vacation Time Off Paid in Hours* with these settings:

| Option             | Value                                  | Description                                                                                                                  |
|--------------------|----------------------------------------|------------------------------------------------------------------------------------------------------------------------------|
| <b>1st Operand</b> | <i>Annual Vacation - Time Off Paid</i> | Workday creates this absence component related calculation when you create the <i>Annual Vacation</i> time off plan in days. |

| Option      | Value           | Description |
|-------------|-----------------|-------------|
| Operator    | <i>Multiply</i> |             |
| 2nd Operand | <i>8</i>        |             |

2. Access the **Create Aggregate Calculation** task.

Create a calculation named *Hours Not Worked* with these settings:

| Option   | Value                                                                                                                                                                                      |
|----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Category | <i>Payroll</i>                                                                                                                                                                             |
| Function | <i>Sum</i>                                                                                                                                                                                 |
| Operand  | <ul style="list-style-type: none"> <li><i>Annual Vacation Time Off Paid in Hours</i></li> <li><i>Worker: Holiday Hours (from Holiday Calendar) for Worker during Sub-Period</i></li> </ul> |

### Next Steps

For Payroll for Canada, the UK, and the U.S., use the *Hours Not Worked* calculation to:

- Reduce worker salaries for time off and holidays.
- Create a related calculation that tracks hours worked.

For Payroll for France, use the *Hours Not Worked* calculation to reduce worker salaries for time off and holidays.

## Example: Reduce Salary for Time Off and Holidays

This example illustrates how to set up an earning for a worker's salary that's reduced by time off or holiday pay for these payroll countries:

- USA
- Canada
- UK

.

### Context

You want to prevent salaried employees from receiving both their full regular wages and time off or holiday pay earnings when they take paid or unpaid leave.

Payroll for France recommends that you create separate deductions for unpaid time off. As a simplification, however, you can directly reduce the salary by unpaid or paid time off.

You need to reduce the earning in a way that considers subperiods and any proration. Example: Midperiod compensation changes and leave events (when you enable PC Proration for leave of absence).

This example only applies when using Absence Management with Workday Payroll.

### Prerequisites

- Set up the worker's holiday calendar.

- Create a *Salary* earning based on a compensation element.
- Create 2 related calculations named *Hourly Rate*, and *Reduction Amount* with proration set to *None of the above*.
- Create a related calculation named *Salaried Comp (prorated)* with proration set to *Prorate Using Days Worked*.

Security:

- *Set Up: Calculations - Generic* in the Core Payroll functional area.
- *Set Up: Time Off (Calculations - Generic)* in the Time Off and Leave functional area.
- *Set Up: Payroll (Calculations - Payroll Specific)* in the Core Payroll functional area.

## Steps

1. Create an aggregate calculation, named *Hours Not Worked* to calculate hours not worked due to time off and holidays.

See [Example: Calculate Hours Not Worked](#) on page 383.

2. Access the **Create Arithmetic Calculation** task.

Create a calculation named *Salaried Comp (prorated) - Reduction Amount* with these settings:

| 1st Operand                     | Operator        | 2nd Operator            |
|---------------------------------|-----------------|-------------------------|
| <i>Salaried Comp (prorated)</i> | <i>Subtract</i> | <i>Reduction Amount</i> |

3. Access the **Create Arithmetic Calculation** task.

Create a calculation named *Hours Not Worked \* Hourly Rate* with these settings:

| 1st Operand             | Operator        | 2nd Operator       |
|-------------------------|-----------------|--------------------|
| <i>Hours Not Worked</i> | <i>Multiply</i> | <i>Hourly Rate</i> |

4. Access the **Edit Earning** task for *Salary*.

a) Enter these settings:

| Option                                        | Value                                              |
|-----------------------------------------------|----------------------------------------------------|
| <b>Worker Eligibility</b>                     | <i>Pay Rate Type &lt;&gt; Hourly as of PS Date</i> |
| <b>Calculation Proration</b>                  | <i>Prorate Using Days Worked</i>                   |
| <b>Calculation</b>                            | <i>Salaried Comp (prorated) - Reduction Amount</i> |
| <b>Events Causing Pay Component Proration</b> | <i>Compensation Change</i>                         |
| <b>Compensation Element</b>                   | Select the worker's salary compensation element.   |

b) Add 3 rows to the **Related Calculations** section.

| Related Calculation             | Override Calculation                                                                            |
|---------------------------------|-------------------------------------------------------------------------------------------------|
| <i>Reduction Amount</i>         | <i>Hours Not Worked* Hourly Rate</i>                                                            |
| <i>Hourly Rate</i>              | Enter a calculation to retrieve a worker's hourly rate.                                         |
| <i>Salaried Comp (prorated)</i> | <i>Compensation: Compensation Element Value (using Pay Period Frequency Only - No Rounding)</i> |

**Result**

Workday reduces the worker's salary for the period by payments for time off and holidays. When the worker has multiple subperiods, or proration, Workday:

- Prorates the salaried amount for each subperiod.
- Calculates the reduction amount for each subperiod based only on the time off and holidays in the period.

**Next Steps**

Create earnings for paid time off and holiday pay.

**Examples**

[Create Holiday Calendars](#)

**Example: Create Related Calculations to Track Worked Hours**

This example illustrates how to track hours worked for salaried workers, excluding time off, and holidays for these payroll countries:

- USA
- Canada

.

**Context**

Global Modern Services provides pension account contributions to salaried workers who work more than a certain number of hours a month. To verify worker eligibility for a pension account, you want to track the total worked hours for each worker, excluding any time off or holidays.

**Prerequisites**

- Set up the worker's holiday calendars.
- Create a related calculation named *Scheduled Hours (prorated)* with proration set to *Prorate using Days Worked*.
- Create a related calculation named *Hours Worked in Period (unprorated)* with proration set to *None of the above*.
- Create a *Salary* earning based on a compensation element.

Security:

- *Set Up: Calculations - Generic* in the Core Payroll functional area.
- *Set Up: Time Off (Calculations - Generic)* in the Time Off and Leave functional area.
- *Set Up: Payroll (Calculations - Payroll Specific)* in the Core Payroll functional area.

**Steps**

1. Create an aggregate calculation to calculate hours not worked due to time off and holidays.  
See [Example: Calculate Hours Not Worked](#) on page 383.

2. Access the **Create Arithmetic Calculation** task.

Create a calculation named *Scheduled Hours - Hours Not Worked* with these settings:

| 1st Operand            | Operator        | 2nd Operator            |
|------------------------|-----------------|-------------------------|
| <i>Scheduled Hours</i> | <i>Subtract</i> | <i>Hours Not Worked</i> |

3. Access the **Edit Earning** task for the *Salary* earning.

Add 2 rows to the **Related Calculations** section.

| Related Calculation                        | Override Calculation                                                                                | Hours for Reporting - Result | Hours for Reporting - Result Line |
|--------------------------------------------|-----------------------------------------------------------------------------------------------------|------------------------------|-----------------------------------|
| <i>Scheduled Hours (prorated)</i>          | <i>Job: Scheduled Hours for Target Frequency (as of Sub Period End Date using PC Freq Override)</i> |                              |                                   |
| <i>Hours Worked in Period (unprorated)</i> | <i>Scheduled Hours - Hours Not Worked</i>                                                           | <i>Yes</i>                   | <i>Add</i>                        |

### Result

Workday calculates the workers' hours based on their weekly scheduled hours, and excludes time off and holidays. When the worker has multiple subperiods, Workday calculates a worker's hours based on:

- Weekly scheduled hours, prorated by days worked.
- The time off or holidays in the subperiod.

You can view the hours worked on these reports:

- **View Payroll Results.**
- **Payroll Register by Period.**
- **Payroll Register** for balance period.

## Example: Create a Dividend Earning

This example illustrates 1 way to configure an earning to pay dividends or other nontaxable earnings to workers.

**Note:** You're responsible for confirming that this solution meets the reporting and compliance requirements of your organization.

### Context

You want to use Workday Payroll to pay quarterly stock dividends to workers. These payments should add to the worker's net pay and display on the payslip, but shouldn't:

- Add to gross pay.
- Be subject to tax withholding.
- Affect benefits calculations.

## Prerequisites

Set up the payslip configuration and printing options.

Security:

- *Set Up: Payroll (Calculations - Payroll Specific)* in the Core Payroll functional area.
- *Set Up: Payroll (Reporting)* in the Core Payroll functional area.

## Steps

1. Access the **Create Earning** task.
2. Enter these values in the header section:

| Option               | Description        |
|----------------------|--------------------|
| Name                 | Quarterly Dividend |
| Code                 | DIVIDEND           |
| Default Payslip Name | Dividend Payment   |

3. Enter these settings on the **Effective Dated** tab:

| Option                | Description                            |
|-----------------------|----------------------------------------|
| Effective Date        | Current date                           |
| Worker Eligibility    | Payroll Input Exists for Pay Component |
| Calculation           | Payroll Input                          |
| Input Amount Allowed? | Selected                               |
| Calculation Proration | None of the above                      |

4. Don't select any existing pay component groups from the **Groups** prompt on the **Non-Effective Dated** tab.
5. Click **OK** and **Done**.
6. Access the **Edit Pay Accumulation** task.
7. In the **Pay Accumulation** prompt, select **Net**.
8. In the **Earnings** prompt, select **Quarterly Dividend**.
9. Click **OK** and **Done**.
10. Access the **Create Pay Component Group** task.
11. Enter these values:

| Option                   | Description         |
|--------------------------|---------------------|
| Name                     | Nontaxable Earnings |
| Pay Component Group Code | NTX_EARN            |
| Pay Component Usage      | Earnings            |

12. Select **Quarterly Dividend** from the **Earnings** prompt on the **Adds to Group** grid.
13. Click **OK** and **Done**.
14. Access the **Maintain Payroll Payslip Configuration** task.
15. On the **Sections** tab, select the Nontaxable Earnings pay component group from the **Payslip Calculation(s)** prompt on the **Earnings** row.
16. Click **OK** and **Done**.

**Next Steps**

Add payroll input for the dividend amounts.

## Net Pay Validation and Arrears

---

### Setup Considerations: Net Pay Validation and Arrears

---

You can use this topic to help make decisions when planning your configuration and use of net pay validation and arrears. It explains:

- Why to set it up.
- How it fits into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

**What It Is**

Workday enables you to set a minimum net pay for workers and take deductions from their pay in priorities you define. When the total deduction exceeds the available pay, Workday puts the remaining deduction in arrears. You can then track those deduction amounts and define limits for amounts to recover from workers' subsequent pay.

Payroll for Australia and France don't typically require arrears tracking.

**Business Benefits**

Workday enables you to define how to recover arrears for each deduction and in which order. This helps reduce manually processing when workers pay deductions in advance, or have negative arrears balances.

**Use Cases**

You can define rules for tracking and recouping arrears to manage deductions such as:

- Deferred compensation.
- Health plans.
- Pensions.
- Retirement accounts.
- Union dues.

You can process arrears for cases such as when:

- Hourly workers have ongoing deductions but don't have any worked hours for a weekly pay period.
- Workers pay deductions in advance using personal checks.
- Workers go on leave with no pay or partial pay.

## Questions to Consider

| Questions                                       | Considerations                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
|-------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Are you using Payroll for France?               | <p>When you use Payroll for France, Workday provides these deductions to avoid workers receiving a negative net salary:</p> <ul style="list-style-type: none"> <li>• <i>Negative Net Pay Advance [FRA]</i> creates an advance when the net pay is negative.</li> <li>• <i>Repayment of Previous Negative Net Salary [FRA]</i> deducts the negative net pay advance from the worker's next positive salary.</li> </ul> <p>When you use these Workday-delivered deductions, you don't need to configure arrears processing.</p>                                                                                                                                                                                                                                                                                       |
| How do you want to recoup arrears?              | <p>When the total deduction amount for 1 worker brings their net pay below the minimum net amount, you can:</p> <ul style="list-style-type: none"> <li>• Track the amount put in arrears.</li> <li>• Recoup the arrears in the worker's next payroll runs.</li> <li>• Define recouping eligibility conditions, such as the pay group, run category, or pay schedule.</li> </ul> <p>You can configure arrears recouping rules at the deduction level and more granular rules when necessary. Example: Configure unlimited arrears recouping for all workers but no recouping for workers on leave with partial pay.</p>                                                                                                                                                                                              |
| What arrears limits do you want to set?         | <p>You can recoup the maximum arrears amount from worker pay in a period or limit recoverable amounts to a:</p> <ul style="list-style-type: none"> <li>• Flat amount.</li> <li>• Percentage of the current deduction.</li> </ul> <p>Net pay limits for the run category take precedence over arrears limits. Workday reduces the arrears amount recovered so that it doesn't fall below the minimum net amount.</p> <p>Examples:</p> <ul style="list-style-type: none"> <li>• Cap the deduction amount to recoup on the current deduction and 1 other deduction.</li> <li>• Recoup a flat amount from active workers with no current deduction when they become ineligible to the associated benefit plan.</li> <li>• Set a high flat amount value to recover the maximum arrears amount on a bonus run.</li> </ul> |
| How do you want to adjust the arrears balances? | <p>When you want to adjust or clear a worker's outstanding arrears balance, you can use:</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

| Questions                                                     | Considerations                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
|---------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                                               | <ul style="list-style-type: none"> <li>• A one-time adjustment through payroll inputs to process in the next pay period, such as for workers on leave.</li> <li>• Manual payments that don't impact existing pay results, such as for terminated workers.</li> </ul>                                                                                                                                                                                                                                                                                                             |
| How do you want arrears recouping to impact other deductions? | <p>When a deduction goes into arrears because of insufficient net pay, you can configure Workday to recalculate:</p> <ul style="list-style-type: none"> <li>• Other deductions with a lower priority that impact the net pay.</li> <li>• Additional pay components in the run category.</li> </ul> <p>Workday continues to process arrears for inactivated deductions for on- and off-cycle payments until they're repaid. To update the arrears balance for an inactive pay component, you can configure a flat amount limit to apply when there's no deduction to process.</p> |
| How do you manage arrears deductions at year-end?             | <p>Workday continues to recoup arrears from 1 year to another. You can move all in-arrears pretax deductions at the end of the year and deduct them as post-tax the next year by:</p> <ul style="list-style-type: none"> <li>• Creating a pay balance.</li> <li>• Loading in-arrears pretax deductions to that pay balance.</li> </ul>                                                                                                                                                                                                                                           |
| Do you have withholding order deductions?                     | <p>Workday applies specific priorities to process withholding order deductions. By default, those priorities don't conflict with the priorities you define for other deductions. You can configure withholding order rule overrides to edit withholding order arrears settings.</p>                                                                                                                                                                                                                                                                                              |

## Recommendations

For Payroll for Canada, configure Workday-delivered employee statutory taxes when defining deduction priorities to prevent negative net pay for workers on paid leave. Don't track or recoup arrears for those deductions and order them as per the Canada Revenue Agency.

## Requirements

No impact.

## Limitations

You can't:

- Put deductions in arrears that you calculate using the **Run Retro Pay Calculation** task.
- Recoup arrears generated for a completed pay calculation.
- Split arrears deductions for workers with multiple tax authority worktags or with ongoing multiple work jurisdiction wages (USA).
- Recover outstanding arrears balances from on-demand additional payments.
- Recoup arrears based on deduction worktags. You can only configure arrears for the deduction itself.

- Create audit rules for arrears.

You can use these net pay validation and arrears report data sources when creating custom reports:

- **All Deductions in Net Pay**
- **All Deductions in Net Pay (filter by priority)**
- **Payroll Result Lines for Outstanding Arrears Balance RDS (USA)(USA, CAN)**

## Integrations

You can use the *Import Payroll Input* or *Import Payroll Off-Cycle Payment* web services to mass clear arrears. Example: You can clear pretax deductions at the end of the year and load them as post-tax deductions for the next year.

[Setup Considerations: Payroll Run Categories](#) on page 94

[Setup Considerations: Earnings and Deductions](#) on page 211

[Concept: Retro and Arrears](#) on page 873

## Steps: Set Up Net Pay Validation and Arrears Tracking and Recouping

---

### Prerequisites

- Review setup considerations for net pay validation and arrears.
- Define the **Minimum Net Amount** on the **General** tab of the **Create Run Category** task. The most common amount is zero.
- Security: These domains in the Core Payroll functional area:
  - *Set Up: Payroll (Calculations - Payroll Specific)*
  - *Reports: Pay Calculation Results (Reports: Indexed Data Source Filters)*

### Context

When a worker's net pay is below the minimum net amount defined for a run category, you can configure Workday to:

- Eliminate or reduce deductions based on deduction priorities.
- Track and recoup arrears based on deduction priorities and arrears limits. You can also track arrears without recouping them.

Example: You can configure Workday to take health care deductions before retirement deductions to arrive at the specified minimum net pay or when recouping arrears.

Arrears tracking isn't typically used in Payroll for Australia and France.

### Steps

1. [Define Deduction Priorities and Arrears Handling](#) on page 395.

Deduction priorities control the order in which Workday:

- Reduces or eliminates deductions to restore an employee's minimum net pay.
- Recovers outstanding arrears balances when an employee has multiple arrears.

2. [Set Arrears Limits](#) on page 396.

Set default limits for a deduction on the amount of the arrears balance that Workday can recoup in a payroll run.

### Next Steps

Run a payroll calculation. You can review calculated arrears amounts on these reports:

- **Payroll Results:** Displays current period deductions and any deduction amounts placed in arrears.
- **Pay Calculation Results - Outstanding Arrears Balance Composite:** Displays arrears balances for an employee.

You can use these net pay validation and arrears report data sources when creating custom reports:

- **All Deductions in Net Pay**
- **All Deductions in Net Pay (filter by priority)**
- **Payroll Result Lines for Outstanding Arrears Balance RDS (USA)(USA, CAN)**

# Define Deduction Priorities and Arrears Handling

## Prerequisites

Security: *Set Up: Payroll (Calculations - Payroll Specific)* domain in the Core Payroll functional area.

## Context

When a worker's net pay falls below the minimum defined net pay, you can define how to:

- Eliminate or reduce deductions.
- Track and later recoup arrears.

You can define the deduction priority when eliminating deductions and recouping arrears. For each deduction, you can also define whether to:

- Take partial deductions.
- Recalculate other associated deductions.

**Note:** You can't stop arrears when a worker goes on leave. However, you can configure the **Worker Eligibility** section of a deduction to only process arrears when the worker's status is active. For more information, see [Set Up Pay Component Eligibility](#). You can also configure this at the run category level on the **Nonactive (On Cycle, On Demand Replacement)** tab. For more information, see [Example: Set Up Pay Run Category for Workers on Leave](#).

## Steps

1. Access the **Maintain Deduction Priorities** task.
2. Add a row for each deduction that you want to:
  - Reduce or eliminate in a specific order when an employee's net pay falls below the minimum net amount.
  - Recover in a specific order when multiple deductions fall into arrears.

Workday:

- Reduces or eliminates deductions to restore net pay in the reverse order of the rows on the grid.
- Recovers arrears amounts in the same order as the rows in the grid.

For Payroll for the UK, Workday recommends that you only add customer-defined deductions, as the priorities are automatically assigned for Workday-delivered statutory deductions.

For Payroll for Australia, Workday recommends that you only add customer-defined deductions, as the priorities are automatically assigned for Workday-delivered statutory deductions.

3. As you complete the task, consider:
- 4.

## Example

When a worker's net pay falls below the minimum amount, you want Workday to apply post-tax deductions in this order of priority: A, then B, and finally C. You also want Workday to track and recoup arrears for all of these deductions. You define these settings on the **Maintain Deduction Priorities** task.

| Deduction | Priority Order | Track Arrears | Recoup Arrears |
|-----------|----------------|---------------|----------------|
| A         |                | Selected      | Selected       |

| Deduction | Priority Order | Track Arrears | Recoup Arrears |
|-----------|----------------|---------------|----------------|
| B         |                | Selected      | Selected       |
| C         |                | Selected      | Selected       |

Pam's gross pay is 75. The minimum net amount is zero. She has 175 in deductions, resulting in a net pay of - 100:

- A: 100
- B: 50
- C: 25

Pam's net pay varies depending on whether you enable partial deductions:

| Do Not Take Partial Deductions | Eliminated Deductions (in order of elimination)                                              | Final Net Pay | Calculated Arrears                                                                           |
|--------------------------------|----------------------------------------------------------------------------------------------|---------------|----------------------------------------------------------------------------------------------|
| Selected                       | <ul style="list-style-type: none"> <li>• C: 25</li> <li>• B: 50</li> <li>• A: 100</li> </ul> | 75            | <ul style="list-style-type: none"> <li>• A: 100</li> <li>• B: 50</li> <li>• C: 25</li> </ul> |
| Clear                          | <ul style="list-style-type: none"> <li>• C: 25</li> <li>• B: 50</li> <li>• A: 75</li> </ul>  | 0             | <ul style="list-style-type: none"> <li>• A: 25</li> <li>• B: 50</li> <li>• C: 25</li> </ul>  |

On the next payroll, when attempting to recover arrears, Workday processes deduction A first.

### Next Steps

Set arrears limits for the deductions that have the **Recoup Arrears** check box selected.

## Set Arrears Limits

### Prerequisites

- Define a priority for the deduction and select **Recoup Arrears** on the **Maintain Deduction Priorities** task.
- Security: *Set Up: Payroll (Calculations - Payroll Specific)* domain in Core Payroll functional area.

### Context

You can set limits on the amount of an arrears balance to recover in a payroll run. You can define:

- Default limits that apply to all workers.
- Limit overrides based on the pay group, run category, or other criteria.

During off-cycle processing, Workday recoups arrears from on-demand replacement payments, but not from on-demand additional payments or manual payments.

### Steps

1. Access the **Net Pay Validation and Arrears Rules (filter by priority)** report.
2. Select the **Has Priority** check box.
3. From the related actions menu of a deduction, select **Deduction > Edit Net Pay Validation/Arrears**.

4. Review or modify the arrears settings.

Workday populates settings from the **Maintain Deduction Priorities** task.

As you complete the task, consider:

5. In the **Default Recoup Arrears Limit** section, set default limits on the amount of arrears to recover for a payroll period.

Net pay limits take precedence over arrears limits. Workday reduces the amount of arrears recovered when it results in an employee's net pay falling below the minimum net pay. Example: Sam's net pay is 100, with a minimum net pay of zero. He is in arrears of 150 for a deduction with an unlimited arrears deduction. Workday recovers only 100 of the arrears balance. Recovering the full amount would result in a negative net pay.

As you complete the section, consider:

| Option                                               | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
|------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Unlimited for Current Deduction</b>               | Select to recoup the total arrears amount in the current period.<br><br>Example: Jane has a current deduction of 100 and total arrears of 400. Workday attempts to recover the 400 in addition to the 100.                                                                                                                                                                                                                                                                                                                                                                                                                            |
| <b>Percent of Current Deduction</b>                  | Select to limit the amount of arrears recouped based on an amount equal to a percentage of the current deduction. When a worker has arrears amounts from payroll results from different run categories, Workday calculates the limit based on the amount from the current pay result. Example: Workday won't recoup a percentage of arrears from other run category results.<br><br>Example: Allison has a current deduction of 100 and total arrears of 200. When you enter 50, Workday attempts to recover an amount of arrears equal to 50% of the current deduction (50). Workday processes the current deduction of 100 in full. |
| <b>Flat Amount for Current Deduction</b>             | Select to recover a specified flat amount. When a worker has arrears from payroll results from different run categories, Workday only recovers the specified flat amount when the deduction is included in the current payroll results.<br><br>Example: Peter has a current deduction of 100 and total arrears of 100. When the flat amount is 25, Workday deducts 25 of the arrears balance in addition to the 100.                                                                                                                                                                                                                  |
| <b>None of the Above</b>                             | Select to use an override to arrears.<br><br>When you select this option, Workday recommends that you also enter a value in the <b>Flat Amount Limit (When No Current Deduction)</b> field to ensure arrears recouping.                                                                                                                                                                                                                                                                                                                                                                                                               |
| <b>Flat Amount Limit (When No Current Deduction)</b> | Enter a flat limit amount on the arrears recovery when Workday can't process the deduction for a period. Example: Dean loses eligibility for medical                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

| Option | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|--------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|        | <p>coverage after changing pay groups. As a result, he receives no medical deduction in the current period. When the arrears amount is 100 and the <b>Flat Amount Limit</b> is 50, Workday deducts 50 in the current period to cover arrears.</p> <p>When Workday doesn't process the deduction in the payroll run, Workday applies both this limit and any scheduling criteria you define for the deduction. Example: You schedule the deduction to apply in the first weekly pay period of each month. Workday recoups arrears for the deduction only in that pay period. To override the scheduling, define custom arrears rules instead of using the default limit.</p> <p>By default, Workday recoups arrears in the next pay period when workers have both:</p> <ul style="list-style-type: none"> <li>• Midperiod events resulting in gross-to-net subperiods.</li> <li>• No earnings in the first subperiod.</li> </ul> <p>To recoup arrears in subsequent subperiods where workers have earnings rather than wait for their next pay period, enter a very high flat amount in this field. Example: Jane goes on leave without pay and returns in the same pay period. To recoup arrears on the subperiod where she's active and has earnings, you can enter 9999 in this field.</p> <p>Except for specific scenarios where you don't want to recoup any arrears, Workday recommends that you always enter a value in this field. Example: You don't want to recoup arrears for another run category.</p> |

6. In the **Default Recoup Arrears Limit** grid, define overrides for default limits based on a worker's pay group, run category, or other criteria.

Workday ignores any worker eligibility and scheduling criteria defined for the deduction when applying the override rules.

Example: You have a deduction configured to resolve only on the first and second pay periods of a monthly payroll. Define criteria in the grid to recoup arrears from other pay periods.

As you complete the grid, consider:

| Option                  | Description                                                                                                                                                                                                                                               |
|-------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Evaluation Order</b> | When you have multiple sets of limits, Workday evaluates a deduction against each row starting from the first. Workday uses the limits associated with the first row that returns a match. When it can't find a match, Workday applies the default limit. |

| Option                         | Description                                                                                                                                                                                  |
|--------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Recoup Arrears Criteria</b> | Specifies the criteria workers must meet to be subject to the override limits, such as run category or pay group.<br><br>Example: You can recoup 50% in regular runs and 100% in bonus runs. |

### Result

Workday applies the override limits to workers who meet the criteria in the grid. It applies the default limits to all other workers with an arrears balance.

### Example

You want to prevent Workday from recouping arrears for employees hired before 2015. For all other employees, you want to set a recouping limit of 100.

In the **Default Recoup Arrears Limit** section, select **Flat Amount for Current Deduction**, and enter *100*. Then add a row with these settings:

| Option                         | Settings                                                                                                                                                           |
|--------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Recoup Arrears Criteria</b> | Select <i>Create</i> from the <b>Additional Criteria</b> field. Define a value comparison calculation that returns true for employees hired after January 1, 2015. |
| <b>Recoup Arrears Limit</b>    | Select <i>None of the Above</i> .                                                                                                                                  |

## Enable Workers to View Arrears Balances

### Prerequisites

Security:

- *Reports: Results for Worker* (Pay Calculation) (for all payroll countries).
- *Self-Service: Payroll*.
- *Set Up: System* domain in the System functional area.

### Context

Enable workers to view arrears balances to provide them with better insights into their net pay and autonomy over accessing that information and to reduce your time spent on arrears balance inquiries.

### Steps

1. Access the **Edit Tenant Setup - Payroll** task.
2. In the **Arrears** section, select the country or countries where you want to enable workers to view their arrears balances.

Only countries that you have enabled for payroll (**Enabled Countries**) are selectable.

3. Select a tooltip message.

| Option                                    | Description                                                                          |
|-------------------------------------------|--------------------------------------------------------------------------------------|
| <b>Arrears Tooltip Text - Use Default</b> | Displays the message provided by Workday when employees view their arrears balances. |

| Option                                 | Description                                                                              |
|----------------------------------------|------------------------------------------------------------------------------------------|
| <b>Arrears Tooltip Text - Override</b> | Select to create your own tenanted message to employees when they view arrears balances. |

4. Access the **Configure Profile Group** task. See: [Steps: Set Up Profiles and Profile Groups](#).
5. In **Profile Group**, select **Pay for Worker Profile**.
6. Add **Arrears** to the **Display in Profile** list.

## Result

Once configured, workers can view any arrears balances they might have on the **Pay > Arrears** tab on their worker profile and in the Benefits and Pay hub.

Only deductions that are set to both **Track** and **Recoup** display for workers, either on the deduction or using the **Maintain Deduction Priorities** task.

Arrears balances update after the payment date to maintain consistency with when workers receive their pay. Each deduction with an arrears balance as of a payment date displays, regardless of whether it was on the current period.

Arrears balances are tied to a worker and company. If a worker moves positions in the same company, arrears balances still display. Example: Last year, the worker was in Position A in Company A and had arrears balances. They moved to position B in Company A. The arrears from Position A still display.

If the worker moves companies or countries, the arrears balances no longer display. Example: The worker from Position A in Company A moves to Company B or to country B. The arrears balance from Position A in Company A do not display.

## Next Steps

You can use the **Most Recent Arrears Transaction for Worker** report field (secured to the *Reports: Results for Worker (Pay Calculation)* domain) on the Worker business object to create custom reports when you have 1 or more workers with deductions in arrears or at least 1 deduction in common.

## Concept: Arrears Processing

### Net Pay and Arrears Processing Calculations

#### Initial gross-to-net calculation

To adjust net pay during payroll processing, Workday first performs an initial gross-to-net calculation (excluding arrears amounts) to verify that an employee's net pay is at, or above, the net pay minimum (zero by default).

#### Example:

| Deduction | Current Period Amount | Arrears Amount |
|-----------|-----------------------|----------------|
| A         | 100                   | 50             |
| B         | 50                    | 25             |
| C         | 25                    | 10             |

When calculating net pay, Workday deducts only the current period values of deductions A, B, and C (100 + 50 + 25), not the arrears amounts.

#### Subsequent calculations when initial net pay is above the minimum

For employees with positive net pay (net pay > minimum net) and no arrears, there are no subsequent calculations. The initial calculation is used.

For employees with positive net pay (net pay > minimum net) and outstanding arrears, Workday:

- Recoups the arrears based on the deduction priorities defined by the **Maintain Deduction Priorities** task (subject to applicable arrears limits).
- Performs multiple iterations to reduce pretax deduction arrears. After each loop, Workday modifies the applicable deduction (based on priority) by adding the positive net value to the deduction value and redetermining net pay. Once 2 loops produce the same net value, the iterations stop.
- Generates new gross-to-net results.

**Example:** Eric had medical benefits deducted while he was on leave. When he returns, you need to recoup as much as possible from his pay.

#### Subsequent calculations when initial net pay is below the minimum

For employees with negative net pay (net pay < minimum net) and outstanding arrears, Workday:

- Reduces or eliminates deductions based on the deduction priorities defined by the **Maintain Deduction Priorities** task and puts them into arrears.
- Recalculates taxes, if the net pay validation forces the reduction or elimination of pretax deductions (from the *Pre Tax Deduction* pay component group).
- If Workday recalculated taxes and took a partial amount for a pretax deduction, it adds the negative net value to the deduction until net pay reaches the minimum net amount, produces the same net value in 2 loops, or completes 50 loops and then places the pretax deduction into arrears.
- Generates new gross-to-net results.

## Restrictions

The **Run Retro Pay Calculation** task doesn't put deductions into arrears or attempt to recoup arrears generated for a completed pay calculation.

When you run retro for a period with a deduction in arrears, Workday sometimes calculates a negative retro result for the impacted deduction. To avoid issuing a retro refund for the deduction not taken, Workday first recoups the arrears balance for the deduction with negative retro amount, then recoups the arrears balances for current period and historical deductions.

For Payroll for the U.S., Workday doesn't split arrears deductions for workers with multiple tax authority worktags.

## Arrears Reporting

Workday provides these reports for tracking arrears balances and managing arrears processing rules:

- The **Pay Calculation Results - Outstanding Arrears Balance Composite** report (secured to the *Reports: Pay Calculation Results (Reports: Indexed Data Source Filters)* domain) displays arrears balances in a given pay period for workers in 1 or more pay run groups or pay groups.
- The **Net Pay Validation and Arrears Rules** and **Net Pay Validation and Arrears Rules (filter by priority)** reports (secured to the *Set Up: Payroll (Calculations - Payroll Specific)* domain) display net pay validation and arrears processing rules for all deductions in Workday.
- The **Most Recent Arrears Transaction for Worker** report field (secured to the *Reports: Results for Worker (Pay Calculation)* domain) on the Worker business object enables you to generate custom reports to view 1 or more workers when there is at least 1 worker with deductions in arrears or at least 1 deduction in common.

## Concept: Arrears Recouping for Multiple Run Categories

---

When recouping arrears, by default Workday considers arrears amounts from all run categories, regardless if you restrict the deduction eligibility to 1 run category.

### Example: Current Deduction Processed

Workday calculates these arrears for Ana in a regular run category:

Deduction A: 500.

You run a payroll calculation for a bonus run category for Ana. Workday processes Deduction A in the bonus run category, and recoups these amounts based on the **Default Recoup Arrears Limit** settings:

| Arrears Limit Option                          | Option Value | Recoup Amount |
|-----------------------------------------------|--------------|---------------|
| Unlimited for Current Deduction               | Selected     | 500           |
| Percent of Current Deduction                  | 50           | 250           |
| Flat Amount for Current Deduction             | 100          | 100           |
| Flat Amount Limit (When No Current Deduction) | 200          | 200           |

#### Example: No Current Deduction

Workday calculates these arrears for Ana in a regular run category.

Deduction A: 500.

You run a payroll calculation for a bonus run category for Ana, in which Workday doesn't process Deduction A. Workday recoups these amounts, based on the **Default Recoup Arrears Limit** settings:

| Arrears Limit Option                          | Option Value | Recoup Amount |
|-----------------------------------------------|--------------|---------------|
| Unlimited for Current Deduction               | Selected     | 0             |
| Percent of Current Deduction                  | 50           | 0             |
| Flat Amount for Current Deduction             | 100          | 0             |
| Flat Amount Limit (When No Current Deduction) | 200          | 200           |

## FAQ: Deduction Priorities and Arrears Processing

**Can I set deduction priorities for both Workday-delivered and customer-defined deductions?**

For Payroll for Canada and the U.S., yes. You can set priorities for all deductions regardless of who defined them. When adding deductions to the **Maintain Deduction Priorities** task,

**Can you define deduction priorities for withholding orders? (CAN, USA)**

consider that Workday doesn't automatically assign higher priorities for Workday-delivered statutory deductions.

For Payroll for the UK, Workday recommends that you only add customer-defined deductions to the **Maintain Deduction Priorities** task, as the priorities are automatically assigned for Workday-delivered statutory deductions.

For Payroll for Australia, Workday recommends that you only add customer-defined deductions to the **Maintain Deduction Priorities** task, as Payroll for Australia automatically assigns priorities for Workday-delivered statutory deductions.

You can add a withholding order to the **Maintain Deduction Priorities** task but you can't track or recoup arrears. You can, however, configure Workday to take partial deductions. When you process a withholding order that you've added as deduction priority, Workday:

- Calculates a withholding order amount based on a worker's disposable earnings. When a worker has multiple withholding orders, Workday uses the priorities from the **Override Priority Withholding Order** task to determine how to distribute the disposable earning amount.

Example: Workday calculates a bankruptcy deduction of 50 based on the worker's disposable earnings.

- Uses the priorities from the **Maintain Deduction Priorities** task to determine the priority of the calculated withholding order amount compared to other deductions. If there are insufficient funds for the withholding order amount, Workday takes either a partial deduction, or zero deduction based on the deduction priorities.

Example: The worker has insufficient net pay for the bankruptcy deduction of 50. If you enable partial deductions, Workday deducts up to the amount it can while still respecting the defined net pay for the worker.

**An employee has a bankruptcy order that requires the processing of all taxes and medical deductions before the bankruptcy deduction. I need Workday to calculate a retirement deduction after the bankruptcy order. How can I configure the arrears process to meet these requirements? (CAN, USA)**

Set up deduction priorities:

| Order | Deduction                                   |
|-------|---------------------------------------------|
| 1     | All medical deductions (pretax or post-tax) |
| 2     | Bankruptcy withholding                      |
| 3     | Retirement deduction                        |
| 4     | Other post-tax deductions                   |

**How do I assign deduction priorities to taxes? (CAN, USA)**

Use the **Maintain Deduction Priorities** task to assign priorities to any deductions, including taxes.

**Why does Workday display arrears for a worker after they already paid them?**

The worker paid the arrears externally, such as with a personal check. You can adjust an arrears balance by running:

- Additional manual payments, when you don't want to impact payroll, such as for terminated workers.
- Adjustment payroll inputs, when you want to process them in payroll, such as for active workers or workers on leave.

1. Access the **Add Payroll Input for Workers** or **Run Manual Payment for Worker** task, and enter these values:

| Option                          | Description                                                                                                                                                                 |
|---------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Special Entry</b>            | For payroll input only. Select the check box.                                                                                                                               |
| <b>Input Details &gt; Type</b>  | Select <i>Arrears Balance</i> .                                                                                                                                             |
| <b>Input Details &gt; Value</b> | Enter the amount by which you want to adjust an arrears balance. Examples: Enter -100 to reduce an arrears balance by 100. Enter 100 to increase an arrears balance by 100. |

2. To process a payroll input, from the related actions menu of the pay result, select **Pay Calculation > Re-Calculate**. To process a manual payment, from the related actions menu of the manual payment pay result, select **Pay Calculation > Complete**.

## Payroll Accounting Setup

---

### Setup Considerations: Payroll Accounting

---

You can use this topic to help make decisions when planning your configuration and use of payroll accounting. It explains:

- Why to set it up.
- How it fits into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

### What It Is

Workday Payroll accounting enables you to:

- Automatically generate accounting entries based on payroll results.
- Allocate employee earnings and employer-paid expenses to organizations to determine labor costing.

You can use payroll accounting either:

- Directly with Workday Financial Management.
- Through an integration with a third-party financial system.

### Business Benefits

Payroll accounting provides a streamlined process that automatically generates accounting entries after each payroll calculation, which helps ensure that your accounting data and financial statements are up to date. Automated processing for period-end accruals and currency conversions also reduce the amount of manual effort needed for managing accounting.

Payroll accounting also provides:

- Custom balancing dimensions, providing flexibility in how you analyze and balance payroll journals.
- Reports that make it easy to verify accounting results and quickly identify journal errors.
- Security options, such as journal summarization and segmented security that enable you to ensure the confidentiality of payroll data.

### Use Cases

- Generate accounting journals based on payroll results.
- Configure alternative costing rules for salary caps. Example: You can split a professor's pay among different cost centers and funds.
- Make accounting adjustments to your payroll journal lines. Example: You can split a worker's base pay to a different cost center after posting your journal lines.
- Use intercompany accounting to manage costs within multiple companies across an organization.
- Summarize journal lines and restrict access to employee-level details from payroll journals.
- Track start and end dates for grants.
- Validate payroll effort expenditures within the scope of a funding agreement and confirm that you're billing correctly.

### Questions to Consider

| Questions                                                                              | Considerations                                                                                                                                                                                                                                                                                                              |
|----------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Which types of ledger accounts do you use on your balance sheet and income statements? | <p>You can configure different ledger account types for balance sheets and income statements.</p> <p>Although Workday Payroll uses only asset, liability, and expense account types, Workday recommends that you set up all available account types as you can't modify your ledger setup once you generate accounting.</p> |
| What company ledger accounts does your company have?                                   | <p>When creating account sets, you can create a dedicated account set for your company ledger accounts for payroll. You can create a parent (chart of account) account set that includes one or more child sets. Workday recommends that you create a</p>                                                                   |

| Questions                                                                            | Considerations                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

| <p>How do you want post payroll transaction journals in company ledger accounts?</p> | <p>Within each account set, you can create rules that direct where to post:</p> <ul style="list-style-type: none"> <li>• Payroll commitments.</li> <li>• Payroll deductions.</li> <li>• Payroll earnings.</li> <li>• Payroll expenses.</li> <li>• Payroll forward accruals.</li> <li>• Payroll net pay.</li> </ul> <p>You can also define default ledger accounts for these posting types to identify transactions that don't meet a posting rule. Workday posts anything not meeting a posting rule to a default account to the ledger.</p> <p>Workday generates accounting journals automatically for these posting types, and recommends that you specify a default ledger account for them:</p> <ul style="list-style-type: none"> <li>• Intercompany payables.</li> <li>• Intercompany receivables.</li> <li>• Retained earnings.</li> </ul> <p>After you configure posting rules, you can change them, but you can't apply the changes retroactively to completed payroll periods. To modify account posting in prior periods, create manual journals.</p> |
| <p>What ledgers do you use?</p>                                                      | <p>You can create different types of ledgers, such as actuals, commitment, and obligation. You can only have 1 actuals ledger type per company.</p> <p>You can't change the ledger setup after generating accounting.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| <p>What are your fiscal and ledger schedules?</p>                                    | <p>Regardless of whether you use Workday Financial Management, you must create:</p> <ul style="list-style-type: none"> <li>• Fiscal schedules and posting intervals.</li> <li>• Ledger years and periods.</li> </ul> <p>You can't change a fiscal schedule once you assign it to a company.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

| Questions                                                                        | Considerations                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
|----------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                                                                  | <p>You must open a ledger period to generate payroll accounting results. You can open ledger periods in advance of generating the results.</p> <p>You can configure forward accruals to manage when a payroll period extends beyond the closing of a financial period. Workday uses forward accruals to estimate payroll accrual and fringe based on payroll result proration settings.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| Do you need to manage accounting across multiple related companies?              | <p>You can split a worker's costing allocation across multiple organizations by enabling intercompany accounting. When you configure intercompany accounting, you can:</p> <ul style="list-style-type: none"> <li>• Cost a portion of a worker's pay to multiple companies.</li> <li>• Budget payroll expenses across an entire organization.</li> </ul> <p>You can't disable intercompany accounting after you have completed payroll processing and created journals.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| What detail do you want to see in journal lines?                                 | <p>By default, Workday displays the detail of each journal line, based on your worktag configurations. You can enable journal summarization for an in-progress payroll to ensure that confidential payroll data isn't included in financial journals. Reducing the quantity of payroll journal lines by summarizing them can also improve performance in reporting. Once you enable it, journal summarization isn't effective until the next pay cycle. Workday runs journal summarization automatically after you've completed your payroll and settlements.</p> <p>Workday recommends you summarize journal lines at least by cost centers to improve performance.</p> <p>When you enable journal summarization after generating payroll journals:</p> <ul style="list-style-type: none"> <li>• You can't retroactively remove employee details from the generated journals.</li> <li>• Only an implementer can disable it.</li> </ul> |
| What accounting date do you want to use in journal lines for off-cycle payments? | <p>By default, Workday uses the period end date as the accounting date in journal lines. For off-cycle payments, you can set the payment date as the accounting date in journal lines for the entire tenant.</p> <p>The accounting date determines which ledger period to post the journal lines to. If this date falls within an open ledger period, Workday posts the journal lines to this period. If the ledger period is closed, Workday posts the journal lines to the next open ledger period.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                |

| Questions                                                                 | Considerations                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
|---------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| How do you track and balance operational transactions?                    | <p>You can define keywords, called worktags, that you can assign to transactions that track information according to business purposes. You can then use worktags as a dimension to balance your operational transactions. Once you enable worktag balancing, you can't disable or change it.</p> <p>When you define a balancing worktag, Workday autobalances journal lines associated with the worktag.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| How do you want to allocate payroll costs when determining labor costing? | <p>You can create costing allocation rules to determine how Workday assigns payroll costs among different organizations and locations.</p> <p>When configuring how to cost different transactions, you can define condition rules based on various criteria, such as organization types or worktags.</p> <p>Workday provides default costing allocations based on a worker's supervisory organization. You can override default costing instructions by assigning cost allocations to specific:</p> <ul style="list-style-type: none"> <li>• Workers.</li> <li>• Restricted positions.</li> <li>• Employee earnings.</li> <li>• Employer-paid expenses.</li> <li>• Employer-paid deductions.</li> <li>• Fringe benefit recovery (CAN, FRA, UK, USA).</li> </ul> <p>When determining costing rules, you can configure the <i>Assign Costing Allocation</i> business process to:</p> <ul style="list-style-type: none"> <li>• Set up approval routing for approval by other groups, such as HR administrators.</li> <li>• Assign alternate costing rules for salary caps.</li> <li>• Restrict a costing to a specific position or staffing event.</li> </ul> |
| Who do you want to manage costing allocations?                            | <p>When you have multiple administrators managing costing allocations, you can add custom validations to prevent or warn users from submitting costing allocations with invalid worktag combinations.</p> <p>Example: You can set a critical condition when an administrator tries to allocate worker costs to a region that doesn't match the cost center.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

### Recommendations

- Use journal summarization to summarize payroll journals at least by cost center to ensure efficient reporting and improve performance. Summarized journals enhance security as they don't contain employee-level data.
- Identify and troubleshoot journals with errors using the **Fix Operational Journals With Errors** task.

- Verify the balances of default accounts, and make any ledger corrections after calculating payroll. If you don't define default accounts for specific payroll transaction types, you can still complete payroll, but you must correct any operational journals before the next calculation.
- Review account posting rules for possible rule consolidations and to ensure you've prioritized the most common rules.
- Add a default ledger account to prevent journals from going into error status.
- Enable **Always Reverse Operational and Noncontrolling Interest Journals** on the **Edit Tenant Setup - Financials** task.
- If you use **Smart Calculation** on the **Run Pay Calculation** task, consider running the **Run Pay Accounting** task to ensure that your accounting is up to date before running the **Run Pay Complete** task.
- If running large jobs before the weekly maintenance window, consider if you have enough time to complete them. If they don't complete, you might cause irreparable issues.

### Requirements

- Set up and define the worktags that you want to configure in your costing allocations or worktag balancing.
- Make the company a required data element when initiating intercompany transactions with other companies. This helps ensure that companies are within the same account set.

### Limitations

- You can't disable intercompany accounting after you complete payroll processing and have created journals.
- After you enable primary worktag balancing, you can't disable or change it, but you can change or disable additional worktag balancing.
- You might not be able to adjust a payroll result completed before enabling primary worktag balancing if the original result didn't contain the worktag balancing dimension.
- Workday doesn't convert currency for arrears, commitments, fringe benefit actuals, obligations, and pay balances.
- Workday only supports the USD currency while creating salary caps.
- Payroll web services don't respect related worktag functionality.

### Tenant Setup

On the **Edit Tenant Setup - Payroll** task, you can:

- Charge payroll expenses between multiple companies.
- Configure start and end dates for grant costing within a processing pay period.
- Create forward accruals and reversals for fringe benefit expenses.
- Display details for commitment journals to review and update data.
- Enable cost allocations for employee-paid deductions.
- Enable labor costing proration when allocations change midperiod.
- Enable salary over the cap for payroll accounting.
- Exclude negative result lines to avoid inflated numbers on your payroll actual journal.
- Set the payment date as the accounting date in journal lines for off-cycle payments.
- Set the transaction budget date as the pay period payment date after processing on-cycle payments.
- Use the primary position attributes when evaluating account posting rules.

### Security

You can configure segmented security based on pay components to limit which pay components an initiator can access when creating payroll accounting adjustments.

To view the full list of security domains for payroll, access the **Domain Security Policies for Functional Area** report and select a Payroll functional area.

| Domains                                                                                                                                                                                                                                                                                                                                                                                                                                                    | Considerations                                                                                                                                                                                                                                                                                      |

|--------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Financial Management     | <p>Regardless of whether you use Financial Management, you must configure and regularly maintain accounting configurations related to payroll transactions.</p> <p>Payroll Accounting shares these configurations with Financial Management:</p> <ul style="list-style-type: none"> <li>• Account posting rules.</li> <li>• Account sets.</li> <li>• Company currency.</li> <li>• Fiscal schedules.</li> <li>• Journal summarization.</li> <li>• Worktag balancing.</li> </ul> <p>When you use Financial Management in addition to Workday Payroll, you can also track start and end dates through Grant Management.</p> |
| Human Capital Management | <p>These types of changes to a worker's situation can impact costing allocations:</p> <ul style="list-style-type: none"> <li>• Default organization assignments.</li> <li>• Hire.</li> <li>• Position change.</li> <li>• Termination.</li> <li>• Worker events.</li> </ul> <p>Workday can calculate new costing allocations based on these changes.</p>                                                                                                                                                                                                                                                                  |
| Grant Management         | <p>You need a separate Grants Management license to be able to create and use awards in Workday.</p> <p>If you have Grants Management with Payroll Accounting, you can:</p> <ul style="list-style-type: none"> <li>• Create salary caps. Assign the salary cap to an award line with a grant before you configure payroll costing allocations.</li> <li>• Use the grant start and end date feature.</li> </ul>                                                                                                                                                                                                           |
| Work-Study               | <p>Work-Study enables you to maintain funds and employment for students with financial need. You can assign and manage standard work-study funding from award assignment automatically through payroll processing. Predefined work-study</p>                                                                                                                                                                                                                                                                                                                                                                             |

| Features | Considerations                                                                                                                                                                                    |
|----------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|          | costing rules allow payroll accounting to account for work-study funding. You can identify the pay groups that include work-study workers so that Workday can efficiently process work-study pay. |

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships in your tenant. Learn more about the [Workday Touchpoints Kit](#) on Workday Community.

### Other Impacts

When you create accounting journals, Workday converts transaction currency into the company currency after net pay validation.

When you set pay groups and company accounting to different currencies, Workday calculates payroll in the pay group currency and passes the results to accounting in both currencies. Currency revaluations can lead to unrealized exchange gains or losses when you produce financial statements for ledger accounts with transactions in foreign currencies.

## Setup Considerations: Payroll Intercompany Accounting

You can use this topic to help make decisions when planning your configuration and use of intercompany accounting. It explains:

- Why to set it up.
- How it fits into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

### What It Is

Intercompany accounting enables you to cost a portion of a worker's pay to multiple companies. You can also budget payroll expenses across an organization.

### Business Benefits

Intercompany accounting enables you to:

- Reduce post-payroll reclassification adjustments.
- Maintain tax reporting to 1 company while costing to multiple reporting companies.
- Manage payroll costing within an organization.
- Maintain accurate accounting across multiple companies.
- Perform intercompany settlements.

## Use Cases

You can use intercompany accounting to split a worker's costing allocation when your organization operates business with 2 or more distinct but related companies. Examples:

- A hospitality organization.
- An entertainment organization.
- A university with a teaching hospital.
- A governmental consortium.
- A multi-brand retail group.

## Questions to Consider

| Question                                                                    | Considerations                                                                                                                                                                                     |
|-----------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| How does enabling the intercompany accounting feature affect tax reporting? | Tax reporting doesn't change when you enable intercompany accounting feature. Tax reporting always follows the tax ID associated with a worker's position.                                         |
| How can you restrict cost centers to specific companies in Workday?         | You can use the <b>Create Cost Center</b> task to restrict cost centers to specific companies. Workday validates the configured company and cost center rules while costing to multiple companies. |

## Recommendations

Intercompany accounting has a significant impact on payroll journals. Depending on your use case, Workday recommends that you assess intercompany accounting journal lines before you complete payroll. Once you enable intercompany accounting and complete payroll processing, you can't disable it.

## Requirements

Before enabling intercompany accounting, set up the required company to initiate intercompany transactions with other companies using the **Edit Company Intercompany Profile** task. The companies listed on this task have the same account set.

## Limitations

An end user can't enter a costing company directly in Time Tracking. Costing functionality follows the standard rules for costing time tracking entries.

Workday Payroll doesn't support currency conversion for intercompany accounting.

## Tenant

To use intercompany accounting, access the **Edit Tenant Setup - Payroll** task and select the **Intercompany Accounting - Enable** check box in the **Payroll Accounting** section.

## Security

Users with security enabled for these domains can set up intercompany accounting:

| Domains                                                                     | Considerations                                                       |
|-----------------------------------------------------------------------------|----------------------------------------------------------------------|
| <i>Set Up: Tenant Setup - Payroll</i> domain in the System functional area. | Enables users to access the <b>Edit Tenant Setup - Payroll</b> task. |

| Domains                                                                                                                                                                                                                                                        | Considerations                                                            |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------|
| <ul style="list-style-type: none"> <li>• <i>Set Up: Payroll - Company Specific (Accounting)</i> domain in the Core Payroll functional area.</li> <li>• <i>Set Up: Company Accounting</i> domain in the Common Financial Management functional area.</li> </ul> | Enable users to access the <b>Edit Company Intercompany Profile</b> task. |

## Business Processes

| Business Process                             | Considerations                                                                                                                                                                                                                                                                                                      |
|----------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <i>Assign Costing Allocation</i>             | When you enable intercompany accounting, Workday prompts you for a costing company when you launch the <i>Assign Costing Allocation</i> business process. You can also initiate the <b>Assign Costing Allocation</b> task as a subprocess of several other business processes. Example: <i>Add Additional Job</i> . |
| <i>Create Payroll Accounting Adjustments</i> | Workday prompts you for a costing company when you launch the <i>Create Payroll Accounting Adjustments</i> business process. You can also initiate the <b>Create Payroll Accounting Adjustments</b> task as a subprocess of the <i>Effort Certification</i> business process.                                       |

## Reporting

To review accounting lines including the costing company for a specific pay period and pay group, run the **Payroll Accounting by Period/Pay Group** report.

## Integrations

No impact.

## Connections and Touchpoints

Workday provides a costing company context on:

- Actuals
- Accounting adjustments
- Costing allocations
- Costing for grant begin and end dates for award (CAN, FRA, UK, USA)
- Effort certification
- Employee deductions
- Employer paid expenses
- Fringe benefits
- Fringe benefit recovery (CAN, FRA, UK, USA)
- Forward accruals
- On-demand payments
- One-time payments
- Manual payments
- Payroll input
- Period activity pay
- Salary over the cap (CAN, FRA, UK, USA)

Workday also includes payroll originating transaction types when you settle intercompany items.

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships across your tenant. Learn more about the [Workday Touchpoints Kit](#) on Workday Community.

## Setup Considerations: Payroll Forward Accruals

You can use this topic to help make decisions when planning your configuration and use of payroll forward accruals. It explains:

- Why to set them up.
- How they fit into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

### What They Are

Payroll forward accruals provide you the ability to estimate payroll costs through the end of the financial reporting period for pay periods spanning multiple financial reporting periods. Example:

- Financial reporting period: 2020-12-01 to 2020-12-31
- Pay period: 2020-12-14 to 2020-12-27

Workday estimates payroll expenses that occur between 2020-12-28 and 2020-12-31.

### Business Benefits

Payroll forward accruals enable you to:

- Reduce manual calculations.
- Close financial periods before you've completed payroll.
- Report accurate financials.

### Use Cases

You can use forward accruals to calculate:

- Earnings
- Employer Paid Taxes
- Employer Paid Benefits
- Fringe Benefit Expense

### Questions to Consider

| Questions                                                                                      | Considerations                                                                                                                                                                                                                                                    |
|------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Can you exclude the earnings that you don't want to accrue?                                    | You can use the <b>Exclude from Forward Accrual</b> check box from the <b>Non-Effective Dated</b> tab on the <b>Create Earning</b> or <b>Edit Earning</b> task.                                                                                                   |
| Can you update forward accruals configuration for a pay period with completed payroll results? | You can't update the forward accrual configuration for on-cycle payments, when a pay period has completed payroll results. To update in-progress payroll results, use these tasks: <ul style="list-style-type: none"> <li>• <b>Run Pay Accounting.</b></li> </ul> |

| Questions                                                             | Considerations                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
|-----------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

| How do you include employer-paid benefits in your forward accruals?   | <p>To ensure that you include employer-paid expenses in forward accruals, you must:</p> <ul style="list-style-type: none"> <li>• Add <i>Employer Paid Benefits</i> to the Employer Paid Benefits pay component group.</li> <li>• Use the same Employer Paid Benefits pay component group to calculate relevant run categories.</li> </ul>                                                                                                                                                                                                                                                       |
| Can you exclude employer-paid expenses that you don't want to accrue? | You can use the <b>Maintain Payroll Accounting Options</b> task to exclude specific employer-paid benefits or taxes.                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| What account posting rules do you need to configure?                  | <p>You can configure any of these account posting rules to use a different ledger account and resulting worktag for the debit forward accrual journals:</p> <ul style="list-style-type: none"> <li>• Payroll Earnings</li> <li>• Payroll Expense</li> <li>• Fringe Benefit Expense (CAN, FRA, UK, USA)</li> </ul> <p>You can configure these account posting rules and use the <i>Forward Accrual</i> dimension for the credit forward accrual journals:</p> <ul style="list-style-type: none"> <li>• Payroll Forward Accrual</li> <li>• Fringe Benefit Recovery (CAN, FRA, UK, USA)</li> </ul> |

### Recommendations

Workday recommends you to set up forward accruals at the beginning of a fiscal year. You can configure forward accruals when you set up period schedules.

### Requirements

Workday requires you to create and open the current and next ledger year periods.

### Limitations

You can't forward accrue:

- Retro earnings.
- Hours.
- Payroll accounting adjustments.
- Off-cycle payments (On-demand additional, On-demand replacement, and manual).

You can't use midperiod costing for forward accruals.

### Tenant Setup

You can use the **Edit Tenant Setup - Payroll** task to:

- Enable forward accruals for fringe benefit expense.
- Disable forward accrual costing to worker defaults when employer-paid statutory taxes over allocate.

## Security

| Domains                                                                                                                                                                                                                                                                                                                                                                                                                                                              | Considerations                                                                                                                                                                                                                                                    |

## Business Processes

No impact.

## Reporting

You can run the **View Period Schedule** report to verify the forward accruals configuration for all the pay periods you've scheduled.

## Integrations

You can use these web services to load or retrieve period schedules:

- *Put Period Schedule*
- *Get Period Schedules*

## Connections and Touchpoints

When you enable forward accruals for fringe benefit expenses, Workday uses the payroll commitment rules that you've configured to calculate the fringe benefit forward accruals.

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships in your tenant. Learn more about the [Workday Touchpoints Kit](#) on Workday Community.

## Setup Considerations: Worktag Balancing for Payroll

You can use this topic to help make decisions when planning your configuration and use of worktag balancing for payroll. It explains:

- Why to set it up.
- How it fits into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

### What It Is

You can use worktag balancing to manage and track operational transactions, and to balance operational journals.

With worktag balancing, you can balance transactions and journals based on 1 or more types of worktags:

- Company.
- Optional worktags.
- Organizational types.
- Primary worktags.
- Worktags with financial balancing rules.

You can set up rules to determine which balancing worktags to apply to the offset side of the operational transaction journal.

### Business Benefits

You can use worktag balancing to balance all transactions and journals by company, eliminating manual processing and balancing efforts.

### Use Cases

You can use worktag balancing to balance transactions and journals by:

- Organization type, such as cost center
- Primary worktag, such as fund.
- Optional worktag, such as project.

### Questions to Consider

| Question                                                          | Considerations                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
|-------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| How do you want to assign worktag balancing for payroll journals? | <p>You can configure to assign a balancing worktag to:</p> <ul style="list-style-type: none"> <li>• The deductions portion and net accumulation of gross-to-net payroll, including forward accruals.</li> <li>• Fringe benefit charges (CAN, FRA, UK, USA).</li> </ul> <p>You can set up which worktag to use by:</p> <ul style="list-style-type: none"> <li>• Creating transaction rules.</li> <li>• Defining which worktags to use for your tenant.</li> </ul> |
| Do you have retroactive transactions?                             | Enabling worktag balancing doesn't trigger retroactive processing.                                                                                                                                                                                                                                                                                                                                                                                               |

| Question                                                                                    | Considerations                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
|---------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Do you want to require all transactions to have the worktag?                                | <p>In worktag balancing, you can set up:</p> <ul style="list-style-type: none"> <li>• Optional worktags.</li> <li>• Primary worktags, which are required on all transactions.</li> </ul> <p>You can only have 1 primary worktag that's always required on a transaction.</p> <p>You don't need to set up primary worktags in order to use optional worktags.</p> <p>Workday requires transactions to balance based on the worktags you specify for your tenant.</p>                                                                        |
| Do you have bank accounts for your worktag balancing?                                       | <p>You can specify fund worktag balancing values for bank account transfers. If the values are different, Workday generates <i>Due To</i> and <i>Due From</i> entries for the Bank Account Transfers operational journal.</p>                                                                                                                                                                                                                                                                                                              |
| What kind of transactions do you have?                                                      | <p>Workday balances all transactions that generate accounting. If you define a primary worktag dimension, it's required on all transactions.</p> <p>You can use optional worktag balancing for accounting results for these transactions:</p> <ul style="list-style-type: none"> <li>• Commitments and obligations.</li> <li>• Forward accruals.</li> <li>• Fringe benefit actuals (CAN, FRA, UK, USA).</li> <li>• Fringe commitments and obligations (CAN, FRA, UK, USA).</li> <li>• Liquidations.</li> <li>• Payroll actuals.</li> </ul> |
| Do you have a large volume of data for payroll?                                             | <p>Payroll actuals and commitment accounting produce a large volume of data. Enabling balancing worktags will increase the data volume and can impact performance. For each optional balancing worktag, weigh the benefit against the performance impact of creating another credit for each debit.</p>                                                                                                                                                                                                                                    |
| Do you have costing allocations?                                                            | <p>These costing allocations supersede the optional balancing worktag:</p> <ul style="list-style-type: none"> <li>• Earning and employee deduction.</li> <li>• Employer paid expense.</li> <li>• Fringe benefit recovery (CAN, FRA, UK, USA).</li> </ul>                                                                                                                                                                                                                                                                                   |
| How do you want to use worktags to balance your fringe benefit actuals? (CAN, FRA, UK, USA) | <p>You can either:</p> <ul style="list-style-type: none"> <li>• Set up fringe benefit actuals so the worktags balance by inheriting values from the operational side of the transaction.</li> <li>• Set up a rule on the <b>Worktag Balancing Transaction Rule Set</b> task for transactions to specify which balancing worktag to use. Generate due to and due from accounting</li> </ul>                                                                                                                                                 |

| Question                     | Considerations                                                                                                                                                                        |
|------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                              | journal entries, creating balanced books.<br>Example: If you balance by fund, the rule enables you to settle and receive payments for a group of funds using a single specified fund. |
| Do you have payroll actuals? | You can set up worktag balancing rules for payroll accruals on the primary and optional balancing worktags.                                                                           |

### Recommendations

- Close the books for the current fiscal year and enable worktag balancing once the new fiscal year starts.
- Complete all in-progress transactions and settle payments before you enable worktag balancing, such as:
  - Administration expense.
  - Commitments.
  - Facilities.
  - Forward accrual.
  - Fringe benefit (CAN, FRA, UK, USA).
  - Obligations.
  - Payroll accruals.
  - Payments.
- Consider making Primary Worktag Balancing a required Position Assignment option.
- Consider whether the benefit of Optional Worktag Balancing is worth the performance impact of creating additional journal lines.
- For worker-related journals, consider enabling **Default Related Worktags from Worker's Organization Assignments** in the **Maintain Worktag Type Precedences** task if you want default worktags to come from a worker.

### Requirements

After you enable worktag balancing, Workday balances all transactions that generate accounting. You're required to have primary balancing worktag on all transactions.

If you have Expenses, ensure the ledger account balance nets to zero before you load beginning balance journals.

### Limitations

- You can only select up to 5 worktag types for optional worktag balancing.
- You can't change your primary balancing worktag once you balance your journals.
- Once you enable worktag balancing, you can't disable it or change the worktag balancing type.
- You might not be able to adjust a payroll result that completed prior to enabling primary worktag balancing. If the original result did not have the worktag balancing dimension, the journal will contain errors.

### Tenant Setup

You can use the **Maintain Worktag Balancing Configuration** task to set up tenant level configurations, such as:

- Worktag type.
- Transaction rule.

- Company.
- Optional balancing worktag.

### Security

The *Set Up: Worktag Balancing* domain on the Common Financial Management functional area enables you to set up worktag balancing configurations and rules.

### Business Processes

No impact.

### Reporting

| Reports                                                                                                                                                                                                                                                                                                                                                                                         | Considerations                                                                                                                                |

[Define Worktag Balancing Rules for Fringe Benefit Actuals Transactions](#)

## Steps: Set Up Payroll Accounting

---

### Prerequisites

- Understand your company implementation for payroll and how it affects your account sets, posting rules, and ledgers.
- Review setup considerations for:
  - Payroll accounting without Financial Management.
  - Payroll accounting with Financial Management.
  - Intercompany accounting.

### Context

Set up all the payroll accounting elements required to pass payroll expenses to Workday Financial Management, including accounts, account posting rules, fiscal schedules, and ledger types.

If you have set up some or all of your financial and payroll accounting components, you can view each configured element to verify the setup.

When completed, you can process on-cycle and off-cycle payrolls to:

- Generate payroll accounting entries.
- Review payroll accounting results.
- Correct any posting and ledger period errors.

### Steps

1. (Optional) Access **Edit Tenant Setup - Payroll** task.

In the **Payroll Accounting** section, select:

- **Off-Cycle - Use Payment Date as Accounting Date** to set up journal entry lines for off-cycle payments to use the payment date instead of the period end date.
- **Budget Date - Use Period Schedule Payroll Payment Date** to set up payroll and fringe benefit transactions so that the transaction budget date uses the pay period payment date instead of the pay period end date. You can set it for all payroll commitments and actuals journals.
- **Intercompany Accounting - Enable**. Before you set up intercompany accounting, select **Initiate Allowed** on the **Edit Company Intercompany Profile** task.

Security: *Set Up: Tenant Setup - Payroll* domain in the System functional area.

2. Access the **Maintain Ledger Account Types** task.

Define ledger account types for payroll. Although Workday Payroll uses only asset, liability, and expense account types, Workday recommends that you set up all available account types in the **Balance Sheet** and **Income Statement** sections.

Security: *Setup: Ledger and Book* domain in the Common Financial Management functional area.

### 3. Access the **Create Account Set** task.

Define an account set for payroll. You can use the **Edit Account Set** task to edit existing account sets, or the **View Account Set** report to view them.

Security: *Set Up: Payroll - Company Specific (Accounting)* domain in the Core Payroll functional area.

See [Set Up Account Sets](#).

### 4. Access the **Create Account Posting Rule Set** task.

Within an account set, you can define ledger accounts for each account posting type used by payroll:

- *Payroll Commitment*
- *Payroll Deduction*
- *Payroll Earnings*
- *Payroll Expense*
- *Payroll Forward Accrual*
- *Payroll Net Pay*

For payroll earnings and expenses, you can direct a forward accrual to accounts other than payroll actuals by using *Forward Accrual* for both the **Dimension** and **Value**.

Any resulting worktags that you create for payroll account posting rules display as optional journal dimensions that you can select after enabling journal summarization.

Security: *Set Up: Payroll - Company Specific (Accounting)* domain in the Core Payroll functional area.

See [Set Up Account Posting Rules](#).

### 5. (Optional) Access the **Maintain Payroll Journal Options** task.

Select **Summarize Payroll Journals** to consolidate payroll journals before sending results to the ledger. You can summarize journals to improve financial reporting and restrict visibility to journal entry details. Optional summary dimensions that you select display on summarized journals in addition to automatic summary dimensions.

You can enable journal summarization for an in-progress payroll. However, journal summarization won't be effective until the next pay cycle. Once you enable journal summarization, only an implementer can disable it.

Security: *Set Up: Payroll - Company Specific (Accounting)* domain in the Core Payroll functional area.

See: [Reference: Tenant Configuration Guidelines for Payroll Journals](#)

### 6. [Set Up Fiscal Schedules and Years](#).

Define fiscal schedules and posting intervals for payroll accounting.

### 7. Access the **Edit Company Accounting Details** task.

Specify the account set, the account posting rule set, and the fiscal schedule you just defined. You can't change these settings after you post payroll accounting results.

Security: *Set Up: Payroll - Company Accounting* domain in the Common Financial Management functional area.

Security: *Set Up: Payroll - Company Specific (Accounting)* domain in the Core Payroll functional area.

### 8. Access the **Maintain Ledger Types** task.

Define at least 1 ledger type. *Actuals* is required, and you can have only 1 *Actuals* ledger type per company. You can define *Commitment* and *Obligations* to make them available for selection when creating company ledgers.

Security: *Set Up: Ledger and Book* domain in the Common Financial Management functional area.

### 9. [Create Ledgers](#).

Select a company and *Actuals* ledger type, and optionally enable the *Commitment* and *Obligations* ledger types.

### 10. Access the **Create Ledger Year and Ledger Periods** task.

Define ledger years and periods for each company ledger.

Security: *Set Up: Ledger and Book* domain in the Common Financial Management functional area.

**11. Access the Update Ledger Period Status task.**

Open the ledger period to generate payroll accounting results. You can open ledger periods anytime in advance. Set the ledger period **Status** to *Open*.

Security: *Process: Period End* domain in the Common Financial Management functional area.

**Result**

When you complete a payroll, Workday generates on-cycle and off-cycle pay calculations and sends payroll results to payroll accounting.

**Next Steps**

Each new fiscal year:

- Create the new ledger year and periods.
- Set the new ledger period **Status** to *Open*.

## Open Ledger Periods for a New Fiscal Year

---

**Prerequisites**

Have Professional Services set up payroll accounting for you.

**Context**

Open ledger periods for the new fiscal year so that the accounting process can create payroll journal entries.

**Steps****1. Access the Create Ledger Year and Ledger Periods task.**

Security: *Set Up: Ledger and Book* domain in Common Financial Management functional area.

Create the ledger year and periods.

**2. Access the Update Ledger Period Status task.**

Security: *Process: Period End* domain in Common Financial Management functional area.

Set the status of each ledger period to *Open*.

**Related Information****Examples**

[FAQ: Journal Errors](#)

## Steps: Control Visibility of Pay Components on Payroll Accounting Adjustments

---

### Context

Enhance security for your sensitive data by creating segmented security to define which roles can create payroll accounting adjustments for specific pay components.

Workday applies segmented security to the **Pay Components** prompt on the **Create Payroll Accounting Adjustments** task. The security group only impacts the pay components that the initiator can access on the initiation step of the *Create Payroll Accounting Adjustments* business process. Workday doesn't restrict access to pay components when:

- Adjustments are *Sent Back* by a reviewer during the *Payroll Accounting Adjustments* business process.
- Payroll accounting adjustments are initiated as a subprocess of an *Effort Certification* business process.

### Steps

1. Access the **Create Pay Component Security Segment** task.

Create a security segment for the pay components you want to restrict.

Security:

- *Set Up: Payroll (Calculations - Payroll Specific)* domain in the Core Payroll functional area.
- *Set Up: Maintain Payroll Interface* domain in the Payroll Interface functional area.

Example: Name the security segment and select the **Pay Components: Base Pay** and **Holiday Pay**.

2. [Create Segment-Based Security Groups](#)

Create a security group to identify who can view the pay components from the security segment.

3. [Edit Domain Security Policies](#)

Edit the *Reports: Pay Calculation Results (Results - Security based on Pay Component Security)* domain security policy in the Core Payroll functional area. In the **Security Groups** field, replace the security groups with your new segmented security group.

4. [Activate Pending Security Policy Changes](#).

### Next Steps

Use the **All Pay Components Security Segments** report to view the pay component security segments you created.

### Related Information

#### Examples

[Example: Control Visibility of Earning and Deduction Results](#) on page 761

## Steps: Set Up Payroll Accounting Adjustments

---

### Prerequisites

Set up payroll accounting.

### Context

You can configure Workday to enable users to adjust accounting.

## Steps

1. Configure the *Create Payroll Accounting Adjustments* business process and security policy in the Core Payroll functional area.

See [Steps: Configure Business Process Definitions](#).

(Optional) You can create conditional steps for routing rules and alerts using these fields:

- **Change Reason Code**
- **Date Requested**
- **Days Since Initiated**

2. [Edit Domain Security Policies](#).

Configure these domains in the Core Payroll functional area for the initiator:

- *Reports: Pay Calculation Results for Worker (Results)*
- *Reports: Pay Calculation Results for Pay Group (Accounting Results)*
- *Reports: Pay Calculation Results for Organization (Accounting Results)*
- *Reports: Pay Calculation Results (Results - Security based on Pay Component Security)*
- *Set Up: Payroll (Calculations - Payroll Specific)*

3. (Optional) Include a questionnaire in the business process to capture supporting information about the adjustment, and then display the completed questionnaire on an approval step.

a) Create a questionnaire.

b) Add the *Complete Questionnaire* step to the *Create Payroll Accounting Adjustments* business process, using the **Edit Business Process** task.

Workday recommends that you attach only 1 questionnaire.

c) (Optional) For Payroll for the U.S., make the questionnaire response viewable in the approval step, using the **Business Process > Configure Supporting Information** related action.

d) Add the security groups on the approval or review steps of the *Create Payroll Accounting Adjustments* business process to the *Questionnaire Results* domain.

See [Concept: Questionnaires](#).

4. (Optional) For Payroll for the U.S., to make payroll accounting adjustments for effort certification quicker and more accurate, add a **Create Payroll Accounting Adjustments for Effort Certification** action step to the *Effort Certification* business process.

This step initiates the *Create Payroll Accounting Adjustments* business process.

See [../education-and-government/grants-management/effort-certification/dan1370796772837.dita](#).

## Concept: Worktag Balancing for Payroll

---

Workday uses worktags to manage and track operational transactions, and to balance operational journals.

You can use these types of balancing worktags for payroll:

- Company.
- Primary balancing worktag.
- Worktags with financial balancing rules.
- Organization types configured as balancing worktags.

- Optional balancing worktags.

## Worktags in Payroll Transactions

### Accounting Journal

You can autobalance journal lines with a balancing worktag. You can also specify a balancing worktag for the journal to generate additional due to and due from entries if the worktags on the line fails to balance. The payroll transactions don't use a financial balancing rule because they already create entries on both sides of the transaction.

If you don't set up a worktag to balance with worktag balancing you haven't specified a header worktag, Workday displays an error message on your journal lines and doesn't submit the journal.

### Optional Balancing Worktags

Optional balancing worktags:

- Automatically generates offsetting journal entries for payroll accounting commitment and obligation transactions.
- Works with or without a primary financial balancing worktag.
- Doesn't require journals to balance in these dimensions, and these worktags are optional on a transaction.
- Doesn't trigger retroactive processing.

The **Optional Balancing Worktag** field displays in these commitment accounting transactions:

- Payroll Commitments
- Payroll Commitment Adjustments
- Payroll Commitment Liquidations
- Payroll Obligations
- Payroll Obligation Adjustments
- Payroll Obligation Liquidations

The **Optional Balancing Worktag** field displays in these operational journals for commitment accounting:

- Fringe Benefit Commitments Journal
- Fringe Benefit Obligations Journal
- Payroll Commitments Journal
- Payroll Commitment Liquidation Journal
- Payroll Obligations Journal
- Payroll Obligation Liquidation Journal

## Concept: Currency Conversion

---

Workday Payroll converts currency after net pay validation. When you set pay groups and company accounting to different currencies, Workday calculates payroll in the pay group currency and passes the results to accounting in both currencies. The results are then available for reporting.

Workday doesn't convert currency for:

- Arrears.
- Commitments.
- Fringe benefit actuals.
- Obligations.
- Pay balances.
- Payroll intercompany accounting.

Currency revaluations can lead to unrealized exchange gains or losses when you produce financial statements for ledger accounts with transactions in foreign currencies. Review the **Foreign Currency Revaluation** report for any currency valuation changes.

### Setup

Workday handles conversion once you set up the:

- Currency for a new company using the **Create Company** task.
- Pay groups using the **Create Pay Group** task.

To switch a foreign pay group from the company currency to their local currency, you can:

- Create a new pay group using the **Create Pay Group** task.
- Select the country of the foreign pay group.

### Payroll Results

- During payroll calculation, Workday uses the default currency rate type as of the pay period end date for currency conversions.
- From a worker's **Payroll Result > View**, you can click the:
  - **Actuals** tab to view journals lines for each ledger account.
  - **Payment** tab to view whether there are different currencies for payments and pay groups for each payroll payment.
- By default, payslips display the currency elected by the worker.

### Maintenance

For managing currency rate types and currency conversion rates, use the:

- **Maintain Currency Rate Types** task to set a default and manage currency rate types.
- **Edit Company Accounting Details** task to override the default currency rate type by company.
- **Maintain Currency Conversion Rates** task to manage currency conversion rates.

## Concept: Ledger Account Restriction by Company

When you create an account set with 1 or more ledger accounts restricted by company or company hierarchy, Workday applies the restrictions to these operational journals:

- Commitments and obligations for both payroll and fringe benefits (CAN, FRA, UK, USA).
- Commitments and obligations for payroll (AUS).
- Forward accruals.
- Payroll accounting adjustments.
- Payroll actuals and fringe benefit actuals (CAN, FRA, UK, USA).
- Payroll actuals (AUS).

Before setting any ledger account restrictions, you need to use the **View Account Posting Rule Set** report to review the account posting rules. Correct any invalid company and ledger account combinations.

During payroll processing, Workday validates whether each ledger account is valid for the company. If an invalid ledger account is used, the journal is created in *Error* status.

Invalid ledger account errors can occur when:

- Account posting rules assign a ledger account to a company that is invalid.
- An existing journal is rerun after creating or editing ledger account restrictions.

### Related Information

#### Examples

[Troubleshooting: Payroll Accounting and Commitment Journals with Errors](#) on page 798

## Reference: Worktag Balancing by Rule or Inherited Value

Workday requires balancing rules for some financial transaction worktag types, but not for others. In the absence of rules, a worktag inherits its values. Some worktags enable you to select or edit the value.

### Operational Journal Transactions with Optional Worktag Balancing

Optional balancing worktags inherit the rules set for the primary balancing worktag and can display on these transactions:

| Areas                         | Transactions                                                                                                                                                                                                                                                                                                                |

## Payroll Commitments

### Setup Considerations: Payroll Commitment Accounting (CAN, USA)

You can use this topic to help make decisions when planning your configuration and use of payroll commitment accounting. It explains:

- Why to set it up.
- How it fits into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

#### What It Is

Payroll commitment accounting is a budget management process that enables you to project fiscal-year compensation and fringe benefits for filled and unfilled positions accurately.

#### Business Benefits

Payroll commitment accounting enables you to:

- Manage payroll expenditures.
- Prevent overspending budgets.
- Predict cash flow.
- Perform financial and resource planning.
- Administer appropriations and obligations.
- Manage reserved funding and grants.

#### Use Cases

You can use payroll commitment accounting when your organization needs to continually track, compare, and report on whether budgeted funds can support actual payroll expenditures. Example: A budget manager at a research university needs to reserve budgeted funds to cover payroll and fringe benefit expense for current employees, as well as potential new hires, in the upcoming fiscal year.

#### Questions to Consider

| Questions                                                                    | Considerations                                                                                                                                                                          |
|------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Do you have a business need to create commitments for multiple future years? | You can create commitments up to 5 future fiscal years for each base fiscal year.                                                                                                       |
| Do you want to check your budget while creating commitment adjustments?      | You can select <b>Enable Budget Check</b> on the <b>Edit Budget Check Options</b> task to enable budget checking as part of the <i>Create Payroll Commitment Adjustment</i> subprocess. |

| Questions                                           | Considerations                                                                                                                                                                                                |
|-----------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Do you have a pay period that spans 2 fiscal years? | You can configure fiscal year proration on the <b>Edit Company Payroll Commitment Options</b> task. It enables you to prorate payroll commitments, obligations, and related fringe that spans 2 fiscal years. |

### Recommendations

- Close commitments as part of your standard year-end closing process to ensure current and future year commitments liquidate.
- Run commitment adjustments frequently to keep commitments data up to date.
- Set up and prioritize your Fringe Benefit Commitment Rules.
- Ensure you don't delete payroll periods if you have already generated commitments for those periods.
- To maximize performance:
  - Consider running commitment adjustments based on **Business Process** instead of **All Positions**.
  - Create only the necessary number of future fiscal years.
  - Ensure you select **Enable Salary Over the Cap** and **Enable Journal Details** on the **Edit Tenant Setup - Payroll** task only if required.

### Requirements

To enable the salary over the cap feature for payroll commitments, you must also enable the feature for payroll accounting.

### Limitations

- Payroll commitment accounting currently only supports USD and CAD currency.
- Payroll commitment accounting supports only 2 open base fiscal years per company.

### Tenant Setup

You can select tenant-wide configurations on the **Edit Tenant Setup - Payroll** task to determine whether to:

- Enable salary over the cap for payroll commitments transactions including initial commitments, commitment adjustments, and liquidations.
- Enable initial commitments and adjustments processes to respect the override frequency on an earning.
- Display detailed commitment data in your finance journals.
- Include payroll forward accruals for budgetary control.
- Include fringe basis on fringe benefit expense to identify earning pay components on journal lines that relate to fringe benefit expense.

### Security

| Domains                                                                            | Considerations                                                                                                                                                           |

[Concept: Payroll and Fringe Benefit Liquidations \(CAN, USA\)](#) on page 452

[Concept: Fiscal Year Proration with HCM Event \(CAN, USA\)](#) on page 451

##### Tasks

[Configure Payroll Commitment Options \(CAN, USA\)](#) on page 440

## Steps: Process Payroll Commitment Accounting (CAN, USA)

---

#### Prerequisites

- [Create Position Budgets](#).
- Configure commitment accounting to control positions.
- Review [Setup Considerations: Payroll Commitment Accounting](#).

#### Context

Payroll commitment accounting enables you to track and control payroll costs for filled and unfilled positions.

Workday Payroll enables you to:

- Initiate payroll commitments for filled and unfilled jobs in the fiscal year. It includes position management staffing and filled jobs in job management staffing.
- Liquidate and create actuals for payroll and fringe benefits.

You can make adjustments throughout the fiscal year based on events such as compensation and costing allocation changes.

If you implement Workday Payroll in the middle of the fiscal year and upload payroll data for the first part of the year, you must liquidate payroll commitments for the uploaded period before using payroll accounting.

## Steps

1. Access the **Create Fringe Benefit Commitment Rule** task to define percentage brackets for the fringe benefit portion of payroll commitments using fringe benefit commitment rules.

You can:

- Create a rule based on job family and cost center.
- Resolve fringe benefit commitment rules for filled (obligations) and unfilled (commitments) positions.
- Apply the commitment rules to multiple company and year combinations.

See [Example: Set Up 2-Tier Fringe Benefits Based on Salary for Earnings \(CAN, USA\)](#) on page 454 and [Example: Set Up Earnings with Different Fringe Benefit Percentages Based on Different Rules \(CAN, USA\)](#) on page 456.

2. (Optional) [Enable Earning Frequency Override \(CAN, USA\)](#) on page 438.

Enable the earning frequency override so you can adjust payroll commitment accounting to align with the payroll actual calculations.

3. [Create Payroll Commitment Rules \(CAN, USA\)](#) on page 438.

Configure rules for payroll commitments and fringe benefit commitments. You can define fringe benefit percentages for earnings.

4. [Create Initial Payroll Commitments \(CAN, USA\)](#) on page 442.

Initiate payroll commitments with the *Create Initial Payroll Commitments* business process.

5. [Configure Payroll Commitment Options \(CAN, USA\)](#) on page 440.

Add and open a new base fiscal year. Create multiyear commitments and configure fiscal year proration options.

6. (Optional) Access the **View Payroll Commitment Rule** report to copy the payroll commitment rule for the current fiscal year and modify it for the following year.

From the related actions menu of the commitment rule, select **Payroll Commitment Rule > Copy**.

Security: *Set Up: Position Commitment Accounting* domain in the Core Payroll functional area.

7. Access the **Run Pay Calculation** task.

Liquidate payroll and fringe benefits and calculate payroll and fringe benefit actuals.

Security: *Process: Run Batch Calculations (Pay Calculation)* domain in the Core Payroll functional area.

## Next Steps

Use the **View Company Payroll Commitment Options** report to close payroll commitments for the fiscal year. Workday liquidates commitments for use in future fiscal years, and you can no longer make further commitment adjustments for the year.

## Enable Earning Frequency Override (CAN, USA)

---

### Prerequisites

- [Create Frequencies](#)
- Security: *Set Up: Compensation General* domain in the Core Compensation functional area.
- Security: *Set Up: Payroll (Calculations - Payroll Specific)* domain in the Core Payroll functional area.
- Security: *Set Up: Tenant Setup - Payroll* domain in the System functional area

### Context

An earning frequency override enables you to align payroll commitments with payroll actuals when you've based your budgeted amounts on an annualization factor that isn't equal to your scheduled pay periods. For example, you might base your budget on a factor of 26.1 while your institution has 26 pay periods. This can help you comply with state or union regulations.

Workday applies the override frequency value to calculate commitments when:

- The earning frequency override value is different than the position pay period frequency value.
- The pay group on the frequency type uses the same earning as the override frequency type.

### Steps

1. (Optional) Review your payroll configuration to determine whether commitments that drive the earning need to follow the same rules as payroll.
  - a) Access the **Maintain Frequencies** task and review the commitment frequency.
  - b) Access the **Edit Earning** task and review the earning.
2. Access the **Maintain Payroll Accounting Options** task.
3. From the **Commitments** section, select the **Use Earning Frequency Override** check box.
4. Access the **Edit Earning** task.
5. Select **Override Frequency** in the **Calculation Details** section and select the frequency.

### Example

An institution employs a worker at a base annual salary of 50,000. The institution budgets for and pays the employee's salary based on an annualization factor of 26.1, but payroll commitments calculates their pay based on a factor of 26:

- Budgeted Amount:  $1915.71 \text{ per pay period} \times 26.1 = 50,000.31$
- Commitments Processed:  $1923.08 \text{ per pay period} \times 26 = 50,000.08$

Budget-to-actuals reporting will be incorrect, showing an over-committed amount of 189.02 annually. Creating a bi-weekly earning override frequency for the worker's salary will align the commitments amount with the budgeted amount.

## Create Payroll Commitment Rules (CAN, USA)

---

### Prerequisites

- Configure commitment accounting to control positions.
- Create fringe benefit commitment rules.
- Security: *Set Up: Position Commitment Accounting* domain in the Core Payroll functional area.
- [Set Up Payroll and Time Tracking Period Schedules](#) on page 149

## Context

You can configure payroll commitment rules for both filled and unfilled positions indicating which compensation elements and plans are for salary, hourly, and allowance plans.

You can specify corresponding earnings as a worktag for accounting purposes.

Workday recommends that you update your payroll commitment rules at the beginning of the fiscal year.

## Steps

1. Access the **Create Payroll Commitment Rule** task.
2. Create all payroll periods for the period schedules within the fiscal years you want to run commitments.
3. As you complete the **Payroll** tab, consider:

| Option          | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
|-----------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Earning</b>  | <p>Workday map earnings available for selection to compensation elements or compensation plans (salary plans, hourly plans, or allowance plans).</p> <p>If you have workers who have activity pay assignments, select the activity pay earning.</p> <p><b>Note:</b></p> <p>Only include earnings for compensation components that are subject to commitments accounting budgeting.</p> <p>For hourly plans, include an earning only if it's a primary component of base compensation. Don't include any hourly earnings that rely on occasional time entry, such as PTO, sick pay, or jury duty. Workday evaluates any hourly earnings by applying all scheduled hours per week for the position, which overstates occasional hourly plans. (For similar reasons, commitments doesn't support unit-based plans, because no concept of scheduled units exists.)</p> <p>Select the <b>Use Weekly Hours</b> check box for the Hourly frequency on the <b>Maintain Frequencies</b> task as a best practice. If you clear this check box, Workday might treat part-time, hourly workers as full-time.</p> <p>When the compensation for a position comes from a compensation element enabled for academic pay, Workday generates commitments and obligations only for the months within the distribution plan period that are in the selected fiscal years.</p> |
| <b>Behavior</b> | <p>Select the type of commitment to apply this earning to, or leave empty to apply it to all types.</p> <p>You can have earning contribute only to:</p> <ul style="list-style-type: none"> <li>• Payroll commitments and obligations, excluding fringe benefits calculations.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

| Option                                                                                         | Description                                                                                                                                                                                                                                                                                                                                                                                                                            |

## Configure Payroll Commitment Options (CAN, USA)

### Prerequisites

Set up payroll commitment rules.

Security: *Set Up: Position Commitment Accounting* domain in the Core Payroll functional area.

### Context

When creating initial payroll commitments, you can use these optional steps to configure:

- Commitments for multiple base fiscal years.
- Up to 5 future fiscal years for each base fiscal year.
- Fiscal year proration options.

All commitments post to the base fiscal year. When you close your current base fiscal year, Workday liquidates all commitments for the base fiscal year and future fiscal years.

When you close commitments for a base fiscal year, Workday creates:

- Debit entries for transactions that have a future year dimension.
- Credit entries to balance debit entries, using the rules that you've set up for primary and optional worktag balancing.

When the final pay period of a fiscal year crosses into the next fiscal year, and you have fiscal year proration configured, Workday prorates the obligation and commitment balances:

- For the current fiscal year, Workday creates a sub-period that begins on the pay period start date and ends on the fiscal year end date.
- For the following fiscal year, Workday creates a sub-period that begins on the fiscal year start date and ends on the pay period end date.

When you complete payroll for the final full pay period of the current fiscal year, Workday prorates and liquidates the amounts in the first sub-period at the end of the fiscal year.

### Steps

1. Access the **Edit Company Payroll Commitment Options** task.
2. As you complete the task, consider:

| Option                                | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

| <b>Base Fiscal Year</b>               | Identify the fiscal year in which to post the resulting transactions. The year must be in Open status. Example: Both your prior and new base fiscal years are open as you prepare to close out the prior fiscal year. You select your new fiscal year.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| <b>Future Year Count</b>              | The number of future fiscal year commitments you want to create.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| <b>Future Year Worktag Dimensions</b> | Select the worktag dimensions that you want to use for future year commitments and obligations. Don't select any if you want to create commitments and obligations for all dimensions.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| <b>Fiscal Year Proration</b>          | <p>Select how to prorate commitments, obligations, and related fringe for periods crossing a fiscal year.</p> <p>You can prorate earnings based on:</p> <ul style="list-style-type: none"> <li>• The <b>Calculation Proration</b> settings on the <b>Edit Earning</b> task.</li> <li>• Your forward accrual setup on the <b>Edit Period Schedule</b> task.</li> </ul> <p>Earnings proration applies to any type of earnings established in your payroll commitment rules. Use the <b>Create Payroll Commitment Rule</b> task to set up rules. Fiscal year proration applies after the earning proration and doesn't override it.</p> <p>When you enable Fiscal Year Proration and select the <b>Include Payroll Forward Accruals for Budgetary Control</b> check box in the <b>Edit Tenant</b></p> |

| Option | Description                                                                                                                                                                                                                                                                                                     |
|--------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|        | <p><b>Setup – Payroll</b> task, Workday automatically includes your configured forward accruals and forward accruals reversals in:</p> <ul style="list-style-type: none"> <li>• Automatic budget creation from commitment data.</li> <li>• Budget check reporting.</li> <li>• Position budget check.</li> </ul> |

### Result

Workday displays entries for each future fiscal year in the base fiscal year journal.

### Next Steps

Set up commitment rules for each future fiscal year.

[Set Up Payroll and Time Tracking Period Schedules](#) on page 149

## Create Initial Payroll Commitments (CAN, USA)

---

### Prerequisites

- Create payroll commitment rules.
- Select **Create Commitments** and **Create Obligations** on the **Create Ledger** task.
- Configure the *Create Initial Payroll Commitments* business process and security policy in the Core Payroll functional area.

### Context

You can calculate initial payroll commitments once for each company at the beginning of the fiscal year.

You can't cancel or rescind the initial creation of the payroll commitments, but you can send it back to the person who created the event and submit to recalculate.

Workday continues to calculate commitments for frozen job requisitions.

### Steps

1. (Optional) Configure Workday to post commitments to your finance journals in a detailed, nonaggregated form.  
In the **Payroll Commitments** section on the **Edit Tenant Setup - Payroll** task, select the **Enable Journal Details** check box.  
Security: *Set Up: Tenant Setup - Payroll* domain in the System functional area.
2. Access the **Create Initial Payroll Commitments** task.

3. (Optional) Select the **Exclude Completed Payroll Periods** check box to prevent Workday from creating commitments, obligations, and related fringe benefit data for previously completed payroll periods.

You can use this option for midyear implementations so that you don't impact budget creation, budget checking, and annual commitment reporting. Workday recommends using the **Create Position Budgets** task to ensure that you accurately generate position budgets for payroll periods.

Example: You complete a payroll run in June 2018, and then create initial payroll commitments in July 2018. You select the check box so your run doesn't include your June commitment data.

4. Click **Submit** to launch the *Create Initial Payroll Commitments* business process.

## Result

The business process creates:

- Initial payroll and fringe benefit commitments and obligations.
- Detail data per pay period.
- Consolidated journal and journal entry lines.
- Consolidated journal and journal entry lines for each costing company, when you enable intercompany accounting.

When you run subsequent commitment adjustments using the **Create Payroll Commitment Adjustments** task, you can view the journal details for these data sets:

- Fringe Benefit Commitment Adjustment
- Fringe Benefit Obligation Adjustment
- Payroll Commitment Adjustment
- Payroll Obligation Adjustment

You can also view multiple companies with their journal details, when you enable intercompany accounting.

**Note:** Workday doesn't calculate fringe commitments or obligations for any period with negative YTD earnings.

## Next Steps

If the reviewer sends back the initial commitments, resubmit either **Calculate Payroll and Fringe Benefits Initial Commitments** or **Fringe Benefits and Initial Commitments ONLY** from the task in My Tasks.

Process payroll to liquidate commitments and obligations and to create fringe benefit actuals.

## Steps: Create Forward Accruals for Fringe Benefit Expense (CAN, USA)

---

### Prerequisites

- Configure commitment accounting to control positions.

- Create fringe benefit commitment rules.
- Create payroll commitment rules.

### Context

You can create forward accruals and reversals for fringe benefit expense to eliminate the need for manual fringe benefit forward accrual calculations and to ensure accurate fiscal reporting. When a payroll period spans multiple financial reporting periods, Workday estimates fringe benefit expense through the end of a financial reporting period.

### Steps

1. Access the **Edit Tenant Setup - Payroll** task.

Select the **Enable Forward Accruals for Payroll Fringe Benefit Expense** check box in the **Payroll Commitments** section.

Security: *Set Up: Tenant Setup - Payroll* domain in the System functional area.

2. Access the **Create Period Schedule** or **Edit Period Schedule** task to set up forward accruals for individual pay periods.

See [Set Up Payroll and Time Tracking Period Schedules](#) on page 149.

3. Run Pay Calculation.

When you enable fringe forward accruals after running initial pay calculation for a pay period, you must recalculate payroll for all the workers in that pay period. Workday doesn't apply fringe forward accruals to in-progress or completed payroll periods.

See [Calculate On-Cycle Payroll](#) on page 618.

### Result

From the **Payroll Results** of a worker, navigate to the **Other Accounting** tab to view the *Fringe Benefit Forward Accrual* **Type** of journal. You can further click **View Journal** to view all the fringe benefit expense and recovery transactions along with reversal journals.

## Automate Payroll Commitment Adjustments (CAN, USA)

---

### Prerequisites

- Create initial payroll commitments.
- Configure the *Create Payroll Commitment Adjustments* business process and security policy in the Core Payroll functional area.

### Context

Set up budget check options to:

- Perform budget checking.
- Enable the review step.

You can use the *Check Budget (Staffing)* business process to automate commitment adjustments when you add it as a step in position-related business processes, such as:

- Hire
- Change Default Compensation
- Close Job Requisition

## Steps

1. Select **Business Process** > **Edit Definition** from the related actions menu of the *Create Payroll Commitment Adjustments* business process definition.
2. As you complete the task, consider:

| Option         | Description                                                                                                                                                                                                                                                                                                       |
|----------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Order</b>   | Enter an alphanumeric character to establish the order in which you want to execute the steps. We recommend using letters, because Workday sorts sequentially, not numerically. Example: 10 sorts before 2. Configure this step to complete before the <b>Complete Payroll Commitment Adjustments (Job)</b> step. |
| <b>Type</b>    | Select <i>Action</i> .                                                                                                                                                                                                                                                                                            |
| <b>Specify</b> | Select <i>Review Payroll Commitment Adjustments</i> .                                                                                                                                                                                                                                                             |

3. Click **OK**.
4. Select **Enable Budget Check** on the **Edit Budget Check Options** task to enable budget checking as part of the *Create Payroll Commitment Adjustment* subprocess.

## Result

When you perform the position-related task, Workday launches the parent business process and then the *Create Payroll Commitment Adjustments* business process. Workday then recalculates commitments for:

- All pay periods for the related positions not yet liquidated.
- In-progress payroll periods for the fiscal year.

Workday liquidates the payroll and fringe benefits when you process subsequent payrolls.

[Steps: Check Position Budgets](#)

# Schedule Payroll Commitment Adjustments (CAN, USA)

## Prerequisites

- Configure the *Create Initial Payroll Commitments* business process and security policy in the Core Payroll functional area.
- Create initial payroll commitments.
- *Security: Process: Position Commitment Accounting* domain in the Core Payroll functional area.

## Context

When you run a payroll commitment adjustment, Workday recalculates all pay periods not yet liquidated as well as in-progress payroll periods for the fiscal year.

You can schedule payroll commitment adjustments to run on a specified schedule without needing to incorporate the *Check Budget* step on impacted business processes. If you frequently process ad hoc payroll commitment adjustments, Workday recommends scheduling your adjustments to reduce the need to run them manually.

### Steps

1. Access the **Payroll Commitment Adjustment Scheduler** task.
2. Select a **Run Frequency**.
3. As you complete the **Scheduler Criteria** tab, consider:

| Option                                                    | Description                                                                                                                                                                                                                                                                                                              |
|-----------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>All Positions for All Completed Business Processes</b> | Select to include all positions from all business processes that impact commitment accounting since the last commitment adjustment or from the initial commitment run of the fiscal year.                                                                                                                                |
| <b>Completed On/After<br/>Completed Prior To/On</b>       | Specify the completion date range of an event that is effective within the fiscal year and impacts payroll commitment accounting.                                                                                                                                                                                        |
| <b>Business Processes</b>                                 | Select 1 or more position-based business processes. Example: <ul style="list-style-type: none"> <li>• <i>Add Additional Job</i></li> <li>• <i>Assign Costing Allocation</i></li> <li>• <i>Assign Pay Group</i></li> </ul> If you don't select any business processes, the task runs on all displayed business processes. |
| <b>Rescinded/Corrected Business Processes Only</b>        | Select to increase performance by restricting the subset of events.                                                                                                                                                                                                                                                      |
| <b>Positions</b>                                          | Select to run commitment adjustments on specific positions.                                                                                                                                                                                                                                                              |
| <b>All Positions</b>                                      | Select to run commitment adjustments on all positions.<br><br>To include any positions retroactively closed or vacated on or before the fiscal year start date, run a commitment adjustment on All Positions within 60 days of creating initial commitments for the fiscal year.                                         |

4. As you complete the **Schedule** tab, consider:

| Option          | Description                                             |
|-----------------|---------------------------------------------------------|
| <b>Priority</b> | Setting a higher priority can reduce potential queuing. |

## 2023R2 What's New Post: Schedule Payroll Commitment Adjustments

## Adjust Payroll Commitments Ad Hoc (CAN, USA)

### Prerequisites

- Create initial payroll commitments.
- Configure the *Create Initial Payroll Commitments* business process and security policy in the Core Payroll functional area.

### Context

You can adjust payroll commitments on an ad hoc basis when you:

- Don't want to add the **Check Budget** step on staffing or payroll business processes.
- Have processes that you've rescinded or corrected.
- Make an adjustment for the last fiscal year while running current commitments.
- Make a mass change.

**Note:** The *Create Payroll Commitment Adjustments* business process doesn't perform budget checks; it only updates commitments and obligations.

### Steps

1. Access the **Create Payroll Commitment Adjustments** task.
2. As you complete the task, consider:

| Option                                                    | Description                                                                                                                                                                                                                                                                                                              |
|-----------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>All Positions for All Completed Business Processes</b> | Select to include all positions from all business processes that impact commitment accounting since the last commitment adjustment or from the initial commitment run of the fiscal year.                                                                                                                                |
| <b>Completed On/After<br/>Completed Prior To/On</b>       | Specify the date range of an event that has an effective date within the fiscal year, for which Workday calculates adjustments.                                                                                                                                                                                          |
| <b>Business Processes</b>                                 | Select a business process that is based on position, such as: <ul style="list-style-type: none"> <li>• <i>Add Additional Job.</i></li> <li>• <i>Assign Costing Allocation.</i></li> <li>• <i>Assign Pay Group.</i></li> </ul> If you don't select a business process, the task runs on all supported business processes. |
| <b>Rescinded/Corrected Business Processes Only</b>        | Select to increase performance by restricting the subset of events.                                                                                                                                                                                                                                                      |
| <b>Positions</b>                                          | Select to run commitment adjustments on specific positions.                                                                                                                                                                                                                                                              |
| <b>All Positions</b>                                      | Select to run commitment adjustments on all positions.<br><br>To include any positions retroactively closed or vacated on or before the fiscal year start date, run a commitment adjustment on <b>All Positions</b> within                                                                                               |

| Option | Description                                                  |
|--------|--------------------------------------------------------------|
|        | 60 days of creating initial commitments for the fiscal year. |

3. (Optional) Click **Schedule Adjustments** to open the **Payroll Commitment Adjustment Scheduler** task and configure commitment adjustments to run on a set schedule.

### Result

When you run the *Create Payroll Commitment Adjustment* business process, Workday recalculates all pay periods not yet liquidated as well as in-progress payroll periods for the fiscal year.

### Next Steps

If the reviewer sends back the initial commitments, resubmit either **Calculate Payroll and Fringe Benefits Initial Commitments** or **Fringe Benefits and Initial Commitments ONLY** from the task in My Tasks.

### Related Information

## Concept: Adjust Payroll Commitments (CAN, USA)

Once you initiate payroll commitments and obligations for a company and fiscal year, you can't cancel or rescind them. For pay periods that are in progress or not yet liquidated, account for changes by making adjustments such as:

- Changes in compensation.
- Fringe benefits.
- Terminations.
- Leaves of absence.

You can adjust commitments as often as necessary by:

- Automating them as part of position-related business processes.
- Performing ad hoc or bulk payroll commitment adjustments using a stand-alone business process.

Workday liquidates any backdated transactions that missed liquidation in prior processes when you:

- **Run Pay Calculation**
- **Create Payroll Commitment Adjustments**

Example: You add a backdated event to a period where commitment processing is complete.

When you run subsequent commitment adjustments using the **Create Payroll Commitment Adjustments** task, Workday creates these commitment adjustments:

Obligations:

- Payroll Obligation Adjustment
- Fringe Benefit Obligation Adjustment

Commitments:

- Payroll Commitment Adjustment
- Fringe Benefit Commitment Adjustment

[Adjust Payroll Commitments Ad Hoc \(CAN, USA\)](#) on page 447

## Concept: Fringe Benefit Actuals (CAN, USA)

Fringe benefits are a form of benefit sometimes offered in addition to a worker's wages or salary such as tuition assistance, company vehicles, or company phones. Fringe benefit actuals are the values posted to the Fringe Benefit Journal after you complete a pay calculation. Workday bases fringe benefit actuals on the percentage you specify in your fringe commitment rules.

If you configure fringe benefits on your payroll commitment rules, then Workday automatically calculates fringe benefit actuals based on a worker's actual earnings each time you run a regular on-cycle or off-cycle pay calculation. Workday records the calculated value on the **Additional Pay Components** tab of a worker's payroll result. The **Fringe Benefit Journal** that you can access from the **Other Accounting** tab displays the journal lines and worktags associated with the fringe benefit actuals.

You create a payroll commitment rule that places a 5% fringe benefit on workers' hourly pay if their earnings are between \$1000 and \$5000. Workday uses the formula: *Earning Amount × Fringe Percent* to determine fringe benefit actuals.

| Pay Component     | Amount  | Fringe Percent | Fringe Benefit Value |
|-------------------|---------|----------------|----------------------|
| Base Pay - Hourly | \$2,500 | 5%             | \$125                |

## Concept: Multiyear Commitments (CAN, USA)

### Multiyear Commitment Processing

When you run commitments, Workday calculates both the base fiscal year and future fiscal years.

Future year commitments post in the ledger associated with the base fiscal year (accounting date), with the budget date indicating the period or subperiod end date.

Workday includes future year commitments in commitment adjustments.

Workday performs budget checking for the budget year that contains the business process event date.

### Closing Multiyear Commitments

When you close the base fiscal year, Workday:

- Liquidates any previously unliquidated commitment transactions for the base fiscal year and future fiscal years.
- Prevents further commitment adjustments for the year.

### Liquidating Multiyear Commitments

When you run the close and liquidation process, Workday:

- Creates liquidation entries for all previously unliquidated commitments and obligations in the base fiscal year and for all future fiscal years.
- Liquidates the closed base fiscal year so debit and credit totals are zero.

Liquidations include:

- Future year transactions.

- All liquidation journals with a Created status.

When the final pay period of a fiscal year crosses into the next fiscal year, and you have fiscal year proration configured, Workday prorates the obligation and commitment balances:

- For the current fiscal year, Workday creates a sub-period that begins on the pay period start date and ends on the fiscal year end date.
- For the following fiscal year, Workday creates a sub-period that begins on the fiscal year start date and ends on the pay period end date.

When you complete payroll for the final full pay period of the current fiscal year, Workday prorates and liquidates the amounts in the first sub-period at the end of the fiscal year.

### Liquidation Status Updates

- During the liquidation process, the liquidation journal status updates to In Progress.
- A successful liquidation update the liquidation journal status to Posted and the base fiscal year status to Closed.
- Liquidations in error update the liquidation journal status to Error.

### Liquidation Errors

Liquidation errors are commonly caused by missing:

- Balancing dimensions.
- Ledger accounts.
- Ledger periods.

### Error Correction

When you encounter an error during closing, correct the problem and then restart the close. To correct:

- Journals in error, access the **Fix Operational Journals with Errors** task.
- Missing accounts, add the missing account using the **Create Account Posting Rule Set** task.
- Missing open ledger periods, set the base fiscal year status to Open.
- Payroll commitment adjustments in **Created** status, wait until the closing process fully completes.
- Incomplete final payroll periods for the year (last payroll end date that falls within the fiscal year) wait until the closing process completes. Complete all payroll periods with an end date within the base fiscal year before closing.

### Real-Time Budget Check

When you run a business process, such as *Request Compensation Change*, you can run the *Real Time Budget Check* business process to see any budget impacts on your multiyear commitments.

- When 1 base fiscal year is open and the business process effective date is within it, Workday checks only that year.
- When 2 base fiscal years are open, Workday checks only the one that includes the business process effective date.

### Future Fiscal Years in Reports

Workday includes future fiscal years in:

- Commitment reports, such as the **Payroll Commitments by Company and Fiscal Period** report.
- Budget reports.

### Related Information Tasks

[Configure Payroll Commitment Options \(CAN, USA\)](#) on page 440

## Concept: Fiscal Year Proration with HCM Event (CAN, USA)

Workday prorates commitments and obligations when a pay period spans 2 fiscal years. You can enable either the **Earnings Proration** or **Forward Accrual Proration** options on the **Edit Company Payroll Commitment Options** task. Workday will calculate existing earnings proration before applying fiscal year proration.

When an HCM event such as *New Hire* or *Compensation Change* occurs within a prorated subperiod, Workday uses these **Calculation Proration** options from the **Edit Earning** task to calculate proration within that subperiod:

- *Prorate Using Days Worked*
- *Prorate Using Calendar Days*
- *Prorate Using Annual Working Days*

When the final pay period of a fiscal year crosses into the next fiscal year, and you have fiscal year proration configured, Workday prorates the obligation and commitment balances:

- For the current fiscal year, Workday creates a sub-period that begins on the pay period start date and ends on the fiscal year end date.
- For the following fiscal year, Workday creates a sub-period that begins on the fiscal year start date and ends on the pay period end date.

When you complete payroll for the final full pay period of the current fiscal year, Workday prorates and liquidates the amounts in the first sub-period at the end of the fiscal year.

### Example: Forward Accrual Proration Using Calendar Days

A budget manager needs to prorate a worker's earnings for a pay period that spans 2 fiscal years. The budget manager:

- Sets up forward accruals using the **Edit Period Schedule** task.
- Enables the *Forward Accrual Proration* option on the **Edit Company Payroll Commitment** task.
- Selects **Prorate Using Calendar Days** option on the **Edit Earning** task.

An HR administrator makes a compensation change to the worker's earnings for the same pay period.

| Field       | Result           |
|-------------|------------------|
| Fiscal Year | 7/1/19 - 6/30/20 |

| Field                             | Result           |
|-----------------------------------|------------------|
| Final pay period for 2019         | 6/26/19 - 7/9/19 |
| Forward accrual - Days to accrue  | 3                |
| Forward accrual - Days in basis   | 14               |
| Calendar days for full pay period | 10               |
| Worker's earning for pay period   | 4000             |
| Compensation change on 7/4/19     | 5000             |

Workday calculates earnings for the prorated subperiods based on forward accrual as:

| Subperiods                         | Result                                                                             |
|------------------------------------|------------------------------------------------------------------------------------|
| Subperiods pay (6/26/19 - 6/30/19) | (Days to accrue/ Days in basis) x Earnings: (3/10) x 4000 = 1200                   |
| Subperiods pay (7/1/19 - 7/9/19)   | ((Days in Basis - Days to accrue)/ Days in basis) x Earnings: (7/10) x 4000 = 2800 |

Workday then calculates prorated obligation as:

| Description                                                             | Result                                                                                                                                                                  |
|-------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Calendar days in subperiod (7/1/19 - 7/3/19) before compensation change | 3                                                                                                                                                                       |
| Calendar days in subperiod (7/4/19 - 7/9/19) after compensation change  | 6                                                                                                                                                                       |
| Total calendar days in subperiod                                        | 9                                                                                                                                                                       |
| Prorated obligation before compensation change (7/1/19 - 7/3/19)        | [(Days in subperiod before compensation change)/ Calendar days in full subperiod] x [Subperiod pay amount]: (3/9) x 2800 = 933.33                                       |
| Prorated obligation after compensation change (7/1/19 - 7/3/19)         | [(Days in subperiod after compensation change)/ Calendar days in full subperiod] x [Subperiod pay amount after compensation change]: (6/9) x [(7/10) x 5000] = 2,333.33 |

##### Tasks

[Configure Payroll Commitment Options \(CAN, USA\)](#) on page 440

## Concept: Payroll and Fringe Benefit Liquidations (CAN, USA)

Every time you run a regular pay calculation, Workday calculates and automatically liquidates payroll commitments and fringe benefits.

They're liquidated for the current period and pay group you're processing plus any prior periods not yet liquidated for the pay group. The amount liquidated is the amount originally committed for the pay period.

When you run the **Create Payroll Commitment Adjustments** task, Workday automatically liquidates any backdated transactions that missed liquidation in prior processes.

When you enter an **Accounting Date Override** value for a pay period on the **Edit Period Schedule** task and then **Run Pay Calculation**, Workday uses the accounting override date for that pay period on all liquidation journals for commitments, obligations, and related fringes.

When you also configure a **Fiscal Year Proration** value on the **Edit Company Payroll Commitment Options** task, Workday uses the accounting override date on the liquidation journals for the first subperiod of the fiscal year.

You can view and cancel liquidations:

#### View Liquidation Results

**Run Pay Calculation** changes journals and journal entry lines to the status of *Created*. **Run Pay Complete** changes journals and journal entry lines to a status of *Posted*.

You can see liquidation results by clicking **View** on the **Payroll Commitment Summary** report on the **Payroll Commitment Details** tab.

#### Cancel Liquidations

##### Run Pay Cancel:

- Removes the liquidated date-time stamp for all payroll commitment data.
- Deletes the journal line entries related to fringe benefit liquidations.

**Cancel Pay Complete** rolls back the journal entry line statuses for fringe benefits to *Created*.

## Concept: Fringe Basis Worktag (CAN, USA)

---

*Fringe Basis* worktags enable you to identify earning pay components on separate journal lines that relate to fringe benefit expenses for payroll:

- Actuals
- Commitments
- Obligations

This worktag makes reporting and auditing payroll actuals and commitments transactions easier.

When you enable *Fringe Basis* worktags, Workday:

- Creates a separate fringe benefit journal line for each earning pay component.
- Adds *Fringe Basis* worktags to the fringe benefit journal lines associated with fringe expenses.

You can enable the worktag and run the **Create Payroll Commitment Adjustment** task to regenerate unliquidated fringe benefit and obligation journals.

#### Example

Payroll admin Meredith runs a pay calculation for a worker with 2 earning pay components with different fringe rates:

- Earning 1: \$5,000 with a fringe rate of 25%.
- Earning 2: \$1,000 with a fringe rate of 7.5%.

To identify the earning pay components on separate journal lines rather than as an aggregate on a single journal line, Meredith enables the *Fringe Basis* worktag. Workday calculates the fringe benefit expense on separate journal lines for each earning:

- Fringe benefit expense for earning 1:  $\$5,000 \times 25\% = \$1,250$ .

- Fringe benefit expense for earning 2:  $\$1,000 \times 7.5\% = \$75$ .

Workday displays the *Fringe Basis* worktag on each of these journal lines to identify the earning pay component associated with the fringe expense.

## Example: Set Up 2-Tier Fringe Benefits Based on Salary for Earnings (CAN, USA)

This example illustrates how you can apply different fringe benefit percentages to different salary tiers.

### Context

You want to set 2 salary bands for fringe benefits on academic positions with earnings up to and over 60,000. You can apply these fringe benefits to the position earnings and position restrictions of the cost center for your company's CEO and Chief Human Resources Officer (CHRO):

- Lower salary band: 25%.
- Higher salary band: 20%.

### Prerequisites

Create a CEO and CHRO cost center and cost center hierarchy.

Create these earnings:

- Base Pay - Academic
- Communication Device Allowance
- Housing Allowance

Create these compensation plans:

- Communication Device Allowance Plan
- Housing Allowance
- Academic Salary Plan

Set up **FY 2020 - 2021 - Academic Year** fiscal year.

Security: *Set Up: Position Commitment Accounting* domain in the Core Payroll functional area.

### Steps

1. Access the **Create Fringe Benefit Commitment Rule** task.
2. Enter *Tiered Benefits* in the **Description** field.
3. Select these values in the **Rule Conditions** grid:

| And/Or     | Source External Field or Condition Rule | Relational Operator              | Comparison Type                       | Comparison Value             |
|------------|-----------------------------------------|----------------------------------|---------------------------------------|------------------------------|
| <i>And</i> | <i>Cost Center Hierarchies</i>          | <i>any in the selection list</i> | <i>Value specified in this filter</i> | <i>Cost Center Hierarchy</i> |

| And/Or | Source External Field or Condition Rule | Relational Operator | Comparison Type | Comparison Value |
|--------|-----------------------------------------|---------------------|-----------------|------------------|
|        | <i>for Fringe Commitments</i>           |                     |                 |                  |

4. Click **OK**.
5. Access the **Create Payroll Commitment Rule** task.
6. Select **Alma Mater University (USA)** for the Company.
7. Select **FY 2020 - 2021 - Academic Year** for the Fiscal Year.
8. Enter these values on the **Payroll** tab:

| Earning                               | Behavior                                                               | Compensation Elements for Earning                            | Compensation Plan for Compensation Elements |
|---------------------------------------|------------------------------------------------------------------------|--------------------------------------------------------------|---------------------------------------------|
| <i>Base Pay - Academic</i>            | Leave blank to apply to commitments, obligations, and fringe benefits. | <i>Base Pay - ACP - Academic Pay Enabled</i>                 | <i>Academic Salary Plan</i>                 |
| <i>Housing Allowance</i>              | Leave blank to apply to commitments, obligations, and fringe benefits. | <i>Housing Allowance - Academic Pay Enabled</i>              | <i>Housing Allowance Plan</i>               |
| <i>Communication Device Allowance</i> | Leave blank to apply to commitments, obligations, and fringe benefits. | <i>Communication Device Allowance - Academic Pay Enabled</i> | <i>Communication Device Allowance Plan</i>  |

9. Enter these values on the **Fringe Benefit** tab:

| > Base Amount YTD | <= Cap Amount YTD | Default Fringe Percent | Fringe Benefit Rule             | Fringe Percentage |
|-------------------|-------------------|------------------------|---------------------------------|-------------------|
| <i>0.00</i>       | <i>60,000.00</i>  | <i>22</i>              | <i>CEO and CHRO Cost Center</i> | <i>25</i>         |
| <i>60,000.01</i>  | <i>800,000.00</i> | <i>17</i>              | <i>CEO and CHRO Cost Center</i> | <i>20</i>         |

10. Click **OK**.
11. Click **Done**.

### Result

The initial payroll commitment results for a position in the higher salary band that receives all allowances are:

| Pay Component                         | Amount          | Fringe Percent | Fringe Benefit Amount |
|---------------------------------------|-----------------|----------------|-----------------------|
| <b>Base Pay Academic</b>              | <i>7,000.00</i> | <i>20%</i>     | <i>\$1,400.00</i>     |
| <b>Housing Allowance</b>              | <i>500.00</i>   | <i>20%</i>     | <i>\$100.00</i>       |
| <b>Communication Device Allowance</b> | <i>150.00</i>   | <i>20%</i>     | <i>\$30.00</i>        |

The initial payroll commitment results for a position in the lower salary band that receives all allowances are:

| Pay Component                  | Amount   | Fringe Percent | Fringe Benefit Amount |
|--------------------------------|----------|----------------|-----------------------|
| Base Pay Academic              | 6,000.00 | 25%            | 1,500.00              |
| Housing Allowance              | 500.00   | 25%            | 125.00                |
| Communication Device Allowance | 150.00   | 25%            | 37.50                 |

## Example: Set Up Earnings with Different Fringe Benefit Percentages Based on Different Rules (CAN, USA)

### Context

You want a 20% fringe benefit on teaching pay earnings for the positions and position restrictions in the lower salary band of the CEO and CHRO cost center. You also want to provide a 10% fringe benefit for housing allowances and a 10% fringe benefit for communication device allowances.

### Prerequisites

Create a CEO and CHRO cost center.

Create these earnings:

- Base Pay - Academic
- Communication Device Allowance
- Housing Allowance

Create these compensation plans:

- Academic Salary Plan
- Communication Device Allowance Plan
- Housing Allowance

Security: *Set Up: Position Commitment Accounting* domain in the Core Payroll functional area.

### Steps

1. Access the **Create Fringe Benefit Commitment Rule** task.
2. Enter *Teaching Benefits* in the **Description** field.
3. Enter these values on the **Rule Conditions** grid:

| And/Or     | Source External Field or Condition Rule | Relational Operator          | Comparison Type                       | Comparison Value           |
|------------|-----------------------------------------|------------------------------|---------------------------------------|----------------------------|
| <i>And</i> | <i>Earning for Fringe Commitments</i>   | <i>in the selection list</i> | <i>value specified in this filter</i> | <i>Base Pay - Academic</i> |

| And/Or     | Source External Field or Condition Rule     | Relational Operator              | Comparison Type                       | Comparison Value    |
|------------|---------------------------------------------|----------------------------------|---------------------------------------|---------------------|
| <i>And</i> | <i>Organizations for Fringe Commitments</i> | <i>any in the selection list</i> | <i>value specified in this filter</i> | <i>CEO and CHRO</i> |

4. Click **OK**.
5. Create another rule and enter *Teaching Allowances* in the description field.
6. Enter these values on the **Rule Conditions** grid:

| And/Or     | Source External Field or Condition Rule | Relational Operator          | Comparison Type                       | Comparison Value                                                  |
|------------|-----------------------------------------|------------------------------|---------------------------------------|-------------------------------------------------------------------|
| <i>And</i> | <i>Earning for Fringe Commitments</i>   | <i>in the selection list</i> | <i>value specified in this filter</i> | <i>Communication Device Allowance</i><br><i>Housing Allowance</i> |

7. Click **OK**.
8. Access the **Create Payroll Commitment Rule** task.
9. Select *Alma Mater University (USA)* for the Company.
10. Select *FY 2018 - 2019 - Academic Year* for the Fiscal Year.
11. Enter these settings on the **Payroll** tab:

| Earning                               | Behavior                                                               | Compensation Elements for Earning                            | Compensation Plan for Compensation Elements |
|---------------------------------------|------------------------------------------------------------------------|--------------------------------------------------------------|---------------------------------------------|
| <i>Base Pay - Academic</i>            | Leave blank to apply to commitments, obligations, and fringe benefits. | <i>Base Pay - ACP - Academic Pay Enabled</i>                 | <i>Academic Salary Plan</i>                 |
| <i>Communication Device Allowance</i> | Leave blank to apply to commitments, obligations, and fringe benefits. | <i>Communication Device Allowance - Academic Pay Enabled</i> | <i>Communication Device Allowance Plan</i>  |
| <i>Housing Allowance</i>              | Leave blank to apply to commitments, obligations, and fringe benefits. | <i>Housing Allowance - Academic Pay Enabled</i>              | <i>Housing Allowance Plan</i>               |

12. Enter these settings on the **Fringe Benefit** tab:

| > Base Amount YTD | <= Cap Amount YTD | Default Fringe Percent | Fringe Benefit Rule        | Fringe Percent |
|-------------------|-------------------|------------------------|----------------------------|----------------|
| <i>0.00</i>       | <i>60,000.00</i>  | <i>25%</i>             | <i>Teaching Benefit</i>    | <i>20%</i>     |
|                   |                   |                        | <i>Teaching Allowances</i> | <i>10%</i>     |

**Result**

These are the initial payroll commitment results for a position that receives these allowances for the CEO and CHRO cost center:

| Pay Component                  | Amount     | Fringe Percent | Fringe Benefit Amount |
|--------------------------------|------------|----------------|-----------------------|
| Base Pay - Academic            | \$6,000.00 | 20%            | \$1,200.00            |
| Communication Device Allowance | \$150.00   | 10%            | \$15.00               |
| Housing Allowance              | \$500.00   | 10%            | \$50.00               |

## Example: Set Up Fringe Commitment Without Fringe Actuals (CAN, USA)

This example illustrates how to set up fringe commitment without fringe actuals.

**Context**

Tanisha needs to set up fringe commitments for budgeting. She prefers to use cost actuals for employer-paid benefits rather than fringe actuals because it's more accurate in this case.

**Prerequisites**

Security: *Set Up: Position Commitment Accounting* domain in the Core Payroll functional area.

**Steps**

1. Access the **Create Fringe Benefit Commitment Rule** task and enter these settings:

| Option                                  | Description                                                        |
|-----------------------------------------|--------------------------------------------------------------------|
| Description                             | <i>Generate fringe commitments without creating fringe actuals</i> |
| And/Or                                  | <i>And</i>                                                         |
| Source External Field or Condition Rule | <i>Run Category</i>                                                |
| Relational Operator                     | <i>is not empty</i>                                                |
| Comparison Type                         | <i>Value specified in this filter</i>                              |

2. Access the **Edit Payroll Commitment Rule** task and enter these settings:

| Option                           | Description                                                         |
|----------------------------------|---------------------------------------------------------------------|
| Payroll Commitment Rule for Edit | <i>500.4 Global Modern Services - 2020 - Public Sector Schedule</i> |
| Fringe Benefit Rule              | <i>Generate fringe commitments without creating fringe actuals</i>  |

| Option         | Description |
|----------------|-------------|
| Fringe Percent | 0           |

Order the **Fringe Benefit Rule** as the first row for each salary range.

3. Create payroll commitment or adjustments.

See [Steps: Process Payroll Commitment Accounting \(CAN, USA\)](#) on page 436.

### Result

When you calculate payroll for periods within the fiscal year, Workday doesn't generate fringe actual accounting. Commitment and obligation fringe balances for the period liquidate as expected.

## FAQ: Payroll Commitments Fiscal Year-End (CAN, USA)

**When can I perform initial payroll commitments for the fiscal year?**

You can run initial payroll commitments at the beginning of the fiscal year. Complete the prerequisites before you create initial payroll commitments. See [Create Initial Payroll Commitments \(CAN, USA\)](#) on page 442.

**How do I close payroll commitments for the fiscal year?**

1. Access the **View Company Payroll Commitment Options** task.
2. Select the company.
3. Find the base fiscal year that you want to close.
4. Click the **Close** button in the **Change Status** column.
5. Select the **Confirm** check box and click **OK**.

**Do I have to complete all payrolls in the fiscal year before closing commitments?**

Yes, incomplete payroll periods can't exist in the base fiscal year before closing commitments.

**If I choose not to close commitments at the fiscal year-end, can I close at a later date?**

To close commitments for a base fiscal year, the final ledger period for that year must be in open status. If you've closed the final ledger period, you need to reopen in order to close commitments for that year.

**If I only want commitments for the base year when I create initial commitments, can I change the commitments options in future periods?**

Yes, you can change commitment options to include future year commitments later. However, your changes will only reflect in pay periods processed after you make the changes.

**Can I run the Create Initial Payroll Commitments task after the first payroll of the year?**

Yes, when you run the next on-cycle payroll, liquidations corresponding to the preceding payrolls of the fiscal year generate and post.

**Is there a limit to the number of base fiscal years that can be open simultaneously?**

No, there's no limit to the number of base fiscal years that can be in open status simultaneously. However, Workday recommends that you close commitments as part of your standard year-end closing process. Otherwise, future year commitments will remain unliquidated.

## Payslips

### Setup Considerations: Payslips

You can use this topic to help make decisions when planning your configuration and use of payslips functionality. It explains:

- Why to set it up.

- How it fits into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

### **What It Is**

The payslips feature enables you to generate hard copy or printable PDF payslips that you can view in Workday.

You can configure payslips to display:

- Pay components, such as earnings, benefits, taxes, deductions, and absence plans.
- Company logo.
- Section labels.
- Signatures.

Workday delivers reports and business form layouts that you can use to create payslips.

For Payroll for Canada, the UK, and the U.S., you can use 1 of these options:

- Report Designer layout, also known as Business Intelligence and Reporting Tools (BIRT). You can modify or customize payslip layouts in Workday Studio Report Designer.
- XSLT layouts, which you can use but not customize.

For Payroll for Australia and France, you can only use the Report Designer layout.

### **Business Benefits**

Workday delivers country-specific configuration, making it easier for you to set up and print payslips.

You can also:

- Break down Fair Labor Standards Act (FLSA) earning by work week and display year to date (YTD) hours by earning, for ease of reviewing your data (USA).
- Enable overflow on Report Designer payslips so workers can view complete details of their pay components (CAN, UK, USA).
- Schedule a time to generate PDFs of Report Designer payslips for current or terminated workers.
- Translate payslips based on worker's preferred language.
- Combine payslips to simplify gross-to-net amounts for workers with multiple jobs at related companies (USA).
- View payslips conveniently on mobile devices.

### **Use Cases**

You can use the payslips feature to:

- Add and modify messages to display on the payslips (AUS, FRA, UK).
- Display or hide payslips from certain workers or for certain pay periods.
- Import and display external payslips.
- Set up options for how and when workers can view and print their payslips.

## Questions to Consider

| Question                                                                         | Considerations                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
|----------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Do you want to add a company logo or signatures to your payslips?                | You can use the <b>Configure Business Form Layout</b> task to upload images for your logo and signatures.                                                                                                                                                                                                                                                                                                                                                                    |
| What are the margins and size of the payslips?                                   | Page size: 8.5 in x 11 in.<br>Page margins: <ul style="list-style-type: none"> <li>• Top: 0.10 in</li> <li>• Right: 0.50 in</li> <li>• Bottom: 0.12 in</li> <li>• Left: 0.50 in</li> </ul>                                                                                                                                                                                                                                                                                   |
| How do you create a custom payslip layout?                                       | You can copy the latest delivered payslip layout and customize it using Workday Studio Report Designer. You can find the latest layouts on Community.                                                                                                                                                                                                                                                                                                                        |
| Do you need to hide or display payslips?                                         | You can: <ul style="list-style-type: none"> <li>• Use the <b>Hide or Display Payslips for Group of Workers</b> task or the <b>Hide Payslip from Worker</b> task.</li> <li>• Select <b>Disable Payslip Viewing (Online Version) in Self-Service</b> on the <b>Edit Tenant Setup - Payroll</b> task to hide all online payslips.</li> </ul>                                                                                                                                    |
| Do you need to control the time when payslips are visible to workers? (USA)      | You can override the default time in the worker's time zone that determines when a payslip is visible. <ul style="list-style-type: none"> <li>• Use the <b>Create Payroll Action Reason</b> task or the <b>Edit Payroll Action Reason</b> task.</li> <li>• Select the <b>Payroll Visibility Time Override</b> field to enter the desired time in the worker's time zone to make off-cycle payslips visible.</li> </ul>                                                       |
| How do you want your workers to receive their payslips?                          | You can use the <b>Company Payroll Printing Options</b> task to: <ul style="list-style-type: none"> <li>• Always print payslips for terminated workers.</li> <li>• Enable workers to print their own payslips.</li> <li>• Enable workers to select either electronic PDF or paper copy for their payslips.</li> </ul> <p>You can override printing options or set the delivery method of printed payslips for individual workers using the <b>Payslip Delivery</b> task.</p> |
| Do you have a large number of workers who view PDF payslips? (AUS, CAN, UK, USA) | You can use the <b>Schedule BIRT Payslip Pre-Print</b> task to generate PDFs of Report Designer payslips during quiet hours. It reduces the processing load on your tenant during peak hours. To minimize processing time, select the <i>Smart Print Payslips</i> option to generate PDFs only for workers who are historically more likely to view them in that format.                                                                                                     |

| Question                                                                                                                 | Considerations                                                                                                                                                                                                                                                                                                                                    |
|--------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                                                                                                          | <b>Note:</b> After you implement Workday Payroll or add a new pay group, it takes 2 months to establish worker viewing trends. During that time, the <i>Smart Print Payslips</i> option generates PDFs for all workers.                                                                                                                           |
| What pay components do you need to include on your payslip?                                                              | <p>You can use the <b>Maintain Payroll Payslip Configuration</b> task to configure pay components, absence plans, and additional options.</p> <p>You can add new earnings, deductions, and field name overrides on these tasks:</p> <ul style="list-style-type: none"> <li>• <b>Create Earnings</b></li> <li>• <b>Create Deduction</b></li> </ul> |
| Do you have a large amount of absence data to process?                                                                   | You can calculate and save absence data when you complete payroll to improve performance when printing and viewing payslips. Otherwise, Workday must recalculate the absence balance each time you or a worker prints or views a payslip.                                                                                                         |
| Does your organization belong to a company relationship or employ workers with multiple jobs at related companies? (USA) | You can use the <b>Maintain Payroll Payslip Configuration</b> task to combine payslips. Combining payslips simplifies how workers with multiple jobs at related companies view their gross-to-net amounts by aggregating their earnings onto a single payslip.                                                                                    |
| Is your organization located in Oregon or the District of Columbia? (USA)                                                | Specify your EIN or FEIN in the <b>Edit Company State and Local US Tax Reporting</b> task. If a payroll result has an associated Oregon or District of Columbia worktag, Workday displays the EIN or FEIN on the payslip for that result.                                                                                                         |

## Recommendations

When you're customizing payslips, you can use the latest layouts on Community.

When you use delivered payslip layouts or new features, create a new effective-dated payslip configuration to ensure that previous payslip layouts are unchanged.

For optimized performance, check to see if Workday-delivered business form layouts work for your Report Designer payslips before creating custom designs.

For Payroll for France, print hard copy payslips and disable self-service payslip viewing for all workers.

For Payroll for the U.S., to ensure workers see their payslips, leave payslip printing or viewing enabled if you also enable **Smart Print Payslip** on the **Schedule BIRT Payslip Pre-Print** task.

## Requirements

If you're using Report Designer (BIRT), select **Print Payslips Using Report Designer Layout in Self-Service** on the **Edit Tenant Setup - Payroll** task.

## Limitations

- You can add only 1 company logo on the delivered payslips layout (AUS, CAN, UK, USA).
- You can only print multiple payslips for 1 worker at a time.

- Workday only supports overflow on Report Designer payslips.
- You can no longer customize XSLT payslip layouts in Workday (CAN, FRA, UK, USA).

## Tenant Setup

You can select tenant-wide configurations on the **Edit Tenant Setup - Payroll** task to:

- Hide **Print** or **View** payslip buttons for all workers on their payslips report.
- Enable Report Designer (BIRT).
- Select a business form layout for payslips.
- Enable administrators or workers to print multiple payslips.
- Save absence balances when payroll completes to avoid calculating them each time someone views or prints a payslip.
- Save absence balances only for workers who receive pay by check or who print their payslips instead of for all workers.

You can use the **Edit Tenant Setup – System** task to select *.rptdesign* as an allowed file type for uploading Report Designer files to Workday.

You're responsible for testing and validating that security domain settings meet your business needs.

### Business Processes

For Payroll for Canada, the UK, and the U.S.:

| Business Process       | Considerations                                                                                                                                                                                                                                                                                                                                                                                                                    |
|------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <i>On Demand Event</i> | You can create a separate payslip or payroll check for workers using this business process.                                                                                                                                                                                                                                                                                                                                       |
| <i>Termination</i>     | <p>You can give terminated workers their final pay and payslip on the day of termination or any other day. When you add the <i>On Demand Event</i> business process to the <i>Termination</i> business process, you enable other Workday administrators such as HR partners to:</p> <ul style="list-style-type: none"> <li>Generate on-demand pay calculations.</li> <li>Review final payslips for terminated workers.</li> </ul> |

## Reporting

| Reports or Dashboards                             | Detail                                                                                                                                                                                                                                                  |
|---------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Payslips for Worker</b>                        | For Payroll for Australia, Canada, the UK, and the U.S., you can use this report to view all payslips for a specific worker.                                                                                                                            |
| <b>View Payroll Payslip Aggregations</b>          | You can view a detailed report on each of these items and how they interrelate: <ul style="list-style-type: none"> <li>• Country.</li> <li>• Payslip group.</li> <li>• Reports under pay components.</li> <li>• Pay components to aggregate.</li> </ul> |
| <b>Payslip to Print - GBR</b>                     | For Payroll for the UK, you can copy this standard report to a custom report, enabling you to customize your own Report Designer payslips layout.                                                                                                       |
| <b>Payslip to Print - AUS</b>                     | For Payroll for Australia, you can copy this standard report to a custom report, enabling you to customize your own Report Designer payslips layout.                                                                                                    |
| <b>Payslip to Print - Report Design</b>           | For Payroll for Canada and the U.S., you can copy this standard report to a custom report, enabling you to customize your own Report Designer payslips layout.                                                                                          |
| <b>Payslip to Print - FRA</b>                     | For Payroll for France, you can copy this standard report to a custom report, enabling you to customize your own Report Designer payslips layout.                                                                                                       |
| <b>FRA Pay Calculation Results - Payslip View</b> | For Payroll for France, you can use this report to view the pay calculation results on payslips                                                                                                                                                         |
| <b>Pay dashboard</b>                              | You can use the <b>Compare Periods</b> worklet on this dashboard to compare 2 payslips from any pay periods.                                                                                                                                            |

## Integrations

- You can enable workers or administrators to access payslips in an external payroll system directly from Workday through the **Create External Payroll Vendor** task or the *Import External Payslips* integration.
- You can use the *Get Payroll Payslips* web service to export worker payslip data based on payment group, date, or printing options.
- For Payroll for the U.S., you can override the time and choose the time of the day payslips are visible to workers when you use the **Payslip Visibility Time Override Reference** field on the *Put Payroll Action Reason* and the *Get Payroll Action Reason* web services.

## Connections and Touchpoints

Customize Report Designer payslips using Workday Studio Report Designer.

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships across your tenant. Learn more about the [Workday Touchpoints Kit](#) on Workday Community.

## Steps: Set Up Payslips

---

**Prerequisites**

Review setup considerations for payslips.

**Context**

On your payslips, you can:

- Set up the fields you want to display.
- Configure the layout based on how you want to display your fields.
- Select printing options, such as generating printable PDFs or hard copies.

**Steps**

1. Configure payslips for your country: [Define Payslips](#) or [Define Payslips \(FRA\)](#).
2. Create a Report Designer layout for your payslips using a Workday-delivered or custom solution.  
See:
  - [Steps: Set Up Standard Report Designer Payslips](#) on page 480.
  - [Steps: Set Up Custom Report Designer Payslips](#) on page 482.
3. Configure payslip printing and delivery options.  
See [Steps: Set Up Payslip Printing Options](#) on page 484.

**Related Information****Concepts**

[Setup Considerations: Payslips](#) on page 461

## Define Payslips

---

**Prerequisites**

For Payroll for Australia:

- Security:
  - *Set Up: Payroll - AUS* domain in the AUS Payroll functional area.
  - *Set Up: Payroll (Reporting)* domain in the Core Payroll functional area.
  - *Worker Data Payroll (Company Specific)* - AUS domain in the AUS Payroll functional area.

For Payroll for Canada and the U.S.:

- *Security: Set Up: Payroll (Reporting)* domain in the Core Payroll functional area.

For Payroll for the UK:

- *Security:*
  - *Set Up: Payroll - UK* domain in the UK Payroll functional area.
  - *Set Up: Payroll (Reporting)* domain in the Core Payroll functional area.
  - *Worker Data Payroll (Company Specific) - UK* domain in the UK Payroll functional area.

## Context

This topic provides instructions for defining payslips for these countries:

- Payroll for Australia
- Payroll for Canada
- Payroll for the UK
- Payroll for the U.S.

For defining payslips for Payroll for France, see [Define Payslips \(FRA\)](#).

Make sure that the payslip meets the consolidated requirements for all regions within the country. If you use Workday Payroll in more than 1 country, you need to have a separate payslip configuration for each country.

You can include up to 7 configurable sections on payslips. Workday automatically includes additional sections for pay period dates and worker information.

Retroactively updating prior completed results by making configuration updates to these tabs might cause incorrect information to display on payslips:

- **Sections** (Payroll for Australia, Canada, and the U.S.).
- **Printing** (Payroll for Australia, Canada, and the U.S.).
- **Combine Payslips** (Payroll for the U.S.).

## Steps

1. Access the **Maintain Payroll Payslip Configuration** task and select the country for the configuration.  
You can set up countries in the **Edit Tenant Setup - Payroll** task.
2. As you complete the task, consider:

|                                       |                                                                                                                                                                                                      |
|---------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Update Existing Effective Date</b> | Select to update an existing payslip configuration, then select the configuration date it takes effect.                                                                                              |
| <b>Add New Effective Date</b>         | Select to create a new payslip configuration, effective on the date you enter.                                                                                                                       |
| <b>Effective Date</b>                 | Displays the effective date of the configuration that you're editing.                                                                                                                                |
| <b>Inactive</b>                       | Select the check box to inactivate the current payslip configuration and use an earlier configuration.                                                                                               |
| <b>Hide Payslips</b>                  | Select the check box to prevent displaying Workday Payroll generated payslips when you import externally generated payslips through an integration based on the External Payroll Documents template. |

|  |                                                                                                                                                                                                                                                                                                                                                                                                                         |
|--|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|  | <p>When you select the check box, Workday doesn't display payslips with payment dates after the effective date.</p> <p>To upload external payroll documents, see <a href="#">Steps: Set Up External Payroll Documents Integration for Workday Payroll</a>.</p> <p>When you use the <b>Hide or Display Payslips for Groups of Workers</b> task, Workday overrides this <b>Hide Payslips</b> check box configuration.</p> |

Payroll results from these companies will combine with the results from the header</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

| Option | Description                                                    |
|--------|----------------------------------------------------------------|
|        | company when you select the <b>Combine Payslips</b> rule type. |

6. On the **Pay Component Override Names (Non-Effective Dated)** tab, you can rename the Workday-owned pay components on payslips.

You can also exclude any worktags associated with the pay components (such as tax authority or withholding order number) from payslips.

These overrides display only on payslips. The payroll results continue to display the pay component name along with the tax authority or withholding order number.

**Note:** To override the name of an earning or deduction, enter the name in the **Default Payslip Name** field on the **Create/Edit Earning** task or the **Create/Edit Deduction** task.

7. (Optional) For Payroll for Australia and the UK, access the **Create Payslip Messages** task.

You can add messages to display on hard copy payslips based on: Company, Employee, Location, Pay Group, Pay Period, and Run Category. You can use the **Edit Payslip Messages** or **Delete Payslip Messages** task to modify these custom messages.

**Note:** Workday displays existing messages for Payroll for the UK in the **Edit Payslip Messages** and **Delete Payslip Messages** tasks. Workday recommends that you check you're working with messages for the correct country. Editing or deleting a message affects all historic occurrences of the message in any existing payslips stored in Workday.

In addition, we recommend you use the **Edit Delivered Business Form Layout** task when you add a message to the *Payslip (AUS)*, *Payslip (GBR)*, or *Payslip (GBR) - Localised* form. Select the **Apply Report Design separately to each row** check box.

## Result

The configuration determines the components set on these reports:

- **Payslip to Print - AUS**
- **Payslip to Print - GBR**
- **Payslip to Print - Report Design** (CAN and USA)
- Workday displays *Regular* or *Base Pay* first in the **Earnings** section of the payslip.
- Earnings recalculated by the retro pay calculation process include a plus sign; the previous amount has a minus sign.
- Deduction differences calculated by the retro pay calculation process display at the end of the applicable section, either **Earnings or Deductions**, **Deductions**, or **Employer Paid Benefits**. Each retro difference displays separately along with the beginning and ending dates of the source period.
- Workday reports the current and year-to-date (YTD) balance for each item in a payslip group.
- For time off plans, payslips report:
  - Time-off units accrued for the current period.
  - Units used.
  - Available units.
- For workers with too many payslip lines to fit in a section, Workday recommends that you enable Report Designer for payslips. It enables you to configure overflow or display the sum of the overflow in a single-line item.
- XSLT payslips total the overflow and display the sum in a single-line item called Details Not Displayed.
- If you view payslips online, all line items will display.

## Next Steps

You can:

- Set up a standard or custom Report Designer payslip layout.
- Print your worker's payslips based on your selected payslips layout.
- Enable workers to view their payslips in Workday and print their payslips based on your selected layout.
- View your worker's payslips on the **Payslips for Worker** report.

For Payroll for the U.S., for organizations in the District of Columbia or Oregon, specify your EIN or FEIN on the **Edit Company State and Local US Tax Reporting** task. Workday displays the EIN or FEIN on payslips for payroll results associated with District of Columbia or Oregon worktags.

## Define Payslips (FRA)

---

### Prerequisites

Set up pay components and pay aggregations.

Security:

- *Set Up: Payroll - FRA* domain in the FRA Payroll functional area.
- *Set Up: Payroll (Reporting)* domain in the Core Payroll functional area.
- *Worker Data Payroll (Company Specific)* - FRA domain in the FRA Payroll functional area.

### Context

This topic provides instructions for defining payslips for Payroll for France. To define payslips for other countries, see [Define Payslips](#).

You can include several configurable sections on worker payslips, plus 2 sections on a payslip annex. Example: *Gross, Post Taxable Net*.

In addition to the configurable sections, Workday automatically includes sections on the payslip for:

- Worker information.
- Pay period dates.
- Employer and collective agreements.

Define which calculations to display in each section and what labels to use.

If you use Workday Payroll in more than 1 country, you need to have a separate payslip configuration for each country.

The payslip configuration determines the content of:

- The **Summary** tab of a payroll result.
- The **FRA Pay Calculation Results - Payslip View** report.
- The hard copy payslips.

### Steps

1. Access the **Maintain Payroll Payslip Configuration** task and select France.

You can set up France in the **Edit Tenant Setup - Payroll** task.

2. As you complete the task, consider:

| Option               | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
|----------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Hide Payslips</b> | <p>Select the check box to prevent displaying Workday Payroll generated payslips when you import externally generated payslips through an integration based on the <b>External Payroll Documents</b> template.</p> <p>When you select the check box, Workday immediately stops displaying payslips.</p> <p>To upload external payroll documents, see: <a href="#">Steps: Set Up External Payroll Documents Integration for Workday Payroll</a>.</p> <p>When you use the <b>Hide or Display Payslips for Groups of Workers</b> task, Workday overrides this <b>Hide Payslips</b> check box configuration.</p> |

3. On the **Sections** tab, consider:

| Option               | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|----------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Payslip Group</b> | <p>Each payslip group represents a separate section of the payslip. You can include each section once.</p> <p>These sections display on a payslip in a predefined order.</p> <ul style="list-style-type: none"> <li>• <i>Gross</i></li> <li>• <i>Deduction – Health Insurance</i></li> <li>• <i>Deduction – Work Accident</i></li> <li>• <i>Deduction – Pension</i></li> <li>• <i>Deduction – Family</i></li> <li>• <i>Deduction - Unemployment Fund</i></li> <li>• <i>Deduction – Other Contributions</i></li> <li>• <i>Deduction – Collective Agreements</i></li> <li>• <i>Deduction – CSG non Taxable, CRDS and CSG Submitted to Tax</i></li> <li>• <i>Deduction – Deduction Exemptions</i></li> <li>• <i>Deduction – Optional Social Contributions</i></li> <li>• <i>Post Taxable Net</i></li> <li>• <i>Absence Plans</i></li> </ul> <p>You can also define 1 annex with 2 separate sections. Example: <i>Annex 1, Annex 2</i>. The annex displays on a separate page from the payslip.</p> |

| Option                        | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|-------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Label</b>                  | <p>You can display your own label for a section instead of the payslip group name.</p> <p>This override is available in the payslip report but isn't visible in the <b>Summary</b> tab of the payroll results.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| <b>Payslip Calculation(s)</b> | <p>Identify the groups of calculations to report in each section (or <b>Payslip Group</b>).</p> <ul style="list-style-type: none"> <li>• For <i>Gross</i>, select <i>FRA Adds to Gross</i> and <i>FRA Subtracts from Gross</i>.</li> <li>• For all deduction payslip groups, select the corresponding pay component group.<br/>Example: For <i>Deduction - Health Insurance</i>, select <i>FRA Payslip - Health Insurance [FRA]</i></li> <li>• For <i>Deduction – CSG non Taxable, CRDS and CSG Submitted to Tax</i>, select <i>FRA Payslip - CRDS and CSG Submitted to Tax [FRA]</i> and <i>FRA Payslip - CSG non Taxable [FRA]</i></li> <li>• For <i>Deduction – Deduction Exemptions</i>, select <i>FRA Payslip - Adds to Total Deduction Exemptions [FRA]</i> and <i>FRA Payslip - Subtracts from Total Deduction Exemptions [FRA]</i>.</li> <li>• For <i>Post Taxable Net</i>, select <i>FRA Payslip - Other Net Pay Components [FRA]</i>.</li> <li>• For <i>Absence Plans</i>, select a time off plan.</li> <li>• For <i>Annex 1</i> and <i>Annex 2</i>, select <i>FRA Payslip Annex 1</i> and <i>FRA Payslip Annex 2</i>.</li> </ul> <p>By default, Workday doesn't display any pay components that have a value of zero on the payslip. To display related calculations when a pay component has a value of zero, access the <b>Maintain Earnings and Deductions Reporting Order</b> task and select <b>Allow display on payslip when equal to 0</b>.</p> |
| <b>Related Calculation(s)</b> | <p>If you select multiple related calculations and multiple values exist for the same pay component, Workday displays the sum of the values.</p> <p>Example: Select <i>Hours (prorated)</i> and <i>Hours (unprorated)</i>.</p> <p>Select related calculations to display in additional columns.</p> <p>If using a related calculation from an earning or deduction, select the related earning or deduction in the <b>Payslip Calculation(s)</b> column.</p> <p>Example: In a <i>Deduction</i> section of the payslip:</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

| Option | Description                                                                                                                                                                                                                                                                                                                                                                                                               |
|--------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|        | <ul style="list-style-type: none"> <li>Select <i>Taxable Wages</i> in the <b>Related Calculation(s) 1</b> column to display the salary basis used in the deduction calculation.</li> <li>Select <i>Rate</i> in the <b>Related Calculation(s) 2</b> column to display the rate used in the deduction calculation.</li> </ul> <p>If different pay components use different related calculations, select all that apply.</p> |

4. On the **Printing** tab, consider:

| Option                                                     | Description                                                                                             |
|------------------------------------------------------------|---------------------------------------------------------------------------------------------------------|
| <b>Report Designer Layout for Payslips in Self-Service</b> | Workday Payroll for France recommends that you disable payslip viewing in self-service for all workers. |

5. On the **Pay Component Override Names (Non-Effective Dated)** tab, you can rename the Workday-owned pay components on payslips.

When you create a custom report based on the **Payslip to Print - FRA** standard report to create a payslip layout, you can display aggregated pay components on the payslip. See [Steps: Set Up Custom Report Designer Payslips](#) on page 482.

To configure an aggregated line, define an **Override Payslip Name** that:

- Is identical for all pay components to be aggregated.
- Contains characters between square brackets.

On the payslip, Workday displays the text between square brackets as the payslip name for aggregated pay components.

These overrides display only on payslips. The payroll results continue to display the pay component name.

**Note:** To override the name of an earning or deduction, enter the name in the **Default Payslip Name** field on the **Create/Edit Earning** task or the **Create/Edit Deduction** task.

6. Under **Totals**, define the totals to display on the payslip

| Option                       | Description                                                                                                                                                                                                                                                                                                                                                                           |
|------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Order</b>                 | Use the arrows to define the order in which the totals display on the payslip.                                                                                                                                                                                                                                                                                                        |
| <b>Payroll Aggregation</b>   | <p>Select one of these pay aggregations:</p> <ul style="list-style-type: none"> <li>Pay component group.</li> <li>Pay accumulation.</li> <li>Pay balance.</li> </ul> <p><b>Note:</b> For the <b>Totals</b> grid, each Payroll Aggregation item needs a monthly total and yearly total. Example: <i>FRA Taxable Net [FRA]</i> and <i>FRA YTD Taxable Net (Payment Date) [FRA]</i>.</p> |
| <b>Payslip Override Name</b> | Enter an alternative name to display on the payslip. Example: <i>Net Imposable</i> and <i>Net Imposable Annuel</i> .                                                                                                                                                                                                                                                                  |

7. (Optional) Access the **Create Payslip Messages** task. You can add messages to display on hard copy payslips based on: Company, Employee, Location, Pay Group, Pay Period, and Run Category. You can use the **Edit Payslip Messages** or **Delete Payslip Messages** task to modify these custom messages.

**Note:** Workday displays existing messages for Payroll for France in the **Edit Payslip Messages** and **Delete Payslip Messages** tasks. Workday recommends that you check you're working with messages for the correct country. Editing or deleting a message affects all historic occurrences of the message in any existing payslips stored in Workday.

In addition, we recommend you use the **Edit Delivered Business Form Layout** task when you add a message to the *Payslip (FRA)* form. Select the **Apply Report Design separately to each row** check box.

## Result

The configuration determines the components set on the **Payslip to Print - FRA** standard report.

- Workday displays earnings and deductions configured for each payslip group.
- Below the impacted pay component, you can see differences calculated by the retro pay calculation process on 1 row per retro period.
- Depending on your setup, you can display:
  - In the *Gross* section: Deductions for time off taken during the pay period.
  - In the *Absence* section: Absence Balances, including time off units taken during the period, and remaining balance.

## Example

### Next Steps

To define the order to display earnings and deductions inside each payslip group, access the **Maintain Earnings and Deductions Reporting Order** task.

You can:

- Set up a standard or custom Report Designer payslip layout.
- Print your worker's payslips based on your selected payslips layout.

## Steps: Set Up Standard Report Designer Payslips

---

### Prerequisites

Configure payslips.

## Context

You can use these Workday-delivered business form layouts and standard reports to generate Report Designer payslips, including for country-specific layouts:

| Country         | Business Form Layout                                                                                             | Report                                  |
|-----------------|------------------------------------------------------------------------------------------------------------------|-----------------------------------------|
| Australia       | <i>Payslip (AUS)</i>                                                                                             | <b>Payslip to Print - AUS</b>           |
| France          | <i>Payslip (FRA)</i>                                                                                             | <b>Payslip to Print - FRA</b>           |
| UK              | <ul style="list-style-type: none"> <li><i>Payslip (GBR)</i></li> <li><i>Payslip (GBR) - Localised</i></li> </ul> | <b>Payslip to Print - GBR</b>           |
| U.S. and Canada | <i>Payslip (Report Design)</i>                                                                                   | <b>Payslip to Print - Report Design</b> |

You can configure your standard business form layout to include:

- Your company logo.
- Up to 2 signatures (CAN and USA).
- The payslip configurations for overflow, address, YTD hours by earning, breakdown of FLSA earnings by work week, and absence balances (USA).
- The payslip configurations for overflow, address, YTD hours by earning, and absence balances (CAN and UK).

## Steps

1. Select the **Print Payslips Using Report Designer Layout in Self-Service** check box and a payslip layout for the tenant default.

If you don't select a layout, Workday automatically sets the tenant payslip layout to **Payslip (Report Design)**.

See [Reference: Edit Tenant Setup - Payroll](#).

2. (Optional) Access the **Maintain Payroll Payslip Configuration** task.

To generate payslips for countries that require different layouts, select the country-specific layout from the **Report Designer Layout for Payslips in Self-Service** prompt on the **Printing** tab to override the tenant default.

For Payroll for Australia, Canada, the UK, and the U.S., when workers print payslips from self-service, Workday uses the layout configured for the country of their pay group.

Security: *Set Up: Payroll (Reporting)* domain in the Core Payroll functional area.

3. (Optional) for Payroll for Australia, Canada, the UK, and the U.S., add and print company logo on payslips.

When you use the **Print** button on a worker's profile, Workday adds the company logo that you've configured using this method:

- Access the **Configure Business Form Layout** task. In the **Token Substitution** grid, attach the relevant image for *company\_logo*.
- Security: *Custom Report Administration* domain in the System functional area.

When you use the **Print** icon on payslips, Workday adds the company logo that you've configured using this method:

- Access the **Edit Tenant Setup - System** task. In the **Information** section, select an existing image or **Create Tenant Logo** to attach the relevant image.
- *Set Up: Tenant Setup - System* domain in the System and Customer Central functional areas.

### Note:

The recommended image size for company logos is 120 x 55.

#### 4. (Optional), for Payroll for France, [Define Bank Accounts](#).

For hard copy payslips, assign the layout to the company bank accounts that you use to process payroll payments.

### Result

For Payroll for Australia, Canada, the UK, and the U.S., you can generate payslips with Report Designer layouts using the:

- **Print** button on the worker profile.
- **Schedule BIRT Payslip Pre-Print** task.

For Payroll for France, you can generate payslips with Report Designer layouts using the **Schedule BIRT Payslip Pre-Print** task.

### Next Steps

Set up payslip printing options.

### Related Information

[The Next Level: Localised UK Payslip](#)

## Steps: Set Up Custom Report Designer Payslips

---

### Prerequisites

- Configure payslips.
- On the **Edit Tenant Setup - System**, enable *.rptdesign* files for uploading, *.properties* files to translate static text in your Report Designer layouts, and print payslips using Report Designer layout.
- Download and install Workday Studio, including Report Designer.
- Familiarize yourself with the Workday Studio documentation and tutorials for Report Designer.

### Context

You can use Report Designer in Workday Studio to configure the business form layouts that you use to generate printable payslips. You can:

- Change the font, content, and other display options.
- Configure multiple logos.
- Specify an order for pay components, such as placing zero amounts at the bottom of the list.
- List earnings by position with separate hours, rate, and amount (AUS, CAN, UK, and USA).
- List retro differences as a net amount (CAN, UK, and USA).
- List taxable wages for all taxes, such as federal, OASDI, Medicare, state, local, or SDIT (USA).

### Steps

#### 1. [Copy Reports](#).

To create a custom report and configure the data elements, copy the relevant **Payslip to Print** standard report for your country:

- **Payslip to Print - AUS**
- **Payslip to Print - FRA**
- **Payslip to Print - GBR**
- **Payslip to Print - Report Design** (CAN and USA)

Share your custom report with anyone authorized to access the report data source.

2. Download the Workday-delivered Report Designer payslip layout you want to customize. See:
  - [Workday Community: Payroll Payslip \(AUS\)](#).
  - [Workday Community: Payroll Payslip and Advice Configurations \(UK\)](#).
  - [Workday Community: Payroll Payslip, Check, and Advice Configurations \(CAN and USA\)](#).
  - [Workday Community: Payroll Payslip Printing and Bulk Check Printing \(FRA\)](#).
3. Modify the payslip layout in Workday Studio.
  - See [Example: Create a Report Design with Multiple Data Sets](#).
4. [Upload a Business Form Layout and Attach It to a Custom Report](#).
  - Upload your custom Report Designer payslip layout and attach it to the custom report. You can upload images on each token. In the **Token Name** field:
    - For Payroll for Australia, Canada, the UK, and the U.S., enter *company\_logo* or signature.
    - For Payroll for France, enter *LogoImg\_[Company Name]* or signature name.
5. (Optional) Access the **Configure Business Form Layout** task.
  - When you configure the layout delivered in Community, you can add a different logo for each company. You can upload an image for each token.
  - Security: *Custom Report Administration* domain in the System functional area.
6. Enable Report Designer layouts and select your custom payslip layout.
  - See [Reference: Edit Tenant Setup - Payroll](#).
7. (Optional) Access the **Maintain Payroll Payslip Configuration** task.
  - When generating payslips for countries that require different layouts, select the country-specific layout from the **Report Designer Layout for Payslips in Self-Service** prompt on the **Printing** tab to override the tenant default.
  - When workers in Canada, the UK, and the U.S. print payslips from self-service, Workday uses the layout configured for the country of their pay group.
  - Security: *Set Up: Payroll (Reporting)* domain in the Core Payroll functional area.
8. (Optional) For Payroll for France, [Define Bank Accounts](#).
  - For hard copy payslips, assign your layout to the company bank accounts that you use to process payroll payments.

## Result

For Payroll for Australia, Canada, the UK, and the U.S., you generate payslips with Report Designer layouts using the:

- **Print** button on the worker profile.
- **Schedule BIRT Payslip Pre-Print** task.

For Payroll for France, you can generate payslips with Report Designer payslips using the **Schedule BIRT Payslip Pre-Print** task.

## Next Steps

For Payroll for Australia, Canada, the UK, and the U.S., to view your custom payslip for a worker, access a worker profile with a completed pay result. Select **Pay > Payslips** and click **Print**. The worker's address doesn't display on the printable payslip until the pay result is complete.

## Steps: Set Up Payslip Printing Options

### Context

You can set up options to view and print payslips for your company, including:

- Printing bulk payroll.
- Setting worker self-service options.
- Printing paper copies of worker payslips (pay advice).

For Payroll for Canada, Ireland, the UK, and the U.S., you can enable workers to access a paperless version of their payslip or print a hard copy. You can configure payroll printing options for your company to:

- Display legal or preferred names on paychecks and payslips.
- Hide some or all payslips.
- Give workers the ability to override company print option settings and receive printed payslips.

### Steps

1. Access the **Company Payroll Printing Options** task.

As you complete the **Payslip Printing Details** section, consider:

| Option                                                                      | Description                                                                                                                                                                                                                                                                                                                                                                                                |
|-----------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Employee Name</b>                                                        | Specify whether to print employees' <b>Legal</b> or <b>Preferred</b> names on pay checks and payslips.<br><br>For Payroll for Canada, France, and the U.S., you can configure employees' name format options on the <b>Edit Tenant Setup - System</b> task.<br><br>For Payroll for Australia, Ireland, and the UK, you can configure employees' legal names on the <b>Edit Tenant Setup - System</b> task. |
| <b>Always Print Paper Copy for Terminated Employees</b> (CAN, IRL, UK, USA) | Select to print a paper copy of payslips, during your next pay run, for all employees terminated: <ul style="list-style-type: none"> <li>• Before the pay period end date.</li> <li>• On the last day of their pay period.</li> </ul> This option overrides other company and employee settings that disable payslip printing.                                                                             |

For Payroll for France, don't any enter details in the **Turn Payslip Printing Off** section.

For Payroll for Canada, Ireland, the UK, and the U.S, as you complete the **Turn Payslip Printing Off** section, consider:

| Option                                                                       | Description                                                                                                                                                                            |
|------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>For All Employees</b>                                                     | Select the check box to turn off bulk payslip printing for employees receiving direct deposit. Employees will receive electronic versions of their payslips.                           |
| <b>Based on Pay Run Groups and/or Pay Group</b><br><b>Based on Locations</b> | Enter values for these fields to turn off payslip printing for specific employees. Example: <ul style="list-style-type: none"> <li>• <i>Semi-monthly U.S Pay Run Group.</i></li> </ul> |

| Option                                                 | Description                                                                                                                                                                                                                                                                                                                                                                                               |
|--------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Based on Run Categories</b>                         | <ul style="list-style-type: none"> <li>• <i>New York.</i></li> <li>• <i>Regular.</i></li> </ul> <p>Workday evaluates the values and turns off payslip printing for employees in a <i>Semi-Monthly U.S Pay Run Group</i>, and are located in <i>New York</i>, and belong to the <i>Regular</i> run category.</p> <p>You can only enter values when you disable the <b>For All Employees</b> check box.</p> |
| <b>Allow Employee to Override through Self-service</b> | Select the check box to enable workers to change their payslip printing election. It enables your employee to override the <b>For All Employees</b> check box.                                                                                                                                                                                                                                            |

Security: *Set Up: Payroll (Reporting)* domain in Core Payroll functional area.

2. (Optional) You can override your setting options to print payslips for a worker on the **Payslip Delivery** task.

You can configure a delivery method, such as FedEx or UPS, to mail a worker's payslips.

3. (Optional) Configure payslip options for absence balances, PDFs, and enable or disable online viewing. See [Reference: Edit Tenant Setup - Payroll](#).

Changes to these settings also impact the mobile applications for payslips.

Workday Payroll for France recommends that you disable payslip viewing in self-service for all workers.

4. (Optional) For Payroll for Australia, Canada, Ireland, the UK, and the U.S., hide the **Payslip Printing Details** grid on the **Payslips** report on the worker profile.

[Create Intersection Security Groups](#) to exclude specific workers from accessing payslip details. [Edit Domain Security Policies](#) by including the intersection security group in the *View: Payroll (Payslip Printing Elections)* domain in the Core Payroll functional area.

Example: The **Payslip Printing Details** grid isn't applicable on the **Payslips** report to workers who belong to the Payroll Interface pay group. You can create intersection security groups that exclude the Payroll Interface pay group and apply them in the domain security policy for payslips.

5. (Optional) For Payroll for Australia, Canada, Ireland, the UK, and the U.S., access the [Print Multiple Payslips for a Worker](#) on page 487 task.

## Next Steps

You can preprint payslips using Report Designer layouts in bulk, which pregenerates printable PDF payslips. You can use the *Get Payroll Pre-Printed Payslips* web service to export workers' preprinted payslips for bulk printing.

For Payroll for Canada, Ireland, the UK, and the U.S., workers who receive:

- Paper copies of their payslips, use the **Print Advices Work Area** task to print their payslips.
- Electronic copies of their payslips, use the **Payslips for Worker** report to view the printable PDF.

For Payroll for Australia, workers receive electronic copies of their payslips, use the **Payslips for Worker** report to view the printable PDF.

For Payroll for France, you can print paper copies of your Report Designer payslips by splitting payslips into separate batch files and using the **Print Advices Work Area** task.

[Steps: Set Up Checks and Advices for Printing](#)

[Set Up Year-End Tax Document Printing Options for Workers](#) on page 899

# Preprint Report Designer Payslips in Bulk

---

## Prerequisites

- Set up Report Designer payslips. For standard Report Designer payslips, see [Steps: Set Up Standard Report Designer Payslips](#) on page 480 and for custom Report Designer payslips, see [Steps: Set Up Custom Report Designer Payslips](#) on page 482.
- Settled payroll results.
- Security: *Process: Payslip Bulk Print* domain in Core Payroll functional area.
- Workday Payroll for France recommends that you disable payslip viewing in self-service for all workers. Hide self-service payroll options in the **Payslips** section of the **Edit Tenant Setup – Payroll** task.

## Context

Each time you or a worker prints a Report Designer payslip, Workday generates a new PDF. A large volume of requests in a short period of time can negatively impact the performance of your tenant. To avoid potential performance impact, you can schedule Workday to preprint payslip PDFs in bulk at a time when usage is low. You can also use preprinting to make payslips available for exporting and archiving.

Example: Schedule payslip PDFs to print at night so Workday generates the PDFs at a time of low usage.

## Steps

1. Access the **Schedule BIRT Payslip Pre-Print** task.
2. On the **Schedule BIRT Payslip Pre-Print** tab, give the request a name and complete all required fields. Select all pay groups to print for everyone at a company.
3. Optional: For **Employees to Process**, consider:
  - **Smart Print Payslips** helps minimize processing time by only generating PDF payslips for workers who have historically viewed them.

After you enable **Smart Print Payslips**, Workday generates PDFs for all workers for 2 months to establish viewing trends. After 2 months, Workday stops generating PDF payslips for workers who don't historically view them. To ensure these workers can still access their payslips, don't select **Disable Payslip Printing (Business Form)** or **Disable Payslip Viewing (Online Version)** on the **Edit Tenant Setup - Payroll** task.

- **Print All Payslips** generates payslips for all workers.

For Payroll for France, Workday recommends selecting the **Print All Payslips** option.

4. On the **Schedule** tab, set the scheduled date, time, and time zone.

## Result

Workday begins generation of the PDF payslips at the scheduled time. You can use *Request Name* to identify the payslip preprint batch on the **Process Monitor** report.

## Next Steps

You can use the **Schedule BIRT Payslip Pre-Print** task with the *Get Payroll Pre-Printed Payslips* web service to export the payslips for archiving, printing, or other purposes.

## Print Multiple Payslips for a Worker

### Prerequisites

Enable 1 or both of these options in the **Edit Tenant Setup - Payroll** task under **Payslips** :

- **Enable for Administrator**
- **Enable for Self-Service**

### Context

This topic provides instructions to print multiple payslips for these countries:

- Payroll for Australia
- Payroll for Canada
- Payroll for the UK
- Payroll for the U.S.

To enable this feature, the worker (current or terminated) must have more than 1 payslip. You or the worker can click the **Print Multiple Payslips** button to:

- Access filter options.
- Retrieve payslips.
- Select the payslips to print to a single PDF.

Workday generates a new PDF of your selected payslips each time you run **Print Multiple Payslips**. The PDF doesn't combine preprinted payslips.

You can see the **Print Multiple Payslips** button:

- On the **Payslips** tab of worker profiles.
- On the **Payslips for Worker** task.
- When viewing a single payslip.

Workers can see the **Print Multiple Payslips** button:

- On their **My Payslips** task.
- **Pay > Payslips**.
- **View Profile > Payslips**.
- When viewing a single payslip.

Example: You select a worker with more than 1 payslip and click **Pay** tab > **Payslips** tab. Click **Print Multiple Payslips** to access the **Print Multiple Payslips for Worker** task. In the task, set filters to retrieve payslips by date range, then select from the results to print the payslips to a PDF.

### Steps

1. Click the **Print Multiple Payslips** button.
2. Set filter criteria to retrieve payslips. As you complete the task, consider:

| Option                   | Description                                                                                                                                           |
|--------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Worker</b>            | You can search for payslips for the worker or select a different worker.                                                                              |
| <b>Payment From Date</b> | Select the beginning of the date range from which to retrieve payslips. For faster processing, select the narrowest date range that meets your needs. |

| Option                           | Description                                                                                                     |
|----------------------------------|-----------------------------------------------------------------------------------------------------------------|
| <b>Payment To Date</b>           | Select the end of the date range. For faster processing, select the narrowest date range that meets your needs. |
| <b>Exclude Net Zero Payslips</b> | Select to omit any payslips where the worker has no pay.                                                        |

- Payslip results display sequentially by date. For faster processing, select specific payslips you want to print. Review the **Count of Payslips Selected to Print** to confirm the payslips you're printing.
- (Optional) You can click **Notify Me Later** to have the result sent to **My Reports**.

### Result

Workday generates a PDF showing the selected payslips in chronological order.

## Hide Payslips from Workers

### Prerequisites

- Payroll for the pay group and period is complete or is in progress with at least 1 completed result.
- Security: *Reports: Pay Calculation Results for Worker (Payslips)* domain in Core Payroll functional area.

### Context

You can hide:

- All online payslips by selecting the **Disable Payslip Viewing (Online Version) in Self-Service** check box on the **Edit Tenant Setup - Payroll** task.  
For Payroll for France, Workday recommends that you disable payslip viewing in self-service for all workers.
- A worker's payslip by viewing the payroll result and selecting **Pay Result > Hide Payslip from Worker** from the related actions menu.
- Workday generated payslips by selecting the **Hide Payslips** check box on the **Maintain Payroll Payslip Configuration** task, if you use third-party payroll payslips.
- Workday generated payslips for a group of workers for a specific pay period, using the **Hide or Display Payslips for Group of Workers** task.

### Steps

- Access the **Hide or Display Payslips for Group of Workers** task.
- Select a **Period** and **Pay Run Groups and/or Pay Group Details** for the payslips you want to hide.
- Select **Hide Payslips** from the **Action** section.
- From the **Processing** section, consider:

| Option          | Description                                                                                                                                                                                                                                                       |
|-----------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Criteria</b> | Select: <ul style="list-style-type: none"> <li><i>Off Cycle Results</i> to hide payslips with completed off-cycle results.</li> <li><i>Zero Gross and Net Pay</i> to hide only payslips with a gross and net of zero (on-cycle and off-cycle results).</li> </ul> |

| Option  | Description                                                                               |
|---------|-------------------------------------------------------------------------------------------|
| Type    | For <i>Off Cycle Results</i> , select <i>Manual Payment</i> or <i>On Demand Payment</i> . |
| Reasons | Select a reason for the payment.                                                          |

You can skip the **Processing** section to hide all payslips with completed on-cycle or off-cycle results.

#### Related Information

#### Reference

[Reference: Edit Tenant Setup - Payroll](#)

## Concept: Earning and Deduction Payslip Display Order (FRA)

You can display these sections on the payslip, in this order:

- *Gross*
- *Deductions*
- *Post Taxable Net*
- *Absence*
- *Tax*

You can also display up to 2 sections on an annex, a separate page after the payslip.

Within each payslip group, Workday displays, in this order:

- All earnings and deductions in the order defined on the **Maintain Earnings and Deductions Reporting Order** task.
- Any earnings or deductions without a defined reporting order, in alphabetical order.

You define this order for earnings and deductions:

| Calculations                   | Payslip Group           |
|--------------------------------|-------------------------|
| <i>Base salary</i>             | <i>Gross</i>            |
| <i>Mileage Allowance [FRA]</i> | <i>Post Taxable Net</i> |
| <i>Paid vacation</i>           | <i>Gross</i>            |

Workday displays these sections on the payslip:

| Sections                | Calculations                                                                                                                                                                                                                                                                              |
|-------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <i>Gross</i>            | <ul style="list-style-type: none"> <li>• <i>Base salary</i></li> <li>• <i>Paid vacation</i></li> </ul>                                                                                                                                                                                    |
| <i>Post Taxable Net</i> | <ul style="list-style-type: none"> <li>• <i>Mileage Allowance</i></li> <li>• <i>CRDS</i></li> <li>• <i>URS CSG Submitted to Tax</i></li> </ul>                                                                                                                                            |
| <i>Tax</i>              | <ul style="list-style-type: none"> <li>• <i>Monthly net amount for exempted overtime hours</i></li> <li>• <i>Monthly taxable net amount</i></li> <li>• <i>Year-to-date amount for exempted overtime hours</i></li> <li>• <i>Year-to-date amount for income tax withholding</i></li> </ul> |

| Sections | Calculations                                                                      |
|----------|-----------------------------------------------------------------------------------|
|          | <ul style="list-style-type: none"> <li>Year-to-date taxable net amount</li> </ul> |

CRDS and URS CSG Submitted to Tax are included in the Gross payslip group, but with no defined order, so Workday displays them in the *Post Taxable Net* section. We display the *Tax* section on the summary page.

Workday:

- Applies the predefined order of each payslip group.
- Uses the defined earning and deduction order within each payslip group.
- Lists any pay components without an order, alphabetically after all other pay components.
- Uses the *Override Payslip Name* and the *Default Payslip Name* when determining alphabetical order.
- Displays related calculations when a pay component has a value of zero only when you select *Allow display on payslip when equal to 0* on the **Maintain Earnings and Deductions Reporting Order** task.

## Concept: Pay Component Aggregation for Payslips (FRA)

You can aggregate several pay components on 1 line in a payslip using Report Designer by defining a print layout based on the *Payslip to Print - FRA* standard report.

When pay components from the same payslip group share a **Default Payslip Name** or **Override Payslip Name** with characters in square brackets, Workday:

- Aggregates the amounts from each pay component on 1 line.
- Uses the text between the square brackets as the display name on the payslip.

Workday doesn't aggregate pay components in the **Summary** tab on the **View Payroll Results** report. You can view the payslip display name in the **Grouping** column.

### Related Calculations on the Payslip

On the **Maintain Payroll Payslip Configuration** task, you can define 2 sets of related calculations in a payslip group:

- **Related Calculation(s) 1**
- **Related Calculation(s) 2**

Workday only displays related calculations when the pay result for the calculation defined in the **Related Calculation(s) 1** prompt is identical for each pay component. Example: The *Taxable Wages* amount is the same for each pay component.

When displaying related calculations for aggregated pay components, Workday displays the:

- Shared value for calculations defined in the **Related Calculation(s) 1** prompt.
- Sum of all values for the calculations defined in the **Related Calculation(s) 2** prompt.

### Employer and Employee Deductions

When aggregating pay components, Workday still displays values from:

- Pay components with a **Code** ending in *\_ER* in the **Employer** column of the payslip.
- All other pay components in the **Employee** column of the payslip.

### Example

You define these deductions in the same payslip group:

| Pay Component        | Code    | Default payslip Name | Calculation                   | Taxable Wages<br>(Related Calculations 1) | Rate<br>(Related Calculations 2) |
|----------------------|---------|----------------------|-------------------------------|-------------------------------------------|----------------------------------|
| Pay Component 1 - ER | PC_1_ER | [Group]              | Taxable Wages * Rate<br>(120) | 3000                                      | 4%                               |
| Pay Component 1 - EE | PC_1_EE | [Group]              | Taxable Wages * Rate<br>(90)  | 3000                                      | 3%                               |
| Pay Component 2 - ER | PC_2_ER | [Group]              | Taxable Wages * Rate<br>(60)  | 3000                                      | 2%                               |
| Pay Component 2 - EE | PC_2_EE | [Group]              | Taxable Wages * Rate<br>(30)  | 3000                                      | 1%                               |

Workday displays 1 line on the payslip:

| Description | Taxable Wages | Employee - Rate | Employee - Amount | Employer - Rate | Employer Amount |
|-------------|---------------|-----------------|-------------------|-----------------|-----------------|
| Group       | 3000          | 4               | -120              | 6               | -180            |

Workday:

- Groups together all 4 deductions, but separates employee from employer deduction amounts.
- Displays the value of taxable wages, defined as **Related Calculations 1**, because the calculated value is identical for all pay components.
- Displays the sum of employee rates, defined as **Related Calculations 2**.

[Define Payslips \(FRA\)](#) on page 476

[Steps: Create Earnings](#) on page 222

## Concept: Display Absence Balances for Multiple Positions (USA)

To display absence balances on payslips based on position eligibility, select the **Show Absence Balances for All Eligible Positions** check box under the **Payslips Printing** tab on the **Maintain Payroll Payslip Configuration** task.

This example illustrates how Workday displays absence balances for an employee with multiple jobs in different companies that have a single legal entity relationship.

Mike has 2 positions at Global Modern Services (USA):

- Executive Assistant, Sales & Marketing (Primary)
- Travel Coordinator

He also has a Travel Coordinator position at Green Planet Solutions (USA). Global Modern Services has a single legal entity relationship with Green Planet Solutions.

Time off balance in days:

| Time Off Plan               | Position                                               | Accrued in Period | Time Off Paid in Period | Ending Period Balance |
|-----------------------------|--------------------------------------------------------|-------------------|-------------------------|-----------------------|
| Sick Leave (Position-based) | Executive Assistant, Sales & Marketing (Primary) (GMS) | 5                 | 1                       | 4                     |
| Vacation (Position-based)   | Travel Coordinator (GMS)                               | 3                 | 2                       | 1                     |
| Vacation (Position-based)   | Travel Coordinator (GPS)                               | 3                 | 1                       | 2                     |

**When you select the check box:**

Workday sums together and displays absence balances for all eligible positions on the payslip for position-based time-off plans for both the managing company and its related company. You need to add a new time off plan in the **Maintain Payroll Payslip Configuration** task prior to Pay Complete for the absence balance to show.

Global Modern Services (USA):

| Absence Plans | Accrued | Reduced | Balance |
|---------------|---------|---------|---------|
| Sick Leave    | 5       | 1       | 4       |
| Vacation      | 6       | 3       | 3       |

Green Planet Solutions (USA):

| Absence Plans | Accrued | Reduced | Balance |
|---------------|---------|---------|---------|
| Sick Leave    | 5       | 1       | 4       |
| Vacation      | 6       | 3       | 3       |

**When you don't select the check box:**

Workday displays absence balances for only the processing position on the payslip for position-based time-off plans for both the managing company and its related company.

Global Modern Services (USA):

| Absence Plans | Accrued | Reduced | Balance |
|---------------|---------|---------|---------|
| Sick Leave    | 5       | 1       | 4       |

Green Planet Solutions (USA):

| Absence Plans | Accrued | Reduced | Balance |
|---------------|---------|---------|---------|
| Sick Leave    | 5       | 1       | 4       |

Workday displays absence balances for only the primary position on the payslip for position-based time-off plans for both the managing company and its related company.

Global Modern Services (USA):

| Absence Plans | Accrued | Reduced | Balance |
|---------------|---------|---------|---------|
| Sick Leave    | 5       | 1       | 4       |

Green Planet Solutions (USA):

| Absence Plans | Accrued | Reduced | Balance |
|---------------|---------|---------|---------|
| Sick Leave    | 5       | 1       | 4       |

## Related Information

### Concepts

[Concept: Single Legal Entities \(USA\)](#) on page 1236

### Tasks

[#unique\\_318](#)

[Steps: Set Up Payroll for Multiple Jobs](#) on page 563

## Concept: Combined Payslips (USA)

Workday enables you to combine payslips for workers who hold positions at 2 or more related companies. Combining payslips for these workers simplifies how they view their multiple gross-to-net earnings and helps support company relationships.

Selecting the **Combine Payslips** rule type under the **Maintain Payroll Payslip Configuration** task enables you to combine payroll results for workers who hold positions at multiple related companies. For their results to combine, these workers must be in the same pay group with the same:

- Country
- Currency
- Period schedule

Complete their payroll results before the day that you have payslips set to display for their pay group.

When you select the **Combine Payslips** rule, Workday:

- Displays the header company name in the company information section.

- Combines the worker's payroll results in these payslip sections:
  - Absence Plans
  - Current and YTD Total
  - Earnings with the same rates
  - Employee Taxes
  - Pre-tax Deductions
  - Post-tax Deductions
  - Taxable Wages
- When the worker's tax elections are identical across related companies, displays them in the Withholding section. When a worker's tax elections aren't identical, Workday displays Multiple Elections Exist in the Withholding section.

### Example

Molly works for both Green Planet Solutions and Global Modern Services and belongs to the same pay group in both companies. Molly receives 2 separate payslips that display earnings from each company.

#### Green Planet Solutions

| Description | Dates                   | Hours | Rate  | Amount   | YTD      |
|-------------|-------------------------|-------|-------|----------|----------|
| Base Pay    | 01/01/2022 - 01/31/2022 | 0.00  | 0.00  | 4,800.00 | 4,800.00 |
| Holiday Pay | 01/01/2022 - 01/31/2022 | 8.00  | 30.00 | 240.00   | 240.00   |

#### Global Modern Services

| Description | Dates                   | Hours | Rate  | Amount  | YTD      |
|-------------|-------------------------|-------|-------|---------|----------|
| Base Pay    | 01/01/2022 - 01/31/2022 | 0.00  | 0.00  | 4300.00 | 4,300.00 |
| Holiday Pay | 01/01/2022 - 01/31/2022 | 8.00  | 25.00 | 200.00  | 200.00   |

As payroll admin, you decide to combine payslips for workers at Green Planet Solutions and workers at the subsidiary, Global Modern Services. During the next pay period, Molly earns the same amount of base pay and holiday pay from both jobs. They receive a single payslip that combines earnings with the same rate.

#### Green Planet Solutions

| Description | Dates                   | Hours | Rate  | Amount   | YTD       |
|-------------|-------------------------|-------|-------|----------|-----------|
| Base Pay    | 02/01/2022 - 02/28/2022 | 0.00  | 0.00  | 9,100.00 | 18,200.00 |
| Holiday Pay | 02/01/2022 - 02/28/2022 | 8.00  | 30.00 | 240.00   |           |
| Holiday Pay | 02/01/2022 - 02/28/2022 | 8.00  | 25.00 | 200.00   | 880.00    |

As a salaried employee at both companies, Molly's hourly rate is zero. The amount and YTD totals for base pay combine across the 2 positions. The amounts for holiday pay don't combine because of the different rates. However the YTD total is the combined total for all the holiday pay between both pay periods. Molly's payslip displays Green Planet Solutions in the company information section because that's the designated header company.

- [What's the difference between an online payslip and a printable PDF payslip image? \(CAN, UK, USA\)](#) on page 497
- [How can I view old payslips for a worker who transferred from a Workday Payroll pay group to a Payroll Interface pay group? \(CAN, UK, USA\)](#) on page 497
- [How can I view old payslips for a worker who transferred from a Workday Payroll pay group to a Payroll Interface pay group? \(FRA\)](#) on page 497
- [How do I create an annex for a payslip? \(FRA\)](#) on page 497
- [Can nonpayroll admins terminate a worker and generate a payslip to pay them on the termination day? \(USA\)](#) on page 498

**What are the requirements for making payslips available to workers through self-service?**

Workday Payroll for France recommends that you don't make payslips available to workers through self-service. For all other countries:

1. Clear the restrictions on the **Edit Tenant Setup - Payroll** task for viewing online payslips or printable PDF versions.
2. The domain security policy for *Self-Service: Payroll (My Payslips)* must include *Self-Service - Worker* as a security group type and *Employee As Self* as a security group with *View* and *Modify* permissions.
3. When creating a pay group, complete the **Days from Payment Date to Display Payslip** field for the worker's pay group and run category.

**How can I export payslips?**

Access the **Schedule BIRT Payslip Pre-Print** task to generate persistent PDFs of payslips in bulk. You can then use the *Get Payroll Pre-Printed Payslips* web service to export the payslips for archiving, printing, or other purposes.

**How can I improve performance when I mass generate payslips?**

By default, Workday calculates absence values each time anyone prints or views a payslip. When you generate a large number of payslips with absence data, you can improve performance by calculating and saving absence values in advance. You can either:

- Select the **Following Pay Complete** check box on the **Edit Tenant Setup - Payroll** task. Workday then calculates and saves absence values when you complete payroll.
- Access the **Persist Absence Data for Payslips** task to calculate and save absence values.

**How can I improve performance when I save absence data for payslips?**

You can improve the performance of the job that saves absence data for payslips by limiting it to workers who either receive a printed check or who typically print their payslips. Select the **Only for Workers With Check Payments or Payslip Printing Enabled** check box on either:

- The **Edit Tenant Setup - Payroll** task.
- The **Persist Absence Data for Payslips** task.

**The automatic job to persist payslip balances stopped, or didn't run at all. Can I start it manually?**

Yes. Access the **Persist Absence Data for Payslips** task when the automatic job fails to run.

**Which delivered reports can I copy from the Pay dashboard?**

You can only copy the **Compare My Pay Periods** standard report.

**When are payslips visible to administrators?**

For Payroll for Australia, Canada, the UK, and the U.S., they're available immediately after calculating payroll. Payroll results don't need to be complete for payslips to be viewable.

For Payroll for France, you can view a draft version of a payslip immediately after calculating payroll. Calculations don't need to be complete.

To print the official French version of a payslip, payroll calculations must be complete and settled.

After printing an official French version at least once, you can view a nonofficial copy of the payslip in the worker payroll result.

**How can I display hidden payslips? (AUS, CAN, UK, USA)**

For a worker:

1. Navigate to the payroll result that you want to display.
2. From the related actions menu of the payroll result, select **Pay Result > Hide Payslip from Worker**.
3. Clear **Hide Payslip from Worker** check box.

For a group of workers:

1. Access the **Hide or Display Payslips for Group of Workers** task.

|                                                                                                                                            |                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
|--------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                                                                                                                            | <ol style="list-style-type: none"> <li>2. Add a row and select: <ul style="list-style-type: none"> <li>• <i>Annex 1</i> or <i>Annex 2</i> in the <b>Payslip Group</b> column.</li> <li>• The deductions or earnings to display on the annex in the <b>Payslip Calculations</b> column.</li> </ul> </li> </ol>                                                                             |

**Can nonpayroll admins terminate a worker and generate a payslip to pay them on the termination day? (USA)**

When you print a payslip, Workday generates a payslip annex.

Yes. You can decentralize processing when you configure the *On Demand Event* business process and add it to the *Termination* business process.

- [Do on-demand payments display on payslips? \(FRA\)](#) on page 500
- [How can I display time off dates on payslips? \(FRA\)](#) on page 500
- [On the Summary page of French pay results, which pay components display in the Worker column? Which display in the Employer column? \(FRA\)](#) on page 500

**Which worker address does Workday use on payslips?**

Workday uses the first address found for the worker using this hierarchy.

| Address Type      | Usage   |
|-------------------|---------|
| Home (Primary)    | Mailing |
| Home              | Mailing |
| Work (Primary)    | Mailing |
| Work              | Mailing |
| Home (Primary)    |         |
| Work (Primary)    |         |
| Business Location |         |

Example: When a worker has a *Home (Primary)* address with a usage of *Mailing*, Workday uses this address. If not, it looks for a *Home* address with a usage of *Mailing*.

**Note:** You can manage usage labels in the **Map to** prompt of the **Maintain Address Usages** task.

**Can you report a deduction or earning on payslips under a different name?**

Yes. To use an alternate name:

- For any earning or deduction, enter the name in the **Default Payslip Name** field using the **Create/Edit Earning** task or the **Create/Edit Deduction** task.
- For a Workday-owned earning or deduction, access the **Maintain Payroll Payslip Configuration** task to assign an **Override Payslip Name**.

**How can I view or print a worker's payslip?**

For Payroll for Australia, Canada, the UK, and the US, navigate to the worker pay result and select **Payroll Result** > **View Payslip** or **Print Payslip Image** from the related actions menu of the pay result.

You can use the **Payslips for Worker** report for completed payroll results.

For Payroll for France, navigate to the worker pay result. The **Summary** tab displays the payroll results in the same format as the payslip.

To print or reprint a hard copy of a worker's payslip, you can use the **Print Advices Work Area**.

To print a copy or draft of the worker payslip, click 1 of these buttons on the **Summary** tab of worker payroll results:

- **Print Payslip Draft**
- **Print Payslip Copy**

Workday recreates the payslip each time you print a copy or draft from the **Summary** tab. You'll see differences from the official payslip if you have modified elements that aren't effective dated, such as absences or the *rptdesign* model.

**How can I display legal names on payslips? (CAN, UK, US)**

Access the **Company Payroll Printing Options** task to specify whether workers' legal or preferred names display on pay checks and payslips.

**Do reversals display on payslips? (CAN, UK, US)**

No. Reversed payments don't display on payslips. Nor do they display on combined payslips (USA only).

**How can I view payroll results for multiple workers in the payslip format? (FRA)**

Access the **FRA Pay Calculation Results - Payslip View** report to view payroll results in the payslip format configured on the **Maintain Payroll Payslip Configuration** task.

You can display pay components that aren't on the payslip by adding them to the *FRA Payslip View - Extended* pay component group. In the **FRA Pay Calculation Results - Payslip View** report, select **Extended View** to view the additional pay components.

**Why does my worker's payslip say *Provisoire* or *Duplicata* on it? (FRA)**

Use the **Print Check Work Area** or **Print Advices** work area to print or reprint official payslips.

When you print a payslip from a worker pay result, the payslip displays:

- *Provisoire* if you haven't yet printed an official version through the **Print Check Work Area**.
- *Duplicata* if you've already printed an official version through the **Print Check Work Area**.

**Do on-demand payments display on payslips? (FRA)**

On-demand replacement payment results display with on-cycle payroll payments. Workday generates a separate payslip for on-demand additional results.

Workday uses the same payslip configuration and layout for on-demand additional payslips as for regular payslips. However, for on-demand additional payments, Workday displays *Bulletin de Paie Complementary* as the heading.

**How can I display time off dates on payslips? (FRA)**

Workday displays absence dates for any absence component related calculations associated with *FRA Days* or *FRA Hours* on a pay component.

You can avoid displaying time off dates twice for an earning and deduction that reference the same time off. Reference the pay component related calculation from the deduction in the earning. Example: Select *Time Off Deduction - FRA Days* as the **Override Calculation** for *FRA Days* on the earning.

To display time off dates for absences not associated with *FRA Days* or *FRA Hours*:

1. Access the earning or deduction for the time off.
2. In the **Related Calculations** grid, on the row for the time off, select *FRA Payslip - Displayed Time Off Dates* from the **Groups** prompt.

Workday recommends that you associate absences with *FRA Days* in order to include absences when calculating:

- Rates based on hours for absences in days.
- Partial day absences for adjusted seniority and social security ceiling calculations.

**On the Summary page of French pay results, which pay components display in the Worker column? Which display in the Employer column? (FRA)**

- The **Employer** column of the payslip displays all pay components with a **Code** ending in *\_ER*.
- The **Worker** column displays all other pay components.

For 2 components to be displayed on the same line, they must have the same code except for *\_EE* and *\_ER* endings.

## FAQ: Payslips for a Worker

---

The questions in this topic are applicable only to these countries:

- Payroll for Canada
- Payroll for the UK
- Payroll for the U.S.
- [How can workers view their payslips?](#) on page 501
- [Can workers view payslips imported from an external third-party system?](#) on page 501
- [Can terminated workers use My Payslips to view their online payslips?](#) on page 501
- [When are payslips visible to workers through My Payslips?](#) on page 501
- [How can workers select whether to receive electronic or paper copy of payslips?](#) on page 501

### How can workers view their payslips?

Workers can view their payslips in the:

- **My Payslips** report.
- **Pay** worklet.
- Worker profile, when they select **Pay > Payslips**.

### Can workers view payslips imported from an external third-party system?

Yes. On the **My Payslips** report, workers can view:

- Workday-generated payslips listed under **Payslips**.
- Payslips imported from an external third-party system listed under **External Payslips**. PDF versions are available.

Workers can also view their payslips from their worker profile, by selecting **Pay > Payslips**.

### Can terminated workers use My Payslips to view their online payslips?

Yes, if you configure the domain security policy for *Self-Service: Payroll (My Payslips)* to include *Terminee Self Service* as a security group type, and *Terminee As Self* as a security group.

### When are payslips visible to workers through My Payslips?

The **Days from Payment Date to Display Payslip** option determines when payslips are visible for completed payroll results. To view or edit this setting for a pay group:

1. Access the **View Pay Group** report.
2. Select **Organization > Edit Organization** from the related actions menu of the pay group.

### How can workers select whether to receive electronic or paper copy of payslips?

To enable workers to select whether to receive electronic or paper copy of payslips:

- Access the **Company Payroll Printing Options** task.
- Select the **Allow Employee to Override through Self-service** check box.

Workers can select **Payroll > Change Payslip Printing Election** from the related actions menu of their worker profile.

## Reference: Line Item Limits for Printed Payslips

The information in this topic is applicable only to these countries:

- Payroll for Canada
- Payroll for France
- Payroll for the UK
- Payroll for the United States

There's a maximum number of earnings, deductions, or other detailed line items that Workday can list in each section of an employee's hard copy payslip. When the number of items exceeds the limit, Workday sums the employee's overflow items in the last line without showing the detail.

**Note:** Limits apply to Workday-delivered solutions for hard-copy payslips only. The online version includes all lines of detail.

| Payslip Section             | XSLT - Total Number of Line Items                                              | Report Designer - Total Number of Line Items                                   |
|-----------------------------|--------------------------------------------------------------------------------|--------------------------------------------------------------------------------|
| Absence Plans               | 3                                                                              | N/A                                                                            |
| Earnings                    | 11                                                                             | 11                                                                             |

## Compliance

### Steps: Set Up Local Minimum Wage Rates (USA)

#### Context

You can set up local minimum wage rates to:

- Help you comply with the government regulations of local counties and cities.
- Calculate income withholding orders (IWOs) and help you determine pay rates and disposable earnings for IWO deductions.

## Steps

1. Map the local minimum wage rate to the location of a business site.
  - a. Access the **View Location** report.
  - b. On the **Business Site** tab, click **Edit** to select an authority from the **Local Minimum Wage Authority** prompt.

Security: *Location: View* domain in the Organizations and Roles functional area.

2. (Optional) If there are multiple minimum wage rates, access the **Record US Withholding Order for Worker** task for a creditor garnishment or state tax levy IWO to override the set local minimum wage rate for the worker's location.

On the **Local Minimum Wage** tab:

- a. Select the **Use Override Rate** check box.
- b. Enter a local minimum wage rate in the **Local Minimum Wage Amount** field.

Security: *Worker Data: Payroll (Income Withholding Orders)* - USA domain in the USA Payroll functional area.

Workday compares the local, federal, and state minimum wage rate and uses the highest rate for the IWO calculation if the **Use Override Rate** check box is:

- Checked.
- Unchecked and there's a set local minimum wage authority.

## Result

Workday displays the set local minimum wage rate for the worker's primary job location on creditor garnishment and state tax levy IWOs.

## Concept: Statutory Compliance (USA)

---

### Taxes

Workday Payroll for U.S. supports employer withholding obligations by performing the following tax calculations – including tax rates, wage and payment limits, and allowances:

#### Federal Taxes

- Federal Income Tax Withholding
- FICA (OASDI/Medicare - Employee and Employer Paid)
- Unemployment Insurance – (Employee and Employer Paid)
- Unemployment Insurance Credit Reduction (Employer Paid)
- Employee Reported Tips [USA]
- Additional Medicare Tax

#### State Taxes

- State Income Tax Withholding (including multistate withholding rules)
- Unemployment Insurance – Employer Paid
- Federal Unemployment Insurance Credit Reduction (Employer Paid)
- Advanced Earned Income Credit (Indiana and Wisconsin)
- Special State Taxes

## Local Taxes

- City Withholding (including multicity withholding rules)
- County Withholding
- School District Withholding
- Special Locality Taxes

## Calculations for Federal, State, and City Tax Withholding

To calculate tax withholding amounts for a pay period, Workday:

- Determines taxable wages for the period.
- Annualizes the amount.
- Calculates the tax based on the annualized amount.
- Deannualizes the tax result.

## Involuntary Withholding Orders/Garnishments

Workday Payroll for U.S. supports these types of garnishment calculations:

- Bankruptcy orders
- Creditor garnishments
- Federal Administrative wage garnishments
- Federal student loans
- Federal tax levies
- State tax levies
- Support orders (including lump sum)
- Wage assignments

For each type, Workday calculates:

- Disposable earnings.
- Limits.
- Allocation methods at federal and state level.

## Minimum Wage

Workday delivers and maintains federal, state, and local minimum wage values. Use these reports to view minimum wage data:

| Report                                     | Description                                                                                |
|--------------------------------------------|--------------------------------------------------------------------------------------------|
| <b>All Payroll Authority Minimum Wages</b> | Displays minimum wage for each local and state tax authority and the federal minimum wage. |
| <b>Payroll Authority Minimum Wages</b>     | Displays minimum wages for a state and local tax authority.                                |

## Payroll Compliance Update Reporting

You can use the **Payroll Compliance Update Documentation** report to look up Workday-delivered compliance updates (since 2014/08/01) by:

- Country.
- Type.
- Tax year.
- Delivery date range.
- Deductions.

- Tax authorities.

### Verification of Legal Obligations

Workday Payroll for U.S. is designed to assist you generally in the withholding of taxes and other amounts required by law. However, you should independently verify your withholding and remittance obligations required by the various jurisdictions in which you operate.

## Concept: Statutory Compliance (CAN)

---

### Taxes

Workday Payroll for Canada supports employer withholding obligations by performing these tax calculations, including tax rates, wage and payment limits, and allowances:

#### Federal Taxes

- Canadian Pension Plan (CPP) - Employee and Employer Paid
- Canadian Pension Plan Second Contribution (CPP2) - Employee and Employer Paid
- Employment Insurance (EI) - Employee and Employer
- Federal Income Tax
- Federal Income Tax T4A- Retirement Compensation Arrangement
- Goods and Services (GST)
- Quebec Pension Plan (QPP) - Employee and Employer (includes a mid-year employee move to Quebec when the employee meets the CPP wage base limit)
- Quebec Pension Plan Second Contribution (QPP2) - Employee and Employer (includes a mid-year employee move to Quebec when the employee meets the CPP2 wage base limit)

#### Province Taxes

- Payroll and Health Tax
    - Health Tax (Ontario and British Columbia)
    - Health and Post-Secondary Education Tax - Employer Paid (Manitoba, Newfoundland and Labrador)
    - Quebec Health Services Fund
- The provincial education and health taxes exclude TD1-IN exempt wages.
- Province Income Tax
  - Province Income Tax (Quebec)
  - Province Payroll Tax (Nunavut and Northwest Territories)
  - Province Income Tax T4A - Retirement Compensation Arrangement
  - QC Commission des normes du travail
  - Quebec Compensation Tax
  - Quebec Parental Insurance Plan - Employee and Employer Paid

- Quebec Province Workers Compensation
- Quebec Workforce Skills Development Recognition Fund
- Sales Tax
  - Province Premiums Tax (PPT)
  - Retail Sales Taxes (RST)
  - Harmonized Sale Tax (HST)
  - Quebec Sales Taxes (QST)
- Worker's Compensation

### Involuntary Withholding Orders and Garnishments

Workday Payroll for Canada supports these types of involuntary withholding order and garnishment calculations:

- Family maintenance.
- Federal tax levies.
- Garnishments.
- Provincial tax levies.
- Wage assignments.

Workday includes disposable earnings limits, fee limits, and allocation methods at both the federal and provincial level.

### Minimum Wage

Workday delivers and maintains minimum wage values for all provinces. Use these reports to view minimum wage data:

| Report                                     | Description                                                               |
|--------------------------------------------|---------------------------------------------------------------------------|
| <b>All Payroll Authority Minimum Wages</b> | Displays the minimum wage for each province and the federal minimum wage. |
| <b>Payroll Authority Minimum Wages</b>     | Displays minimum wages for a province.                                    |

### Payroll Compliance Update Reporting

You can use the **Payroll Compliance Update Documentation** report to look up Workday-delivered compliance updates (since 2014/08/01). You can filter by country, type, tax year, delivery date range, deductions, and tax authorities.

### Verification of Legal Obligations

Workday Payroll for Canada is designed to assist you generally in the withholding of taxes and other amounts required by law. However, you should independently verify your withholding and remittance obligations required by the various jurisdictions in which you operate.

## Concept: Statutory Compliance (UK)

---

### PAYE

Workday Payroll for the UK supports employer statutory obligations by performing these tax calculations.

#### Tax

Support for payments of tax includes:

- Calculation of free pay and additional taxable pay.
- Rules regarding payments after leaving.
- Scotland, Wales, and Rest of UK tax regimes.

To calculate a worker's tax deduction amount for a pay period, Workday determines the worker's taxable pay:

- Year to Date (YTD) for cumulative tax calculations.
- Period to Date (PTD) for Week 1/Month 1 tax calculations.

## National Insurance

Workday Payroll for the UK supports the calculation of Employee and Employer Class 1 National Insurance (NI) contributions, including:

- NI categories A, B, C, D, E, F, H, I, J, K, L, M, N, S, V, X, and Z
- Standard NI.
- Director's NI standard annual cumulative method.

An employee who is a director at the beginning of the tax year has an annual earnings period for that tax year, even if they cease to be a director before the tax year ends. The annual earnings period runs from 6 April to 5 April.

Workday also supports these mid-year events:

- A newly appointed director.
- A worker becomes a director.
- A director changes their NI category.
- Director's NI alternative method is supported for FPS purposes. Check directors' NI for each period, or when they leave or at year-end, and adjust the record accordingly.
- Payments After Leaving.

To calculate employee's and employer's NI deduction amounts for a pay period, Workday determines the employee's NIable pay:

- Year to Date (YTD) for Director's NI standard annual cumulative method calculations.
- Period to Date (PTD) for standard Director's alternative method calculations.
- Apprenticeship Levy is also calculated and accounted for within the EPS.

## Student and Postgraduate Loans

Workday Payroll for the UK supports calculation of worker student and postgraduate loan deductions, including interaction with court orders, to ensure that they are:

- Prioritised correctly.

- Not deducted when active court orders (such as those for Council Tax) prohibit it.

To calculate worker student and postgraduate loan deduction amounts for a pay period, Workday determines the Nlable Pay Period to Date (PTD).

## Court Orders

Workday Payroll for the UK supports these types of court order calculations, including court order fees and correct prioritisation when a worker has more than 1 active court order:

- Attachment of Earnings Order in respect of Council Tax (Priority)
- Attachment of Earnings Order in respect of Council Tax (Priority) for Wales, from 1st April 2022
- Attachment of Earnings Order in respect of Fines (Priority)
- Attachment of Earnings Order in respect of Maintenance (Priority)
- Deduction from Earnings Order (Priority)
- Attachment of Earnings Order (Non Priority)
- Earnings Arrestment
- Current Maintenance Arrestment
- Conjoined Earnings Arrestment
- Direct Earnings Attachment
- Debt Arrangement Scheme

## Statutory Payments

Workday Payroll for the UK supports calculation and payment of these statutory payments:

- Statutory Adoption Pay (SAP)
- Statutory Maternity Pay (SMP)
- Statutory Neonatal Care Pay (SNCP)
- Shared Parental Pay (ShPP)
- Statutory Parental Bereavement Pay (SPBP)
- Statutory Paternity Pay (SPP)
- Statutory Sick Pay (SSP)

## Pensions Auto-Enrolment

Workday Payroll for the UK supports Pensions Auto-Enrolment requirements, enabling you to:

- Identify staging and re-enrolment dates.
- Define pension schemes used for auto-enrolment.
- Perform worker assessment within the payroll calculation.
- Enrol workers into the auto-enrolment pension scheme and deduct associated pension contributions.
- Apply postponement at the employer or worker level.

## Payroll Compliance Update Reporting

You can use the **Payroll Compliance Update Documentation** report, or the Payroll Compliance Updates Dashboard, to view Workday-delivered compliance updates (issued since 14th March 2015) by:

- Country.
- Type.
- Tax year.
- Delivery date range.
- Earnings and deductions.

- Applies to.

### Verification of Legal Obligations

Workday Payroll for the UK is designed to assist you generally in the deduction of taxes and other amounts, and the payment of statutory elements required by law. However, you should independently verify your statutory obligations required by HMRC and other bodies.

## Concept: Statutory Compliance (FRA)

---

### Statutory Contributions

Workday Payroll for France supports employer and employee obligations by providing these statutory contribution calculations. Workday supports:

- The calculation of statutory rates, contribution bases, and limits.
- The application of contribution bases following a yearly progressive regularization.

### URSSAF

Workday supports employer and employee statutory calculations for workers classified as these URSSAF types of personnel:

- 100 - General Plan.
- 112 - General Case Pension Contributions Exempted.
- 172 - General Plan Without Disability and Pension Contributions Including Civil Servants on Secondment. (For privately employed civil servants.)
- 180 - General Plan without pension contributions. (For impatriates who don't contribute to a pension plan.)
- 336 - Medical Jobs 30% Reduced Rate.
- 346 - Medical Health Center Staff.
- 726 - Apprentice.
- 727 - Apprentice Alsace/Moselle.
- 863 - Company Board Members.

Workday also supports:

- Additional contributions for workers in Alsace Moselle.
- Contributions on the employer portion of partial activity indemnities, during COVID special measures.
- Contributions on stock options and free shares.
- CSG exemptions and additional contribution calculations for nonresident workers.
- CSG on replacement income.
- Reductions in CSG and CRDS on replacement income.
- Reductions on illness contributions for Alsace Moselle and nonresident workers.
- Employee contribution exemptions for apprentices.

|                           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |

### Withholding Orders

Workday Payroll for France supports these types of withholding orders:

- Alimony Pension.
- Administrative Seizure.
- Debt.

When managing withholding orders Workday supports:

- Disposable earnings calculations.
- Limit increases by dependents.
- Prioritization when a worker has more than 1 active withholding order.
- RSA limits.

### Déclaration Sociale Nominative

Workday Payroll for France supports the generation of these types of Déclaration Sociale Nominative (DSN) reports for supported pay and statutory calculations:

- Monthly.
- Termination.
- Absence.
- Return from absence.

### Statutory Payments

Workday Payroll for France supports the calculation of these statutory payments:

- Statutory compensation at the end of a fixed-term contract.
- Transportation allowances, including calculations for Paris-area transportation fees and mileage allowances.

### Payslips

Workday Payroll for France enables you to include all elements required by legislation on payslips.

### Payroll Compliance Update Reporting

You can use the **Payroll Compliance Update Documentation** report or the **Payroll Compliance Updates Dashboard** to view Workday-delivered compliance updates (issued since March 12, 2016).

### Verification of Legal Obligations

Workday Payroll for France is designed to assist you generally in the calculation of taxes and other amounts, and the payment of statutory elements required by law. However, you should independently verify your statutory obligations required by URSSAF and other bodies.

## Concept: Statutory Compliance (AUS)

---

### PAYG

Workday Payroll for Australia supports employer statutory obligations by performing these tax calculations.

#### Tax

Support for payment of tax includes:

- Calculation of taxable earnings.
- Calculation of PAYG Withholding

To calculate a worker's tax deduction amount for a pay period, Workday determines the worker's:

- Tax scale to be applied based on the workers tax details (TFN declaration)
- Taxable pay Year to Date (YTD) for cumulative tax calculations.

### Superannuation

Workday Payroll for Australia supports superannuation, enabling you to:

- Record a worker's superannuation fund choice.
- Pay superannuation to workers without a recorded fund choice, using a default fund.
- Calculate the amount of superannuation guarantee and voluntary superannuation to pay to a worker.
- Define superannuation eligibility for your organization.

### Single Touch Payroll

Workday Payroll for Australia supports Phase 2 of Single Touch Payroll:

- Disaggregation of gross.
- Tax File Number declarations.
- Employment and payment types
- Reporting of superannuation liability and salary sacrifice.
- Reporting of child support deductions.

### Verification of Legal Obligations

Workday Payroll for Australia is designed to assist you generally in the deduction of taxes and other amounts, and the payment of statutory elements required by law. However, you should independently verify your statutory obligations required by the ATO and other bodies.

## Reference: Payroll Compliance Updates Dashboard

---

The **Payroll Compliance Updates** dashboard gives you quick visual insight into the compliance updates that are most important to you. You can quickly identify whether a compliance update potentially impacts your employees and take appropriate action, such as:

- Alerting employees.
- Spot-checking payroll results.
- Being ready to answer questions.

Its drillable worklets enable you to understand the details of what is changing without guesswork or the need to run weekly reports with various criteria.

You can configure the **Payroll Compliance Updates** dashboard to display 3 worklets:

- **Delivered Last Week**
- **Effective Next Month with Employee Impact**
- **Other Updates Delivered Last Week or Effective Next Month**

They're secured to the *Set Up: Payroll (Taxes View)* domain in the Core Payroll Functional area.

For Payroll for Canada, France, the UK, and the U.S., when you want to research compliance-related data (such as tax rates, wage and payment limits, allowances, and minimum wages) a navigation menu makes these reports easier to access.

Set Up

You can set up the **Payroll Compliance Updates** dashboard from the **Edit** button on the **Maintain Dashboards** task.

You can set defaults for the dashboard prompts and select which worklets to display. On the **Prompts** section, we recommend these default settings.

- **Country:**

| Default Type                              | Default Value                                                                                                           |
|-------------------------------------------|-------------------------------------------------------------------------------------------------------------------------|
| <i>Determine default value at runtime</i> | <i>Payroll Supported Default Country</i><br><br>The country or countries set up in <b>Edit Tenant Setup - Payroll</b> . |

- **Effective as of Date:**

Workday bases *delivered last week* and *effective next month* on the **As Of** date.

| Default Type                              | Default Value |
|-------------------------------------------|---------------|
| <i>Determine default value at runtime</i> | <i>Today</i>  |

You can change the Workday prepopulated reports for the menu navigation on the **Menu** section.

## Reference: Global Library

When adding on another Workday product area or expanding into new countries or regions, use the **Global Library** report to view sample configurations and common compliance requirements.

The **Global Library** report is a preconfigured profile of 2 types of configurations:

- Workday delivered and maintained statutory guidance configurations. Example: State minimum wages, tax calculations, withholding and court order data, address and name formats.
- Sample configurations. On the sample configuration tabs, you'll see a description of how to implement them.

The **Global Library** report is also available as a menu item from these Workday-delivered dashboards:

- **Pay Cycle Command Center**
- **Payroll Compliance Updates**

When you click **View Library** for that country or country region, the **Global Library** reports display under these product areas:

| Product Area        | Reports                                                                                                                                                                                                                                                                                                                | Security Domain                                     |

You can use the **Configure Profile Group** task to configure which reports display in the product areas.

This information isn't a source of record for regulatory requirements. Verify requirements for the regions in which you operate.

**Note:** These reports only display if Workday has uploaded the relevant information for the country.

Your company is expanding and will have workers in Australia. You want to know what time off and leave sample configurations Workday offers for a starting point.

1. Select **Australia** for the **Country**.

The **Global Library** report returns all configurations for **Australia**.

2. On the **Australia** row, click **View Library**.

3. On the **Time Off and Leave** tab, you'll see sample configurations and a description of how to implement them.

[Steps: Set Up Profiles and Profile Groups](#)

## Labor Costing

### Steps: Set Up Labor Costing

#### Prerequisites

If you use worktags, configure them before you set up labor costing. Use the **Maintain Worktag Usage** report to review and verify your worktags. Workday represents organization types and locations as worktag types. Examples:

- Business units.
- Cost centers.
- Custom organizations.
- Funds.
- Gifts.
- Grants.
- Locations.
- Programs.
- Projects.
- Regions.

## Context

Use these steps to allocate earnings and expenses to your defined organizations and locations (worktags).

## Steps

1. [Edit Business Processes](#) and configure *Assign Costing Allocation*.  
Use *Assign Costing Allocation* on its own or as a subprocess of the *Hire* or *Termination* business processes.
2. [Steps: Set Up Approval Routing for Costing](#) on page 521.
3. [Create Condition Rules for Costing](#) on page 522.
4. (Optional) Configure *Assign Costing Allocation* to display estimated annual compensation.  
See [Embed Related Worklets in Business Processes](#).

As you complete the task, consider:

| Field        | Description                                            |
|--------------|--------------------------------------------------------|
| <b>Name</b>  | Select <i>Estimated Annual Compensation</i> .          |
| <b>Field</b> | Select <i>Position for Assign Costing Allocation</i> . |

5. (Optional) [Set Up Custom Validations for Assigning Costing Allocations](#) on page 524.
6. Enable worktags that you can use in costing instructions.  
See: [Steps: Enable Worktags for Cost Allocations](#) on page 525.

7. (Optional) Access the **Edit Tenant Setup - Payroll** task:

- a) Select the **Enable Mid Period Costing** checkbox.

Workday prorates costing allocation by the proration type on the pay component. Costing always prorate regardless of pay component proration.

- b) Select the **Position Required for Costing Allocations** checkbox.

Workday requires you to select **Position** for the **Assign Costing Allocation** task or web service, so you can allocate costs for positions on leave.

This requirement can prevent you from completing the *Leave of Absence* business process for worker leaves. To work around this restriction, add a step condition logic to the *Leave of Absence* business process to skip costing for worker leaves.

- c) Select the **Intercompany Accounting - Enable** checkbox in the **Payroll Accounting** section.

When enabled, you can charge payroll expenses between multiple companies within an organization. See: [Reference: Edit Tenant Setup - Payroll](#).

- d) Select **Allocate New Pay Liability based on earning proration** to enable net pay liability allocation to create multiple actuals journal lines consistent with the distribution of the earnings paid to the worker.

**Note:** You cannot enable this feature if the **Intercompany Accounting - Enable** checkbox is selected.

- e) Select **Allocate Net Pay Liability - Exclude Negative Result Lines** to exclude negative earnings when calculating the earnings-based proration for net pay liability allocation, preventing inflated distributions or miscalculations.

**Note:** You cannot enable this feature if you have not enabled **Allocate Net Pay Liability**.

- f) Select the **Display Costing Allocation Event Number** checkbox.

When enabled, Workday assigns an ID number to completed costing allocation events and displays it in various reports. In addition, Workday retroactively assigns ID numbers to past costing allocation events with a completed status. This ensures more efficient tracking and auditing. It also supports linking these events with their associated Pay Accounting Reallocation journal entries.

- g) For Payroll for the U.S., if your organization uses salary over the cap, select the checkboxes to enable the feature in the **Payroll Accounting** and **Payroll Commitments** sections.

8. [Create Salary Caps \(USA\)](#) on page 1092.

You can create salary caps only when you enable the salary over the cap feature for payroll accounting on the **Edit Tenant Set Up - Payroll** task.

9. Optional: (Optional) Use these options to review a worker's default costing allocations:

- The **Organization Assignments** tab on the **View Supervisory Organization** report (*Manage Supervisory Organization* domain in the Organization Assignments functional area). This report displays default cost allocations that workers inherit from the supervisory organization.
- The **Pay** option on a worker's profile. Select **Costing Allocations**. The default costing allocations displayed on the worker's profile take precedence over allocations inherited from the supervisory organization.

10.(Optional) Override default costing instructions by assigning cost allocations to specific:

- Earnings: [Set Up Cost Allocations for Earnings](#) on page 256.
- Employee-paid deductions: [Set Up Cost Allocations for Employee Deductions](#) on page 258.
- Employer-paid expenses: [Define Cost Allocations for Employer-Paid Expenses](#) on page 534.

Workday allocates employer-paid expenses based on the allocation of employee gross earnings.

- Fringe benefit recovery (CAN, FRA, UK, USA): [Define Cost Allocations for Fringe Benefit Recovery](#) on page 536 .
- Workers:
  - [Define Cost Allocations for a Worker](#) on page 528 .
  - [Define Cost Allocations for a Worker as Part of a Staffing Event](#) on page 531 .
- Restricted (unfilled) positions: [Define Cost Allocations for Position Restrictions](#) on page 532 .

## Result

Workday allocates payroll costs according to the costing rules you've configured.

For Payroll for Canada and Payroll for the U.S., when you use multiple jobs functionality, journal entry lines include a position worktag and costing worktags. For worker-based pay components, Workday includes the worktag for the processing position, unless you select a position when entering payroll input.

## Next Steps

Review the distributions on these reports:

- **Pay Calculation Results for Worker (Actuals tab of View Payroll Result)**
- **Payroll Accounting by Period/Pay Group**
- **Payroll Accounting by Company/Period**

[Reference: Organization Types and Subtypes](#)

## Steps: Set Up Approval Routing for Costing

---

### Prerequisites

Security: *Set Up: Payroll* domain in Core Payroll functional area.

### Context

You can configure the *Assign Costing Allocation* business process to route cost allocation approval requests to:

- Administrative security groups, such as HR administrators and partners.
- Selected role-based (constrained) security groups, such as cost center managers and fund managers.

When an allocation requires approval from a role-based security group, Workday notifies the role, such as cost center managers in the proposed organizations. If you allocate costs to multiple organizations that have the same manager, Workday sends 1 approval request to that manager. When cost allocations change, the approval request goes to the roles in all proposed organizations.

Example: You allocate costs for a position evenly between cost center 1 and cost center 2. When you update these costing allocations and split them between cost centers 1 and 3, the managers of cost centers 1 and 3 receive an approval request.

### Steps

#### 1. [Edit Business Process Security Policies.](#)

On the *Assign Costing Allocation* business process, add security groups to either the:

- *Approve* action.
- *Review Costing Allocation Event Review Start* action step.

#### 2. [Edit Business Processes](#)

Add security groups to either of these steps on the *Assign Costing Allocation* business process:

- *Approve*
- *Review Costing Allocation Event Review Start*

### Example

You configure the *Assign Costing Allocation* business process to route approval requests to HR administrators and fund managers:

- 34% to fund 001 (the default fund)
- 33% to fund 002 (entered as a costing override)
- 33% to fund 003 (entered as a costing override)

When each fund has a different manager, Workday sends an approval notification to each of the 3 fund managers and to every HR administrator. However, if 1 person manages both funds 002 and 003, they would receive only 1 approval request.

If you update the allocations for funds 002 and 003 to 40% and 26% respectively, Workday notifies the managers for all 3 funds. If you later update the allocations to 0% for fund 001, 50% for fund 002 and 50% to fund 003, Workday notifies only the managers of funds 002 and 003.

[Concept: Business Processes](#)

## Create Condition Rules for Costing

---

### Prerequisites

Security: *Manage: Business Process Definitions* domain in the System functional area.

### Context

Creating condition rules improves the accuracy and control of the approval process for assigning cost allocations. You can create condition rules on the steps of the *Assign Costing Allocation* business process to validate:

- *Costing Allocation Proposed Organizations*
- *Costing Allocation Proposed Organization Type (Aggregate)*

When the condition rules on your **Assign Costing Allocation** business process are true, Workday:

- Stops the business process.
- Displays a critical error or warning.
- Saves the process for revision.

You can then correct the invalid organizations and rerun the business process.

### Steps

1. Access the *Assign Costing Allocation (Default Definition)* business process.
2. From the related actions menu of the initiation step or an action step, select **Business Process > Maintain Step Conditions**.
3. Confirm the **Effective Date** and **Workflow Step**.
4. Add a row in the **Validation Conditions** grid and from the **Rule** prompt, select **Create Condition Rule**.
5. As you create the condition rule, consider:

| Option                                         | Description                                                                                                                                                                                                                                                                                     |
|------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Description</b>                             | Workday displays this text as a message when the business process runs and the conditions you specify are true.                                                                                                                                                                                 |
| <b>Source External Field or Condition Rule</b> | To validate: <ul style="list-style-type: none"> <li>• Worktag values, select <i>Costing Allocation Proposed Organizations</i>.</li> <li>• Type of organization (such as a region, cost center, or project), select <i>Costing Allocation Proposed Organization Type (Aggregate)</i>.</li> </ul> |
| <b>Relational Operator</b>                     | Select an operator to evaluate the worktag or organization type against the comparison value.                                                                                                                                                                                                   |
| <b>Comparison Value</b>                        | Select a value for the worktag or organization type.                                                                                                                                                                                                                                            |

6. Add other rows with *And* or *Or* conditions as required.

### Result

The rule you created displays as a validation on the **Assign Costing Allocation** business process in these fields:

- **If** for an entrance condition (on an initiation step).
- **Validation** for an exit condition (on an action step).

### Example

You're an administrator in Cost Center A, and Cost Center A must not allocate Gift 1 and Grant 1 together. You create a condition rule as the exit condition on the workflow action step of the *Assign Costing Allocation (Default Definition)* business process.

In the **Description** field, enter *Gift 1 and Grant 1 can't be allocated together*.

| And/Or     | Source External Field or Condition Rule          | Relational Operator          | Comparison Value |
|------------|--------------------------------------------------|------------------------------|------------------|
| <i>And</i> | <i>Costing Allocation Proposed Organizations</i> | <i>any in selection list</i> | <i>Gift 1</i>    |
| <i>And</i> | <i>Costing Allocation Proposed Organizations</i> | <i>any in selection list</i> | <i>Grant 1</i>   |

When you click **OK**, Workday displays the rule in the **Validation** field.

When the **Assign Costing Allocation** business process runs with *Gift 1* and *Grant 1* in the **Costing Override** field, Workday displays your description in a critical or warning message: *Gift 1 and Grant 1 can't be allocated together*. The business process stops, and Workday saves it for you to correct.

[Create Business Process Condition Rules](#)

## Set Up Custom Validations for Assigning Costing Allocations

### Prerequisites

Security: *Set Up: Payroll* domain in the Core Payroll functional area.

### Context

You can set up validations to prevent or warn users from entering and submitting costing allocations with invalid worktag combinations.

Validations apply when you use the **Assign Costing Allocation** task, or the *Assign Costing Allocation* business process alone or as a subprocess part of another business process. Workday validates new costing allocations and existing allocations when you update them.

### Steps

1. Access the **Maintain Payroll Costing Validations** report.
2. Click **New Validation** at the appropriate **Severity** level:
  - *Critical*: Prevents users from submitting invalid requests. Workday saves these requests so that users can revise them.
  - *Warning*: Alerts users but doesn't prevent submission and approval.
3. As you complete the task, consider:

| Option        | Description                                                                                                                                                                           |
|---------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Description   | Enter text to display when the business process runs and the conditions you specify are true.                                                                                         |
| Category      | Assign a category to make the validation rule easier to find later. You can create <i>Custom Validation Rule</i> categories using the <b>Maintain Condition Rule Categories</b> task. |
| Derived Logic | Select the statement you defined for the rule conditions. It displays when you save a new rule.                                                                                       |

4. As you complete the Rule Conditions grid, consider:

| Field    | Description                                                                                                                                                 |
|----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------|
| And / Or | When 2 or more conditions exist, specify how they relate to each other.                                                                                     |
| ( )      | Use parentheses to indicate precedence for 3 or more statements with a combination of <i>And</i> and <i>Or</i> conditions. Example: <i>(A and B) or C</i> . |

| Field                                          | Description                                                                                                                                                                                                                                                                                                             |
|------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Source External Field or Condition Rule</b> | Select: <ul style="list-style-type: none"> <li><i>Costing Allocation Proposed Organizations</i> to validate worktag values.</li> <li><i>Costing Allocation Proposed Organization Type (Aggregate)</i> to validate use of a particular type of organization worktag, such as region, cost center, or project.</li> </ul> |
| <b>Comparison Value</b>                        | Based on the <b>Comparison Type</b> , select a comparison field or enter a value to compare to the source.                                                                                                                                                                                                              |

## Result

When a validation meets the:

- *Warning* conditions, Workday displays *Warning: [the validation description]*.
- *Critical* conditions, the costing allocation is incomplete and the error message displays.

## Example

You want to create a warning message to display when an administrator tries to allocate worker costs to the *Cost Center: 10000 Office of CEO* and selects a region other than *Region: North America*.

1. Access the **Maintain Payroll Costing Validations** report.
2. Click **New Validation** for a warning.
3. Enter *Change the Region to North America or select a different Cost Center* for the description.
4. In the Rule Conditions grid, enter these values:

| And/Or     | Source External Field or Condition Rule          | Relational Operator               | Comparison Type                       | Comparison Value                        |
|------------|--------------------------------------------------|-----------------------------------|---------------------------------------|-----------------------------------------|
|            | <i>Costing Allocation Proposed Organizations</i> | <i>any in selection list</i>      | <i>Value specified in this filter</i> | <i>Cost Center: 10000 Office of CEO</i> |
| <i>And</i> | <i>Costing Allocation Proposed Organizations</i> | <i>none in the selection list</i> | <i>Value specified in this filter</i> | <i>Region: North America</i>            |

5. Access the **Assign Costing Allocation** task.
6. In the **Worktags** column, select *Cost Center: 10000 Office of CEO* and *Region: Australia*.

Workday displays your message, *Warning: Change the Region to North America or select a different Cost Center*.

## Steps: Enable Worktags for Cost Allocations

### Prerequisites

Security:

- *Set Up: Enable Worktags* domain in the Worktags functional area.
- *Set Up: Organization* domain in the Organizations and Roles functional area.

### Context

You can make these worktags available for use in costing allocations:

- Business units.
- Cost centers.
- Custom organizations (when they don't have other organizations as members).
- Funds.
- Grants.
- Locations.
- Programs.
- Gifts.
- Projects.
- Regions.

Regardless of whether you've enabled them, you can always select the worktags when entering payroll input, or running off-cycle payments.

## Steps

### 1. [Maintain Organization Types](#).

You can select the organization type to edit, or create up to 10 custom organization types for payroll costing. Select **Use as Financial Worktag** to configure payroll costing worktags.

### 2. Access the **Edit Tenant Setup - Payroll** task.

Select **Enable Related Worktags** in the **Payroll Costing** section to configure allowed and required related worktag functionality for costing allocations.

Security: *Set Up: Tenant Setup - Payroll* domain in the System functional area.

### 3. [Configure Worktags for Transactions](#).

You can add or update the *Payroll Costing Allocation* transaction worktags that you want to enable as primary or additional worktags. When you configure the worktag as a balancing worktag, you must set them up as required for payroll costing allocation.

For Payroll for Canada and the U.S., making the Location worktag available has no effect on taxation. Local, state, and provincial taxes are based on a worker's location or position location, not on the location specified in costing allocations.

### 4. [Configure Related Worktags](#).

You can configure how to use related worktags on the **Assign Costing Allocation** task.

**Note:** The **Assign Costing Allocation** task processes worktags in the order that you define in the **Maintain Worktag Type Precedences** task. The **Assign Costing Allocation** web service doesn't.

### 5. [Set Up Account Posting Rules](#).

You can configure account posting rules to assign ledger accounts to operational journal lines for your company.

## Result

The assign costing allocation **Primary Worktag Types** display in separate columns on these business processes:

- Add Job.
- Change Job.
- Create Position.
- Edit Position.
- Hire Employee.
- Request Leave of Absence.
- Start International Assignment.
- Terminate Employee.

All other payroll costing allocation subprocess display **Primary Worktag Types** and **Additional Worktag Types** alphabetically in 1 column.

#### Related Information Concepts

[Concept: Worktag Balancing for Payroll](#) on page 428

## Example: Using Costing Company Override Rules

### Prerequisites

- Configure any worktag types under the **Payroll Costing Allocation** section of the **Maintain Worktag Usage** task. For this example, configure *Cost Center* and *Location*. See: [Steps: Enable Worktags for Cost Allocations](#). Worktags you configure populate the **Dimension** field on the **Maintain Payroll Costing Company Overrides** task.
- [Define Intercompany Profiles](#).
- Enable **Restricted to Companies** on the **Edit Cost Center** task. When enabled and you choose **Cost Center** as a value on the **Maintain Payroll Costing Company Overrides** task, you limit what populates the **Costing Company** field.
- Set up Intercompany Accounting on the **Edit Tenant Setup - Payroll** task. See: [Reference: Edit Tenant Setup - Payroll](#).
- Security: *Set Up: Payroll (Calculations - Payroll Specific)* domain in the Core Payroll functional area. See: [Steps: Enable Functional Areas and Security Policies](#).

### Context

Your worker, John, has these default organizational assignments:

- *Primary Company: GMS-1*
- *Cost Center: CC-1, Fund 1*

You want to allocate some of John's time to a different cost center, so you apply CC-2 as a worktag override to 1 of John's time block entries. In order for CC-2 to override the default cost center (CC-1) when you approve John's time entry, you configure override rules using the **Maintain Payroll Costing Company Overrides** task.

Use this task to configure override rules for time blocks to automatically match costing companies with worker time entries or run payroll accounting adjustments for intercompany time tracking errors. Workday evaluates the costing company override rules that you configure (and the full set of worktags, including worker defaults and any entered as overrides on the worker's time block) sequentially, and then determines whether the rule matches a worker's time entry.

### Steps

1. Access the **Maintain Payroll Costing Company Overrides** task.
2. Using the task, you configured these override rules.

| Rule 1                        |                                                                                                                                                                                                                       |
|-------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Costing Company: GMS-2</b> | Select the costing company you want to apply the override rule to, which is assigned to the worker's time block (in this example it's GMS-2). Only active companies as of the override rules' effective date display. |

|                               |                                                                                                                                            |
|-------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Rule 1</b>                 |                                                                                                                                            |
| <b>Dimension: Cost Center</b> | You created the <i>Cost Center</i> worktag on the <b>Maintain Worktag Usage</b> task, so you can select it in the <b>Dimension</b> prompt. |
| <b>Values: CC-2</b>           | Since you selected <i>Cost Center</i> as the dimension, only cost centers display as values.                                               |
| <b>Rule 2</b>                 |                                                                                                                                            |
| <b>Costing Company: GMS-3</b> |                                                                                                                                            |
| <b>Dimension: Location</b>    | You created the <i>Location</i> worktag on the <b>Maintain Worktag Usage</b> task, so you can select it in the <b>Dimension</b> prompt.    |
| <b>Value: LocA</b>            | Since you selected <i>Location</i> as the dimension, only locations display as values.                                                     |

### Result

You approve the time entry for John where you applied the CC-2 cost center as a worktag override. Workday evaluates the override rules you configured. Rule 1 matches the worktag override applied to the time entry, *Cost Center - CC-2*. Workday stops evaluating the rules and applies Rule 1 to the time entry, overriding John's default cost center, which is CC-1. The approved time entry displays the full set of worktags: CC-2 and *Fund1*.

## Define Cost Allocations for a Worker

### Prerequisites

- Enable worktags for cost allocations. See: [Steps: Enable Worktags for Cost Allocations](#).
- Configure the *Assign Costing Allocation* business process and security policy in the Core Payroll functional area.

### Context

Workday processes costing allocations for a worker when you calculate payroll using the **Run Pay Calculation** task.

You can specify default allocations for 1 or all of a worker's earnings across:

- Cost Centers.
- Projects.
- Grants.
- Other organization types.
- Locations.

For Payroll for Canada, Payroll for the UK, and Payroll for the U.S., if you enable the multiple jobs functionality from the **Position Setup Options** field on the **Edit Tenant Setup - HCM** task, workers can have cost allocations that differ by position.

You can view the costing allocations you defined by accessing the **All Workers Costing Allocations** report. See: [View Worker Cost Allocations](#).

For Payroll for the U.S., if you enable Salary Over the Cap and assign a Grant worktag subject to a Sponsor Salary Cap to a costing allocation, Workday evaluates earnings in the pay component group to determine the covered amount. When a portion of the earning exceeds the cap, Workday displays an action button in the Salary Over the Cap column.

### Steps

1. Access the **Assign Costing Allocation** task.
2. In the **Include Existing Costing Allocations** section, select the **From** and **To** dates.
3. As you complete the **Worker Costing** section, consider:

| Option          | Description                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|-----------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Position</b> | Applies the allocation instructions only to the selected position. You can select a past, present, or future position. When you enable <b>Require Position</b> on the <b>Edit Tenant Setup - Payroll</b> task, Workday displays: <ul style="list-style-type: none"> <li>• The worker's processing position for workers in Canada and the U.S.</li> <li>• The worker's primary position for workers in Australia, France, and the UK.</li> </ul> |
| <b>Earning</b>  | Applies the allocation instructions only to the selected earning. You can select from all earnings or earnings associated with the worker (or position) compensation plans.<br><br>When you leave Earning blank, the allocation instructions apply to all earnings for the worker or their position.                                                                                                                                            |

4. Click **OK**.
5. As you complete the task, consider:
6. (Optional) For Payroll for the U.S., if the action button appears in the Salary Over the Cap column, click the action button to access the salary over cap suballocation amount and organizational defaults. As you complete the grid, consider:

| Option                      | Description                                                                                                                                                                                                                                                               |
|-----------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Costing Company</b>      | Enter a costing company to assign costing allocations. The <b>Costing Company</b> column is only available when you select the <b>Intercompany Accounting - Enable</b> check box in the <b>Payroll Accounting</b> section on the <b>Edit Tenant Setup - Payroll</b> task. |
| <b>Worktags</b>             | You can edit the worker's organizational default worktags on the salary over cap suballocation. You can't edit the Grant worktag associated with the salary over cap award.                                                                                               |
| <b>Distribution Percent</b> | You can add rows to split the costing allocation for the salary over cap portion. The sum of all rows must equal 100%.                                                                                                                                                    |

**Allocations for a Worker****Allocations for a Worker with Multiple Positions (CAN, USA)**

Enter cost allocations for Ben:

- To allocate 34% of his earnings to his default cost center.
- To split the rest evenly between cost centers 0002 and 0003.

| Default (As of Start Date) | Costing Override         | Distribution Percent |
|----------------------------|--------------------------|----------------------|
| Cost Center: 0001          | No entry                 | 34                   |
|                            | <i>Cost Center: 0002</i> | 33                   |
|                            | <i>Cost Center: 0003</i> | 33                   |

Jean has 2 positions, each belonging to a different cost center:

- Researcher, cost center 0001
- Professor, cost center 0002

You want to allocate 50% of her earnings to cost center 0003.

Access the **Assign Costing Allocation** task for her researcher position and enter:

| Default (As of Start Date) | Costing Override         | Distribution Percent |
|----------------------------|--------------------------|----------------------|
| Cost Center: 0001          | No entry                 | 50                   |
|                            | <i>Cost Center: 0003</i> | 50                   |

Now, access the **Assign Costing Allocation** task for her professor position and enter:

| Default (As of Start Date) | Costing Override         | Distribution Percent |
|----------------------------|--------------------------|----------------------|
| Cost Center: 0002          | No entry                 | 50                   |
|                            | <i>Cost Center: 0003</i> | 50                   |

For her researcher position:

- 50% of her earnings will go to cost center 0001.
- 50% of her earnings will go to cost center 0003.

For her professor position:

- 50% of her earnings will go to cost center 0002.
- 50% of her earnings will go to cost center 0003.

## Define Cost Allocations for a Worker as Part of a Staffing Event

### Prerequisites

- Enable worktags for cost allocations. See: [Steps: Enable Worktags for Cost Allocations](#).
- Add the *Assign Costing Allocation* business process as a step in your staffing business processes, such as *Hire* or *Termination*.
- Configure the *Assign Costing Allocation* business process and security policy in the Core Payroll functional area.

### Context

As a step in the hiring process or another staffing event, you can allocate 1 or more worker earnings across:

- Cost Centers.
- Projects.
- Grants.
- Other organization types and locations.

For Payroll for Canada, the UK, and the U.S., if you enable multiple jobs on your Workday tenant, workers can have cost allocations that differ by position.

The costing hierarchy for employee earnings overrides the cost allocations you specify for an employee's earnings or their position.

### Steps

1. When you receive an automated notice requesting you to assign costing allocations to a worker as part of the hiring process or staffing event, select:

| Option                              | Description                                                                                                                                                                                                                                                                                                                                                                           |
|-------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Include Existing Allocations</b> | Revise the cost allocations using the <b>From</b> and <b>To</b> date filters and reload the data using <b>Refresh Costing Allocation</b> .<br>By default, the <b>From</b> field is the current date.                                                                                                                                                                                  |
| <b>Costing Allocation Level</b>     | Identify which earnings to allocate: <ul style="list-style-type: none"> <li>• <i>Worker</i>: all the worker's earnings</li> <li>• <i>Worker, Position, and Earning</i>: a selected earning for the worker's position</li> <li>• <i>Worker and Earning</i>: a selected earning for the worker</li> <li>• <i>Worker and Position</i>: all earnings for the worker's position</li> </ul> |
| <b>Earning</b>                      | When the <b>Costing Allocation Level</b> is <i>Worker, Position, and Earning</i> or <i>Worker and Earning</i> , select from all earnings or the earnings belonging to the worker's (or position's) compensation plans.                                                                                                                                                                |

- (Optional) Select the **Copy Position Restriction Costing Allocation** check box to modify position restrictions for the employee's position.

This check box is available for *Worker and Position* allocations, only if you:

- Use the Position Management staffing model.
- Are allocating costs as part of the *Hire* business process.

- As you complete the task, consider:

## Define Cost Allocations for Position Restrictions

### Prerequisites

- Enable worktags for cost allocations. See: [Steps: Enable Worktags for Cost Allocations](#).
- Configure the *Assign Costing Allocation* business process and security policy in the Core Payroll functional area.

### Context

You can define how to allocate earnings for a particular position, or position restriction, across:

- Cost centers.
- Projects.
- Grants.
- Other organization types and locations.

Workers hired into the position inherit the allocations by default. Workers already in the position inherit the allocations only if they have no worker-specific allocations defined for a:

- Worker, position, and earning.
- Worker and earning.
- Worker and position.
- Worker.

The cost allocations you specify for a position restriction are subject to the costing hierarchy for employee earnings. You can access the **All Position Restrictions Costing Allocations** report to view all cost allocations defined for positions.

For Payroll for the U.S., if you enable Salary Over the Cap and assign a Grant worktag subject to a Sponsor Salary Cap to a costing allocation, Workday evaluates earnings in the pay component group to determine the covered amount. When a portion of the earning exceeds the cap, Workday displays an action button in the Salary Over the Cap column.

### Steps

- Access the **Assign Costing Allocation** task.
- In the **Include Existing Costing Allocations** section, select the **From** and **To** dates.
- As you complete the **Position Restrictions Costing** section, consider:

| Option                       | Description                                                                                          |
|------------------------------|------------------------------------------------------------------------------------------------------|
| <b>Effective Date</b>        | Controls the positions available for selection.                                                      |
| <b>Position Restrictions</b> | You can select any position, filled or unfilled, that is available as of the <b>Effective Date</b> . |

4. Click **OK**.
5. As you complete the task, consider:
6. (Optional) For Payroll for the U.S., if the action button appears in the Salary Over the Cap column, click the action button to access the salary over cap suballocation amount and organizational defaults. As you complete the grid, consider:

| Option                      | Description                                                                                                                                                                                                                                                               |
|-----------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Costing Company</b>      | Enter a costing company to assign costing allocations. The <b>Costing Company</b> column is only available when you select the <b>Intercompany Accounting - Enable</b> check box in the <b>Payroll Accounting</b> section on the <b>Edit Tenant Setup - Payroll</b> task. |
| <b>Worktags</b>             | You can edit the worker's organizational default worktags on the salary over cap suballocation. You can't edit the Grant worktag associated with the salary over cap award.                                                                                               |
| <b>Distribution Percent</b> | You can add rows to split the costing allocation for the salary over cap portion. ### Position Restriction Costing Allocation

#### Allocations for a Worker with Multiple Positions (CAN, USA)

You want to allocate costs for employees hired into position 5000 to 3 cost centers. Allocate 34% to the default cost center for the worker's organization assignment, and split the rest evenly between cost centers 0002 and 0003. Enter:

| Default (As of Start Date) | Costing Override         | Distribution Percent |
|----------------------------|--------------------------|----------------------|
| Cost Center: 0001          | No entry                 | 34                   |
|                            | <i>Cost Center: 0002</i> | 33                   |
|                            | <i>Cost Center: 0003</i> | 33                   |

Jean has 2 positions, each belonging to a different cost center:

- Researcher, cost center 0001
- Professor, cost center 0002

You want to allocate 50% of her earnings to cost center 0003.

Access the **Assign Costing Allocation** task for her researcher position and enter:

| Default (As of Start Date) | Costing Override         | Distribution Percent |
|----------------------------|--------------------------|----------------------|
| Cost Center: 0001          | No entry                 | 50                   |
|                            | <i>Cost Center: 0003</i> | 50                   |

Now, access the **Assign Costing Allocation** task for her professor position and enter:

| Default (As of Start Date) | Costing Override         | Distribution Percent |
|----------------------------|--------------------------|----------------------|
| Cost Center: 0002          | No entry                 | 50                   |
|                            | <i>Cost Center: 0003</i> | 50                   |

For her researcher position:

- 50% of her earnings will go to cost center 0001.
- 50% of her earnings will go to cost center 0003.

For her professor position:

- 50% of her earnings will go to cost center 0002.
- 50% of her earnings will go to cost center 0003.

## Define Cost Allocations for Employer-Paid Expenses

---

### Prerequisites

Enable worktags for cost allocations.

Security: *Set Up: Payroll (Calculations - Payroll Specific)* domain in Core Payroll functional area.

### Context

You can specify how to allocate employer-paid expenses for a selected pay group across:

- Cost centers.
- Projects.
- Grants.
- Other organization types and locations.

These expenses add to labor costs, such as employer-paid taxes and benefits, but they don't add to gross or net pay.

The cost allocations you specify for a pay group and company are:

- Subject to the costing hierarchy for employer-paid expenses.
- Applied specifically to either debit or credit lines of corresponding journal entries.

### Steps

1. Access the **Edit Employer Paid Expense Costing Allocation** task.

a) Select a **Pay Group**.

b) If applicable, select a **Company** and an **Employer Paid Expense**.

**Note:** You can assign costing allocations only to Workday-owned employer paid expenses.

## 2. Enter **Debit** or **Credit** allocations, or both.

- To allocate 100% of the employer-paid expenses to the same worktag values, enter instructions in 1 row.
- To distribute the allocations, enter multiple rows.

As you complete the task, consider:

| Field                                | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|--------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Start Date</b><br><b>End Date</b> | If an allocation exists, enter its <b>End Date</b> . New costing allocation dates can't overlap past or future instructions.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| <b>Costing Company</b>               | Enter a company to cost specific employer-paid expenses. The <b>Costing Company</b> column is available only when you select the <b>Intercompany Accounting - Enable</b> check box in the <b>Payroll Accounting</b> section on the <b>Edit Tenant Setup - Payroll</b> task.                                                                                                                                                                                                                                                                                                                                                     |
| <b>Costing Override Worktag</b>      | <p>Select a value for at least 1 of the worktags listed in the <b>Required (Override At Least One)</b> column; Workday removes the worktag from that column.</p> <p>When you've enabled worktag balancing, enter a value for the balancing worktag.</p> <p>You can also select additional worktags that you've enabled for payroll costing.</p> <p>When you've set up related worktags, Workday adds the one you select and its related worktags. You can remove any you don't want.</p> <p>You can only select 1 of these worktags as an override: <i>Project</i>, <i>Project Plan Phase</i>, or <i>Project Plan Task</i>.</p> |
| <b>Distribution Percent</b>          | The sum of all rows must equal 100%.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

## Result

When rounding is necessary, Workday adjusts the last allocation.

Workday displays the allocated amounts on the **Actuals** tab of the **View Payroll Results** page.

## Next Steps

To view allocations for employer-paid expenses, access the **All Employer Paid Expense Costing Allocations** report.

## Define Cost Allocations for Fringe Benefit Recovery

### Prerequisites

Enable worktags for cost allocations.

Security: *Set Up: Payroll (Calculations - Payroll Specific)* domain in the Core Payroll functional area.

### Context

The instructions in this topic are applicable only for these countries:

- Payroll for Canada
- Payroll for France
- Payroll for the UK
- Payroll for the U.S.

You can specify how to allocate the recovery of fringe benefits for a selected pay group to:

- Grants.
- Projects.
- Other costing dimensions.

### Steps

1. Access the **Edit Fringe Benefit Recovery Costing Allocation** task.
  - a) Select a **Pay Group**.
  - b) If applicable, select a **Company**.
2. If an allocation exists, enter its **End Date**.
3. To define a new costing allocation, click **Add**.
4. Enter the **Start Date** and optional **End Date** for the new allocation. Dates can't overlap past or future instructions.
5. To allocate 100% of the employer-paid expenses to the same worktag values, enter instructions in a single row. To distribute the allocations, enter multiple rows.

| Field                           | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|---------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Costing Company</b>          | Enter a company to allocate costing for fringe benefit recovery. The <b>Costing Company</b> column is only available when you select the <b>Intercompany Accounting - Enable</b> check box in the <b>Payroll Accounting</b> section on the <b>Edit Tenant Setup - Payroll</b> task.                                                                                                                                                                                                                                               |
| <b>Costing Override Worktag</b> | <p>Select a value for at least one of the worktags listed in the <b>Costing Override Worktag</b> column.</p> <p>If you have set up related worktags, they automatically populate the <b>Costing Override Worktag</b> field for you to consider using.</p> <p>You can also select additional worktags enabled for payroll costing.</p> <p>If you enable worktag balancing, the balancing worktag isn't available for a costing override, but added to journal lines based on your worktag balancing rules for fringe benefits.</p> |

| Field                       | Description                                                                                                                          |
|-----------------------------|--------------------------------------------------------------------------------------------------------------------------------------|
|                             | You can only select one of these worktags as an override: <i>Project</i> , <i>Project Plan Phase</i> , or <i>Project Plan Task</i> . |
| <b>Distribution Percent</b> | The sum of all rows must equal 100%.                                                                                                 |

- If the total distribution percent is less than 100%, add a row to allocate a percentage of costs to another combination of worktag values.
- Use the arrows in the **Order** column to control the order in which to allocate costs.

### Result

Workday displays the allocated amounts on the **Journal Lines** tab of **View Operational Accounting Details**.

When rounding is necessary, Workday adjusts the last allocation.

### Next Steps

Access the **All Fringe Benefit Recovery Costing Allocations** report, to view allocations for fringe benefit recovery.

## Configure Costing for Specific Employer-Paid Expense

### Prerequisites

Security: *Set Up: Payroll (Calculations – Payroll Specific)* in the Core Payroll functional area.

### Context

You can:

- Cost applicable employer-paid expenses to the worker's assigned costing allocations.
- Cost 100% of all applicable employer-paid expenses to the worker's organization defaults.
- Exclude specific earnings from the applicable employer-paid expense costing distribution.
- Set earnings-based costing rules for employer-paid expenses based on specific conditions or exclude specific earnings from applicable employer-paid expense costing.

### Steps

- Access the **Edit Employer Paid Expense Costing Allocation Defaults** task.
- Enter the **Pay Group**, **Company**, and **Employer Paid Expense**.  
You can enter only 1 employer-paid expense per pay group and company.
- As you complete the task, consider:

| Option            | Description                                                                                  |
|-------------------|----------------------------------------------------------------------------------------------|
| <b>Start Date</b> | Enter a start date that falls within the date range of a processing pay period or subperiod. |

| Option                                | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |                   |                                                                                                                 |                                |                                                                                                                                                                      |
