## Result

Workday processes costing rules depending on the configuration you select.

If you don't configure costing allocation rules, Workday automatically costs employer-paid expenses to earnings proration. If no earnings proration exists, Workday costs employer-paid expenses to a worker's organization assignment.

## Example

### Default from Worker's Costing Allocations

When a payroll administrator selects **Default from Worker's Costing Allocations**, Workday evaluates payroll result lines and uses:

1. Worker + Position level costing allocations for all position-based, employer-paid deductions.
2. Worker level costing allocations for employer-paid deductions that aren't position-based.
3. A worker's organization defaults if the worker doesn't have assigned costing allocations.

The payroll administrator at Global Modern Services uses the **Default from Worker's Costing Allocations** option. They cost 50% of a *Medical - AETNA - ER [USA]* employer-paid expense (\$200) to Cost Center 1, Fund 1. They cost 50% to Cost Center 2, Fund 2, which comes from the worker's assigned costing allocation.

| Distribution % | Costing               | Expense Distribution |
|----------------|-----------------------|----------------------|
| 50%            | Cost Center 1, Fund 1 | 100                  |
| 50%            | Cost Center 2, Fund 2 | 100                  |
| Total          |                       | 200                  |

### Default from Worker's Organization Assignment

The payroll administrator at Global Modern Services uses the **Default from Worker's Organization Assignment** option. They cost 100% of *Medical - AETNA - ER [USA]* employer-paid expense (\$500) to the worker's default organization assignment. Workday applies the costing rule and distributes the employer-paid expense as:

| Earning       | Gross | Distribution % | Costing                                                  | Expense Distribution |
|---------------|-------|----------------|----------------------------------------------------------|----------------------|
| Base Pay      | 5000  | 0%             | Cost Center 1, Fund 1                                    |                      |
| Spot Bonus    | 2000  | 0%             | Cost Center 2, Fund 2                                    |                      |
| Car Allowance | 1000  | 0%             | Cost Center 3, Fund 3                                    |                      |
|               |       | 100%           | Cost Center 4, Fund 4<br>(Worker's Default Organization) | 500                  |
| Total         |       |                |                                                          | 500                  |

### Exclude Earnings

The payroll administrator at Global Modern Services uses **Exclude Earnings** option to exclude *Spot Bonus* from the employer-paid expense costing distribution. Workday applies the costing rule and distributes the employer-paid expense as:

| Earning       | Gross | Distribution % | Costing               | Expense Distribution |
|---------------|-------|----------------|-----------------------|----------------------|
| Base Pay      | 5000  | 83%            | Cost Center 1, Fund 1 | 416.67               |
| Spot Bonus    | 2000  | -              | Cost Center 2, Fund 2 | -                    |
| Car Allowance | 1000  | 17%            | Cost Center 3, Fund 3 | 83.33                |
| Total         | 6000  | 100%           |                       | 500                  |

### Next Steps

Use the **View All Employer Paid Expense Costing Allocation Defaults** report to review any configured defaults.

## Set Up Retro Costing for Payroll Accounting

---

### Prerequisites

Security: *Set Up: Payroll (Calculations - Payroll Specific)* domain in the Core Payroll functional area.

### Context

You can automatically update retro result lines to reflect the costing rules, budget date, and payroll attributes of a retro pay period instead of the current period.

You can select earnings to exclude from retro costing when you want to keep the costing as the current period.

You can configure retro pay amounts to charge either over or under a salary cap grant when you run retro payroll calculations, reducing the number of payroll accounting adjustments you need to run and improving the accuracy of your billing. You can configure retro lines specific to salary cap grants to cost fully over or under the cap for certain job families, job family groups, and job profiles.

### Steps

1. Access the **Maintain Payroll Accounting Options** task.
2. Select the **Enable Retroactive Costing** check box.
3. (Optional) From the **Earnings to Exclude from Retro Costing** prompt, select 1 or more earnings to exclude from the calculation.
4. (Optional) For Payroll for the U.S., in the **Configuration for Retro Lines with Salary Cap Grant** section, select:
  - **Default Over Cap** to cost retro amounts associated with a salary cap grant to the Salary Over the Cap suballocations of a worker.
  - **Default Under Cap** to cost retro amounts associated with a salary cap grant to the salary cap grant of that worker.
5. For Payroll for the U.S., add rows to the grid that you want to configure for retro line salary cap costing.
 

When the job profile associated with a retro line matches the job profile you specify or belongs to the job family or job family group that you configure, the behavior you select in step 4 applies to the retro line.

### Result

When you run the **Run Retro Pay Calculation** task, Workday pulls in all incomplete retro events. When you complete the next pay calculation, Workday automatically updates retro result lines to reflect your costing rules.

### Example

#### Retroactive Costing

In July, a worker receives a bonus pay of 1,000 that is retroactive to January. Their cost center in January was CC100. In March, they moved to a different department and their cost center changed to CC500. When you select the **Enable Retroactive Costing** check box and run a retro pay calculation for the bonus pay, Workday applies the costing from the retro pay period instead of the current period, which is July. Their bonus is charged to cost center CC100.

#### Retro Costing to Salary Cap Grant (USA)

You have a worker who is a full-time professor earning a salary associated with a grant subject to a salary cap: SOC Grant A.

- They earn \$72,000 as a base annual salary, and they're on a monthly period schedule earning \$6,000 per month.
- SOC Grant A is subject to the award salary cap of \$240,000 base annual salary, or \$20,000 per month.

The worker is subject to these costing allocation rules:

| Default                                | SOC Suballocation       | Distribution Percent |
|----------------------------------------|-------------------------|----------------------|
| SOC Grant A<br>Fund A<br>Cost Center A |                         | 100%                 |
|                                        | Fund B<br>Cost Center B | 100%                 |

The worker earns their normal monthly salary from January to June. In July, they receive an annual salary increase to \$84,000, or \$7,000 per month, which is retroactive to June. When you run the **Run Retro Pay Calculation** task in July, Workday pulls in the salary increase for the worker as a retro event. After the next payroll calculation, the actuals journal reflects the retro differences and the costing configuration for lines with salary over the cap grants.

When you select the **Default Over Cap** check box, Workday allocates the retroactive \$1,000 to the suballocation of the worker, which is Fund B, Cost Center B for June, and the current \$7,000 to SOC Grant A, Fund A, Cost Center A.

When you select the **Default Under Cap** check box, Workday allocates the retroactive \$1,000 and the current \$7,000 to SOC Grant A, Fund A, Cost Center A for June:

When you configure a row in the table to have Professor as a Job Profile or select the Job Family to which the Professor job belongs, retro processing respects your choice to **Cost Fully Over Cap** or **Cost Fully Under Cap** for those selections rather than follow your default choice.

## View Worker Cost Allocations

### Prerequisites

Security: *Worker Data: Payroll (Costing Override)* domain in the Core Payroll functional area.

### Context

The **All Workers Costing Allocations** report enables you to view workers' past, present, and future cost allocations. You can also view cost allocations for workers with multiple jobs as well as who initiated and approved costing allocation events.

### Steps

1. Access the **All Workers Costing Allocations** report.
2. (Optional) To view all costing allocations for a worker with multiple jobs, filter the **Worker** column to select a specific worker and display all of their positions.

3. (Optional) To view cost allocations for a specific worker:
  - a. Click the worker's name to access the worker profile.
  - b. Click **Pay > Costing Allocation** to view present and future costing allocations.
  - c. Click **View All Costing Allocations** to view all past, present, and future costing allocations for the worker.
4. (Optional) To view details for a costing allocation event, including who initiated it and who approved it:
  - a. From the worker's related actions menu, select **Worker History > View Worker History by Category**.
  - b. Click **Payroll**.
5. (Optional) To view worker cost allocations where the award line company isn't the same as the payroll company, access the **Grant Multi Company Audit for Worker Costing Allocations** report.

## Concept: Allocation of Payroll Costs

### Workday Default Allocations

- [Workday Default Allocations](#) on page 542
- [Allocations Based on Pay Period End Date](#) on page 543
- [Proration and Midperiod Changes to Cost Allocations](#) on page 544
- [Rounding](#) on page 544
- [Reversals](#) on page 544
- [Multiple Positions](#) on page 544
- [Getting Cost Allocation Data](#) on page 545

This table displays how Workday automatically allocates different types of payroll costs and which types you can reallocate.

| Payroll Cost Type                                                                                                                                                                                                                             | Default Allocation                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | Reallocate? |

| Fringe benefit expenses | (CAN, FRA, UK, USA) Based on the distribution of the worker's gross pay earnings.                                                                                                                                                                                                                                                                | No          |
| Fringe benefit recovery | (CAN, FRA, UK, USA) According to the balancing worktag, when you enable worktag balancing.                                                                                                                                                                                                                                                       | Yes         |

### Allocations Based on Pay Period End Date

Workday applies the allocation instructions in effect on the pay period end date to the entire period. You can apply them to the mid period by selecting the **Enable Mid Period Costing** check box on the **Edit Tenant Setup - Payroll** task.

When an instruction spans pay periods, the available values are the ones in effect on the end date of the last pay period included in the instruction's start and end dates.

Example 1: The current pay period is June 8 to June 14, and Ernesto has these worker overrides:

- Row 1: June 1 - June 10
- Row 2: June 11 - June 20
- Row 3: June 21 - June 30

Workday applies the instructions for the row 2 override because it includes the June 14 pay period end date.

Example 2: The current pay period is January 1 to January 31. Amanda has worker overrides for January 10 to January 15. Because the pay period end date falls outside of the override dates, Workday applies

the Default Organizational Assignments. For a February 15 allocation end date, Workday would apply the allocation instructions to the January pay period.

### Proration and Midperiod Changes to Cost Allocations

When you select **Enable Mid Period Costing** on the **Edit Tenant Setup - Payroll** task and change costing allocations midperiod, Workday prorates costs for earnings and deductions.

Workday uses the earning's proration method when you select **Prorate Using Days Worked** or **Prorate Using Calendar Days** while creating or editing an earning. Workday doesn't support midperiod costing with the **Prorate Using Annual Working Days** proration method, and uses calendar days instead. When you don't select a proration method for an earning, Workday prorates costs based on calendar days.

Workday always prorates deductions based on calendar days.

When Workday Payroll passes costs to Workday Financials, it also passes the end date of the costing allocation as the budget date.

Workday recognizes midperiod costing allocation changes for these organizations:

- Business Unit
- Cost Center
- Custom Organizations
- Fund
- Grant
- Location
- Program
- Project Plan Phase
- Region

Changes to a worker's Default Organizational Assignments don't cause costed earnings proration.

Forward accruals use the costing allocations in effect on the period end date.

### Rounding

When you allocate costs across multiple organizations, Workday calculates the final distribution using the formula: *Total Calculated Value of Pay Component - Sum of All Instances Prior to Final Instance = Final Distribution Amount*, and rounds the result to the nearest penny.

Example: Base pay of 1225 distributes across 3 cost centers. Workday applies the formula to instance 3:

| Cost Center | Distribution Percent | Amount Allocated to Cost Center                         |
|-------------|----------------------|---------------------------------------------------------|
| 200         | 33.33                | $1225 \times 33.33 = 408.29$ (rounded to nearest penny) |
| 300         | 33.33                | $1225 \times 33.33 = 408.29$ (rounded to nearest penny) |
| 400         | 33.34                | $1225 - (408.29 + 408.29) = 408.42$                     |

### Reversals

You can reverse payroll results that include earnings with associated override values. Workday uses the allocation instructions associated with the original results to process the reversal.

Payroll for France doesn't support reversals.

### Multiple Positions

For Payroll for Canada, Payroll for the UK, and Payroll for the U.S., when you enable the multiple jobs functionality from the **Position Setup Options** field on the **Edit Tenant Setup - HCM** task, you can define

cost allocations for workers based on each of their positions. See: [Define Cost Allocations for Position Restrictions](#) on page 532.

Jean has 2 positions, each belonging to a different cost center:

- Researcher, cost center 0001
- Professor, cost center 0002

You want to allocate 50% of her earnings to cost center 0003. Access the **Assign Costing Allocation** task for her researcher position and enter:

| Default (As of Start Date) | Costing Override  | Distribution Percent |
|----------------------------|-------------------|----------------------|
| Cost Center: 0001          | No entry          | 50                   |
|                            | Cost Center: 0003 | 50                   |

Now, access the **Assign Costing Allocation** task for her professor position and enter:

| Default (As of Start Date) | Costing Override  | Distribution Percent |
|----------------------------|-------------------|----------------------|
| Cost Center: 0002          | No entry          | 50                   |
|                            | Cost Center: 0003 | 50                   |

For her researcher position:

- 50% of her earnings will go to cost center 0001.
- 50% of her earnings will go to cost center 0003.

For her professor position:

- 50% of her earnings will go to cost center 0002.
- 50% of her earnings will go to cost center 0003.

### Getting Cost Allocation Data

The *Get Worker Costing Allocation* web service retrieves costing information from a worker or position restriction.

#### Reference

[Reference: Edit Tenant Setup - Payroll](#)

## Concept: Allocate Net Pay Liability Based on Earning Proration

The Allocate Net Pay Liability Based on Earning Proration feature allows you to generate multiple actuals journal lines for the net pay liability (credit) that align with the distribution of earnings paid to the worker.

This provides the ability to better track and manage the liability associated with payroll net pay and eliminates the need to process post-payroll journal entries to reclassify accounting.

The Allocate Net Pay Liability Based on Earning Proration feature supports:

- Intercompany Accounting
- Journal Summarization
- Multi-position Workers
- Multiple Currency on Single Company Results

- Retroactive Pay Results
- Worktag Balancing

### Actuals Journals

With **Allocate Net Pay Liability Based on Earning Proration** enabled, you can create multiple journal lines for net pay based on the distribution of earnings.

If you use Worktag Balancing, the net pay, earnings, employee, and employer deductions journal lines (debits and credits) are subject to balancing. The system uses the primary worktag dimension from the Worktag Balancing rule and the optional balancing dimension from the worker's Default Organizational Assignments to create intercompany and/or interworktag payables and receivables journal lines.

Any small rounding differences that occur when calculating net pay journal lines will be added to the largest net pay amount. If there are multiple net pay journal lines that are the same and the largest, the difference will be added to the worktag set based on ascending order.

#### Example

An employee has a gross pay of \$1000, their proration of earnings is a 30/70 split, and they have a \$100 Employee Deduction. For simplicity, in this example no other deductions apply this pay result.

With this set up, their payroll actuals looks like:

| Pay Component      | Debit | Credit | Worktags              |
|--------------------|-------|--------|-----------------------|
| Earning-Base Pay   | 300   |        | Fund 1, Cost Center 1 |
| Earning-Base Pay   | 700   |        | Fund 2, Cost Center 2 |
| Employee Deduction |       | 100    | Fund 0, Cost Center 0 |
| Net Pay            |       | 900    |                       |

With **Allocate Net Pay Liability Based on Earning Proration** enabled, their payroll actuals would separate the net pay into two separate lines, resulting in payroll actuals that look like:

| Pay Component      | Debit | Credit | Worktags              |
|--------------------|-------|--------|-----------------------|
| Earning - Base Pay | 300   |        | Fund 1, Cost Center 1 |
| Earning - Base Pay | 700   |        | Fund 2, Cost Center 2 |
| Employee Deduction |       | 100    | Fund 0, Cost Center 0 |

| Pay Component | Debit | Credit | Worktags              |
|---------------|-------|--------|-----------------------|
| Net Pay       |       | 270    | Fund 1, Cost Center 1 |
| Net Pay       |       | 630    | Fund 2, Cost Center 2 |

### Payments Journals

When Allocate Net Pay Liability Based on Earnings Proration is enabled, multiple net pay liability lines (credits) are created based on the distribution of earnings on the actuals journal. The net pay liability lines (debits) on the Payroll Payment Journals follow the splits from the actuals journals to relieve the liability accounts.

The Payroll Payments Journals will continue to follow the configuration of your cash balancing rule. Workday will still generate any necessary intercompany and/or interworktag payable and receivable journal lines to balance at the bank account level.

**Note:** Ensure you test all the way through settling payroll and intercompany settlements. You can expect an increase in the time to complete or cancel settlements, especially if your company uses intercompany accounting or worktag balancing.

### Exclude Negative Results Lines

With **Allocate Net Pay Liability - Exclude Negative Result Lines** enabled, you allow the exclusion of negative earning result lines from the proration calculation and you can eliminate or correct improper prorated distributions.

When you have negative earning lines that decrease the payroll gross, the earnings-based distribution percentages are impacted and this could cause the resulting net pay split amounts to be artificially inflated.

If all earnings on the pay result are negative and excluded, the system uses the worktags from the worker's Default Organizational Assignments to create the journal lines.

### Example

An employee has a gross pay of \$200, including some negative earnings, and they have a \$100 Employee Deduction. For simplicity, in this example no other deductions apply this pay result.

With this set up, their payroll actuals looks like:

| Pay Component      | Debit | Credit | Worktags              |
|--------------------|-------|--------|-----------------------|
| Earning - Base Pay | 300   |        | Fund 1, Cost Center 1 |
| Earning - Base Pay | 700   |        | Fund 2, Cost Center 2 |
| Earning - Bonus    | -800  |        | Fund 3, Cost Center 3 |

| Pay Component      | Debit | Credit | Worktags              |
|--------------------|-------|--------|-----------------------|
| Employee Deduction |       | 100    | Fund 0, Cost Center 0 |
| Net Pay            |       | 100    |                       |

Payroll actuals without **Exclude Negative Results** would produce a costing proration of:

| Earning      | Amount | Worktags              | Math                   | Proration       |
|--------------|--------|-----------------------|------------------------|-----------------|
| Base Pay     | 300    | Fund 1, Cost Center 1 | $(300/200) \times 1.5$ | <del>150%</del> |
| Base Pay     | 700    | Fund 2, Cost Center 2 | $(700/200) \times 3.5$ | <del>350%</del> |
| Bonus        | -800   | Fund 3, Cost Center 3 | $(-800/200) \times -4$ | <del>400%</del> |
| <b>Total</b> | 200    |                       |                        |                 |

Payroll actuals without **Exclude Negative Results** enabled would produce:

| Pay Component      | Debit | Credit | Worktags              |
|--------------------|-------|--------|-----------------------|
| Earning - Base Pay | 300   |        | Fund 1, Cost Center 1 |
| Earning - Base Pay | 700   |        | Fund 2, Cost Center 3 |
| Earning - Bonus    | -800  |        | Fund 3, Cost Center 3 |
| Employee Deduction |       | 100    | Fund 0, Cost Center 0 |
| Net Pay            |       | 150    | Fund 1, Cost Center 1 |
| Net Pay            |       | 350    | Fund 2, Cost Center 2 |
| Net Pay            |       | -400   | Fund 3, Cost Center 3 |

Payroll actuals with **Exclude Negative Results** would produce a costing proration of:

| Earning      | Amount | Worktags              | Math                          | Proration |
|--------------|--------|-----------------------|-------------------------------|-----------|
| Base Pay     | 300    | Fund 1, Cost Center 1 | $(300/1000) \times 100 = 0.3$ |           |
| Base Pay     | 700    | Fund 2, Cost Center 2 | $(700/1000) \times 100 = 0.7$ |           |
| <b>Total</b> | 1000   |                       |                               |           |

Payroll Actuals with **Exclude Negative Results** enabled would produce:

| Pay Component      | Debit | Credit | Worktags              |
|--------------------|-------|--------|-----------------------|
| Earning - Base Pay | 300   |        | Fund 1, Cost Center 1 |
| Earning - Base Pay | 700   |        | Fund 2, Cost Center 2 |
| Earning - Bonus    | -800  |        | Fund 3, Cost Center 3 |
| Employee Deduction |       | 100    | Fund 0, Cost Center 0 |
| Net Pay            |       | 30     | Fund 1, Cost Center 1 |
| Net Pay            |       | 80     | Fund 2, Cost Center 2 |

## Concept: Costing Allocations Priority

### Costing Hierarchy for Employee Earnings

Workday:

- Evaluates payroll result lines and refers to the hierarchy to determine which rule to apply.
- Applies the first rule found in the hierarchy and obtains the worktags configured at that level.
- Supplements with the worker's default organizational assignments for the position, if available. Otherwise, supplements with the worker's default organizational assignments for the:
  - Processing position for Payroll for Canada and the U.S.
  - Primary position for Payroll for Australia, France, and the UK.

**Hierarchy:**

1. Worktag overrides entered through payroll input, on-demand payments, and manual payments.
2. Worktag values entered through:
  - Time Tracking.
  - Compensation (one-time payments and period activity payments).
  - Earning for a worker's position.
3. Worker earning (select a worker and an earning on the **Assigned Costing Allocations** task).
4. Earning (select an earning on the **Edit Earning and Employee Deduction Costing Allocations** task).
5. Worker's position (select a worker and a position on the **Assigned Costing Allocations** task).
6. Position restrictions (select a position on the **Assigned Costing Allocations** task).
7. Worker (select a worker on the **Assigned Costing Allocations** task).
8. Supervisory organization of a worker's position.
9. If multiple jobs:
  - a. The processing position's supervisory organization for workers in Canada and the U.S.
  - b. The primary position's supervisory organization for workers in Australia, France, and the UK.
10. For Payroll for Canada and the U.S., Worker's organizational assignments based on position. Workday selects the position from the associated payroll result line, if it exists. Otherwise, Workday uses the position on the payroll result. This position is either:
  - The processing position when the Processing Position for Workers with Multiple Jobs feature is enabled.
  - The worker's primary position.
11. For Payroll for Australia, France, and the UK, Default Organizational Assignments (for a specific worker).

**Scenario (CAN, USA)**

John has default organizational assignments for his processing position set as:

- Cost Center - *CC 2600*
- Fund - *Fund 1*
- Location - *San Francisco*

**Scenario (AUS, FRA, UK)**

John has default organizational assignments for his primary position set as:

- Cost Center - *CC 2600*
- Fund - *Fund 1*
- Location - *San Francisco*

**Example 1 (CAN, USA)**

The payroll administrator enters a worktag override through pay input on the processing position as *Fund 2*.

The resulting costing for John is *CC 2600*, *Fund 2*, and *San Francisco*, because:

- From the hierarchy, the override instructions entered through pay input have higher priority.
- Workday supplements the worktags *CC 2600* and *San Francisco*, from the default organizational assignments.

**Example 1 (AUS, FRA, UK)**

The payroll administrator enters a worktag override through pay input on the primary position as *Fund 2*.

The resulting costing for John is *CC 2600*, *Fund 2*, and *San Francisco*, because:

- From the hierarchy, the override instructions entered through pay input have higher priority.
- Workday supplements the worktags *CC 2600* and *San Francisco*, from the default organizational assignments.

## Example 2

The payroll administrator enters a:

- Worktag override through pay input on the processing position as *Fund 2* (CAN, USA).
- Worktag override through pay input on the primary position as *Fund 2* (AUS, FRA, UK).
- Costing override for a worker earning as *Fund 3* and *Dallas*.

The resulting costing for John is *CC 2600*, *Fund 2*, and *San Francisco*, because:

- From the hierarchy, override instructions entered through pay input have priority over the costing override for a worker earning.
- Workday supplements the worktags *CC 2600* and *San Francisco*, from the default organizational assignments.

## Example 3

The payroll administrator enters a costing override for a worker earning as *Fund 3* and *Dallas*.

The resulting costing for the earning is *CC 2600*, *Fund 3*, and *Dallas*, because:

- From the hierarchy, the costing override for a worker earning has higher priority.
- Workday supplements the worktag *CC 2600*, from the default organizational assignments.

## Costing Hierarchy for Employer-Paid Expenses (Debits)

Workday evaluates payroll result lines for employer-paid expenses (debits) and refers to this hierarchy to determine which rule to apply:

1. Worktag overrides entered through payroll input.
2. Allocations, configured on the **Edit Employer Paid Expense Costing Allocation** task, defined by:
  - a. Pay group, company, and pay component.
  - b. Pay group and pay component.
  - c. Pay group and company.
  - d. Pay group.
3. Configurations defined using the **Edit Employer Paid Expense Costing Allocation Defaults** task.
4. Based on the allocation of earnings and applies to employer-paid debits only.

5. (CAN, USA) Worker's organizational assignments based on position, when you don't have earnings in your payroll results. Workday selects the position from the associated payroll result line, if it exists. Otherwise, Workday uses the position on the payroll result. This position is either:
  - The processing position when the Processing Position for Workers with Multiple Jobs feature is enabled.
  - The worker's primary position.
6. (AUS, FRA, UK) Worker's Default Organizational Assignments, when you don't have earnings in your payroll results.

**Note:** If you've enabled Retroactive Costing, costing for employer-paid expenses associated with retroactive earnings uses the worker's default organization assignments if the employer-paid expense lines don't have a retro subperiod that matches the retro pay period.

### Costing Hierarchy for Employer-Paid Expense Liabilities (Credits)

Workday evaluates payroll result lines for employer-paid expense liabilities (credits) and refers to this hierarchy to determine which rule to apply:

1. Default setting for costing overrides on credits, if applicable, on the **Edit Employer Paid Expense Costing Allocations** task.
2. (CAN, USA) Worker's organizational assignments based on position. Workday selects the position from the associated payroll result line, if it exists. Otherwise, Workday uses the position on the payroll result. This position is either:
  - The processing position when the Processing Position for Workers with Multiple Jobs feature is enabled.
  - The worker's primary position.
3. (AUS, FRA, UK) Worker's default organizational assignments.

### Costing Hierarchy for Employee-Paid Deductions

Workday evaluates payroll result lines for employee-paid deductions and refers to this hierarchy to determine which rule to apply:

1. Worktag overrides entered through payroll input.
 

When worktag balancing is on, Workday gets the balancing worktag from the worktag balancing rule set.
2. Employee deduction (for all workers).
3. Supervisory organization of the worker's position.
4. (CAN, USA) Supervisory organization of the worker's processing position (if multiple jobs).
5. (AUS, FRA, UK) Supervisory organization of the worker's primary position (if multiple jobs).
6. (CAN, USA) Worker's organizational assignments based on position. Workday selects the position from the associated payroll result line, if it exists. Otherwise, Workday uses the position on the payroll result. This position is either:
  - The processing position when the Processing Position for Workers with Multiple Jobs feature is enabled.
  - The worker's primary position.
7. (AUS, FRA, UK) Default Organizational Assignments (for a specific worker).

## Concept: Default Allocation of Employer-Paid Expenses

### Overview

Workday automatically allocates the costs of employer-paid expenses, based on the allocation of the earnings that constitute an employee's gross pay.

Workday uses the formula:  $(\text{Earnings Allocated to a Cost Center} / \text{Sum of All Earnings}) \times \text{Expense Amount}$ . To adjust for rounding, it calculates the last expense distribution using the formula:  $\text{Expense Amount} - \text{Sum of All Prior Expense Distributions} = \text{Final Expense Distribution Amount}$ . The last distributed instance of an expense can be based on any of the employee's regular earnings. There's no way to select which distributed instance receives the rounding adjustment.

### Example

John receives base pay of 1000 and commission of 1000. Using an earning override, Workday splits his base pay among 3 cost centers: CC 1, CC 2, and CC 3. No overrides exist for commission, so Workday assigns it to CC 1, the default cost center for his organization.

Workday allocates his base pay and commission as follows:

| Default Cost Center | Earning           | Earning Level Overrides and Splits                                                                            | Amount Distributed to Each Cost Center                                                                        |
|---------------------|-------------------|---------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------|
| CC 1                | Base Pay = 1000   | <ul style="list-style-type: none"> <li>• 30% to CC 1</li> <li>• 30% to CC 2</li> <li>• 40% to CC 3</li> </ul> | <ul style="list-style-type: none"> <li>• 300 to CC 1</li> <li>• 300 to CC 2</li> <li>• 400 to CC 3</li> </ul> |
| CC 1                | Commission = 1000 | No override                                                                                                   | 1000 to CC 1                                                                                                  |

John also has an employer-paid insurance expense of 80. To distribute the expense, Workday applies the formulas to come up with this distribution:

| Cost Center | Earnings Allocated To Cost Center     | Sum of All Earnings | Expense Amount | Calculation Result             |
|-------------|---------------------------------------|---------------------|----------------|--------------------------------|
| CC 1        | 300 Base Pay + 1000 Commission = 1300 | 2000                | 80             | $(1300 / 2000) \times 80 = 52$ |

| Cost Center | Earnings Allocated To Cost Center | Sum of All Earnings | Expense Amount | Calculation Result            |
|-------------|-----------------------------------|---------------------|----------------|-------------------------------|
| CC 2        | 300 Base Pay                      | 2000                | 80             | $(300 / 2000) \times 80 = 12$ |
| CC 3        | 400 Base Pay                      | 2000                | 80             | $80 - (52 + 12) = 16$         |

### Exclude Negative Result Lines

When calculating employer-paid expense, Workday prorates the amounts based on the allocation of earnings. When the gross value of these earnings gets close to zero due to negative payroll result lines, the amounts allocated to the employer-paid expense might inflate but the calculation remains the same.

To avoid the inflated numbers, Workday enables you to exclude these negative result lines for your employer-paid expense default costing. You can use the **Employer Paid Expense Default Costing - Exclude Negative Result Lines** option on the **Edit Tenant Setup – Payroll** task.

### Example

When gathering earning Payroll Result Lines values to prorate across employer expenses, you can exclude negative result lines. Workday uses this formula *(Earnings Allocated to a Cost Center / Sum of All Earnings) x Expense Amount*.

In the example, there are 4 earning lines allocated to cost centers. We calculate the distribution based on the Workday formula and use 1200 as the employer-paid expense amount.

| Default Cost Center | Actual Payroll Gross | Distribution Percent | Employer-Paid Expense Amount |
|---------------------|----------------------|----------------------|------------------------------|
| CC 1                | -9000                | Excluded             |                              |
| CC 2                | 7500                 | $7500/10000 = 75\%$  | $1200 \times 75\% = 900$     |
| CC3                 | 2500                 | $2500/10000 = 25\%$  | $1200 \times 25\% = 300$     |
| CC3                 | -6000                | Excluded             |                              |
| Total               | 10,000               | 100%                 | 1200                         |

[Define Cost Allocations for Employer-Paid Expenses](#) on page 534

## Concept: Forward Accruals Costing for Employer-Paid Statutory Taxes

When a payroll result has a sum of earnings contributing to forward accruals that's larger than the total gross, the calculations used to determine the forward accrued employer-paid expense (ER) amounts can over allocate the accrual value.

Workday uses the formula:  $\text{ER Amount} * (\text{Days to Accrue} / \text{Days in Basis}) * (\text{Earnings Forward Accrued} / \text{Gross})$ . When  $(\text{Earnings Forward Accrued} / \text{Gross}) > 1$ , then over allocation can occur. The over allocation happens when the payroll result includes a relatively large negative value for an earning excluded from forward accrual.

### Example

John has default organizational assignments set as CC0, Fund0. The initial total gross amount is \$10,000. When John is on sabbatical leave that reduces his pay, and results in negative earnings of \$6000. The total gross amount now is  $\$10,000.00 - \$6,000.00 = \$4,000.00$ .

Employer-Paid Statutory Tax: OASDI (ER 6.2%) calculated on the total gross amount of \$4,000 = \$248.00.

Earnings contributing to the gross amount of \$4,000:

- Base Pay: \$8,000.00 (Cost to CC1, Fund1)
- Additional Pay: \$2,000.00 (Cost to CC2, Fund2)
- Sabbatical Reduction: - \$6,000.00 (Cost to CC3, Fund3)

While calculating forward accruals for inflated employer-paid statutory taxes, Workday provides flexibility to costing with the **Disable Forward Accrual Costing to Worker Defaults when Employer Paid Statutory Taxes Over Allocate** check box in the **Payroll Costing** section on the **Edit Tenant Setup - Payroll** task.

### When you select the check box:

Workday costs all employer-paid statutory taxes based upon the earning proration.

Costing allocation and distribution of employer-paid statutory taxes across earnings:

- Base Pay: \$8,000.00 (Cost to CC1, Fund1) = 200%
- Additional Pay: \$2,000.00 (Cost to CC2, Fund2) = 50%
- Sabbatical Pay: - \$6,000.00 (Cost to CC3, Fund3) = -150%

Employer-paid OASDI of \$248 applied across earnings:

- OASDI-ER (Cost to CC1, Fund1) =  $200\% * \$248.00 = \$496.00$
- OASDI-ER (Cost to CC2, Fund2) =  $50\% * \$248.00 = \$124.00$

- OASDI-ER (Cost to CC3, Fund3) = -150% \* 248.00 = - \$372.00
- Total OASDI-ER: \$248.00

Forward accrual calculation (Days to Accrue = 5, Days in Basis = 20):

- OASDI-ER (Cost to CC1, Fund1) = 496.00 \* 0.25 = \$124.00
- OASDI-ER (Cost to CC2, Fund2) = 124.00 \* 0.25 = \$31.00
- OASDI-ER (Cost to CC3, Fund3) = -372.00 \* 0.25 = - \$93.00
- Total OASDI-ER Accrued: \$62.00

Workday charges OASDI-ER of \$124.00 to CC1, Fund1 resulting in over allocation when compared to the total forward accrual of \$62.00.

**When you don't select the check box:**

Workday continues to cost all employer-paid statutory taxes 100% to worker defaults.

- OASDI-ER (Cost to CC0, Fund0) = \$248.00
- Total OASDI-ER: \$248.00

## Multiple Jobs

---

### Setup Considerations: Payroll for Multiple Jobs

---

The setup considerations in this topic are applicable only to these countries:

- Payroll for Canada
- Payroll for the UK
- Payroll for the United States

You can use this topic to help make decisions when planning your configuration and use of payroll for multiple jobs. It explains:

- Why to set it up.
- How it fits into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

#### What It Is

Multiple jobs, also referred to as additional jobs or multiple positions, enables you to pay workers that occupy more than 1 position at the same time.

For Payroll for Canada and the U.S., Workday uses 1 of the worker's positions as the default for payroll processing. You determine whether the processing position is:

- Always use the primary position, or
- Use a position override, based on the values of selected position-based attributes.

Workday uses the processing position to:

- 
- Determine tax authorities for payroll calculation.
- Display in the header of pay results.
- Evaluate accounting configuration for labor costs.

### Business Benefits

Payroll for multiple jobs in Workday enables you to pay an employee with more than 1 position efficiently by reducing manual effort. Workday supports each position having different:

- Business titles.
- Companies (CAN, USA).
- Cost centers.
- International assignments (CAN, USA).
- Job profiles.
- Locations (CAN, USA).
- Managers.
- Pay rates.
- Scheduled hours.
- Supervisory organizations.

For Payroll for Canada and the U.S., using a position override to determine the processing position can:

- Improve clarity on pay results and reports.
- Reduce accounting adjustments.
- Base taxes and accounting entries on position attributes that are meaningful to your business.

### Use Cases

Efficiently pay workers:

- Whose positions are in different companies.
- Whose rate of pay varies by position.
- Whose work is charged to varying cost centers based on the hours worked.
- Who work in multiple departments with the same department manager.
- Whose work locations are in different provinces of employment (CAN).
- Whose work locations are in different state tax authorities (USA).

### Questions to Consider

| Questions                                                                 | Considerations                                                                                                                                                                                                                                                                                                                       |
|---------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| How can you pay workers with positions in different companies? (CAN, USA) | <p>If the multiple jobs are in multiple companies, you can separate by company:</p> <ul style="list-style-type: none"> <li>• Tax elections.</li> <li>• Withholding orders.</li> </ul> <p>You can also pay workers' retro differences from companies other than their current primary company, excluding workers on international</p> |

| Questions                                                                        | Considerations                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
|----------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                                                                  | assignments. You can pay retro differences in 1 or more pay periods with on-demand additional payments, reducing manual effort when you enter payments. Workday only calculates retro differences for workers with positions in multiple companies when they have pay results in those companies.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| How can you process workers' taxes based on their position locations? (CAN, USA) | <p>Workers who have jobs in different companies or pay groups will receive multiple pay results. Set up position override rules so Workday calculates each result based on the position being paid.</p> <p><b>Note:</b> For Payroll for the U.S., a worker's State Unemployment Insurance (SUI) Authority is always based on the location of the primary position. Certain local taxes also follow the SUI state.</p> <p>For workers whose positions are in the same pay group and company, Workday calculates taxes based on the processing position.</p>                                                                                                                                                                                                                                                                                                                                                               |
| How can you allocate pay to each position? (CAN, USA)                            | <p>When you need to allocate some of the worker's pay to an additional job, use position-based pay components. If you don't use a position-based pay component, Workday defaults all money and costing to the default processing position.</p> <p>When you use a position-based pay component, Workday applies actuals to the cost center of the worker's secondary position. However, all credit entries, such as taxes, are costed to the processing position for the result. When the primary and secondary positions have separate gross-to-net results (Example: the positions are in different companies), then both the debits and credits will be costed to the cost center of the worker's secondary position. Workday assigns position-based earnings and deductions to the worker's position when the earnings or deductions don't come from payroll input. Example: The earning comes from compensation.</p> |
| Will you need to change positions or companies midperiod? (CAN, USA)             | Workday prorates payroll results in response to midperiod changes in a worker's job or company. When a worker has multiple jobs, Workday applies pay component proration. When calculating subperiod results for a worker with multiple jobs, Workday prorates both position and worker-based pay components.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| When can I start an additional job? (UK)                                         | A worker can start an additional job at any time within a pay period. Workday applies pay component proration. When calculating subperiod results for a worker with multiple jobs, Workday prorates both position- and worker-based pay components.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |

| Questions                                                                                                                       | Considerations                                                                                                                                                                                                                                                                                                                          |
|---------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| How can you track time or time off through a third-party system?                                                                | You can create an integration from Workday to the third-party system to load the position for each employee. The integration includes the position number and resolves in payroll.                                                                                                                                                      |
| How does Workday process pay for a worker with 1 job but different pay rates dependent on the task, such as a server/bartender? | When the worker has different rates for the same pay component, Workday splits them on the payslip. Workday doesn't split the payslip by the position worktag when: <ul style="list-style-type: none"> <li>The worker has the same rate across both jobs.</li> <li>You split the payroll results with a position worktag.</li> </ul>    |
| How many additional jobs can a worker have in Workday?                                                                          | There's no limit to the number of positions a worker can have. For Payroll for the UK, all the positions must be in the same company and pay group.                                                                                                                                                                                     |
| How can you include steps for other administrators when they add jobs?                                                          | You can configure the <i>Add Additional Job</i> business process to include steps such as change organization assignments, approvals, reviews, and assign pay groups.                                                                                                                                                                   |
| Do you have workers who are in multiple pay groups? (CAN, USA)                                                                  | You can have workers in multiple pay groups with multiple jobs. Assign a worker to each pay group when you add an additional job to their profile.                                                                                                                                                                                      |
| How can you pay a worker for additional jobs after the jobs end?                                                                | You can add criteria to your run category that enable you to pay workers for an additional job after it ends. (CAN, USA)<br><br>Use pay inputs to pay a worker after an additional job has ended. (UK)                                                                                                                                  |
| When can Workday process retro differences for multiple jobs? (UK)                                                              | For workers with multiple jobs or positions in the same company and same pay group, Workday processes retro differences.                                                                                                                                                                                                                |
| How does Workday track time against different salary-based positions?                                                           | As a non time entry worker (salary-based), the worker's salary flows from compensation to payroll and you can assign a position-based earning code.                                                                                                                                                                                     |
| How does Workday pay workers on leave?                                                                                          | Workday considers the type of leave when determining which pay components to process for workers with a status of <i>On Leave</i> . If the worker has multiple jobs, the status that prevails is that of the: <ul style="list-style-type: none"> <li>Payroll processing position. (CAN, USA)</li> <li>Primary position. (UK)</li> </ul> |

## Recommendations

We recommend you determine if an earning or deduction is position-based or worker-based before you set it up. You can't change an earning or deduction after it's been used.

Workday recommends that you don't create worker-based pay components for workers with multiple jobs when you want the eligibility to reference an attribute from the position.

For Payroll for Canada and the U.S., when you set up the rules that determine payroll processing position, select an effective date that's after the end date of any pay periods that are completed, in progress, or opened for off-cycle payments. Changing the rules midperiod can impact other on-cycle calculations, FLSA calculations in the U.S., and result in unsupported retro.

## Requirements

Configure your tenant to support multiple jobs with the **Position Setup Options** field on the **Edit Tenant Setup - HCM** task.

Create categories and reasons for additional jobs with the **Maintain Event Categories and Reasons** task.

You can't add an additional job until a worker has a primary job.

## Limitations

Workday only supports multiple jobs for:

- Payroll for Canada.
- Payroll for the U.S.
- Payroll for the UK.

For Payroll for Canada, Workday doesn't support multiple jobs for statutory holiday pay.

For Payroll for Canada and the U.S.:

- You can't give additional jobs to contingent workers.
- When a worker's positions are in the same pay group and company, Workday applies taxes to the worker's processing position even when they only have time worked in a different position.
- Workday ignores payroll limit overrides based on a worker's position when it's not the processing position.

For Payroll for the UK:

- If a worker:
  - Has an additional position, all positions must share the same NI category.
  - Is deemed as within IR35, and has an additional position, all positions for the worker are deemed as within IR35.
- Workday applies taxes to the worker based on the worker's payroll ID even when they only have time worked in an additional position.

## Tenant Setup

You can configure your tenant to support multiple jobs or positions in the **Position Setup Options** field on the **Edit Tenant Setup - HCM** task.

For Payroll for Canada and the U.S.:

- Set up the rules to determine the payroll processing position.
- When you select **Enable Retro Processing in Primary Pay Group** on the **Edit Tenant Setup - Payroll** task, Workday pulls all retro differences into a worker's primary pay group, regardless of their processing position.

## Security

When a worker holds multiple positions, role-based access to that worker's personal and position data depends on the **Access Rights to Multiple Job Workers** setting on the role-based security group.

If you set the role-based security group to **Role has access to the positions they support**, workers can still see the results for the pay group they don't have access to, but can't take any action.

Example: Sarah has a primary position in the U.S. at Company 1, Pay Group A that Mark manages. Sarah also has a secondary position in the U.S. at Company 2, Pay Group B that Susan manages. When you select this option:

- Mark can view and access Sarah's payroll result details for Company1, Pay Group A. Mark can view the gross-to net details for Company 2, Pay Group B; but can't take any action.
- Susan can view and access Sarah's payroll result details for Company 2, Pay Group B. Susan can view the gross-to-net details for Company 1, Pay Group A; but can't take any action.

Users of Payroll for Canada and the U.S. with access to the *Set Up: Payroll* domain in the Core Payroll functional area can configure the rules that determine a worker's default payroll processing position.

### Business Processes

| Business Process          | Considerations                                                                                                                                                                                                                      |
|---------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <i>Add Additional Job</i> | Configure the business process and security policy in the Staffing functional area.                                                                                                                                                 |
| <i>End Additional Job</i> | Configure the business process and security policy in the Staffing functional area.                                                                                                                                                 |
| <i>Switch Primary Job</i> | Configure the business process and security policy in the Staffing functional area. You can use <i>Switch Primary Job</i> as a stand-alone business process or as a subprocess for <i>Add Additional Job</i> or <i>Change Job</i> . |
| <i>End Jobs</i>           | Configure the business process and security policy in the Staffing functional area.                                                                                                                                                 |

### Reporting

| Reports or Dashboards                                                              | Considerations                                                                                                                                                                                                                      |
|------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>All Absence Balances</b>                                                        | View all absence balances for workers with multiple jobs and where they are in use based on your tenant configuration.                                                                                                              |
| <b>Audit- Workers with Multiple Jobs having Different Organization Assignments</b> | View workers in Canada and the U.S. who have multiple jobs in different organizations. Use to identify workers who might be in more than 1 pay group.                                                                               |
| <b>Pay Calculation Results for Worker</b>                                          | View detailed pay results for a worker's positions. When you create position-based pay components, the report lists result lines with the position, pay group, and company. Workday doesn't report results by position on payslips. |
| <b>View Payroll Other Tax Authorities</b>                                          | See whether a local tax authority in the U.S. follows the SUI tax authority.                                                                                                                                                        |

### Integrations

To include an additional job in Workday Payroll Interface integration output, associate the job with a pay group.

## Connections and Touchpoints

Payroll for multiple jobs interacts with these Workday product areas:

| Product Area  | Considerations                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
|---------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Absence       | You can define position-based time off plans. Position-based plans, balances, and limits apply to a position. You define eligibility rules, time off validations, and position-based accrual calculations. You can also define these rules to apply to the worker's primary position or across all positions instead. Worker-based plans have balances and limits that apply to the worker. Typically, eligibility rules, time off validations, and accrual calculations are based on the worker's primary position.                                     |
| Benefits      | You can set up benefit eligibility based on information pulled from the employee's primary job or 1 or more of the additional jobs.                                                                                                                                                                                                                                                                                                                                                                                                                      |
| HCM           | <p>Workday Payroll uses the positions configured in HCM. You can add or end additional jobs or switch primary jobs with these business processes in the Staffing functional area:</p> <ul style="list-style-type: none"> <li>• Add Additional Job</li> <li>• Add Additional Job subprocess</li> <li>• Switch Primary Job</li> <li>• End Additional Job</li> <li>• End Jobs</li> </ul> <p>You can also validate hiring restrictions in the supervisory organizations to make sure you can use them with the <i>Additional Job</i> business processes.</p> |
| Time Tracking | Workday tracks time against the different positions or jobs. When a worker has multiple positions, Workday displays an additional prompt on the <b>Enter Time</b> task to select which position to log time against. There's also a setting on the worker's <b>Time Entry Template</b> that you can enable to create separate approval events for each position. The time entry calendar includes an additional <b>Position</b> field when a worker has multiple jobs. Workday passes the worker's position to payroll with the time block information.  |

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships in your tenant. Learn more about the [Workday Touchpoints Kit](#) on Workday Community.

## Steps: Set Up Payroll for Multiple Jobs

---

### Prerequisites

Configure your tenant to support multiple jobs in the **Position Setup Options** field on the **Edit Tenant Setup - HCM** task.

### Context

The instructions in this topic are applicable only for these countries:

- Payroll for Canada
- Payroll for the UK
- Payroll for the U.S.

For Payroll for Canada and the U.S., configure Workday to pay employees for multiple jobs, also referred to as multiple positions. You can use Workday to pay all of a worker's positions, including positions in different pay groups and companies (in the same country).

**Note:** Workday doesn't calculate retro differences for workers in Canada or the U.S. with positions in multiple companies when they have no pay results in those companies.

For Payroll for the UK, configure Workday to pay employees for multiple jobs. You can use Workday to pay employees with multiple jobs under the same payroll ID.

### Steps

1. For your payroll country, configure the worker's additional jobs.
  - For Payroll for Canada and the U.S., configure criteria to determine which of a worker's positions to use when calculating payroll. See [Set Up Default Processing Position for Payroll \(CAN, USA\)](#) on page 564.
  - For Payroll for the UK, record the additional job or position. See [Add Additional Jobs](#).
2. Assign a Workday Payroll pay group to each position you want to pay:
  - [Assign Workers to Pay Groups](#) on page 174.
  - [Steps: Set Up Pay Group Automatic Assignments](#) on page 173.

**Note:** For Payroll for the UK, all jobs or positions for a worker must be in the same pay group. Workday automatically assigns the additional job to the worker's existing payroll ID. See [../Payroll-for-the-UK/tax-setup-uk-joh1430397073073.dita](#).

3. Create position-based earnings and deductions by assigning them a **Calculation Worktag of Position**. See [Enter Earning or Deduction Calculations](#) on page 238.

Workday calculates position-based pay components for an employee for each position processed. Results are associated with the company that the position belongs to at the time of processing.

4. (Optional for Payroll for Canada and the U.S.) When a worker belongs to multiple pay groups or companies, prevent Workday from calculating worker-based pay components more than once. Configure eligibility rules with calculations and report fields such as:

- *Processing Primary Job*
- **Current Processing Company**

See [Set Up Pay Component Eligibility](#) on page 236.

Based on worker eligibility, Workday calculates worker-based pay components once for each pay group per company.

5. Assign **Position** as a **Filter Worktag** on pay balances and pay accumulations.

- [Create Pay Balances](#) on page 317.
- [Create Pay Accumulations](#) on page 311.

6. (Optional) Enter costing allocation instructions for positions.

- [Define Cost Allocations for a Worker](#) on page 528.
- [Define Cost Allocations for Position Restrictions](#) on page 532.

Once you allocate costs by position, journal entry lines generated by the accounting process include a position worktag.

### Next Steps

You can view detailed pay results for a worker's positions on the **Pay Calculation Results for Worker** report. When you create position-based pay components, the report lists result lines with the position, pay group, and company. Workday doesn't report results by position on payslips.

### Related Information

[2022R2 What's New Post: Processing Position for Workers with Multiple Jobs](#)

## Set Up Default Processing Position for Payroll (CAN, USA)

---

### Prerequisites

Configure your tenant to support multiple jobs in the **Position Setup Options** field on the **Edit Tenant Setup - HCM** task.

Security: *Set Up: Payroll* domain in the Core Payroll functional area.

### Context

You can configure criteria to determine which of a worker's positions to use when calculating payroll. Workday assesses the value of the selected attributes in priority order to select the default processing position.

### Steps

1. Access the **Maintain Payroll Processing Position Rules** task.

2. Enter an effective date that's on or after today's date.

You can't update rules that are already in effect.

To prevent unintended changes to in-progress pay results or retro payroll, Workday recommends you to set the effective date after the end date of any periods that are:

- Completed.
- In progress.
- Opened for off-cycle payments.

3. Complete the task:

| Option                                                        | Description                                                                                                                                                                                                                                                                                                                                                                                                                |
|---------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Use primary position as the processing position</b>        | <p>Workday uses each worker's primary position to process payroll.</p> <p>For Payroll for Canada, Workday determines provincial tax based on the worker's primary position. You don't need to add the province worktag to a deduction containing a position worktag.</p>                                                                                                                                                   |
| <b>Use position override to determine processing position</b> | <p>For workers whose positions are in the same pay group and company, and therefore paid together, Workday assesses the attributes in the <b>Position Override</b> grid to select the processing position for each worker.</p> <p>For workers whose positions are in different companies or pay groups, and therefore paid separately, Workday uses each position as the processing position on its respective result.</p> |
| <b>Position Override</b>                                      | <p>Select the attributes that you want Workday to evaluate to determine the processing position. Use the <b>Order</b> controls to arrange the attributes in priority order. When the highest-priority attribute has equal values for a worker, Workday checks the remaining attributes.</p> <p><b>Position Start Date</b> and <b>Position Entry Moment</b> must always be the last 2 attributes considered.</p>            |

## Result

When you calculate payroll or retro, Workday determines the default processing position, and uses the information from that position to:

- Display in the result header.
- Calculate taxes.
- Evaluate accounting configuration for labor costs.
- Determine what displays on Canadian pay results for:
  - Location
  - Position
  - Province of Employment
  - Payroll Reference Number
- Calculate employee and employer statutory taxes for Canada.

## Example

You can select **Use position override to determine processing position**, and configure these position override rules:

| Order | Attribute              | Selected By    |
|-------|------------------------|----------------|
| 1     | Scheduled Weekly Hours | Greatest Value |
| 2     | Position Start Date    | Earliest Date  |
| 3     | Position Entry Moment  | Earliest Date  |

Mike has 2 positions in the same company and pay group. Each week, Mike's scheduled to work 32 hours in the primary position and 8 hours in the additional position. Workday uses Mike's primary position as the default processing position for payroll, because that position has the greater number of scheduled weekly hours.

Shelley has 3 positions in the same company and pay group. Shelley's scheduled each week to work 16 hours in the primary and 1 additional position, and 8 hours in the other additional position. Because the scheduled weekly hours are equal for 2 positions, Workday checks the next attribute, **Position Start Date**, and selects the position Shelley started first as the default processing position.

Steve has 2 positions in different companies, and so receives separate pay results for each position. Workday uses each position as the default processing position on its corresponding pay result.

## Related Information Reference

[2022R2 What's New Post: Processing Position for Workers with Multiple Jobs](#)

## Concept: Payroll Processing Positions (CAN, USA)

When you have workers who hold multiple positions, Workday uses 1 position as the default for payroll processing. You can either:

- Always use the primary position as the payroll processing position.
- Use a position override. Workday then selects which position to use by comparing the values of attributes that you configure.

Use the **Maintain Payroll Processing Position Rules** task to specify how you want to determine the default payroll processing position.

### What the Default Processing Position Controls

The default processing position:

- Displays in the header of pay results.
- Determines the tax authorities used to calculate taxes.
- Evaluates accounting configuration for labor costs.

When you use the primary position as the default processing position, Workday uses each worker's primary position on all pay results.

When you use position override, and a worker's positions:

- Are in the same company and pay group, Workday uses the determined position override on a worker's pay result.
- Are in different companies or pay groups, Workday uses information from each position on the corresponding pay result.

## How Workday Determines the Default Processing Position

You select the attributes that you want Workday to consider, and the priority of each. When you calculate payroll, Workday compares the values of each attribute in priority order with the rules in effect at the end of the pay period or subperiod. If the highest-priority attribute is equal for all positions, Workday checks the remaining attributes for a position to use.

Attributes you can select include:

- Calculated FTE
- Paid FTE
- Position entry moment
- Position start date
- Scheduled weekly hours
- Working FTE

Position start date and position entry moment must be the lowest priority attributes.

## Position Eligibility

When determining a worker's default processing position, Workday considers positions that were:

- In the pay group being processed at any time during the pay period.
- Terminated or ended in an earlier period, but had a pay-through date in the current period.
- Terminated or ended in an earlier period, but had pay input or a one-time payment in the current period.

When the effective date for position rules falls within a pay period, the rules in effect at the end of the period apply to the entire period. However, if a worker has an event that causes gross-to-net proration before the effective date, Workday applies the previous rules to the subperiod that's before the effective date.

## Gross-to-Net Proration (USA)

When the location of a worker's processing position changes during the current period, Workday creates subperiods if the new location is in a different state tax authority. Workday also creates subperiods for retro events in the period where the location change took place.

Workday creates subperiods when a worker's primary position changes locations midperiod, even when it's not the processing position. Doing so enables Workday to prorate the worker's State Unemployment Insurance (SUI) taxes and certain Local Other taxes that follow the primary position location.

Workday doesn't create subperiods when the new location is in the same state tax authority as the previous location.

## Retro Payroll Processing

Workday supports retroactive changes to a worker's default processing position, but doesn't consider these changes as retro events. When a supported retro event occurs, retro processing rederives the worker's processing position with the rules in effect at the end of the retro period.

Workday doesn't support retroactive changes to a worker's processing position that cause a change to the tax authority in the retro period. Examples:

- Timothy has 2 positions in different tax authorities. You retroactively change a worker's position attribute that's used to determine the processing position when the positions are in different work states. Workday doesn't support retro.
- Clarice has 2 positions, both in the same tax authority. Their additional position is the default processing position. You retroactively increase the scheduled work hours for Clarice's primary position, so that it becomes the default processing position for the retro period. Workday supports retro because the tax authority didn't change.

Retroactive changes to the default processing position could cause a worker to:

- Lose eligibility for a pay component that Workday originally processed in the pay period.
- Gain eligibility for a pay component that Workday didn't originally process.

## Payroll Accounting

When you select the position override and have workers with multiple jobs in different companies, Workday:

- Uses the default organization assignments associated with a worker's processing position to allocate worktags to the liabilities and net pay lines of the Payroll Actuals journal.
- Uses a worker's processing position to evaluate payroll deduction and payroll net pay account posting rules.
- Uses a worker's processing position to determine the primary worktag balancing dimension on these transaction types if you have **Default by Organization** set as the **Payroll Balancing Source**:
  - Payroll Accruals
  - Fringe Benefit Actuals
- Uses a worker's processing position to determine optional worktag balancing dimensions regardless of the **Payroll Balancing Source**.

[2022R2 What's New Post: Processing Position for Workers with Multiple Jobs](#)

## Example: Payroll Processing Position (USA)

---

This example illustrates 1 way to configure payroll processing position rules for workers with multiple positions.

### Context

You manage payroll for 2 companies. Some workers have positions in both companies and receive separate pay results for each position. Other workers have 2 positions in the same company and pay group, and receive a single pay result for both positions. You restrict cost centers in your organization to specific companies.

Workday automatically uses information from each worker's primary position for payroll processing. You want Workday to:

- Apply a position's default organization assignments to the liability and net pay lines of the operational journal.
- Calculate state income taxes based on the state where the position is located for workers who receive separate pay results.
- Display the position with the most hours worked on the pay result of workers who receive a single pay result.

Mary McDuffy's positions are in different companies:

| Position                       | Pay Group        | Company                | Location     | Cost Center                    | Scheduled Weekly Hours | Position Start Date |
|--------------------------------|------------------|------------------------|--------------|--------------------------------|------------------------|---------------------|
| Software Engineer (Primary)    | Monthly Clerical | Global Modern Services | New York, NY | 31000 Operations Management    | 25                     | 2016-03-15          |
| Associate Manager (Additional) | Monthly Clerical | Green Planet Solutions | Newark, NJ   | 32000 Research and Development | 15                     | 2022-08-15          |

Jeff Kirby's positions are in the same company:

| Position                        | Pay Group         | Company                | Location         | Cost Center                 | Scheduled Weekly Hours | Position Start Date |
|---------------------------------|-------------------|------------------------|------------------|-----------------------------|------------------------|---------------------|
| Recruiter (Primary)             | Executive Monthly | Global Modern Services | New York, NY     | 31000 Operations Management | 20                     | 2017-07-01          |
| Management Trainee (Additional) | Executive Monthly | Global Modern Services | Philadelphia, PA | 31000 Operations Management | 20                     | 2020-02-01          |

## Steps

1. Access the **Maintain Payroll Processing Position Rules** task.

2. Select **Add New Effective Date**.

The current period for both pay groups is 2022-09-01 to 2022-09-30. You've added off-cycle payments in the next period, which runs 2022-10-01 to 2022-10-31.

3. Enter a date that's on or after 11/01/2022.

4. Select **Use position override to determine processing position**.

5. In the **Position Override** grid, select criteria in this order:

| Option                        | Description    |
|-------------------------------|----------------|
| <b>Scheduled Weekly Hours</b> | Greatest Value |
| <b>Position Start Date</b>    | Latest Date    |
| <b>Position Entry Moment</b>  | Latest Date    |

For workers with positions in different companies or pay groups, Workday doesn't refer to the attributes in the **Position Override** grid.

## Result

When you calculate payroll for the November 2022 pay period:

- Each of Mary McDuffy's pay results now has its own default processing position. The position displayed on each result, and on her payslips, now matches the position being paid.
- Workday uses New York as the state tax authority for Mary's primary position, and New Jersey as the state tax authority for her additional position.
- Workday calculates state unemployment insurance (SUI) taxes for both positions based on New York, the location of the primary position.

- Workday creates operational journals for each company without errors. Liability and net pay journal lines use the appropriate cost center for each position.

For Jeff Kirby, Workday determines that their scheduled weekly hours are the same for both positions. Workday then checks his start date for each position, and selects his additional position as the processing position for payroll.

- The Management Trainee position displays on his pay result and payslip.
- Workday uses Pennsylvania as the state tax authority, and New York as the SUI tax authority, on his pay result.

## FAQ: Multiple Jobs and Workday Payroll

---

The questions in this topic are applicable only to these countries:

- Payroll for Canada
- Payroll for the UK
- Payroll for the U.S.
- [What happens when a worker's positions are in different pay groups or companies?](#)
- [When a worker's additional position ends, does on-cycle processing pay the position?](#)
- [Can I enter payroll input for a specific position?](#)
- [How are earnings from multiple positions taxed?](#)
- [Can I control access to a worker's positions?](#)
- [How can I distinguish between a worker's primary position and secondary positions?](#)
- [When a worker ends an additional job but is still active in their primary job, does Workday generate zero gross and zero net payroll results for that ended job? \(CAN, USA\)](#)
- [How does Workday determine statutory payments for a worker with multiple positions? \(UK\)](#)
- [How can I calculate statutory holiday pay for a worker with multiple positions? \(UK\)](#)
- [How does Workday determine the FLSA status for a worker with multiple positions? \(USA\)](#)
- [How can I recalculate a worker's FLSA for multiple jobs when there are in-progress payroll results for a pay period? \(USA\)](#)

### **What happens when a worker's positions are in different pay groups or companies?**

The worker receives a separate:

- Payslip for each pay group processed for the same company.
- T4 and RL-1 from each company (CAN).
- W-2 from each company (USA).

The pay calculation process calculates:

- Position-based pay components for each of a worker's positions.

When processing payroll input, Workday determines which company the position currently belongs to.

- Worker-based pay components once for each of a worker's pay groups per company.
- Fair Labor Standards Act (FLSA) regular rate of pay across all jobs in the same company, except for certain tax relationships (USA).
- Taxes for the authorities associated with the employee's payroll processing position. State unemployment insurance (SUI) taxes are based on the location of the worker's primary position.

Certain local taxes also follow the SUI state (USA).

- Provincial tax based on the worker's payroll processing position (CAN).
- Reference number (RP) based on the worker's payroll processing position, whether or not that position is in a different company (CAN).

**Note:** Workday doesn't calculate retro differences for workers with positions in multiple companies when those companies don't have pay results.

For workers in the same Canadian pay group in different companies, Workday creates 1 payroll result per company. The payroll results display the company reference number. Workday derives the reference number from the information that you configure on the company that the worker's payroll processing position is in. To ensure that the Payroll Account Number, which is a combination of the business number and reference number, is correct, configure these for the companies:

- Business number on the **Edit Company Tax Details** task.
- Reference number on the **Edit Company Federal CAN Tax Reporting** task.

**Note:**

Payroll for the UK only supports multiple positions in the same company.

**When a worker's additional position ends, does on-cycle processing pay the position?**

You can configure the run category to continue to pay active workers for an ended additional position.

1. Update the run category of the pay group for the ended additional job.
2. Access the **Edit Run Category** task.
3. In the **Workers to Process** section on the **General** tab, select an *Ended Additional Job* status. Example: *Ended Additional Job with Pay Through Date*.
4. In the **Gross/Net** section, specify which pay components to calculate.

During an on-cycle run, Workday:

- Processes workers with an ended additional job as active workers.
- Uses the pay component configuration on the **General** tab.

**Can I enter payroll input for a specific position?**

Yes. You can select a worker's position when using these tasks:

- **Add Payroll Input by Worker**
- **Run On Demand Payment for Worker**
- **Run Manual Payment for Worker**

## How are earnings from multiple positions taxed?

When you have position-based earnings or deductions, Workday resolves the input for the selected position. When you have worker-based earnings or deductions, Workday:

1. Resolves the pay component for the worker.
2. Includes the position worktag in the journal entry line.

To calculate employee and employer statutory taxes for Payroll for Canada, Workday uses the payroll processing position to determine:

- Location
- Payroll Reference Number
- Province of Employment

View the pay result to see the values determined from the payroll processing position:

- Position
- Location
- Payroll Reference Number
- Province of Employment

**Note:** Based on location province or the **Alternate Work Location** province if one exists for the worker.

For Payroll for the UK, Workday applies tax details assigned to the worker's payroll ID. The additional position for the worker defaults to the worker's existing payroll ID.

For Payroll for the U.S., Workday applies a worker's company-specific tax elections to their total income from the same company. A worker's payroll processing position determines the relevant state income tax authorities. State unemployment insurance (SUI) taxes are always based on the location of the worker's primary position. Certain local taxes also follow the SUI state. Workers can be exempt from FICA for some positions.

## Can I control access to a worker's positions?

Yes. Security groups determine which positions that a worker can access.

## How can I distinguish between a worker's primary position and secondary positions?

Workday displays a plus sign next to additional positions.

## When a worker ends an additional job but is still active in their primary job, does Workday generate zero gross and zero net payroll results for that ended job? (CAN, USA)

Workday doesn't generate zero gross or zero net payroll results in subsequent pay periods for the additional job. In rare cases, such as in a midperiod leave of absence, Workday might generate a payroll result that doesn't continue into subsequent pay periods.

## How does Workday determine statutory payments for a worker with multiple positions? (UK)

If a worker has an additional position, Workday includes earnings from all the positions to determine if the worker meets the statutory requirements for statutory pay. If the worker receives statutory

### How can I calculate statutory holiday pay for a worker with multiple positions? (UK)

pay, this payment defaults to the worker's primary position.

When calculating holiday pay, Workday includes earnings from all the positions to determine the statutory holiday pay payment. This payment defaults to the worker's primary position.

### How does Workday determine the FLSA status for a worker with multiple positions? (USA)

Workday groups according to what you select for **Job Exempt** on the **Edit Job Profile** task. When the sum of exempt scheduled hours exceeds the sum of nonexempt scheduled hours, Workday considers the worker exempt for that pay group. When exempt and nonexempt scheduled hours are equal, Workday uses the exemption status of the primary or processing position. This happens whether the job is in the same company or a different company.

Example: Joe and Marlena each have 2 positions in different pay groups and companies. Joe is scheduled to work 10 hours in his exempt primary or processing position and 30 hours in his nonexempt secondary position. Because nonexempt hours exceed exempt hours, he's considered nonexempt. You scheduled Marlena to work 20 hours in her exempt primary or processing position and 20 total hours in her nonexempt secondary positions. Because exempt and nonexempt hours are equal, she's considered exempt.

### How can I recalculate a worker's FLSA for multiple jobs when there are in-progress payroll results for a pay period? (USA)

You can use the **Run Pay Calculation** task secured to the *Process: Run Batch Calculations (Pay Calculation)* domain in the Core Payroll functional area to calculate all in-progress payroll results for that pay period. If you use the **Re-Calculate Result** button, Workday considers the number of scheduled hours, and the FLSA status for each of a worker's positions across all companies and calculates pay only on that specific payroll result. Avoid using the button when you have multiple gross-to-nets.

# International Assignment Pay

---

## Steps: Set Up International Assignment Pay (CAN, USA)

---

### Prerequisites

- Workers have an international assignment position.
- Workers have an additional **Home** address in the host country with the usage type *International Assignment*.

### Context

When a worker from another country is on international assignment in Canada or the U.S., you can set up Workday Payroll to pay them in their host country either:

- Their entire pay.
- Only selected expenses, such as housing allowance. In this scenario, you continue to pay their base pay in their home country, using third-party payroll.

When a worker from Canada or the U.S. is on international assignment elsewhere, Workday Payroll requires no additional setup to continue paying them in their home country but has some limitations.

Workday doesn't support certain features for workers who have an international assignment position in the U.S. and U.S. workers on international assignment elsewhere. These features include but are not limited to:

- Federal, state, and local withholding forms.
- Changing tax document printing elections on the **My Tax Documents** report.
- Fair Labor Standards Act.
- Single Legal Entity Company Relationships.
- Common paymaster company relationships.
- Common pay agent company relationships.
- Income withholding orders.
- Business process step *Complete State and Local Withholding Elections* for workers.
- Exempting military spouses from residence state and local taxes.
- Multiple worksite reporting.

**Note:** Workday doesn't process retro differences for workers on international assignments because of limitations related to currency conversion and tax implications.

Payroll for Canada doesn't support Record of Employment (ROE) for international assignment pay. You need to issue ROEs for these workers directly through the Service Canada website.

### Steps

1. [Set Up Pay Groups](#) on page 169.

Create separate pay groups for workers on international assignment in Canada and the U.S.

2. Assign workers in international assignment positions to international assignment pay groups.

See:

- [Assign Workers to Pay Groups](#) on page 174.
- [Steps: Set Up Pay Group Automatic Assignments](#) on page 173.

A worker's position in their home country remains assigned to the pay group for their home country.

### 3. [Define Payment Election Options.](#)

Set up **Country** and **Currency** options for workers.

- When you pay workers in the host country only, select the host country and currency as the default.
- When you pay workers in the host and home countries, select a default country and currency. Then specify additional country and currency options by **Pay Type**.

### 4. (Optional) [Add Worker Federal Tax Elections \(CAN\)](#) on page 1308.

For workers that you pay through compensation in Workday Payroll for Canada, accept the default or enter your provincial tax elections. Workday bases the Canadian provincial tax withholding on the address of their international assignment work location.

### 5. (Optional) [Steps: Add Worker Tax Elections \(USA\)](#) on page 1180.

For workers that you pay through compensation in Workday Payroll for the U.S., accept the default or enter your federal and state tax elections. Workday uses the worker's:

- Home addresses with an *International Assignment* usage type to determine state and local residence taxation.
- International assignment work location to determine work taxation.

### 6. [Enter Earning or Deduction Calculations](#) on page 238.

Create position-based earnings and deductions by selecting *Position* as the **Calculation Worktag**.

For workers that you pay through compensation in Workday Payroll for the host country, add the **Compensation Element** on the earnings.

For workers that you pay in their home country, you can create a deduction to offset the net pay from earnings taxed in the host country.

### 7. (Optional) [Add Payroll Input for Workers](#) on page 589.

When you pay workers in their home country, you must calculate employer tax liabilities for the host country. You can enter payroll input with an offset deduction for the net amount to produce a zero net check.

#### Result

You can run payroll for the international assignment pay group.

## Payroll Input

---

### Setup Considerations: Payroll Input

---

You can use this topic to help make decisions when planning your configuration and use of payroll input. It explains:

- Why to set it up.
- How it fits into the rest of Workday.
- Downstream impacts and cross-product interactions.

- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

### What It Is

Payroll inputs enable you to add, adjust, or override payroll calculations. You can either:

- Add or subtract an amount from a pay component result.
- Replace a pay component result with a different value.

You can create a one-time input or an ongoing input that reoccurs in each pay period.

### Business Benefits

Payroll inputs increase accuracy in payroll calculations by enabling you to adjust a calculation for an individual worker or several workers at once. You can use payroll input to:

- Incorporate data from external sources, providing more flexibility in your payroll calculations.
- Assign non-numeric data types to your related calculations, including text, date, and boolean.

### Use Cases

- Adjust or provide time or absence information from an external source.
- Adjust historical pay entries.
- Adjust tax calculations and amounts.
- Enter one-time or ongoing earnings and deductions.
- Provide bonus or incentive amounts from external sources.
- For Payroll for Canada, the UK, and the U.S.:
  - Enter information about loan repayments.
  - Provide pay rates calculated by an external source.
- For Payroll for France:
  - Add income tax regularizations.
  - Provide IJSS Payment amounts.
  - Provide details on transportation allowances.

### Questions to Consider

| Questions                                     | Considerations                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|-----------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| How many payroll inputs do you plan to enter? | <p>When you have only a few inputs to make, you can enter them easily through the user interface.</p> <p>When you have more than a few payroll inputs, you can:</p> <ul style="list-style-type: none"> <li>• Use the <i>Import Payroll Input</i> web service to create integrations or use EIBs to mass load payroll inputs.</li> <li>• Create a payroll input workbook to add and modify payroll input in a spreadsheet format. Data you enter in the workbook automatically updates Workday payroll inputs. Payroll inputs you enter in Workday don't automatically update the workbook; to view those updates regenerate the workbook.</li> </ul> |

| Questions                                                                                                                                                            | Considerations                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Who will manage payroll inputs?                                                                                                                                      | <p>You can enable:</p> <ul style="list-style-type: none"> <li>• Payroll administrators to add payroll input through tasks, a business process, or EIBs.</li> <li>• Payroll partners to provide specific data for payroll input, by creating a payroll input workbook. Create a template in which you select which fields a user can enter data for. Then, generate a workbook that payroll partners can use to enter the data. You can also lock and unlock workbooks to prevent data entry at specific times. Example: During a payroll calculation.</li> <li>• Nonpayroll administrators to end workers' ongoing payroll inputs as part of a termination.</li> </ul> |
| How do you want to prevent users from adding payroll input for themselves?                                                                                           | <p>Workday tasks automatically prevent users from adding or editing payments for themselves. Users can only add payroll input for themselves by using a web service. To prevent them from doing so, select the <b>Payroll Web Services - Do Not Allow Add/Update for Worker as Self</b> check box on the <b>Edit Tenant Setup - Payroll</b> task.</p>                                                                                                                                                                                                                                                                                                                  |
| Will you want to add to a calculated amount or replace a calculated amount?                                                                                          | <p>To add to a calculated amount, create an adjustment payroll input. Workday continues to display the initial calculation and creates an additional entry to increase or decrease a payment.</p> <p>To completely replace a calculated amount, create an override payroll input. Workday replaces the calculated amount with the payroll input amount.</p>                                                                                                                                                                                                                                                                                                            |
| How do you want to modify information that came from another Workday product area, such as Time Tracking or Absence, or provide information from an external source? | <p>You can create:</p> <ul style="list-style-type: none"> <li>• An override payroll input for pay components that rely on payroll inputs for their value.</li> <li>• An adjustment payroll input when modifying amounts that come from Workday.</li> </ul> <p>You can use override or adjustment inputs in either case, but adjustment payroll inputs display both the original amount and the adjustment.</p> <p>When you create an adjustment input for a pay component that relies on payroll inputs for its value Workday displays a zero result for the original pay component amount.</p>                                                                        |
| Will you want to replace an entire payment?                                                                                                                          | <p>You can use payroll input to override an earning, deduction, or pay component related calculation (PCRC) amount for a single on-cycle result. To replace an entire payroll result, consider creating an on-demand or manual replacement payment.</p>                                                                                                                                                                                                                                                                                                                                                                                                                |
| Are you adjusting compensation payments?                                                                                                                             | <p>For adjustments to compensation one-time payments, Workday recommends that you modify the one-time compensation payment. Workday sets</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

| Questions                                                                                 | Considerations                                                                                                                                                                                                                                                                                                                                                                                                                    |
|-------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                                                                           | <p>any associated payroll calculations to <i>Requires Re-Calculation</i>.</p> <p>If you decide to use a payroll input to adjust a one-time payment, enter an adjustment payroll input instead of an override. Also make appropriate modifications to your one-time payments in Compensation.</p>                                                                                                                                  |
| What data types do you want to use for your payroll inputs?                               | <p>You can assign 1 of these Input Value Types to a related calculation that you enter through payroll input:</p> <ul style="list-style-type: none"> <li>• Boolean</li> <li>• Date</li> <li>• Text</li> <li>• Numeric</li> </ul> <p>If you select Text, you must also add an Input Value Lookup Table. When creating a related calculation, you can enter a Default Value that is the same data type as the input value type.</p> |
| Are you adding a payment for a worker who has transferred internationally (CAN, UK, USA)? | You can create an on-demand trailing payment instead of a payroll input.                                                                                                                                                                                                                                                                                                                                                          |
| Do you need to calculate specific taxes for the payroll input (USA)?                      | <p>When you activate and configure Tax Location Mapping, Workday determines which taxes to calculate based on location worktags on the payroll input.</p> <p>When you include a location worktag on a payroll input, Workday resolves taxes associated with the location, regardless of the worker's tax election.</p>                                                                                                            |

## Recommendations

When adding payroll input, specify batch IDs so that you can mass delete the inputs in case of error. After you complete a payroll result that uses a batch ID, you can no longer delete the batch ID.

When adjusting information from Time Tracking or Absence, modify the information at the source instead of using payroll input, and then recalculate payroll. Doing so helps ensure that:

- Future adjustments to the Time Tracking or Absence data don't result in over- or under-payment.
- Absence balances are accurate for payout at termination.
- Other payroll calculations and reports that use the data are also accurate.
- Future retro calculations use the modified values.

For Payroll for Australia and the UK, when adjusting tax-based pay components, be sure to add payroll input for all related PCRCs.

For Payroll for France, to modify statutory contributions, override the PCRCs of Memo deductions instead of modifying the contribution deduction. Overriding Memo deductions enables you to maintain consistent ceilings and gross wages across contribution calculations. Example: To modify the value of AGIRC-ARRCO contributions, override gross wages and ceiling values of the *Memo - Reference Values for AGIRC-ARRCO [FRA]* deduction.

For Payroll for the U.S., when adding payroll input for FLSA, use start and end dates that correspond to the appropriate FLSA period.

## Requirements

You can only process payroll input for workers and pay components that are configured to be included in the payroll process on the **General** tab of a run category.

To receive a payroll input, workers must also meet the pay component eligibility of the earning or deduction.

Configure the run category to include the appropriate workers and pay components.

**Note:** Regardless of the configuration on the **Nonactive (On Cycle, On Demand Replacement)** tab for the run category, Workday processes one-time payroll input for non-active workers.

## Limitations

Once you process a payroll input, you can't override it with a new input. When a worker has multiple override payroll inputs, Workday sums the amounts.

You can't update an existing ongoing payroll input that is in a completed payroll result. To update ongoing payroll inputs, end the existing payroll input and create a new one.

When mass deleting payroll inputs, you must delete each batch corresponding to a batch ID individually. Workday doesn't support multiselect batch deletion.

Retroactive payroll processes don't update existing payroll input amounts. When you create an adjustment payroll input, Workday can adjust the original amount, but not the adjustment payroll input.

## Tenant Setup

You can use the **Edit Tenant Setup - Payroll** task to:

- Prevent payroll administrators and partners from using web services to add payroll input for themselves.
- Select which end date to suggest on the task for ending workers' ongoing payroll inputs as part of a termination. You can edit the date on the task.

## Security

| <i>Worker Data: Payroll (Payroll Input Workbook – Unlock)</i> in the Core Payroll functional area.    | Users can unlock payroll input workbooks.                                                                                                                                                                                                                                                          |
| <i>Worksheets</i> in the System functional area.                                                      | Users can view all data in a workbook shared with them regardless of other security settings related to the data. They can't edit data in the workbook.<br><br>Example: Users can see data even when they don't have access rights to payroll input or the specific pay group the workbook is for. |

### Business Processes

| Business Processes            | Considerations                                                                                                                           |
|-------------------------------|------------------------------------------------------------------------------------------------------------------------------------------|
| <i>Request Payroll Inputs</i> | Enables you to submit payroll input requests for workers, which Workday routes for review and approval.                                  |
| <i>End Payroll Inputs</i>     | As a subprocess of the <i>Termination</i> business process, enables you to end workers' ongoing payroll inputs as part of a termination. |

### Reporting

| Reports or Dashboards                          | Considerations                                                                                                                                  |
|------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Ongoing Payroll Input with Reference ID</b> | Use to gather information required to create an EIB upload that modifies existing ongoing payroll input. Examples: Reference IDs, batch IDs.    |
| <b>Payroll Input by Batch ID</b>               | Use to check payroll input uploads by verifying adjustment and override totals for all payroll inputs for a specific batch ID.                  |
| <b>Payroll Input Not Processed</b>             | Use to identify unprocessed payroll inputs.                                                                                                     |
| <b>Tenant Analyzer</b>                         | Use the <b>Validations</b> tab on this report to identify that worker eligibility is set correctly for pay components that allow payroll input. |
| <b>View Payroll Input by Worker(s)</b>         | Use to verify the existing payroll inputs for a worker, and view whether the input is used in pay calculation or retro pay calculation results. |

| Reports or Dashboards     | Considerations                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
|---------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Find Payroll Input</b> | <p>Use to easily view payroll inputs. When you run the report, Workday displays these details on each payroll input line:</p> <ul style="list-style-type: none"> <li>• On-Cycle Payroll Result Usage Count</li> <li>• Off-Cycle Payroll Result Usage Count</li> <li>• Retro Payroll Result Usage Count</li> <li>• Input Lines (PCRC and amount)</li> </ul> <p>You can then use various search facets to further filter the payroll input lines and click the <b>View Payroll Input Details</b> mass action button. This generates a detailed report of all the selected payroll inputs.</p> <p><b>Note:</b> To access the <b>Find Payroll Input</b> report, you must create a security policy for the <i>Reports: Payroll Input</i> domain. In the security policy add the Payroll Administrator security group with View access permission. Run the <b>Activate Pending Security Policy Changes</b> task.</p> |

You can use these report data sources when creating custom reports on payroll inputs:

- **Pay Calculation Results for Organization, Worker, Period and Date Range (As of Sub Period End Date)**
- **Payroll Inputs**
- **Payroll Input for Periods**

When creating a custom report, you can retrieve payroll input information for a worker by using the **Payroll Inputs with Optional Filters** report field on the *Worker* business object.

## Integrations

| Web Services                                               | Considerations                                                                                                                                        |
|------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------|
| <i>Import Payroll Input</i><br><i>Submit Payroll Input</i> | Use the <i>Import Payroll Input</i> web service because it's optimized for bulk import. You can also use the <i>Submit Payroll Input</i> web service. |
| <i>Terminate Employee</i>                                  | Use to end workers' ongoing payroll inputs as part of a termination.                                                                                  |

## Connections and Touchpoints

| Features                                  | Considerations                                                                                                                                                                                                             |
|-------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Gross-up calculations (CAN, FRA, UK, USA) | You can use payroll input to provide the net amount for a gross-up earning or deduction.                                                                                                                                   |
| On-demand payments                        | <p>When creating an on-demand payment, you can load existing payroll inputs as the payment values.</p> <p>Workday loads all active payroll input for a worker regardless of run category or pay component eligibility.</p> |

| Features               | Considerations                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Pay components         | <p>You can configure pay components to allow payroll input or not.</p> <p>The worker eligibility of a pay component also determines whether a worker can receive a payroll input. Workday provides several calculations referring to payroll inputs that you can use as eligibility criteria. Examples: <i>Payroll Input (Onetime) Exists for Pay Component</i> and <i>Payroll Input (Ongoing) Exists for Pay Component</i>. Ensure that you select the appropriate eligibility for the payroll inputs you want to process.</p> <p>When a payroll input doesn't resolve or isn't available for input, verify the pay component configuration.</p> |
| Payroll run categories | <p>The payroll run category determines which pay components to process in a payroll run, including payroll inputs.</p> <p>Workday provides several processing statuses referring to payroll input that you can use to identify workers to process. Example: <i>Terminated with Ongoing Payroll Input</i>.</p>                                                                                                                                                                                                                                                                                                                                     |
| Retroactive processing | <p>You can process retroactive payroll inputs for earnings and deductions that are configured to recalculate during a retroactive payroll calculation.</p> <p>Retroactive payroll processes don't update existing payroll input amounts. When you create an adjustment payroll input, Workday can adjust the original amount, but not the adjustment payroll input.</p>                                                                                                                                                                                                                                                                           |
| Staffing               | <p>You can configure the <i>Termination</i> business process to enable nonpayroll administrators to end ongoing payroll inputs.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships in your tenant. Learn more about the [Workday Touchpoints Kit](#) on Workday Community.

### Other Impacts

When a period is divided into multiple subperiods, Workday applies these processing rules for payroll inputs:

- For one-time payroll inputs: Workday processes the entire input in the subperiod that has the input end date.
- For ongoing payroll inputs: Workday resolves the input in each subperiod, and applies proration if specified.

For gross-to-net proration, you can set worker eligibility for the pay component to resolve only once per pay period.

[Setup Considerations: Pay for Terminated Workers](#) on page 113

**Reference**

[2023R2 What's New Post: Non-Numeric Payroll Input](#)

## Steps: Set Up Payroll Input

---

**Prerequisites**

Review setup considerations for payroll inputs.

**Context**

You can add additional payroll information when calculating an on-cycle payroll result for a worker. You can use payroll inputs to:

- Add information that comes from sources other than compensation plans, benefit plans, or absence management.
- Adjust general calculations for an individual worker.

Some payroll input tasks use machine learning recommendations to help you complete the tasks more easily. See [Concept: Intelligent Prompt Recommendations for Payroll](#).

**Steps**

1. Access the **Edit Earning** or **Edit Deduction** task for the pay component you want to add pay input for. As you complete these sections, consider:

| Section                     | Description                                                                                                                                                                                                                                                 |
|-----------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Worker Eligibility</b>   | Verify that the workers targeted to receive payroll input are eligible for the earning or deduction.<br><br>To only process the pay component for workers with existing payroll inputs, select <i>Payroll Input Exists for Pay Component (Sub Period)</i> . |
| <b>Calculation Details</b>  | To add payroll input for the pay component amount, select <b>Input Amount Allowed?</b> .                                                                                                                                                                    |
| <b>Related Calculations</b> | To add payroll input for a pay component related calculation amount, select <b>Input Allowed?</b> For each related calculation.                                                                                                                             |

When adding payroll input, you can use the **Special Entry** check box to override the input allowed settings on the pay component.

Security: *Set Up: Payroll (Calculations - Payroll Specific)* domain in the Core Payroll functional area.

2. Access the **Edit Run Category** task for your run category.

Configure your run category to:

- Process the workers you're targeting for payroll input.
- Process the pay components with the payroll input.

See [Steps: Set Up Pay Run Categories](#) on page 98.

### 3. Add payroll input values:

- Configure the *Request Payroll Inputs* business process to request and approve payroll inputs. See [Steps: Set Up Request Payroll Inputs Business Process](#).
- [Add Payroll Input for Workers](#) on page 589.
- Add payroll input on the worker's payroll result. See [Concept: Payroll Input on Payroll Results](#).
- Create a workbook to add, update, or delete payroll inputs in real time on a single sheet. See [Steps: Using Payroll Input Workbooks](#) on page 595.
- Create an EIB based on the *Import Payroll Input* web service to mass upload payroll inputs. See [Concept: Data Entry in Payroll Input EIB Spreadsheets](#) on page 599.

[Concept: Retro Payroll Input](#) on page 883

[Concept: Payroll Input and Proration](#) on page 281

[Setup Considerations: Payroll Input](#) on page 575

## Steps: Set Up Request Payroll Inputs Business Process

### Prerequisites

- Review setup considerations for payroll input.
- Security: *Business Process Administration* or *Manage: Business Process Definitions* domain in the System functional area.

### Context

You can set up the *Request Payroll Inputs* business process to enable payroll practitioners to manage payroll input requests for a single or multiple workers, and to review and approve requests. Workday routes requests to reviewers as **My Tasks** notifications.

Configuring the *Request Payroll Inputs* business process doesn't prevent you from using other Workday-delivered payroll input tasks, such as **Add Payroll Input** and **Add Payroll Input by Worker**.

### Steps

#### 1. [Edit Business Process Security Policies](#).

Configure access for security groups on the *Request Payroll Inputs* business process security policy. Add the same user groups who would normally have access to payroll input tasks and reports. We don't recommend adding groups such as managers or workers.

Workday recommends these security group configurations:

| Option                                                             | Security Groups                                                                                      |
|--------------------------------------------------------------------|------------------------------------------------------------------------------------------------------|
| <b>Who Can Start the Business Process Initiating Action</b>        | <ul style="list-style-type: none"> <li>• Payroll administrator</li> <li>• Payroll partner</li> </ul> |
| <b>Who Can Do Action Steps in the Business Process Action Step</b> | Payroll administrator                                                                                |
| <b>Who Can Do Actions on Entire Business Process Approve</b>       | Payroll administrator                                                                                |
| <b>Who Can Do Actions on Entire Business Process Deny</b>          | Payroll administrator                                                                                |

| Option                                                        | Security Groups                                                                                      |
|---------------------------------------------------------------|------------------------------------------------------------------------------------------------------|
| <b>Who Can Do Actions on Entire Business Process View All</b> | <ul style="list-style-type: none"> <li>• Payroll administrator</li> <li>• Payroll partner</li> </ul> |

(Optional) You can configure the business process security policy to enable users to attach files to payroll input requests. See [Steps: Enable Attachments on an Individual Business Process](#).

## 2. [Edit Business Processes](#).

a) Add the **Review Payroll Input Request for Worker** task as an action step on the *Request Payroll Inputs* business process definition. If you don't do this, Workday approves the payroll input requests automatically.

b) (Optional) Disable **My Tasks** notifications for payroll input request reviews.

When you have a high volume of requests for review, you can disable sending system notifications by accessing the business process definition. On the **Notifications** tab, click **Maintain System Notifications** and select the **Disabled** check box for steps you don't want to send system notifications for. You'll still be able to access review requests in **My Tasks**, but you won't receive notifications about them.

## 3. Access the **Request Payroll Inputs** task to create 1 or more payroll input requests and send them for review.

Workday displays the same fields on the **Request Payroll Inputs** task as it does for other payroll input tasks.

Only the **Request Payroll Inputs** task enables you to initiate the *Request Payroll Inputs* business process. You can still use these tasks to add payroll input, but they won't generate a request for approval:

- **Add Payroll Input**
- **Add Payroll Input by Result**
- **Add Payroll Input by Worker**

**Note:** You can't use the Enterprise Interface Builder to initiate the *Request Payroll Inputs* business process.

## Result

Workday directs the payroll input requests to the appropriate reviewers, who can:

- Approve requests individually and in bulk. See [Concept: Bulk Approve Business Processes](#).
- Deny or edit payroll input requests, but not send them back

When a payroll practitioner submits a payroll input request, Workday creates a business process event but not the payroll input. When a reviewer approves a payroll input request, Workday creates the payroll input and adds it to the payroll calculation for the worker.

## Next Steps

You can view *Payroll Input Requests* business process events on the worker history and on the **Find Events** report.

You view payroll inputs, but not payroll input requests pending approval, on reports such as **Find Payroll Input** or **View Payroll Input by Worker**.

[2025R1 Feature Release Note: Payroll Input Business Process](#)

## Steps: Set Up End Payroll Inputs for Terminated Workers

### Prerequisites

- Review setup considerations for:
  - Pay for terminated workers.
  - Payroll inputs.
- Set up payroll inputs.

### Context

You can add the *End Payroll Inputs* business process on the *Termination* business process to enable ending ongoing payroll inputs when terminating workers. Workday only runs the *End Payroll Inputs* business process when workers have inputs that both:

- End after the end date of the current pay period.
- Start on or before the workers' termination date.

For terminations that occur prior to the end date of the current pay period, you must manually override the end date using the **Edit Payroll Input** task.

When administrators run the business process, they can also view the workers' payroll inputs with a start date after the termination date.

### Steps

- (Optional) Access the **Edit Tenant Setup - Payroll** task.

Select the end date to suggest for the **Proposed End Date for Ending Payroll Inputs** on the **End Payroll Inputs** inbox task.

Security: *Set Up: Tenant Setup - Payroll* domain in the System functional area.

- [Edit Business Process Security Policies](#).

Edit the security policies for these business processes:

| Business Processes        | Security to Configure                                                                                                                                                                                                                                    |
|---------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <i>End Payroll Inputs</i> | Add security groups such as HR partners on these action steps: <ul style="list-style-type: none"> <li><i>Review End Payroll Inputs by Worker</i></li> <li><i>View All</i></li> <li><i>Approve</i></li> <li><i>Cancel</i></li> <li><i>Deny</i></li> </ul> |
| <i>Termination</i>        | Add security groups on the <i>End Payroll Inputs</i> step.                                                                                                                                                                                               |

- Access the **Create Business Process Definition (Default Definition)** task.

From the **Business Process Type** prompt, select *End Payroll Inputs*.

Security: These domains in the System functional area:

- Business Process Administration*
- Manage: Business Process Definitions*

#### 4. [Edit Business Processes.](#)

On the *End Payroll Inputs* business process definition, either:

- Select the **Enable Autocomplete** check box to complete the business process without approvals.
- Add 1 row with these values on the **Business Process Steps** tab:

| Order | Type            | Group                                                                                               |
|-------|-----------------|-----------------------------------------------------------------------------------------------------|
| b     | <i>Approval</i> | Select the roles that can approve the business process. You can configure view-only or edit access. |

On the *Termination* business process, add the *End Payroll Inputs* action step.

#### Result

When administrators run the *Termination* business process, Workday checks whether workers have ongoing payroll inputs. When they do, Workday sends an Inbox task to the business process initiator to end the inputs. When you enable the *End Payroll Inputs* business process to autocomplete, Workday ends the inputs and sets their end dates as either the:

- Later of the pay through date and the end date of the workers' last completed period.
- Workers' termination date, when you select that date type for your tenant.

When workers have no eligible payroll inputs, Workday skips the *End Payroll Inputs* business process and doesn't display the workers' future-dated inputs. You can find those inputs on the **View Payroll Input by Workers** report.

After administrators complete or rescind the *End Payroll Inputs* business process, Workday:

- Changes the workers' pay results status to *Requires Re-calculation*.
- Ignores corrections to the *Termination* business process or changes to the payroll inputs you ended with the business process.

#### Next Steps

View the ended payroll inputs on the workers' history.

Recalculate payroll for the workers.

#### Related Information

[Reference: Edit Tenant Setup - Payroll](#)

## Set Up Hours Aggregation

#### Prerequisites

Create earnings and deductions with hours-related pay component related calculations (PCRCs).

Security: *Set Up: Payroll (Calculations - Payroll Specific)* domain in the Core Payroll functional area.

## Context

Workday can aggregate the hours from daily payroll inputs, and time blocks from Workday Time Tracking, into condensed result lines. Aggregation can improve the performance of payroll calculations and enhance the readability of payroll results.

To enable hours aggregation, you need to select which hours-related PCRCs you want to aggregate.

## Steps

1. Access the **Maintain Pay Component Related Calculations for Aggregation** task.

On the **Pay Input Aggregation** tab, Workday displays:

- Hours-related, customer-owned PCRCs.
- PCRCs with the **Aggregate** check box selected.

2. Select the **Aggregate** check box for PCRCs you want to aggregate.

3. If you use Workday Time Tracking, select the **Time Block Aggregation** tab.

Workday displays all pay components with time calculation tags. To enable aggregation for pay components without PCRCs, edit the pay component and add a PCRC.

4. In the Pay Components with PCRCs table, select the **Aggregate** check box for PCRCs you want to aggregate.

In FLSA calculations, when you use Time Tracking to enter hours; Workday recommends that you always select the **Aggregate** check box for PCRCs.

## Result

When you calculate payroll, Workday adds together the hours for each worker into a single pay result line.

## Example

This example illustrates daily pay inputs aggregated into a condensed result line for each subperiod:

| Pay Component | Sub Period (if different from Pay period) | Related Calculation | Amount | Input Amount |
|---------------|-------------------------------------------|---------------------|--------|--------------|
| Hourly Pay    | 2019-01-01 through 2019-01-04             | Hours (unprorated)  | 26.00  | 8.00         |
|               |                                           |                     |        | 7.00         |
|               |                                           |                     |        | 6.00         |
|               |                                           |                     |        | 5.00         |
|               |                                           | Rate                | 20.00  |              |
| Hourly Pay    | 2019-01-05 through 2019-01-11             | Hours (unprorated)  | 17.00  | 8.00         |
|               |                                           |                     |        | 9.00         |
|               |                                           | Rate                | 22.00  |              |

## Related Information

[Concept: Hours Aggregation on Pay Results](#) on page 601

## Add Payroll Input for Workers

### Prerequisites

Security: *Worker Data: Payroll (Payroll Input)* domain in the Core Payroll functional area.

### Context

You can add payroll inputs to modify data used in an individual worker's payroll calculation. You can either:

- Completely override existing pay component values.
- Adjust an existing value by increasing or decreasing it.

You can create payroll inputs that either:

- Reoccur in every pay period.
- Occur once.

Some payroll input tasks use machine learning prompt recommendations to help you complete the tasks more easily. See [Concept: Intelligent Prompt Recommendations for Payroll](#).

### Steps

1. Access the **Add Payroll Input by Worker** task.
2. As you complete the **Worker Defaults** section, consider:

| Option               | Description                                                                                                                                                                                                                                                                                                                                                                                                                                |
|----------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Worker(s)</b>     | You can't use the <b>Add Payroll Input by Worker</b> task to add payroll input for yourself.                                                                                                                                                                                                                                                                                                                                               |
| <b>Batch ID</b>      | Enter a batch ID to find and take action on the associated payroll input with ease later.                                                                                                                                                                                                                                                                                                                                                  |
| <b>Start Date</b>    | <p>One-time and ongoing entries require a <b>Start Date</b>.</p> <p>Workday doesn't prorate payroll inputs based on the <b>Start Date</b> and <b>End Date</b>. Workday processes the input value in full even when the start and end dates fall in the middle of a period or subperiod.</p> <p>When the pay component you select is an FLSA bonus, enter <b>Coverage Dates</b> to allocate the bonus across the coverage period (USA).</p> |
| <b>End Date</b>      | <p>One-time entries require an <b>End Date</b>.</p> <p>When the pay component you select is an FLSA bonus, enter <b>Coverage Dates</b> to allocate the bonus across the coverage period (USA).</p>                                                                                                                                                                                                                                         |
| <b>Special Entry</b> | <p>Select to display additional options on the <b>Pay Components</b> prompt, including:</p> <ul style="list-style-type: none"> <li>• Tenanted pay components that you don't configure for payroll input.</li> <li>• Pay components with arrears balances.</li> <li>• Statutory deductions and withholding orders (AUS, CAN, USA).</li> </ul>                                                                                               |

|--------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|        | <ul style="list-style-type: none"> <li>Statutory deductions and taxes (FRA).</li> <li>Statutory deductions and court orders (UK).</li> </ul> <p>Example: Select <b>Special Entry</b> to adjust NI deductions when a worker changes NI categories.</p> <p>Enter the reason for the special entry in the <b>Comment</b> field in the <b>Input</b> grid.</p> <p>Payroll for France doesn't support pay inputs for withholding orders.</p> |

Workday uses **Worker Defaults** on the payroll input for each worker that you select. Example: When paying 10 workers using the same earning, you can select the workers and earning in the **Worker Defaults** section. When you click **OK**, you can enter input values for each worker, but Workday populates the pay component.

3. Select any **Processing Defaults**:

| Option            | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
|-------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>One-time</b>   | When there are multiple subperiods in a pay period, Workday processes the input in full for the subperiod that includes the pay input <b>End Date</b> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| <b>Ongoing</b>    | <p>When there are multiple subperiods in a pay period, Workday resolves the pay component in each subperiod.</p> <p>Workday selects the subperiod that's closest to the pay period end date when the worker has both:</p> <ul style="list-style-type: none"> <li>An ongoing payroll input with no end date for a position-based pay component.</li> <li>A midperiod company transfer.</li> </ul> <p>For terminated workers, Workday applies the payment to the worker's last subperiod when the start and end dates of the payment are after the termination subperiod.</p> <p>For gross-to-net proration, you can set worker eligibility for the pay component to resolve only once per pay period. Workday prorates the amounts to each subperiod only when you set up the pay component for proration.</p> |
| <b>Override</b>   | <p>Overwrites the pay component amount, the pay component related calculations, or both, based on the <b>Input Details</b> section. Use for an initial input or to overwrite any zero values Workday populates.</p> <p>Overwrites a payment for the entire period, even when the payroll input <b>Start Date</b> and <b>End Date</b> don't represent the full period.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| <b>Adjustment</b> | Creates an additional entry on payroll results to increase or decrease a payment.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |

| Option | Description                                                         |
|--------|---------------------------------------------------------------------|
|        | Each adjustment entry has a separate resolution on payroll results. |

4. Enter any **Additional Defaults**:

| Option                  | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
|-------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Payroll Worktags</b> | <p>Select a worktag value to associate with the input. Examples:</p> <ul style="list-style-type: none"> <li>• NI categories (UK).</li> <li>• Projects for cost allocations (FRA).</li> <li>• Tax authorities (CAN, FRA, USA).</li> <li>• Tax locations (CAN, USA).</li> <li>• Organization types or projects for cost allocations (CAN, UK, USA).</li> <li>• Superannuation (AUS).</li> <li>• Withholding orders (AUS).</li> </ul> <p>Although you can add multiple worktags to an input row, you can use each worktag type only once for that input row. Add separate input rows for each worktag.</p> <p>For Payroll for Australia, if you don't provide a worktag for superannuation, Workday will default to the superannuation choice that's effective on the payment date. You can use a worktag to override the default.</p> <p>For Payroll for the U.S.:</p> <ul style="list-style-type: none"> <li>• When you associate a tax authority worktag with payroll input and set up ongoing multiple work jurisdictions (OMWJ) for the worker, Workday doesn't split wages by OMWJ allocations. Workday continues to associate wages with the tax location worktag and tax accordingly.</li> <li>• When you select a payroll tax location or a project related to a payroll tax location, Workday populates the appropriate tax authorities according to the payroll tax mapping. Workday uses the mapping active on the earlier of: <ul style="list-style-type: none"> <li>• The period end date of the payroll period selected.</li> <li>• The pay input end date selected.</li> </ul> </li> </ul> <p>When entering off-cycle payroll input for a local other pay component, select the local tax location worktag and remove the state worktag. Example: You create payroll input for the <i>WA: Washington Paid Family and Medical Leave (State Plan) [USA]</i> pay component. You only select the <i>Local Other: WA: Washington paid Family &amp; Medical Leave (State Plan)</i></p> |

| Option                                   | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
|------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                          | <i>Washington</i> worktag. You don't include the <i>State: Washington</i> worktag.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| <b>Prior Period Tax Adjustment (USA)</b> | <p>You can select the check box, only when you:</p> <ul style="list-style-type: none"> <li>• <b>Enable Negative Tax Withholding for Negative Wages</b> on the <b>Edit Tenant Setup – Payroll</b> task.</li> <li>• Create one-time payroll input for workers in US primary pay group.</li> </ul> <p>When selected, if retro pay input is processed resulting in a negative wage adjustment and you've enabled negative withholding on the <b>Edit Tenant Setup – Payroll</b> task, Workday calculates the taxes to be credited by multiplying the percentage of YTD taxable wages being reversed against the actual YTD tax withheld.</p> |

5. Click **OK** to enter individual payroll input details.

6. As you complete the **Input** grid, consider:

| Option                 | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
|------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Position</b>        | <p>Required for position-based earnings and deductions. Workday processes the input for the company that the position belongs to at processing time.</p> <p>When a worker changes positions midperiod for an unprorated period, Workday overrides the selected position and uses the one in effect at the period end date.</p> <p>For worker-based earnings and deductions, Workday includes the selected position in journal entry lines as a worktag.</p>                                                                               |

| <b>Costing Company</b> | <p>Use to charge this payroll item to a company other than the worker's default company. This column is available when you enable intercompany accounting in your tenant.</p>                                                                                                                                                                                                                                                                                                                                                             |

| Option                       | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
|------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Payroll Worktags</b>      | <p>To select more than 1 value for the same worktag type and worker, add separate <b>Input</b> rows for each worktag here.</p> <p>Example (CAN, UK, USA): When a worker has 2 loans, add 2 <b>Input</b> rows with these values:</p> <ul style="list-style-type: none"> <li>• A worktag of <i>Loan 1</i> and its amount.</li> <li>• A worktag of <i>Loan 2</i> and its amount.</li> </ul> <p>When you configure multiple custom worktag types as calculation worktags, enter a value for each of the worktag types in the same row.</p> <p>For Payroll for Canada, when you don't select a province worktag for a taxable earning or pretax deduction, Workday withholds for either:</p> <ul style="list-style-type: none"> <li>• The worker's primary work province for compensation.</li> <li>• The province of employment for all other taxes.</li> </ul> <p>For Payroll for the U.S., when you don't select a state worktag for a taxable earning or pretax deduction, Workday withholds for the worker's processing position work state.</p> |
| <b>Input Details - Type</b>  | <p>The type of value you want to record.</p> <p>You can select:</p> <ul style="list-style-type: none"> <li>• <i>Amount</i> to enter the pay component value.</li> <li>• Pay component related calculations.</li> </ul> <p>Example: For a pay component defined as <math>Amount = Rate \times Hours</math>, select <i>Rate</i>, <i>Hours</i>, and <i>Amount</i>.</p> <p>For adjustment inputs, Workday only resolves pay component related calculations when you select them in this field. Workday resolves all pay component related calculations for override inputs.</p> <p>To adjust an arrears balance, select <b>Special Entry</b> and then <i>Arrears Balance</i> in this field.</p> <p>To provide input for a gross-up earning, select <i>Net Amount (for Gross-Up)</i>.</p> <p>For Payroll for the U.S., to avoid unexpected results for tax reporting, don't select <i>Gross Wages</i> when the payment date is before 2013/01/01. Workday uses <i>Gross Wages</i> for quarterly tax reporting for 2013 and after.</p>                 |
| <b>Input Details - Value</b> | <p>The pay component amount and, if applicable, the values of the related calculations that make up the amount.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |

| Option             | Description                                                                                                                                                                                                                                                                                                                                                                                                                                              |
|--------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Attachments</b> | <p>Select or upload any attachments you want to associate with the payroll input. You can configure your custom reports to display the attachments you upload. You can also edit, delete, and purge payroll input attachments.</p> <p>When you delete a payroll input, the attachment file may still exist in Workday. You can't open the file, but we recommend that you don't include Personally Identifiable Information in attachment filenames.</p> |

## Result

You can view payroll inputs in the **Input** report of the **Pay** profile group on the worker profile. Workday only displays payroll inputs for:

- The past 12 months before the current date.
- The next month from the current date.

Workday updates results with a status of *In Progress* to *Requires Re-Calculation*.

## Next Steps

When the payroll result has a status of:

- *Requires Re-Calculation*, recalculate the payroll results.
- *Complete*, run a retro calculation.

## Concept: Payroll Input on Payroll Results

Workday enables you to add a payroll input directly on a worker's payroll result using the **Add Payroll Input** task (secured to the *Worker Data: Payroll (Payroll Input)* domain).

Workday:

- Initially displays a simplified task with only the required and most commonly used fields. Examples: Pay component, run category, value.
- Enables you to expand all details to access a full task view, which includes all payroll input fields.

## Comparison of Payroll Input Tasks

Workday also enables you to add payroll inputs on the user interface using these tasks:

- **Add Payroll Input by Result.**
- **Add Payroll Input by Worker.**
- **Request Payroll Inputs**

The 4 tasks contain the same fields, but they differ in terms of:

- Access: How you find them in Workday.
- Layout: Whether Workday displays all fields or an expandable selection of the most commonly used fields.

|        | Add Payroll Input                                                                                                                                                                               | Add Payroll Input by Result                       | Add Payroll Input by Worker | Request Payroll Inputs                                                                          |

## Payroll Input Workbooks

### Steps: Using Payroll Input Workbooks

#### Prerequisites

- Set up Drive.
- Set up Worksheets.
- Security: These domains in the Core Payroll functional area:
  - *Set Up: Payroll (Payroll Input Workbooks).*
  - *Worker Data: Payroll (Payroll Input Workbooks).*
  - *Worker Data: Payroll (Payroll Input Workbooks - Generate).*
  - *Worker Data: Payroll (Payroll Input Workbooks - Lock).*
  - *Worker Data: Payroll (Payroll Input Workbooks - Unlock).*

Workday recommends that you add only the payroll administrator to the Lock and Unlock domain security policies. This configuration gives them the responsibility and sole privilege to lock and unlock shared workbooks.

#### Context

Payroll input workbooks enable you to change or add payroll inputs for a pay group in a familiar, centralized spreadsheet environment. Updates in workbooks also reflect in the worker profiles in real time.

Workday enables you to:

- Configure payroll input templates for specific pay components and valid values.
- Generate workbooks that automatically include existing payroll inputs based on the pay group and date range you select.
- Add, edit, or delete payroll inputs using workbooks.
- Share workbooks with payroll and non-payroll stakeholders for simultaneous collaboration.

Example: Using a shared payroll input workbook, a payroll partner can add monthly payroll inputs for a pay group and collaborate with a payroll administrator to ensure accuracy.

## Steps

1. [Create Payroll Input Templates](#) on page 596.

Example: You can create separate payroll input templates for bonuses, charitable contributions, and wellness reimbursements.

2. [Generate Payroll Input Workbooks](#) on page 598.

When you generate a workbook, it contains the fields defined in the template. It enables you to add, edit, or delete payroll inputs for a specific pay group and date range.

Workday displays a link to the generated workbook and saves it in your Drive.

Example: You can generate a workbook for wellness reimbursements for a USA monthly pay group.

3. Edit workbooks.

The active entry area displays inside a green dashed outline in the workbook. To add new data, you must insert a row.

Example: You can add or change ongoing payroll inputs in a workbook generated for wellness reimbursements for a USA Monthly pay group.

4. (Optional) Share the payroll input workbook for collaboration.

Click **Share** and select specific users to grant edit or view permissions.

Users receive a Workday notification and (if enabled) an email.

Users can update the workbook simultaneously.

5. (Optional) Select **Payroll Input > Lock** from the payroll input workbook related action menu to prevent further updates in the entry area.

Once locked:

- You can still edit cells outside the entry area to make notes.
- You can unlock the worksheet to enable changes again in the entry area.
- You can remove workbooks from your Drive only when they're locked.

Security: These domains in the Core Payroll functional area:

- *Worker Data: Payroll (Payroll Input Workbooks - Lock).*
- *Worker Data: Payroll (Payroll Input Workbooks - Unlock).*

## Create Payroll Input Templates

### Prerequisites

- Set up Drive.
- Set up Worksheets.
- Security: *Set Up: Payroll (Payroll Input Workbooks)* domain in the Core Payroll functional area.

### Context

You can use worksheets to add, edit, or delete payroll inputs in a consolidated sheet. Workday enables you to create and configure templates that best fit your use cases.

With the template, you can:

- Add only the fields that you deem necessary. Workday generates these fields as distinct columns within a workbook.
- Configure hidden fields, required fields, and fields with multiple possible values.
- Specify the pay component to use in the workbook.
- Generate a workbook to create, edit, and delete payroll inputs.
- Generate workbooks multiple times using the same template.

## Steps

1. Access the **Create Payroll Input Template** task.
2. As you complete the task, consider:

| Option                 | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
|------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Field</b>           | <p>Include the fields you need for your use case. You can select from a variety of fields including:</p> <ul style="list-style-type: none"> <li>• Workday-delivered worktags.</li> <li>• Up to 4 related calculations.</li> </ul> <p>Worksheets don't support custom or related worktags or custom organizations for fields.</p> <p>Example: You regularly provide workers with wellness reimbursements. You create a template for Gym Reimbursements. In addition to the 5 required fields, you add <i>Amount</i> and <i>Costing Company</i>.</p> |
| <b>Label Override</b>  | <p>Enter a descriptive label. Otherwise, the default label is the name of the field.</p> <p>Example: Override the <i>Amount</i> field label to <i>Reimbursement Amount</i>, and the <i>Worker</i> field label to <i>Employee</i>.</p>                                                                                                                                                                                                                                                                                                              |
| <b>Valid Value</b>     | <p>Only include the valid values that are applicable to that field.</p> <p>Example: Enter your <i>Wellness Reimbursement</i> earning as the <b>Valid Value</b> for the <b>Pay Component</b> field. When you generate a workbook using this template, the only valid value under <b>Pay Component</b> is <i>Wellness Reimbursement</i>.</p>                                                                                                                                                                                                         |
| <b>Display Options</b> | <p>You can hide or make fields required.</p> <p><b>Note:</b> When the field has multiple valid values, you can't select <i>Do Not Show</i>.</p> <p>Example: Since <i>Wellness Reimbursements</i> is the only valid value for <b>Pay Component</b>, you can select <i>Do Not Show</i> for that field. You can also select <i>Amount</i> as <i>Required</i>.</p>                                                                                                                                                                                     |

## Result

You've created a customized template that determines which columns display on a generated workbook. If you edit the payroll input template, you must generate a new workbook to reflect the changes.

## Next Steps

Review the template carefully before you use it to generate a workbook. Once you generate a workbook, you can't delete the template.

Generate a payroll input workbook.

## Generate Payroll Input Workbooks

### Prerequisites

- [../.../manage-workday/tenant-configuration/content-management/drive/ymp1498691345885.dita](#)
- [../.../reporting-and-analytics/worksheets/worksheets-setup/zhb1488304070236.dita](#)
- Create a payroll input template.
- Security: These domains in the Core Payroll functional area:
  - *Worker Data: Payroll (Payroll Input Workbooks).*
  - *Worker Data: Payroll (Payroll Input Workbooks - Generate).*

### Context

You can generate a workbook to add, edit, or delete worker payroll inputs in a single worksheet using a template.

With Worksheets for payroll input, you can:

- Generate workbooks populated with existing payroll inputs based on the pay component of the template, the pay group, and the date range.
- Generate blank workbooks that you can use to add new payroll inputs for workers in a pay group.
- Update payroll input data that reflects on the worker profile in real time.
- Collaborate simultaneously with multiple users in a single workbook.

After you edit the workbook, Workday recommends that you lock it before you run the pay calculation.

When you add payroll input on a worker's profile, you must generate a new workbook to reflect the changes.

### Steps

1. Access the **Generate Payroll Input Workbook** task.
2. As you complete the task, consider:

| Option                     | Description                                                                                                                                                                                                                                                |
|----------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Pay Group</b>           | <p>Select a pay group to determine which workers are available in the generated workbook.</p> <p>Workday automatically populates workbooks with payroll inputs for workers from this pay group.</p> <p>You can only select 1 pay group for a workbook.</p> |
| <b>Start Date/End Date</b> | <p>Select the date range for the workbook.</p> <p>Workday automatically populates workbooks with payroll inputs that have a start or end date within</p>                                                                                                   |

| Option                   | Description                                                                                                                                                                                                                             |
|--------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                          | <p>this date range. Workday also populates with ongoing payroll inputs that have a:</p> <ul style="list-style-type: none"> <li>• Start date before the workbook end date.</li> <li>• End date after the workbook start date.</li> </ul> |
| Create Blank Input Sheet | Select this check box only when you want to generate a blank worksheet without populating any existing payroll inputs.                                                                                                                  |
| Template                 | <p>Select a template for the payroll inputs that you want to add.</p> <p>The template configuration determines the pay components and valid values available in the generated workbook.</p>                                             |

### Result

Workday displays a link to the generated workbook and saves it in your Drive.

Workday builds a workbook with columns from the template and provides an entry area for the specified pay group and date range. The workbook is now available for you to add, edit, or delete payroll inputs.

### Next Steps

Make the desired changes for the payroll inputs in the Worksheet entry area.

Share workbook with other users.

When you're ready to run the payroll calculation, first lock the workbook to prevent further updates. When you complete the pay calculation, you can no longer edit payroll inputs for completed pay or retro results. You can generate a separate workbook to add new inputs for a noncompleted period.

To prevent users from continuing to use a workbook that you created, you can lock it and remove it from your Drive.

## Concept: Data Entry in Payroll Input EIB Spreadsheets

To add multiple payroll inputs, you can create an EIB based on the *Import Payroll Input* web service. You can then enter data in a spreadsheet that corresponds to the inbound EIB.

These examples illustrate how to complete the EIB spreadsheet for the *Import Payroll Input* web service.

**Note:** Workday recommends that you use the *Import Payroll Input* web service, because it's optimized for bulk import. This example also applies to EIBs based on the *Submit Payroll Input* web service.

When you create an EIB spreadsheet, if you leave the **Run Category ID** field blank, the EIB defaults to include all run categories.

#### Example: Add New Pay Input

You want to upload a new payroll input for a transportation allowance earning of 50.

Add this row to the EIB spreadsheet:

| Spreadsheet Key | Row ID | Payroll Input ID | Earning                  | Amount |
|-----------------|--------|------------------|--------------------------|--------|
| 1               | 1      | 8000             | Transportation allowance | 50     |

If you leave the **Payroll Input ID** blank, Workday generates a new reference ID when you import the spreadsheet. This new reference ID can cause duplicate input records if you run the same EIB spreadsheet multiple times.

### Example: Modify Existing Pay Input

Global Modern Services terminated an employee on March 15, 2017. You want to end an existing ongoing pay input for transportation allowances for the terminated worker. The payroll input ID of the existing payroll input is 8000.

You can only modify a pay input end date after it was used in a payroll calculation.

Modify these columns in the EIB spreadsheet for the terminated worker:

| Payroll Input ID | Earning                  | End Date   |
|------------------|--------------------------|------------|
| 8000             | Transportation allowance | 2017-03-15 |

Ensure that the **Payroll Input ID** refers to the existing payroll input. When you enter a new payroll input id or leave the **Payroll Input ID** column empty, Workday creates a new payroll input.

### Example: Include Related Calculations on Payroll Inputs

You have an earning for hourly pay with related calculations for worked hours and hourly rate. You want to add payroll input for:

- Total pay: 1600.
- Worked hours: 160.
- Hourly rate: 10.

Add these rows to the EIB spreadsheet:

| Spreadsheet Key | Row ID | Earning    | Amount | Additional Input Details - Row ID | Related Calculation | Input Value |
|-----------------|--------|------------|--------|-----------------------------------|---------------------|-------------|
| 1               | 1      | Hourly Pay | 1600   | 1                                 | Hours               | 40          |

| Spreadsheet Key | Sheet ID | Earning Amount | Additional Input Details - Row ID | Related Calculation | Input Value |
|-----------------|----------|----------------|-----------------------------------|---------------------|-------------|
| 1               | 1        |                | 2                                 | Hourly rate         | 10          |

## Concept: Hours Aggregation on Pay Results

---

You can configure Workday to aggregate the hours from these sources into 1 line:

- Pay inputs.
- Workday Time Tracking time blocks.

**Criteria for Aggregation**

Workday aggregates hours from pay inputs or time blocks on which all of these attributes are the same:

- Company
- Costing company
- Currency override
- Pay component
- Position
- Rate
- Workers compensation codes
- Worktags

Pay inputs and time blocks that differ in any of these attributes aggregate separately.

**Example**

Robert worked 10 8-hour days this pay period. Daily pay inputs were identical, except for the costing company.

- The 64 hours costed to company A aggregate into 1 result line.
- The 16 hours costed to company B aggregate into another result line.

**Example**

Lindsey worked 10 8-hour days this pay period. She received a compensation increase from 20 to 22 on the sixth day. This proration event creates a separate subperiod and therefore separate result lines:

- 40 hours at the 20 rate aggregate into 1 result line.
- 40 hours at the 22 rate aggregate into another result line.

Hours That Don't Aggregate

Workday doesn't aggregate:

- Ongoing pay inputs.
- Inputs with more than 1 input line, such as hours and rate.

Adjustments aggregate only with other adjustments. Overrides aggregate only with other overrides.

Aggregation and Ongoing Multiple Work Jurisdictions (USA)

When you use ongoing multiple work jurisdictions (OMWJ), Workday aggregates input and time block hours according to the allocation percentages.

Example

Christopher's work jurisdiction allocations are as follows:

- California: 40%
- Oregon: 40%
- Hawaii: 20%

In the current pay period, he has these inputs:

- Input 1 (Monday): 10 hours
- Input 2 (Tuesday): 5 hours

Without aggregation, Christopher has 6 pay result lines:

| Pay Component    | Worktag    | Related Calculation | Amount  | Input Amount |
|------------------|------------|---------------------|---------|--------------|
| Hourly Pay [USA] | California | Hours (unprorated)  | 4 hours | 10           |
| Hourly Pay [USA] | Oregon     | Hours (unprorated)  | 4 hours | 10           |
| Hourly Pay [USA] | Hawaii     | Hours (unprorated)  | 2 hours | 10           |
| Hourly Pay [USA] | California | Hours (unprorated)  | 2 hours | 5            |
| Hourly Pay [USA] | Oregon     | Hours (unprorated)  | 2 hours | 5            |
| Hourly Pay [USA] | Hawaii     | Hours (unprorated)  | 1 hour  | 5            |

With aggregation, Christopher has 3 pay result lines:

| Pay Component    | Worktag    | Related Calculation | Amount  | Input Amount |
|------------------|------------|---------------------|---------|--------------|
| Hourly Pay [USA] | California | Hours (unprorated)  | 6 hours | 15           |
| Hourly Pay [USA] | Oregon     | Hours (unprorated)  | 6 hours | 15           |
| Hourly Pay [USA] | Hawaii     | Hours (unprorated)  | 3 hours | 15           |

**Note:** When you enter an override State worktag on a pay input, Workday doesn't aggregate that input with inputs that it allocates according to OMWJ splits.

#### Example

You add another 8-hour pay input for Christopher, with a California override worktag so California tax rates apply to all 8 hours. Workday adds a pay result line for the input and doesn't add it to the OMWJ-allocated California hours.

| Pay Component    | Worktag                       | Related Calculation | Amount  | Input Amount |
|------------------|-------------------------------|---------------------|---------|--------------|
| Hourly Pay [USA] | California (OMWJ split)       | Hours (unprorated)  | 6 hours | 15           |
| Hourly Pay [USA] | Oregon                        | Hours (unprorated)  | 6 hours | 15           |
| Hourly Pay [USA] | Hawaii                        | Hours (unprorated)  | 3 hours | 15           |
| Hourly Pay [USA] | California (override worktag) | Hours (unprorated)  | 8 hours | 8            |

#### Retro Calculations

Workday can aggregate hours for retroactive pay inputs. You can configure hours aggregation on the **Effective Dated** tab of the pay component. Workday uses the snapshot in effect at the end of the pay period to determine whether to aggregate retroactive pay input for prior periods.

#### Example

The pay component Hourly Pay has 3 effective-dated snapshots:

- 2019-01-01
- 2019-03-15
- 2019-04-01

You add retroactive pay inputs for the monthly pay period 2019-03-01 through 2019-03-31. Workday checks the status of the **Aggregate** check box for the pay component related calculation in the 2019-03-15 snapshot. When selected, Workday aggregates the hours.

Because Workday aggregates hours when calculating payroll, you won't see aggregated hours on pay results that Workday calculated before you enabled aggregation.

### Rounding in Payroll Calculations

You might see a nominal difference in pay results when you compare unaggregated result lines to result lines that Workday aggregates. Since rounding occurs after Workday completes the calculations, rounding the aggregated result line produces a more precise sum.

#### Example

Pay result lines without aggregation enabled:

| Hours | Rate     | Total  |
|-------|----------|--------|
| 7.125 | 15.15000 | 107.94 |
| 7.125 | 15.15000 | 107.94 |
| 7.125 | 15.15000 | 107.94 |
| Sum   |          | 323.82 |

Pay result line with aggregation enabled:

| Hours  | Rate     | Total  |
|--------|----------|--------|
| 21.375 | 15.15000 | 323.83 |
| Sum    |          | 323.83 |

#### Related Information

## Example: Include Workday and Company-Specific Deductions in EIB Spreadsheets

This example illustrates how to include both Workday and company-specific deductions in an EIB spreadsheet when uploading payroll input or off-cycle payments.

### Context

You want to upload payroll input in the form of either payroll input or off-cycle payments for these pay components:

- A parking deduction (a deduction your company created).
- A withholding order employer fee (a Workday-owned deduction).

You need to add a large number of inputs, so you use an EIB based on a spreadsheet to upload the inputs. You want to use 1 spreadsheet to add input for both the Workday-delivered and company-specific deductions.

### Prerequisites

Create an inbound EIB:

- For payroll inputs, base the EIB on the *Import Payroll Input* web service.
- For off-cycle payments, base the EIB on the *Import Payroll Off-cycle Payment* web service.

Create a deduction for parking fees with a code of *WE\_PARK*.

**Security:**

- *Integration Build* domain in the Integration functional area.
- *My Reports* domain in the System functional area.

**Steps**

1. Access the **View Integration System** task and select the integration system for your inbound EIB.
  - a) Select **Template Model > View** from the related actions menu.
  - b) Navigate to the **Payroll Input Data+** or **Off cycle Input Data+** section and select **Edit Template Model Area**.
  - c) In the **Column Details** grid, select the **Separate Type Column** check box in the row with the **Deduction** label.
  - d) Click **OK** and **Done** to return to the template model.
  - e) From the related actions menu, select **Template Model > Generate Spreadsheet Template**.
2. Access the **My Reports** task to download the Excel file spreadsheet template.  
Keep the template in its original *XML Spreadsheet 2003* format.
3. Add a row for each input:

| Spreadsheet Key | Row ID | Deduction - ID Type           | Deduction-ID Value | Amount |
|-----------------|--------|-------------------------------|--------------------|--------|
| 1               | 1      | <i>Deduction_Code</i>         | <i>WE_PARK</i>     | 25     |
| 2               | 2      | <i>Workday_Deduction Code</i> | <i>WZOFFER</i>     | 50     |

You can identify deduction ID types and values on the **Integration IDs** report.

4. Complete the remaining fields for the payroll input or off-cycle payment.

**Next Steps**

Launch the EIB spreadsheet upload.

## Example: Add Payroll Input for Multiple Workers

---

This example illustrates how to add different payroll input amounts for multiple workers.

**Context**

You want to pay Marianne, Thomas, and Julia quarterly bonus for February to April results. You want to pay the bonus through a separate check using a specific Bonus run category. Since your employees receive varying bonus amounts for each quarter, you want to set up the bonus as a one-time payroll input. For this quarter:

- Marianne receives 75% of a 5000 target.
- Thomas receives a flat bonus amount of 1500.

- Julia receives a flat bonus amount of 2000.

### Prerequisites

Create an earning named *Quarterly Bonus* that is eligible for payroll input, with *Target* and *Percentage* related calculations.

Security:

- *Set Up: Payroll (Calculations - Payroll Specific)* domain in the Core Payroll functional area.
- *Set Up: Payroll - Pay Group Specific* domain in the Core Payroll functional area.
- *Worker Data: Payroll (Payroll Input)* domain in the Core Payroll functional area.

### Steps

1. Access the **Add Payroll Input by Worker** task.
2. Select these options:

| Option                     | Description                                            |
|----------------------------|--------------------------------------------------------|
| <b>Worker(s)</b>           | <i>Marianne, Thomas, Julia</i>                         |
| <b>Start Date</b>          | February 1                                             |
| <b>End Date</b>            | April 30                                               |
| <b>Pay Component</b>       | <i>Quarterly Bonus</i>                                 |
| <b>Processing Defaults</b> | <b>One-Time<br/>Override<br/>Specific Run Category</b> |
| <b>Run Category</b>        | <i>Bonus</i>                                           |

3. Click **OK**.
4. In the **Input** grid, enter these values:

| Worker   | Input Details - Type | Input Details - Value |
|----------|----------------------|-----------------------|
| Marianne | <i>Target</i>        | 5000                  |
|          | <i>Percentage</i>    | 75                    |
| Thomas   | <i>Amount</i>        | 1500                  |
| Julia    | <i>Amount</i>        | 2000                  |

### Result

When you run a pay calculation for the April pay period for the bonus run category, Workday processes the payroll inputs for the 3 workers. For Marianne, Workday uses the target and percentage inputs to calculate the final bonus amount.

## FAQ: Payroll Input

- [How do I enter hourly wages for workers \(CAN, UK, USA\)?](#) on page 607
- [How do I enter overtime hours for workers \(FRA\)?](#) on page 607
- [Can I enter payroll input for terminated employees?](#) on page 607
- [How do I add a one-time bonus for workers?](#) on page 607

- [How does Workday apply one-time entries when there are multiple subperiods?](#) on page 607
- [How do I add an ongoing payment for a worker?](#) on page 607
- [How do I override the employer fee for a withholding order \(CAN, USA\)?](#) on page 607
- [How do I override the worktags for a one-time payment from Workday Compensation?](#) on page 607
- [Can I override the worktags for resident taxes \(USA\)?](#) on page 608
- [Does an adjustment process pay component related calculations \(PCRCs\)?](#) on page 608
- [How does Workday process pay input added as an adjustment when there's no existing line for the pay component?](#) on page 608
- [How do I end ongoing payroll inputs for workers?](#) on page 608
- [How do I view a batch entry?](#) on page 608
- [How and when can I delete payroll input by batch?](#) on page 608

**How do I enter hourly wages for workers (CAN, UK, USA)?**

1. Access the **Add Payroll Input by Worker** task.
2. Select the **Workers** and an hourly pay **Pay Component**.
3. For each worker, under **Input Details**, select an hours **Type** and enter a **Value**.

**How do I enter overtime hours for workers (FRA)?**

1. Access the **Add Payroll Input by Worker** task.
2. Select the **Workers** and an overtime **Pay Component**.
3. For each worker, under the **Input Details**:
  - **Type**: Select a calculation input for hours.
  - **Value**: Enter the number of overtime hours.

**Can I enter payroll input for terminated employees?**

Yes, Workday calculates payroll input for terminated employees when you configure the run category to process 1 or both of these inputs for terminated workers:

- One-time payroll input.
- Ongoing payroll input.

**How do I add a one-time bonus for workers?**

1. Access the **Add Payroll Input by Worker** task.
2. Select the **Workers**, a bonus **Pay Component**, and the *One-time* processing option.
3. For each worker, under **Input Details**, enter a bonus value.

**How does Workday apply one-time entries when there are multiple subperiods?**

Workday processes one-time entries during the subperiod that includes the end date for the entry.

**How do I add an ongoing payment for a worker?**

Access the **Add Payroll Input by Worker** task and select the *Ongoing* processing option.

**How do I override the employer fee for a withholding order (CAN, USA)?**

1. Access the **Add Payroll Input by Worker** task.
2. Select **Special Entry** and a withholding order **Pay Component**.
3. Under **Input Details**, select the *Withholding Order Employer Fee Type* and enter a value.

**How do I override the worktags for a one-time payment from Workday Compensation?**

Have your compensation administrator change the worktags using the **Request One-Time Payment** task. When the payment has a payroll calculation status of:

**Can I override the worktags for resident taxes (USA)?**

- *In Progress*, the status changes to *Requires Re-Calculation* in response to the change.
- *Complete*, the **Run Retro Pay Calculation** task detects the change the next time you use it.

Worktag overrides on an earning or deduction for a tax authority only impact work taxes. You can't override resident taxes.

**Does an adjustment process pay component related calculations (PCRCs)?**

Workday resolves the pay component related calculations (PCRCs) on adjustment results only when you select the PCRC as the **Type** in the **Input Details**.

**How does Workday process pay input added as an adjustment when there's no existing line for the pay component?**

Since adjustment inputs are meant to add to an existing value, Workday adds a \$0 amount line and then adds another line for the input adjustment.

**How do I end ongoing payroll inputs for workers?**

Access the **View Payroll Input by Worker(s)** report. From the related actions menu of the payroll input, select **Payroll Input > Edit**. Enter an **End Date** that occurs after the last completed pay period.

You can also add the *End Payroll Inputs* business process on the *Termination* business process to end inputs automatically as part of a termination. This configuration enables you and nonpayroll administrators to end those inputs.

**How do I view a batch entry?**

Access the **View Payroll Input by Worker(s)** report and enter a **Batch ID**.

**How and when can I delete payroll input by batch?**

Access the **Delete By Batch ID** task. If your batch ID isn't listed in the *Batch IDs by Source* category, search for it under the *All Batch IDs* category. Workday only records source IDs for payroll input when you provide one in the **Source** field on the EIB upload.

You can delete payroll input by batch ID even when there are associated *In Progress* pay calculation results. As a result, Workday changes the status of *In Progress* results to *Requires Re-Calculation*. Workday enables you to delete a subset of the batch without deleting the entire Batch ID. You can't delete payroll inputs that have been used in Completed On-Cycle, Completed or Suspended Retro results, or Reversals.

# Payroll Processing

---

## Process Payroll

---

### Setup Considerations: On-Cycle Payroll Processing

You can use this topic to help make decisions when planning your configuration and use of on-cycle payroll processing. It explains:

- Why to set it up.
- How it fits into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

**What It Is**

On-cycle payroll processing enables you to calculate payroll for your workers on a regular, recurring cycle.

**Business Benefits**

- Calculate payroll when it's convenient for you. You can process payroll:
  - Manually.
  - At scheduled times.
  - Continuously in the background.
- Recalculate payroll as often as needed to update payroll results.
- Cancel or reverse pay results.
- Make corrections without needing to cancel the calculation.
- Calculate payroll for all workers, a subset of workers, or a single worker, and put a worker's pay on hold.
- Maximize efficiency and performance with the smart calculation option, which only includes workers with a pay-impacting event since the last calculation.
- Improve accuracy by using the continuous calculation feature, which calculates payroll as pay-impacting events occur.

**Use Cases**

- Manually or automatically open a new pay period for a pay group by running a full calculation.
- Recalculate payroll for a worker after adding pay input or making other changes that affect pay.
- Cancel pay results for all workers when you need to make a configuration change. Example: Correct the payment date.
- Put a worker's pay result on hold to prevent payment temporarily while you troubleshoot issues.

## Questions to Consider

| Question                                                                   | Considerations                                                                                                                                                                                                                                          |
|----------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Do you want updated payroll results continually throughout the pay period? | If yes, consider enabling the continuous payroll calculation feature. This feature automates payroll calculations, continuously updating pay results as events occur. You can pause continuous calculation when you want to perform period-end audits.  |
| When do you want to process payroll?                                       | Processing payroll is a calculation-intensive process that can affect the performance of other jobs. If you initiate payroll calculations manually, you can schedule the job to run after hours, either once or on a recurring basis.                   |
| What payments other than salary do you need to pay on a defined schedule?  | When you have payments that fall outside of the regular payroll schedule, you can create off-cycle payments. When the payments occur on a recurring basis, you can set up separate nonregular run categories for recurring payments (Example: Bonuses). |

## Recommendations

Ensure that you set up period schedules correctly before running your first payroll. Once you start live payroll processing, changes are more difficult.

Don't run more than 1 processing task for a pay group at the same time. Running concurrent tasks in multiple browser tabs increases the risk of data corruption. Example: Don't cancel an individual worker's payroll result while a payroll calculation is running.

When you calculate payroll, you can reduce processing time by only updating accounting for the workers processed. When you're ready to complete payroll, Workday recommends that you update accounting for all workers.

To help ensure data accuracy, don't abort payroll processing tasks. If you mistakenly/erroneously start a task, let it finish. Then:

- For calculated results, use the **Run Pay Cancel** task to cancel the pay results and reset the workers' status to *Not Yet Started*.
- For completed results, use the **Cancel Pay Complete** task to set all pay results back to *In Progress* status.

Before you complete regular payroll for the period:

- Review and verify all data generated by the payroll calculation (Examples: Payroll accounting entries, regulatory reporting data). Correct any data as needed and rerun the calculation.
- Calculate and complete any retroactive pay differences for the pay group. This pulls the retro differences into the current period and includes them in the current pay result.

To run smart calculation efficiently:

- Run a full calculation at the beginning of the processing period.
- Run a full calculation at the end of the processing period before you **Run Pay Complete**. A full calculation captures any configuration changes that have an effective date within the period being processed.
- Schedule a nightly smart calculation run to process any pay results that have a pay-impacting event.
- Wait until after an integration has completed to run smart calculation.

## Requirements

Before you can complete payroll for a pay period, you must complete any on-demand additional and replacement payments.

Before you can open a new pay period:

- Complete all pay results for a pay group.
- Resolve any pay results that are in *Error* status.
- Cancel or complete any pay results that are *On Hold*.

## Limitations

The smart calculation and continuous payroll calculation features detect employee-level events, such as a pay raise or benefits election change. They don't detect configuration changes, like changes to an earning that applies to all workers or changes to state tax rates.

## Tenant Setup

To enable continuous payroll calculation for all regular run categories, use the **Edit Tenant Setup - Payroll** task.

## Security

Configure these domains in the Core Payroll functional area:

| Domains                                                                                                                                                                                                                                                                                                                                                                 | Considerations                                                                                                            |

| <i>Process: Off-Cycle (Reversal)</i>                                                                                                                                                                                                                                                                                                                                    | Users secured to this domain can reverse a payment to a worker.                                                           |
| <i>Process: Run Batch Cancel Complete</i>                                                                                                                                                                                                                                                                                                                               | Users secured to this domain can cancel a completed on-cycle payroll.                                                     |
| <ul style="list-style-type: none"> <li>• <i>Pay Calculation: Ad-Hoc Actions (Cancel)</i></li> <li>• <i>Pay Calculation: Ad-Hoc Actions (Complete)</i></li> <li>• <i>Pay Calculation: Ad-Hoc Items (Hold/Un-Hold)</i></li> <li>• <i>Pay Calculation: Ad-Hoc Actions (Payroll Accounting)</i></li> <li>• <i>Pay Calculation: Ad-Hoc Actions (Re-Calculate)</i></li> </ul> | Users secured to these domains can complete the associated action from the Related Actions menu on a worker's pay result. |

You can set up an unconstrained role to enable a payroll administrator to view and modify data for all pay groups in all payroll countries. You can set up a constrained role that enables payroll partners to view and modify data only for specified pay groups.

## Business Processes

You can configure the *Pay Cycle Event* business process as a to-do list of the required steps in payroll processing. Using this business process can also help you delegate tasks and ensure accountability when multiple users perform different steps in the process.

## Reporting

| Reports or Dashboards                               | Considerations                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
|-----------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Audit - Pay Calculation Results for a Period</b> | Helps you to identify unusual pay results to check for possible errors.                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| <b>Pay Calculation Results for Group of Workers</b> | Find payroll results for workers in a pay group or pay run group.                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| <b>Pay Cycle Command Center</b>                     | Access common tasks used to process payroll.                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| <b>Pay Input Not Processed</b>                      | Find pay inputs for a period that the payroll calculation didn't process.                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| <b>Payroll Calculation Processing Report</b>        | <p>View and take these actions on on-cycle payroll results:</p> <ul style="list-style-type: none"> <li>• Recalculate and unhold.</li> <li>• Complete.</li> <li>• Cancel.</li> <li>• Hold.</li> <li>• Cancel pay complete.</li> </ul> <p>Example: A worker is on leave and returns in the middle of the pay period, resulting in multiple on-cycle pay results. If you click <b>Hold</b> for the worker that has multiple on-cycle pay results, all the on-cycle pay results will have a <i>Hold</i> status.</p> |
| <b>Payroll Calculation Lines Processing Report</b>  | View details of individual payroll result lines and their related calculations. You can also view, analyze, and create a detailed report on the selected payroll result lines.                                                                                                                                                                                                                                                                                                                                  |
| <b>Payroll Pay Group Summary</b>                    | Use this report to view a high-level summary of workers, results, gross pay, and net pay based on the pay group details and periods you select. You can then use <b>Drill-To Report Links</b> from the results to access the <b>Payroll Calculation Processing</b> report.                                                                                                                                                                                                                                      |
| <b>Payroll Pay Component Summary</b>                | Use this report to view a high-level summary of workers, results, result lines, and result line amount for the pay components based on the pay group details and periods you select. You can then use the <b>Drill-To Report Links</b> from the result lines to access the <b>Payroll Calculation Lines Processing</b> report.                                                                                                                                                                                  |

When you create custom reports, use report data sources on 1 of these business objects:

- **Payroll Results** for gross and net totals.
- **Payroll Result Lines** for pay component-level detail.

For best performance, Workday recommends:

- Using indexed report data sources when possible.
- Avoiding report data sources on the **Worker** business object for payroll reporting.

## Integrations

You can use the:

- *Put Run Pay Calculation* web service to start a pay calculation.
- *Get Run Pay Calculation* web service to retrieve the status of a calculation.

## Connections and Touchpoints

| Features           | Considerations                                                                                                                                                                                                                                                    |
|--------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Absence balances   | Workday frequently uses absence balances from Absence Management as part of payroll calculations. For optimal performance when calculating on-cycle payroll, Workday recommends manually scheduling the storage of absence balances based on your business needs. |
| Payroll accounting | Workday automatically generates payroll accounting entries in your ledger as part of the calculation process.                                                                                                                                                     |

[2022R1 What's New Post: Pay Result Mass Action Report](#)

## Steps: Process Payroll

### Prerequisites

- [Setup Considerations: On-Cycle Payroll Processing](#) on page 609
- Enter or load payroll input for the pay period.
- To ensure that all workers have tax code and National Insurance details for Payroll for the UK, access the **UK Pre-Payroll - Workers without Tax and National Insurance Details** report.

### Context

You can process on-cycle payroll to:

- Calculate and complete payroll.
- Generate payroll accounting entries.

You can run and complete pay calculations for pay groups with workers in both Canada and the U.S., provided all workers have the same period schedule. Run the settlement process separately for each country.

Even if the pay group is effective as of the period end, pay calculations still include:

- Workers terminated in the middle of the pay period.
- Workers who are on leave in the middle of the pay period.

Workday automatically generates accounting entries when you calculate on-cycle and off-cycle payroll results. It generates entries for accruals and accrual reversals as part of normal, on-cycle runs based on the accrual dates specified on the period schedule. See [Setup Considerations: On-Cycle Payroll Processing](#) on page 609.

Payroll for France doesn't support manual payments, or reversals.

## Steps

1. Verify input data for the payroll calculation. Examples: Worker data, payroll input, absence, and compensation data.  
See [Reference: Verification Reports for Payroll Inputs](#) on page 638.
2. (Optional for Payroll for the UK) [Process HMRC Notifications \(UK\)](#) on page 616.  
If you have an integration with HMRC, process HMRC notifications to receive any updates to worker tax details.
3. Process retroactive payroll. Workday recommends that you run the retro pay calculation at least once before running each on-cycle pay, including the initial payroll run. This enables you to maximize the number of supported retro events that Workday can process and forward to workers' regular pay results.  
See [Steps: Process Retro Payroll](#) on page 827.
4. Access the **Retro Calculation Processing Report** to verify retro pay results.  
You can use the report to take action on the results. Examples: You can suspend the results to exclude them from further processing, or cancel them to adjust retro entries.  
See [Steps: Manage Retro Results](#) on page 852.
5. Manually or automatically start on-cycle payroll calculations. If you want updated payroll results continually throughout the pay period, consider enabling the continuous payroll calculation feature:
  - Access the initiating task from the *Pay Cycle Event* business process.
  - [Calculate On-Cycle Payroll](#) on page 618.
  - [Schedule Payroll Calculations](#) on page 621.
6. (Optional) Lock pay group for auditing.  
See:
  - [Steps: Set Up Pay Group Lock for Auditing](#) on page 615.
  - [Concept: Pay Group Lock Status](#) on page 636.
7. [Run Payroll Audits](#) on page 778.  
Workday recommends that you verify and correct audit exceptions. See [Reference: Payroll Audit Reports](#) on page 780.
8. Review and correct payroll results.  
See [Reference: Verification Reports for Payroll Results](#) on page 785.
9. Review and correct accounting results.  
To avoid completing pay calculations with journal errors, Workday recommends you address all errors when reviewing results.  
See [Concept: Reviewing Payroll Accounting](#) on page 784.
10. [Complete Retro Results for Workers](#) on page 853.
11. (Optional) Recalculate pay results.
  - [Recalculate a Payroll Result](#) on page 623: For a single worker.
  - [Rerun Pay Accounting](#) on page 626: For a pay run group or a pay group.
12. [Steps: Generate DSNs \(FRA\)](#) on page 1647.

**13. Verify DSN results (FRA).**

Access the **DSN Status for Group of Workers** report and address any DSN errors before completing payroll.

See [Reference: DSN Verification Reports \(FRA\)](#) on page 1657.

**14. Complete Payroll** on page 627.

For off-cycle payments, view the **Pay Calculation Results for Worker** or **Pay Calculation Results for Group of Workers** report. Select **Pay Calculation > Complete** from the related actions menu of the payroll result.

**15. Reconcile payroll results and prepare external payments and declaration using the Payroll Reconciliation (Results/Payments) report.**

See [Reference: Reports for Post-Payroll](#) on page 639.

**Result**

You can view:

- Payroll results for workers.
- Posted accounting entries.

**Next Steps**

For Payroll for Australia, Canada, Ireland, the UK, and the U.S.:

- Run the settlement process to create settlement journal entries.
- Run the check and advice printing process.

For Payroll for France:

- Run the settlement process to create settlement journal entries.
- Run the check and advice printing process to print payslips.

[Steps: Use Settlement](#)

**Steps: Set Up Pay Group Lock for Auditing****Prerequisites**

Security:

- *Set up: Tenant Setup - Payroll* in the System functional area.
- *Process: Run Batch Calculations (Pay Calculation)* in the Core Payroll functional area.

**Context**

You can set up a pay group in a lock or unlock status. When locked, Workday doesn't automatically flip the *In Progress* on-cycle results within the pay group to *Requires Re-calculation* status due to worker-based events.

## Steps

### 1. Access the **Edit Tenant Setup - Payroll** task.

In the **Pay / Retro Calculations** section, under **Pay Group Status Lock**, select the **Lock Pay Groups To Block All Pay Calculations on Payroll Results** check box.

**Note:** If you're a professional employer organization or you want a restrictive workflow for processing payroll, you must enable this check box. If you want the Payroll Processor or Administrator to run payroll calculations while the pay group detail is locked, you shouldn't enable this check box.

When you enable the check box, all on-cycle payroll results must be in *In Progress* status to lock the pay group detail, and a pay group detail must be locked to run pay complete. On-cycle, off-cycle, and retro can't be calculated, canceled, or completed; and pay accounting can't be run for a locked pay group. Also, you can't complete individual on-cycle results, you can only run pay complete for the entire pay group.

Security: *Set up: Tenant Setup - Payroll* in the System functional area.

### 2. Access the **Run Pay Calculation** task.

Run on-cycle pay calculation for a pay group detail for the current period.

If you've enabled the **Lock Pay Groups To Block All Pay Calculations on Payroll Results** check box, ensure that the payroll results after pay calculation are all *In Progress* before proceeding to Step 3.

Security: *Process: Run Batch Calculations (Pay Calculation)* in the Core Payroll functional area.

### 3. Access the **Update Pay Group Lock Status** task.

Select the **Lock Pay Groups** action and enter specific **Pay Group Details**. Verify the **Pay Groups Successfully Locked** page and then click **Done**.

When you run pay calculation and all results are *In Progress*, use this task to lock the pay group details.

**Note:** You can use this task, regardless of whether you enable or disable the **Lock Pay Groups To Block All Pay Calculations on Payroll Results** check box on the **Edit Tenant Setup - Payroll** task.

Before you lock the pay group, ensure that you've configured:

- Automatic stop for continuous payroll calculation.
- Days from period end date to close requests for Pay On-Demand on period schedules.

Security: *Process: Run Batch Calculations (Pay Calculation)* in the Core Payroll functional area.

## Next Steps

To view a locked pay group, access the **View Pay Group** report. Select the pay group that you locked or unlocked. Select the **Pay Groups** tab, and verify the **Pay Group Period Details** section. The **Current Period Locked** column indicates the locked or unlocked status.

To view payroll impacting events since the last pay calculation, access the **Preview Smart Calculation Run** report. You can then drill-down by:

- Worker to verify all events each worker has to process.
- Events to verify the workers that have the specific event.

[2025R1 Feature Release Note: Lock Pay Group for Auditing](#)

## Process HMRC Notifications (UK)

### Prerequisites

- Implement and run the *HMRC Incoming Notifications* integration.

- Access the **Match HMRC Notifications** task to download tax code notifications from HMRC.
- Security: *Process: HMRC Notifications (Run)* - UK domain in the UK Payroll functional area.

## Context

To ensure that you process payroll with the latest worker tax details, regularly retrieve and apply any changes in tax code details from HMRC.

**Note:** To avoid applying incorrect details to a worker's record, apply notifications in the period that they're issued, not based on their effective date.

## Steps

1. Access the **Apply HMRC Notifications** task.
2. To display HMRC notifications, enter your criteria and click **Search**.  
If you match and download RTI notifications, there might be generic information for the **UK Employer Reference**. Run the **View UK RTI Generic Notifications** report to display the messages. Example: Late filing, or late payment notices.
3. (Optional) To download a copy of the data retrieved from HMRC, right-click **Export HMRC Notifications**, and select **Export to Excel**.  
To dismiss the warning message, click **Discard**. Workday downloads the *Export\_HMRC\_Notifications\_Pre\_Apply* Excel file.  
If you click **Export to Excel**, you can generate an Excel file. However, when you click **Return To Apply HMRC Notifications** after the file downloads, Workday clears your search criteria.
4. As you complete the **Matched Notifications** and **Partially Matched (\* does not match)** sections, consider:

| Option                                                     | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

| Option | Description                                                                          |
|--------|--------------------------------------------------------------------------------------|
|        | Workday applies the notification with the latest <b>Issue Date</b> to their records. |

Before you apply any partially matched notifications to a worker's record, Workday recommends you contact the HMRC Employer's Helpline with any queries about the data.

**Note:** If you don't select any check boxes in the left column, in both the **Matched Notifications** and **Partially Matched (\* does not match)** sections, Workday applies all the notifications to the workers' records. When you select one or more of the check boxes for the rows, Workday only applies the selected notifications.

5. As you complete the **Notifications Not Matched/In Error** section, consider:

| Option                    | Description                                                                                                                                                                                                                                    |
|---------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>View Notifications</b> | Right-click the magnifying glass icon to display HMRC payee information for the worker in a new tab.                                                                                                                                           |
| <b>Exception</b>          | Click the number to display the reason why the notification is in this section.<br><br>Workday recommends you delete any notifications with an exception reason of <i>Notification not applied as it is superseded by a new notification</i> . |

Workday displays any record with an exception associated with it, or if the record doesn't match an active worker. Workday recommends that you don't apply any notifications from this section until you've investigated each to determine the exception reason.

6. When you click **OK**, Workday displays a report listing the selected **Notifications To Be Applied** and any **Notifications To Be Deleted**.
7. (Optional) Right-click **Export Changes To be Applied**, and select **Export to Excel**.

Workday downloads the *Export\_HMRC\_Notifications\_To\_Apply* Excel file. You can compare the file with the *Export\_HMRC\_Notifications\_Pre\_Apply* Excel file for audit purposes.

If you click **Export Changes To be Applied**, you can generate an Excel file. However, when you click **Return To Apply HMRC Notifications** after the file downloads, Workday clears your search criteria.

8. Review the proposed changes and click **OK** to apply the notifications to workers' tax details.
- Workday displays the number of changes **Applied** and **Rejected**. Click the number to display more details of the affected worker records.

## Result

You can see the latest tax details for a worker in the **Worker UK Tax Details** report.

[Steps: Set Up HM Revenue & Customs-Incoming Notifications Integration](#)

## Calculate On-Cycle Payroll

### Prerequisites

- Complete the prior pay period.
- Enter or load payroll input for the current period.

- Calculate payments for any retroactive changes.
- Ensure that no retro payroll processes are running for any pay groups.
- Security: *Process: Run Batch Calculations (Pay Calculation)* domain in the Core Payroll functional area.

## Context

You can run a pay calculation and review the calculation results at any point during your payroll processing. Running a pay calculation creates both gross-to-net and accounting results.

You can use the **Smart Calculation** options to limit calculations to workers with payroll-impacting events. Excluding workers whose results haven't changed can speed up calculations and recalculations. For greater control, you can use the **Configure Smart Calculation Event Processing** task (secured to the *Set Up: Payroll* domain in the Core Payroll functional area) to exclude specific events for each country in which you use Workday Payroll.

While the Smart Calculation options limit the workers processed, the payroll result for an included worker reflects all payroll-impacting events.

You can use these web services to start a pay calculation process and then retrieve the status of the process:

- *Get Run Pay Calculation*
- *Put Run Pay Calculation*

## Steps

1. Access the **Run Pay Calculation** task.

For most tasks in Workday with the **Period** or **Pay Run Groups and/or Pay Group Details** prompts, you can refine your search for periods and pay groups by month, year, period schedule name, or run category.

2. As you complete the task, consider:

| Option                        | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |

| Option                                                           | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
|------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                                                  | <p>payroll-impacting events in a category you select, with statuses:</p> <ul style="list-style-type: none"> <li>• <i>In Error</i></li> <li>• <i>In Progress</i></li> <li>• <i>Requires Recalculation</i></li> <li>• <i>Waiting to Pick Up Retro Difference</i></li> <li>• <b>Based on Results Status</b> to include only workers with one or more selected pay result statuses. Example: Select <i>Not Yet Started</i> to limit the calculation to midperiod new hires and exclude all other workers.</li> <li>• <b>Workers</b> to include only selected workers. Enter the name or ID of one or more workers who are in, or have a pay result in, the selected pay group or pay run group. You can't select workers whose Pay result is <i>Not Yet Started</i> when the pay group is <i>Completed with Exceptions</i>.</li> </ul> <p>Workday doesn't consider configuration changes as selection criteria, but does include them in payroll calculations for included employees. To include midperiod configuration changes for all employees, select <i>In Progress</i> from the <b>Based on Result Status</b> prompt.</p> |
| <b>Limit Accounting Population Based on Calculation Criteria</b> | <p>Select the check box to optimize calculation times by only processing accounting results that meet your calculation criteria. When you're ready to complete payroll, clear the check box to include recent costing allocation changes and refresh accounting for the entire population.</p> <p>Example: As a payroll administrator, you use <b>Run Pay Calculation</b> to calculate regular pay for 100 workers. The results are 95 <i>In Progress</i> and 5 <i>In Error</i>. After fixing the errors, you want to recalculate only the 5 results that were in error. You select <i>Error</i> from the <b>Based on Results Status</b> prompt. You also select the <b>Limit Accounting Population Based on Calculation Criteria</b> check box.</p> <p>When all 5 results are <i>In Progress</i>, you want to run the pay calculation for all workers. You use <b>Run Pay Calculation</b> and clear the <b>Limit Accounting Population Based on Calculation Criteria</b> check box to refresh accounting for all 100 workers.</p>                                                                                           |

3. (Optional) To run the payroll at a specified time in the future, or on a recurring schedule, click **Schedule a Pay Calculation**.

To get an idea of how long your calculation could take, compare the **Current Processing Time** and the **Average Processing Time**. **Average Processing Time** displays only if there were calculations

within the last 90 days with the same **Calculation Criteria**. **Pay Groups** and **Pay Run Groups** aren't considered an exact match, even if the pay groups within the pay run group are a match.

## Result

Workday automatically runs these jobs:

1. **Run Pay Accounting**
2. **Persist Payroll Balance Data**

The **Persist Payroll Balance Data** job enhances data retrieval by grouping result lines by worker and year to create a worker result line group. When the job process runs, Workday queues other jobs and tasks for the same pay group and period. You can view the job processes on the **Process Monitor** report.

The payroll status is *In Progress* when at least 1 worker has gross-to-net results.

## Next Steps

Correct errors (if any) and recalculate payroll as needed before you complete the period. You can recalculate:

- An individual payroll result. Select **Re-Calculate** from the **Pay Calculation** related actions menu.
- Only the payroll results with a specific calculation status. Select the status from the **Based on Result Status** prompt, and select **Limit Accounting Population Based on Calculation Criteria**.
- Only the payroll results of employees with payroll-impacting events. Select the event category from the **Based on Events** prompt and select **Limit Accounting Population Based on Calculation Criteria**.
- The entire payroll. Select all statuses from the **Based on Result Status** prompt and clear the **Limit Accounting Population Based on Calculation Criteria** check box.

**Note:** If you recalculate a payroll result with a payroll third-party payable item, it displays as a changed payroll result, even if you didn't make any changes to it. This behavior does not occur when you enable Smart Calculation options. For more information, see [Concept: Payroll Third-Party Payable Items](#).

If you identify operational journals with errors, correct any posting, ledger period, or other accounting entries. Then rerun the accounting process. See [Concept: Reviewing Payroll Accounting](#).

For Payroll for Canada, the UK, and the U.S., if you manage grants and multicompany awards, review the **Grant Multi Company Audit for Pay Calculation Results** report. The report displays worker payroll results for grants where the award line company is different from the company on the pay result line.

## Schedule Payroll Calculations

### Prerequisites

Set up pay groups and pay period schedules.

Security: *Process Run Batch Calculations (Pay Calculation)* domain in the Core Payroll functional area.

## Context

You can schedule the payroll calculation to start automatically, either once in the future or on a recurring basis. Recurring calculations continue through successive pay periods until the schedule end date.

## Steps

1. Access the **Pay Calculation Scheduler** task.
2. Select *Pay Calculation Scheduler* from the **Run Type** prompt.
3. As you complete the task, consider:

| Option                                                                             | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Pay Run Groups and/or Pay Group Details</b>                                     | Select the pay groups and the period schedule for the scheduled calculation. Workday displays the next open period for which you can calculate payroll, but doesn't limit the schedule to this period.                                                                                                                                                                                                                                                                                                                                                                            |
| <b>Employees to Calculate</b>                                                      | By including only workers with events that impact payroll, you can minimize processing time for recalculations.                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| <b>Initiate Scheduler for Period</b>                                               | Indicate when to start recurring calculations for a new period, relative to the period start date. Select: <ul style="list-style-type: none"> <li>• <b>Allow after First Manual Calculation</b> to start after you've run the Run Pay Calculation task once for the period.</li> <li>• <b>Allow from Period Start Date</b> to start as early as the period start date.</li> <li>• <b>Allow Day(s) after Period Start Date</b> to start a specified number of days after the period start date.</li> <li>• <b>None of the above</b> to disregard the period start date.</li> </ul> |
| <b>Stop Scheduler for Period</b>                                                   | Indicate when to stop recurring calculations for a period, relative to the payment date. Select: <ul style="list-style-type: none"> <li>• <b>Stop on Payment Date</b> to run scheduled calculations up to, but not including, the payment date.</li> <li>• <b>Stop Day(s) before Payment Date</b> to stop a specified number of days before the payment date.</li> <li>• <b>None of the above</b> to disregard the payment date.</li> </ul>                                                                                                                                       |
| <b>Skip Processing if Pay Calculation is in Progress</b>                           | Select this check box to skip the scheduled calculation if a pay calculation is running for the same pay group details.                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| <b>Skip Processing if Pay Calculation Has Been Processed within Last x Hour(s)</b> | Select this check box to skip the scheduled calculation if a pay calculation for the same pay group details has run within the specified number of hours.                                                                                                                                                                                                                                                                                                                                                                                                                         |

## Result

The pay calculation job runs in the background according to the schedule and parameters you set up.

## Next Steps

Use the **Process Monitor** report to view:

- Details about completed calculations.
- Messages about skipped calculations.
- The status of the **Run Pay Accounting** and the **Persist Payroll Balance Data** jobs.

[Concept: Workday Scheduled Processes](#)

## Recalculate a Payroll Result

### Prerequisites

The payroll result has a status other than *Complete* or on *Hold*.

Security: *Reports: Results for Worker (Pay Calculation)* - USA domain in the USA Payroll functional area.

Security: *Reports: Results for Worker (Pay Calculation)* - CAN domain in the CAN Payroll functional area.

Security: *Reports: Results for Worker (Pay Calculation)* - UK domain in the UK Payroll functional area.

Security: *Reports: Results for Worker (Pay Calculation)* - FRA domain in the FRA Payroll functional area.

Security *Reports: Results for Worker (Pay Calculation)* - AUS domain in the AUS Payroll functional area.

### Context

When you correct an error or enter payroll input after calculating on-cycle payroll, you can recalculate the payroll result for an individual worker.

### Steps

1. Access the **Pay Calculation Results for Worker** report.
2. From the related actions menu of the payroll result, select:
  - **Pay Calculation > Re-Calculate** for an on-cycle result.
  - **Pay Calculation > Update Input / Re-Calculate** for an off-cycle result.
  - **Payroll Result > View** to view the result details first. Then click **Re-Calculate Result**.

## Result

Workday recalculates the worker's pay and regenerates accounting results.

## Next Steps

Complete payroll for the worker or the entire payroll.

### Tasks

[Complete Payroll](#) on page 627

## Cancel Pay Calculation

### Prerequisites

Security: *Process: Run Batch Cancel (Pay Cancel)* domain in the Core Payroll functional area.

### Context

**Note:** Perform this task with caution. In most cases, when data is missing or incorrect, Workday recommends that you add or correct the data and recalculate payroll.

Occasionally, you might cancel a payroll or payment that's in progress. Example: You discover a payment date is incorrect. You can cancel the pay calculation, change the payment date on the **Edit Period Schedule** task, and recalculate payroll.

You can cancel:

- On-cycle or off-cycle payroll results.
- Individual payroll results from the **Pay Calculation > Cancel** related actions menu.
- Multiple results for a pay group or pay run group.

### Steps

1. To mass cancel pay calculations for a pay group or pay run group, access the **Run Pay Cancel** task.
2. As you complete the task, consider:

| Option                | Description                                                                                                                                                                                                                                                                                                                                                                                                                                      |
|-----------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Current Period</b> | <p>Select a period in progress from the <b>Period</b> prompt.</p> <p>For most tasks in Workday with the <b>Period</b> prompt, you can refine your search by month or year.</p> <p>If you use the <i>MM/DD/YYYY</i> search, only periods that begin or end on that date display. Example: You're looking for the bi-weekly period that ran from <i>01/17/2025 - 01/31/2025</i>, but you enter <i>01/15/2025</i>, your period doesn't display.</p> |
| <b>Prior Period</b>   | <p>Select the <b>Prior Period</b> check box and a prior <b>Period</b>.</p> <p>You can select any period in the 6 calendar years preceding the current year. Workday determines the current year as the year of <i>In Progress</i> results or the next period to be calculated.</p>                                                                                                                                                               |
| <b>Next Period</b>    | <p>Select the <b>Next Period</b> check box and a <b>Period</b> that's <i>Opened for Off-Cycles</i>.</p> <p>Use to cancel next period on-demand payments that you've run.</p>                                                                                                                                                                                                                                                                     |

3. Select the **Pay Run Group and/or Pay Group Details** to cancel.

For most tasks in Workday with the **Pay Run Group and/or Pay Group Details** prompt, you can refine your search by pay group or period schedule name, or run category. You can select only pay groups or pay run groups that are being processed in the period indicated in the **Period** field.

4. (Optional) To cancel by batch ID or payroll action reason, select **All Workers**. Then select the **Batch ID** or the **Reason**.

5. Click **OK** to cancel the calculation now, or select a future **Start Date**, **Start Time**, and a **Time Zone** for running the cancellation process.

### Result

When you cancel off-cycle payments that you uploaded with an Enterprise Interface Builder (EIB) integration, Workday deletes the uploaded data.

Workday removes the liquidated date-time stamp and deletes the journal line entries for all payroll data. When you're using Workday payroll commitment accounting, Workday also deletes the payroll liquidation data.

[2022R1 What's New Post: Pay Result Mass Action Report](#)

## Put a Worker's Pay on Hold

### Prerequisites

Calculate payroll for the worker, and the payroll result status is *In Progress*.

Security: *Reports: Results for Worker (Pay Calculation)* - USA domain in the USA Payroll functional area.

Security: *Reports: Results for Worker (Pay Calculation)* - CAN domain in the CAN Payroll functional area.

Security: *Reports: Results for Worker (Pay Calculation)* - UK domain in the UK Payroll functional area.

Security: *Reports: Results for Worker (Pay Calculation)* - FRA domain in the FRA Payroll functional area.

Security: *Reports: Results for Worker (Pay Calculation)* - AUS domain in the AUS Payroll functional area.

### Context

You can put worker payroll results on hold so that Workday won't pay them. Example: You need to prevent payment temporarily while you:

- Await approval of a change to a worker's compensation or employment status.
- Correct an incorrect payment amount.
- Troubleshoot issues with pay.

Some of the reasons you can't put a result on Hold:

- Result is in Pending Completion of Prior.
- Result is in Requires Recalculation.
- Result is in Error.

### Steps

1. Access the **Pay Calculation Results for Worker** report.
2. From the related actions menu of the payroll result, select **Pay Calculation > Hold**.

### Result

Workday holds the result until you reverse the status by repeating the process and selecting **Pay Calculation > Un Hold**.

## Rerun Pay Accounting

### Prerequisites

- The payroll status can't be *Complete*.
- Security: *Process: Run Batch Payroll Accounting* domain in the Core Payroll functional area.

### Context

When you calculate on-cycle or off-cycle payroll, Workday generates:

- Payroll results.
- Accounting entries in *Draft* status.

For regular, on-cycle runs, it also creates accrual and accrual reversal entries, based on the accrual dates of the period schedule.

After you correct accounting errors, you can generate new accounting entries without recalculating payroll.

You can generate new accounting entries for:

- An individual payroll result using the **Pay Calculation > Accounting** related action.
- An entire pay group or pay run group.

### Steps

1. To rerun accounting for pay groups or pay run groups, access the **Run Pay Accounting** task.
2. Select the payroll **Period** you want to rerun.

| Option                | Description                                                                                                                                                                                                                                                                  |
|-----------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Current Period</b> | Select a period in progress from the <b>Period</b> prompt.                                                                                                                                                                                                                   |
| <b>Prior Period</b>   | Select the <b>Prior Period</b> check box and a prior <b>Period</b> .<br><br>You can select any period in the 6 calendar years preceding the current year. Workday determines the current year as the year of <i>In Progress</i> results or the next period to be calculated. |

[FAQ: Journal Errors](#)

## Complete Payroll

### Prerequisites

- Calculate payroll and generate accounting entries using the **Run Pay Calculation** task.
  - From the **Based on Result Status** prompt, select *All Statuses*. Select all statuses in the prompt.
  - Clear the **Limit Accounting Population Based on Calculation Criteria** check box to ensure that you include any recent costing allocation changes. It refreshes accounting for your entire payroll population before you complete payroll.
- Verify that payroll results are correct and complete.
 

See [Reference: Verification Reports for Payroll Results](#).
- Verify that payroll accounting is correct.
 

See [Concept: Reviewing Payroll Accounting](#).
- For Payroll for France, verify that DSN reports are correct and have passed DSN-val data verifications.
- When completing on-demand additional payments that include retroactive differences, the retro results are *Complete*.
- Security:
  - *Process: Run Batch Complete (Pay Complete)* domain in the Core Payroll functional area.
  - *Pay Calculation: Ad-Hoc Actions (Complete)* domain in the Core Payroll functional area.
  - *Reports: Pay Calculation Results for Pay Group (Results) - USA* domain in the USA Payroll functional area.
  - *Reports: Pay Calculation Results for Pay Group (Results) - CAN* domain in the CAN Payroll functional area.
  - *Reports: Pay Calculation Results for Pay Group (Results) - UK* domain in the UK Payroll functional area.
  - *Reports - Pay Calculation Results for Pay Group (Results) - FRA* domain in the FRA Payroll functional area.
  - *Reports - Pay Calculation Results for Pay Group (Results) - AUS* domain in the AUS Payroll functional area.

### Context

You can complete *In Progress* on-cycle payroll or off-cycle payments for:

- An individual payroll result, using the **Pay Calculation > Complete** related action.
- Pay groups or pay run groups, using these steps.

**Note:** Workday doesn't recommend aborting the **Run Pay Complete** task. But if you do, Workday resets the status of any *Completed* results back to *In Progress*. Depending on the number of results, the reset could take a significant amount of time.

Workday uses the currency rate type (or the company override) as of the pay period end date for currency conversions during the pay calculation.

When you use the **Run Pay Complete** task, Workday evaluates which bank accounts the settlement process routes payments through based on the bank routing rules you define.

Workday recommends that you:

- Complete payroll in advance of Workday updates, to avoid midperiod changes in tax calculations or gross-to-net pay.
- Ensure that all payroll results with their corresponding accounting journals are up to date before completing payroll. You can use the **Payroll Results with Outdated Accounting** report to identify results that's out of sync.

If you can't complete payroll, you can run the **Pay Calculation Results for Group of Workers** report before the update and download the results. After the update, compare the latest results and make any necessary adjustments.

### Steps

1. Access the **Run Pay Complete** task.
2. Select the **Period** to complete.

| Option                | Description                                                                                                                                                                                                                                                                  |
|-----------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Current Period</b> | Select a period in progress from the <b>Period</b> prompt.                                                                                                                                                                                                                   |
| <b>Prior Period</b>   | Select the <b>Prior Period</b> check box and a prior <b>Period</b> .<br><br>You can select any period in the 6 calendar years preceding the current year. Workday determines the current year as the year of <i>In Progress</i> results or the next period to be calculated. |
| <b>Next Period</b>    | Select the <b>Next Period</b> check box and a <b>Period</b> that's <i>Opened for Off-Cycles</i> .<br><br>Select this check box to complete next period on-demand payments that you've run.                                                                                   |

3. Select the pay run groups or pay groups to complete.
4. Select *On-cycle* or *Off-cycle* in the **On-cycle/Off-cycle** field to complete results for either on-cycle or off-cycle results.

### Result

Workday changes the status of *In Progress* results in other pay groups to *Requires Re-Calculation*, when:

- A worker belongs to multiple pay groups, and
- You complete the worker's payroll results for only 1 pay group.

### Next Steps

- Run the settlement process to create settlement journal entries.  
See [Create Manual Settlement Runs](#).
- Run the check and advice printing process (CAN, UK, USA).  
See [Print Checks and Advices](#).
- Print payslips (FRA).

## Setup Considerations: Payroll Reversals

You can use this topic to help make decisions when planning your configuration and use of reversals. It explains:

- Why to set them up.
- How it fits into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

### What They Are

You can record a negative version of a completed payment that you haven't reconciled with a bank statement. You can then replace the reversed amount by a different calculation. Running reversals creates new reversal result lines and impacts accounting.

### Business Benefits

Payroll reversals:

- Provide flexibility in processing.
- Help improve efficiency.
- Enable you to correct payroll errors.

### Use Cases

Create reversals to correct payments when:

- The HR partner terminates a worker at the start of the last pay period in the prior year, but doesn't record the termination until the new year. You reverse the worker's final payroll payment as a prior period adjustment.
- A terminated worker receives an incorrect payment after leaving.
- The HR partner hires a worker after the payment date of the current pay period. You reverse the payment made for the period, and run an on-demand payment to include all year-to-date pay accumulations.

### Questions to Consider

| Questions                                                                          | Considerations                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

| Which period do you want to report reversals in?             | <p>When you run reversals, you can select a current or prior reporting period. When the reporting period is current, you can use any run categories associated with the original payment pay group. When it's a prior period, you can use the run category of the original payment or the regular run category of the pay group.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| What is the timeline of the reversal?                        | <p>You can only run reversals for payments you haven't reconciled yet with the bank statement. When it's too late for a reversal, you can run:</p> <ul style="list-style-type: none"> <li>On-demand or manual payments. Example: You're notified of a worker's move after a couple of quarters. You need to adjust their taxes and wages to ensure that Workday Payroll data is accurate for year-end reporting.<br/>See <a href="#">Setup Considerations: On-Demand Payments</a>.</li> <li>Retro pay calculations for the prior period. Example: You overpaid a worker due to incorrect time entries. After you enter the actual time worked and run retro, Workday recovers the base pay and refunds deductions on the worker's next pay.<br/>See <a href="#">Calculate Retro Payroll</a>.</li> </ul> <p>For Payroll for the UK, when you retrospectively change a worker's National Insurance (NI) category, also adjust previously calculated NI deductions and the associated balance. To make NI adjustments after the end of the tax year and before April 19, you can use:</p> <ul style="list-style-type: none"> <li>Reversals and on-demand additional payments, if the adjustments result in negative net pay.</li> <li>On-demand payments, if the adjustments don't result in negative net pay.</li> </ul> <p>You can then submit the result to HMRC by FPS.</p> |
| What is the status of the payments that you want to correct? | <p>You can correct on- or off-cycle payments based on their calculation status and whether you've settled them. For in-progress results that are:</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

| Questions                                       | Considerations                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

| What are your ROE reporting requirements (CAN)? | <p>When you reverse a payment that you reported on the ROE, Workday allocates the reversal to the same reporting period. When you don't report a payment and later reverse it, Workday excludes the reversal from the ROE. Example: Workday doesn't report a payment on the ROE because it exceeds the Service Canada requirements for maximum reporting periods. When you reverse that payment Workday ignores the reversal for the ROE.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

## Recommendations

When you don't use Workday Financials for accounting, you might find discrepancies when you leave accounting periods open. You can configure business processes to include closing accounting periods.

Workday recommends that you use reversals only when necessary due to potential conflicts with accounting periods.

## Requirements

You can reverse a payment for a worker in a completed pay period that:

- You haven't reconciled with your bank statement.
- Doesn't have payroll accounting adjustments.
- Doesn't have an escheatment in progress or *Escheated* status.
- Doesn't have associated journals in error.

## Limitations

Workday doesn't:

- Settle reversals. The original payment and the reversal remain on the books. Although Workday doesn't settle reversals, you must still complete it.
- Display reversals on payslips.
- Support reversals for Payroll for France.

You can't:

- Edit reversal dates. You can run on-demand or manual payments to adjust reversals. You can also run the **Cancel Off-cycle Complete** task to cancel completed reversals for the current pay period.
- Reverse zero pay results created by retro events such as leaves of absence. You can remove it by canceling the retro result that contains the retro leave event.
- Reverse a completed payroll history. You can adjust or offset completed history results using the **Run History Payment for Worker** task. You can also correct single history payments by accessing their related actions menu. Workday sets the status of the payment to *In Progress*.
- Reverse a payment for a worker who has a next period on-demand payment.

When you forward retro differences to the current period from a period that you reversed, manually remove the differences in the current period. Example: You can offset retro differences using payroll input. When you forward retro differences to a period and later reverse that period, Workday:

- Recovers the retro differences.
- Adds them to the worker's current pay results.

## Tenant Setup

No impact.

## Reporting

| Reports                                               | Considerations                                                                              |
|-------------------------------------------------------|---------------------------------------------------------------------------------------------|
| <b>Ledger Period Journal Status</b>                   | Check whether an accounting period is open or closed.                                       |
| <b>Reversal Results with Retro</b>                    | Identify workers with retro differences when you later reverse the source or target period. |
| <b>Payroll Off-cycle Payments for Group of Worker</b> | Create custom reports that contain information about reversals.                             |

## Integrations

Tax filing integrations don't include reversed pay results, so reports such as the **Purged Workers with Completed Payroll Results** report don't display those results.

You can use the *Import Payroll Off-Cycle Payment* web service to run manual payments in bulk that offset completed on- or off-cycle results instead of running individual reversals.

## Connections and Touchpoints

| Features           | Considerations                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
|--------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Accounting         | When you run reversals, Workday generates accounting when there's a gross-to-net change. Reversals don't create, cancel, or reverse forward accrual journals.                                                                                                                                                                                                                                                                                                                                                                       |
| Payroll processing | <p>For a worker in a given pay group and period, you can run multiple payment types. Workday processes the payments in this order to update pay accumulations and pay balances:</p> <ol style="list-style-type: none"> <li>1. Manual</li> <li>2. Reversal</li> <li>3. On-demand</li> <li>4. On-cycle</li> </ol> <p>When you try to process payments out of order, Workday enforces this sequence by setting the calculation status of any result type that depends on prior calculations to <i>Pending Completion of Prior</i>.</p> |
| Pay balances       | <p>When you run reversals, Workday updates pay accumulation and pay balance results. For balances based on:</p> <ul style="list-style-type: none"> <li>• Period dates, Workday updates the balances for the reporting period.</li> <li>• Payment dates, Workday updates balances for the period that includes the payment date of the result you reversed.</li> </ul>                                                                                                                                                               |
| USA year-end (USA) | Reversals can result in differences between tax filing data and W-2, and impact year-end reporting.                                                                                                                                                                                                                                                                                                                                                                                                                                 |

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships in your tenant. Learn more about the [Workday Touchpoints Kit](#) on Workday Community.

## Reverse a Completed Payroll Calculation

### Prerequisites

- The pay calculation that you want to reverse is complete, but not yet reconciled with your bank statement.
- Security: *Process: Off-Cycle (Reversal)* domain in the Core Payroll functional area.

### Context

You can reverse a payment for a worker in a completed pay period as long as the pay period:

- Hasn't been reconciled.
- Doesn't have payroll accounting adjustments.
- Doesn't have an escheatment *in progress* or *escheated* status.
- Doesn't have associated journals in error.

**Note:** If you've issued a payment reversal to your financial institution, Workday recommends you wait for confirmation that they've returned the funds before reversing the payroll calculation.

You can't reverse a payment for a worker who has a next period on-demand payment. You'll need to either:

- Cancel the next period on-demand payment.
- Wait until the next period becomes the current *In Progress* period.

Workday doesn't settle reversals. The original payment and the reversal remain on the books. When you reverse a pay on-demand result, the amount isn't available to request again. To make the amount available to request again, rescind the business process instead.

When the accounting date of the payroll result is in an open ledger period, Workday:

- Associates the reversal result with the reporting period you select on the **Reversal Pay Calculation** related action.
- Creates reversing journal lines in the Payroll Actual Accrual Journal and uses the accounting date from the original Operational Journal.

When the accounting date of the payroll result is in a closed ledger period, Workday:

- Associates the reversal result with the reporting period you select on the **Reversal Pay Calculation** related action.
- Creates reversing journal lines in the Payroll Actual Accrual Journal and uses the first day of the next open ledger period as the accounting date.

**Note:** When you don't use Workday for accounting, you might find discrepancies when you leave accounting periods open. Workday recommends that you configure business processes to include closing accounting periods.

### Steps

1. Access the pay calculation that you want to reverse:
  - a) Access the **Pay Calculation Results for Worker** report.
  - b) From the related actions menu of the payroll result, select **Pay Calculation > Reversal**.
2. As you complete the task, consider:

| Option              | Description                                                                                                                                                              |
|---------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Prior Period</b> | <p>Select to apply the reversal to a prior reporting period.</p> <p>You can select any period in the 6 calendar years preceding the current year. Workday determines</p> |

| Option                            | Description                                                                                                                                                                                                                                                                                              |
|-----------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                   | the current year as the year of <i>In Progress</i> results or the next period to be calculated.                                                                                                                                                                                                          |
| <b>Reporting Period</b>           | The reporting period must be in the same calendar year as the original payment date.                                                                                                                                                                                                                     |
| <b>Reporting Pay Group Detail</b> | When the selected <b>Reporting Period</b> is: <ul style="list-style-type: none"> <li>• Current period: Use any run category associated with the original payment pay group.</li> <li>• Prior period: Use the run category for the original payment or regular run category for the pay group.</li> </ul> |
| <b>Reversal Date</b>              | Must be on or after the payment date of the period you're reversing and in the same calendar year.                                                                                                                                                                                                       |

## Result

Workday updates pay accumulation and pay balance results. For balances based on:

- Period dates: Workday updates the balances for the selected **Reporting Period**.
- Payment dates: Workday updates balances for the period that includes the **Payment Date** you reversed.

## Cancel a Completed On-Cycle Payroll

### Prerequisites

- The on-cycle payroll run has a *Complete* or *Complete with Exceptions* status in the **Period Status** section on the **View Pay Group** report.
- Retro isn't completed or in progress for the target period that you're canceling. If retro is in progress, you can cancel it and then cancel the completed payroll.
- If settlement ran, it was canceled.
- No journals have an *In Error* status for the pay period.
- No other post-processing occurred, such as tax filing, accounting entries, or processing of a subsequent payroll run.
- Security: *Process: Run Batch Cancel Complete* domain in the Core Payroll functional area.

### Context

You can cancel a completed on-cycle payroll run.

Workday can't cancel the completion of an individual result when:

- You've settled the payment (this includes settled payroll third-party payments).
- The worker has a subsequent payroll calculation and result.
- The worker has multiple results and the result you selected isn't the last completed.
- Award costs processing is still in progress for the payroll result.

You can cancel results that you completed from the related actions menu of the **Payroll Calculation Processing Report**.

### Steps

1. Access the **Cancel Pay Complete** task.
2. Select the **OK to Proceed** check box.

### Result

Workday changes the status of:

- The payroll from *Complete* or *Complete with Exceptions* to *In Progress*.
- Payroll accounting from *Posted* to *Created*.
- Liquidation accounting from *Posted* to *Created* if you're using Workday Payroll commitment accounting.

Workday changes the status of individual on-cycle results to *In Progress*.

Individual payroll results that you can't cancel remain with the status of *Complete*.

Individual payroll results that weren't complete due to an exception status remain unchanged. Examples: Results with a status of *Hold*, *Error*, *Requires Re-Calc*, or *Pending Calculation of Prior*.

### Next Steps

Correct any errors, recalculate the payroll, and complete the payroll as intended.

## Concept: Payroll Process Workflow

Processing payroll in Workday follows these main steps:

1. Input worker data manually or with an EIB.
2. Calculate payroll.
3. Review on- and off-cycle payroll and accounting results.
4. Correct and complete payroll.
5. Settle payments.

Keep this basic workflow in mind as you address variations or complexities, such as payroll input by worker.

[Steps: Process Payroll](#) on page 613

## Concept: Pay Group Lock Status

Workday enables you to lock pay groups so that you can easily audit payroll results without having to recalculate before completing payroll due to worker-based events which cause results to flip to *Requires Re-calculation*.

Regardless of whether you enable or disable the **Lock Pay Groups To Block All Pay Calculations on Payroll Results** check box on the **Edit Tenant Setup - Payroll** task, once you lock a pay group for a current period; you can enter these events, but Workday no longer flips the payroll result status from *In Progress* to *Requires Re-calculation*:

- Add payroll input
- Flexible payment and deduction options
- One-time payments
- Period activity pay
- Switch primary job

When you enable **Lock Pay Groups To Block All Pay Calculations on Payroll Results**, Workday prevents you from running these tasks on locked pay groups while the current period is *In Progress*:

- Run Pay Calculation
- Run Pay Cancel
- Run on Demand Payment for Worker
- Run Manual Payment
- Run Off-cycle Pay Calculation
- Related actions from a pay result > Pay Calculation
- Payroll Calculation Processing Report
- Cancel Off-cycle Complete
- Cancel Off-cycle Complete for Group of Results
- Prior Period Tax Adjustment on any completed result
- Reversal on any completed result
- Schedule Pay Calculation
- Run Retro Calculation
- Schedule Retro Pay Calculation
- Cancel Retro Complete
- Run Pay Accounting
- Run Payroll Fringe Benefits Accounting

Also, you can't complete individual on-cycle results, you can only run pay complete for the entire pay group.

**Retroactive Payroll:** When you enter any of these events after you lock a pay group; and you don't recalculate the worker before you complete payroll, then when you run retro pay calculation, Workday processes these events in the next on-cycle pay period:

- One-time pay input
- One-time payment
- Ongoing pay input
- Period activity pay

When you lock a pay group, however; there are some scenarios where Workday does flip the on-cycle result status to *Requires Re-Calculation* as it's necessary for the accuracy of payroll results. Here are some examples:

|            |                                                                                                                                                                                                                                         |
|------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Example 1: | Multiple job worker has positions in different pay groups (PG-A and PG-B). When you complete PG-A, this flips the result status in PG-B, even if PG-B is locked.                                                                        |
| Example 2: | Single job worker has an on-cycle in their regular run category and an on-cycle in their non-regular run category. When you complete 1 pay result, the other flips to <i>Requires Re-Calculation</i> even when the pay group is locked. |

**How do I restart a pay calculation after it stops?**

When a payroll calculation fails or is aborted before it finishes, access the **Run Pay Calculation** task to restart it. In most cases, you should use the same **Employees to Calculate** option used on the original run.

| Original Run                             | Restarted Run                                                                                                                                                                                                                                                                                                                        |

| <i>Based on Result Status</i>            | <p>Select the same result statuses when you restart.</p> <p><b>Note:</b> Unless you have specific result statuses to calculate, you can save time by selecting <i>Smart Calculation</i> instead.</p> <p>If results are in error after the restarted run, calculate payroll by status again, this time selecting <i>In Error</i>.</p> |
| <i>Workers</i>                           | Select the same subset of workers when you restart.                                                                                                                                                                                                                                                                                  |

**How do I process new hires and transfers after a pay calculation?**

To calculate new hires and transfers after the initial calculation, select the *Not Yet Started* status on

**In what order does Workday process different types of payroll input?**

**Run Pay Calculation.** See [Calculate On-Cycle Payroll](#) on page 618.

For a worker in a given pay group and period, Workday processes payroll input in this order:

1. Manual (AUS, CAN, UK, USA)
2. Reversal (AUS, CAN, UK, USA)
3. On-demand
4. On-cycle

This sequence ensures that Workday can process pay accumulations and pay balances correctly. If you try to process payroll input out of order, Workday sets the calculation status to *Pending Completion of Prior* on any result that depends on prior calculations.

Payroll for France doesn't support manual payments or reversals.

**Do I need to run settlement processing separately for off-cycle and on-cycle transactions?**

No. You can run settlements for both on-cycle and off-cycle payments together. When you create a settlement run, you can select:

- *All Available Pay Groups* for on-cycle payments.
- *All Available Pay Group Exceptions* for off-cycle payments.

See [Steps: Set Up Settlement](#).

**How do I make a payment to the estate of a deceased worker?**

1. From the related actions menu for the worker, select **Personal Data > Maintain Names**.
2. Change the **Legal Name** or **Preferred Name** (whichever you've configured on the **Company Payroll Printing Options** task) to the name of the estate.
3. Issue the payment.

**Note:** Workday uses the **Legal Name** on year-end tax forms.

**How do I make an advance payment to a worker?**

To make a regular payment ahead of schedule for Payroll for Australia, Canada, the UK, and the U.S.:

1. Create an on-demand replacement payment for the current *In Progress* or *Not Yet Started* period.
2. Enter a **Payment Date** that precedes the regular pay date.

Workday then resolves only the advance payment for this period.

To make an additional payment ahead of schedule:

1. Create an on-demand additional payment in the current *In Progress* or *Not Yet Started* period.
2. Enter a **Payment Date** that precedes the regular pay date.

Workday then resolves both the additional pay and the regular pay.

For Payroll for France, you can configure the *Payroll Advance* business process to enable you to manage payroll advances. See [Example: Set Up Pay Advances \(FRA\)](#) on page 1512.

**How do I change the payment date for an on-cycle payroll that's in progress?**

1. Cancel the pay calculation.
2. **Edit Period Schedule** to change the payment date.
3. **Run Pay Calculation** again.

**How does Workday determine tax authorities, tax rates, and withholding for payroll tax calculations (USA)?**

The period end generally controls which taxes Workday calculates. The payment date controls how Workday calculates the taxes.

For states, Workday determines the primary resident and work states using the contact information for the worker. For local taxes, such as city or school district, the worker tax elections control which taxes Workday calculates.

| Data on Tax Elections                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | Example                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <p>The subperiod end date usually controls which tax authorities resolve for the pay result of the worker. The result is based on:</p> <ul style="list-style-type: none"> <li>• Where the worker lives and works during the period.</li> <li>• Reciprocity rules.</li> <li>• Multijurisdictional rules.</li> <li>• Company tax data.</li> <li>• Worker tax data.</li> </ul> <p>The payment date (also known as check date) controls how Workday calculates the tax, based on tax rates in effect as of that date.</p> | <p>Your worker lives in New York state, with a resident tax election for:</p> <ul style="list-style-type: none"> <li>• Yonkers that's effective 2019-12-01.</li> <li>• New York City that's effective 2020-01-01.</li> </ul> <p>The pay period is December 15 to December 31 and the payment date is 2020-01-03.</p> <p>Workday resolves the Yonkers tax election because the worker lived in Yonkers during that period.</p> <p>However, Workday calculates using the tax rates in effect for Yonkers as of 2020, because the payment date is in 2020. Workday reports this payment in the worker's 2020 W-2.</p> |
| For 2 Indiana county tax elections effective within the same year Workday:                                                                                                                                                                                                                                                                                                                                                                                                                                            | A worker has a county tax election for Steuben County Indiana, effective 2019-01-01.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

| Data on Tax Elections                                                                                                                                                          | Example                                                                                                                                                                                                                                                                  |

| <ul style="list-style-type: none"> <li>• Uses the one effective as of January 1 for that year.</li> <li>• Starts calculating the second tax election the next year.</li> </ul> | <p>The same worker has a second tax election for Tipton County Indiana, effective 2019-06-01.</p> <p>Based on Indiana guidelines, Workday calculates their Steuben County election for 2019. Workday starts calculating the Tipton County election as of 2020-01-01.</p> |

**How does Workday resolve earnings and deductions in multiple gross to nets when a worker has a midperiod pay group change?**

Workday resolves earning and deductions differently based on whether you calculate payroll for both the pay groups at the same time or individually for the *Pay Component: Not Previously Paid in Period* instance value calculation (IVC). If you calculate:

- The pay groups together, Workday resolves the earnings or deductions only once.
- The pay groups individually, Workday resolves the earnings or deductions in both payroll results until you complete 1 result and recalculate the other result.

**Can I cancel a completed reversal to reactivate a payment?**

No. Once you complete a reversal, the payment and payment journals on the original result are cancelled. If you were to then cancel complete the reversal, it doesn't change the payment or payment journals of the original result from canceled to posted. You must create a new payment if it needs to be paid.

## Process On-Demand (Off-Cycle) Payments by Worker

### Setup Considerations: On-Demand Payments

You can use this topic to help make decisions when planning your configuration and use of on-demand payments. It explains:

- Why to set them up.
- How they fit into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

### What They Are

On-demand payments enable you to pay a worker outside of their regular pay cycle.

- On-demand replacement payments replace a worker's regular on-cycle payment.
- On-demand additional payments issue payment in addition to a worker's regular pay.

### Business Benefits

On-demand payments enable you to pay a worker:

- Without waiting for the next regular pay cycle.
- For a prior period.

For Payroll for Australia, Canada, the UK, and the U.S., Workday automatically calculates employer and employee statutory taxes for on-demand payments, and updates the accounting and ledger.

For Payroll for France, Workday calculates and reports social contributions while:

- Applying rates and ceilings from the original period
- Calculating ceilings, SMIC, and other limits in the regular period
- Calculating and reporting taxes and income tax withholding using rates and limits effective on the payment date

### Use Cases

You can use on-demand replacement payments to:

- Calculate final pay for a worker who's terminated midperiod and needs their pay immediately.
- Pay a worker who has no regular results for the period. Example: Timesheet not processed.
- Correct a payroll error for Payroll for Australia, Canada, the UK, and the U.S.

You can use on-demand additional payments to:

- Issue a one-time payment to a worker, such as a spot bonus.
- Pay a worker for hours that they report after the end of the pay period.
- Issue a trailing payment to a worker after they transfer internationally, for amounts they earned in their previous position for Payroll for Canada, the UK, and the U.S.
- Pay a bonus or other payment to a terminated worker.
- Issue profit-sharing payments for Payroll for France.
- Hire workers retroactively for Payroll for France.

### Questions to Consider

| Question                                                       | Considerations                                                                                                                                                                                                                                                                                                                                                                                                                    |
|----------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Does your company process large volumes of on-demand payments? | Consider using the <i>Import Payroll Off-Cycle Payment</i> web service to mass import on-demand payment data that Workday uses to calculate payments.                                                                                                                                                                                                                                                                             |
| Does your company pay bonuses intermittently?                  | You can process one-time bonuses as on-demand additional payments.                                                                                                                                                                                                                                                                                                                                                                |
| Do you need to pay terminated workers immediately?             | <p>You can create an on-demand replacement payment for the worker. When the termination date is:</p> <ul style="list-style-type: none"> <li>• Within the current period, create a payment for the subperiod worked.</li> <li>• After the current period, first complete the current pay result for the worker. Then create a next-period payment for the subperiod from the period start date to the termination date.</li> </ul> |

| Question                                                                                                                           | Considerations                                                                                                                                                                                                                                                                                                                                                   |
|------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Do nonpayroll administrators at your company need to calculate final pay for terminated employees on their termination date (USA)? | You can enable nonpayroll administrators to calculate and generate termination-day paychecks by configuring the <i>On Demand Event</i> business process as part of the <i>Termination</i> business process.                                                                                                                                                      |
| Do you want to issue a check for additional pay separately from the regular paycheck?                                              | An on-demand additional payment generates a separate check and payslip. To include additional pay on a worker's on-cycle check, add payroll input instead.                                                                                                                                                                                                       |
| Do you want to prevent payroll administrators and partners from running on-demand payments for themselves?                         | User interface tasks automatically prevent users from adding or editing payments for themselves. They can only run on-demand payments for themselves using a web service. You can prevent them from doing so by selecting the <b>Payroll Web Services - Do Not Allow Add/Update for Worker as Self</b> check box on the <b>Edit Tenant Setup - Payroll</b> task. |
| What do you call payments that you make to workers who transfer internationally (CAN, UK, USA)?                                    | Workday refers to this type of payments as trailing payments for international transfers. The preset name for this check box is <b>Trailing Payment</b> , which you can change using the <b>Maintain Custom Labels</b> task.                                                                                                                                     |

## Recommendations

For Payroll for Canada and the U.S., run manual payments instead of on-demand payments to adjust tax amounts, since Workday calculates employer and employee statutory taxes for on-demand payments.

For Payroll for the UK:

- Run on-demand payments instead of manual payments to adjust payment amounts, since Workday calculates employer and employee statutory taxes for on-demand payments and reports the amounts to HMRC.
- Run manual payments instead of on-demand payments in situations where you need to adjust tax amounts, since Workday doesn't calculate employer and employee statutory taxes for manual payments. Consider running manual payments for pay periods before the previous pay period, since it's likely you need to correct tax amounts. Manually add related calculations for statutory taxes

Complete any on-demand replacement payments for a terminated worker before removing the worker from a company or pay group.

## Requirements

To ensure accurate processing, specify which pay components to calculate for on-demand payments on the **Create Run Category** task.

## Limitations

- You can only create 1 replacement payment for a worker in a period, pay group, and company. When the pay period has subperiods, you can create 1 replacement payment per subperiod.
- When you create a replacement payment, Workday excludes the worker from the regular on-cycle run for that period or subperiod.
- Workday doesn't prorate on-demand additional payment amounts.
- You can only run replacement payments for periods or subperiods that you haven't completed.

- You can only run trailing payments for the current or next period. Workday doesn't support trailing payments for workers on international assignment, or who have multiple jobs in the current or prior periods (CAN, UK, USA).
- You can apply supplemental taxation to on-demand replacement payments only on nonregular run categories that you set to use nonregular taxation (USA).
- When you complete retro for a retro hire in a subperiod, Workday creates a zero pay result for the subperiod. Therefore, you can't run on-demand replacement payments for that subperiod.
- Workday doesn't recover outstanding arrears balances for on-demand additional payments (AUS, CAN, UK, USA).
- You can't add attachments to pay input that is directly entered on an on-demand payment.

### Tenant Setup

You can use the **Edit Tenant Setup - Payroll** task to determine whether to:

- Use the payment or period end date as the accounting date for off-cycle payments.
- Consider completed on-demand additional payments when you determine retro processing periods.
- Prevent users from running on-demand payments for themselves when using a web service.

### Security

| Domains                                                                           | Considerations                                         |
|-----------------------------------------------------------------------------------|--------------------------------------------------------|
| <i>Custom Label Management</i> domain in the System functional area.              | Enables you to customize labels for trailing payments. |
| <i>Process: Off Cycle (On Demand)</i> domain in the Core Payroll functional area. | Enables you to create on-demand payments.              |

### Business Processes

You can add an on-demand payment to a business process as a *To Do* step, such as on *Add/End Additional Job*, *Onboarding*, *Compensation Change*, or *Leave Event*.

### Reporting

| Reports or Data Sources                                                                                  | Considerations                                                                                                                                                                                                        |

[2023R2 What's New Post: Expand Reporting for On-Demand Payment in a Prior Period - France](#)

## Create On-Demand Replacement Payments

### Prerequisites

- Review setup considerations for on-demand payments.
- In the **Nonactive (On Cycle, On Demand Replacement)** tab of your run category, define which pay components to calculate for on-demand replacement payments.
- (Optional) Configure decentralized processing for on-demand payments. This setup enables nonpayroll administrators to process final payments for terminated workers on the termination day.
- Security: *Process: Off Cycle (On Demand)* domain in the Core Payroll functional area.

### Context

You can replace a worker's regular on-cycle payment for periods or subperiods that have a status of *In Progress* or *Not Yet Started*. Examples:

- For Payroll for Australia, Canada, the UK, and the U.S.:
  - To make a termination payment, in either the current pay period or the next.
  - To pay workers who have no regular on-cycle results for the pay period. This case can be due to unprocessed timesheets, or results that you reversed in error.
- To make a termination payment for Payroll for France.

When you create an on-demand replacement payment for a pay period or subperiod, Workday excludes the worker from the regular on-cycle run for that period. You can create an on-demand replacement payment only for a subperiod where the worker is eligible for the payment.

Before you create an on-demand replacement payment for the next period, you need to complete any current and prior period results.

A worker can have only 1 replacement payment (manual or on-demand) for a period, pay group, or company at a time. If the pay period has subperiods, a worker can have multiple replacement payments per period, but only 1 per subperiod.

You can gross up an on-demand payment for a worker.

When you complete a retro pay calculation for a retro hire in a subperiod, Workday creates a pay result of zero for the subperiod. Therefore, you can't run an on-demand replacement payment for that subperiod.

Some off-cycle payment tasks use machine learning prompt recommendations to help you complete the tasks more easily. See [Concept: Intelligent Prompt Recommendations for Payroll](#).

## Steps

1. Access the **Run On Demand Payment for Worker** task.
2. (Optional) As you complete the task, consider:

| Option              | Description                                                                                                                                    |
|---------------------|------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Prior Period</b> | Process a payment for a prior completed period.                                                                                                |
| <b>Next Period</b>  | Process a payment for the next period, while the current period is still in progress. First complete current and prior results for the worker. |
| <b>Worker</b>       | You can't use the <b>Run On Demand Payment for Worker</b> task to add a payment for yourself.                                                  |

3. Select **Create Replacement Payment**.
4. As you complete the **Payment Information**, consider:

| Option              | Description                                                                                                                                                                                                                                                                                                                        |
|---------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Batch ID</b>     | Displays if you import payment information using the Enterprise Interface Builder (EIB).<br><br>Use to link a new on-demand payment to a batch ID that you previously imported.                                                                                                                                                    |
| <b>Payment Date</b> | Determines which tax tables apply.<br><br>Workday updates pay accumulation and pay balance results in the period or subperiod that includes the payment date.                                                                                                                                                                      |
| <b>Priority</b>     | Determines the processing order when you enter multiple on-demand payments for the same worker, period or subperiod, and pay group. Enter <b>1</b> when the worker has 1 on-demand payment.<br><br>To adjust the priority of multiple on-demand payments for a worker, access the <b>Maintain Off-cycle Payment Priority</b> task. |

5. (Optional for Payroll for the U.S.) Override the frequency to use for tax and withholding order calculations when a worker has substantially more or less pay than typically received in a pay period or subperiod.

When a worker in a weekly pay group receives an on-demand replacement payment that includes 2 weeks of unused vacation.

| Option             | Description                                                                                                                                                                                                                             |
|--------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Number</b>      | Enter the number of pay periods over which to spread the payment when determining taxes for the payment.<br><br>You can't define tax frequency overrides for payments that use a nonregular run category or U.S. supplemental taxation. |
| <b>Pay Periods</b> | Example: When you enter <b>Number: 2</b> and <b>Pay Periods: Weekly</b> , Workday taxes the payment based on 2 weekly periods.                                                                                                          |

Any tax frequency overrides you define apply to the entire on-demand payment, even if the payment includes multiple pay components. When no tax frequency override is available, Workday uses the frequency from the pay group.

Workday displays the **Tax Frequency Override** in the **Payment Details** section of the **View Payroll Results** report.

6. (Optional) Select a **Payment Type** that's different from the worker's typical payment elections.

Available payment types are:

- For the run category of the pay group.
- As allowed for transaction override on the **Maintain Payment Election Rules** task.

7. (Optional) Configure worktags.

See [Override Worktags for On-Demand Payments](#) on page 660.

8. (Optional) To include available retroactive payments for a worker, expand the **Retro Results** section and select **Include Retro Differences in Payment**. This field displays only when there are retro differences available to include.

See [Process Retro Differences in On-Demand Payments](#) on page 835.

9. (Optional) Select the **Load or Refresh Input** check box to replace current payment values in the **Input** section with values entered for the period, using the **Add Payroll Input by Worker** task. You can then modify the input, delete it, or add to it. Example: You can load payroll input to verify if there are ongoing loan payments or other transactions to evaluate before replacing a payment.

**Note:** **Load or Refresh Input** replaces current input details. To append current input details with calculation values, use the *Import Payroll Off-Cycle Payment* web service.

10. As you enter payment values in the **Input** section, consider:

| Option               | Description                                                                                                                                                                                                                                                                                             |
|----------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Start Date</b>    | The start date of the pay period or subperiod.                                                                                                                                                                                                                                                          |
| <b>Special Entry</b> | Overrides earning or deduction rules. Select this check box to enter values for earnings and deductions that don't allow payroll input, such as: <ul style="list-style-type: none"> <li>• Statutory deductions.</li> <li>• Withholding orders (CAN, FRA, USA).</li> <li>• Court orders (UK).</li> </ul> |

| Option               | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
|----------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Pay Component</b> | <p>For replacement payments to active workers, Workday calculates the same pay components as in the on-cycle run. Select only earnings or deductions that require either:</p> <ul style="list-style-type: none"> <li>• Select pay components to calculate, aside from Workday input for hours, units, or other amounts that vary in each period or subperiod.</li> <li>• An override or adjustment amount. Workday applies these override values when calculating results.</li> </ul> <p>For replacement payments to non-active workers, Workday calculates the pay components configured on the <b>Nonactive (On Cycle, On Demand Replacement)</b> tab of the run category.</p> <p>Workday automatically calculates statutory taxes (employer and employee) and withholding order fees for on-demand payments. If you enter a tax amount, Workday overrides and replaces the calculated amount.</p> |
| <b>Position</b>      | <p>Applies if your Workday tenant allows for multiple jobs.</p> <p>Required for position-based pay components. Select from positions that are active on the subperiod target date.</p> <p>Workday includes the position worktag in journal entry lines.</p> <p>To adjust position-based wages and taxes for Payroll for the U.S., such as OASDI, after an employee changes their position, be sure to select the correct position.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| <b>Company</b>       | <p>Applies to worker-based pay components processed as part of a replacement payment. Workday resolves the pay input only for the selected company.</p> <p>You can select any company associated with the employee at any point in time.</p> <p>If you don't select a company, Workday calculates the pay component for each company it processes for the worker, except for:</p> <ul style="list-style-type: none"> <li>• Withholding order deductions (AUS, CAN, FRA, USA). If you select a withholding order deduction without selecting the company, Workday calculates it only for the company associated with the case number worktag.</li> <li>• Court order deductions (UK). |                       | <p>contribution deduction. When you replace the amount of pay component-related calculations for a memo deduction, the ceilings and gross wages are consistent across the related contribution calculations. Example: To modify the value of AGIRC-ARRCO contributions, create a replacement payment for the <i>Memo - Reference Values for AGIRC-ARRCO [FRA]</i> deduction, and replace amounts for gross wages and ceilings.</p> <p>To have Workday calculate taxes for workers with ongoing multiple work jurisdictions for Payroll for the U.S., enter a related calculation, such as <i>Hours (unprorated)</i>.</p> <p>For a gross-up earning for Payroll for Canada, France, the UK, and the U.S., select <i>Net Amount (for Gross-Up)</i> for input.</p> <p>To avoid unexpected results for tax reporting for Payroll for the U.S., don't enter a value for <i>Gross Wages</i> when the payment date is before 2013/01/01.</p> |
| Input Details - Value | The pay component amount and, if applicable, the values of the related calculations that make up the amount.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

## Result

Workday calculates a replacement payment for the worker.

## Next Steps

Recalculate any *In Progress* on-cycle payments.

Complete the on-demand replacement payment.

[Steps: Set Up Decentralized Processing for On-Demand Payments \(USA\)](#) on page 1071

## Create On-Demand Additional Payments

### Prerequisites

- Review setup considerations for on-demand payments.
- In the **Edit Run Category** task, **General** tab, define which workers to process for on-demand additional payments. Also define which pay components to calculate for on-demand additional payments on the **Off Cycle (On Demand Additional, Manual)** tab.

- Security: *Process: Off Cycle (On Demand)* domain in the Core Payroll functional area.

## Context

You can issue 1 or multiple on-demand payments in addition to a worker's regular on-cycle earnings for the period. Examples:

- A worker doesn't receive pay for 8 additional hours.
- A worker doesn't receive pay for 8 additional hours in a prior period.
- For Payroll for Canada, the UK, and the U.S., a worker who has transferred internationally is eligible for a bonus from their previous position.

For Payroll for Australia, Canada, the UK, and the U.S., Workday doesn't recover outstanding arrears balances for on-demand additional payments.

You can gross up an on-demand payment for a worker.

You can use these web services to load payroll input for off-cycle payments:

- *Import Payroll Off-Cycle Payment*
- *Put Payroll Off-Cycle Payment*

Some off-cycle payment tasks use machine learning prompt recommendations to help you complete the tasks more easily. See [Concept: Intelligent Prompt Recommendations for Payroll](#).

## Steps

1. Access the **Run On Demand Payment for Worker** task.
2. Select **Create Additional Payment**.
3. (Optional) As you complete the task, consider:

| Option                   | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
|--------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Prior Period</b>      | Process a payment for a prior completed period.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| <b>Next Period</b>       | Process a payment for the next period, while the current period is still in progress. First complete current and prior results for the worker.                                                                                                                                                                                                                                                                                                                                                                                                          |
| <b>Trailing Payments</b> | <p>For Payroll for Canada, the UK, and the U.S. only. Trailing payments don't apply to Payroll for France.</p> <p>Process a payment for a previous job in another country, after a worker transfers to a new country. The payment can be for the current or next period. You can only run trailing payments for a worker:</p> <ul style="list-style-type: none"> <li>• With a single job.</li> <li>• Whose results from the previous position are all complete.</li> </ul> <p>Make sure that you enter the previous company as an override worktag.</p> |
| <b>Period</b>            | When you select <b>Prior Period</b> , select any completed period in the 6 calendar years preceding the current year. Workday determines the current year for the <i>In Progress</i> results or the next period to be calculated.                                                                                                                                                                                                                                                                                                                       |

| Option | Description                                                                                   |
|--------|-----------------------------------------------------------------------------------------------|
| Worker | You can't use the <b>Run On Demand Payment for Worker</b> task to add a payment for yourself. |

4. As you complete the **Payment Information** section, consider:

| Option                 | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Batch ID               | Displays when you import payment information using the Enterprise Interface Builder (EIB).<br><br>You can only link a new on-demand payment to a previously imported batch ID.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| Reason                 | For on-demand additional payments, Workday automatically calculates pay components that are associated with the off-cycle reason. You can associate an off-cycle reason with a pay component on the <b>Off Cycle (On Demand Additional, Manual)</b> tab of the run category.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| Sub-Period Target Date | Determines the default worktags for the payment.<br><br>When a worker has a midperiod change that causes gross-to-net proration, select a date in the subperiod that the payment applies to.<br><br>Example for Payroll for the U.S.: On January 21, Laura changes job locations. Their work state changes from New York to New Jersey, creating 2 subperiods: <ul style="list-style-type: none"> <li>January 15 - January 20.</li> <li>January 21 - January 30.</li> </ul> To enter an additional payment that applies to work performed in New York, enter January 20th.<br><br>For Payroll for Canada, to enter amounts targeting different portions of a pay period that doesn't have gross-to-net proration, add multiple rows in the <b>Input</b> grid. Example: Split payments after a change in a province of employment. |
| Payment Date           | Determines which tax tables apply.<br><br>Workday updates pay accumulation and pay balance results in the period that includes the payment date.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| Priority               | Determines the processing order when you enter multiple on-demand payments for the same worker, period, and pay group. Enter <b>1</b> when the worker has 1 on-demand payment.<br><br>To adjust the priority of multiple on-demand payments for a worker, access the <b>Maintain Off-cycle Payment Priority</b> task.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| Supplemental Taxation  | For Payroll for the U.S. only.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

| Option                                         | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
|------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                                | <p>Automatically populates when you configure the run category for nonregular taxation.</p> <p>To ignore the run category tax setting and apply a supplemental tax rate to the additional payment, select the check box. When you select the checkbox, Workday will use the separate check method defined in Edit Company Federal US Tax Reporting. For more details, see: <a href="#">Set Up Company federal Taxes (USA)</a>.</p> <p>Regardless of whether an aggregate method applies, the payment might be subject to a state flat tax rate when:</p> <ul style="list-style-type: none"> <li>• You configure the run category to <b>Use Supplemental State Flat Tax Rate</b>.</li> <li>• The worker's preceding regular payment has no regular wages, or no preceding regular payment exists.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| <b>Take Additional Tax Withholding Amounts</b> | <p>Applies to Payroll for Canada and the U.S. only.</p> <p>For Payroll for the U.S., for these states, Workday calculates additional local withholding on regular on-cycle payments unless it's supplemental pay only:</p> <ul style="list-style-type: none"> <li>• Indiana, for Work or Residence county.</li> <li>• Michigan, for Work or Residence city.</li> <li>• New York, for Work or Residence city.</li> </ul> <p>For nonregular run categories, Workday doesn't deduct additional amounts. However, you can include the <b>Additional Amount</b> pay component related calculation (PCRC) in your deduction. Example: A worker has a bonus paid in an on-cycle, nonregular run category, and you want to withhold an additional amount. Add the <b>Additional Amount</b> PCRC to the <i>Federal Withholding [USA]</i> deduction.</p> <p><b>Note:</b> Due to net pay validation, the <b>Additional Amount</b> elected on the payroll administrator view of pay results might not reflect the total amount withheld.</p> <p>For on-demand additional payments paid in regular run categories, Workday deducts when you:</p> <ul style="list-style-type: none"> <li>• Select <b>Take Additional Tax Withholding Amounts</b>.</li> <li>• Enter input for the <i>Additional Amount</i> PCRC.</li> </ul> <p>For Payroll for Canada, Workday deducts additional amounts for federal or provincial tax withholding according to worker TD1</p> |

| Option | Description                                                                |
|--------|----------------------------------------------------------------------------|
|        | elections when you select <b>Take Additional Tax Withholding Amounts</b> . |

5. (Optional for Payroll for the U.S.) Override the frequency to use to calculate tax and withholding orders when a worker has substantially more or less pay than typically received in a pay period.  
Example: When a worker in a weekly pay group receives an on-demand payment that includes 2 weeks of unused vacation.

| Option             | Description                                                                                                                                                                                                                              |
|--------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Number</b>      | Enter the number of pay periods over which to spread the payment when determining taxes for the payment.<br><br>You can't define tax frequency overrides for payments that use a nonregular run category, or U.S. supplemental taxation. |
| <b>Pay Periods</b> | Example: When you enter <b>Number: 4</b> , and <b>Pay Periods: Weekly</b> , Workday taxes the payment based on 4 weekly periods.                                                                                                         |

Any tax frequency overrides apply to the entire on-demand payment, even when the payment includes multiple pay components. When no tax frequency override is available, Workday uses the frequency from the pay group.

Workday displays the **Tax Frequency Override** in the **Payment Details** section of the **View Payroll Results** report.

6. (Optional) Select a **Payment Type** that's different from the worker's typical payment elections.  
You can use payment types that you:
- Define for the run category of the pay group.
  - Configure as transaction overrides on the **Maintain Payment Election Rules** task. Note that these are not specific to your defined pay groups.
7. [Override Worktags for On-Demand Payments](#) on page 660 (CAN, UK, USA).  
Use override worktags to manage payments in specific scenarios such as for payments from another company.
8. (Optional) To include available retroactive payments for a worker, expand the **Retro Results** section and select **Include Retro Differences in Payment**. This field displays only when there are retro differences available to include.  
See [Process Retro Differences in On-Demand Payments](#) on page 835.
9. (Optional) Select **Load or Refresh Input** to replace current payment values in the **Input** section. Enter the values for the period using the **Add Payroll Input by Worker** task. You can then modify the input, delete it, or add to it.

When you process payroll input on a result and run pay calculations or retro pay calculations, Workday doesn't process it again for the same period. The exception is that Workday doesn't support workers with a midperiod pay group change. Workday might continue to pay out one-time inputs multiple times for a worker who has a midperiod pay group change.

**Note:** **Load or Refresh Input** replaces current input details. To append current input details with calculation values, use the *Put Payroll Off-Cycle Payment* web service.

10. In the **Input** section, consider:

| Option               | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
|----------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>End Date</b>      | <p>Automatically set to the <b>Sub-Period Target Date</b>. Determines which values to use when calculating the pay component.</p> <p>To prorate a pay component, change the <b>End Date</b> to target the input to the appropriate subperiod. Enter a date between the period begin date and the <b>Sub-Period Target Date</b>.</p> <p>Example: To prorate an earning because of a midperiod compensation change, add a row of input for each subperiod and enter an <b>End Date</b> for each row.</p> <p>For Payroll for the U.S., to make an additional payment for a biweekly FLSA work period, add a separate row of input for each week. On each row, enter the <b>End Date</b> that corresponds to the FLSA week.</p> <p>To prorate the employee's gross-to-net pay instead of a pay component, create a separate additional payment for each subperiod.</p> |
| <b>Pay Component</b> | <p>Select pay components to calculate, in addition to the ones Workday calculates automatically.</p> <p>For additional payments, Workday automatically calculates the pay components configured on the <b>Off Cycle (On Demand Additional, Manual)</b> of your run category.</p> <p>Workday also automatically calculates statutory taxes (employer and employee) and:</p> <ul style="list-style-type: none"> <li>• Superannuation for Payroll for Australia.</li> <li>• Withholding order fees for on-demand payments for Payroll for Canada and the U.S.</li> <li>• Court order fees for on-demand payments for Payroll for the UK.</li> </ul> <p>When you enter a tax amount, Workday overrides and replaces the calculated amount.</p>                                                                                                                         |
| <b>Position</b>      | <p>Applies when you configure your Workday tenant for multiple jobs.</p> <p>Required for position-based pay components. Select from positions that are active on the subperiod target date.</p> <p>Workday includes the position worktag in journal entry lines.</p> <p>For Payroll for the U.S., to adjust position-based wages and taxes, such as OASDI, after an employee changes their position, be sure to select the correct position.</p>                                                                                                                                                                                                                                                                                                                                                                                                                   |

| Option                      | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |

| <b>Costing Company</b>      | Use to charge this payroll item to a company other than the worker's default company. This column is available when you enable intercompany accounting in your tenant.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| <b>Currency</b>             | Applies if the currency differs from the pay group currency.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| <b>Input Details - Type</b> | <p>The type of value, such as <i>Amount</i> or a related calculation. For earnings with related calculations, this field displays all of them, regardless of whether you select the <b>Input Allowed</b> in the <b>Related Calculations</b> grid.</p> <p>For statutory taxes, enter only amounts, including subject wages and taxable wages. When adjusting a tax amount, Workday recommends that you always enter a value (even zero):</p> <ul style="list-style-type: none"> <li>• For the subject wages and taxable wages-related calculations for Payroll for Canada, the UK, and the U.S.</li> <li>• For the gross wages and taxable wages-related calculations for Payroll for Australia.</li> </ul> <p>For earnings and voluntary deductions for Payroll for Australia, Canada, the UK, and the U.S., select <i>Amount</i> or any pay component-related calculation configured to enable input. Example: When a pay component is defined as <math>Amount = Rate \times Hours</math>, you can select <i>Rate</i>, <i>Hours</i>, and <i>Amount</i>.</p> <p>Example for Payroll for France: For a pay component defined as <math>Amount = Rate \times Hours</math>, you can select <i>Rate</i>, <i>Hours</i>, and <i>Amount</i>.</p> <p>To modify statutory contributions for Payroll for France, Workday recommends that you create the payment for Memo deductions for statutory contributions instead of for the contribution deduction. When you adjust the amount of pay component-related calculations for a memo deduction, the ceilings and gross wages are consistent across the related contribution calculations.</p> <p>For a gross-up earning for Payroll for Canada, France, the UK, and the U.S., select <i>Net Amount (for Gross-Up)</i> for input.</p> <p>To avoid unexpected results for tax reporting in Payroll for the U.S., don't enter a value for <i>Gross Wages</i> when the payment date is before 2013/01/01.</p> |

| Option                       | Description                                                                                                  |
|------------------------------|--------------------------------------------------------------------------------------------------------------|
| <b>Input Details - Value</b> | The pay component amount and, if applicable, the values of the related calculations that make up the amount. |

## Result

Workday calculates an additional payment for the worker. When pay input is added to an on-demand additional payment, Workday considers it to be an override entry and ignores worker eligibility on the pay component.

## Next Steps

Complete any on-demand additional payroll before completing the on-cycle payroll for the same period.

## Override Worktags for On-Demand Payments

### Prerequisites

Create an on-demand payment for a worker.

Security: *Process: Off Cycle (On Demand)* domain in the Core Payroll functional area.

### Context

By default, Workday applies worktags based on the:

- Subperiod target date for additional payments.
- Period or subperiod end date for replacement payments.
- Worker's primary position.

For on-demand payments, Workday automatically uses the worktags from the company of the worker's primary position.

You can override the default worktag values for either:

- The entire on-demand payment.
- A pay component within the on-demand payment.

Payroll for France doesn't support override worktags for on-demand payments.

### Steps

1. Access the **Run On Demand Payment for Worker** task.
2. In the **Reference Worktags** section, review the default worktags.

3. In the **Override Worktags** section, select overrides for reference worktags for calculations, reporting, or journal entry costing.

Select a **Company** when paying:

- Retro differences from companies other than the worker's current primary job company, for additional payments only (CAN, USA).
- A position in a different pay group from the primary position (CAN, UK, USA).
- Trailing payments. The company of the worker's previous job determines the residence and work override worktags (CAN, UK, USA).

For Payroll for the U.S., Workday calculates the worker's taxes based on the override worktags on the pay result:

- When you override the work or resident state of the worker.
- When you override the city, county, or school district tax authorities.
- When you override the optional other tax authorities.

Workday automatically resolves mandatory other taxes based on the overridden work or resident state.

When the worker does have a tax election for that tax authority, Workday uses the tax election in the resolution of the tax.

Exceptions for overriding local taxes include:

- Pennsylvania cities.
- Indiana counties.

Workday automatically populates the **State Unemployment Insurance Authority** prompt to match the **State Authority (Work)** prompt. You can override the default value for workers with jobs in different states.

For Payroll for the U.S., Workday disconnects the work state from a terminated worker. To resolve severance pay after termination, select the work state for SUI from the **State Authority (Work)** prompt.

For **Province Authority (Work)** for Payroll for Canada, you can override the reference worktag of the same name with another province. If the worker works outside of Canada, you can select *United States* or *Other*.

4. In the **Input** section, enter worktag values for the pay component, if different from the values in the **Override Worktags** or **Reference Worktags** section.

| Option          | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
|-----------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Worktags</b> | <p>If the pay component has 1 or more calculation worktag types defined, select a value for each of the worktag types.</p> <p>To override ongoing multiple work jurisdiction allocations for Payroll for the U.S., enter a tax authority worktag.</p> <p>If you set up related worktags, Workday adds the worktag you select and its related worktags. You can remove any you don't want.</p> <p>Example for Payroll for the U.S.: If the pay component is <i>State Withholding (Resident) [USA]</i>, select a <b>Payroll State</b> in the <b>Worktags</b> field.</p> <p>Example for Payroll for Canada: For the <i>Province Income Tax (PIT) [CAN]</i> pay component, select a <b>Payroll Province</b> in the <b>Worktags</b> field.</p> |

| Option         | Description                                                                                                                                                                                                                                                                                                                                                                                                     |
|----------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Company</b> | <p>Applies to worker-based pay components processed as part of a replacement payment.</p> <p>When you load payroll input by selecting the <b>Load or Refresh Input</b> check box, Workday doesn't modify the <b>Company</b> specified on the input. However, Workday doesn't process any payroll input when the <b>Company</b> is different from the one specified in the <b>Override Worktags</b> section.</p> |

##### Tasks

[Create On-Demand Replacement Payments](#) on page 648

[Create On-Demand Additional Payments](#) on page 653

## Cancel Completed Off-Cycle Payroll

#### Prerequisites

- Cancel settlements.
- You haven't completed retro for the target period that you're canceling and retro isn't in progress. When the retro process is in progress, you can cancel it, and then cancel the completed off-cycle payroll.
- Security: *Process: Run Batch Cancel Complete* domain in the Core Payroll functional area.

#### Context

You can cancel a completed off-cycle payroll result with a status of *Complete* or *Complete with Exceptions*. Check the calculation status in the **Period Status** section of the **View Pay Group** report.

Workday can't cancel the completion of an individual result, when:

- You settle payments.
- Postprocessing occurred, such as tax filing, accounting entries, or processing a subsequent off-cycle payroll run.

#### Steps

1. Access the **Cancel Off-cycle Complete** task.
2. (Optional) Select the **Next Period** check box in a period that's *Opened for Off-Cycles*.

### 3. Select a **Period**, **Pay Group Detail**, **Worker**, and an **Off-cycle Result**.

When you don't see any results in the **Off-cycle Result** drop-down list after you've completed your off-cycle; it's possible that your results aren't eligible for cancel complete.

Workday recommends you to run the:

- **Cancel Off-Cycle Complete for Group of Results** report as it displays Results Not Eligible to be Canceled.
- **Completed Off-Cycles Results to be Canceled** report as it displays the Ineligibility Reason.

Here are some of the ineligibility reasons that you can find when you run the **Completed Off-Cycle Results to be Canceled** report:

- Reversed
- Payroll Accounting Adjustment Event Not Canceled or Rescinded
- Settled
- On Demand Event Business Process
- More Recent In-Progress or Completed Results Exist
- Next Period Off-Cycle Exists

### Result

Workday changes the status of:

- Individual payroll off-cycle results from *Complete* or *Complete with Exceptions* to *In Progress*.
- Payroll accounting from *Posted* to *Created*.
- Liquidation accounting from *Posted* to *Created* when you're using Workday Payroll commitment accounting.

Individual off-cycle payroll results that you can't cancel remain with the status of *Complete*.

## Concept: Off-Cycle Payments

Off-cycle payment transactions occur outside of a regularly scheduled (on-cycle) pay run, and include:

- Manual payments made to employees outside of Workday Payroll, such as check or cash.
- On-demand payments that replace or add to an employee's on-cycle payments.
- Reversals that back out an employee's completed pay calculation.

For Payroll for Canada, the UK, and the U.S., for periods with a forward accrual, Workday doesn't calculate off-cycle results for on-demand or manual payments.

Payroll for France doesn't support manual payments or reversals.

### Common Uses of Off-Cycle Payments

For Payroll for Canada and the U.S.:

| Usage                                   | Manual Payment | On-Demand |
|-----------------------------------------|----------------|-----------|
| Record advance or replacement payments. | X              |           |
| Make advance or replacement payments.   |                | X         |

| Usage                                                                                                                     | Manual Payment | On-Demand |
|---------------------------------------------------------------------------------------------------------------------------|----------------|-----------|
| Record third-party payments for sick pay or the exercise of nonqualified stock options.                                   | X              |           |
| Move taxes from 1 jurisdiction to another.                                                                                | X              | X         |
| Correct payroll errors.                                                                                                   | X              | X         |
| Record adjustments in the current or prior year.                                                                          | X              | X         |
| Pay terminated workers.                                                                                                   |                | X         |
| Pay retroactive differences calculated by the <b>Run Retro Pay Calculation</b> task.                                      |                | X         |
| Pay trailing payments for workers when they permanently transfer to another country (only through an additional payment). |                | X         |

For Payroll for the UK:

| Usage                                                                                                                     | Manual Payment | On-Demand |
|---------------------------------------------------------------------------------------------------------------------------|----------------|-----------|
| Record advance or replacement payments.                                                                                   | X              |           |
| Make advance or replacement payments.                                                                                     |                | X         |
| Record third-party payments for the exercise of nonqualified stock options.                                               | X              |           |
| Correct payroll errors.                                                                                                   | X              | X         |
| Record adjustments in the current or prior year.                                                                          | X              | X         |
| Pay terminated workers.                                                                                                   |                | X         |
| Pay retroactive differences calculated by the <b>Run Retro Pay Calculation</b> task.                                      |                | X         |
| Pay trailing payments for workers when they permanently transfer to another country (only through an additional payment). |                | X         |

For Payroll for France, you can use on-demand payments to:

- Make advance or replacement payments.
- Correct payroll errors.
- Pay terminated workers.
- Record adjustments in the current or prior year.
- Pay retroactive differences calculated by the **Run Retro Pay Calculation** task.

## Replacement Payments and Additional Payments

Off-cycle payments enable you to:

- Replace the on-cycle payment for a period or subperiod that's *In Progress* or *Not Yet Started*.
- Replace the on-cycle payment for a worker that has no regular payment for the period. When the pay period has subperiods, you can run on-demand replacement payments only for subperiods where the worker is eligible. Example: When the worker is inactive for a subperiod, you can't run an on-demand replacement payment for that subperiod.
- Enter an additional payment made separately from the on-cycle payment.

For Payroll for Canada, the UK, and the U.S., you can only run trailing payments for single-job workers and pay them in their current position. Workday doesn't support trailing payments for workers who:

- Are on international assignment.
- Had multiple jobs in prior periods.

Workday applies the tax of the original country to trailing payments.

Workday tracks on-cycle, off-cycle, and retro usage of payroll inputs. Workday doesn't pull one-time inputs into payroll processing multiple times for a worker within a pay period.

## Taxes and Other Automatically Calculated Pay Components

Workday automatically calculates these pay components for off-cycle payments:

For Payroll for Australia, Canada, and the U.S.:

| Payment Type            | Statutory Employer Taxes | Statutory Employee Taxes | Withholding Order Fees | One-Time Payments from Workday Compensation | Other Earnings and Deductions |
|-------------------------|--------------------------|--------------------------|------------------------|---------------------------------------------|-------------------------------|
| On demand - additional  | X                        | X                        | X                      |                                             |                               |
| On demand - replacement | X                        | X                        | X                      | X                                           | X (active employees only)     |
| Manual - additional     | X                        |                          |                        |                                             |                               |
| Manual - replacement    | X                        |                          |                        |                                             |                               |

For Payroll for the UK:

| Payment Type            | Statutory Employer Taxes | Statutory Employee Taxes | Court Order Fees | One-Time Payments from Workday Compensation | Other Earnings and Deductions |
|-------------------------|--------------------------|--------------------------|------------------|---------------------------------------------|-------------------------------|
| On demand - additional  | X                        | X                        | X                |                                             |                               |
| On demand - replacement | X                        | X                        | X                | X                                           | X (active employees only)     |
| Manual - additional     | X                        |                          |                  |                                             |                               |

| Payment Type         | Statutory Employer Taxes | Statutory Employee Taxes | Court Order Fees | One-Time Payments from Workday Compensation | Other Earnings and Deductions |
|----------------------|--------------------------|--------------------------|------------------|---------------------------------------------|-------------------------------|
| Manual - replacement | X                        |                          |                  |                                             |                               |

For Payroll for Australia, Canada, the UK, and the U.S., on-demand replacement payments for active workers include the employee's other earnings and deductions that you would have included in the original on-cycle payment.

- For Payroll for Canada and the U.S., withholding order fees apply only when processing withholding orders.
- For Payroll for the UK, court order fees apply only when processing court orders.

On-demand replacement payments for active workers include the employee's other earnings and deductions that you would have included in the original on-cycle payment.

For on-demand payments, you can use the run category associated with the worker's pay group to configure Workday to calculate pay components automatically based on:

- A worker's status (*Active*, *Terminated*, *On Leave*).
- Other conditions.

For Payroll for France, Workday calculates withholding orders for on-demand replacement payments and on-demand additional payments.

### Processing Rules for Off-Cycle Payments

An employee can have multiple consecutive off-cycle payments for the same period or subperiod, and pay group. These rules apply:

- Only 1 manual payment and 1 on-demand payment can be in progress at a time. If you have an existing off-cycle payment, complete it before running another off-cycle payment.
- Calculate and complete off-cycle payments 1 at a time.
- Complete off-cycle additional payments for a period or subperiod before completing on-cycle calculations for that period.
- When you complete retro for a retro hire in a subperiod, Workday creates a zero pay result for the subperiod. Therefore, you can't run an on-demand replacement payment for that subperiod.

### Example: On-Demand Replacement Payments for Terminated and Rehired Workers

The pay period is from January 1 to January 31. Jake is a short-term contract worker that you terminate, rehire, and terminate again in the same month.

Because you can have only 1 on-demand replacement payment in progress at a time, follow this specific sequence:

1. Terminate Jake on January 5. Workday creates the first subperiod from January 1 to January 5.
2. Run and complete an on-demand replacement payment for that subperiod.
3. Rehire Jake on January 10.
4. Terminate Jake again on January 16. Workday creates another subperiod from January 10 to January 16.
5. Run and complete an on-demand replacement payment for that second subperiod.

You can't run an on-demand replacement payment for the subperiod from January 5 to January 10 when Jake is inactive.

## Related Information

### Concepts

[Concept: Adjust Prior Period Payments](#) on page 700

### Examples

[Example: Trailing Payments for International Transfers](#) on page 669

## Concept: Next Period On-Demand Payments

You can create an on-demand payment for a worker in the next period before you complete the current period for the entire pay group. This process enables you to generate pay for a worker on their termination date when it falls after the period end date.

### Example

The current pay period is July 20 through August 2. You plan to complete the period on August 5. The pay date is August 7.

Max is involuntarily terminated on August 4. You need to pay him immediately for the current period, and for August 3 to August 4 in the next period. To generate final payroll for Max:

1. Run an on-demand replacement payment for Max in the current period.
2. Complete this payment.
3. Run an on-demand replacement payment for Max in the next period.
4. Complete the next period on-demand payment.

### Workflow

Before you can create a next period on-demand payment for a worker, you must complete that worker's pay results in the current period and prior periods. After you've created the next period payment for a worker:

- You can't reverse the worker's next, current, or prior period pay results until the next period becomes the current *In Progress* period.
- You can't create a new prior period result for the worker until the next period becomes the current *In Progress* period.

When a worker has current period pay results in multiple run categories, you only need to complete the result that's in the same run category as the next period on-demand payment.

Next period results that are still *In Progress* when you complete the current period become current period results when you recalculate them after the next period has moved from *Opened for Off-Cycles* to *In Progress*.

Canceling new pay results in the next period doesn't affect next period on-demand payments you've already completed.

### Payroll Calculation Status

When you create a next period on-demand payment, Workday assigns the *Opened for Off-Cycles* calculation status to the period. This status indicates that there is at least 1 on-demand payment in the period. Workday changes the next period status from:

- *Opened for Off-Cycles* to *In Progress* after you complete the current period and create a new on-cycle or off-cycle result in the next period.
- *In Progress* to *Opened for Off-Cycles* when you cancel next period results. Workday doesn't cancel results created as next period on-demand payments that have a status of *In Progress* or *Completed*.
- *Opened for Off-Cycles* to *Not Yet Started* when you cancel all next period on-demand payments.

When the next period is in *Opened for Off-Cycles* status, canceling all results in the current period leaves the current period status *In Progress*. If enabled, Workday pauses continuous payroll calculation for the current period.

### Period Prompts

An **Opened for Off-Cycles** subprompt to the **Period** prompt is available on tasks and reports that enable you to process next period on-demand payments. The subprompt:

- Displays only when a next period on-demand payment exists.
- Includes only periods with the status *Opened for Off-Cycles*.

### Paying Retro Differences

By default, Workday pays retro differences in the current pay period. But when a worker has a completed off-cycle result in the current period, you can target the next open period. Example: The current pay period is March. You run and complete an on-demand replacement payment for Mary to process a retro compensation change. You open April to on-demand payments. Mary is also due a retro bonus that you want to pay in April. You can update the target period:

- On an individual retro result by selecting **Retro Pay Calculation > Update** from the related actions menu. You can then complete the retro result and the on-demand payment.
- By default for all retro results by selecting the **Target Next Period When Current Period Replacement Payment is Complete** check box on the **Edit Tenant Setup - Payroll** task. Workday advances the target period when the completed off-cycle result is in the primary pay group.

## Example: Prorate an Earning in On-Demand Payments

This example illustrates how to prorate an earning in an on-demand payment.

### Context

Global Modern Services has monthly pay periods. On January 16, Lee, an employee, has a pay rate increase:

| Dates                    | Pay Rate  |
|--------------------------|-----------|
| 2020-01-01 to 2020-01-15 | 10.00 USD |
| 2020-01-16 to 2020-01-31 | 15.00 USD |

You want to provide an on-demand payment for additional hours that Lee worked in January. You also want to prorate the earning amounts to reflect his pay increase.

### Prerequisites

Create an *Hourly Pay* pay component.

Security: *Process: Off Cycle (On Demand)* domain in the Core Payroll functional area.

### Steps

1. Access the **Run On Demand Payment for Worker** task.
2. Enter these settings:

| Option                  | Value                   |
|-------------------------|-------------------------|
| <b>Period</b>           | 01/01/2020 - 01/31/2020 |
| <b>Pay Group Detail</b> | Global Modern Services  |

|                                  |                    |
|----------------------------------|--------------------|
| <b>Worker</b>                    | Lee                |
| <b>Create Additional Payment</b> | Select the option. |

3. Click **OK**.

4. In the **Payroll On Demand Pay Calculation** section, enter:

|                               |                       |
|-------------------------------|-----------------------|
| <b>Option</b>                 | <b>Value</b>          |
| <b>Reason</b>                 | <i>Additional Pay</i> |
| <b>Sub-Period Target Date</b> | 01/31/2020            |
| <b>Payment Date</b>           | 01/31/2020            |
| <b>Priority</b>               | 1                     |

5. In the **Input** grid, add these rows:

| <b>End Date</b> | <b>Pay Component</b> | <b>Input Details - Type</b> | <b>Input Details - Value</b> |
|-----------------|----------------------|-----------------------------|------------------------------|
| 01/15/2020      | <i>Hourly Pay</i>    | <i>Hours</i>                | 80                           |
| 01/31/2020      | <i>Hourly Pay</i>    | <i>Hours</i>                | 80                           |

## Result

Workday calculates a prorated pay component based on Lee's different pay rates. The pay component will amount to 2000 based on the calculation  $(80 * 10) + (80 * 15) = 800 + 1200 = 2000$ .

### Tasks

[Create On-Demand Additional Payments](#) on page 653

## Example: Trailing Payments for International Transfers

This example illustrates how to calculate and pay a trailing payment for a worker who transfers internationally.

**Note:** Workday Payroll for the UK supports international transfers, but not international assignments.

## Context

Ava transfers from a US position to a Canadian position. Prior to 2023, Ava was in the Global Modern Services US (Monthly) pay group for GMS US. In 2023, Ava moved to the Global Modern Services Canada (Monthly) pay group for GMS Canada. After moving to the Canada monthly pay group, Ava is eligible to receive a 5000 USD bonus for the US position, made payable today.

## Prerequisites

Access the **Edit Run Categories** task and define for on-demand additional payments the:

- Run category statuses to calculate on the **General** tab.
- Pay components to calculate on the **Off Cycle (On Demand Additional, Manual)** tab.

Security: *Process: Off Cycle (On Demand)* domain in the Core Payroll functional area.

## Steps

1. Access the **Run On Demand Payment for Worker** task.

2. Select the **Trailing Payments** check box.

You can't select the **Prior Period** check box when you select **Trailing Payments**. Trailing payments process in the current pay period.

3. Enter these values:

| Option                    | Description                                               |
|---------------------------|-----------------------------------------------------------|
| Period                    | The current pay period: 05/01/2023 - 05/31/2023 (Monthly) |
| Pay Group Details         | Global Modern Services, US (Monthly)                      |
| Worker                    | Ava                                                       |
| Create Additional Payment | Selected                                                  |

4. Click **OK**.

5. Enter these values:

| Option                 | Description |
|------------------------|-------------|
| Reason                 | Bonus       |
| Sub-Period Target Date | 05/31/2023  |
| Payment Date           | 05/31/2023  |
| Priority               | 1           |

6. In the **Override Worktags** section, select **GMS US** from the **Company** prompt.

In this example, Ava receives the bonus payment from her previous US position, which the US company pays.

7. Add these values in the **Input** grid:

| End Date   | Pay Component | Input Details - Type | Input Details - Value |
|------------|---------------|----------------------|-----------------------|
| 05/31/2023 | Bonus         | Amount               | 5000                  |

## Result

Workday processes the trailing payment for Ava under her previous US-based position and applies US taxes based on the 2023 payment date.

### Tasks

[Create On-Demand Additional Payments](#) on page 653

## Example: Create On-Demand Payments for Pennsylvania

This example illustrates how to create an on-demand payment for workers in Pennsylvania using override worktags.

## Context

You want to provide an on-demand additional payment for Jake Lee for additional hours that Lee worked in Albany Township, Pennsylvania. Lee has a Pennsylvania city (work) tax election for Bern Township, so you must override Lee's tax election for Albany Township.

### Prerequisites

- Review setup considerations for on-demand payments.
- Security: *Process: Off Cycle (On Demand)* domain in the Core Payroll functional area.

### Steps

1. Access the **Run On Demand Payment for Worker** task.

2. Enter these values:

| Option                    | Value                                                                          |
|---------------------------|--------------------------------------------------------------------------------|
| Period                    | Select <b>Period to Calculate</b> > <b>01/01/2019 - 01/31/2019 (Monthly)</b> . |
| Pay Group Detail          | <i>USA Monthly: Regular (Monthly)</i>                                          |
| Worker                    | <i>Jake Lee</i>                                                                |
| Create Additional Payment | Select this option.                                                            |

3. Click **OK**.

4. In the **Payroll On Demand Pay Calculation** section, enter these values:

| Option                 | Value                 |
|------------------------|-----------------------|
| Reason                 | <b>Additional Pay</b> |
| Sub-Period Target Date | <i>01/31/2019</i>     |
| Payment Date           | <i>01/31/2019</i>     |
| Priority               | <i>1</i>              |

5. In the **Override Worktags** section, select these values:

| Option                 | Value                                   |
|------------------------|-----------------------------------------|
| State Authority (Work) | <i>Pennsylvania</i>                     |
| City Authority (Work)  | <i>Albany Twp (Pennsylvania: Berks)</i> |

If the worker has the **Primary EIT** check box selected on their work city tax election, it will override the **City Authority (Work)** field.

6. Add these values to the **Input** grid:

| Option        | Value                   |
|---------------|-------------------------|
| End Date      | <i>01/31/2019</i>       |
| Pay Component | <i>Hourly Pay [USA]</i> |

7. Add these Input Details to the row:

| Type                  | Value                     |
|-----------------------|---------------------------|
| Input Details - Type  | <i>Hours (unprorated)</i> |
| Input Details - Value | <i>10</i>                 |

8. Click **OK**.

9. Click **Refresh** to view the status of the calculation. When the process is complete, review the on-demand payment to verify the results.

## Result

Workday creates the on-demand additional payment, and Lee receives the correct pay for hours worked in Albany Township.

## FAQ: Off-Cycle Payments

### How do I delete an off-cycle payment?

For individual off-cycle payments with in-progress calculation results, select **Pay Calculation > Cancel** from the related actions menu of the pay result.

For completed off-cycle payments that haven't been settled or reversed, you can change the calculation result status to *In Progress* and then cancel the payment.

- Use the **Cancel Off-cycle Complete** task to cancel 1 off-cycle result at a time.
- Use the **Cancel Off-Cycle Complete for Group of Results** task to cancel multiple off-cycle results at once.

You can only cancel off-cycle complete for results that:

- Are from the current or next period.
- Haven't been settled.
- Haven't been reversed.
- Aren't referenced in retro results.

In addition, you can't cancel off-cycle complete if:

- There are more recent in-progress or completed results.
- The worker has a next period on-demand payment for the same pay group.

### How can I change the date of an off-cycle payment?

To change the date after calculating an on-demand or manual payment, cancel the payment and recreate it with the correct date.

### How can I reverse on-demand calculation results before they're completed?

You can cancel on-demand calculation results before completion and recreate them if needed.

### How can I reverse completed on-demand calculation results?

If you haven't yet reconciled results with your bank statement, you can back out of a worker's completed calculation results by reversing the payment.

### Where can I view off-cycle payments for workers?

You can view payroll input for off-cycle payments by accessing the **Pay Calculation Off-cycle Inputs for Group of Workers** report. After calculation, you can also view off-cycle payments under the worker's pay result.

### Can I process multiple off-cycle payments for the same worker?

Yes, you can create multiple off-cycle payments for the same worker, period or subperiod, and pay group. But if you have multiple payments of the

same type for the worker, only 1 pay calculation result can have a status of *In Progress*.

When you use the Enterprise Interface Builder (EIB) to load multiple off-cycle payments of the same type for a worker, access the **Maintain Off-cycle Payment Priority** task to define the processing priority for each payment.

**Can I use a manual payment to handle nonqualified stock options (CAN, UK, USA)?**

Yes. You can pay options outside of Workday Payroll and then batch load the manual payments into Workday using the EIB.

**How can I pay a worker after they've transferred internationally (CAN, UK, USA)?**

You can select the **Trailing Payment** check box on the **Run On Demand Payment for Worker** task to process off-cycle payments for a single-job worker when they permanently transfer to another country.

Use the **Worktag Override** section to set the **Company** to the previous job to determine taxation.

For Payroll for the UK, for the payment to be treated as a payment after leaving by HMRC, ensure that you've already generated a P45 for the worker.

**Can I reverse a settled check?**

No. You can only run reversals for payments you haven't reconciled yet with the bank statement. When it's too late for a reversal, you can run on-demand payments, manual payments, or retro pay calculations for the prior period.

## Process Manual (Off-Cycle) Payments by Worker

---

### Setup Considerations: Manual Payments

You can use this topic to help make decisions when planning your configuration and use of manual payments. It explains:

- Why to set it up.
- How it fits into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

## What They Are

Manual payments enable you to record payments made outside of Workday Payroll. Manual payments can either replace a worker's regular pay or add to it.

## Business Benefits

You can record manual payments to workers at any point in time, including in prior periods.

Workday calculates employer statutory taxes for manual payments, and updates the accounting and ledger.

## Use Cases

You can run manual payments to record external payments such as cash or checks to:

- Record payments that workers issue in advance to cover deductions for a future leave of absence with no pay.
- Correct a payroll error.
- Record adjustments in the current or prior year to solve tax discrepancies.
- Record the exercise of stock options.
- For Payroll for the U.S., record third-party sick pay when the third party withholds employee taxes and transfers liability for the employer taxes to you.
- Adjust worker taxable wage buckets after a stock sale.
- Reduce a worker's arrears balance in Workday when a worker pays a deduction using a personal check.
- Reduce the outstanding balance of a worker's flexible payment and deduction option when the worker repays all or part of the outstanding balance outside of payroll.

## Questions to Consider

| Questions                                                                      | Considerations                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
|--------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| What volume of manual payments does your company process?                      | <p>You can use the:</p> <ul style="list-style-type: none"> <li>• <i>Import Payroll Off-Cycle Payment</i> web service to mass load manual payments.</li> <li>• Dedicated task to enter manual payments in low volumes.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| What taxes or pay components do you want to calculate for the manual payments? | <p>You can configure which pay components to process in manual payments on the <b>Off Cycle (On Demand Additional, Manual)</b> tab of your run category. Pay components resolve based on the run category configuration, so Workday calculates amounts when either:</p> <ul style="list-style-type: none"> <li>• The manual payment has entries for the calculation the pay component is using. Example: You configure a pay component to calculate 10% of a pay component related calculation (PCRC). Workday resolves that component only when the PCRC has a manual payment entry. The PCRC can also be from the pay component on the run category configuration.</li> </ul> |

| Questions                                                                                               | Considerations                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |

|                                                                                                         | <ul style="list-style-type: none"> <li>All amounts are contained within the pay component. Example: You configure a pay component to calculate a flat amount of 100.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                            |
| Which periods do you want to run manual payments for?                                                   | <p>You can run a manual payment for a:</p> <ul style="list-style-type: none"> <li>Subperiod that's no later than the next period to process. The status of the subperiod is either <i>In Progress</i> or <i>Not Yet Started</i>.</li> <li>Completed prior period up to 6 years before the current period.</li> </ul> <p>To record payments before the effective date of your first Workday Payroll transactions, load them as payroll history. Examples: Bonus wages paid by a company you acquired, earnings that contribute to year-to-date reporting, or pay balances used in payroll calculations.</p> |
| How do you want manual payments to impact the worker's payroll?                                         | <p>You can run a manual payment to either:</p> <ul style="list-style-type: none"> <li>Replace a worker's regular pay and exclude the worker from regular on-cycle payroll for that period.</li> <li>Add to a worker's regular pay for the period. Workers can have multiple additional payments for 1 subperiod.</li> </ul> <p>To impact a worker's regular pay and pay the worker in Workday, use payroll inputs or on-demand payments. Example: You can use payroll inputs to process a refund on a worker's pay.</p>                                                                                    |
| Do you want to prevent payroll administrators and partners from running manual payments for themselves? | <p>Workday user interface tasks automatically prevent any user from adding or editing payments for themselves. Users can only run manual payments for themselves by using a web service. To prevent them from doing so, select the <b>Payroll Web Services - Do Not Allow Add/Update for Worker as Self</b> check box on the <b>Edit Tenant Setup - Payroll</b> task.</p>                                                                                                                                                                                                                                  |

## Recommendations

For Payroll for Australia, run manual payments instead of on-demand payments to adjust tax amounts, since Workday calculates employee taxes and superannuation for on-demand payments.

For Payroll for Canada and the U.S., run manual payments instead of on-demand payments to:

- Adjust tax amounts, since Workday calculates employer and employee statutory taxes for on-demand payments.
- Achieve a specific amount on year-end forms for withholding.

For Payroll for the UK:

- Run on-demand payments instead of manual payments to adjust payment amounts, since Workday calculates employer and employee statutory taxes for on-demand payments and reports the amounts to HMRC.

- Run manual payments instead of on-demand payments in situations where you need to adjust tax amounts, since Workday doesn't calculate employer and employee statutory taxes for manual payments. Consider running manual payments for pay periods before the previous pay period, since it's likely you need to correct tax amounts. Manually add related calculations for statutory taxes.

For Payroll for the U.S., to prevent calculation errors when running manual payments for FLSA, indicate end dates that correspond to the appropriate FLSA period.

To change the pay period date that you're targeting for the manual payment, cancel the manual payment and run another one.

For best performance when loading manual payments in bulk, use the *Import Payroll Off-Cycle Payment* web service.

## Requirements

Verify bank account information by making sure that:

- There's at least 1 **Manual Payment Method** configured on the **Maintain Payment Types** task.
- The bank account setup for payroll payments has a **Manual Allowed Payment Type**.

## Limitations

You can't:

- Replace manual payment values with payroll inputs you enter on the **Add Payroll Input by Worker** task. Use on-demand payments instead.
- Cancel completed manual payments that you ran for prior periods.
- Calculate employee taxes or supplemental taxes on manual payments in Workday. Use on-demand payments instead.

You can:

- Run manual payments for periods with a forward accrual, but Workday won't create an accrual.
- Settle positive manual payments, but not negative ones.

## Tenant Setup

Use the **Edit Tenant Setup - Payroll** task to:

- Set the accounting date for off-cycle payments as either the payment date or the period end date.
- Prevent users from using a web service to create manual payments for themselves.

## Security

Configure these domains in the Core Payroll functional area:

| Domains                                                         | Considerations                                                                                                                                                           |
|-----------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <i>Process: Off-Cycle</i>                                       | Enables users to run manual payments in batches.                                                                                                                         |
| <i>Process: Off Cycle (Manual Payment)</i>                      | Enables users to run manual payments.                                                                                                                                    |
| <i>Reports: Pay Calculation Results for Pay Group (Results)</i> | Enables users to: <ul style="list-style-type: none"> <li>• Adjust priorities for manual payments.</li> <li>• Display manual payments by pay group and period.</li> </ul> |

## Business Processes

No impact.

## Reporting

You can use the:

- **Pay Calculation Off-cycle Inputs for Group of Workers** report to display manual payments by pay group and period. You can run it for specific statuses, batch IDs, or both.
- **Payroll Off-cycle Payments for Group of Worker** report data source to create a custom report that contains manual payment information.

## Integrations

You can use the *Import Payroll Off-Cycle Payment* web service to load high volumes of manual payments, and then:

- Adjust the priority of each payment.
- Process the payment using the **Run Off-cycle Pay Calculation** task.

You can also use the web service to run manual payments in bulk as reversals of other off-cycle payments.

## Connections and Touchpoints

| Features            | Considerations                                                                                                                                                                                                                                                                                            |
|---------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Payroll processing  | For a worker in a given pay group and period, you can run multiple payments types. Workday processes the payments in this order to update pay accumulations and pay balances: <ol style="list-style-type: none"> <li>1. Manual</li> <li>2. Reversal</li> <li>3. On-demand</li> <li>4. On-cycle</li> </ol> |
| Run category        | You can configure which pay components to process in manual payments on the <b>Off Cycle (On Demand Additional, Manual)</b> tab of your run category.                                                                                                                                                     |
| Settlement          | When you run manual payments, Workday updates the accounting and ledger, even though you process the payment itself externally. Ensure that you provide accurate bank account information.                                                                                                                |
| Year-end processing | You can run manual payments to correct workers' wages and taxes for a prior period. When these payments have an effect on year-end forms, complete all manual payments before finalizing year-end data for your workers.                                                                                  |

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships in your tenant. Learn more about the [Workday Touchpoints Kit](#) on Workday Community.

### Tasks

[Steps: Prepare and Load Payroll History](#) on page 190

## Create Manual Payments

### Prerequisites

Review setup considerations for manual payments.

Understand how Workday processes manual payments.

For Payroll for the U.S., to ensure the accuracy of the Political Subdivision (PSD) code for employees in Pennsylvania, verify that the employee contact information contains both the work city and resident city.

Verify bank account information by making sure that:

- There's at least 1 **Manual Payment Method** configured on the **Maintain Payment Types** task.
- The bank account setup for payroll payments has a **Manual Allowed Payment Type**.

Security: *Process: Off Cycle (Manual Payment)* domain in the Core Payroll functional area.

### Context

For Payroll for the U.S., to maintain accurate payroll information for employees, you can record payments made outside of Workday Payroll, such as:

- Third-party payments for sick pay.
- The exercise of stock options.

For Payroll for Canada and the UK, to maintain accurate payroll information for employees, you can record payments made outside of Workday, such as payments for the exercise of stock options.

Workday doesn't prorate manual payments. If a payment is subject to gross-to-net proration, enter a separate payment for each subperiod with the subperiod target date.

You can create manual payments for gross-up earnings, but Workday doesn't calculate a gross up amount.

Workday settles positive manual payments, but doesn't generate an electronic payment for them. Workday doesn't settle:

- Negative manual payments.
- Third Party Sick Pay manual payments.

Some off-cycle payment tasks use machine learning prompt recommendations to help you complete the tasks more easily. See [Concept: Intelligent Prompt Recommendations for Payroll](#).

### Steps

1. Access the **Run Manual Payment for Worker** task.
2. As you complete the task, consider:

| Option                            | Description                                                                                                                                                                                                                                                                                                                                                                             |

| Worktags             | When using a manual payment to reduce the balance on a worker's flexible payment and deduction, add the worktag of the flexible payment and deduction option.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| Costing Company      | Use to charge this payroll item to a company other than the worker's default company. This column is available if you enable intercompany accounting in your tenant.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| Input Details - Type | <p>The type of value you want to record, such as <i>Amount</i>, or a PCRC.</p> <ul style="list-style-type: none"> <li>For Payroll for Australia, Canada, the UK, and the U.S., for earnings and voluntary deductions, select <b>Amount</b> or any PCRC configured to allow input. Example: If a pay component is defined as <math>Amount = Rate \times Hours</math>, select <i>Rate</i>, <i>Hours</i>, and <i>Amount</i>.</li> <li>For employee statutory taxes for Payroll for Canada and the U.S.: <ul style="list-style-type: none"> <li>Select <b>Amount</b> or any PCRC configured to allow input and enter a tax amount.</li> <li>Workday populates amounts for <b>Gross Wages</b>, <b>Subject Wages</b>, <b>Taxable Wages</b>, or <b>Regular Taxable Wages</b>. Select these PCRCs when you want to override the amounts.</li> <li>Consider if you need to add the regular tax PCRC to the manual payment anytime you process regular taxable wages.</li> </ul> </li> <li>For employee statutory taxes for Payroll for the UK, select <b>Amount</b> and any PCRCs configured to allow input.</li> <li>For employer statutory taxes, Workday automatically calculates them. You can also override the calculated value (<b>Amount</b> or PCRC) with a value you enter.</li> <li>For a gross-up earning, select <b>Amount</b> to define the gross amount. If you select the <b>Net Amount (for Gross-Up)</b> PCRC, Workday records the net amount for recording purposes. However, Workday doesn't use it for calculations.</li> </ul> |
| Value                | <p>The pay component amount and the values of the PCRC that make up the amount.</p> <p>Workday doesn't calculate the amount of a pay component from the PCRC values that you enter in this field; it simply reports the values entered.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| Comments             | Explain any selections or values that differ from standard practice.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

**Next Steps**

Recalculate any *In Progress* on-cycle payments.

Complete the manual payment.

[FAQ: Payroll Processing](#) on page 640

**Override Worktags for Manual Payments****Prerequisites**

Create a manual payment for a worker.

**Context**

By default, Workday applies worktags based on:

- Subperiod target date.
- Worker's primary position.

You can override the default worktag values for either:

- The entire manual payment.
- A pay component within the on-demand payment.

For more information on worktags, see [Concept: Worktags](#).

**Steps**

1. Access the **Run Manual Payment for Worker** task.
2. Expand the **Reference Worktags** section to review the default, Workday-owned worktags.
3. Expand the **Override Worktags** section and select overrides for any of the reference worktags for calculations, reporting, or journal entry costing.

For additional payments, Workday calculates the payment for the company associated with the worker's primary position, by default. You can select a different company in the **Company** worktag prompt.

Example: Select a **Company** when paying a position in a different pay group from the primary position.

If you have set up related worktags, Workday adds the worktag you select and its related worktags. You can remove any you don't want.

For Payroll for Canada, you can override the reference worktag for **Province Authority (Work)** with another province. If the worker works outside of Canada, you can select:

- *United States*
- *Other*, for any other country.

4. In the **Input** section, enter worktag values for the pay component, if different from the values in the **Override Worktags** or **Reference Worktags** section.

| Option          | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
|-----------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Worktags</b> | <p>If the pay component has one or more calculation worktag types defined, select a value for each of the worktag types. If you have set up related worktags, Workday adds the worktag you select and its related worktags. You can remove any you don't want.</p> <p>Example (USA): If the pay component is <i>State Withholding (Resident) [USA]</i>, select a <b>Payroll State</b> in the <b>Worktags</b> field.</p> <p>Example (CAN): For the <i>Province Income Tax (PIT) [CAN]</i> pay component, select a <b>Payroll Province</b> in the <b>Worktags</b> field.</p> |
| <b>Company</b>  | <p>Applies to worker-based pay components processed as part of a manual payment.</p> <p>When you load payroll input by selecting the <b>Load or Refresh Input</b> check box, Workday doesn't modify the <b>Company</b> specified on the input. However, Workday doesn't process any payroll input when the <b>Company</b> is different from the one specified in the <b>Override Worktags</b> section.</p>                                                                                                                                                                 |

### Result

For Payroll for Canada, if the worker is Canadian and works outside of Canada or, if you override the **Province Authority (Work)** for a Canadian worker outside of Canada, the **Payroll Results** display *United States* or *Other* for the:

- **Province of Employment** field in the **Result Details** section.
- **Worktags** field for *Province Income Tax [PIT] [CAN]* on the **Taxes** section of the **Gross-to-Net** tab. In addition, the off-cycle amount displays for **Subject Wages** and **Taxable Wages**, but other taxes display as zero.
- **Province (Work)** field on the **Tax Authority - (Work)** section of the **Tax Elections** tab.

## Process Off-Cycle Payments in Batch Mode

### Steps: Upload Off-Cycle Payments Using EIB

#### Prerequisites

Security: *Process: Off-Cycle (On Demand)* and *Process: Off-Cycle (Manual Payment)* domains in the Core Payroll functional area.

#### Context

You can create an EIB to process multiple manual and on-demand payments for workers. You can use the EIB to initiate or modify off-cycle payments, but you can't use it to reverse the payments by batch.

When processing manual or on-demand payments in batch mode, you can use a single batch file for:

- Multiple batch IDs.

- Multiple payroll periods or subperiods, and pay groups.
- Payments for both current and prior years.

Each payment must have a payment ID that remains unique for all off-cycle events.

Payroll for France doesn't support manual payments.

## Steps

### 1. [Set Up Inbound EIB.](#)

Select *Import Payroll Off-cycle Payment (Web Service)* from the **Template from Web Service Operation** prompt.

Workday recommends that you use the *Import Payroll Off-Cycle Payment* web service as it helps optimize bulk imports. These steps also apply to EIBs based on the *Put Payroll Off-cycle Payment* web service.

### 2. Select **Template Model > Generate Spreadsheet Template** from the related actions menu of the integration system for the upload.

To maintain the correct spreadsheet format, don't change the file extension (.xml or .xlsx) generated for the template. However, Workday recommends you to use XLSX format over XML when generating a new spreadsheet.

Security: *Integrations: EIBs, Integration Configure, and Integration Event* domains in Integration functional area.

### 3. (Optional) [Customize EIB Spreadsheet Template.](#)

To customize the template, edit the template model of the EIB.

### 4. Enter business data in the spreadsheet.

See:

- [Concept: Data Entry in Payroll Off-Cycle Payment EIB Spreadsheets](#) on page 688.
- [Concept: Dates in Payroll Off-Cycle Payment EIB Spreadsheets](#) on page 690.

### 5. [Launch EIB Spreadsheet Upload.](#)

### 6. Access the **Pay Calculation Off-cycle Inputs for Group of Workers** report.

This report includes all off-cycle pay calculation results for manual and on-demand payments. It includes data:

- Uploaded through the EIB.
- Created on the **Run On Demand Payment for Worker** or **Run Manual Payment for Worker** tasks.

Security: *Reports: Pay Calculation Results for Pay Group (Results)* domain in Core Payroll functional area.

### 7. (Optional) [Adjust Payment Priorities for Off-Cycle Payments](#) on page 686.

### 8. [Calculate Off-Cycle Payments in Batches](#) on page 686.

### 9. [Complete Payroll](#) on page 627.

### Tasks

[Set Up EIB Spreadsheet](#)

## Adjust Payment Priorities for Off-Cycle Payments

### Prerequisites

Security: *Reports: Pay Calculation Results for Pay Group (Results)* domain in the Core Payroll functional area.

### Context

Workers can have multiple off-cycle payment types in the same period or subperiod and pay group. Only 1 payment for each worker can have the *In Progress* status at a time.

Workday processes payments based on the payment type and the priority:

- Workday processes manual payments first, then reversals, then on-demand payments.
- When a worker has multiple manual or on-demand payments, Workday uses the priority to determine the processing order.

You can change the priority for off-cycle payments:

- Uploaded in a batch.
- Created with the **Run On Demand Payment for Worker** or **Run Manual Payment for Worker** task.

### Steps

1. Access the **Maintain Off-cycle Payment Priority** task.
2. Search for off-cycle payments by worker.
3. In the **Off-cycle Payments** grid, change the **Priority** field.  
1 is the highest priority.

### Result

When you change a priority of an off-cycle payment that has results, Workday resets the calculation status to *Requires Re-calculation*.

### Example

To process an on-demand replacement payment before a bonus, set these values on the **Maintain Off-cycle Payment Priority** task:

| Payment     | Priority |
|-------------|----------|
| Replacement | 1        |
| Bonus       | 2        |

### Next Steps

Calculate off-cycle payments.

## Calculate Off-Cycle Payments in Batches

### Prerequisites

- Load batch data for off-cycle payments.
- Security: *Process: Off-Cycle* domain in the Core Payroll functional area.

## Context

After batch loading off-cycle payments, you can calculate and create pay calculation results for the batch data.

## Steps

1. Access the **Run Off-cycle Pay Calculation** task.
2. As you complete the task, consider:

| Option                                                           | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Prior Period</b>                                              | Select to process payments for a prior period or subperiod.                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| <b>Next Period</b>                                               | Select to process payments for the next period, while the current period is still in progress.                                                                                                                                                                                                                                                                                                                                                                                                  |
| <b>Period</b>                                                    | <p>Select the pay period or subperiod for which to calculate payroll.</p> <ul style="list-style-type: none"> <li>• Payments for the current period: Select a period or subperiod that is <i>In Progress</i> or <i>Not Yet Started</i>.</li> <li>• Payments for a prior period: Select any period or subperiod in the 6 calendar years preceding the current year.</li> <li>• Payments for the next period: Workday displays periods that follow a current <i>In Progress</i> period.</li> </ul> |
| <b>Calculation Statuses</b>                                      | <p>Uploaded off-cycle payments that you haven't processed yet have a status of <i>Not Yet Started</i>.</p> <p>When a worker has multiple off-cycle payments for the same period or subperiod, only 1 payment can have the status of <i>In Progress</i> at a time. Workday sets the highest priority payment to <i>In Progress</i> and the other on-demand payments to <i>Pending Completion of Prior</i>.</p>                                                                                   |
| <b>Limit Accounting Population Based on Calculation Criteria</b> | Select to optimize calculation times. Workday then only processes accounting results that meet your calculation criteria. When you're ready to complete payroll, you can clear the check box to include recent costing allocation changes and refresh accounting for the entire population.                                                                                                                                                                                                     |

## Result

Workday uses the Payment ID to link pay calculation results to the batch input file.

## Next Steps

- Calculate and complete other off-cycle payments in order of priority.
- To delete an off-cycle payment batch, access the **Delete by Batch ID** task. Only payments with a *Not Yet Started* status are available for batch deletion.
- When you use the **Run Pay Cancel** task to cancel an off-cycle pay calculation, Workday deletes the batch-loaded payment data.

## Concept: Data Entry in Payroll Off-Cycle Payment EIB Spreadsheets

To add multiple manual or on-demand payments, you can create an EIB based on the *Import Payroll Off-cycle Payment* web service. You can then enter data in a spreadsheet that corresponds to the inbound EIB.

These examples illustrate how to complete the EIB spreadsheet for the *Import Payroll Off-Cycle Payment* web service.

**Note:** Workday recommends that you use the *Import Payroll Off-Cycle Payment* web service, as it helps optimize bulk imports. These examples also apply to EIBs based on the *Put Payroll Off-cycle Payment* web service.

### Example: Add a New On-Demand Payment

You want to upload these on-demand payments for a worker:

- A year-end bonus of 500.
- A replacement salary payment of 3000.

Add these rows to the EIB spreadsheet:

| Spreadsheet Key | Payment ID | Payment Priority | Result Type     | Replacement | Off-cycle Input Data - Row ID | Earning | Amount |
|-----------------|------------|------------------|-----------------|-------------|-------------------------------|---------|--------|
| 1               | 8000       | 1                | OnDemandPayment |             | Bonus                         |         | 500    |
| 2               | 8001       | 2                | OnDemandPayment |             | Salary                        |         | 3000   |

Enter a new **Payment ID** to create a new off-cycle payment. Workday uses the payment ID to link the off-cycle payment to the pay calculation results.

Enter a unique **Payment Priority** for each payment. Workers can have multiple payments in the same period or subperiod. Workday uses the payment priority to determine the pay calculation order when processing the payments. Enter *1* when a worker has only 1 payment.

### Example: Modify Existing On-Demand Replacement

You want to modify an existing on-demand replacement payment for a worker's salary to 3500. You've used the **Pay Calculation Off-Cycle Inputs for Group of Workers** report to determine that the **Payment ID** of the existing payment is 8001.

Add this row to the EIB spreadsheet:

| Spreadsheet Key | Payment ID | Result Type     | Replacement | Off-cycle Input Data - Row ID | Earning | Amount |
|-----------------|------------|-----------------|-------------|-------------------------------|---------|--------|
| 1               | 8001       | OnDemandPayment |             |                               | Salary  | 3500   |

Ensure that the **Payment ID** refers to the existing off-cycle payment. Workday overrides the existing off-cycle payment, and sets the payment status to *Requires Recalculation*.

You can't update off-cycle payments that have a status of *Complete*.

### Example: Add a New Manual Payment

You want to add a new manual payment to record a payment that covers 2 exercises of stock options paid outside of Workday Payroll. The worker received 1 check for the payment of the 2 options.

Add this row to the EIB spreadsheet:

| Spreadsheet Key | Payroll ID | Payment Type   | Replacement Amount | Net Amount | Check Number | Bank Account | Off-cycle Input Data - Row ID | Earning Name  | Amount |
|-----------------|------------|----------------|--------------------|------------|--------------|--------------|-------------------------------|---------------|--------|
| 1               | 8002       | Manual Payment | 1500               | 1500       | 7777         | BANK_1       | ACStockOption_1               | StockOption_1 | 1500   |
| 1               |            |                |                    |            |              |              | 2                             | StockOption_2 | 1500   |

Ensure that the **Net Amount** equals the total amount of the earnings and deductions in the payment.

### Example: Include Related Calculations on Off-Cycle Payments

You have an earning for hourly pay with related calculations for worked hours and hourly rate. You want to add a replacement off-cycle input for:

- Total pay: 400
- Worked hours: 40
- Hourly rate: 10

Add these rows to the EIB spreadsheet:

| Spreadsheet Key | Payroll ID | Row ID | Earning Name | Amount | Row ID | Related Calculation Name | Input Value |
|-----------------|------------|--------|--------------|--------|--------|--------------------------|-------------|
| 1               | 8005       | 1      | Hourly Pay   | 400    | 1      | Hours                    | 40          |
| 1               |            | 1      | Hourly Pay   |        | 2      | Hourly rate              | 10          |

### Deposit Payment to the Balance Account

You want to add an on-demand additional payment for a worker. You want to deposit the payment to the account designated in the worker's payment elections as the balance account.

Add this row to the EIB spreadsheet:

| Spreadsheet Key | Payment ID | Payment Priority | Payment Group | Result Type | Replacement | Payment to Balance Account | Off-cycle Input Data - Row ID | Earning | Amount |
|-----------------|------------|------------------|---------------|-------------|-------------|----------------------------|-------------------------------|---------|--------|
| 1               | 80071      | 1                | USA Monthly   | On Demand   |             | Payment                    | Bonus                         |         | \$1000 |

To deposit an off-cycle payment to a worker's balance account, you must include the worker's pay group.

[Workday Community: Import Payroll Off-Cycle Payment EIB - Inbound](#)

## Concept: Dates in Payroll Off-Cycle Payment EIB Spreadsheets

When uploading multiple off-cycle payments through an EIB spreadsheet, you need to indicate the period to which the payment applies.

These examples illustrate how to complete the EIB spreadsheet for the *Import Payroll Off-Cycle Payment* web service for a period with multiple subperiods.

**Note:** Workday recommends that you use the *Import Payroll Off-Cycle Payment* web service, because it's optimized for bulk import. These examples also apply to EIBs based on the *Put Payroll Off-cycle Payment* web service.

### Example: On-Demand Additional Payments with Subperiods

On January 21, Julia's work state changes, creating 2 subperiods:

- January 1 - January 20.
- January 21 - January 31.

You want to upload a bonus for Julia, but you need to prorate the bonus payment for each period.

In the EIB spreadsheet, enter a separate payment with:

- A different **Payment ID** for each subperiod.
- A **Period Date** that corresponds to each subperiod.

| Header Key | Payment ID | Period Date | Result Type       | Replacement | Offense Cycle Input Data - Row ID | Earning | Amount |
|------------|------------|-------------|-------------------|-------------|-----------------------------------|---------|--------|
| 1          | 6000       | 2021-01-20  | On-Demand Payment | Bonus       | 2000                              |         |        |
| 2          | 6001       | 2021-01-21  | On-Demand Payment | Bonus       | 1000                              |         |        |

### Example: On-Demand Replacement Payments with Subperiods

On January 21, Robert's primary job changes, creating 2 subperiods:

- January 1 - January 20.
- January 21 - January 31.

You want to upload a replacement payment for the work performed in the first subperiod.

Add this row to the EIB spreadsheet:

| Header Key | Payment ID | Period Date | Result Type       | Replacement | Offense Cycle Input Data - Row ID | Earning    | Amount | Reference Date |
|------------|------------|-------------|-------------------|-------------|-----------------------------------|------------|--------|----------------|
| 1          | 7000       | 2021-01-20  | On-Demand Payment | Bonus       | 2000                              | 2021-01-20 |        |                |

Workday uses the **Reference Date** to determine the applicable reference worktags and subperiod. The **Reference Date** becomes view-only after Workday calculates the payment. To change the reference date, cancel the payment using the **Run Pay Cancel** task, and re-enter the date.

**Note:** Only use the **Reference Date** column for on-demand replacement payments.

### Example: Next Period On-Demand Replacement Payments

Ramona is terminated today, March 4. The monthly pay period for February is still *In Progress*. You need to pay her today for the days she worked in March.

Add this row to the EIB spreadsheet:

| Header Key | Payment ID | Period Date | Result Type       | Replacement | Offense Cycle Input Data - Row ID | Earning | Amount |
|------------|------------|-------------|-------------------|-------------|-----------------------------------|---------|--------|
| 1          | 7100       | 2021-03-04  | On-Demand Payment | Salary      | 900                               |         |        |

Enter a **Period Date** in the period immediately after the current *In Progress* period.

You can upload an on-demand replacement payment for Ramona's February pay in the same spreadsheet. You'll need to calculate and complete the February pay result before you calculate and complete the March result.

### Example: On-Demand Payments for Inactive Workers

You want to upload an on-demand additional payment for Louis, who was terminated on March 25th. The payment covers the pay period from March 1 to March 31.

Add this row to the EIB spreadsheet:

| Header<br>Key | Payment<br>ID | Period<br>Date | Result<br>Type | Replacement<br>Type | Off-Cycle<br>Input<br>Data<br>-<br>Row<br>ID | Earnings<br>Type | Amount |
|---------------|---------------|----------------|----------------|---------------------|----------------------------------------------|------------------|--------|
| 1             | 7500          |                | OnDemand       | Payment             | Bonus                                        | 1500             |        |

Ensure that the **Period Date** corresponds to the worker's termination date, or another date in which the worker was active.

## FAQ: Batch Off-Cycle Payments

### How can I correct batch data for off-cycle payments?

If you loaded an entire batch with incorrect payment information, reload the data. Ensure that you use the same Payment IDs to avoid creating a duplicate entry. You can't reload data that has a payment status of *Complete*.

If only some payment information is incorrect, access one of these tasks to correct it:

- **Run On Demand Payment for Worker**
- **Run Manual Payment for Worker**

### How can I delete imported off-cycle payments that Workday hasn't processed?

For imported off-cycle payments with a *Not Yet Started* status, access the **Delete by Batch ID** task.

When the payments have a status of *In Progress* or *Completed*, they aren't available for selection. In this case:

- For *In Progress* payments, access the **Run Pay Cancel** task to cancel and delete them.
- For *Completed* payments, access the **Cancel Off-Cycle Complete for Group of Results**

task to cancel the completion. Then, access the **Run Pay Cancel** task to cancel and delete the payments.

You can only cancel off-cycle complete for results that:

- Are from the current or next period.
- Haven't been settled.
- Haven't been reversed.
- Aren't referenced in retro results.

In addition, you can't cancel off-cycle complete if:

- There are more recent in-progress or completed results.
- The worker has a next period on-demand payment for the same pay group.
- Journals for the pay period have the status *In Error*.

## Adjust Payments

---

### Setup Considerations: Adjustments for Prior Periods

You can use this topic to help make decisions when planning your configuration and use of adjustments for prior periods for Payroll for Canada, the UK, and the U.S. It explains:

- Why to set them up.
- How they fit into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

### What They Are

Prior period adjustments enable you to run payments before the current in-progress period.

### Business Benefits

Adjustments for prior periods give you the flexibility to correct past payments and help reduce manual processing by automatically:

- Calculating employer and employee statutory taxes for on-demand payments.
- Calculating employer statutory taxes for manual payments.
- Updating Payroll accounting and ledger.

### Use Cases

You can adjust prior payroll periods to:

- Correct an inaccurate gross wages amount.
- Record a personal check that workers issue to pay deductions in advance.
- Reverse incorrect final payments to terminated workers.
- Pay a worker for hours that they report after pay period already ended.

- Correct payroll for workers who enter an address change after you already calculated their taxes for Payroll for the UK and the U.S.

You can also adjust prior periods for year-end form corrections such as when:

- Workers enter inaccurate tax elections (USA).
- Workers don't update their tax elections when they move to a new state or locality and you need to adjust wage accumulators (USA).
- Third-party stock vendors report a transaction for a worker after their form is already complete (UK, USA).
- Workers report a gift card after their form is already complete (UK, USA).

### Questions to Consider

| Questions                                       | Considerations                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
|-------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| How do you want to process the adjustments?     | <p>You can process an adjustment:</p> <ul style="list-style-type: none"> <li>• As part of the workers' regular on-cycle pay, by creating a payroll input.</li> <li>• During the workers' regular on-cycle pay, but with a separate check, by creating another run category.</li> <li>• Outside the workers' regular on-cycle pay, by running on-demand payments to replace or add to their pay.</li> </ul> <p>You can also enter adjustments for payments made outside of Workday by running manual payments. Example: You want to record a personal check that a worker issues to clear arrears.</p> |
| What's your timeline for entering adjustments?  | <p>You can use off-cycle payments to adjust prior periods you process in Workday up to 6 years before the current in-progress period. For periods that you haven't yet reconciled with a bank statement, you can run payment reversals.</p> <p>You can also consider using retro pay processing for earlier periods that are after the workers' No Retro Processing Prior To date. Retro doesn't recalculate taxes:</p> <ul style="list-style-type: none"> <li>• In prior periods for Payroll for Canada and the U.S.</li> <li>• In prior periods for all events for Payroll for the UK.</li> </ul>   |
| What's the volume and frequency of adjustments? | <p>For large volumes of adjustments, instead of running multiple off-cycle payments, you can:</p> <ul style="list-style-type: none"> <li>• Run batch payments for one-off or intermittent payments using the <i>Import Payroll Off-Cycle Payment</i> web service. Example: You want to correct 1 deduction taken for all part-time workers.</li> <li>• Create a new period schedule and run category for recurring prior period adjustments. Example: Every year, some data required for year-end</li> </ul>                                                                                          |

| Questions                                                             | Considerations                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
|-----------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                                                       | processing is only available after you already complete the previous year.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| Which tax tables do you want to apply (UK, USA)?                      | <p>Workday uses the payment date to determine which tax tables to apply in off-cycle processing. Pay period end dates control the period for reporting and accounting transaction posting. To make prior period tax adjustments, you can run off-cycle payments for:</p> <ul style="list-style-type: none"> <li>• Prior periods, to post the transaction in those periods.</li> <li>• The current period with a payment date in a prior period, to post the transaction in the current period, while applying taxes from a prior period. You can configure this behavior at the tenant level.</li> </ul> <p>Example: To correct taxes in the first quarter, you can run a payment in the current payroll period while using a check date from January 1 to March 31. Workday then posts all accounting transactions in the current period, which can help reporting prior period transactions in external accounting systems. You can run manual payments to enter tax amounts manually.</p>                                                                                                                             |
| What's the effective date of your first Workday Payroll transactions? | <p>To record payments before the effective date of your first Workday Payroll transactions, load them as payroll history. Examples: Load payroll history for bonus wages paid by a company you acquired, or earnings that contribute to year-to-date reporting.</p> <p>You can change these history payments, but these corrections don't impact production payroll results that are already complete. For Payroll for the UK and the U.S., Workday adjusts self-correcting percentage taxes in the next payroll.</p> <p>Adding or changing historical results for a worker can impact calculations and results that use historical balances. Therefore, when you do so for workers with existing payroll results in Workday, verify all their current calculation results.</p> <p>For Payroll for the U.S., Workday doesn't calculate FLSA amounts based on historical amounts. You can adjust this type of FLSA amounts manually either by:</p> <ul style="list-style-type: none"> <li>• Loading them as payroll history.</li> <li>• Entering payroll inputs and processing them in retro pay calculations.</li> </ul> |

### Recommendations

To adjust tax amounts, use manual payments instead of on-demand payments because:

- Workday calculates employer and employee statutory taxes for on-demand payments.
- Manual payments provide you the flexibility to record a payment without all the pay processing requirements such as payroll bank account or settlement information.

For Payroll for the U.S., don't move workers from 1 FLSA calendar to another because it can cause unexpected results when processing prior period adjustments.

Payroll continues to process successfully even when the associated accounting journals are in error. Workday flags those errors only when you attempt to reverse or cancel completed results. To prevent issues with third-party systems, run the **Fix Operational Journals With Errors** report as part of the payroll process to audit and fix those errors.

## Requirements

To ensure proper processing, specify which pay components to calculate for on-demand payments on your run categories.

## Limitations

You can open the next period to on-demand payments only after the workers' prior or current period results are complete. After you create a payment in that next period for a worker, you can't create new results for them in the current or prior periods.

For some retro events such as retro hire, the retro pay calculation creates a zero pay result for the processed prior period. Therefore, you can't run on-demand replacement payments for the same subperiod.

You also can't:

- Cancel completed off-cycle payments that you run for prior periods.
- Issue trailing payments for prior periods.
- Include retro differences in prior period payments.

For Payroll for the UK, when you adjust prior tax years, Workday doesn't always automatically update HMRC using Real Time Information (RTI). Make sure to reconcile results and run on-demand additional payments as needed by using the:

- Earlier Year Update (EYU) process for the 2018-2019 and 2019-2020 tax years.
- RTI Employer Payment Summary (EPS) and Full Payment Submission (FPS), from the 2020-2021 tax year onwards.

## Tenant Setup

You can use the **Edit Tenant Setup - Payroll** task to:

- Prevent payroll administrators and partners from running on-demand payments for themselves using web services.
- Use the payment date instead of the period end date that contains the adjustment as the accounting date.

|--------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------|
| <b>View Payroll Input by Worker(s)</b>     | Enables you to verify whether Workday already processed a worker's existing pay inputs in pay calculations or retro pay calculations. |
| <b>View UK RTI FPS Data (UK)</b>           | Enables you to review FPS values generated for selected payroll results and verify their accuracy.                                    |
| <b>View Worker UK RTI EYU Details (UK)</b> | Enables you to review a worker's RTI data for the previous tax year.                                                                  |

You can create custom reports for prior period adjustments using the:

- **Journal Lines** report data source.
- **Payroll Accounting Filter (by Payment Date)** data source filter.

Example: You manage your accounting externally and want to identify which adjustments to report since your last integration run.

You can also use the **Payroll Off-cycle Payments for Group of Worker** report data source to create custom reports about off-cycle payments.

## Integrations

You can use these web services to mass load data:

- *Import Payroll Input* for payroll inputs.
- *Import Payroll Off-Cycle Payment* for on-demand payments.

## Reconcile Tax Liabilities for Prior Period Adjustments (USA)

### Prerequisites

- Adjust prior periods.
- Security: *Process: Tax Filing/W-2s (Reports)* - USA domain in the USA Payroll functional area.

### Context

You can use these reports to audit tax filing submissions and find differences caused by prior period adjustments or other recently completed payroll results. You can use this data to reconcile tax liabilities and make adjustments as necessary.

### Steps

1. Access 1 of these tax filing reports:

- **Tax Filing Periodic Data by Common Pay Agent**
- **Tax Filing Periodic Data by Company**
- **Tax Filing Periodic Data for Workers**
- **Tax Filing Quarterly Data by Common Pay Agent**
- **Tax Filing Quarterly Data by Company**
- **Tax Filing Quarterly Data for Workers**

2. As you complete the task, select 1 of these options:

| Option                                       | Description                                                                                                                                   |
|----------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Completed After Tax Integration Event</b> | For periodic data reports only, select a tax filing integration run to display all payments and adjustments completed after this prior event. |
| <b>Completed within Date Range</b>           | Select the date and time span that include the recently completed payments or adjustments you want to display.                                |

## Result

The **Data for Quarters** or the **Data for Periods** tab in the report display total results reportable for the tax filing period including prior period adjustments.

## Concept: Adjust Prior Period Payments

### Prior Period Adjustments

For Payroll for Canada, the UK, and the U.S., you can use these off-cycle processes to adjust payments made up to 6 years before the period in progress:

- On-demand additional payments.
- Manual additional payments.
- Reversals.

For Payroll for France, to adjust payments made before the period in progress, use a payroll input and then launch a retro payment calculation.

For Payroll for Canada, the UK, and the U.S.:

| Use Case                                                                                                                                                    | Off-Cycle Adjustment                                                                                                                                                                                                                                                                                                                                                                          |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| A worker loses his bonus check from last pay period (CAN, USA)                                                                                              | Reverse the bonus payment and create a new payment for the prior period using a manual or on-demand payment.                                                                                                                                                                                                                                                                                  |
| A worker's regular gross payment of 2000 in a prior year should have been 2500.                                                                             | Create an additional manual or on-demand payment for the prior period for 500 gross, minus taxes and other deductions.                                                                                                                                                                                                                                                                        |
| A company terminates a worker at the start of the last payroll period in the prior year. HR doesn't record the termination until the start of the new year. | Reverse the final regular payroll payment and record the reversal as a prior period adjustment.                                                                                                                                                                                                                                                                                               |
| When auditing W-2 wage and tax data for the prior year, you discover incorrect results in a worker's W-2 (USA).                                             | Depending on the type of error, you can take one of these steps to correct the W-2 data: <ul style="list-style-type: none"> <li>• Reverse the prior period payment and make additional off-cycle payments in the prior period.</li> <li>• Reverse, and then replace, a prior year payment using on-demand processing.</li> <li>• Use other combinations of off-cycle calculations.</li> </ul> |

| Use Case                                                           | Off-Cycle Adjustment                                                                                                                                                                    |
|--------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                                                    | <b>Note:</b> Before completing the W-2 process, complete any pending prior period off-cycle corrections or adjustments that might affect the wage and tax amounts in an employee's W-2. |
| You discover errors in a worker's W-2 data after sending it (USA). | Correct the errors using the appropriate combination of off-cycle calculations before you create and extract wage and tax data for the corrected wage and tax statement (W-2C).         |

### Tax Filing Reports (CAN)

These reports can help you reconcile your tax liabilities for adjustments:

- **Tax Remittance Summary - Federal**
- **Tax Remittance Summary - Quebec**
- **Tax Remittance Detail**

### Tax Filing Reports (USA)

These reports can help you reconcile your tax liabilities for adjustments:

- **Tax Filing Periodic Data by Company**
- **Tax Filing Periodic Data for Worker**
- **Tax Filing Quarterly Data by Company**
- **Tax Filing Quarterly Data for Worker**

### Payroll Accounting (CAN, UK, USA)

- The transaction date of a prior period adjustment is the last day of the pay period that contains the adjustment. To use the payment date, select the **Off-Cycle - Use Payment Date as Accounting Date** check box on the **Edit Tenant Setup - Payroll** task.

- If the ledger period containing the transaction date has an Open status, Workday creates the accounting journal in that ledger period.

The accounting date automatically populates with the transaction date.

- If you've closed the ledger period containing the transaction date, Workday searches in period order for a subsequent open ledger period. Workday then creates an accounting ledger in the first open period it finds.

The accounting date automatically populates with the first day of the first open ledger period.

- If Workday doesn't find an open ledger period, the accounting journal goes into error status.
- You can use either the ledger period or the accounting date when extracting adjustment data for financial accounting.
- In your accounting reports, you can use the **Prior Year Period** report field to view accounting journal data from a period in a prior year.

### Example: Pay Results (USA)

John has completed payroll results for 2015/01/01 - 2015/08/31. Payroll results for this time frame include:

- Car Allowance: 500
- QTD: 1,500
- YTD: 1,500

In pay period 2015/03/01 - 2015/03/31, John should also have received an 8,000 car allowance.

Susan, the Payroll Administrator, needs to make a prior period adjustment to give John the 8,000 car allowance for the period 2015/03/01 - 2015/03/31.

The payroll for 2015/09/01 - 2015/09/30 is in progress. Susan creates an additional on-demand payment for John's car allowance in the amount of 8,000. She selects the **Prior Period** check box and the dates **2015/03/01 - 2015/03/31**, with a payment date of 2015/03/31.

The September payroll status changes to Requires Recalculation. Susan recalculates, then processes the September payroll. She then reruns the **Tax Filing Quarterly Data by Worker** report for John to validate that the taxes withheld on the car allowance were correct for Q1.

### Adjusting Statutory Contributions (FRA)

To adjust Workday-delivered statutory contributions for a previous period, override the taxable wages or contribution ceilings. You can make this override by adding pay input on the appropriate pay component related calculation in a memo deduction. Examples:

- *Memo - Reference Values for URSSAF [FRA]*
- *Memo - Reference Values for Pôle Emploi [FRA]*
- *Memo - Reference Values for AGIRC-ARRCO [FRA]*

[Reference: Tax Filing Reports](#)

### Example: Adjust Worker Taxes and Wages (USA)

This example demonstrates 1 way to adjust a worker's taxes and wages to accommodate a mid-year move to a different tax authority.

### Context

For the first 3 quarters of the year, Terry pays Georgia resident and work taxes. On July 1, Terry moves to North Carolina, but doesn't notify you until October 5, in the current period.

You need to move Terry's wages and taxes for July through September to the appropriate tax jurisdiction, in North Carolina. It's too late to do a reversal, so you decide to process a manual additional payment for the affected quarter. Although you could process an on-demand or on-cycle payment instead, you select a manual payment because you don't want to generate a check number.

In this scenario, you're moving all Q3 Georgia wages and tax to North Carolina.

### Prerequisites

Security: *Process: Off Cycle (Manual Payment)* domain in the Core Payroll functional area.

## Steps

1. Use the **Pay Calculation Results for Worker** report to review results within the date range and determine which pay results calculated for Georgia require adjustment.

**Note:** Because you're adjusting all Q3 wages and taxes in this example, you can use the **Tax Filing Quarterly Data for Workers** report for this step.

2. Use the **Tax Filing Quarterly Data for Workers** report to identify the Georgia state withholding amounts. In this example, you identify these wages and tax:

|               |        |
|---------------|--------|
| Gross Wages   | 25,000 |
| Subject Wages | 22,500 |
| Taxable Wages | 22,500 |
| Tax Withheld  | 1,173  |

3. Access the **Run Manual Payment for Worker** task.
4. Select the period where you want to apply the adjustments. For a previous period, you select **Prior Period**.
5. Select **Create Additional Payment**.
6. Enter the **Payment Date**, ensuring the date is within the period that should include the taxes. Workday updates the pay accumulation and pay balance results in the period that includes this payment date. For this example, you select September 30, the last day of Q3.
7. In the **Input** section:

- a. Record the reversal of the withholding taxes paid to Georgia.

1. Select *State Withholding (Work)* in the **Pay Component** field and add the **Worktag State: Georgia**.
2. Add 4 rows in the **Input Details** grid and enter each type and amount you previously determined as a negative number:

|               |         |
|---------------|---------|
| Tax Withheld  | -1,173  |
| Gross Wages   | -25,000 |
| Subject Wages | -22,500 |
| Taxable Wages | -22,500 |

- b. Record the taxes to report to North Carolina. Add 4 rows in the **Input Details** grid and enter each wage type and amount you previously determined as a positive number:

|               |        |
|---------------|--------|
| Tax Withheld  | 1,173  |
| Gross Wages   | 25,000 |
| Subject Wages | 22,500 |
| Taxable Wages | 22,500 |

## Result

Workday updates Terry's taxes and wages for the quarter to reflect the correct tax authority. Workday also updates the period's pay accumulations and pay balances based on the period and payment date.

## Next Steps

Prepare and file any amended quarterly reports as necessary. Run the **W-2 Preview** report to verify the W-2 values are correct.

## Troubleshooting: Payroll Processing

---

### Troubleshooting: Payroll Tax Calculations (USA)

This topic provides strategies for diagnosing and resolving these tax calculation problems:

- [Workday doesn't calculate federal, state, territory, or local taxes for employees.](#) on page 704
- [Workday incorrectly calculates state tax for employee.](#) on page 704
- [Workday doesn't withhold State Unemployment Insurance \(SUI\) for an employee who changed work states.](#) on page 705
- [Workday incorrectly calculates State Unemployment Insurance \(SUI\) for an employee who changed work states.](#) on page 705
- [Unexpected federal tax withholding from employee's supplemental pay.](#) on page 705
- [Workday didn't take additional federal withholding for an employee.](#) on page 706

#### **Workday doesn't calculate federal, state, territory, or local taxes for employees.**

**Cause:** Federal, state, or local tax information isn't either:

- Set up for the company.
- In effect on the period end date.

**Solution:****Steps**

Security: *Set Up: Payroll - Company Specific (Taxes)* - USA domain in USA Payroll functional area.

1. Access these tax reporting tasks:

- **Edit Company State and Local US Payroll Tax Reporting.**
- **Edit Company Federal US Tax Reporting.**

2. Verify that the **Start Date** covers the pay period end date. The period end date generally controls which taxes to calculate. The payment date controls the rates to apply.

**Note:** For Indiana, resident and work counties are determined at the beginning of the calendar year. Set the tax election start date for an Indiana county to the first day of the year (January 1) in which the tax becomes effective for the worker.

If tax information has changed, preserve tax history by adding new tax information with a new **Start Date**.

3. Recalculate payroll.

#### **Workday incorrectly calculates state tax for employee.**

**Cause:** The employee is subject to reciprocity rules.

**Solution:****Steps**

Security: *Worker Data: Payroll (Company Specific)* - USA domain in USA Payroll functional area.

Security: *Set Up: Payroll (Taxes View)* domain in the Core Payroll functional area.

1. Access the **Worker US Tax Elections** report.
2. Check for reciprocity by verifying:
  - The **Work State** and **Home State** are different.
  - There are elections for more than 1 state on the **State** tab or the **Tax Allocations** tab.
  - The **Tax Allocations** tab displays whether the worker's company is configured for ongoing work jurisdiction allocations.
3. Review the reciprocity rules using the **View Payroll Multistate Withholding Rules** report for each state.

**Cause:** Payroll input overrode the tax calculation.

**Solution:** Security: *Reports: Results for Worker (Pay Calculation)* - USA domain in USA Payroll functional area.

1. Access the **Pay Calculation Results for Worker** report.
2. View the worker's pay results.
3. Review the **Payroll Input** tab for a payroll input representing a tax override. The tab only displays if the worker has payroll input for the period.
4. (Optional) Edit or delete the payroll input.

#### **Workday doesn't withhold State Unemployment Insurance (SUI) for an employee who changed work states.**

**Cause:** The employee had SUI wages in another state. The employee's new state recognizes the wages paid in the prior state when determining the year-to-date wage limit.

However, SUI wages start over if a worker transfers to Minnesota or Louisiana.

**Solution:** Security: *Reports: Pay Calculation Results for Worker (Tax Filing/W-2s)* - USA in USA Payroll functional area.

#### **Steps**

1. Access the **Tax Filing Quarterly Data for Workers** report.
2. Review the report to confirm that Workday withheld SUI for other states.

#### **Workday incorrectly calculates State Unemployment Insurance (SUI) for an employee who changed work states.**

**Cause:** The state you're moving the SUI wages to comes alphabetically before the previous state. The new state has a lower wage limit.

Example: The employee moved from Iowa to Arizona. The payroll administrator needs to report the SUI (ER) subject wages for Iowa, 5,885.95 USD, to Arizona. The payroll administrator creates a manual payment to move SUI wages out of Iowa and into Arizona. The SUI wage limit in Iowa is 28,000 USD. The SUI wage limit in Arizona is 7,000 USD. Workday Payroll processes alphabetically. Workday will process Arizona first, resulting in an inaccurate transaction because Arizona will reach the limit before Workday processes the full amount.

**Solution:** Security: *Process: Off Cycle (Manual Payment)* domain in the Core Payroll functional area. To prevent this inaccuracy, process in 2 separate transactions.

#### **Steps**

1. Back out the previous state wages and taxes and complete the payroll result. Example: Iowa wages.
2. Create a separate manual transaction using the **Run Manual Payment for Worker** task to add the new state wages. Example: Arizona wages.

#### **Unexpected federal tax withholding from employee's supplemental pay.**

**Cause:** You're calculating supplemental tax with a *Flat Rate* method and the employee has no prior results.

Workday doesn't withhold federal tax at the flat rate from a supplemental payment if you didn't calculate regular tax for the employee during the current or preceding year.

See: [Setup Considerations: Payroll Run Categories](#).

See: [Set Up Company Federal Taxes \(USA\)](#).

See: [FAQ: Pay Run Categories](#).

#### **Solution:**

##### **Steps**

Security: *Set Up: Payroll - Company Specific (Taxes) - USA* domain in USA Payroll functional area.

1. Access the **Edit Company Federal US Tax Reporting** task.
2. Confirm that the **Supplemental Tax Method - Regular Check** and **Supplemental Tax Method - Separate Check** is *Flat Rate*.
3. Access the **Pay Calculation Results for Worker** report.
4. Confirm that you didn't pay wages subject to regular tax in the current or preceding tax year.

#### **Workday didn't take additional federal withholding for an employee.**

**Cause:** The payment missing the additional federal withholding is a subsequent payment in a pay period. Workday took the additional withholding amount from the employee's first payment of the period.

**Solution:** Security: *Reports: Results for Worker (Pay Calculation) - USA* secured to the USA Payroll functional area.

##### **Steps**

1. Access the **Pay Calculation Results for Worker** report.
2. Look for more than 1 result for the period, such as both on-cycle and off-cycle results.  
  
Workday takes the additional withholding amount from the employee's first payment of the period, whether its on-cycle or off-cycle.
3. (Optional) Withhold an additional amount from a subsequent on-demand additional payment in a regular run.  
  
Select the **Take Additional Tax Withholding Amounts** check box when you create the on-demand payment.

## **Troubleshooting: Payroll Tax Calculations (CAN)**

This topic provides strategies for diagnosing and resolving these tax calculation problems:

- [Payroll results report zero health tax for British Columbia, Ontario, Manitoba, and Newfoundland and Labrador](#). on page 707
- [Workday doesn't calculate federal taxes for employees](#). on page 707
- [Payroll results report zero Workers Compensation wages](#). on page 707

### Payroll results report zero health tax for British Columbia, Ontario, Manitoba, and Newfoundland and Labrador.

**Cause:** Payroll results only report subject wages, not health tax amount.

**Solution:** You can also view tax amounts after subject wages when you complete these steps:

Security: *Set Up: Payroll - Company Specific (Taxes) - CAN* domain in the CAN Payroll functional area.

1. Access the **Province** tab on the **Company Province CAN Tax Reporting** task for British Columbia, Ontario, Manitoba, or Newfoundland and Labrador.
2. Select the **Calculate Tax** check box on health tax amounts in the **Health Tax** section.

To view amounts calculated for the health tax, access these reports after you complete the payroll results.

| Report                                                               | Displays                                                                                                                 |
|----------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------|
| <b>Provincial Employer Payroll and Health Tax Summary</b>            | Displays the health tax amounts calculated for a company, excluding TD1-IN exempt wages.                                 |
| <b>Provincial Employer Payroll and Health Tax (Actual) - Summary</b> | Displays tax amount and subject wages reported and totaled by payment month and tax type, excluding TD1-IN exempt wages. |
| <b>Provincial Employer Payroll and Health Details</b>                | Displays taxable amounts by employee, excluding TD1-IN exempt wages                                                      |

### Workday doesn't calculate federal taxes for employees.

**Cause:** Federal tax information isn't either:

- Set up for the company.
- In effect on the period end date.

**Solution:**

#### Steps

Security: *Set Up: Payroll - Company Specific (Taxes) - CAN* domain in the CAN Payroll functional area.

1. Access the **Federal** tab on the **Edit Company Federal CAN Tax Reporting** task.
2. Review the **Reference Number Criteria Assignment** section.
  - Enter missing tax information.
  - If tax information exists, confirm that:
    - Workers meet the criteria for a reference number on the period end date.
    - The **Start Date** and **End Date** for the reference number includes the period end date.
3. Change the **Start Date** and **End Date** if they're incorrect.  
If tax information has changed, preserve tax history by:
  - Entering an **End Date** for the current tax information.
  - Adding a row with a new **Start Date** for new tax information.
4. Recalculate payroll.

### Payroll results report zero Workers Compensation wages.

| Cause                                           | Solution                                                                                                     |

## Troubleshooting: Payroll Statutory Calculations (FRA)

**Workday doesn't apply statutory contribution exemptions to worker's pay.**

**Cause:** The worker doesn't meet the eligibility criteria for the statutory contribution.

**Solution:**

### Steps

1. Access the **All Deductions** report.

Filter on the **Groups** column for these pay component groups:

- *FRA Statutory Taxes EE - Deductible from Tax [FRA]*
- *FRA Statutory Taxes EE - Deductible from Tax - Excluded from Gross Up [FRA]*
- *FRA Statutory Taxes EE - Submitted to Tax [FRA]*
- *FRA Statutory Taxes ER [FRA]*

Identify the required **Eligibility Criteria** for the missing statutory contribution.

Security: *Set Up: Payroll (Calculations - Payroll Specific)* domain in the Core Payroll functional area.

2. (Optional) Update the worker data to ensure that they meet the eligibility criteria.
3. [Recalculate a Payroll Result](#) on page 623.

**Worker doesn't receive statutory compensation at the end of a fixed-term contract.**

**Cause:** The worker doesn't meet the eligibility criteria for the fixed-term contract allowance earning.

**Solution:**

### Steps

1. Access the **View Earning** report for *IND Fixed Term Contract Allowance [FRA]*.

Identify the eligibility criteria in the **Criteria** section of the **Effective Dated** tab.

Security: *Set Up: Payroll (Calculations - Payroll Specific)* domain in the Core Payroll functional area.

2. (Optional) Update the worker data to ensure that they meet the eligibility criteria.
3. [Recalculate a Payroll Result](#) on page 623.

## Troubleshooting: Incorrect Earning or Deduction Amount

This topic provides strategies for diagnosing and resolving these earning or deduction calculation problems:

- [Earning or deduction calculation is wrong \(or zero\) for 1 employee.](#) on page 709

- [Earning or deduction calculation is wrong \(or zero\) for a subset of employees.](#) on page 709
- [Earning or deduction calculation is wrong \(or zero\) for all employees.](#) on page 710

### **Earning or deduction calculation is wrong (or zero) for 1 employee.**

**Cause:** Employee has met an earning or deduction limit. When this happens, the pay component resolves to zero and Workday ignores any other limits defined for it.

#### **Solution:**

##### **Steps**

1. Access the **View Earning** or **View Deduction** report.

On the **Effective Dated** tab, review the **Limits** section. Determine if multiple limits exist, and how Workday calculates each limit. (The section displays only when a limit exists.)

Review the **Value** and **Based On** fields. Determine whether the limit is based on the current pay component or another pay component.

Security: *Set Up: Payroll (Calculations - Payroll Specific)* domain in the Core Payroll functional area.

2. Access the **Pay Calculation Results for Worker** report.

Click the magnifier icon for the most recent **Payroll Result**.

Compare the pay component cumulative amount (year-to-date or other) to the limits. If the limit is based on something other than the current pay component, verify the other values.

Security: *Reports: Results for Worker (Pay Calculation)* - USA domain in the USA Payroll functional area.

Security: *Reports: Results for Worker (Pay Calculation)* - CAN domain in the CAN Payroll functional area.

Security: *Reports: Results for Worker (Pay Calculation)* - UK domain in the UK Payroll functional area.

Security: *Reports: Results for Worker (Pay Calculation)* - FRA domain in the FRA Payroll functional area.

Security: *Reports: Results for Worker (Pay Calculation)* - AUS domain in the AUS Payroll functional area.

3. If the limit is incorrect, correct it.

**Cause:** You haven't entered payroll input required for hours, units, or other values.

#### **Solution:**

##### **Steps**

1. Access the **View Earning** or **View Deduction** report.

On the **Effective Dated** tab, review the **Calculation** field and **Related Calculations** fields to confirm that the calculation requires payroll input.

Security: *Set Up: Payroll (Calculations - Payroll Specific)* domain in the Core Payroll functional area.

2. Access the **View Payroll Input by Worker(s)** task.

See if the worker had payroll input for the period.

Security: *Worker Data: Payroll (Payroll Input)* in the Core Payroll functional area.

3. [Add Payroll Input for Workers](#) on page 589.

### **Earning or deduction calculation is wrong (or zero) for a subset of employees.**

**Cause:** Pay component has a limit that's defined incorrectly.

**Solution:**

### Steps

Security: *Set Up: Payroll (Calculations - Payroll Specific)* domain in the Core Payroll functional area.

1. Access the **View Earning** or **View Deduction** report.
2. In the **Limits** section, review the **Value** and **Based On** fields.
3. Select **Deduction > Edit** or **Earning > Edit** from the related actions menu of the pay component.
4. Correct the limit.

**Earning or deduction calculation is wrong (or zero) for all employees.**

**Cause:** Calculation is defined incorrectly.

**Solution:**

### Steps

Security: *Set Up: Payroll (Calculations - Payroll Specific)* domain in the Core Payroll functional area.

1. Access the **View Earning** or **View Deduction** report.
2. On the **Effective Dated** tab, confirm that:
  - The value or formula selected in the **Calculation** field is correct.
  - The **Related Calculations** section defines the source of the values required for the calculation (in the **Override Value** field).
3. Drill into each related calculation to ensure that it retrieves the correct information.
4. Select **Deduction > Edit** or **Earning > Edit** from the related actions menu of the pay component.
5. Correct the calculations.

**Cause:** The pay component limit is defined incorrectly.

**Solution:**

### Steps

Security: *Set Up: Payroll (Calculations - Payroll Specific)* domain in the Core Payroll functional area.

1. Access the **View Earning** or **View Deduction** report.
2. In the **Limits** section, review the **Value** and **Based On** fields.
3. Select **Deduction > Edit** or **Earning > Edit** from the related actions menu of the pay component.
4. Enter the correct limit information.

**Cause:** The pay component limit is based on the sum of multiple pay components and the **Include Current Value** field is configured incorrectly.

**Solution:**

### Steps

Security: *Set Up: Payroll (Calculations - Payroll Specific)* domain in the Core Payroll functional area.

1. Access the **View Earning** or **View Deduction** report.
2. Review the **Limits** section on the **Effective Dated** tab to see if the pay component has a limit.
3. Ensure that the **Include Current Value** field is correct for each pay component that makes up the limit.
  - On the pay component to take first, leave the **Include Current Value** field blank.
  - On the pay component to take second, select the first pay component.
  - On the pay component to take third, select the first and second pay component.

## Troubleshooting: Earning or Deduction Missing from Pay Results

When an earning or deduction doesn't resolve, it can be an issue with worker eligibility, pay component configuration, or run category configuration. This topic provides strategies for diagnosing and resolving these issues:

- [Earning or deduction resolves for only some employees.](#) on page 711
- [Earning based on compensation doesn't resolve.](#) on page 711
- [Earning based on a benefit plan doesn't resolve.](#) on page 712
- [The earning or deduction doesn't resolve for any workers.](#) on page 712
- [Earning or deduction doesn't resolve for workers on leave of absence.](#) on page 712
- [Earning or deduction doesn't resolve for terminated workers.](#) on page 712

### Earning or deduction resolves for only some employees.

**Cause:** Employee doesn't meet pay component **Worker Eligibility** or **Scheduling** criteria.

#### Solution:

#### Steps

1. Access the pay component using the **View Earning** or **View Deduction** report.  
Security: *Set Up: Payroll (Calculations - Payroll Specific)* domain in the Core Payroll functional area.
2. Review the **Criteria** section on the **Effective Dated** tab and evaluate whether the employee meets the **Worker Eligibility** and **Scheduling** criteria.  
Criteria that displays in 1 row means that employees must meet all conditions in that row. When there are multiple rows of criteria, employees must meet the criteria in only 1 row.  
Workday displays the Scheduling section only when you entered scheduling criteria.
3. To change criteria, from the related actions menu of the pay component, select **Deduction > Edit As Of** or **Earning > Edit As Of**.

**Note:** When you hire or terminate the worker midperiod, ensure that the conditions referencing start and end dates are on separate rows. Example:

- *Pay Rate Type as of Period End Date = Hourly*
- *Pay Rate Type as of Period Start Date = Hourly*

### Earning based on compensation doesn't resolve.

**Cause:** You haven't mapped the earning to the compensation element such as for basic wages.

#### Solution:

#### Steps

1. Access the pay component using the **View Earning** report.  
Security: *Set Up: Payroll (Calculations - Payroll Specific)* domain in the Core Payroll functional area.
2. Review the **Compensation Element** section on the **Effective Dated** tab.
3. To map the earning, from the related actions menu of the pay component, select **Earning > Edit As Of**.
4. In the **Compensation Element** section, select the related compensation element.

**Earning based on a benefit plan doesn't resolve.**

**Cause:** You haven't mapped the earning to the benefit plan such as for gym membership.

**Solution:****Steps**

1. Access the pay component using the **View Earning** report.  
Security: *Set Up: Payroll (Calculations - Payroll Specific)* domain in the Core Payroll functional area.
2. Review the **Benefit Plan** section on the **Non Effective Dated** tab.
3. To map the earning, from the related actions menu of the pay component, select **Earning > Edit As Of**.
4. In the **Benefit Plan** section, select the related benefit plan.

**The earning or deduction doesn't resolve for any workers.**

**Cause:** You haven't added the earning or deduction to the run category in the:

- **Gross Pay Accumulation**
- **Net Pay Accumulation**
- **Additional Pay Components to Calculate**
- **Additional Pay Component Groups to Calculate**

**Solution:****Steps**

1. Access the **Edit Earning** or **Edit Deduction** task.  
Security: *Set Up: Payroll (Calculations - Payroll Specific)* domain in the Core Payroll functional area.
2. Select the earning or deduction.
3. Add the earning or deduction to either:
  - One of the pay accumulations or pay component groups.
  - **Additional Pay Components to Calculate** field.

**Earning or deduction doesn't resolve for workers on leave of absence.**

**Cause:** Either:

- You don't configure the pay component for non-active workers on the run category.
- The worker doesn't meet the **Status** or **Leave Type** for the pay component.

**Solution:** Add the earning or deduction to 1 of these fields on the **Non-Active (On Cycle, On Demand Replacement)** tab of the run category:

- **Pay Components to Calculate**
- **Pay Component Groups to Calculate**

Ensure that the workers meet the **Status** and **Leave Type** for the pay component.

**Steps**

1. Access the **Edit Run Category** task.  
Security: *Set Up: Payroll - Pay Group Specific* domain in the Core Payroll functional area.
2. Select the **Run Category**.
3. Access the **Non-Active (On Cycle, On Demand Replacement)** tab on the run category.
4. Add the pay component to either the **Pay Components to Calculate** or to 1 of the **Pay Component Groups to Calculate** for workers on leave.

**Earning or deduction doesn't resolve for terminated workers.**

**Cause:** The worker doesn't meet the **Status** or **Processing Criteria** on the **Non-Active (On Cycle, On Demand Replacement)** tab of the run category.

**Solution:** Ensure that the **Status** *Terminated* is selected and that the worker meets the **Processing Criteria**.

#### Steps

1. Access the **Edit Run Category** task.  
Security: *Set Up: Payroll - Pay Group Specific* domain in the Core Payroll functional area.
2. Select the **Run Category**.
3. Access the **Non-Active (On Cycle, On Demand Replacement)** tab on the run category.
4. Ensure there's a row for workers with the **Status** *Terminated*.
5. Ensure that terminated workers meet the **Processing Criteria**.

### Troubleshooting: Deduction Taken Twice for a Worker in a Pay Period

This topic provides strategies for diagnosing and resolving issues that cause a deduction to be taken twice for a worker in a single pay period.

| Cause                                                                                                                                                                                                                                                                                                 | Solution                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

## Troubleshooting: On-Cycle Payroll Run Doesn't Process Payroll Input

### Workday doesn't process ongoing payroll input for terminated workers.

**Cause:** You didn't configure the run category to process ongoing payroll input for terminated workers.

#### Solution:

#### Steps

1. Access the **Edit Run Category** report.

On the **General** tab, add the **Workers to Process** grid to include the appropriate terminated status, such as *Terminated with Pay Through Date*.

On the **Nonactive (On Cycle, On Demand Replacement)** tab, add a row with:

- The pay component or pay component groups to calculate.
- A **Status** of *Terminated*.

Security: *Set Up: Payroll - Pay Group Specific* domain in the Core Payroll functional area.

2. Access the **Run Pay Calculation** task to recalculate payroll.

Security: *Process: Run Batch Calculations (Pay Calculation)* domain in the Core Payroll functional area.

### Workday doesn't process ongoing payroll input for workers on leave.

**Cause:** You didn't configure the run category to consider workers on leave.

#### Solution:

#### Steps

1. Access the **View Run Category** report.

On the **General** tab, add the **Workers to Process** grid to include the appropriate leave status, such as *On Leave with Payroll Effect Leave Events*.

On the **Nonactive (On Cycle, On Demand Replacement)** tab, add a row with:

- The pay component or pay component groups to calculate.
- A **Status** of *On Leave*.
- Defined **Leave Types**.

Security: *Set Up: Payroll - Pay Group Specific* domain in the Core Payroll functional area.

2. Access the **Run Pay Calculation** task to recalculate payroll.

Security: *Process: Run Batch Calculations (Pay Calculation)* domain in the Core Payroll functional area.

## Troubleshooting: Terminated Workers Paid or Taxed Incorrectly

Workday doesn't process terminated workers.

**Cause:** You didn't configure the run category to process terminated workers.

**Solution:**

### Steps

**1.** Access the **Edit Run Category** task.

On the **General** tab, in the **Workers to Process** grid, add a row with an appropriate terminated status, such as *Terminated with One-Time Payroll Input*.

On the **Nonactive (On Cycle, On Demand Replacement)** tab, add a row with:

- The pay component or pay component groups to calculate.
- A **Status** of *Terminated*.

Security: *Set Up: Payroll - Pay Group Specific* domain in the Core Payroll functional area.

**2.** Access the **Run Pay Calculation** task to recalculate payroll for the affected worker.

Security: *Process: Run Batch Calculations (Pay Calculation)* domain in the Core Payroll functional area.

**Workday doesn't process workers you terminate midperiod, even though they have payroll input.**

| Cause                                                                                                                                                                                                                                                 | Solution                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

**Workday applies SUI for terminated workers to the wrong state (USA).**

**Cause:** Workday disassociates the work state from a terminated worker.

**Solution:**

### Steps

1. Access the **Run On Demand Payment for Worker** task.  
Select the work state for SUI from the **State Authority (Work)** prompt in the **Override Worktags** section.  
Security: *Process: Off Cycle (On Demand)* domain in the Core Payroll functional area.
2. Access the **Run Pay Calculation** task to recalculate payroll.  
Security: *Process: Run Batch Calculations (Pay Calculation)* domain in the Core Payroll functional area.

## Troubleshooting: Employee's Holiday Pay Is Incorrect

### Employee paid twice for same holiday.

**Cause:** Employee has more than 1 **holiday** calendar or the holiday displays twice on the same calendar.

**Solution:** To see the employee's assigned holiday calendars, access the **View Worker Calendars** report. Verify whether the worker has more than 1 holiday calendar (such as a calendar for 2 different years). Review each calendar to see if the holiday is a recurring event on 1 calendar and a one-time event on the other.

### Steps

1. Click the holiday name to access the **View Holiday Calendar** report.
2. Review the **Recurring Event** field for the holiday.
3. If the field is empty (indicating a one-time event), select **Calendar Event > Delete** from the holiday related actions menu.
4. If the employee has only 1 holiday calendar, click the holiday name to access the **View Holiday Calendar** report.
5. Check the **Calendar Event** column to see if it lists the holiday twice.
6. Delete 1 of the holiday events by selecting **Calendar Event > Delete** from the holiday related actions menu.

### Employee paid for 24 hours of holiday instead of 8.

**Cause:** The holiday is an all-day event on the holiday calendar.

**Solution:**

### Steps

1. Access the **View Worker Calendars** report to identify the worker's holiday calendar and open it.  
If the **All Day Event** column displays **Yes** for the holiday, the holiday counts as 24 hours.
2. From the holiday related actions menu, select **Calendar Event > Edit**.
3. Enter values for the correct number of hours in the **Start Time** and **End Time** fields.

**Related Information****Tasks**[Create Holiday Calendars](#)**Troubleshooting: Worker Has No On-Cycle Payment for the Period**

**Cause:** The worker has an incorrect on-demand replacement payment in the period.

**Solution:****Steps**

1. Select **Pay Calculation** > **Cancel** from the related actions menu of the on-demand replacement payment.
2. [Calculate On-Cycle Payroll](#) on page 618.  
Recalculate payroll for the worker.  
Security: *Process: Run Batch Calculations (Pay Calculation)* domain in the Core Payroll functional area.

**Cause:** The worker has no pay group assigned.

**Solution:****Steps**

1. [Assign Workers to Pay Groups](#) on page 174.  
Assign the worker to a pay group.
2. [Calculate On-Cycle Payroll](#) on page 618.  
Select *Not Yet Started* from the **Based on Result Status** prompt to calculate the worker's pay.  
Security: *Process: Run Batch Calculations (Pay Calculation)* domain in the Core Payroll functional area.

**Related Information****Tasks**[Cancel Pay Calculation](#) on page 624**Reference**[FAQ: Off-Cycle Payments](#) on page 672**Troubleshooting: Processing Payroll Adjustments for Year-End (CAN)**

This topic provides strategies to process year-end payroll adjustments. There are many ways to make year-end adjustments with Workday. We make suggestions but please select what works best for your organization.

We recommend processing adjustments in your Sandbox tenants as best practice. To confirm the adjustments processed are calculating and reported as expected, use the **Tax Form Preview** reports before you create your year-end data.

Make additional adjustments to year-end data using the year-end corrections process if:

- You created year-end data.
- You sent the integration (XML) file.
- CRA or Revenu Quebec successfully received it.

**Manual Payment**

Use the **Run Manual Payment for Worker** task to make adjustments when you wish to report specific wages and statutory deductions. You might use this task to add or reduce amounts to a worker's year-to-dates. For adjustments to multiple workers, you can select to load the amounts using an EIB.

**Cause:** You need to report stock option amounts exercised after the last on-cycle pay of the year. The stock vendor provided the withheld tax amounts that need to report on the worker's year-end form.

**Solution:** Use the **Run Manual Payment for Worker** task.

### Steps

1. Select the **Prior Period** check box.
2. Select a **Period** within the tax year you wish to make the adjustment in, that is, select the last pay of the year.
3. Select **Create Additional Payment**.
4. Select a **Payment Date** within the prior tax year.
5. Auto generate payment ID or create a unique one.
6. Enter the applicable amounts to the pay component and update the pay component related calculation as necessary.

### On Demand Payment

Use the **Run On Demand Payment for Worker** task to make adjustments where Workday will calculate the gross to net.

**Cause:** You need to report a taxable benefit. Example: someone communicates a grossed-up gift card after the last on-cycle payroll for the year.

**Solution:** Use the **Run On Demand Payment for Worker** task.

Year-end adjustments will generate an off-cycle payroll that you'll need to run and complete. You can create the necessary accounting files for this run as you would for any other off-cycle payroll processed throughout the year.

### Steps

1. Select the **Prior Period** check box.
2. Select a **Period** within the tax year you wish to make the adjustment in; that is, select the last pay of the year.
3. Select **Create Additional Payment**.
4. Select a **Payment Date** within the prior tax year.
5. Auto Generate Payment ID or create a unique Payment ID.
6. Complete the necessary input.

[Steps: Upload Off-Cycle Payments Using EIB](#) on page 684

## Troubleshooting: Period Availability When Running Payroll

**Workday still displays the period for year-end adjustments on the Run Pay Calculation task.**

**Cause:** When you create a separate period schedule and period for year-end off-cycle adjustments, you didn't complete on-cycle payroll for the period.

**Solution:**

**Steps**

1. [Calculate On-Cycle Payroll](#) on page 618.  
Run on-cycle payroll for the year-end period. The calculation displays results of zero.  
Security: *Process: Run Batch Calculations (Pay Calculation)* domain in the Core Payroll functional area.
2. [Complete Payroll](#) on page 627.  
Complete payroll for the year-end period.  
Security: *Process: Run Batch Complete (Pay Complete)* domain in the Core Payroll functional area.
3. (Optional) [Hide Payslips from Workers](#) on page 488.  
You can hide payslips with results of zero from workers. On the **Hide or Display Payslips for Group of Workers** task:
  - a. Select **Hide Payslips**.
  - b. In the **Criteria** field, select *Zero Gross and Net Pay*.  
Security: *Reports: Pay Calculation Results for Worker (Payslips)* domain in the Core Payroll functional area.
4. (Optional) To avoid this situation in the future, configure year-end adjustments as on-demand or manual payments to a prior period instead of creating a separate period schedule.

**Next period doesn't display on the Run Pay Calculation task.**

**Cause:** Workday wasn't able to complete some results for the previous period.

**Solution:**

**Steps**

1. [Calculate On-Cycle Payroll](#) on page 618.  
Select the previous period.  
Security: *Process: Run Batch Calculations (Pay Calculation)* domain in the Core Payroll functional area.
2. In the **Calculation Status** section of the **Pay Groups being Calculated** grid, address each result with a status other than *Complete*:
  - Fix results that are *In Error*.
  - Release results that are *On Hold*.
  - Complete results with a status of *Pending Completion of Prior* in the appropriate order.
3. Rerun the payroll calculation.
4. [Complete Payroll](#) on page 627.  
Complete payroll for the previous period.  
Security: *Process: Run Batch Complete (Pay Complete)* domain in the Core Payroll functional area.

## Pay Anomalies

---

### Steps: Set Up Machine Learning for Pay Anomalies

---

**Prerequisites**

## Context

The instructions in this topic apply to:

- Payroll for Australia
- Payroll for Canada
- Payroll for the UK
- Payroll for the U.S.

Workday Pay Anomalies uses machine learning to analyze and identify suspected payroll result abnormalities on an automatic and continuous basis. This can help improve the accuracy and efficiency of your payroll audit process.

The **Payroll Machine Learning GA Features** innovation services and the **Pay Anomalies** report are available for Payroll for the U.S., UK, Canada, and Australia but isn't functional for Payroll for France customers.

## Steps

[Enable Innovation Services Feature and Machine Learning Data Contributions.](#)

On the **Available Services** tab, select **Payroll** category and then the **Payroll Machine Learning GA Features** check box.

Security: *Manage: Innovation Services domain in the Innovation Services* functional area.

**Note:** You must opt in to all these 6 data categories to build tenanted models and to enable Pay Anomalies functionality:

- Anomalous Payroll Results
- Payroll Data
- Payroll Data (Historical)
- Pay Anomalies Validations
- Previous States of Payroll Results (Historical)
- Worker Data

Not selecting all data categories will result in failing to build and deploy the machine learning model as designed. The feature won't be fully functional without these models. See [Reference: Machine Learning Data Contributions](#).

# Configure Pay Anomalies

---

## Prerequisites

Security: *Set Up: Payroll (Reporting)* domain in the Core Payroll functional area

## Context

The instructions in this topic apply to:

- Payroll for Australia
- Payroll for Canada
- Payroll for the UK
- Payroll for the U.S.

You can configure Pay Anomalies to provide better context of your data and improve accuracy in predictions. You can set up:

- Audit schedules.
- Pay calculation usages.
- Pay results report fields.

Workday recommends that you configure these fields after you opt into the innovation service for the first time. You can update these values at any time.

### Steps

1. Access the **Maintain Pay Anomalies Configuration** task.
2. (Optional) From the **Pay Calculation Usage** section, enter:

| Option                                 | Description                                                                                                             |
|----------------------------------------|-------------------------------------------------------------------------------------------------------------------------|
| <b>Pay Calculation for Total Hours</b> | Pay calculations as part of total hours. It can include but isn't limited to regular, overtime, PTO, and holiday hours. |

3. (Optional) In the **Audit Schedule** section, enter:

| Option                                                       | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
|--------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Days from Period End Date to Payroll Audit Start Date</b> | <p>The number of days from the period end date to the day when auditing begins.</p> <p>Workday uses the auditing date since all payroll-impacting inputs are submitted and there are no further changes to payroll. You can enter a negative value to indicate it's before the period end date or a positive value to indicate it's after the period end date. Example: With pay period 1/1-1/14, entering -4 implies you typically begin payroll audit on 1/9.</p> |

4. In the **Pay Result - Class Report Field**, select up to 3 custom report field mappings. These report field mappings display as facets on the **Pay Anomalies** and the **Historical Pay Anomalies** reports.  
You can only select the report field mappings that you've configured in the **Maintain Pay Results – Class Report Field Mapping** task.

Configure the pay components using this task if you've haven't already done so. This helps you to better train the machine learning model on your payroll and audit usage. See [Map Fields for Custom Reporting of Pay Results](#).

## Examine Pay Anomalies

### Prerequisites

- Calculate payroll using the **Run Pay Calculation** task.
- *Security: Reports: Pay Calculation Results for Pay Group (Audits)* domain in the Core Payroll functional area.

### Context

The instructions in this topic apply to:

- Payroll for Australia
- Payroll for Canada

- Payroll for the UK
- Payroll for the U.S.

After you run a payroll calculation, including on-cycle, off-cycle (excluding historical payments), on demand, and recalculations, Workday runs the Pay Anomalies service to analyze all the current in-progress pay results. Pay Anomalies then predicts the confidence level of each pay result being abnormal and warranting further investigation. Where possible, the report attempts to provide a potential reason for identifying a payroll result as an abnormality.

Use the **Pay Anomalies** report to view the prediction results, including their confidence levels of high, medium, low, or N/A (unable to predict), and mark them as normal or abnormal.

In addition to predicting if payroll results are potentially abnormal, you can use the various facets and any saved searches on the report to search for and triage your results as part of your audit process.

**Note:** Workday recommends that you don't opt out of the innovation service once you run the Pay Anomalies report to view predictions. Opting out disables the feature and causes data synchronization issues.

## Steps

1. Access the **Pay Anomalies** report.

2. Use **Current Search** to select 1 or more facets to fine-tune your search results.

Example: You can use **Pay Rate Type** and **Gross Amount** facets to search for *Salaried* workers' paid *Over 10,000*.

To reuse your search in future searches, click **Save**. Workday lists your **Saved Searches** at the top of the report. Example: High Salaries

Saved searches don't persist across different users.

**Note:** When using the report for the first time, Workday recommends that you use saved searches to set up 5 to 10 of your most frequently used audits. This helps you easily consolidate your audit results and familiarize with the report.

3. Review the payroll **Results** that Workday displays matching your search criteria.

Use the arrows at the right of the report to display an overview of why the results are included in the report.

4. Select the check box next to 1 or more results and click:

| Option                  | Description                                                                                                                                                                                                                                                                                  |
|-------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>View Details</b>     | <p>Workday displays more details for each selected pay anomaly, including links to various areas associated with that result.</p> <p>Use the report to search for workers predicted with a higher confidence of abnormality by the model but not detected by the configured audit rules.</p> |
| <b>Mark as Abnormal</b> | <p>Workday is more likely to include similar results in future Pay Anomalies reports. Similar results will be assigned a higher confidence level of being abnormal.</p>                                                                                                                      |
| <b>Tag Result</b>       | <p>Select or create tags to label your results into meaningful categories. This provides you the ability to separately tag results without requiring you to mark as normal or abnormal. You can also add comments or analysis you want to include</p>                                        |

| Option                    | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
|---------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                           | <p>in the <b>Comments</b> field. Workday recommends that you don't include any Personal Identifiable Information (PII) in this field.</p> <p>Use the <b>Maintain Pay Anomaly Custom Tags</b> to create custom tags and group pay anomalies results together such as: <i>Requires manager approval</i>, or <i>Missing hours</i> based on your business needs. Tags can be used to provide feedback for Pay Anomalies. Once you assign a tag to a pay anomaly, you can't delete it. Workday provides a set of common tags. For consistency, it's important to reuse tags. Tags are searchable on the report.</p> <p><i>Security: Reports: Pay Calculation Results for Pay Group (Audits)</i> domain in the Core Payroll functional area.</p> |
| <b>Mark as Normal</b>     | Workday is less likely to include similar results in future Pay Anomalies reports. Similar results will be assigned a lower confidence level of being abnormal.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| <b>Sync Pay Anomalies</b> | <p>Select the Pay Anomalies that are out of sync with the latest payroll result. You can see the Sync or Out of Sync status of the pay anomalies on the expanded view of the search results.</p> <p>When you click the <b>Sync Pay Anomalies</b> button, you can view the <i>Selected Payroll Results</i> count on the <b>Sync Pay Anomalies Results</b> page. You may notice that the <i>Selected Payroll Results</i> count might be different from the selected pay anomalies on the facet. This could be due to a worker having multiple payroll results in a pay period .</p>                                                                                                                                                          |

### Next Steps

Use the **Historical Pay Anomalies** report to view the prediction results for previously completed and current periods, including their confidence levels of high, medium, low, or N/A (unable to predict), and mark them as normal or abnormal.

This report works in the same way as the **Pay Anomalies** report. When you run the report, you can select 1 or more of these filters to reduce the number of results shown:

- **Period**
- **Pay Run Groups**
- **Pay Group Details**
- **Confidence Level**
- **Worker**

## Concept: Payroll Result Abnormalities

---

This topic applies to:

- Payroll for Australia
- Payroll for Canada
- Payroll for the UK
- Payroll for the U.S.

### What are Payroll Result Abnormalities?

Payroll result abnormalities are any results that, for 1 or more reasons, are atypical for a regularly run pay calculation. Workday uses machine learning to determine normal pay calculation and result patterns, based on historical pay results and current and historical worker data.

Pay Anomalies uses workers' payment information, based on their current and historical payroll results, to learn any historical abnormal payment patterns. It then uses those patterns to predict abnormal payroll results for the current pay period.

The machine learning model also accounts for historical data such as whether administrators marked similar pay results as normal or abnormal. Workday then identifies payroll results that violate those patterns and assigns the result a score, quantifying the likelihood that the result is abnormal.

When Workday identifies a payroll result as abnormal, it doesn't mean that the result is invalid. Rather, the result is atypical and might require additional attention. As the machine learning model gathers more data, Workday identifies abnormalities more accurately.

### Abnormality Confidence

Confidence level is the model's level of confidence in its prediction of a pay anomaly being either Normal or Abnormal. Possible values are: High, Medium, Low, or None. None might be applied when there are insufficient results to base a prediction on; for example, for a new employee.

## FAQ: Pay Anomalies

---

The questions and answers in this topic apply to:

- Payroll for Australia
- Payroll for Canada
- Payroll for the UK
- Payroll for the U.S.

- [How can I test Pay Anomalies feature?](#) on page 728

**I've opted into the innovation service and data categories. Why am I not seeing predictions in Pay Anomalies?**

After you opt in to Payroll Machine Learning GA Features innovation service, make sure that you've opted into all 6 data categories:

- Anomalous Payroll Results
- Payroll Data
- Payroll Data (Historical)
- Pay Anomalies Validations
- Previous States of Payroll Results (Historical)
- Worker Data

Then, allow up to 3 weeks for Workday to display the Pay Anomalies predictions through the Pay Anomalies report in your tenant.

**Why is it important to provide feedback?**

The feedback you provide is important for enabling the model to improve the accuracy of its predictions over time. Your feedback provides the model with additional training data on what normal and abnormal pay results look like for your team based on your specific organizational needs.

**How do I tag pay anomalies and why is it important?**

As you provide feedback, use tags to group results based on similarities, your process, and current payroll usage to help you better find and identify the results. Once assigned, tags can be used as facets on the report. You can select from the list of delivered tags or create your own custom tags. We recommend you provide feedback and use custom tags as often as possible. See [Examine Pay Anomalies](#).

**Can the Pay Anomalies report be delivered to auditors on a schedule after a pay cycle?**

This report doesn't need to be scheduled, it automatically brings in every in progress payroll result.

**How is the report secured? Unconstrained or can it be constrained by pay group?**

The report is secured to both unconstrained and constrained users, so pay partners will only see the results that they have access to via pay group.

**Do we need to opt in to People Experience?**

No, not for the Pay Anomalies report.

**Can payroll partners access the reports and see tags?**

Yes, as long as a pay partner has access to see the pay anomaly results, they'll be able to see associated tags with those results.

**Will there be any performance impact on pay calculation by enabling Pay Anomalies?**

No, it shouldn't. The way that the job is set up is to run after calculation.

**What does it look like after 10 payrolls when anomalies are learned? What does Workday now do with these?**

They're used to give the model a better idea of what an anomaly looks like in your system. Ideally, the number of reported anomalies will decrease while the quality of reported anomalies increases significantly.

**What does the Sync Pay Anomalies button do?**

It manually resyncs the pay anomaly results, this is mainly used in the first few periods after pay anomalies is enabled where there might be some out of sync results.

**Can I export this data to a spreadsheet?**

Yes. You can select the results you want to export and then click **View Details**. You can then use the **Export to Excel** icon. You can also add a comment when tagging.

**Can I add facets to the report? If so how do I do that?**

You can create a custom report off of the Pay Anomalies report. Note that any added facets need to be indexed for performance reasons. Any nonindexed fields won't be available.

**If there are multiple pay groups in process, do the reports consolidate the results on the single report?**

Yes, it processes all in progress results, you can then filter by Pay Group.

**How does the Historical Pay Anomalies report work?**

The **Historical Pay Anomalies** report is very similar to **Pay Anomalies** report. It enables you to view the prediction results for previously completed and current periods.

**Can I opt in and not mark the anomalies for several pay periods then start teaching the model? Would this impact my future use?**

Yes. You can give feedback whenever it's convenient to you. For the model to begin being effective, we recommend marking 20-30 results as anomalies per pay period.

**How can I test Pay Anomalies feature?**

ML features that require data contributions will not function accurately in your Sandbox tenant. To test ML features before deploying them to your Production tenant, use your Preview or Implementation tenants. See [Concept: Workday AI for Universal Main Subscription Agreement Customers](#).

## Payroll Third-Party Payments

---

### Concept: Payroll Third-Party Payments

---

When you enable payroll third-party payments, you can generate and settle payments for:

- Income Withholding Orders (IWO) or Court Orders.
- For Payroll for Canada and the U.S., agency fees for Income Withholding Orders.
- Benefit Premiums.
- Retirement and pension contributions.

- Charitable contributions.
- Union dues.
- Other customer-owned employee and employer deductions.

You can enable payroll third-party payments on a deduction recipient. Workday then generates a payroll third-party payable item for each payroll result line where a payment should be sent to a deduction recipient. For more information, see [Concept: Payroll Third-Party Payable Items](#).

### Deduction Recipient Snapshot

Workday displays a snapshot of a deduction recipient in the **Effective Dated Details** section when you access a deduction recipient. Workday generates payroll third-party payable items using the most current active snapshot with an effective date less than or equal to the period end date of the payroll result. This snapshot will be associated with the payable item.

Once you have enabled payroll third-party payments on a snapshot of a deduction recipient, you can only opt out within that snapshot if one of the following is true:

- You have paid all payroll third-party payable items.
- No payroll third-party payable items exist for the deduction recipient.

When modifying snapshots, you can:

- Add rows dated after the current effective snapshot. When you add a new snapshot, Workday copies the configuration of the prior snapshot to the new one.
- Edit the effective date when no payable items exist.
- Update the **Country**, **Category**, **Enable Payroll Third-Party Payments**, and **Inactive** fields when no payable items exist or all payable items are paid.
- Payment instructions for a deduction recipient may change. To support this, you can update **Payment Type**, **Always Separate Payments**, **Address**, and **Settlement Bank Account** for the deduction recipient snapshot associated with a payable item until you add the payable item to a settlement run.

Workday doesn't compare the effective date of the snapshot to the subperiod end date where proration occurs.

When you create a payroll result line for a retro adjustment, Workday compares the effective date of the most current active snapshot to the period end date of the on-cycle or off-cycle result the retro adjustment is included in.

**Note:** If you access the **Create Deduction Recipient** task but click **Cancel** instead of **OK**, Workday still creates a deduction recipient snapshot.

You can deactivate a deduction recipient snapshot or deactivate the entire deduction recipient. When you deactivate a snapshot, Workday can still generate payable items for other active snapshots. If you deactivate a snapshot and there are other snapshots with an **Active** status, Workday can still generate payable items for the active snapshots. For example, if you post an off-cycle result to a payroll period where a snapshot with an active status is within the period end date of the off-cycle result, Workday generates payable items where applicable.

If you no longer want to generate any payments for the deduction recipient, you must deactivate all snapshots.

### Payroll Third-Party Payments Grid

You can map multiple pay components to a deduction recipient using the Payroll Third-Party Payments grid in the deduction recipient snapshot. To map pay components to a deduction recipient, add a row to the grid for each pay component. To add a row to the grid, click the **Add** button under the **Payroll Third-Party Payments** header when creating or editing a deduction recipient. A row is added with these fields:

- **Pay Component**- This field is required. Mapping a Pay Component to a deduction recipient identifies the Payroll Result Lines Workday will use to generate a payable item

- **Worktag-** Select from **Company**, **Pay Group**, and **Custom Worktag**. Custom Worktag will only be available if the deduction has a custom worktag dimension configured in the **Calculation Worktag** field on the pay component. Acceptable worktag combinations are:
  - (Single) Custom Worktag value of one custom worktag dimension.
  - (Single) Custom Worktag value of one custom worktag dimension AND (single) Custom Worktag value of another custom worktag dimension. **Note:** This supports pay components with 2 custom worktag dimensions configured in the calculation worktag field.
  - Company AND Pay Group.
  - Company AND Pay Group AND (single) Custom Worktag value of one custom worktag dimension.
  - Company AND Pay Group AND (single) Custom Worktag value of one custom worktag dimension AND (single) Custom Worktag value of another custom worktag dimension.
- **Benefit Plan-** Select from the benefit plans on a deduction. This field only displays if the deduction in the Pay Component field has benefit plans assigned.
- **Comments**

**Note:** Each row in the Payroll Third-Party Payments grid within the deduction recipient must be unique.

### Settlement

To generate a payroll third-party payment to a deduction recipient, you must add payroll third-party payable items to a settlement run. For more information, see [Concept: Settlement Processing](#).

Once you settle a payment, you can:

- **Cancel payment:** Cancel payments generated in a settlement run if you haven't reconciled them to a bank statement. Once you cancel a payment, you can add the payable items associated with the original payment to a new settlement run to generate a new payment. Canceling a payment will also cancel the payment accounting journal. For more information, see [Cancel Payments](#).
- **Return payment:** Return processed payments. You can also return a payment on the **Create Payment Return Statement** task. For more information, see [Steps: Create Payment Returns](#). You also have the option to handle the Return payment transaction in the Settlement.
- **Stop payment:** Place a stop on check payments. For more information, see [Record Stopped Payments](#).
- **Void payment:** Cancel the printed check associated with the processed payment. This doesn't change the status of the payment. You can void a check payment during the cancel payment process, the escheat payment process, or on the **Record Voided Checks** task.
- **Escheat payment:** Escheat unclaimed check payments. You can use the **Find Escheatable Items** task to locate payments for escheatment. For more information, see [Escheat Payments](#).

You can reconcile payroll third-party payments to the bank statement of the bank account the payment was settled on. This enables proper auditing of cleared or rejected payments between Workday and the bank. For more information, see [Concept: Bank Account Reconciliation](#).

The **Acknowledgment History** tab in the settlement run displays acknowledgment of the payment received from the bank. You can load a Payment Acknowledgement file received from your bank using an EIB for the Put Payment Acknowledgement Message web service. For more information, see [Concept: Electronic Payment Acknowledgment](#).

### Note:

If you settle a payroll third-party payment for a payable item within an on-cycle or off-cycle result and you haven't canceled the payment, you can't cancel the completion of the result either. If you have already run the settlement process for a payable item, you can't cancel the completion of a result when accessing:

- Cancel Pay Complete
- Cancel Off-Cycle Complete
- Cancel Off-Cycle Complete for Group of Results
- Payroll Calculation Processing Report

This avoids updates to results after you have disbursed payroll third-party payments.

### Generic Remittance File Framework

You can generate supporting documentation for payroll third-party payments sent to deduction recipients using the Generic Remittance File Framework. Depending on your data source, you can generate remittance files in PDF or CSV format. To use either of these data sources, download custom reports and layouts through the Configuration Catalog in Customer Central. For more information, see [Concept: Configuration Catalog](#).

For PDF remittance, Payroll Third-Party Payments is the primary data source. To generate PDF remittance files, use:

- Custom Report: PTPP PDF Remittance Template
- Document Layout: PTPP Remittance Advice
- Business Form Layout: PTPP Remittance Advice PDF
- Remittance Print Layout: PTPP Remittance Advice PDF

For CSV remittance, the Get Payments web service is the data source. To generate CSV remittance files, use the INT PTPP CSV Remittance Advice sample integration system.

For more information on generating remittance files, see [Steps: Set Up Remittance Advices Using Setup Rules](#).

### Check Printing

For Payroll for the U.S., the business form layout, BIRT – Payroll Third-Party Payments Check (USA) enables you to print checks of payroll third-party payments. This layout is available for download in the Configuration Catalog and includes:

- BIRT – Payroll Third-Party Payments Check (USA) custom report file. This is the data source for the fields printed on the check.
- Payroll Third-Party Payment USA Check.rptdesign custom report design file. You can update it using Workday Studio.

To include the business form layout in a report design check print layout:

1. Access the **Create Check Print Layout With Report Design** task.
2. Enter a name for the check print layout.
3. In the **Business Form Layout** field, select **BIRT - Payroll Third-Party Payments Check (USA)**.
4. Access the bank account the checks will be printed on using the **Edit Bank Account** or **Create Bank Account** task.
5. Navigate to the **Settlement Setup** tab and select **Payroll Third-Party Payments** in the **Payment Category** column.
6. Enter the name of the check print layout you created in step 2 in the **Integration System Check Print Layout** field.

The Case Number displays in the remittance portion of the check when you include the payable items of multiple orders in the same check payment. As a result, you don't need to enable the **Always Separate Payments** option on the deduction recipient when using this business form layout.

[The Next Level: Payroll Third-Party Payments](#)

## Concept: Payroll Third-Party Payable Items

---

When you enable payroll third-party payments for a deduction recipient, Workday generates a third-party payable item for each result line where a payment should be sent to that recipient.

In addition, the deduction recipient associated with the payable item becomes a worktag on the payroll result line.

**Note:** Workday generates payroll third-party payable items for on-cycle and off-cycle payments (including reversals), but not for payroll history results.

To generate payments to a third party, add the payroll third-party payable items to a settlement run. You can only add payable items from completed payroll results.

These retro adjustments to a previously created payable item are not supported:

- Company change
- Pay group change
- Benefit provider change

In other words, Workday will not process changes to existing payable items resulting from those retro events.

**Note:** If you recalculate a payroll result with a payroll third-party payable item, it displays as a changed payroll result, even if you didn't make any changes to it. This behavior does not occur when you enable Smart Calculation options.

### Always Separate Payments

When you enable Payroll Third-Party Payments for a deduction recipient, Workday automatically selects the **Always Separate Payments** checkbox. This setting generates an individual payment for each payroll third-party payable item.

Keep this option selected if:

- The payable item and payment have a 1:1 relationship.
- You send the case or reference number at the payment level of an electronic payment. For more information, see [Create a Payment for an Income Withholding Order or Court Order](#).

If you clear the checkbox and include multiple case or reference numbers in the same electronic payment, Workday sends only 1 case or reference number with the payment. When you add payable items to a settlement run, Workday aggregates payable items by:

- Company
- Currency
- Deduction Recipient Snapshot
- Payment Type

### Reporting

When Workday generates third-party payable items within a payroll result, the **Payroll Third-Party Payment** tab on the **Pay Calculation Result for Worker** report displays details about each item.

You can use the **Payroll Third-Party Payable Open Items** report to audit payroll third-party payable items that are not paid. You can also use these reports throughout the payroll third-party payment process:

- All Open Items by Amount for Payment Category (worklet within the Settlement Work Area Dashboard)
- Find Payments
- Find Payment Returns
- Find Settlement Runs
- Payment Counts by Status

- Payment Returns by Month
- View All Payments
- View Check Register
- View Direct Deposit Register

In addition, you can generate custom reports using the:

- Payroll Third-Party Payments Application business object
- Payroll Third-Party Payments business object
- Payroll Third-Party Payments data source
- Payroll Third-Party Payable Item business object

For more information, see [Create Custom Reports](#).

## Settlement

Once you complete payroll results, you can add payroll third-party payable items to a settlement run. Items related to settlement have these statuses:

- Available for Settlement: Indicates that you can add the item to a settlement run.
- Document Status: Indicates if a payment has been generated for the item.

For Payroll for Australia, Canada, France, and the U.S., when you create a settlement run, the Settlement Run Date becomes the payment date for payable items.

For Payroll for the UK, the Settlement Run Date field represents the processing date. Workday uses the processing date to determine the first date for the clearing process.

You can schedule the settlement of payroll third-party payable items with the **Schedule Settlement Run** task, or create a manual settlement run. For more information, see [Create Manual Settlement Runs](#).

You can manually search for and add payroll third-party payable items to a settlement run using the **Payroll Third-Party Payments** payment category. Workday references this payment category in bank account setup, bank routing rules, settlement, and settlement-related reports.

To add the payable items using filters, select **System Filters** from the **Auto-Select Filter** prompt and apply the **All Available Payroll Third-Party Payments** filter. For more information, see [Setup Considerations: Settlement Run Filters](#).

You can also create custom filters by accessing the **Create Settlement Run Custom Filter** task and selecting **Payroll Third-Party Payment** from the **Payment Source** prompt. For more information, see [Define Settlement Run Custom Filters](#).

Payment instructions for a deduction recipient may change. To support this, you can update **Payment Type**, **Always Separate Payments**, **Address**, and **Settlement Bank Account** for the deduction recipient snapshot associated with a payable item until you add the payable item to a settlement run.

Once you add a payroll third-party payable item to a settlement run, you can't add it to another settlement run unless:

- You cancel the original settlement run you added the payable item to.
- You cancel, return, or stop the original payment generated for the payable item.

**Note:** You can't cancel the completion of a payroll result if Workday has generated a payment for a payable item associated with the result.

## Related Information

### Tasks

[Create Deduction Recipient](#) on page 232

### Examples

[2024R1 What's New Post: Payroll Third-Party Payments](#)

## Create a Payroll Third-Party Payment

---

### Prerequisites

Security: These domains in the Core Payroll functional area:

- *Set Up: Payroll (Payroll Third-Party Payments)*
- *Process: Payroll Third-Party Payments Settlement*
- *Process: Payroll Third-Party Payments Escheatment*

### Context

When you enable payroll third-party payments on a deduction recipient, Workday generates payable items on result lines for payments that need to be sent to a third party. You can add this payable item to a settlement run to generate a payment to the deduction recipient.

You can use this process to generate and settle payments for:

- Income Withholding Orders (IWO) or Court Orders
- For Payroll for Canada and the U.S., agency fees for Income Withholding Orders
- Benefit Premiums
- Retirement and pension contributions
- Charitable contributions
- Union dues
- Other customer-owned employee and employer deductions.

### Steps

1. Access the **Create Deduction Recipient** task. For more information, see [Create Deduction Recipient](#).  
The deduction recipient serves as the payee for payroll third-party payments.
2. Select the **Enable Payroll Third-Party Payments** checkbox.
3. Workday selects the **Always Separate Payments** checkbox by default when you select **Enable Payroll Third-Party Payments**.  
The **Always Separate Payments** option generates an individual payment for each payroll third-party payable item. For more information, see [Concept: Payroll Third-Party Payable Items](#).
4. Add a row to the **Payroll Third-Party Payments** grid on the deduction recipient snapshot.
5. In the **Pay Component** field, select the pay component associated with the deduction recipient. For example, you would select **Charitable Contribution** to make a charitable contribution deduction.
6. (Optional) In the **Worktag** field, select from **Company**, **Pay Group**, and **Custom Worktag** (if configured). Custom Worktag will only be available if you have configured a custom worktag dimension in the Calculation Worktag field on the Pay Component.  
Acceptable worktag combinations are:
  - (Single) Custom Worktag value of one custom worktag dimension.
  - (Single) Custom Worktag value of one custom worktag dimension AND (single) Custom Worktag value of another custom worktag dimension. **Note:** This supports pay components with 2 custom worktag dimensions configured in the calculation worktag field.
  - Company AND Pay Group.
  - Company AND Pay Group AND (single) Custom Worktag value of one custom worktag dimension.
  - Company AND Pay Group AND (single) Custom Worktag value of one custom worktag dimension AND (single) Custom Worktag value of another custom worktag dimension.
7. Access the **Run Pay Calculation** task. For more information, see [Calculate On-Cycle Payroll](#).

8. Access the **Create Settlement Run** or **Schedule Settlement Run** task. For more information, see [Steps: Use Settlement](#).
9. Add the payroll third-party payable items to the settlement run. To find these items, use the **All Available Payroll Third-Party Payments** filter, or custom filters you create. To add payroll third-party payable items manually, select the **Payroll Third-Party Payments** payment category from the **Add** button. For more information, see [Concept: Payroll Third-Party Payable Items](#).
10. Complete the settlement run.

## Result

When you generate a payroll result for a worker, Workday generates a payroll third-party payable item if these values match in both the payroll result line and the Payroll Third-Party Payments grid:

- Pay Component
- Company
- Pay Group
- Custom Worktag (if configured).

## Example

You want to create a deduction recipient for a benefit provider where the benefit premium amounts have been calculated in Workday. First, configure benefit plans in Workday. For more information, see [Steps: Set Up Benefits](#). Then, follow steps 1 - 4 described above. In the **Pay Component** field of the **Payroll Third-Party Payments** grid, select a benefit related pay component with one or more benefit plans are assigned. In the **Benefit Plan** field, select the benefit plans specific to the benefit provider associated with the deduction recipient. Continue from step 6 onward.

**Note:** The employee must be enrolled in a benefit plan mapped in the same row as the pay component. Enrollment must be active as of the period end date or payment date of the payroll result where you've enabled Coverage Cost as of payment date on the pay component.

## Next Steps

#### Tasks

[Create Deduction Recipient](#) on page 232

#### Examples

[2024R2 Feature Release Note: Payroll Third-Party Payments](#)

## Create a Payment for an Income Withholding Order or Court Order

---

### Prerequisites

Security: These domains in the Core Payroll functional area:

- *Set Up: Payroll (Payroll Third-Party Payments)*
- *Process: Payroll Third-Party Payments Settlement*
- *Process: Payroll Third-Party Payments Escheatment*
- *Worker Data: Payroll (Income Withholding Orders)*

### Context

When you enable payroll third-party payments on a deduction recipient, Workday generates payable items on result lines for payments that need to be sent to a third party. You can add this payable item to a settlement run to generate a payment to the deduction recipient.

You can use this process to generate and settle payments for Income Withholding Orders (IWO) or Court Orders.

## Steps

1. Access the **Create Deduction Recipient** task. For more information, see [Create Deduction Recipient](#).  
The deduction recipient serves as the payee for payroll third-party payments.
2. Select the **Enable Payroll Third-Party Payments** option.
3. Workday selects the **Always Separate Payments** checkbox by default when you select the **Enable Payroll Third-Party Payments** option.  
The **Always Separate Payments** option generates an individual payment for each payroll third-party payable item. We recommend that you leave it selected if you're sending the case number or reference number of an income withholding order or court order at the payment level of an electronic payment.
4. Access 1 of these tasks based on the worker's country:
  - **Record AUS Withholding Order for Worker**
  - **Record CAN Withholding Order for Worker**
  - **Record FRA Withholding Order for Worker**
  - **Record UK Court Order for Worker**
  - **Record US Withholding Order for Worker**
5. Assign the deduction recipient that you created to the income withholding order or court order.
6. Access the **Run Pay Calculation** task. For more information, see [Calculate On-Cycle Payroll](#).  
Workday generates a payroll result with a payroll result line for the income withholding order or court order recorded on the worker.
7. Access the **Run Pay Complete** task. For more information, see [Complete Payroll](#).
8. Access the **Create Settlement Run** or **Schedule Settlement Run** task. For more information, see [Steps: Use Settlement](#).  
For Payroll for Australia, Canada, France, and the U.S., the **Settlement Run Date** you enter becomes the payment date of all payroll third-party payments generated in that settlement run.  
For Payroll for the UK, the **Settlement Run Date** field represents the processing date. Workday uses the **Settlement Run Date** to determine the first date for the clearing process.
9. Add the payroll third-party payable items to the settlement run. To find these items, use the **All Available Payroll Third-Party Payments** filter, or custom filters you create. To add payroll third-party payable items manually, select the **Payroll Third-Party Payments** payment category from the **Add** button. For more information, see [Concept: Payroll Third-Party Payable Items](#).
10. (Optional) To display Case Number or Reference Number on electronic payments so that the deduction recipient can more easily identify the payment in their bank account, use 1 of these methods:
  - Use Core Connector: Payments Outbound V2 (Enhanced Performance) to retrieve Case Number or Reference Number detail, then output it based on your banking system requirements. For more information, see [Concept: Payment Connector](#).
  - When using a BACS Integration System, you can configure these values in the **Payroll Third Party Payment - Reference Location** integration attributes: **Destination Account Name**, **Service User's Name**, and **Service User's Reference**.
11. Complete the settlement run.

## Result

When you generate a payroll result, Workday identifies the payroll result lines with a Case Number or Reference Number worktag and retrieves the deduction recipient assigned to the IWO or Court Order. Workday generates a payroll third-party payable item for a payroll result line, and the deduction recipient becomes a worktag on the payroll result line.

When Workday generates a payroll third-party payable item, the **Payroll Third-Party Payments** tab displays on the **Pay Calculation Result for Worker** report. This tab displays information about payable items and the associated payment status, payment, and payment journal.

For Payroll for Canada and the U.S., you can generate payments for one-time and per-pay-period agency fees for workers. Workday doesn't support employer fees. If you add an agency fee to an income withholding order, the deduction recipient assigned to the IWO is also assigned to the payable item for the agency fee. However, when you create an agency fee, you can assign a deduction recipient that differs from the one assigned to the IWO. When this happens, Workday ignores the deduction recipient override on the agency fee.

## Concept: Payroll Third-Party Payments Accounting

---

Workday generates payroll third-party payment journals after you process payroll third-party payments during a settlement run. Workday displays the journal on the **Payroll Third-Party Payment** tab on a worker's payroll result.

Workday creates a singular journal or an aggregated journal based on how you configure the **Always Separate Payments** check box on the deduction recipient:

- When selected, Workday creates a singular journal that includes the payment to the deduction recipient for a worker.
- When cleared, Workday creates an aggregated journal that includes all associated payments for that deduction recipient in 1 journal and 1 payment.

You can filter the **Find Journals** and **Find Journal Lines** reports for payroll third-party payments by using the **Journal Source** filter and selecting **Payroll Third-Party Payments**.

In the payroll third-party payment journals, realized gain displays in the **Ledger Credit Amount** column and realized loss displays in the **Ledger Debit Amount** column.

You can close the ledger period for payroll third-party payments when a journal posts. You can't close the ledger period if the payroll result status is In Progress.

You can use the **Fix Operational Journal with Errors** task on payroll third-party payments journals, if necessary.

### Supported Functionality

When configured, the payroll third-party payments journals supports these accounting functions:

- Cancel Payments
- Escheatment
- Intercompany Accounting
- Journal Summarization
- Operational Journal Reversals
- Return Payments
- Worktag Balancing - Workday supports inherited and specified worktag balancing for both primary and optional worktags when you generate payroll third-party payments with realized gain/loss.
- Multi-currency scenarios - You can enter conversion rates for multi-currency scenarios using the **Maintain Currency Conversion Rates** task. In addition, you can use the **FRE Currency Conversion Rates** report to view the current rates. **Note:** Multi-currency scenarios are not supported with intercompany accounting.

### Account Posting Rules

You can find Deduction Recipient as a Dimension on:

- Payroll Deduction account posting rules.
- Payroll Expenses account posting rules.
- Journal Summarization configuration.

This is useful when you have configured multiple deduction recipients and want to allocate each to different accounts.

To allocate all Payroll Third-Party Payment journals to an account, regardless of deduction recipient, use the **Payroll Journal Source** Dimension, with **Payroll Third-Party Payment** as an associated value. You can do so when editing these account posting rules:

- Payroll Deduction
- Payroll Earnings
- Payroll Expense
- Fringe Benefit Expense
- Fringe Benefit Recovery
- Cash Account Posting Rules

For more information, see [Set Up Account Posting Rules](#).

# Payroll and Accounting Results

## Set Up Standard Payroll Reports

### Set Up Balance Periods for Reports with Payroll Results

#### Prerequisites

Security: *Set Up: Payroll (Reporting)* domain in the Core Payroll functional area.

#### Context

You can display up to 3 balance periods on the **View Payroll Result** report.

Your selections also display as filter options for the **Payroll Register by Period** report.

#### Steps

1. Access the **Maintain Pay Results - Balance Period Mapping** task.
2. Specify the data requested in these fields:

| Option                       | Description                                                                                                                                                                                                             |
|------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Select Balance Period</b> | Select up to 3 balance periods in separate rows, <i>Select Balance Period 01, 02, 03</i> .<br><br>The suffix (01, 02, 03) determines the order in which Workday displays them on the <b>View Payroll Result</b> report. |
| <b>Balance Period</b>        | Select the balance periods that you want to display from the prompts for the <b>Select Balance Period 0x</b> field as filters for the <b>Payroll Register by Period</b> report.                                         |
| <b>Label</b>                 | Enter a heading, such as <i>YTD</i> , that you want to display on the <b>View Payroll Results</b> and <b>Payroll Register by Period</b> reports for each balance period.                                                |

#### Result

The **View Payroll Result** report displays the balance periods that you configured.

The **Payroll Register by Period** report displays the *Select Balance Period 0x* filter option.

You can see the settings on the **View Pay Results - Balance Period Mapping** report.

**Australia****Canada****France****United Kingdom****United States**

The Global Modern Services payroll administrator wants to see the **Payroll Register by Period** report for all balance periods for Australia. She configures the **Maintain Pay Results - Balance Period Mapping** task with these settings.

| Select Balance Period | Balance Period                                            | Label |
|-----------------------|-----------------------------------------------------------|-------|
| Balance Period 01     | Current Period                                            | PTD   |
| Balance Period 02     | QTD - Current Calendar Quarter<br>(based on Payment Date) | QTD   |
| Balance Period 03     | YTD - Tax Year                                            | YTD   |

When she runs the **Payroll Register by Period** report, she selects a pay group or pay run group for Australia only from the **Pay Run Groups and/or Pay Group Details** field.

The Global Modern Services payroll administrator wants to see the **Payroll Register by Period** report for all balance periods for Canada. She configures the **Maintain Pay Results - Balance Period Mapping** task with these settings.

| Select Balance Period | Balance Period                                          | Label |
|-----------------------|---------------------------------------------------------|-------|
| Balance Period 01     | MTD - Current Calendar Month<br>(based on Payment Date) | MTD   |
| Balance Period 02     | YTD - Current Calendar Year<br>(based on Payment Date)  | YTD   |

When she runs the **Payroll Register by Period** report, she selects a pay group or pay run group for Canada only from the **Pay Run Groups and/or Pay Group Details** field.

The Global Modern Services payroll administrator wants to see the **Payroll Register by Period** report for all balance periods for France. She configures the **Maintain Pay Results - Balance Period Mapping** task with these settings.

| Select Balance Period | Balance Period                                             | Label |
|-----------------------|------------------------------------------------------------|-------|
| Balance Period 01     | MTD - Current Calendar Month<br>(based on Period End Date) | MTD   |
| Balance Period 02     | YTD - Current Calendar Year<br>(based on Period End Date)  | YTD   |

When she runs the **Payroll Register by Period** report, she selects a pay group or pay run group for France only from the **Pay Run Groups and/or Pay Group Details** field.

The Global Modern Services payroll administrator wants to see the **Payroll Register by Period** report for all balance periods for the UK. She configures the **Maintain Pay Results - Balance Period Mapping** task with these settings.

| Select Balance Period | Balance Period | Label |
|-----------------------|----------------|-------|
| Balance Period 01     | Current Period | PTD   |

| Select Balance Period | Balance Period                                                             | Label |
|-----------------------|----------------------------------------------------------------------------|-------|
| Balance Period 02     | GBR Stat Calc: YTD Current Tax Year (using Country Tax Year and Hire Date) | YTD   |

When she runs the **Payroll Register by Period** report, she selects a pay group or pay run group for the UK only from the **Pay Run Groups and/or Pay Group Details** field.

The Global Modern Services payroll administrator wants to see the **Payroll Register by Period** report for all U.S. balance periods. She configures the **Maintain Pay Results - Balance Period Mapping** task with these settings.

| Select Balance Period | Balance Period                                         | Label |
|-----------------------|--------------------------------------------------------|-------|
| Balance Period 01     | MTD - Current Calendar Month (based on Payment Date)   | MTD   |
| Balance Period 02     | QTD - Current Calendar Quarter (based on Payment Date) | QTD   |
| Balance Period 03     | YTD - Current Calendar Year (based on Payment Date)    | YTD   |

When she runs the **Payroll Register by Period** report, she selects a pay group or pay run group for the U.S. only from the **Pay Run Groups and/or Pay Group Details** field.

#### Related Information

##### Tasks

[Set Up Payroll Register by Period](#) on page 751

##### Reference

[FAQ: View Payroll Results](#) on page 795

## View Payroll Results

### Prerequisites

- Configure the balance periods to display on payroll results reports on the **Maintain Pay Results - Balance Period Mapping** task.
- Calculate at least 1 payroll for the worker.
- Depending on your payroll country, the **View Payroll Results** report is secured to these domains:
  - *Reports: Results for Worker (Pay Calculation)* - AUS domain in the AUS Payroll functional area.
  - *Reports: Results for Worker (Pay Calculation)* - CAN domain in the CAN Payroll functional area.
  - *Reports: Results for Worker (Pay Calculation)* - FRA domain in the FRA Payroll functional area.
  - *Reports: Results for Worker (Pay Calculation)* - UK domain in the UK Payroll functional area.
  - *Reports: Results for Worker (Pay Calculation)* - USA domain in the USA Payroll functional area.

### Context

The **View Payroll Results** report from the worker profile is the primary report for administrators to view calculated payroll results for a worker. To verify that complex or new configurations are displaying expected results, view worker results on this report before completing a payroll.

This report provides access to payroll results for past, current, and future positions for the worker. Consider limiting permissions to the security domain of this report to payroll administrators, payroll partners, and HR partners.

For Payroll for the UK, the Payroll ID displays for UK workers.

In addition to giving the result, payment, and status, the report includes:

- Actuals.
- Additional pay components.
- Details of the payment.
- Gross-to-net pay.
- Other accounting information.
- Pay accumulation balances.
- Payroll input.
- Tax details. (AUS and UK)
- Tax elections. (CAN and USA)
- Payroll results summary in the standard French format. (FRA)
- Worker details. (FRA)

Workday also provides a *Get Payroll Results* web service.

### Steps

1. Access the worker profile by searching for the worker's name.
2. From the worker profile, click **Pay > Results**.
3. Click the magnifying glass icon for the result that you want to view.

### Next Steps

(Optional) View a smaller set of most commonly referenced results, such as worker name, date of payment, and amount, on these summary reports:

- **Pay Calculation Results for Worker**
- **Pay Calculation Results for Group of Workers**

Use the **Payroll Calculation Processing Report** to research payroll results that you want to view or take action on, such as:

- Recalculate
- Complete
- Cancel
- Hold
- Cancel pay complete

**Note:** For best performance, when processing all payroll results for a large pay group, such as 20,000 workers; Workday recommends running these individual tasks instead of using the report:

- **Run Pay Calculation**
- **Run Pay Cancel**

For Payroll for France, use these reports to view an aggregated view of payroll results based on the payslip configuration:

- **FRA Payroll Journal By Company**
- **FRA Payroll Journal by Establishment**

Use the **Payroll Calculation Lines Processing Report** to view details of the individual payroll result lines and their related calculations. You can also view, analyze, and create a detailed report on the selected payroll result lines.

Use the **Payroll Results Compare Periods** report to compare pay component variances by period.

To display a worker's hours for an earning or deduction on the **Actuals** tab of their pay results:

1. Edit the earning or deduction that you want to display hours for on the pay result.

2. Add a related calculation for *Hours* to the earning or deduction.
3. Add the *General Ledger: Hours* pay component group to that related calculation.

See: [Set Up Pay Component Related Calculations](#) on page 241.

## Set Up Payroll Registers

---

### Setup Considerations: Payroll Register

This topic provides information for planning the payroll register configuration for these countries:

- Payroll for Canada
- Payroll for the UK
- Payroll for the U.S.

You can use this topic to help make decisions when planning your configuration and use of payroll register. It explains:

- Why to set it up.
- How it fits into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

#### What It Is

Workday provides you with a configurable framework that enables you to report payroll register as a preformatted PDF. You can produce an output that's optimized for readability and printing.

#### Business Benefits

The payroll register in Workday enables you to:

- Configure reports with the latest payroll information.
- Easily reconcile payroll results to ensure accuracy of your results.
- Produce summarized results along with granular details, providing flexibility with viewing your data.

## Use Cases

You can use the payroll register in Workday to:

- Analyze worker results for on-cycle and off-cycle payroll.
- Audit and reconcile payroll results internally or externally, before completing the pay period.
- Check for errors in payroll results by reconciling accounting journals against bank statements.
- Help reconcile ledgers for accounting.
- Provide information to budget for bonuses.
- Report worker rates and hours for managers to review.
- Summarize and drill into specific payroll result for one or more periods and pay groups.
- Understand payroll increase in 1 month compared to previous.
- Verify adjustments and hours from timekeeping reports.
- Verify HR data such as hire dates and termination dates.

## Questions to Consider

| Question                                                    | Considerations                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|-------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| How do you want to structure the payroll register report?   | <p>You can use the <b>Maintain Payroll Register Configurations</b> task to determine:</p> <ul style="list-style-type: none"> <li>• The group of pay components you want to display on 4 different sections of the payroll register.</li> <li>• The names to display for each section and group.</li> </ul> <p>For each section, you can display:</p> <ul style="list-style-type: none"> <li>• Only hours and rates for earnings in section 1.</li> <li>• Taxes in section 2.</li> <li>• Deductions in section 3.</li> <li>• Employer paid for benefits or taxes in section 4.</li> </ul>                                                                                                                                                                           |
| What detail do you want to include on the payroll register? | <p>You can configure different details to view in the payroll register report based on the configuration of the <b>Payroll Register</b> task. For 1 pay period, the report displays:</p> <ul style="list-style-type: none"> <li>• Payroll period results of any or all statuses.</li> <li>• Payment details, such as check or direct deposit.</li> <li>• Hours worked.</li> <li>• Rates.</li> <li>• Wages.</li> </ul> <p>For a balance period, the report displays month-to-date, quarter-to-date, or year-to-date:</p> <ul style="list-style-type: none"> <li>• Pay balance amounts.</li> <li>• Payroll results for terminated workers.</li> <li>• Pay balance hours.</li> <li>• Wages.</li> </ul> <p>Both period and balance period display the employee ID.</p> |

| Question                                                                          | Considerations                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
|-----------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Do you want to report on data other than pay components and related calculations? | <p>To display information other than pay components or related calculations, Workday recommends that you create a custom report instead of using the payroll register functionality. You can create a custom report that uses the payroll register configuration by copying these reports and applying a new business form layout:</p> <ul style="list-style-type: none"> <li>• <b>Payroll Register - Report Design</b></li> <li>• <b>Payroll Register for Balance Period - Report Design</b></li> </ul> <p>Example: <b>Payment Date</b> is included on the <b>Payroll Register - Report Design</b>.</p> |
| In what format do you want to produce your report?                                | The <b>Payroll Register</b> task produces a formatted PDF report. Workday enables you to generate a limited spreadsheet that's based on predefined pay component groups. When you select a balance period, you can only generate a formatted PDF report.                                                                                                                                                                                                                                                                                                                                                 |
| What payroll period or balance period do you want to report on?                   | <p>You can report on either a pay period or balance period on the <b>Payroll Register</b> task. To report on multiple pay periods or balance periods, Workday recommends that you use these alternative standard reports:</p> <ul style="list-style-type: none"> <li>• <b>Payroll Register by Period</b></li> <li>• <b>Payroll Register Summary</b></li> </ul>                                                                                                                                                                                                                                           |

### Recommendations

For best performance, run payroll register reports for pay groups of 20,000 or fewer employees.

### Requirements

No impact.

### Limitations

On the **Payroll Register** task, you can't select multiple pay periods. When you select a balance period, you can only generate a formatted PDF report.

Workday Payroll for France doesn't support the **Payroll Register** task.

You can only create a payroll register configuration that covers 1 country at a time.

### Tenant Setup

No impact.

### Security

### Connections and Touchpoints

| Features                     | Considerations                                                                                                                                                                                                                   |
|------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Earnings and deductions      | You can configure the payroll register based on the earnings and deductions you have set up.                                                                                                                                     |
| Payroll register spreadsheet | You can use the <b>Payroll Register</b> task to generate a spreadsheet. However, the output is predefined and based on earnings and deductions associated with several <i>Payroll Register Excel Group</i> pay component groups. |

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships in your tenant. Learn more about the [Workday Touchpoints Kit](#) on Workday Community.

## Other Impacts

While not part of the payroll register functionality, Workday delivers other standard payroll register reports that enable you to filter or sort through multiple periods. You can also create a custom report that is configurable based on delivered report fields, but doesn't produce a PDF.

## Set Up Payroll Register

### Prerequisites

Set up pay components and pay component groups.

### Context

This topic provides instructions for setting up a payroll register for these countries:

- Payroll for Australia
- Payroll for Canada
- Payroll for the UK
- Payroll for the U.S.

To help you reconcile your payroll results with impacted data from other areas of Workday or external systems, you can configure payroll register reports that provide:

- Summaries of worker payroll results.
- Report on a specific period or balance period for pay groups and organizations.
- Organization subtotals and totals.

Workday provides a defined framework for payroll register reports that you can configure to display your payroll data. You can generate the payroll register as a:

- Preformatted PDF that is optimized for readability and printing, through the **Payroll Register** task.
- Custom report, by copying the **Payroll Register - Report Design** and the **Payroll Register for Balance Period - Report Design** reports.

Workday includes the same information in each output.

Depending on your payroll country, the **Payroll Register** task is secured to these domains:

- *Reports: Pay Calculation Results for Pay Group (Results)* - AUS domain in the AUS Payroll functional area.
- *Reports: Pay Calculation Results for Pay Group (Results)* - CAN domain in the CAN Payroll functional area.
- *Reports: Pay Calculation Results for Pay Group (Results)* - UK domain in the UK Payroll functional area.
- *Reports: Pay Calculation Results for Pay Group (Results)* - USA domain in the USA Payroll functional area.
- *Worker Data: Payroll (Payroll Input)* domain in the Core Payroll functional area.

For best performance, Workday recommends running payroll register reports for pay groups of 20,000 or fewer employees.

## Steps

1. (Optional) Access the **Edit Earning** task to configure how to manage hours on the payroll register subtotals.

In the **Related Calculations** grid, access a related calculation that returns hours.

From the **Result Line** prompt in the **Hours for Reporting** section, select to *Add* or *Subtract* hours from payroll register subtotals.

You can configure rates to Section 1 of the payroll register. The same pay components will aggregate into 1 payroll result line for scannability.

Security: *Set Up: Payroll (Calculations - Payroll Specific)* domain in the Core Payroll functional area.

2. Access the **Maintain Payroll Register Configurations** task.

As you complete the task, consider:

| Option                                  | Description                                                                                                                                                                                                                                                                                                  |
|-----------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Payments Section Name</b>            | Workday automatically displays settled payments in the far right column on the payroll register. Workday automatically displays Payments as the section heading. You can use this field to override the section name. This section displays only when you run the <b>Payroll Register</b> task for a period. |
| <b>Display Negative Values in Black</b> | Workday automatically displays negative values in red on the PDF version.                                                                                                                                                                                                                                    |

As you complete the **Sections** grid, consider:

| Option                | Description                                                                                                                                                                                                                               |
|-----------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Section Number</b> | You can configure 4 sections.<br><br>For the PDF output of the payroll register, each section defines a column on the payroll register.<br><br>Section 4 only displays on the subtotal and grand total pages of the payroll register PDF. |
| <b>Name</b>           | Workday populates a recommended name for each section. Examples: Earnings, Taxes, Deductions.                                                                                                                                             |
| <b>Group Number</b>   | You can configure 2 groups for each section, except for Section 2, where you can only configure 1 group.<br><br>For the PDF output of the payroll register, each group defines groups of data that display in each column.                |
| <b>Group Name</b>     | Workday populates a recommended name for each group. Examples: Other Taxable Income, Pre-tax Deductions, Post-tax Deductions.                                                                                                             |
| <b>Pay Components</b> | You can select any pay component or pay component group. Workday recommends this configuration: <ul style="list-style-type: none"> <li>• Section 1: Earnings that add to gross with hours and related rate calculations.</li> </ul>       |

| Option       | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|--------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|              | <ul style="list-style-type: none"> <li>Section 2: Employee-paid taxes.</li> <li>Section 3: Nontax deductions that reduce net pay.</li> <li>Section 4: Employer-paid benefits and taxes.</li> </ul>                                                                                                                                                                                                                                                                             |
| <b>Rates</b> | You can only display rates in Section 1. Rates are only displayed when you run the <b>Payroll Register</b> task for a period.                                                                                                                                                                                                                                                                                                                                                  |
| <b>Wages</b> | <p>For Section 2 only. You can report wages based on:</p> <ul style="list-style-type: none"> <li>either <i>Subject Wages</i> or <i>Taxable Wages</i> (CAN or USA)</li> <li><i>GBR Nlable Earnings</i> and <i>Taxable Pay to Date</i> (UK)</li> </ul> <p>on your payroll register PDF reports.</p> <p>You can view wage details at the worker, subtotal, and grand total level based on a pay period or a balance period (year-to-date, quarter-to-date, or month-to-date).</p> |

Security: *Set Up: Payroll (Reporting)* domain in the Core Payroll functional area.

### Next Steps

Access the **Payroll Register** task to generate a PDF or Excel payroll register report.

You can further customize the payroll register report by copying these reports and attaching a custom business form layout in Report Designer:

- **Payroll Register - Report Design**
- **Payroll Register for Balance Period - Report Design**

When using the balance period report, Workday recommends you use the report fields in the data source together rather than using them independently for better performance.

### Related Information

#### Tasks

[Copy Reports](#)

[Steps: Create a Business Form Layout](#)

## Create a Payroll Register Spreadsheet

### Prerequisites

- Set up pay components and pay component groups.
- Set up a payroll register for your payroll country.

### Context

This topic provides instructions for creating a payroll register spreadsheet for these countries:

- Payroll for Australia
- Payroll for Canada
- Payroll for the UK

- Payroll for the U.S.

You can configure a payroll register spreadsheet to provide more data formatting options when reconciling payroll results. The payroll register spreadsheet displays worker totals for predefined columns. Example:

- Base salary
- Bonus
- Advance payments

You can configure which pay components display in each column.

Regardless of configuration, Workday displays a worker's:

- Annual salary, based on the **Total Base Pay Annualized - Amount** report field.
- Hourly rate, based on the **Hourly Rate - Amount** report field.
- Payment method.
- Hire and termination dates.

## Steps

1. Access the **Edit Earning** or **Edit Deduction** task.

Security: *Set Up: Payroll (Calculations - Payroll Specific)* domain in the Core Payroll functional area.

2. On the **Non-Effective Dated** tab, select a Payroll Register Excel Group pay component group from the **Groups** prompt.

Example: Select *Payroll Register Excel Group Advance Payment* to include the value of the pay component in the Advance Payment column on the payroll register spreadsheet.

These pay component groups and corresponding columns only apply to the payroll register configurations for Payroll for the UK:

- *Payroll Register Excel Group Child Care Vouchers*
- *Payroll Register Excel Group Pennies from Heaven*

For Payroll for the UK, Workday automatically reports the sum of pay components in the *GBR Court Order (All): Deductions [GBR]* pay component group in the Court Order column of the payroll register spreadsheet.

3. Access the **Payroll Register** task.

Select *Excel* from the **Generate as** prompt.

For best performance, Workday recommends running payroll register reports for pay groups of 25,000 or fewer employees.

Depending on your payroll country, the **Payroll Register** task is secured to these domains:

- *Reports: Pay Calculation Results for Pay Group (Results)* - *AUS* domain in the AUS Payroll functional area.
- *Reports: Pay Calculation Results for Pay Group (Results)* - *CAN* domain in the CAN Payroll functional area.
- *Reports: Pay Calculation Results for Pay Group (Results)* - *UK* domain in the UK Payroll functional area.
- *Reports: Pay Calculation Results for Pay Group (Results)* - *USA* domain in the USA Payroll functional area.
- *Worker Data: Payroll (Payroll Input)* domain in the Core Payroll functional area.

## Result

Workday generates the payroll register spreadsheet and sends it to **My Tasks**.

## Set Up Payroll Register by Period

### Prerequisites

To manage balance periods that display on the report, set up balance periods on the **Maintain Pay Results - Balance Period Mapping** task.

Security: *Set Up: Payroll (Reporting)* domain in the Core Payroll functional area.

### Context

This topic provides instructions for creating a payroll register by period for these countries:

- Payroll for Australia
- Payroll for Canada
- Payroll for the UK
- Payroll for the U.S.

The **Payroll Register by Period** report provides payroll totals when you select pay period, pay group, or pay run groups. For each gross-to-net calculation, it also provides details for:

- Total gross pay.
- Earning and deductions.
- Net pay.
- Employer-paid benefits and taxes.
- Total number of results and employees.

You can create your own versions of the payroll register with additional reporting criteria and customized sections.

### Steps

1. Access the **Maintain Payroll Register by Period Configurations** task.
2. In the **Display Total Hours** column, you can select to display:
  - *Hours Paid on Result*: Aggregates all pay component related calculations that have *Add* or *Subtract* selected in the **Hours for Reporting - Result Line** field on the **View Earning** or **View Deduction** task.
  - *Hours Worked on Result*: Aggregates all pay component related calculations with the **Hours for Reporting - Result** check box selected on the **View Earning** or **View Deduction** task.
3. In the **Organization Worktags Filters** column, select up to 6 worktags.  
 You can enter worktag values as filters for the report data that cause additional columns to display.  
 Example: If you select *Company*, you can produce the register for workers in specific companies. The register then includes a column that displays each company.
4. Select the sections to include in the register:

| Section         | Description                                                                                                                                                                                                                                                                                                                      |
|-----------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Earnings</b> | <p>Earnings that add to the gross pay.</p> <p>Includes pay result lines with <i>Gross</i> or <i>Net</i> pay accumulations.</p> <p>Doesn't include pay components in these pay component groups:</p> <ul style="list-style-type: none"> <li>• GBR Non Cash Taxable Benefits [GBR]</li> <li>• Non Cash Taxable Benefits</li> </ul> |

| Section                         | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
|---------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Deductions</b>               | <p>Nontax deductions that reduce net pay.</p> <p>Includes pay result lines with Gross or Net pay accumulations.</p> <p>Doesn't include pay components in these pay component groups:</p> <ul style="list-style-type: none"> <li>GBR Non Cash Taxable Benefits [GBR]</li> <li>Non Cash Taxable Benefits</li> </ul>                                                                                                                                                                     |
| <b>Taxes</b>                    | <p>Employee-paid taxes.</p> <p>Includes pay result lines with Gross or Net pay accumulations.</p> <p>Doesn't include pay components in these pay component groups:</p> <ul style="list-style-type: none"> <li>1042-S Withholding (Tax Treaty) Taxes [USA]</li> <li>Statutory Taxes (EE) [USA]</li> </ul>                                                                                                                                                                              |
| <b>Employer Paid</b>            | <p>Employer-paid benefits and taxes in the <b>Additional Pay Components to Calculate</b> field on the run category for a pay group.</p> <p>Includes pay components in these pay component groups:</p> <ul style="list-style-type: none"> <li>Employer Paid Benefits [FRA GBR AUS CAN USA]</li> <li>All AUS Reportable Fringe Benefits Amounts (FBT/RFBA) [AUS].</li> <li>AUS Superannuation Employer Contributions [AUS]</li> <li>Statutory Taxes Employer (All Countries)</li> </ul> |
| <b>Noncash Taxable Benefits</b> | <p>Noncash taxable benefits earnings that are listed in the <b>Additional Pay Components to Calculate</b> field on the run category for a pay group.</p> <p>Includes pay components in these pay component groups:</p> <ul style="list-style-type: none"> <li>1042-S Withholding (Tax Treaty) Taxes [USA]</li> <li>Statutory Taxes (EE) [USA]</li> <li>GBR Non Cash Taxable Benefits [GBR]</li> <li>Non Cash Taxable Benefits</li> </ul>                                              |

**Next Steps**

Run the **Payroll Register by Period** report.

**Related Information****Tasks**

[Set Up Balance Periods for Reports with Payroll Results](#) on page 739

**Troubleshooting: Payroll Register**

This topic provides information about troubleshooting for these countries:

- Payroll for Canada
- Payroll for the UK
- Payroll for the U.S.

#### No results for selected organization hierarchy in the Payroll Register report.

**Cause:** In the **Payroll Register** task, the organization hierarchy you selected on the **Organizations** prompt has subordinate organizations, but you didn't select the **Include Subordinate Organizations** check box.

**Solution:** Select the **Include Subordinate Organizations** check box to include results from the subordinate organizations.

#### Steps

1. Access the **Payroll Register** task.
2. Ensure you've selected the correct option on the **Organizations** prompt.
3. Select the **Include Subordinate Organizations** box.

#### No results for specific workers in the Payroll Register report.

**Solution:** Check that the workers have pay results for the selected organization and pay group or within the balance period.

#### Steps

1. Go to the missing worker's profile.
2. Click the worker's **Pay** tab.
3. Click the **Results** tab.
4. Verify that the worker has pay results for the selected organization and pay group for the pay period or within the balance period.

### FAQ: Why do duplicate tax names display on the payroll register?

For Payroll for Canada, the UK, and the U.S., if you run the **Payroll Register** task with **Separate Taxes by Jurisdiction** selected, each tax in the report displays with its pay component name followed by the tax authority worktag. You might see duplicate tax names because the name of the pay component is similar to the name of the tax authority worktag.

## Create Custom Payroll Reports

---

### Setup Considerations: Custom Payroll Reports

You can use this topic to help make decisions when planning your configuration and use of custom payroll reports. It explains:

- Why to set it up.
- How it fits into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

## What It Is

You can create custom payroll reports with specific fields, filters, worktags, and other criteria. You can create custom reports to return payroll data for individual workers or all employees for a specific range of dates. Your reports can include gross, net, taxes, earnings, deductions, and variances of pay results.

## Business Benefits

Payroll custom reports enable you to:

- Drill into payroll data to identify correlations or discrepancies, such as missing deductions or earnings.
- Take action on payroll results, such as completing retro results.
- Compare payroll result variances, such as earnings differences between the current and previous period.
- Provide payroll data to nonpayroll users, such as earnings balances for a manager's employees.

## Use Cases

- You can use simple or advanced reports to analyze detailed information on a targeted set of data, such as tax totals for a pay period.
- You can use a matrix report to summarize a large amount of data, such as pay group assignments.
- You can use composite reports to view combined data from multiple sources, such as year-to-date, month-to-date, and quarter-to-date pay component variances.
- You can use search reports to find a subset of data and take an action on it.

## Questions to Consider

| Question                                                                     | Considerations                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
|------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Is there a standard report that delivers most of the functionality you want? | You can use the <b>Copy Standard Report to Custom Report</b> task to modify a standard report.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| Do you know which data source to use for your custom report?                 | <p>The data source that you select determines:</p> <ul style="list-style-type: none"> <li>• How quickly Workday returns results.</li> <li>• The primary business object.</li> <li>• The starting data set.</li> <li>• Which users can access the report.</li> <li>• Which users you can share the report with.</li> </ul> <p>You can build custom payroll reports from a data source, such as <b>All Pay Balances for Payroll</b>. You can view all data sources on the <b>Data Sources</b> report. Use indexed data sources whenever possible. Select filtered data sources such as <b>Workers by Organization</b> or focused data sources such as <b>My Direct Reports</b> to improve efficiency.</p> <p><b>Note:</b> Workday eliminates non-indexed data sources from the selection list when you select the <b>Optimized for Performance</b> check box on the <b>Create Custom Report</b> task. To view and select from all data sources, clear the check box.</p> |
| Will you use the report to transfer payroll data to a third-party service?   | If you use Report-as-a-Service (RaaS) or Excel/CSV to transfer payroll data, consider using Studio integrations to export large amounts of data to third-party services.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

| Question                                                                                          | Considerations                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
|---------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Which roles in your organization need to access custom payroll reports?                           | You can use reports using organizational hierarchies, role-based permissions, and row-level security on custom reports. You can also secure by pay group, ensuring payroll partners can only view data for the pay groups they support.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| Who can you share reports with?                                                                   | <p>You can share all report types, apart from simple reports, with authorized users and groups that have access to the data sources and data source filters. You can convert simple reports to advanced reports to share them. Once shared, users running the report can view the results filtered by their security. Example: If the user doesn't have security access to a report field, the data returned from the report field won't be visible on the report.</p> <p>You can use the:</p> <ul style="list-style-type: none"> <li>• <b>View Security Groups for User</b> report to see what security groups a user belongs to.</li> <li>• <b>View Security for Securable Item</b> report to see what security groups can access the securable item. Example: A data source or report field.</li> </ul> |
| Do you need to share a custom report with nonpayroll users, such as managers or benefit partners? | <p>You can restrict pay component access by creating dedicated security segments.</p> <p>You can only apply pay component security segments to custom reports based on segmented data sources.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| Do you need to transfer ownership of reports?                                                     | You can use the <b>Transfer Ownership of Custom Reports</b> task.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| Do you need to report on pay components and pay accumulations?                                    | You can map pay components or pay accumulations to Workday-owned report fields. If you map more than 1 pay component to the same report field, Workday sums the component values and assigns the results to the report field.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| Do you intend to report on balance periods?                                                       | Run the <b>Integration IDs</b> report with the <i>Balance Period (Workday Owned)</i> business object to view all balance periods that you can use on custom reports.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| What calculated fields can you include in reports?                                                | Use the <b>All Calculated Fields</b> report to identify calculated fields for custom reports. If there isn't a calculated field that meets your needs, use the <b>Create Calculated Field</b> task. Example: If you want to find the worker's most recent completed payroll results, use the <b>Most Recent Completed Payroll Results</b> report field. This report field returns the 3 most recently completed payroll results for a worker.                                                                                                                                                                                                                                                                                                                                                              |
| Do you need to make your payroll data easier to report on?                                        | You can use custom or Workday-delivered worktags to more easily access information, filter searches, and analyze data in aggregated and                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

| Question | Considerations                                                                                                                                                                                              |
|----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|          | summarized reports. You can use worktags for cost allocations or to tag pay components with supplemental information. You can assign worktags to the payroll result level or the payroll result line level. |

### Recommendations

For best performance, Workday recommends you to:

- Use indexed Reporting Data Source (RDS) and filters where available.
- Avoid using Do Not Use or DNU fields.
- Leverage a consolidated report consisting of matrix reports and lookup fields and use together with indexed data sources and indexed field.
- Use the business object with the most instances as your primary business object. Example: Use the *Payroll Result Line* business object before the *Worker* business object for a better performing report.

| Reporting On                               | Recommendation                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

| Pay balances                               | <p>Use these standard report data sources:</p> <ul style="list-style-type: none"> <li>• <b>Earning/Deduction Payroll Balances for Organization</b></li> <li>• <b>Earning/Deduction Payroll Balances for Worker</b></li> <li>• <b>Earning/Deduction Payroll Results for Organization (As of Sub Period End Date)</b></li> <li>• <b>Earning/Deduction Payroll Results for Organization, Worker, Period and Date Range (As of Sub Period End Date)</b></li> <li>• <b>Earning/Deduction Payroll Results for Worker (As of Sub Period End Date)</b></li> </ul> <p>Ensure that you configure pay component security segments when using these report data sources.</p> |
| Aggregated balance periods                 | <p>If you don't require worktag balance calculations, consider using these Workday-delivered reports:</p> <ul style="list-style-type: none"> <li>• <b>Payroll Totals by Company</b></li> <li>• <b>Payroll Totals by Company and Pay Group Detail</b></li> <li>• <b>Payroll Totals by Company and Worker</b></li> <li>• <b>Payroll Totals by Company Pay Group Detail and Worker</b></li> </ul>                                                                                                                                                                                                                                                                   |
| Earning, deduction, or pay component codes | <p>For better performance, use the <b>Payroll Calculation</b> indexed report field instead of these report fields:</p> <ul style="list-style-type: none"> <li>• <b>Deduction</b></li> <li>• <b>Earning</b></li> <li>• <b>Pay Component Code</b></li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                       |

| Reporting On                                 | Recommendation                                                                                                                               |
|----------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------|
| Payroll result lines and worker-related data | Use the <b>Payroll Result Lines</b> data source for the report, and then specify the <i>Worker</i> business object as a field on the report. |

### Requirements

To report on tenanted Earnings, Deductions, Pay Component Related Calculations, or Pay Accumulations, you must map the components to Workday-owned report fields. If you map more than one pay component to the same report field, Workday sums the component values and assigns the results to the report field.

### Limitations

You can't use matrix or composite reports with RaaS integration.

Indexed data sources don't currently support segmented security. Example: You create a report for a cost center manager using segmented security. The report sums payroll result lines by pay component. It returns the sum of all payroll result lines rather than just the sum of the payroll result lines to which the cost center manager has access.

Worktags, especially unindexed worktags, might negatively affect performance. When filtering by worktags, use standard indexed worktags for the best performance, such as:

- *Business Unit*
- *Company*
- *Cost Center*
- *Location*
- *Pay Group*
- *Region*

### Tenant Setup

No impact.

### Security

| Domains                                                          | Considerations                                                                                                                                                                                                                                         |
|------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <i>Custom Report Creation</i> in the System functional area.     | Enables you to create and manage custom reports. This security grants modify privileges on reports in these domains: <ul style="list-style-type: none"> <li>• <i>Custom Report Management</i></li> <li>• <i>Custom/Standard Report Copy</i></li> </ul> |
| <i>Manage: All Custom Reports</i> in the System functional area. | Enables you to view, edit, and delete all custom reports, regardless of whether you're the report owner.                                                                                                                                               |

When creating a custom report, you can only use data sources and report fields in the security domains to which you have access.

### Business Processes

You can add custom reports as a step on relevant payroll business processes. Example: You can add custom reports to the *Pay Cycle Event* business process.

## Reporting

You can use these Workday-delivered reports and dashboards to track report usage in your tenant:

- **Report Administrator** dashboard - Displays tasks and reports that help you manage the reports in your tenant.
- **Report Run History** report - Displays how many times a report ran and details such as who ran the report and at what time.

| Reports                                            | Considerations                                                                                                                                                                                                                                                                                                                             |
|----------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Calculated Field Exception Audit</b>            | Enables you to validate your calculated fields and identify errors.                                                                                                                                                                                                                                                                        |
| <b>Custom Report Exception Audit</b>               | Enables you to validate report definitions.                                                                                                                                                                                                                                                                                                |
| <b>Custom Report Exceptions by Owner</b>           | Enables you to view exceptions for reports that: <ul style="list-style-type: none"> <li>• Include terminated workers.</li> <li>• Are enabled as worklets but not available on dashboards.</li> <li>• Are temporary or past their deletion date.</li> <li>• Aren't shared.</li> <li>• Include items marked as <b>Do Not Use</b>.</li> </ul> |
| <b>Custom Reports I Can Run Exception Audit</b>    | Enables you to view custom reports with exceptions.                                                                                                                                                                                                                                                                                        |
| <b>Reporting</b> tab on the <b>Tenant Analyzer</b> | You can use to identify custom reports that you can update to improve performance.                                                                                                                                                                                                                                                         |

## Integrations

For the best performance, use Workday-delivered integration cloud connectors, such as Check Print Connector and Payroll Journal Outbound Connector instead of RaaS.

When a custom report returns more than 50,000 lines, consider creating a Studio integration using Workday Web Services instead of a custom report or RaaS.

## Connections and Touchpoints

Custom reports touch any product area that returns data from the primary business object and related business objects.

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships across your tenant. Learn more about the [Workday Touchpoints Kit](#) on Workday Community.

## Map Fields for Custom Reporting of Pay Results

### Prerequisites

Security: *Set Up: Payroll (Reporting)* domain in the Core Payroll functional area.

### Context

In addition to viewing payroll results in standard Workday reports, you can create custom reports using the Workday Report Writer. To report on earnings, deductions, pay component related calculations, or pay accumulations, you must map the components to Workday-provided report fields.

If you map more than 1 pay component to the same report field, Workday sums the component values and assigns the results to the report field.

### Steps

1. Access the **Maintain Pay Results - Class Report Field Mapping** task.
2. Select the tab for the type of results you want to display in the report:
  - **Pay Component Results:** Use to map earnings, deductions, pay component related calculations, and pay accumulations to a report field. When you include the item in a custom report, the reported value represents a single gross-to-net result. Example: When reporting on a mapped earning that a worker receives in both a regular pay run and an on-demand additional payment, Workday returns a separate value for each result, not the combined result.
  - **Pay Component Balance Results:** Use to map earnings, deductions, pay component related calculations, and pay accumulations to a report field, and display the results over a specified balance period. Examples: month-to-date, quarter-to-date.
  - **Pay Component Group Results:** Use to map pay component groups to a report field.
3. As you complete the task consider:

| Field                     | Description                                                 |
|---------------------------|-------------------------------------------------------------|
| <b>Class Report Field</b> | Workday provides a set of placeholder report fields.        |
| <b>Label</b>              | The label to search for report fields in the Report Writer. |

### Result

View the list of reports that use a mapped report field on the **Used in Custom Reports** field on the **View Pay Results - Class Report Field Mapping** report.

### Next Steps

Access the **Create Custom Report** task to create a custom report.

**Note:** When creating a custom report, you must specify a data source. Select your mapped report fields from the *Payroll Processing/Results* prompt folder.

## Create Calculated Fields for Custom Pay Result Reporting

### Prerequisites

Security: *Custom Field Management* domain in the System functional area.

### Context

When creating calculated fields for custom reports, you can use the *Payroll Result* business object and the **Lookup Field with Prompts** function to return:

- Deductions.
- Earnings.
- Pay accumulations.
- Pay component groups.
- Pay component-related calculations.

This combination enables you to create an unlimited number of custom report fields.

### Steps

1. Access the **Create Calculated Field** task.
2. Select *Payroll Result* from the **Business Object** prompt.  
The business object associated with a calculated field controls the availability of fields.
3. Select *Lookup Field with Prompts* from the **Function** prompt.
4. On the **Calculation** tab, select a **Source Field** from the prompt:
  - *Payroll Result Amount for Pay Components*: Select to build the calculated field on a specific pay component. Example: *Base Pay* or *Bonus*.
  - *Payroll Result Amount for Pay Component Group*: Select to build the calculated field on a specific pay component group.
  - *Payroll Result Balances Amount for Pay Components*: Select to build the calculated field on a specific pay component over a period. Example: *YTD - Current Fiscal Year*.
5. Select a **Value** for each prompt field.  
Workday returns results on the calculated field that uses your specified prompt values.
6. (Optional) On the **Additional Info** tab, select a **Category** from the prompt to help you find the appropriate field to use when creating a report.

### Example

To include bonuses for the current payroll period in a report, you can create a custom calculated field on a specific pay component over a period. Select *Payroll Result Balances Amount for Pay Components* as your **Source Field**.

Select *Bonus* for your **Payroll Components** and *Current Period* for your **Balance Period**.

| Prompt Field              | Value                          |
|---------------------------|--------------------------------|
| <b>Payroll Components</b> | Example: <i>Bonus</i>          |
| <b>Balance Period</b>     | Example: <i>Current Period</i> |

### Next Steps

Add your calculated fields to custom reports using the **Create Custom Report** task.

You can copy a standard report, such as the **Pay Calculation Results for Group of Workers** report, and customize it by adding your custom calculated fields.

**Related Information****Concepts**[Concept: Calculated Fields](#)[Concept: Custom Reports](#)**Example: Control Visibility of Earning and Deduction Results**

This example illustrates how to enable users outside of payroll to view the results of selected earnings and deductions.

**Context**

Users outside of payroll want to view the results of selected earnings and deductions:

- The benefits administrator and the benefits partner want to view dental, medical, and vision deductions for employees.
- Managers want to view the base pay, hourly pay, and overtime pay for employees in their organization.

You can only apply segmented security to custom reports based on these segmented data sources:

- **Earning/Deduction Payroll Balances for Organization**
- **Earning/Deduction Payroll Balances for Worker**
- **Earning/Deduction Payroll Results for Organization (As of Sub Period End Date)**
- **Earning/Deduction Payroll Results for Organization, Worker, Period and Date Range (As of Sub Period End Date)**
- **Earning/Deduction Payroll Results for Worker (As of Sub Period End Date)**

**Prerequisites**

Create 2 deductions named *Dental* and *Medical*.

Create 3 earnings named *Base Pay*, *Hourly Pay*, and *Overtime Pay*.

Security:

- *Set Up: Payroll (Calculations - Payroll Specific)* domain in the Core Payroll functional area.
- *Security Configuration* domain in the System functional area.

**Steps**

1. Access the **Create Pay Component Security Segment** task and enter these values:

| Option        | Value                           |
|---------------|---------------------------------|
| Name          | <i>Benefits View</i>            |
| Pay Component | <i>Dental</i><br><i>Medical</i> |

2. Access the **Create Pay Component Security Segment** task and enter these values:

| Option        | Value                                                       |
|---------------|-------------------------------------------------------------|
| Name          | <i>Manager View</i>                                         |
| Pay Component | <i>Base Pay</i><br><i>Hourly Pay</i><br><i>Overtime Pay</i> |

3. Access the **Create Security Group** task and enter these values:

| Option                          | Value                                      |
|---------------------------------|--------------------------------------------|
| Type of Tenanted Security Group | Segment-Based Security Group               |
| Name                            | Benefits Visibility                        |
| Security Groups                 | Benefits Administrator<br>Benefits Partner |
| Access to Segments              | Benefits View                              |

4. Access the **Create Security Group** task and enter these values:

| Option                          | Value                        |
|---------------------------------|------------------------------|
| Type of Tenanted Security Group | Segment-Based Security Group |
| Name                            | Managers Visibility          |
| Security Groups                 | Manager                      |
| Access to Segments              | Manager View                 |

5. Update your security policies to grant the security groups that aren't segment-based to access payroll results reports.
- Access the **Domain Security Policies for Functional Area** report.
  - Edit permissions for the *Reports: Pay Calculation Results (Results - Reports based on Pay Component Security)* domain in the Core Payroll functional area.
  - In the **Security Groups** field on the **Report/Task Permissions** grid, select *Benefits Administrator*, *Benefits Partner*, and *Manager*.
  - Select the **View** check box.
6. Update your security policies to make the results of the selected earnings and deductions visible.
- Access the **Domain Security Policies for Functional Area** report.
  - Edit permissions for the *Reports: Pay Calculation Results (Results - Security based on Pay Component Security)* domain in the Core Payroll functional area.
  - In the **Security Groups** field in the **Report/Task Permissions** grid, select *Benefits Visibility*, and *Managers Visibility*.
  - Select the **View** check box.
7. [Activate Pending Security Policy Changes](#).

## Result

The benefits administrator and benefits partner can view pay results for the dental and medical deductions. They only see results for:

- Reports that are secured to the *Reports: Pay Calculation Results (Results - Reports based on Pay Component Security)* domain.
- Workers that they have security to view.
- Deductions or earnings in the pay component security segment.

Managers can view the base pay, hourly pay, and overtime pay for the employees that they're responsible for.

The **View Earning** and **View Deduction** reports include a tab listing the pay component security segments an earning or deduction belongs to.

## Next Steps

Use the **All Pay Components Security Segments** report to view the pay component security segments you created.

## Example: YTD Pay Balances for Custom Reporting

### Context

Several executives continue to pay into their retirement plan on a post-tax basis after reaching their pretax limit. You want to display the year-to-date balance on pay results for workers.

### Prerequisites

- Create pretax and post-tax retirement deductions.
- Add the retirement deductions to a pay accumulation called *Retirement Pre and Post Tax*.
- Create a custom report for YTD Payroll Results.
- Security: *Set Up: Payroll (Calculations - Payroll Specific)* domain in the Core Payroll functional area.

### Steps

1. Access the **Maintain Pay Results - Class Report Field Mapping** task.
2. Select the **Pay Component Balance Results** tab.
3. As you complete the task, consider:

| Option                           | Description                                                                                      |
|----------------------------------|--------------------------------------------------------------------------------------------------|
| <b>Pay Components to Include</b> | Select <i>By Calculation Type &gt; Pay Accumulation (ALL) &gt; Retirement Pre and Post Tax</i> . |
| <b>Balance Period</b>            | Select <i>YTD - Current Calendar Year (based on Payment Date)</i> .                              |
| <b>Label</b>                     | Enter a descriptive label, such as <i>YTD Pre/Post Tax Retirement</i> .                          |

4. Open your custom report YTD Payroll Results and add this field with these settings:

| Option                 | Description                                              |
|------------------------|----------------------------------------------------------|
| <b>Business Object</b> | Select <i>Payroll Result</i> .                           |
| <b>Field</b>           | Select <i>Payroll &gt; YTD Pre/Post Tax Retirement</i> . |
| <b>Options</b>         | Select <i>Do Not Show if Empty</i> .                     |

### Result

You can see the YTD balance on your custom YTD payroll results report.

### Example: Report on Payroll Result Lines on Worker Business Object

This example suggests 1 way you can use calculated fields to sum a specific payroll result line.

#### Context

You want a report that sums regular wages for completed pay periods. You need to create 2 calculated fields:

- 1 to identify result lines belonging to the pay component for regular wages (Example: Hourly pay).
- 1 to sum the result lines where the pay component is hourly pay.

#### Steps

1. Access the **Create Calculated Field** task.
2. For the first calculated field, enter:

| Option          | Description                                    |
|-----------------|------------------------------------------------|
| Field Name      | <i>PC on Payroll Result Line is Hourly Pay</i> |
| Business Object | <i>Payroll Result Line</i>                     |
| Function        | <i>True/False Condition</i>                    |

3. On the **Calculation** tab for the **PC on Payroll Result Line is Hourly Pay** calculated field, enter:

| Option           | Description                           |
|------------------|---------------------------------------|
| And/Or           | <i>And</i>                            |
| Field            | <i>Earning</i>                        |
| Operator         | <i>In the selection list</i>          |
| Comparison Type  | <i>Value specified in this filter</i> |
| Comparison Value | <i>Hourly Pay</i>                     |

4. Create a second calculated field with these values:

| Option          | Description                            |
|-----------------|----------------------------------------|
| Field Name      | <i>Sum of Regular Wages for Worker</i> |
| Business Object | <i>Worker</i>                          |
| Function        | <i>Sum Related Instances</i>           |

5. On the **Calculation** tab for the **Sum of Regular Wages for Worker** calculated field, enter:

| Option                                | Description                                               |
|---------------------------------------|-----------------------------------------------------------|
| Related Field                         | <i>Payroll Result Lines within Date Range (Completed)</i> |
| Sum Instances where condition is true | <i>PC on Payroll Result Line is Hourly Pay</i>            |
| Field to Sum                          | <i>Result Line Amount</i>                                 |

6. Access the **Create Custom Report** task and enter these values:

| Option      | Description                             |
|-------------|-----------------------------------------|
| Report Name | <i>Hourly Pay for Completed Periods</i> |

| Option             | Description                                                                                                          |
|--------------------|----------------------------------------------------------------------------------------------------------------------|
| <b>Report Type</b> | <i>Advanced</i>                                                                                                      |
| <b>Data Source</b> | Select a data source based on the <i>Worker</i> business object. Example: <b>All Active and Terminated Workers</b> . |

7. On the **Columns** tab, add the **Sum of Regular Wages for Worker** calculated field to the report.

### Result

The **Sum of Regular Wages for Worker** field on the custom report gives you the sum of the regular wage earnings for workers within the specified dates.

## Example: All Pay Component Totals by Periods

### Context

After completing payroll, you need to audit the pay component totals to verify that the totals match with outside deduction reports. You want a report that sums all pay component totals by a single or multiple periods.

### Prerequisites

Security: *Custom Report Creation* domain in the System functional area.

### Steps

1. Access the **Create Custom Report** task.
2. Enter these values:

| Option                           | Description                                   |
|----------------------------------|-----------------------------------------------|
| <b>Report Name</b>               | <i>All Pay Component Totals for Period(s)</i> |
| <b>Report Type</b>               | <i>Advanced</i>                               |
| <b>Optimized for Performance</b> | <i>Cleared</i>                                |
| <b>Data Source</b>               | <i>Payroll Result Lines</i>                   |

3. Click **OK**.
4. Confirm that the **Data Source Filter** is *Pay Calculation Result Lines for Pay Group and Period (As of Sub Period End Date)*.
5. On the **Columns** tab, enter these values:

| Business Object            | Field                               | Column Heading Override | Options    |
|----------------------------|-------------------------------------|-------------------------|------------|
| <i>Payroll Result Line</i> | <i>Pay Component Code</i>           | <i>Code</i>             |            |
| <i>Payroll Result Line</i> | <i>Pay Component Name</i>           | <i>Description</i>      |            |
| <i>Payroll Result Line</i> | <i>Pay Component Category</i>       | <i>Category</i>         |            |
| <i>Payroll Result Line</i> | <i>Result Line Amount (Indexed)</i> | <i>Amount</i>           | <i>Sum</i> |

6. On the **Sort** tab, enter these values:

| Field                         | Sort Direction                  | Summarize Detail Rows |
|-------------------------------|---------------------------------|-----------------------|
| <i>Pay Component Code</i>     | <i>Alphabetical - Ascending</i> |                       |
| <i>Pay Component Name</i>     | <i>Alphabetical - Ascending</i> |                       |
| <i>Pay Component Category</i> | <i>Alphabetical - Ascending</i> | Selected              |

7. On the **Prompts** tab, select the **Display Prompt Values in Subtitle** check box.

8. Enter these values on the **Prompt Defaults** grid:

| Field                                          | Prompt Qualifier      | Default Type            | Required | Do Not Prompt at Runtime |
|------------------------------------------------|-----------------------|-------------------------|----------|--------------------------|
| <i>Pay Run Groups and/or Pay Group Details</i> |                       | <i>No default value</i> | Selected |                          |
| <i>Periods</i>                                 |                       | <i>No default value</i> | Selected |                          |
| <i>Organizations</i>                           |                       | <i>No default value</i> |          | Selected                 |
| <i>Payroll Off-cycle Type</i>                  | <i>Default Prompt</i> | <i>No default value</i> |          | Selected                 |
| <i>Worker</i>                                  | <i>Default Prompt</i> | <i>No default value</i> |          | Selected                 |
| <i>Include Subordinate Organizations</i>       |                       | <i>No default value</i> |          | Selected                 |

9. On the **Output** tab, select *Chart and Table* from the **Output Type** prompt.

10. In the **Chart Options** section, enter these values:

| Option                        | Description                         |
|-------------------------------|-------------------------------------|
| <b>Chart Type</b>             | <i>Donut</i>                        |
| <b>Top n Values</b>           | <i>50</i>                           |
| <b>Categories (for label)</b> | <i>Pay Component Name</i>           |
| <b>Series (for legend)</b>    | <i>Result Line Amount (Indexed)</i> |

11. On the **Share** tab, select the *Share with specific authorized groups and users* option.

12. Select *Payroll Administrator* and *Payroll Partner* from the **Authorized Groups** prompt.

13. Click **OK**.

14. Make sure that the *Payroll Administrator* and *Payroll Partner* user groups have security access to the *Reports: Pay Calculation Results for Pay Group (Results)* domain in the Core Payroll functional area.

## Example: Pay Component Totals by Worker

### Context

This example illustrates how you can create a composite report that sums all pay component totals by worker for a single or multiple periods. Composite reporting uses matrix report types as sub reports to enable you to perform dynamic reporting.

**Steps**

1. Access the **Create Custom Report** task to configure your matrix sub report. Enter:

| Field       | Value                                    |
|-------------|------------------------------------------|
| Report Name | Pay Component Totals By Worker Subreport |
| Report Type | Matrix                                   |
| Data Source | Payroll Result Lines                     |

2. Click **OK**.
3. Select **Pay Calculation Result Lines for Pay Group and Period (As of Sub Period End Date)** as the **Data Source Filter**.
4. On the **Matrix** tab, add these values to the **Row Grouping** grid:

| Group By Field                                                                                                                                                                | Sort Rows                |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|
| Worker                                                                                                                                                                        | Alphabetical - Ascending |
| Payroll Calculation                                                                                                                                                           | Alphabetical - Ascending |
| Pay Component Category<br>If <i>Pay Component Category</i> isn't displayed in the drop-down, clear the <b>Optimized for Performance</b> check box on the <b>Advanced</b> tab. | Alphabetical - Ascending |

5. Replace the populated values with these values on the **Define the Field(s) to Summarize** grid:

| Summarization Type | Summarization Field          | Format   |
|--------------------|------------------------------|----------|
| Sum                | Result Line Amount (Indexed) | #,##0.00 |

**Note:** The **Result Line Amount (Indexed)** report field is secured to the *Public Reporting Items* domain. If you need security, use the **Result Line Amount** report field.

6. Navigate to the **Prompts** tab.
7. Select the **Populate Undefined Prompt Defaults** check box.  
Workday populates the values in your report, but the check box doesn't remain checked.
8. Select **Do Not Prompt at Runtime** for these fields:
  - **Organizations**
  - **Payroll Off-cycle Type**
  - **Worker**
  - **Include Subordinate Organizations**
9. On the **Share** tab, select **Share with all authorized users**.
10. Click **OK**.
11. Access the **Create Custom Report** task and enter:

| Field       | Value                          |
|-------------|--------------------------------|
| Report Name | Pay Component Totals By Worker |
| Report Type | Composite                      |

12. Add 2 rows on the **Business Object Enabled for Filtering and Grouping** grid and enter these business objects:

- *Worker*
- *Calculation (Payroll Calculation)*

13. Click **OK**.

14. Click column **C1** and select **Define > Control Field** from the drop-down menu.

15. Enter:

| Field           | Value         |
|-----------------|---------------|
| Column Name     | Worker        |
| Business Object | <i>Worker</i> |

16. Click **OK**.

17. Click column **C2** and select **Define > Control Field**.

18. Enter:

| Field           | Value                                    |
|-----------------|------------------------------------------|
| Column Name     | Description                              |
| Business Object | <i>Calculation (Payroll Calculation)</i> |

19. Click **OK**.

20. Click column **C3** and select **Define > Lookup Field Value**.

21. Enter:

| Field                | Value                   |
|----------------------|-------------------------|
| Column Name          | Code                    |
| Control Field Column | <i>Description</i>      |
| Return Field         | <i>Calculation Code</i> |

22. Click **OK**.

23. Click column **C4** and select **Define > Data**.

24. Enter:

| Field           | Value                                                                                                                                                                     |
|-----------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Column Name     | Amount                                                                                                                                                                    |
| Sub Report Name | <i>Pay Component Totals By Worker Subreport</i><br>Workday populates the <b>Map Sub Report Prompts</b> grid with some of the prompt values you defined in the sub report. |

25. Enter these values in the **Map Sub Report Prompts** grid:

| Prompt Field                            | Value Type                               |
|-----------------------------------------|------------------------------------------|
| Pay Run Groups and/or Pay Group Details | <i>Prompt User for Value at Run Time</i> |
| Periods                                 | <i>Prompt User for Value at Run Time</i> |

26. From the **Field to Aggregate** prompt, select *Sum of Result Line Amount (Indexed)*.

27. Click **OK**.

**Related Information****Tasks**[Steps: Create Matrix Reports](#)[Steps: Create Composite Reports](#)**Example: Payroll Balances for Organization****Context**

This example illustrates 1 way that you can create an advanced report to view earning and deduction payroll balances for an organization. You want to review the month-to-date payroll balances.

**Prerequisites**

Security: *Custom Report Creation* domain in the System functional area.

**Steps**

1. Access the **Create Custom Report** task.

2. Enter these values:

| Option                           | Description                                                |
|----------------------------------|------------------------------------------------------------|
| <b>Report Name</b>               | <i>Payroll Balances for Organization</i>                   |
| <b>Report Type</b>               | <i>Advanced</i>                                            |
| <b>Optimized for Performance</b> | Cleared                                                    |
| <b>Data Source</b>               | <i>Earning/Deduction Payroll Balances for Organization</i> |

3. Click **OK**.

4. Confirm that the **Data Source Type** is *Standard* and **Primary Business Object** is *Payroll Result Line*.

5. On the **Columns** tab, enter these values:

| Business Object            | Field                                          | Column Heading Override | Options |
|----------------------------|------------------------------------------------|-------------------------|---------|
| <i>Payroll Result Line</i> | <i>Period</i>                                  |                         |         |
| <i>Payroll Result Line</i> | <i>Payroll Calculation</i>                     |                         |         |
| <i>Payroll Result Line</i> | <i>Pay Balance Amount for Balance Period 1</i> |                         |         |
| <i>Payroll Result Line</i> | <i>~Worker~</i>                                |                         |         |

6. On the **Prompts** tab, from the **Runtime Date Prompts** section, consider:

| Option                                   | Description                         |
|------------------------------------------|-------------------------------------|
| <b>Effective Date</b>                    | <i>Use date and time at runtime</i> |
| <b>Entry Date</b>                        | <i>Use date and time at runtime</i> |
| <b>Display Prompt Values in Subtitle</b> | Select the check box.               |

7. Enter these values on the **Prompt Defaults** grid:

| Field               | Prompt Qualifier | Default Type            | Required |
|---------------------|------------------|-------------------------|----------|
| <i>Organization</i> |                  | <i>No default value</i> | Selected |

| Field                                       | Prompt Qualifier | Default Type            | Required |
|---------------------------------------------|------------------|-------------------------|----------|
| <i>Balance Period 1</i>                     |                  | <i>No default value</i> | Selected |
| <i>As Of</i>                                |                  | <i>No default value</i> | Selected |
| <i>Earnings/Deductions</i>                  |                  | <i>No default value</i> |          |
| <i>Reference Period for Balance</i>         |                  | <i>No default value</i> |          |
| <i>~Terminated~<br/>~Workers~ From Date</i> |                  | <i>No default value</i> |          |
| <i>Include Subordinate Organizations</i>    |                  | <i>No default value</i> |          |
| <i>Separate Balances by Company</i>         |                  | <i>No default value</i> |          |
| <i>Separate Balances by Pay Group</i>       |                  | <i>No default value</i> |          |
| <i>Period Date Indicator</i>                |                  | <i>No default value</i> |          |
| <i>Include Results Processed by</i>         |                  | <i>No default value</i> |          |

When you run the report, using:

- A date calculation for *Balance Period 1*, you should enter the *As of* date to view the relevant dates. Select a balance period with a reporting only date calculation such as *MTD - Current calendar (Based on Payment Date) for Reporting Only*.
- A period calculation for *Balance Period 1*, you should enter the *Reference Period* to view the closest relevant dates.

8. On the **Output** tab, select *Table* from the **Output Type** prompt.

9. On the **Share** tab, select the *Share with specific authorized groups and users* option.

10. Select *Payroll Administrator* and *Payroll Partner* from the **Authorized Groups** prompt.

Make sure that the Payroll Administrator and Payroll Partner user groups have security access to the *Reports: Pay Calculation Results for Pay Group (Results)* domain in the Core Payroll functional area.

11. Click **OK**.

## Audit Payroll Results

### Setup Considerations: Payroll Audits

You can use this topic to help make decisions when planning your configuration and use of payroll audits. It explains:

- Why to set them up.
- How they fit into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

## What They Are

Payroll audits enable you to:

- Audit any past or current pay period.
- Verify that payroll results are correct.
- Spot and fix issues before completing payroll.

You can configure audit rules for a specific subset of workers and group sets of audit rules to run at the same time.

## Business Benefits

The Workday payroll auditing process enables you to:

- More easily analyze and act on audit exceptions.
- Set the severity of audit exceptions to Informational, Warning, or Critical.
- Configure audit assignment alerts using the reporting notification framework within Workday.
- More effectively research and collaborate on the resolution of audit exceptions by assigning audit exceptions to individuals for resolution.
- Reduce the risk of exposing sensitive worker data by controlling which audit-related data to share with collaborators.
- Change the status of audit exceptions and add comments for easier tracking.
- Track audit exceptions and assignees through delivered reports.
- View audit exception histories and comments.

## Use Cases

You can use audit rules to:

- Ensure accurate overtime payment by identifying workers with overtime hours.
- Find workers in a specific location that have year-to-date (YTD) retirement savings eligible wages that are close to the contribution limit.
- Prevent errors by identifying workers with unusually high or low payroll results.

You can compare:

- An in-progress period with any completed period.
- Any 2 completed periods.
- Results by pay group, period summary, and worker.

Example: Configure an audit that reports base pay variations greater than 5% for a pay group.

## Questions to Consider

| Question                                                      | Considerations                                                                                                                                                                                                                                                                                                     |
|---------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| What kind of rules do you want to create?                     | Consider what you're trying to identify before completing payroll. You can create rules: <ul style="list-style-type: none"> <li>• With a mixture of worker eligibility filters and payroll results for the current period.</li> <li>• To compare any in-progress or completed prior periods in Workday.</li> </ul> |
| Do you want to run audits for workers in different countries? | Audits rules and audit run groups are country-specific, so you can run different sets of rules for different enabled countries.                                                                                                                                                                                    |
| How many audit rules do you want to group?                    | The more audit rules you group and the broader the rules are, the longer the audit can take. If there's a                                                                                                                                                                                                          |

| Question | Considerations                                                       |
|----------|----------------------------------------------------------------------|
|          | noticeable performance impact, you can inactivate some of the rules. |

## Recommendations

Workday recommends that you:

- Schedule the **Run Pay Calculation** task to run before scheduled payroll audit runs to ensure that the audit can run successfully.
- Add the **Payroll Audit Exception Summary** worklet to the **Pay Cycle Command Center** dashboard to have easy access to it from the dashboard.
- Don't edit an audit rule with existing exceptions as it can cause the existing audit rule to behave unexpectedly.

## Requirements

No impact.

## Limitations

You can't identify workers to audit based on their:

- Job family.
- Name or ID.
- Type.
- Active status.
- Age group.
- Hired as of date.
- Tax elections.
- Compensation change.

Audit rules don't support worktags.

You can't:

- Copy audit rules.
- Audit for arrears.
- Run more than 50 audit details at a time. Audit details are each line within the audit rule.

## Tenant Setup

No impact.

## Security

These domains in the Core Payroll functional area:

| Domains                                                        | Considerations                                                                                                                                 |
|----------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------|
| <i>Set Up: Payroll (Reporting)</i>                             | Enables you to set up payroll audit rules and payroll audit run groups.                                                                        |
| <i>Reports: Pay Calculation Results for Pay Group (Audits)</i> | Enables you to run payroll audit rules and payroll audit run groups.                                                                           |
| <i>Reports: Payroll Audit Exception (Assignee)</i>             | Enables you to assign users to payroll audit exceptions so they can view audit exception details. Restricted to unconstrained security groups. |

## Business Processes

Workday recommends that you add the **Payroll Audit Run** task as a step to the *Pay Cycle Event* business process after the **Payroll Run Pay Calculation** step.

## Reporting

| Report                                 | Security                                                       | Description                                                                                                                                                                                                |
|----------------------------------------|----------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>My Payroll Audit Exceptions</b>     | <i>Reports: Payroll Audit Exception (Assignee)</i>             | Displays audit exceptions assigned to a specific user. The user can review details, update the status of an exception, comment, and reassign the exception.                                                |
| <b>Payroll Audit Exceptions</b>        | <i>Reports: Pay Calculation Results for Pay Group (Audits)</i> | Provides granular details that you can use to analyze and track the progress of audit exceptions that have manageable statuses.                                                                            |
| <b>Payroll Audit Exception Details</b> | <i>Reports: Pay Calculation Results for Pay Group (Audits)</i> | Accessed by clicking <b>View Details</b> on the <b>Payroll Audit Exceptions</b> report. Displays details for the selected pay period and pay group.                                                        |
| <b>Payroll Audit Exception Summary</b> | <i>Reports: Pay Calculation Results for Pay Group (Audits)</i> | Enables you to drill-down on the status and severity values and view individual audit exception details. You can also configure this report as a worklet on the <b>Pay Cycle Command Center</b> dashboard. |

## Integrations

No impact.

## Connections and Touchpoints

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships in your tenant. Learn more about the [Workday Touchpoints Kit](#) on Workday Community.

## Steps: Audit Payroll Results

### Prerequisites

Review setup considerations for payroll audits.

### Context

You can run the audit exception reports to analyze and address your audit exceptions before completing payroll by:

- Creating, grouping, and running audits of payroll results.
- Using worker eligibility to target a specific subset of workers.
- Using audit assignment and routing functionality to manage, research, and resolve audit exceptions within Workday.

## Steps

1. (Optional) Access the **Maintain Payroll Audit Worker Eligibility** report to create worker eligibility rules.  
Security: *Set Up: Payroll (Reporting)* domain in the Core Payroll functional area.
2. [Create Payroll Audit Rules](#) on page 775.
3. (Optional) Access the **Maintain Payroll Audit Run Group Configurations** report to group audit rules to run at the same time.  
Security: *Set Up: Payroll (Reporting)* domain in the Core Payroll functional area.
4. (Optional) [Set Up Alerts for Audit Assignments](#) on page 777.  
When you implement the Workday audit assignment and routing functionality, set up notifications that Workday sends to audit exception assignees for research and resolution.
5. (Optional) [Schedule Payroll Audits](#) on page 778.
6. [Run Payroll Audits](#) on page 778.
7. After running a payroll audit, review the audit exceptions by:
  - Selecting **Launch Audit Report** from the completed payroll audit.
  - Accessing the audit results from the **Pay Cycle Command Center**.
8. (Optional) Assign audit exceptions for resolution.
  - a) From the related actions menu of the exception, select **Payroll Audit Exception > Maintain Exception**.
  - b) Select a **Status**.
  - c) Select an **Assignee**.
  - d) (Optional) Enter a **New Comment**.  
The assignee receives a notification of the assignment and can:
    - Drill into the details of the exception.
    - Investigate the exception.
    - Change the status.
    - Enter a comment.
    - Reassign the exception back to you.
9. (Optional) To keep track of which exceptions you've reviewed, access the related actions menu for an exception, select **Payroll Audit Exception > Maintain Exception**, and select Y in the **Verified by Administrator** field.  
To set this value for multiple items at once, select the exceptions in the **My Payroll Audit Exceptions** report and select **Update/Assign**.  
Security: *Reports: Pay Calculation Results for Pay Group (Audits)* domain in the Core Payroll functional area.

## Next Steps

After fixing audit exceptions, you must rerun the **Run Payroll Audit** task for the same period where the exceptions existed before Workday updates the exception with a *Resolved* status.

Review these reports:

- **Assigned Payroll Audit Exceptions**
- **My Payroll Audit Exceptions**

[Setup Considerations: Payroll Audits](#) on page 770

**Reference**

[Reference: Payroll Audit Reports](#) on page 780

[Reference: Pay Cycle Command Center Dashboard](#) on page 93

**Create Payroll Audit Rules****Prerequisites**

Security: *Set Up: Payroll (Reporting)* domain in the Core Payroll functional area.

**Context**

You can configure audit rules so that you can identify and fix issues before completing payroll. Audit rules can be configured to identify payroll results values for:

- A single period (this is done on the **Period** tab in the task).
- A prior period comparison (this is done on the **Prior Period Comparison** tab in the task).

**Note:** When you uptake the audit assignment and routing functionality, Workday recommends that you create new audit rules. Editing an existing audit rule can cause inconsistencies with existing exceptions. Also, the audit routing and assignment functionality includes additional fields and worker eligibility rules.

**Steps**

1. Access the **Maintain Payroll Audit Configurations** report.
2. As you complete the audit configuration, consider:

| Option                    | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
|---------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Assignee Action</b>    | When you use the Workday audit assignment and routing functionality, select or create an assignee action. Example: For an audit exception resulting from a missing national identifier, create the assignee action Add national identifier.                                                                                                                                                                                                                                                                                              |
| <b>Worker Eligibility</b> | (Optional) You can use worker eligibility in payroll audits to select a subset of workers to eliminate the need to run multiple reports. Example: When you audit for a high bonus, use worker eligibility fields to build audit rules for workers in a specific job profile.                                                                                                                                                                                                                                                             |
| <b>Severity</b>           | <p>Select the audit severity to prioritize audit exceptions and visually analyze severities on these reports:</p> <ul style="list-style-type: none"> <li>• <b>Payroll Audit Exceptions</b></li> <li>• <b>Payroll Audit Exception Summary</b></li> </ul> <p>Workday displays audit alert flags only on these reports:</p> <ul style="list-style-type: none"> <li>• <b>Pay Calculation Results for Group of Workers.</b></li> <li>• <b>Pay Calculation Results for Worker.</b></li> <li>• <b>Results</b> on the worker profile.</li> </ul> |

| Option                      | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
|-----------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                             | <p>Workday displays these flags to indicate a severity status:</p> <ul style="list-style-type: none"> <li>• Red: <b>Critical</b>.</li> <li>• Yellow: <b>Informational</b>.</li> <li>• Yellow: <b>Warning</b>.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| <b>Configuration Detail</b> | <p>To configure an:</p> <ul style="list-style-type: none"> <li>• AND relationship between detail rows, add multiple rows in the same audit detail. All calculations in the group must fail in order to trigger an audit exception.</li> <li>• OR relationship between detail rows, add rows to separate groups. If any 1 of the calculations fails, the audit triggers an exception.</li> </ul> <p>For best performance, Workday recommends that you create payroll audit rules with fewer than 50 audit details.</p> <p>You can perform audits only for calculations resolving in a result. If the calculation doesn't resolve, the audit won't work. Example: You can't configure an audit rule to return empty values.</p> |
| <b>Balance Period</b>       | <p>The <i>Current Period</i> option refers to a configured balance period. When you select that option, the audit rule might not correspond to the single pay period you want to audit. To audit a single period, leave the <b>Balance Period</b> prompt empty.</p> <p>You can run the <b>View Balance Period</b> report to verify the period that the <i>Current Period</i> option represents.</p>                                                                                                                                                                                                                                                                                                                           |

3. As you complete the **Prior Period Comparison** tab, consider:

| Option                 | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
|------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Reporting Level</b> | <p>Select the corresponding reporting level when you want to use the audit rule on these reports:</p> <ul style="list-style-type: none"> <li>• <b>Audit - Pay Calculation Results Comparison to a Prior Period (By Pay Group)</b></li> <li>• <b>Audit - Pay Calculation Results Comparison to a Prior Period (By Worker)</b></li> <li>• <b>Audit - Pay Calculation Results Comparison to a Prior Period (Period Summary)</b></li> </ul> <p>Example: You create a prior period comparison audit rule for Net &gt; 15% and set the <b>Reporting Level</b> to <i>Period</i>. You can then run the rule on the <b>Audit - Pay Calculation Results Comparison to a Prior Period (Period Summary)</b> report.</p> |

## Next Steps

Calculate payroll and then run the payroll audits.

## Set Up Alerts for Audit Assignments

### Prerequisites

Run payroll calculation.

Run payroll audits.

Security:

- *Custom/Standard Report Copy* domain in the Tenant Non-Configurable functional area.
- *Reports: Pay Calculation Results for Pay Group (Audits)* domain in the Core Payroll functional area.
- *Set Up: Tenant Setup - General* domain in the System functional area.

### Context

Configure audit exception assignment notifications to let assignees know that an audit exception has been assigned to them and they have an action to take.

### Steps

1. Access the task **Copy Standard Report to Custom Report**.
2. Select the *Assigned Payroll Audit Exception* report.
3. Assign a unique name to the report.
4. Select the **Share** tab.
5. Select **Share with all authorized users** in the **Report Definition Sharing Options** section.
6. Access the **Configure Alert** task to configure a scheduled notification. As you complete the task, consider:

| Option                       | Description                                                                                                    |
|------------------------------|----------------------------------------------------------------------------------------------------------------|
| <b>Report Name</b>           | Select the name that you gave the <b>Assigned Payroll Audit Exceptions</b> standard report when you copied it. |
| <b>Run Frequency</b>         | Example: <i>Daily Recurrence</i>                                                                               |
| <b>Task</b>                  | <i>My Payroll Audit Exceptions</i>                                                                             |
| <b>Recipients</b>            | <i>Assigned to Worker</i>                                                                                      |
| <b>Notification Subject</b>  | Example: Payroll Audit Exceptions Assigned to You                                                              |
| <b>Introductory Comments</b> | Example: These Audit Exceptions are assigned to you. Please take action.                                       |

7. Access the **Schedule** tab.
8. Set the **Start Time**. Example: 8:00 AM.
9. Set the desired **Start Date** and **End Date**.

### Result

Beginning on the date and time you specify, and continuing until the end date you specify, Workday sends notifications to all users who have audit exceptions assigned to them.

## Schedule Payroll Audits

**Prerequisites**

- Set up payroll audit rules.
- Security: *Reports: Pay Calculation Results for Pay Group (Audits)* domain in the Core Payroll functional area.

**Context**

To save you time, you can schedule payroll audits for in-progress periods to start automatically, either once in the future or on a recurring basis until the scheduled end date.

**Steps**

1. Access the **Pay Audit Scheduler** task.
2. As you complete the task, consider:

| Option                         | Description                                                                                                                                                                                                                          |
|--------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Prior Period Comparison</b> | Workday populates this field with the most recently completed prior period when applicable.                                                                                                                                          |
| <b>Number of Periods Back</b>  | When you schedule a recurring audit and enter a number for a period that doesn't have completed results, Workday audits the completed periods after you complete them.<br><br>Enter zero when you don't want to audit prior periods. |

**Next Steps**

Run the:

- **Scheduled Future Processes** report to view future scheduled pay audits.
- **Process Monitor** report to view the completed and queued payroll audits.

## Run Payroll Audits

**Prerequisites**

- Calculate payments for the period or pay group you want to audit.
- Security: *Reports: Pay Calculation Results for Pay Group (Audits)* domain in the Core Payroll functional area.

## Context

You can run payroll audits for any pay results and review the audit exceptions to catch errors or discrepancies before completing payroll.

## Steps

1. Access the **Run Payroll Audit** task.
2. As you complete the task, consider:

| Option                             | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
|------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Period</b>                      | When you run the <b>Run Pay Calculation</b> task for the same pay group and period, Workday delays the <b>Run Payroll Audit</b> task until the <b>Run Pay Calculation</b> task completes.                                                                                                                                                                                                                                                                                            |
| <b>Prior Period Comparison</b>     | <p>Workday only displays this prompt when you select an audit rule or an audit run group that compares a prior period.</p> <p>When the period contains more than 1 completed result, Workday populates this prompt with the most recently completed period for the pay group.</p>                                                                                                                                                                                                    |
| <b>Balance Period Cut Off Date</b> | <p>Workday only displays this field when you select an audit rule or audit run group for a current period that uses a balance period. Select a date to cut off the balance period.</p> <p>Example: You run an audit with a YTD balance period, and you only want the rule to check results to 2019-08-01. You can select a balance period cutoff date of 2019-08-01 so Workday runs the audit rule for the YTD balance period but cuts off the payroll results after 2019-08-01.</p> |

## Next Steps

View and track audit exceptions on the **Payroll Audit Exceptions** report.

### Tasks

[Calculate On-Cycle Payroll](#) on page 618

## Concept: Payroll Audit Assignments and Routing

### Audit Routing

You can assign and route audit exceptions to organizational partners within Workday. This functionality enables you to:

- Research and collaborate on the resolution of audit exceptions by assigning audit exceptions to individuals for resolution.
- Reduce the risk of overexposing sensitive worker data by controlling which audit-related data is shared with other collaborators.
- Configure audit assignment alerts using the reporting notification framework within Workday.

- Track audit exceptions and assignees through delivered reports.
- View audit exception histories, assignees, and comments.

## Audit Rules

When you uptake audit assignment and routing functionality, Workday recommends that you create new audit rules rather than edit existing rules because:

- You can select or create an assignee action when creating the rule. Example: For a rule for employees receiving pay while on leave, you can assign an action to investigate whether that worker is eligible for that pay.
- Editing an existing audit rule can cause inconsistencies with existing exceptions.

When audit rules either include worker eligibility or have a status of *Inactive*, Workday doesn't display the audit alert flag on the payroll result, the worker profile, or these reports:

- **Audit - Pay Calculation Results Comparison to a Prior Period (By Pay Group)**
- **Audit - Pay Calculation Results Comparison to a Prior Period (By Worker)**
- **Audit - Pay Calculation Results Comparison to a Prior Period (Period Summary)**
- **Audit - Pay Calculation Results for a Period**

## Example: Audit YTD High Bonus and Commission

This example illustrates how to create an audit rule for workers within the recruiting region and locations that have a bonus or commission greater than 5,000.

### Context

You need to see if there are workers in these recruiting areas that have year-to-date bonus or year-to-date commission results greater than 5,000:

- New York recruiting region
- San Francisco office
- Chicago office

You create an audit rule with a **Critical** severity level for workers that break this audit rule.

### Prerequisites

Create a:

- New York Recruiting region.
- Executive Recruiting Bonus [USA] payroll calculation.
- Executive Recruiting Commission [USA] payroll calculation.

Security: *Set Up: Payroll (Reporting)* domain in the Core Payroll area.

### Steps

1. Access the **Maintain Payroll Audit Configurations** task.
2. Select *United States of America*.
3. On the **Period** tab, click **Create**.
4. Enter *High YTD Rec. Bonus/Commission for Rec. Locations* for the **Audit Rule Name**.
5. Add a row on the **Worker(s) to include** grid.
6. On the **Worker Eligibility Rule** column, select **Create Payroll Audit Worker Eligibility**.
7. Add 3 rows to create worker eligibility rules with an OR condition.
8. Enter these values:

| Worker Eligibility Name     | Field           | Comparison                   | Value                             |
|-----------------------------|-----------------|------------------------------|-----------------------------------|
| Region: New York Recruiting | <i>Region</i>   | <i>in the selection list</i> | <i>New York Recruiting Region</i> |
| Location: Chicago           | <i>Location</i> | <i>in the selection list</i> | <i>Chicago</i>                    |

| Worker Eligibility Name | Field           | Comparison                   | Value                |
|-------------------------|-----------------|------------------------------|----------------------|
| Location: San Francisco | <i>Location</i> | <i>in the selection list</i> | <i>San Francisco</i> |

9. On the **Pay result(s) to include** grid, create 2 audit rules with these values:

| Audit Detail Name                 | Severity        | Payroll Calculation                          | Balance Period                                             | Comparison          | Amount |
|-----------------------------------|-----------------|----------------------------------------------|------------------------------------------------------------|---------------------|--------|
| YTD Recruiting Bonus > 5,000      | <i>Critical</i> | <i>Executive Recruiting Bonus [USA]</i>      | <i>YTD - Current Calendar Year (based on Payment Date)</i> | <i>greater than</i> | 5000   |
| YTD Recruiting Commission > 5,000 | <i>Critical</i> | <i>Executive Recruiting Commission [USA]</i> | <i>YTD - Current Calendar Year (based on Payment Date)</i> | <i>greater than</i> | 5000   |

### Next Steps

Run a payroll calculation and then run the audit rule with the **Run Payroll Audit** task.

## Example: Audit Workers with Net or Gross Variance

This example illustrates how to create an audit rule for comparing prior pay periods' gross and net to the current period.

### Context

You want to see if there are any significant differences with USA West Region workers' net and gross pay from the prior period payroll to catch any discrepancies. You also want to exclude the Executive pay group because that pay group normally has variances greater than 10%. You create an audit rule that finds workers in the USA West Region excluding Executive Pay Groups that have a net or gross variance greater than 10%.

### Prerequisites

Create a:

- Executive (Monthly): Bonus Quarterly pay group.
- Executive (Monthly): Regular (Monthly) pay group.
- USA - Western US region.

Security: *Set Up: Payroll (Reporting)* domain in the Core Payroll area.

### Steps

1. Access the **Maintain Payroll Audit Configurations** task.
2. On the **Prior Period Comparison** tab, click **Create**.
3. Enter *Net/Gross Variance Threshold (exclude Execs)* for the **Audit Rule Name**.
4. Select *Worker* for the **Reporting Level**.
5. Add a row on the **Worker(s) to include** grid.
6. On the **Worker Eligibility Rule** column, select **Create Payroll Audit Worker Eligibility**.

7. Create 2 worker eligibility rules with these values:

| Worker Eligibility Name       | Field            | Comparison                | Value                                                                                |
|-------------------------------|------------------|---------------------------|--------------------------------------------------------------------------------------|
| Exclude: Executive Pay Groups | Pay Group Detail | not in the selection list | Executive (Monthly):<br>Bonus Quarterly<br>Executive (Monthly):<br>Regular (Monthly) |
| Region: USA Western US        | Region           | in the selection list     | USA - Western US                                                                     |

8. On the **Pay result(s) to include** grid, create 2 audit rule with these values:

| Audit Detail Name    | Severity | Payroll Calculation | Comparison   | Percentage | Amount |
|----------------------|----------|---------------------|--------------|------------|--------|
| Net > 10% Variance   | Warning  | Net                 | greater than | 10         | 0      |
| Gross > 10% Variance | Warning  | Gross               | greater than | 10         | 0      |

### Next Steps

Run a payroll calculation and then run the audit rule with the **Run Payroll Audit** task.

## Review Pay and Accounting Results

### Concept: Reviewing Payroll Accounting

#### When to Rerun Accounting Versus Recalculating Payroll

After you review and reconcile payroll calculations, you can rerun pay calculation and accounting as many times as needed to fix any payroll errors.

Recalculate the payroll result after making these changes:

- Updating an earning definition.
- Assigning an optional balancing worktag to a transaction.
- Redefining an account posting rule.
- Changing a worker's default organization to a different cost center or location.
- Correcting a worker's cost center or other costing dimension.

Rerun pay accounting after fixing these errors:

- Posting a special allowance to the wrong account.
- Posting to an unopened ledger period.

#### Finding and Fixing Errors in Payroll Accounting Results

You can use the **Fix Operational Journals with Errors** task to identify and fix payroll journals with accounting errors.

You can also use these reports to review your accounting results.

| Report                                                           | Description                                                                                                                                                                                                                                                                                                                                                                                    |
|------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Payroll Accounting by Company/Period</b>                      | Review created or posted entries to each ledger account for a company, including debit, credit, and net amounts.<br><br>You can review entries by journal source and identify the journals in error.                                                                                                                                                                                           |
| <b>Payroll Accounting by Period/Pay Group</b>                    | Drill down line items in the accounting entries for selected periods and pay groups. The <b>Accounting Status</b> column identifies entries with errors.<br><br>The report only displays accounting results based on the standard account set defined for the company.                                                                                                                         |
| <b>Pay Calculation Results for Worker</b>                        | Review detailed accounting lines for a worker on the <b>Actuals</b> and <b>Other Accounting</b> tabs.<br><br>When you enable intercompany accounting, the <b>Actuals</b> tab displays journal lines for all relevant costing companies to which the worker's payroll was costed.<br><br>The report only displays accounting results based on the standard account set defined for the company. |
| <b>Payroll Accounting Transactions Preventing Period Closure</b> | Identify open payroll accounting transactions for the ledger period you select.                                                                                                                                                                                                                                                                                                                |
| <b>Payroll Results with Outdated Accounting</b>                  | Identify all payroll results that don't align with the corresponding accounting journals for a specific pay period.                                                                                                                                                                                                                                                                            |

## Reference: Pay Calculation Statuses

Workday displays calculation statuses on pay calculation tasks and reports such as **Run Pay Calculation** and **Pay Calculation Result**. You can use pay calculation statuses to track:

- The overall progress of a pay calculation.
- The movement of individual payees through the payroll process.

### Payroll Calculation Statuses

These statuses apply to on-cycle and off-cycle pay calculations.

| Status                 | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
|------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <i>Not Yet Started</i> | Workday hasn't calculated pay for the pay group for the payroll period. When running a pay calculation, you can select <i>Not Yet Started</i> from the <b>Based on Result Status</b> prompt to select either: <ul style="list-style-type: none"> <li>• An entire payroll run for which you haven't yet processed any payees.</li> <li>• A payroll calculation for 1 or more workers not included in the original calculation, such as new hires or transfers.</li> </ul> |
| <i>In Progress</i>     | The pay calculation process has run with these results: <ul style="list-style-type: none"> <li>• At least 1 worker with a payroll result.</li> <li>• At least 1 worker in the pay group doesn't have the <i>Complete</i> status.</li> </ul>                                                                                                                                                                                                                              |

| Status                          | Description                                                                                                                                                                                                                                                                                                                                                                              |
|---------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                 | <p>The status of individual results can be:</p> <ul style="list-style-type: none"> <li>• <i>Error</i></li> <li>• <i>Hold</i></li> <li>• <i>In Progress</i></li> <li>• <i>Pending Completion</i></li> <li>• <i>Requires Re-calculation</i></li> <li>• <i>Requires ReCalc due to Retro</i></li> <li>• <i>Waiting to pick up Retro Difference</i></li> </ul>                                |
| <i>Complete with Exceptions</i> | <p>The <b>Run Pay Complete</b> task has run for the pay group, but 1 or more results are:</p> <ul style="list-style-type: none"> <li>• <i>In Error</i></li> <li>• <i>On Hold</i></li> <li>• <i>Pending Completion of Prior</i></li> <li>• <i>Requires Re-calculation</i></li> <li>• <i>Requires ReCalc due to Retro</i></li> <li>• <i>Waiting to pick up Retro Difference</i></li> </ul> |
| <i>Complete</i>                 | <p>The <b>Run Pay Complete</b> task has run for the pay group and there are no payees on <i>Hold</i> or in <i>Error</i>.</p>                                                                                                                                                                                                                                                             |
| <i>Opened for Off-Cycles</i>    | <p>You ran an on-demand payment for a worker in the next pay period while the current period is still <i>In Progress</i>.</p> <p>The status changes to <i>In Progress</i> after you complete the current pay period, and either:</p> <ul style="list-style-type: none"> <li>• Calculate payroll for the pay group.</li> <li>• Add an on-demand payment for the new period.</li> </ul>    |

### Individual Result Statuses

These statuses apply to 1 payroll result for a worker.

| Status                             | Description                                                                                                                                                                                                                                                                           |

## FAQ: View Payroll Results

- [Who can view payroll results?](#)
- [What reports are available for viewing payroll results?](#)
- [How can I view arrears amounts, including those for terminated workers?](#)
- [How can I ensure that Hours display on the View Payroll Results report?](#)
- [Why aren't workers' hours aggregating on their pay results?](#)
- [How can I ensure the drill-down report on the Run Pay Calculation task updates the flags based on updated audit rule configurations?](#)
- [How can I view on demand and manual payment results for Canadian workers working outside of Canada? \(CAN\)](#)
- [How can I see what Human Capital Management information is used in a worker's Payroll calculation? \(FRA\)](#)
- [How can I view intermediate values used in statutory payroll calculations? \(FRA\)](#)

### Who can view payroll results?

Your security policies control the visibility of payroll results. You can use pay component security segments to further define access to pay results.

**What reports are available for viewing payroll results?**

For more information, see [Example: Control Visibility of Earning and Deduction Results](#) on page 761.

To view reports with payroll results, access the **Workday Standard Reports** report, and select *Payroll Processing/Results* as the report category.

**How can I view arrears amounts, including arrears for terminated workers?**

Access the **Pay Calculation Results - Outstanding Arrears Balance Composite** report (secured to the *Reports: Pay Calculation Results (Reports: Indexed Data Source Filters)* domain). You can view outstanding arrears balances summarized by pay period, including amounts for terminated workers.

**How can I ensure that Hours display on the View Payroll Results report?**

Access the **Edit Earning** or **Edit Deduction** task. In the row with the related calculation for hours, scroll to the **Results** section and select *Display Current*.

**Why aren't workers' hours aggregating on their pay results?**

Workday aggregates workers' hours from daily payroll inputs by period or subperiod only when:

- You've configured an hours-related pay component related calculation (PCRC) on the pay component to aggregate.
- All worktags on the inputs are the same.
- There's only 1 input line on the payroll input.
- The payroll input is one-time.

Ensure that you select the **Aggregate** check box on a PCRC when you add:

- A new hours-related pay component or PCRC.
- Pay component with a time calculation tag.

**How can I ensure the drill-down report on the Run Pay Calculation task updates the flags based on updated audit rule configurations?**

When you change an audit rule configuration, the flags only change when you recalculate the period and pay run groups.

**How can I view on demand and manual payment results for Canadian workers working outside of Canada? (CAN)**

Workday displays *United States* or *Other* on some payroll results when:

- A worker is Canadian and works outside of Canada.
- You override the **Province Authority (Work)** for a Canadian worker outside of Canada.

Access the **Payroll Result** report. For Canadian workers outside of Canada, the **Payroll Result** report displays *United States* or *Other* for these fields:

- **Province of Employment** in the **Result Details** section.
- **Worktags** for *Province Income Tax [PIT] [CAN]* in the **Taxes** section on the **Gross-to-Net** tab.

In addition, the off-cycle amount displays for **Subject Wages** and **Taxable Wages**, but other taxes display zero.

- **Province (Work)** in the **Tax Authority - (Work)** section on the **Tax Elections** tab.

The **Province Tax** calculation **Worktags** field in the **Others** section on the **Additional Pay Components** tab doesn't display at all.

**How can I see what Human Capital Management (HCM) information Workday uses in payroll calculations? (FRA)**

If you have a license to use both Workday Payroll and HCM:

1. From the worker's profile, click **Pay > Results**.
2. Click the magnifying glass icon for the result you want to view and select the **Worker Details** tab.

The HCM information shown is from when the last payroll calculation ran.

**How can I view intermediate values used in statutory payroll calculations? (FRA)**

Workday provides several memo deductions that calculate intermediate values for statutory calculations. Example: You can view the monthly ceilings for URSSAF contributions in the related calculations on the *Memo - Reference Values for URSSAF* deduction.

To view intermediate results for a worker, access the **Gross to Net** tab on the **View Payroll Results** report from the worker profile. You can then view the **Related Values** for the memo deductions.

## FAQ: Pay Balance Reports

**How can I include all results for the As Of option on my custom pay balance reports?**

You can include an **As Of** option when creating a custom pay balance report. Your **As Of** option defaults to the beginning of the day (00:00:00). Example: You enter 2020-03-31 for the **As Of** option. Workday uses the beginning of the day (00:00:00) as the default time and excludes all results for 2020-03-31.

If you select **Include Results Processed By** on the **Field** column when creating the custom report, you can select 1 of these options on the **Default Type** column:

- *Determine default value at runtime:* you can select **Today (End of Day)** on the **Default Value** column.

**How can I get my custom reports to return results for the Include Results Processed By field?**

- *Specify default value:* you can select today's date and end of day time, use 23:59:59 on the **Default Value** column.

Workday returns no data when you use an **As Of** option before the balance period start date.

When you select **Include Results Processed By** on the **Field** column, Workday uses the beginning of the day (00:00:00) as the default time and excludes all results for that day.

To include results for the entered date, use 1 of these report fields as the **Default Value** column for the **Include Results Processed By** field:

- **Equal to As of Date:** Workday automatically uses the entered **As Of** date instead of the current date and time.
- **Today (End of Day):** Workday automatically uses the current date and end of day time (23:59:59).

**How can I use balance periods that are based on the period schedule, not As Of date, in my custom reports?**

Add the **Reference Period for Balance** prompt to your report.

Example: From the **Reference Period for Balance** prompt, select a period schedule within January 2020 such as *01/02/2020-01/08/2020 (Weekly (Mon-Sun))*. The monthly balance period calculates the month of January 2020. Workday then only returns results with a period end date between 2020-01-01 and the specified **As Of** date 2020-01-01.

**How can I maximize the performance of my custom pay balance reports?**

To reduce calculation time, use a data source that has *Payroll Result Lines* as its primary business object. For best performance, use an indexed data source.

**Which standard reports display pay balance information?**

You can run these reports to see pay balances:

- **Pay Balance Summary.**
- **Pay Calculation Results - Outstanding Arrears Balance Composite.**
- **Pay Calculation Results Summary.**

## Troubleshooting: Payroll Accounting and Commitment Journals with Errors

You can use the **Fix Operational Journals with Errors** task to identify and fix these accounting and commitment journals with errors:

- Payroll Actuals
- Payroll Accounting Adjustments
- Fringe Benefit Actuals
- Payroll Forward Accruals
- Completed Payroll Commitment and Obligations
- Liquidations

**Troubleshooting: Unable to Run Payroll Result Reports**

**Cause:** You don't have security access to payroll results.

**Solution:** Enable security for the reports.

**Steps**

Security: *Security Configuration* domain in the System functional area.

1. Access the **Domain Security Policies for Functional Area** report.
2. Select the **Core Payroll** functional area.
3. Configure viewing access for these domain security policies:
  - *Reports: Pay Calculation Results for Pay Group*
  - *Reports: Pay Calculation Results for Worker*
  - *Reports: Pay Calculation Results (Reports: Indexed Data Source Filters)*
  - *Reports: Pay Calculation Results (Results - Reports based on Pay Component Security)*
  - a) Select the domain security policy.
  - b) From the related actions menu, select **Domain Security Policy > Edit Permissions**.
  - c) In the **Report/Task Permissions** grid, add security groups and select the **View** check box.
4. On the same report, select your country-specific payroll functional area.  
Example: Select **FRA Payroll** for France.

5. Depending on your payroll country, configure viewing access for the relevant domain security policies:

- *Reports: Pay Calculation Results for Pay Group - CAN*
- *Reports: Pay Calculation Results for Pay Group (Results) - AUS*
- *Reports: Pay Calculation Results for Pay Group (Results) - FRA*
- *Reports: Pay Calculation Results for Pay Group (Results) - UK*
- *Reports: Pay Calculation Results for Pay Group (Results) - USA*
- *Reports: Pay Calculation Results for Worker - UK*
- *Reports: Pay Calculation Results for Worker - USA*
- *Reports: Results for Worker (Pay Calculation) - AUS*
- *Reports: Results for Worker (Pay Calculation) - CAN*
- *Reports: Results for Worker (Pay Calculation) - FRA*

6. Access the **Activate Pending Security Policy Changes** task.

7. Add a **Comment**.

8. Select the **Confirm** check box.

## Troubleshooting: Pay Results in Error

All payroll results have an *In Error* status and an error message of No Payment Election (or Default) Exists.

**Cause:** The run category doesn't have an associated payment election rule.

#### Solution:

##### Steps

Security:

- *Process: Run Batch Calculations (Pay Calculation)* domain in the Core Payroll functional area.
- *Set Up: Payment Election* domain in the Expenses functional area.
- *Set Up: Payroll (Payment Election Rules)* domain in the Core Payroll functional area.
- *Set Up: Payroll Interface* domain in the Payroll Interface functional area.

1. Access the **Maintain Payment Election Rules** task.

2. Locate the row of the payment election rule that you want to assign.

3. From the **Run Category** prompt, select the run category of the payroll result in error for at least 1 payment election rule.

4. Access the **Run Pay Calculation**.

## Correct Payroll Accounting Results

---

### Setup Considerations: Payroll Accounting Adjustments

You can use this topic to help make decisions when planning your configuration and use of payroll accounting adjustments. It explains:

- Why to set them up.

- How they fit into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

### What They Are

Payroll accounting adjustments enable you to modify payroll journal lines after you complete payroll. You can make a net-zero adjustment when you have incorrect journal lines.

You can:

- Adjust costing worktags.
- Adjust 1 or more journal lines.
- Override the costing company when you enable intercompany accounting.

### Business Benefits

- Decrease compliance risk by ensuring greater accuracy in financial reporting.
- Workday notifies you when operational journals fail, helping you ensure that your adjustments are successful.

### Use Cases

- Adjust an employee's payroll accounting to split cost allocations between cost centers when the employee works a different percentage on a project than anticipated.
- Make adjustments for 1 or multiple pay periods, and for distribution splits. When you add multiple pay periods, you can configure additional details, such as pay components payroll results, and positions.
- Make adjustments for a pay period in the current year or the previous 7 years.

### Questions to Consider

| Questions                                                    | Considerations                                                                                                                                                                                                                                                                                                                                                                                                   |
|--------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Can you make adjustments to a closed ledger period?          | <p>You can make adjustments in open ledger periods. To make adjustments to closed ledger periods, you must open the periods first.</p> <p>When the period end date of your adjustment is in a closed ledger period, Workday:</p> <ul style="list-style-type: none"> <li>• Posts the adjustment journals in the next open period.</li> <li>• Sets the accounting date to the first day of this period.</li> </ul> |
| What information do you want to collect for the adjustments? | <p>You can add a <i>Complete Questionnaire</i> step on the <i>Create Payroll Accounting Adjustments</i> business process to collect additional information on adjustments.</p> <p>When you create questionnaires for the adjustments, Workday recommends that you:</p> <ul style="list-style-type: none"> <li>• Attach only 1 questionnaire.</li> <li>• Assign only 1 role on the step.</li> </ul>               |

| Questions                                                                                    | Considerations                                                                                                                                                                                                                                                                                                                                                                   |
|----------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Do you need to associate retro period information with your proposed accounting adjustments? | You can display retro periods on payroll accounting adjustments by selecting the <b>Enable Retro Period on Payroll Accounting Adjustments</b> check box on the <b>Maintain Payroll Accounting Options</b> task. You can specify which retro period to associate with your proposed adjustments and summary totals from the retro periods displayed on the current journal lines. |

### Recommendations

Workday recommends you check the accounting journal status before making adjustments to ensure that you don't run into errors.

### Requirements

To create a payroll accounting adjustment, payroll must be complete for the employee's pay group and journal lines must be in posted status. You'll be unable to select the pay period for a worker on the **Create Payroll Accounting Adjustment** task if you create a payroll accounting adjustment when payroll isn't complete for their pay group or the journal lines aren't in posted status.

### Limitations

You can't:

- Adjust hours.
- Create validations for adjustments.
- Directly adjust ledger accounts.
- Make adjustments to fringe journal lines.
- Mass create or load adjustments. You can only do 1 adjustment for 1 worker at a time.
- Move amounts from 1 pay component or position to another.
- Adjust historical payroll that's more than 7 years old.

Workday evaluates position-based account posting rule dimensions that affect payroll accounting adjustments based on the entry moment when the adjustment's result was last calculated. If you create new account posting rule dimensions after the entry moment of the accounting adjustment, Workday can't match the adjustment to the dimension and might post the adjustment to an incorrect account. To post the adjustment to the correct account, you can temporarily remove the dimension, and then rescind and resubmit the adjustment.

### Tenant Setup

You can use the **Edit Tenant Setup - Payroll** task to:

- Configure both on-cycle and off-cycle as the default payroll result type.
- Enable you to view the attachments added during the initial creation of the *Effort Certification* business process.

You can use the **Maintain Payroll Accounting Options** task to display retro period information on payroll accounting adjustments.

### Security

You can control the visibility of pay components on payroll accounting adjustments by creating a pay component security segment and segment-based security group.

This only impacts the pay components that the initiator of a payroll accounting adjustment can access during the initiating task. Workday doesn't apply segmented security to payroll accounting adjustments:

- At any other time in the *Create Payroll Accounting Adjustments* business process.
- When a reviewer sends back adjustments during the *Create Payroll Accounting Adjustments* business process.
- When you initiate payroll accounting adjustments as a subprocess of an *Effort Certification* business process.

### Business Processes

The *Create Payroll Accounting Adjustments* business process enables you to create adjustments and routing rules.

You can configure payroll accounting adjustments as a subprocess of the *Effort Certification* business process, making adjustments more efficient and accurate. You can start a *Create Payroll Accounting Adjustment* event, when:

- The qualified effort certification event completes.
- The event contains a costed change.
- You select the *Use Full Worktag* option on the effort certification type.

### Reporting

### Tasks

[Steps: Control Visibility of Pay Components on Payroll Accounting Adjustments](#) on page 427

[Steps: Set Up Payroll Accounting Adjustments](#) on page 427

## Create Payroll Accounting Adjustments

### Prerequisites

- Review setup considerations for payroll accounting adjustments.
- Verify that payroll is complete for the employee's pay group and that the journal lines are in posted status.
- Create a change reason on the **Maintain Change Reason Codes for Effort Certification and Payroll Accounting Adjustment** task.
- Set up payroll accounting adjustments.

## Context

You can make net zero adjustments to payroll accounting for cost allocations for 1 or more pay periods. You can also make adjustments to distribution percentages and correct cost center changes.

## Steps

1. Access the **Create Payroll Accounting Adjustments** task.

2. Select **Employee, Pay Group, Company, and Change Reason**.

If you have a simple adjustment with only 1 pay period and no distribution splits, click **OK** and go to step 4.

3. If you have complex adjustments with multiple pay periods or distribution splits in 1 pay period, you can simplify entering the adjustments by completing the **Optional Parameters**.

a) Enter 1 or more **Pay Periods** and select *On-cycle* or *Off-cycle* **Payroll Result Type**.

When you enable **Adjustments - Enable Payroll Result Type to Default to On-Cycle and Off-Cycle** from the **Payroll Accounting** section on the **Edit Tenant Setup - Payroll** task, Workday enables both *On Cycle* and *Off Cycle* as the default payroll result type.

**Note:** If the pay period you want to select is unavailable, check that payroll is complete for the employee or pay group and that the journal lines are in posted status.

b) To adjust distribution percents and have Workday calculate the **Debit Amount** and **Hours**, consider:

| Field                       | Description                                                                                                                                                                                                                   |
|-----------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Position</b>             | Add a row for each position and pay component combination to adjust.                                                                                                                                                          |
| <b>Pay Component(s)</b>     | Earnings and employer-paid expenses.                                                                                                                                                                                          |
| <b>Costing Company</b>      | Enter a costing company to make accounting adjustments for a specified position and pay component. You can enter a costing company only when you enable intercompany accounting.                                              |
| <b>Worktags</b>             | Workday enters the default worktags from the worker's current organization assignments, such as <i>Cost Center</i> , <i>Location</i> , and <i>Region</i> .<br><br>If you configured related worktags, Workday adds them here. |
| <b>Distribution Percent</b> | Enter a percent for each position and pay component combination if less than 100%. The total must equal 100%.                                                                                                                 |

When you click **OK**, Workday:

- Displays an adjustment section for each pay period that you entered.
- Calculates and displays the **Debit Amount** and **Hours** based on the distribution splits you entered.

4. Click **Add** to enter adjustment details:

- For a simple adjustment, select **Payroll Result, Position(s), Pay Component(s), and Change Reason**.
- For complex adjustments, enter additional pay period and position combinations. If they have distribution splits, you must calculate the **Debit Amount** for each position and pay component combination that you add.

5. Select **Refresh Journal Lines**.

6. Review the **Current Journal Lines** and the **Proposed Adjustments** grid. If you entered multiple pay periods, scroll down to see each of the adjustment sections that Workday created. You can enter or revise the proposed adjustments.
7. (Optional) Select **Combine Identical Adjustments** to aggregate identical rows with Budget Date, Position, Pay Component, and Worktag Overrides in the **Proposed Adjustments** grid.
8. From the **Summary Totals** section, select the relevant **Pay Components**, **Worktags**, or a combination of **Pay Components** and **Worktags** based on the proposed adjustments.  
You can select only 1 worktag per dimension. Example: You can select only 1 Cost Center, 1 Fund, or 1 Location.
9. Click **Update Amounts** to verify the distribution percentage of the adjustment you're changing.  
Based on the pay components and worktags you select, Workday calculates:
  - Current Total Amount as sum of amounts from current journal lines.
  - Proposed Total Amount as sum of amounts from proposed journal lines.
  - Difference as current total amount - proposed total amount.
  - Percent of Proposed as total selected proposed amount/ total proposed amount.
10. (Optional) Add one or more **Attachments** for each pay period.

## Result

- The adjustments create a new journal line with:
    - A reversal entry of the original journal lines.
    - A replacement entry with the updated costing allocation.
- Actual pay for the worker doesn't change. You can readjust adjusted journal lines.
- Workday creates reversal fringe benefit journals to reverse the original fringe journals, recalculates fringe, and creates new fringe benefit journals.
  - Your business process might take you through additional steps based on the change reason.
  - The payroll result displays all adjustment-related journals (including adjustment fringe benefits) on the **Other Accounting** tab.
  - Worker history displays the Payroll Accounting Adjustment events.
  - When the period end date is in a closed ledger period, Workday:
    - Posts the adjustment journals in the next open period.
    - Sets the accounting date to the first day of this period.
  - Workday calculates the hours on the adjusted journal line based on the percentage distribution of earnings.

## Next Steps

For pay periods with payroll accounting adjustments for workers, you must rescind the adjustment before running these tasks:

- **Cancel Pay Complete**
- **Reversal Pay Calculation**

To rescind an adjustment, select **Business Process > Rescind** from the related actions menu of a completed payroll accounting adjustment event. If multiple adjustments exist for a worker, you must rescind them individually in reverse order for every subsequent payroll result that contains an adjustment. Rescinded journal lines then become available for adjustment again.

## Tasks

Steps: [Set Up Payroll Accounting Adjustments](#) on page 427

### Example: Adjust Payroll Accounting Cost Center

This example illustrates how to adjust a worker's payroll accounting for a cost allocation applied to the wrong cost center.

#### Context

For the 2014-01-05 to 2014-01-11 pay period, the payroll administrator at Global Modern Services discovers:

- She incorrectly costs an employee's pay to the 5000 Office of the CFO cost center.
- The correct cost center for that pay period is 1000 Office of the CEO.

She uses the **Create Payroll Accounting Adjustment** task to make a net zero correction to the costing of the employee's base pay earning. She doesn't need to create an on-demand payment.

#### Prerequisites

- Verify that payroll is complete for employee Aidan Mitzner and his pay group, *Administration - Corporate*.
- Configure the *Create Payroll Accounting Adjustments* business process and security policy in the Core Payroll functional area.
- Configure these domains in the Core Payroll functional area to give the payroll administrator access to the employee's payroll results:
  - *Reports: Pay Calculation Results for Worker (Results)*
  - *Reports: Pay Calculation Results for Pay Group (Accounting Results)*
  - *Reports: Pay Calculation Results for Organization (Accounting Results)*
- Create a change reason called *Cost Center Adjustment* on the **Maintain Change Reason Codes for Effort Certification and Payroll Accounting Adjustment** task.

#### Steps

1. Access the **Create Payroll Accounting Adjustments** task. As you complete the task, consider:

| Option        | Description                       |
|---------------|-----------------------------------|
| Employee      | <i>Aidan Mitzner</i>              |
| Pay Group     | <i>Administration - Corporate</i> |
| Company       | <i>Global Modern Services</i>     |
| Change Reason | <i>Cost Center Adjustment</i>     |

2. Click **Add**. On the **Adjustments** section, consider:

| Option         | Description                                           |
|----------------|-------------------------------------------------------|
| Payroll Result | <i>Aidan Mitzner: 01/11/2011 (Regular) - Complete</i> |
| Position(s)    | <i>P-00147 Executive Assistant - Aidan Mitzner</i>    |
| Pay Components | <i>Base Pay</i>                                       |
| Change Reason  | <i>Cost Center Adjustment</i>                         |

### 3. Click **Refresh Journal Lines**.

The **Current Journal Lines** grid includes the incorrect cost center in the **Worktags** column: *Cost Center: 5000 Office of CFO*.

| Option        | Description                                                                                                          |
|---------------|----------------------------------------------------------------------------------------------------------------------|
| Debit Amount  | 1615.39                                                                                                              |
| Position      | P-00147 Executive Assistant - Aidan Mitzner                                                                          |
| Pay Component | Base Pay                                                                                                             |
| Worktags      | Fund 101: General Admin<br>Cost Center: 5000 Office of CEO<br>Location: New York<br>Region: Headquarters - Corporate |
| Budget Date   | 01/11/2011                                                                                                           |

### 4. Add a row to the **Proposed Adjustments** grid and enter the same options as in the **Current Journal Lines** grid, except for the cost center in the **Worktags** column:

| Option        | Description                                                                                                          |
|---------------|----------------------------------------------------------------------------------------------------------------------|
| Debit Amount  | 1615.39                                                                                                              |
| Position      | P-00147 Executive Assistant - Aidan Mitzner                                                                          |
| Pay Component | Base Pay                                                                                                             |
| Worktags      | Fund 101: General Admin<br>Cost Center: 1000 Office of CEO<br>Location: New York<br>Region: Headquarters - Corporate |
| Budget Date   | 01/11/2011                                                                                                           |

If you enter **Position** first, Workday populates some of the fields for you.

### Result

After the payroll administrator submits the adjustment, she can see that it's successfully completed on the employee's profile, **Job > Worker History**. If she clicks *Payroll Accounting Adjustment for 2014-01-05 to 2014-01-11*, she can verify that it's the same as the proposed adjustment she submitted.

When she completes the payroll accounting adjustment, Workday creates a new journal with *Payroll Accounting Adjustment* as the journal source. This journal posts to the ledger period associated with the payroll period, if the ledger period is open. If the ledger period isn't open, the journal posts to the next available ledger period.

She also looks at **Pay > Results** on the worker profile, drills into the results for this period, and selects the **Other Accounting** tab. When she clicks the **View Journal** button, she can verify the net zero adjustment and see that the worktags include the updated cost center.

| Ledger Account           | Debit Amount | Credit Amount | Worktags                        |
|--------------------------|--------------|---------------|---------------------------------|
| 6000: Salaries and Wages | 1,615.39     |               | Cost Center: 1000 Office of CEO |

| Ledger Account           | Debit Amount | Credit Amount | Worktags                                                                                                             |
|--------------------------|--------------|---------------|----------------------------------------------------------------------------------------------------------------------|
|                          |              |               | Fund 101: General Admin<br>Location: New York<br>Region: Headquarters - Corporate                                    |
| 6000: Salaries and Wages |              | 1,615.39      | Cost Center: 5000 Office of CEO<br>Fund 101: General Admin<br>Location: New York<br>Region: Headquarters - Corporate |

### Example: Adjust Payroll Accounting Distribution Percentage

This example illustrates how to adjust a worker's payroll accounting to split cost allocations between cost centers.

#### Context

You incorrectly applied Aidan Mitzner's full base pay for the January 15th pay period of 1615.39 to cost center 50000 Office of the CEO. The costing split should have been:

- 1,211.54 (75%) for the 50000 Office of the CEO cost center.
- 403.85 (25%) for the 10000 Office of the CEO cost center.

Use the **Create Payroll Accounting Adjustment** task to make a net zero correction to his base pay costing so you don't need to create an on-demand payment.

#### Prerequisites

- Verify that payroll is complete for employee Aidan Mitzner and his pay group, *Administration - Corporate*.
- Security: Configure these domains in the Core Payroll functional area:
  - *Reports: Pay Calculation Results for Organization (Accounting Results)*
  - *Reports: Pay Calculation Results for Pay Group (Accounting Results)*
  - *Reports: Pay Calculation Results for Worker (Results)*
  - *Set Up: Payroll (Calculations - Payroll Specific)*
- Configure the *Create Payroll Accounting Adjustments* business process.
- Configure the Hourly Pay Earning with the *General Ledger: Hours* group in the Related Calculation.
- Create a change reason called *Cost Share Adjustment* on the **Maintain Change Reason Codes for Effort Certification and Payroll Accounting Adjustment** task.

#### Steps

1. Access the **Create Payroll Accounting Adjustments** task.
2. Enter these values:

| Option   | Description   |
|----------|---------------|
| Employee | Aidan Mitzner |

| Option        | Description                |
|---------------|----------------------------|
| Pay Group     | Administration - Corporate |
| Company       | Global Modern Services     |
| Change Reason | Cost Share Adjustment      |

3. Select these **Optional Parameters** to identify the pay period:

| Option              | Description                                        |
|---------------------|----------------------------------------------------|
| Pay Periods         | 01/05/2014 - 01/11/2014 (Weekly (Monday - Sunday)) |
| Payroll Result Type | On Cycle                                           |

4. Enter these values to adjust the cost center worktag and the distribution percents:

| Position                                    | Pay Component(s) | Worktags                                                                                                              | Distribution Percent |
|---------------------------------------------|------------------|-----------------------------------------------------------------------------------------------------------------------|----------------------|
| P-00147 Executive Assistant - Aidan Mitzner | Base Pay         | Fund 101: General Admin<br>Cost Center: 50000 Office of CFO<br>Location: New York<br>Region: Headquarters - Corporate | 75                   |
| P-00147 Executive Assistant - Aidan Mitzner | Base Pay         | Fund 101: General Admin<br>Cost Center: 10000 Office of CEO<br>Location: New York<br>Region: Headquarters - Corporate | 25                   |

5. Click **OK**.

6. Review your adjustments:

- The **Position**, **Pay Component**, and **Worktags** data are:
- The calculated debit amounts for the journal lines are: 1211.54 and 403.85.
- The **Hours** also reflect the specified percentages: 30 and 10.

| Debit Amount | Position                                    | Pay Component | Worktags                                                                          | Budget Date | Hours |
|--------------|---------------------------------------------|---------------|-----------------------------------------------------------------------------------|-------------|-------|
| 1211.54      | P-00147 Executive Assistant - Aidan Mitzner | Base Pay      | Fund 101: General Admin<br>Cost Center: 50000 Office of CFO<br>Location: New York | 2014-01-11  | 30    |

| Debit Amount | Position                                             | Pay Component | Worktags                                                                                                                                            | Budget Date | Hours |
|--------------|------------------------------------------------------|---------------|-----------------------------------------------------------------------------------------------------------------------------------------------------|-------------|-------|
|              |                                                      |               | Region:<br>Headquarters -<br>Corporate                                                                                                              |             |       |
| 403.85       | P-00147<br>Executive<br>Assistant -<br>Aidan Mitzner | Base Pay      | Fund 101:<br>General Admin<br><br>Cost Center:<br>50000 Office of<br>CFO<br><br>Location: New<br>York<br><br>Region:<br>Headquarters -<br>Corporate | 2014-01-11  | 10    |

**Result**

After you submit the adjustment, you can review it on Aidan Mitzner's worker profile, by selecting **Job > Worker History**.

Select **Payroll Accounting Adjustment for 2014-01-05 to 2014-01-11** to verify the amounts.

You can also drill into the results for this period on the **Other Accounting** tab by accessing **Pay > Results** on the worker profile:

| Debit Amount | Position                                             | Pay Component | Worktags                                                                                                                                            | Budget Date | Hours |
|--------------|------------------------------------------------------|---------------|-----------------------------------------------------------------------------------------------------------------------------------------------------|-------------|-------|

**Related Information****Concepts**[Concept: Business Process Management](#)[Concept: Step Conditions](#)**Tasks**[Create Business Process Condition Rules](#)[Edit Business Processes](#)[Edit Business Process Security Policies](#)**Concept: Operational Journal Reversals**

Workday creates operational journals automatically when you complete operational transactions. When you cancel an approved operational transaction, you can generate an operational journal reversal. Reversal journals provide an audit trail of journal entries, enabling you to comply with legal requirements in countries where you can't modify or cancel posted journals.

Workday creates reversals of operational journals when you select the **Always Reverse Operational and Noncontrolling Interest Journals** check box in the **Journal Options** section on the **Edit Tenant Setup - Financials** task.

You can also consolidate payroll operational journals by selecting the **Summarize Payroll Journals** check box on the **Maintain Payroll Journal Options** task.

**Canceled Off-Cycle and On-Cycle Payroll Results**

When you cancel an off-cycle or on-cycle payroll result and configure journal reversals and journal summarization, Workday:

- Keeps original operational and original summary journals in *Posted* status.
- Reverses and copies original operational journal.
- Summarizes reversal journal and changes status to *Posted*.
- Changes copied operational journal status to *Created*.

When you cancel an off-cycle or on-cycle payroll result and configure journal reversals but not journal summarization, Workday:

- Keeps original operational journal in *Posted* status.
- Reverses and copies original operational journal.
- Changes reversal journal status to *Posted*.
- Changes copied operational journal status to *Created*.

When you cancel an off-cycle or on-cycle payroll result and configure journal summarization but not journal reversals, Workday:

- Keeps original operational journal and summary journal in *Posted* status.
- Changes summarization journal status to *Created*.

When you cancel an off-cycle or on-cycle payroll result and haven't configured journal reversals or journal summarization, Workday changes the status of the operational journal from *Posted* to *Created*.

# Retroactive Payroll

## Process Retroactive Payroll

### Setup Considerations: Retroactive Pay Processing

You can use this topic to help make decisions when planning your configuration and use of retro processing. It explains:

- Why to set it up.
- How it fits into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

#### What It Is

The retro pay functionality enables you to react to past payroll activity in workers' current payroll by:

- Recalculating pay results for impacted prior periods, back to a specific date.
- Reporting differences between the original and the recalculated pay results.
- Paying the differences in the current period.

#### Business Benefits

The retro pay functionality gives you the flexibility to adjust your current payroll to reflect updates to past payroll runs. Workday also enables you to:

- Pay those differences as part of the workers' regular pay or through on-demand payments.
- Keep track and audit those updates using reports.

#### Use Cases

You can use the retro pay functionality to process past events, such as when you retroactively:

- Change a health care plan election for a worker.
- Enter a bonus for a worker.
- Hire or terminate a worker.

You can also process events workers enter, such as when they retroactively:

- Submit a leave of absence.
- Enter time off or time worked.

#### Questions to Consider

| Questions                                                 | Considerations                                                                                                                                                   |
|-----------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| What time frame do you want to consider for retro events? | The No Retro Processing Prior To (NRPPT) date sets the earliest date for processing retro events for each worker. You can control this date at the level of the: |

| Questions                                                                        | Considerations                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
|----------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                                                                  | <ul style="list-style-type: none"> <li>• Tenant by setting the maximum number of months before the current pay period to enable retro processing. The preset value is 24 and the maximum you can enter is 72. Example: You can exclude any events that occurred during previous tax years.</li> <li>• Worker by setting the earliest date for retro processing. Example: You can exclude events for a worker before their rehire date.</li> </ul> <p>The tenant-level setting takes precedence over the worker-level NRPPT date.</p> <p>When you run the retro pay calculation, Workday changes that date based on the type of workers and events you're processing.</p> <p>You can move the NRPPT date forward or backward, but not before an unsupported retro event.</p>                                                                                                                                                                                              |
| When and how do you want to process retro differences?                           | <p>You can schedule:</p> <ul style="list-style-type: none"> <li>• Retro pay calculations to start automatically, either once in the future or on a recurring basis.</li> <li>• Pay calculations to run after each retro pay calculation to pay the workers' retro differences as soon as Workday generates them.</li> </ul> <p>You can pay the retro differences as part of the workers' regular pay or using on-demand payments such as for a bonus.</p> <p>When you need to review the retro results, you can temporarily suspend them and:</p> <ul style="list-style-type: none"> <li>• Exclude them from further processing.</li> <li>• Bring them back later by canceling the retro results and rerunning retro.</li> </ul> <p>Example: You terminated a worker's employment and entered a retroactive bonus. You want to confirm this bonus with another department before paying it, so you suspend the retro result. You can later process payment manually.</p> |
| How do you want to process retro differences for workers in multiple pay groups? | <p>You can configure a tenant-level setting to either:</p> <ul style="list-style-type: none"> <li>• Forward retro differences to the workers' primary pay group.</li> <li>• Treat the events as unsupported, so that you can process retro differences manually in the prior pay group.</li> </ul> <p>After you run retro, you can update the target pay group to another based on worker eligibility.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

| Questions                                                            | Considerations                                                                                                                                                                                                                                                                                                                                                             |
|----------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Which workers do you want to process with the retro pay calculation? | <p>When workers have existing pay results in completed pay periods, you can enter supported events to process them in retro.</p> <p>When workers have no pay results in completed pay periods, create off-cycle payments for prior periods instead of running retro. Example: You retroactively enter time worked for hourly workers who haven't logged any hours yet.</p> |
| How do you want to display retro results on payslips?                | You can use Report Designer to create specific payslip layouts. Example: You can display consolidated retro results instead of 1 line per retro result.                                                                                                                                                                                                                    |

## Recommendations

### Before Running the Retro Pay Calculation

Before running the retro pay calculation for the first time, avoid unexpected results by defining the **Maximum Months Allowed For Retro Processing** for your tenant. Workday determines the earliest period for which to recalculate earnings and deductions by:

- Finding the current start date of a worker's primary pay group.
- Setting the NRPPT date to the date that precedes the current period start date by the number of months you define.

You can then adjust that period for individual workers. For best performance, set the number of months to 24 or less.

Review which events that you can and can't process with the retro pay calculation in these reports:

- **All Supported Payroll Retro Transaction Types**
- **All Unsupported Payroll Retro Transaction Types**

To avoid workers' NRPPT dates set in the future after you run retro, which results in unprocessed retro for current and future-dated events:

- Create run categories with period schedules that don't go beyond the schedules of the regular run category. Example: You configure a nonregular category such as bonus or commission with an annual period schedule with periods from January 1 to December 31. After this period is complete, when workers have unsupported events, Workday considers December 31 as the last day of the completed pay period, even if the current month is June. Therefore, when you run

retro, Workday moves the NRPPT date to the future, to the last completed pay period plus 1 day (1 January 2021).

- Complete pay periods after the last completed period of the regular run category.

Workday recommends that when you configure pay components to recalculate in retro, you only reference other pay components that also recalculate in retro. This configuration ensures that retro uses correct amounts when calculating prior periods. Example: You leave the **Do Not Recalculate During Retro** check box clear on an earning. To reference another earning, select 1 with the check box clear. To reference a deduction, select 1 with the **Recalculate During Retro** selected.

You can use the **Retro Calculation Processing Configuration** task to not process retro before an effective date for supported retro events for:

- Completed periods without on-cycle or on-demand replacement results (except for retro leave of absence, retro hire, and retro termination).
- A worker's additional job for a completed period without on-cycle or on-demand replacement results.
- A worker's non-regular run category for a completed period without on-cycle or on-demand replacement results.

Once you select an effective date, Workday won't calculate retro differences for these scenarios for pay periods before that date. This avoids double payments if workers receive supported retro entries back to periods with unprocessed retro.

Before removing or modifying the effective date you initially set, ensure there's no retro processing in progress.

For Payroll for the U.S., Workday recommends enabling these tenant settings from the **Pay/Retro Calculations > Retro Calculations - USA** section of the **Edit Tenant Setup - Payroll** task:

- **Enable Retro Processing from Different Tax Authorities to On-Cycle Payroll**
- **Enable Taxes on Retro Amounts from Prior Tax Authorities**

With these tenant settings enabled, when you process retro pay for a worker with a tax authority in the retro period that's different from their tax authority in the current period, Workday pulls the retro pay into the current period and taxes it based on the tax authority in effect during the retro period.

For Payroll for the UK, if you currently support future dated retro hires, we recommend you edit any relevant run categories to use this setup:

- Create a tenanted calculation that determines if the worker hire date is less than or equal to a certain date of the month, based on your business needs. Example: Worker: Hire Date <= 19th of the Month.
- Access the **Create Run Category** or **Edit Run Category** task.
- On the **Workers To Process** grid, configure the Active Status row as follows:
  - Add the new hire date condition.
  - Add the Workday delivered calculation *Retro Pay Calculation* as an OR statement. This is a Workday delivered value comparison calculation that specifies that the worker should be picked up by retro pay calculation

### Running the Retro Pay Calculation

Run the retro pay calculation at least once before running each on-cycle pay, including the initial payroll run (manual or scheduled). This practice maximizes the number of supported retro events that Workday can process and forward to workers' regular pay results.

Consider the frequency for running retro when you enable continuous calculations, depending on how many retro events you process.

When updating configurations, use effective dating whenever possible to ensure that retro processing considers the new configuration.

Because retirement savings are a percentage of, or based on other pay components, don't recalculate them during retro to prevent:

- Double-counting those earnings.
- Potential regulatory limit issues.

After running retro, access the **Retro Calculation Processing Report** and resolve any negative retro differences to avoid errors in payroll.

### Off-Cycle Payments for Pennsylvania Workers (USA)

When you create off-cycle payments for Pennsylvania workers using the **Run Retro Pay Complete for Subset of Workers** task from the **Retro Calculation Processing Report** with:

- The *Complete* option selected.
- The **Primary EIT** check box selected on the **Add Worker US Tax Elections** task.

The tax election configured takes precedence over the **City Withholding (work)** worktag override.

However, Workday recommends you to verify the Pennsylvania city withholding when processing retro payroll.

## Requirements

### For All Workers

Before running retro, make sure that the workers to process have:

- Existing completed pay results, except for leave of absence, hire, and termination. For those events, the retro pay calculation creates zero payroll results for the prior periods.
- Only supported retro events occurring after their NRPPT date. When they also have unsupported events, Workday moves their NRPPT date forward to exclude those events. However, Workday then ignores any supported events before the new NRPPT date.
- A target period that matches the current pay period. Example: An hourly worker hasn't entered time worked for the current pay period, so this period has no existing results. When you run retro for that worker, you can't forward retro differences to the current pay period.
- Only 1 company assigned (FRA, UK).
- Only 1 tax authority assigned (CAN, USA).

### For Specific Events

Configure run categories that you use in retro pay calculations to include specific statuses:

- Retro leaves of absence with **Payroll Effect** enabled: Select *On Leave* on the **General** and **Nonactive (On Cycle, On Demand Replacement)** tabs.
- Retro terminations, and supported events for terminated workers: Select *Terminated with Retro Differences* and *Terminated with Retroactive Events (for Retro Pay Calc only)* on the **General** tab.

Workday supports processing retro events from other pay groups when you enable it for your tenant. When the workers' primary pay group is a newly created pay group with no existing pay results, before running retro:

- Run and complete payroll for the first period of the period schedule assigned to the new pay group. Make sure that the pay group doesn't have an **Override First Processing Period** selected.
- Transfer the workers to the new pay group starting on the second period.

## Limitations

| Limitation                                            | Details                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
|-------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Unsupported retro events.                             | The <b>All Unsupported Payroll Retro Transaction Types</b> report lists unsupported retro events by country. Process these events manually through payroll input or off-cycle payments.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| Updates that don't trigger the retro pay calculation. | <p>Workday doesn't handle changes to these settings as retro events:</p> <ul style="list-style-type: none"> <li>• Definition of effective-dated pay components. Example: Changing the pay group detail eligibility.</li> <li>• Effective date of compensation changes. Example: Backdating a change to a compensation plan.</li> </ul> <p>To process these changes, enter a supported retro event for the worker such as payroll input with a zero amount.</p>                                                                                                                                                                                                                                                                                                                                                                          |
| Corrective retro for taxes.                           | <p>For Payroll for the UK, the retro pay calculation recalculates:</p> <ul style="list-style-type: none"> <li>• National Insurance amounts for completed periods for a retro hire event.</li> <li>• National Insurance, tax, student loan, and postgraduate loan amounts, and any pay components for apprenticeship levy, for a retro termination event.</li> </ul> <p>Workday doesn't recalculate for completed periods for any other taxes for Payroll for the UK.</p> <p>For Payroll for Canada, France, applicable taxes in the UK, and the U.S., Workday:</p> <ul style="list-style-type: none"> <li>• Forwards retro differences between a worker's original and recalculated results to their current pay results.</li> <li>• Applies the tax rates in effect for the regular run category in the current pay period.</li> </ul> |
| No supported events selection.                        | When workers have supported events and no unsupported events, you can't select which events to process. Workday includes all supported events.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| Arrears.                                              | <p>The retro pay calculation doesn't put deductions into arrears or recoup arrears generated in completed pay periods.</p> <p>When you run retro for a deduction that went into arrears, Workday considers the arrears balance when calculating the retro differences. Example: A deduction of 100 went into arrears. When you retroactively change the deduction to 120, Workday calculates the retro difference as 20.</p>                                                                                                                                                                                                                                                                                                                                                                                                            |

| Limitation                                                 | Details                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
|------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| International assignments.                                 | Workday doesn't process retro differences for workers on international assignments because of limitations related to currency conversion and tax implications.                                                                                                                                                                                                                                                                                          |
| Payment reversals (CAN, UK, USA)                           | When you forward retro differences to the current period from a period that you reversed, manually remove the differences in the current period.<br>Example: You can offset retro differences using payroll input. When you forward retro differences to a period and later reverse that period, Workday: <ul style="list-style-type: none"> <li>• Recovers the retro differences.</li> <li>• Adds them to the worker's current pay results.</li> </ul> |
| Gross ups.                                                 | The retro pay calculation doesn't recalculate gross-up earnings.                                                                                                                                                                                                                                                                                                                                                                                        |
| Effective date of your first Workday Payroll transactions. | The retro pay calculation doesn't process any events before the effective date of your first Workday Payroll transactions.                                                                                                                                                                                                                                                                                                                              |
| Change to payroll processing position (USA)                | Workday doesn't support retroactive changes to processing position that result in a tax authority change. Example: Retroactively changing a position attribute that's used to determine the processing position when the positions are in different work states.                                                                                                                                                                                        |

### Tenant Setup

You can use the **Edit Tenant Setup - Payroll** task to:

- Exclude completed on-demand additional results in the current period when determining which periods to process in the retro pay calculation.
- Disable processing pay components with retro differences for non-active workers (terminated or on leave).
- Set the maximum number of months before the current period for considering retro events.
- Enable processing retro differences from another pay group in the workers' primary pay group.
- Enable processing retro differences from different tax authorities to on-cycle payroll for USA only.
- Enable tax calculation under the correct tax authority for retro pay for USA only.
- Set the retro target period when a worker has a completed replacement payment in the current period.

### Security

Configure the *Change No Retro Processing Prior To* business process and security policy, and these domains in the Core Payroll functional area:

| Domains                                                    | Considerations                                                                                                                                                            |
|------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <i>Process: Off Cycle (On Demand)</i>                      | Enables users to include retro results in on-demand payments.                                                                                                             |
| <i>Process: Run Batch Calculations (Retro Calculation)</i> | Enables users to: <ul style="list-style-type: none"> <li>• Change the NRPPT date for multiple workers.</li> <li>• Change the retro setting on a pay component.</li> </ul> |

| Domains                                                         | Considerations                                                                                                                                                                                                                                                                                                                                                           |

|                                                                 | <ul style="list-style-type: none"> <li>Run or schedule retro pay calculations.</li> </ul>                                                                                                                                                                                                                                                                                |
| <i>Process: Run Batch Cancel (Retro Cancel)</i>                 | Enables users to cancel completed or in-progress retro results.                                                                                                                                                                                                                                                                                                          |
| <i>Process: Run Batch Complete (Retro Complete)</i>             | Enables users to complete retro results.                                                                                                                                                                                                                                                                                                                                 |
| <i>Reports: Pay Calculation Results for Pay Group (Results)</i> | Enables users to review retro results on reports such as the <b>Retro Calculation Processing Report</b> . Managing retro results on this report requires security that's specific to each action. Example: Canceling retro results through the report requires access to the <i>Process: Run Batch Cancel (Retro Cancel)</i> domain in the Core Payroll functional area. |

### Business Processes

| Business Processes                   | Considerations                                                                                                                                                                                                                                       |
|--------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <i>Change No Retro Prior To Date</i> | Use this business process to change a worker's NRPPT date.                                                                                                                                                                                           |
| <i>Hire</i>                          | Use this business process to correct a worker's location retroactively, then run the retro pay calculation to calculate differences due to that change.                                                                                              |
| <i>Termination</i>                   | To exclude any pay period before a rehire date, add a <i>To Do</i> step to this business process to advance a worker's NRPPT date. When you rehire the worker, Workday doesn't process any retro events between the termination and the rehire date. |

### Reporting

You can use the **Pay Calculation Retro Result Lines for Pay Group** report data source when creating custom reports on retro payments.

The date you enter as the Retro Processing Date on retro reports such as the **Retro Calculation Processing Report** or the **Retro Pay Calculation Result Audit Detail Report** reflects the date of the first retro pay calculation after your last complete. Example: When you **Run Retro Pay Complete** task for a full pay group on 03/06/2022 and then initiate the **Run Retro Pay Calculation** task on 03/08/2022, Workday uses 03/08/2022 as the Retro Processing Date.

| Reports                                            | Considerations                                                                                                                                                                                                                                                                |
|----------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Payroll Changes Unprocessed for a Retro Run</b> | Enables you to identify unprocessed and unsupported retro events that need a manual adjustment.                                                                                                                                                                               |
| <b>Retro Calculation Processing Report</b>         | <p>Enables you to review and troubleshoot retro results by filtering results using facets. Example: You can display workers with:</p> <ul style="list-style-type: none"> <li>Unprocessed events.</li> <li>Unsupported events.</li> <li>Negative retro differences.</li> </ul> |

| Reports                                           | Considerations                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
|---------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                                   | <ul style="list-style-type: none"> <li>Nonactive statuses.</li> </ul> <p>You can also:</p> <ul style="list-style-type: none"> <li>Review the retro difference source on the subreports. Examples: Compensation change or bonus payment through payroll input.</li> <li>Suspend, cancel, or complete retro results for a subset of workers.</li> </ul> <p>When you run the retro pay calculation, Workday assigns statuses such as <i>Unprocessed</i> that you can use to filter results.</p> |
| <b>Reversal Results with Retro (CAN, UK, USA)</b> | Enables you to identify workers with retro differences when you later reversed the source or target period.                                                                                                                                                                                                                                                                                                                                                                                  |

### Integrations

You can use these web services:

- Change No Retro Processing Prior To*: To change the NRPPT date by worker for multiple workers at a time.
- Import Payroll Off-Cycle Payment*: To pay retro differences through an off-cycle payment instead of the regular on-cycle payroll.

### Connections and Touchpoints

The retro pay calculation has touchpoints with all the supported events that you can process such as compensation changes or time tracking. You can view the full list by country using the **All Supported Payroll Retro Transaction Types** report.

| Features                     | Considerations                                                                                                                                                                                                                                                                                                                                                           |
|------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Benefits.                    | <p>When workers have a supported retro event and you run retro, Workday processes all:</p> <ul style="list-style-type: none"> <li>Other supported events within the retro period.</li> <li>Benefits changes, even when they don't trigger retro.</li> </ul>                                                                                                              |
| Earning or deduction limits. | <p>You can limit retro payments based on pay components and related calculations.</p> <p>When you calculate the workers' current payroll, Workday includes retro differences in the current pay component value. When the total retro differences for the recalculated periods exceed an earning or deduction limit, Workday reduces those differences to the limit.</p> |
| Multiple subperiods.         | When forwarding retro results in payroll results with gross-to-net proration, Workday includes the differences to the first subperiod.                                                                                                                                                                                                                                   |
| Payroll run categories.      | Payroll run categories determine which pay components to process based on worker eligibility.                                                                                                                                                                                                                                                                            |

| Features        | Considerations                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
|-----------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                 | <p>The retro pay calculation forwards retro differences from all run categories to the regular run category.</p> <p>Workday provides several processing statuses referring to retro that you can use to identify workers to process. Example: <i>Terminated with Retro Differences</i>.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| Pay balances.   | <p>You can calculate and forward retro differences to the current pay period from earnings that are either from:</p> <ul style="list-style-type: none"> <li>Any completed periods.</li> <li>A period that falls within the current pay balance period.</li> </ul> <p>You can also exclude all retro differences from pay balances.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| Pay components. | <p>You can configure which pay components to recalculate in a retro pay calculation. Retro uses the pay component definition on its effective date when it falls within the processed period.</p> <p>Even when you don't configure pay components to recalculate, Workday always evaluates these pay component settings for workers who have a supported event:</p> <ul style="list-style-type: none"> <li>Worker eligibility criteria.</li> <li>Active or inactive status.</li> </ul> <p>Example: You leave <b>Recalculate During Retro</b> clear for a deduction and either:</p> <ul style="list-style-type: none"> <li>You inactivate the deduction for a completed period.</li> <li>The worker no longer meets the eligibility criteria.</li> </ul> <p>When you run retro for that period, Workday still refunds the deduction in the current period.</p> |

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships in your tenant. Learn more about the [Workday Touchpoints Kit](#) on Workday Community.

## Steps: Set Up Retro Processing

### Prerequisites

Review setup considerations for retro processing.

### Context

Before you run the retro pay calculation to process past events, configure pay components, related calculations, and run categories.

### Steps

1. (Optional) For Payroll for the U.S., select these check boxes from the **Pay / Retro Calculations > Retro Calculations - USA** section of the **Edit Tenant Setup - Payroll** task:

- **Enable Retro Processing from Different Tax Authorities to On-Cycle Payroll**
- **Enable Taxes on Retro Amounts from Prior Tax Authorities**

Selecting these check boxes enables Workday to forward retro differences to on-cycle payroll and calculate taxes for retro pay based on the tax authorities in effect during the retro periods.

2. Access the **Create Earning** task.

For earnings, leave the **Do Not Recalculate During Retro** or **Always Gross-Up** check box clear to have Workday recalculate the earning during retro pay calculations.

When you leave these check boxes clear and want to reference another pay component, Workday recommends that you select one configured to recalculate in retro. This configuration ensures that retro uses correct amounts when calculating prior periods.

For Payroll for Canada, the UK, and the U.S., to process retroactive changes to time off, use earnings rather than deductions to calculate the value of paid and unpaid time off. You can define negative earnings to subtract paid and unpaid time from a worker's base pay.

Security: *Set Up: Payroll (Calculations - Payroll Specific)* domain in the Core Payroll functional area.

3. Access the **Create Deduction** task.

Select the **Recalculate During Retro** check box to have Workday recalculate the deduction during retro pay calculations.

Workday recommends that:

- You don't select this check box for percentage-based deductions. Example: Percentage-based pension contributions.
- When you select this check box and want to reference another pay component, select 1 configured to recalculate in retro.

Security: *Set Up: Payroll (Calculations - Payroll Specific)* domain in the Core Payroll functional area.

4. (Optional) [Set Up Pay Component Related Calculations](#) on page 241.

To forward related calculations to the current period for a pay component, select **Bring Forward Difference** on the **Retro Adjustment Type** tab of the calculation.

When you leave the check box clear, Workday pulls the full amount of the calculation into the worker's current period.

## 5. Access the **Edit Run Category** task.

To process retro for terminated workers, configure these statuses on the **General** tab:

- *Terminated with Retroactive Events (for Retro Pay Calc only)*: To calculate retro differences for terminated workers, for events occurring during or after the period that includes the termination date.
- *Terminated with Retro Differences*: To pay retro differences for terminated workers when you run payroll.

Security: *Set Up: Payroll Pay Group Specific* domain in the Core Payroll functional area.

## 6. (Optional) Access the **Configure Smart Calculation Event Processing** task.

Access the **Payroll Retro Event Categories** tab.

For each event, select which countries to exclude from triggering retro in the **Processing Configuration** column.

If you change back the setting to include the event, Workday considers that event for prior periods where you didn't run retro for the workers. Example: In January, you exclude the Transfer Employee event from triggering retro. In February, you transfer Janet effective in January. That transfer doesn't trigger retro. In March, you change the setting to include the event. When you run retro, Workday recalculates her pay to consider the transfer in January.

Security: *Set Up: Payroll* domain in the Core Payroll functional area.

## 7. (Optional) Access the **Retro Calculation Processing Configuration** task.

This enables you to not process retro before an effective date for these scenarios:

- Supported retro event for completed periods (except retro leave of absence, retro hire, and retro termination) without on-cycle or on-demand replacement results.
- Supported retro for the worker's additional job for a completed period without on-cycle or on-demand replacement results.
- Supported retro for the worker's non-regular run category for a completed period without on-cycle or on-demand replacement results.

Once you select a country and an effective date, Workday won't calculate retro differences for these scenarios for pay periods before that date. This avoids double payments if workers receive supported retro entries back to periods with unprocessed (but resolved) retro.

Before removing or modifying the effective date you initially set, ensure there is no retro in progress.

Security: *Set Up: Payroll* domain in the Core Payroll functional area.

## Next Steps

To change the retro setting of a pay component, add a new effective date.

For Payroll for the UK, if you currently support future dated retro hires, we recommend you edit any relevant run categories to use this setup:

- Create a tenanted calculation that determines if the worker hire date is less than or equal to a certain date of the month, based on your business needs. Example: Worker: Hire Date <= 19th of the Month.
- Access the **Create Run Category** or **Edit Run Category** task.
- On the **Workers To Process grid**, configure the Active Status row as follows:
  - Add the new hire date condition.
  - Add the Workday delivered calculation *Retro Pay Calculation* as an OR statement. This is a Workday delivered value comparison calculation that specifies that the worker should be picked up by retro pay calculation

## Reference

[2022R2 What's New Post: Retro Processing and Gross-to-Net Proration](#)

## Steps: Process Retro Payroll

### Prerequisites

- Review setup considerations for retro processing.
- Set up retro processing.
- Run retro, cancel the results, and set an initial No Retro Processing Prior To date using the *Change No Retro Processing Prior To* web service. This practice reduces the number of unsupported retro events when you first run retro.

### Context

You can recalculate workers' earnings and deductions for a supported retro event in completed pay periods. You can then process the differences in the workers' payroll.

### Steps

1. [Schedule Retro Pay Calculations](#) on page 830 or [Calculate Retro Payroll](#) on page 827.  
Run a retro pay calculation to generate retro differences.
2. Review retro results.  
See [Steps: Manage Retro Results](#) on page 852.
3. [Calculate On-Cycle Payroll](#) on page 618 or [Process Retro Differences in On-Demand Payments](#) on page 835.  
Recalculate payroll to pay the retro differences.  
When workers have additional retro events after you calculate their regular payroll, you must recalculate that regular payroll.  
You can view the processed retro differences on the **Gross to Net** and **Additional Pay Components** tabs of the workers' payroll results.
4. Access the **Run Retro Pay Complete** task.  
Complete retro results for pay groups and pay periods with:
  - No payroll process running for any pay groups.
  - No in-progress on-demand replacement payments.
  - No workers with a retro pay calculation status of *Requires Recalculation* or *Error*. Correct and recalculate retro as needed for those workers. Example: When you complete on-demand additional payments while retro is *In Progress*, Workday assigns the *Requires Re-calculation* status to the retro result.

Workday marks retro results as *Complete* and you can't rerun retro or suspend the results.

Security: *Process: Run Batch Complete (Retro Complete)* domain in the Core Payroll functional area.
5. [Complete Payroll](#) on page 627.  
Run your final pay calculation and complete it.  
Complete off-cycle payments with retro before completing on-cycle payments for the same period.

## Calculate Retro Payroll

### Prerequisites

- Set up retro processing.
- Enter an event for a completed period such as a payroll input.

- Ensure that no on-cycle payroll processes are running for any pay groups.
- Security: *Process: Run Batch Calculations (Retro Calculation)* domain in the Core Payroll functional area.

## Context

When workers have supported retro events, you can calculate differences in earnings and deductions by running the retro pay calculation. Workday then forwards the retro differences to the next open regular pay period.

Workday recommends that you calculate retro payroll before every regular payroll calculation, including the initial payroll run (manual or scheduled). This practice maximizes the number of supported events Workday processes in a worker's regular payroll results. For best performance:

- Consider the frequency for running retro when you enable continuous calculations, depending on the number of retro events to process.
- You can limit the retro run to specific workers using the **Employees to Calculate** field.
- Run smart retro or retro by calculation statuses once per period.

For Payroll for Canada, France, and the U.S., retro doesn't recalculate taxes in the prior period and applies the tax rate:

- Effective for the target period in which you process the differences.
- Of the regular run, including for bonus earnings that on-cycle pay calculations tax at a supplemental rate.

## Steps

1. Access the **Run Retro Pay Calculation** task.
2. As you complete the task, consider:

| Option                              | Description                                                                                                                                                                                                                                                                                         |
|-------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Smart Retro</b>                  | To process workers with supported or unsupported retro events since the last retro run, and workers who have results with the <i>Requires Re-calculation</i> status. The <i>Requires Re-calculation</i> status could be because of other pay results, and not just supported or unsupported events. |
| <b>Smart Retro by Events</b>        | To process workers with 1 or more specific supported or unsupported retro event type.                                                                                                                                                                                                               |
| <b>Calculation Statuses</b>         | To process workers with specific statuses, or workers with no new event since the last retro run. Example: Select this option to process configuration changes. <i>Not Yet Started</i> is the only available status the first time you process a pay group.                                         |
| <b>Workers</b>                      | To select specific workers by name or ID, including workers with no new event since the last retro run. Example: Select this option to process configuration changes.                                                                                                                               |
| <b>Comma Separated Employee IDs</b> | To process multiple workers by their employee IDs. This option only runs on valid IDs that you                                                                                                                                                                                                      |

| Option | Description                                                                          |
|--------|--------------------------------------------------------------------------------------|
|        | enter from the pay group that correspond to workers who have supported retro events. |

Smart retro calculations consider the events listed on the **Payroll Retro Event Categories** tab of **View Payroll Event Categories** report.

## Result

The retro pay calculation creates retro results for all workers with supported or unsupported events. However, Workday only generates differences for workers with supported retro events whose effective date is on or after the workers' No Retro Processing Prior To (NRPPT) date. Retro also sets the status of the workers' open payroll results to *Waiting to pick up Retro Difference*, and assigns the NRPPT date for:

- Workers with unsupported events to 1 day after the last period with completed on- or off-cycle results.
- New hires to the later of:
  - The start date of the first processing period of their pay group, and
  - The date determined by the **Maximum Months Allowed For Retro Processing** field on the **Edit Tenant Setup - Payroll** task.
- All other workers to the later of the first pay period with completed results, and 24 months before you run retro.

When forwarding the retro differences to payroll results with gross-to-net proration, Workday forwards the differences to the first subperiod.

## Example

In January, you select the **Recalculate during Retro** check box for the United Way deduction that Melissa has. You also add a 100 ongoing pay input override.

In March, you increase her deduction by adding a 30 pay input adjustment effective January 1. You process the retro event for the target period of March and run payroll. Retro processes a 30 difference for both January and February and 30 for the increased deduction.

|                               | January | February | March | YTD |
|-------------------------------|---------|----------|-------|-----|
| Original United Way Deduction | 100     | 100      | 100   | 300 |
| Retro for January             |         |          | 30    | 30  |
| Retro for February            |         |          | 30    | 30  |
| Increased deduction           |         |          | 30    | 30  |
| Total                         | 100     | 100      | 190   | 390 |

## Next Steps

- Review retro results.
- Rerun the retro pay calculation for 1 or more workers whenever you have more prior period changes. You can run retro for individual workers from the related actions menu of the worker or the result.

## Schedule Retro Pay Calculations

### Prerequisites

- Set up retro processing.
- Security: *Process: Run Batch Calculations (Retro Calculation)* domain in the Core Payroll functional area.

### Context

You can schedule retro calculations to start automatically and run in the background, either once in the future or on a recurring basis.

### Steps

1. Access the **Pay Calculation Scheduler** task.
2. From the **Run Type** prompt, select *Retro Pay Calculation Scheduler*.
3. As you complete the task, consider:

| Option                                                                                   | Description                                                                                                                                                                                                                      |
|------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Pay Run Groups and/or Pay Group Details</b>                                           | You can select any pay groups for which you ran retro at least once, including pay groups whose retro results you canceled.                                                                                                      |
| <b>Employees to Calculate</b>                                                            | By including only workers with events that impact retro, you can minimize processing time for recalculations. Workday recommends that you select smart calculations to consider only workers with new events since the last run. |
| <b>Launch Pay Calculation after Retro</b>                                                | Starts a pay calculation for the same pay group details immediately following the retro pay calculation.<br><br>Security: <i>Process Run Batch Calculations (Pay Calculation)</i> domain in the Core Payroll functional area.    |
| <b>Allow after First Manual Retro Calculation</b>                                        | Initiates a recurring retro run only after you run the <b>Run Retro Pay Calculation</b> task once for the pay group.                                                                                                             |
| <b>Stop Day(s) before Payment Date of Target Period</b>                                  | Stops scheduled recurring calculations a specified number of days before the payment date of the target period.<br><br>The target period is the payroll period pulling the retro differences.                                    |
| <b>Skip Processing if Retro Pay Calculation Is in Progress</b>                           | Skips the scheduled calculation when a retro run is in progress for the same pay group details.                                                                                                                                  |
| <b>Skip Processing if Retro Pay Calculation Has Been Processed within Last x Hour(s)</b> | Skips the scheduled calculation when you ran retro for the same pay group details within the specified number of hours.                                                                                                          |

## Next Steps

You can:

- Enable notifications to receive messages when processes start, finish, or encounter errors.
- Run the **Process Monitor** report for information about completed or skipped calculations.

### Concepts

[Concept: Workday Scheduled Processes](#)

### Tasks

[Schedule Payroll Calculations](#) on page 621

[Steps: Set Up Workday Notifications](#)

## Steps: Process Retro Differences from Tax Authority Change (USA)

### Prerequisites

[Steps: Set Up Retro Processing](#) on page 825

### Context

You can associate taxes on retro pay with the tax authority in effect during the corresponding retro pay period. Workday:

- Calculates retro differences for earnings and deductions.
- Forwards the retro differences to the current pay period.
- Associates taxes on the retro difference with the tax authorities in effect during the retro pay periods.
- Calculates taxes on retro pay based on the worker's current tax rates, elections, and rules.

### Steps

1. Select these check boxes from the **Pay / Retro Calculations > Retro Calculations - USA** section of the **Edit Tenant Setup - Payroll** task:

- **Enable Retro Processing from Different Tax Authorities to On-Cycle Payroll**
- **Enable Taxes on Retro Amounts from Prior Tax Authorities**

Selecting these check boxes enables Workday to forward retro differences to on-cycle payroll and calculate taxes for retro pay based on the tax authorities in effect during the retro pay periods.

2. [Calculate Retro Payroll](#) on page 827

Run a retro pay calculation to generate retro differences.

3. Review retro results.

See: [Steps: Manage Retro Results](#) on page 852

4. [Calculate On-Cycle Payroll](#) on page 618

Recalculate payroll to pay the retro differences.

When workers have additional retro events after you calculate their regular payroll, you must recalculate that regular payroll.

You can view the processed retro differences on the **Gross to Net** and **Additional Pay Components** tab of the worker's payroll results.

## 5. Access the **Run Retro Pay Complete** task.

Complete the retro results for pay groups and pay periods with:

- No payroll process running for any pay groups.
- No in-progress on-demand replacement payments.
- No workers with a retro pay calculation status of *Requires Recalculation* or *Error*. Correct and recalculate retro as needed for those workers.

Example: When you complete on-demand additional payments while retro is *In Progress*, Workday assigns the *Requires Recalculation* status to the retro result.

Workday marks retro results as *Complete* and you can't rerun retro or suspend the results.

## 6. [Complete Payroll](#) on page 627

Run your final pay calculation and complete it.

Complete off-cycle payments with retro before completing on-cycle payments for the same period.

## Result

Workday resolves the taxes for retro period tax authorities on a single pay result with 1 payroll result line displaying per:

- Tax for the current period.
- Tax for each retroactive period that has different applicable tax authorities than the current pay result.

## Related Information

### Concepts

[Concept: Retro Differences from Tax Authority Changes \(USA\)](#) on page 832

[2024 R2 Feature: Retroactive Pay with Different Tax Authorities for On-Cycle Payroll](#)

## Concept: Retro Differences from Tax Authority Changes (USA)

When you select **Enable Retro Processing from Different Tax Authorities to On-Cycle Payroll** and **Enable Taxes on Retro Amounts from Prior Tax Authorities** in your tenant, Workday:

- Calculates retro differences for earnings and deductions and forwards them to the current pay period.
- Associates taxes on the retro difference with the tax authorities in effect during the retro pay periods.
- Calculates taxes on retro pay based on the worker's current tax rates, elections, and rules.
- Displays source tax authorities that includes the work and resident tax authority details from each individual payroll result processed by retro on the retro worker result.
- Displays retro tax authorities for pay components in the Retro Period Tax Authorities column on a payroll result.
- Displays a separate payroll result line for each unique combination of source period and current period that have different tax authorities.

During pay calculation, Workday calculates retro periods before the current period. When there is more than 1 retro period, Workday calculates them in alphanumerical order based on the retro period tax authorities and then by these dimensions:

1. Work state
2. Work city
3. Work county
4. SUI state
5. Resident state
6. Resident city
7. Resident county
8. Resident school district

With only the **Enable Retro Processing from Different Tax Authorities to On-Cycle Payroll** tenant setting enabled, Workday processes retro differences in on-cycle payments and forwards them to the current pay period. Workday taxes the retro differences based on the current tax authority.

You can use on-demand additional payments to process retro differences from tax authorities for workers:

- Who have taxes for both U.S. states and territories
- In Pennsylvania who:
  - Selected or cleared the **Primary EIT** check box on their work city tax election since the retroactive period.
  - Have an OMWJ tax allocation set up for a city in Pennsylvania that's different from the primary EIT city designated tax election.

Workday only applies pay input for pay component related calculations to the current pay period. You can adjust the retro period by adding an input adjustment to balance the total for the current and retro pay periods.

Workday includes the retro taxes and earnings that are paid on on-cycle pay results in the disposable income calculation on a worker's income withholding order.

Workday uses the effective date of worker's tax elections to determine whether a local tax is included in the retro pay period. When you process retro differences for workers with local tax elections, consider:

| Use Case                                                | Tax Election Adjustment                                                                                                                               |
|---------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------|
| The worker's tax election is no longer applicable.      | Add a new local tax election and select the <b>Inactive</b> check box with an effective date for when the local tax election is no longer applicable. |
| The worker has a tax election for a new city or county. | Add a new local tax election for the worker's city or county.                                                                                         |

### Example

As of January 1, 2024, James lives in Cleveland, Ohio and works in Toledo, Ohio earning 3000 per pay period. As a payroll administrator, you run pay calculation and complete for 2 pay periods in January:

- 2024-01-01 to 2024-01-15
- 2024-01-16 to 2024-01-31

On February 1, 2024, James moves to New York when he now lives and works. James also receives a retroactive compensation change of 1000 per pay period, effective January 1, 2024.

You run the retro pay calculation and then you run pay calculation and complete for the current pay period in February. The **Compensation** section of the **Gross to Net** tab on James' payroll result displays the retroactive payments for January along with the tax authorities in effect during those retro periods.

| Pay Component | Retro Period             | Retro Period Tax Authorities                                                                                           | Amount |
|---------------|--------------------------|------------------------------------------------------------------------------------------------------------------------|--------|
| Base Pay      | 2024-01-16 to 2024-01-31 | State (Work): Ohio<br>State (SUI): Ohio<br>State (Resident): Ohio<br>City (Work): Toledo<br>City (Resident): Cleveland | (3000) |
| Base Pay      | 2024-01-16 to 2024-01-31 | State (Work): Ohio                                                                                                     | 4000   |

| Pay Component | Retro Period                | Retro Period Tax Authorities                                                                                              | Amount |
|---------------|-----------------------------|---------------------------------------------------------------------------------------------------------------------------|--------|
|               |                             | State (SUI): Ohio<br>State (Resident): Ohio<br>City (Work): Toledo<br>City (Resident):<br>Cleveland                       |        |
| Base Pay      | 2024-01-01 to<br>2024-01-15 | State (Work): Ohio<br>State (SUI): Ohio<br>State (Resident): Ohio<br>City (Work): Toledo<br>City (Resident):<br>Cleveland | (3000) |
| Base Pay      | 2024-01-01 to<br>2024-01-15 | State (Work): Ohio<br>State (SUI): Ohio<br>State (Resident): Ohio<br>City (Work): Toledo<br>City (Resident):<br>Cleveland | 4000   |
| Base Pay      |                             |                                                                                                                           | 4000   |

Because the tax authorities in effect during the 2 retro pay periods are the same, Workday displays the aggregated amounts for gross wages, subject wages, and taxable wages for each pay component on the **Taxes** section of the **Gross to Net** tab.

| Pay Component           | Worktags | Retro Period Tax Authorities                                                                                           | Amount | Related Calculation | Amount |
|-------------------------|----------|------------------------------------------------------------------------------------------------------------------------|--------|---------------------|--------|
| Federal Withholding USA |          | State (Work): Ohio<br>State (SUI): Ohio<br>State (Resident): Ohio<br>City (Work): Toledo<br>City (Resident): Cleveland | 78.33  | Gross Wages         | 2000   |
|                         |          |                                                                                                                        |        | Subject Wages       | 2000   |
|                         |          |                                                                                                                        |        | Taxable Wages       | 2000   |

| Pay Component         | Worktags | Retro Period Tax Authorities                                                                                                                          | Amount | Related Calculation | Amount |

[2024 R2 Feature: Retroactive Pay with Different Tax Authorities for On-Cycle Payroll](#)

##### Tasks

[Steps: Process Retro Differences from Tax Authority Change \(USA\)](#) on page 831

## Process Retro Differences in On-Demand Payments

### Prerequisites

- Define which pay components to calculate for on-demand payments.
- Run retro pay calculations and review the results.
- Security: *Process: Off Cycle (On Demand)* domain in the Core Payroll functional area.

### Context

When you run retro and have retro differences, you can pay them using on-demand payments for the current pay period and regular run categories.

**Note:** When you override a payment date and retro replaces an on-demand replacement result, the payment date of the zero result will be the period default payment date. In addition, the retro calculation for the period will use the period payment date instead of the original on-demand replacement payment date.

### Steps

1. Access the **Run On Demand Payment for Worker** task or click **Actions > Payroll > Run On Demand Payment** from a worker's profile.
2. Select **Create Additional Payment** or **Create Replacement Payment**.  
Leave the **Prior Period** check box clear.  
You can't include retro differences in prior period payments.
3. In the **Payment Date** field, select a date on or after the period start date.

4. In the **Reference Worktags** section, review the worktags you've currently set up for the earnings and deductions.  
The **Other Authority** worktag displays the current voluntary and mandatory tax authorities of a worker as of the subperiod end date.
5. In the **Override Worktags** section, enter overrides for existing worktags.  
You can override a worker's:
  - Company other than the current primary job company.
  - Resident and work tax authority (state, county, and local).
  - Other Authorities to include changes to any voluntary tax authority options. Workday automatically resolves the mandatory tax authorities based on your current work or resident state.
6. In the **Retro Results** section, select **Include Retro Differences in Payment**.
7. To pay retro differences only, delete the empty row in the **Input** grid.

## Result

Workday processes the retro differences in the on-demand payment rather than in worker's next regular on-cycle payroll.

**Note:** For Payroll for the UK, when you run pay complete for an on-demand additional payment with a position-based pay component for a worker, make a retro company change within that on-demand period, then run retro, retro creates a negative earnings difference in the amount of the on-demand payment. In other words, the on-demand additional payment is not applied. This is because the company for the on-demand payment does not match the current company. If you want to apply an on-demand additional payment with a retro company change, we recommend that you manually create a pay input for the worker.

## Next Steps

For Payroll for Canada and the U.S., when a worker has retro differences from companies other than their current primary job company, access the related actions menu of the payroll retro worker result to view the:

- Source company that the retro difference is from.
- Target payroll result that Workday processes the difference in.

Recalculate any *In Progress* on-cycle payments.

### Tasks

[Steps: Set Up Retro Processing](#) on page 825

[Steps: Manage Retro Results](#) on page 852

## Concept: Cancel a Retro Pay Calculation

You can use the **Run Retro Pay Cancel** task to cancel retro results for pay groups or pay run groups:

- When no on-cycle payroll processes are running for any pay groups.
- Before the results have a *Complete* status.

Example: Janet is on unpaid leave in the current pay period and is back on the next period. You enter a retro event that generates a negative pay result on her current payroll. You can cancel the retro result to process the differences in her next pay period.

When you cancel retro results, Workday updates the workers':

- No Retro Processing Prior To date to the value before you ran retro.
- Retro pay calculation status to *Not Yet Started*.

After you adjust entries for the pay group such as with payroll inputs and rerun retro, Workday processes the events again.

## Concept: Cancel a Completed Retro Pay Calculation

You can use the **Cancel Retro Complete** task to cancel a completed retro pay calculation for pay groups or pay run groups when:

- No on-cycle payroll processes are running for any pay groups.
- The pay groups or pay run groups have a *Completed* or *Completed with Exceptions* status.
- No other pay groups have retro results with an *In Progress* status.
- You haven't included the differences in completed payroll.

Workday recommends that you use this feature sparingly to avoid unexpected results when you already closed the ledger period. Example: You can use this feature for errors that affect a large population within a pay group whose retro results are complete.

When you need to cancel retro results that you completed at different times, you must cancel them in reverse completion order, including any completed on or off-cycle payroll as well. Example: You complete two separate retro pay calculations, then run and complete a payroll calculation that includes the completed retro calculations. You find inaccuracies in the first set of retro results and want to cancel them. You must first cancel the completed the completed payroll calculation, and then run **Cancel Retro Complete** and **Run Retro Pay Cancel** for the second retro pay calculation before doing the same for the first completed retro pay calculation.

When you cancel completed retro results, Workday changes the status of canceled completed retro pay results to *In Progress*.

## Reference: Retro Processing Statuses

Workday displays retro statuses on retro pay calculation tasks and reports such as **Run Retro Pay Calculation** or **Retro Calculation Processing Report**.

A **Retro Status** applies to individual workers.

| Status                                                            | Description                                                                                                                                                        |
|-------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <i>Cannot Process Retro – has unsupported Retro events</i>        | Worker has unsupported retro changes that require manual adjustments.                                                                                              |
| <i>Supported Retro to process</i>                                 | Worker has supported retro changes that require processing.                                                                                                        |
| <i>Suspended Retro to exclude</i>                                 | Worker has supported retro changes and you suspended the results.                                                                                                  |
| <i>Cannot Process Retro – Retro Change Date Event in progress</i> | Worker's No Retro Processing Prior To date is changing. You can recalculate or cancel retro for the worker, but you can't suspend or complete their retro results. |

A **Retro Pay Calculation Status** applies to calculated or completed retro runs for entire pay groups. Canceling retro results for 1 worker or a subset of workers in a pay group doesn't trigger status updates.

| Status             | Description                                                                                                              |
|--------------------|--------------------------------------------------------------------------------------------------------------------------|
| <i>In Progress</i> | The <b>Run Retro Pay Calculation</b> task results include no <i>In Error</i> or <i>Requires Re-calculation</i> statuses. |

| Status                          | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
|---------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <i>Completed</i>                | The <b>Run Retro Pay Complete</b> task results include no <i>In Error</i> or <i>Requires Re-calculation</i> statuses.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| <i>Complete with Exceptions</i> | <p>The <b>Run Retro Pay Complete</b> task results include 1 or more retro results not in an <i>In Progress</i> status, such as:</p> <ul style="list-style-type: none"> <li>• <i>In Error</i>. You can correct the error, run the <b>Run Retro Pay Calculation</b> task again, and complete the retro.</li> <li>• <i>Requires Re-calculation</i>. You can run the <b>Run Retro Pay Calculation</b> task again and complete the retro.</li> </ul>                                                                                                                                                                                         |
| <i>Pending Prior Retro</i>      | <p>There's a change in a worker's pay group, and the <b>Run Retro Pay Calculation</b> task includes 2 retro worker results:</p> <ul style="list-style-type: none"> <li>• 1 set to <i>Requires Re-calculation</i> processed first.</li> <li>• The other set to <i>Pending Prior Retro</i> processed second.</li> </ul> <p>When you recalculate retro, Workday:</p> <ul style="list-style-type: none"> <li>• Removes <i>Requires Re-calculation</i> for the retro worker result processed first.</li> <li>• Changes <i>Pending Prior Retro</i> to <i>Requires Re-calculation</i> for the retro worker result processed second.</li> </ul> |

**Related Information****Concepts**

[Concept: Retro Processing Statuses with Multiple Retro Runs](#) on page 861

[Concept: Supported, Unsupported, and Unprocessed Retro Events](#) on page 859

**Reference: Supported Retro Events**

The retro pay calculation supports specific retro events in various categories for active and terminated workers. You can access the:

- **All Supported Payroll Retro Transaction Types** report to view what countries support each retro transaction type.
- **Payroll Retro Event Categories** tab on the **View Payroll Event Categories** report to view the individual events included in a category.

| Event Category  | Description                                                                                                                                                                                                                                                                                                                             |
|-----------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Additional jobs | <p>The retro pay calculation can process a retro additional job when the new job is in the same pay group and company as the worker's existing job.</p> <p>You can enter a retro change for a worker with multiple positions. Workday then recalculates pay components for all of the worker's positions that are in the pay group.</p> |
| Benefits        | The retro pay calculation supports:                                                                                                                                                                                                                                                                                                     |

| Event Category                        | Description                                                                                                                                                                                                                                                                                                  |
|---------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                       | <ul style="list-style-type: none"> <li>Changes to rates and deductions, such as <i>Change Benefits</i> and <i>Change Benefits Annual Rate</i>.</li> <li>Compensation changes that cause Workday to recalculate benefit deductions configured to recalculate during retro.</li> </ul>                         |
| Compensation                          | The retro pay calculation supports several compensation changes, including one-time payments and bonuses.                                                                                                                                                                                                    |
| Leave of absence (request and return) | <p>The retro pay calculation processes retro leave of absence for leave types that both:</p> <ul style="list-style-type: none"> <li>Have payroll effect.</li> <li>Are part of your run category.</li> </ul>                                                                                                  |
| Other data change                     | <p>The retro pay calculation processes these change job events in the same tax authority:</p> <ul style="list-style-type: none"> <li>Data change</li> <li>Demotion</li> <li>Promotion</li> <li>Lateral move</li> <li>Swap positions</li> <li>Transfer</li> </ul>                                             |
| Payroll input                         | <p>You can process retro payroll input for:</p> <ul style="list-style-type: none"> <li>Deductions that you set to recalculate during retro.</li> <li>Earnings, unless you set them to always gross up or not to recalculate during retro.</li> </ul>                                                         |
| Retro Company Change (UK)             | When you submit a company change for a worker effective in a completed period, the retro differences are calculated for each of the periods between the period in which the company transfer falls and the current period, and those differences are brought forward to the current pay period.              |
| Retro End Additional Job (CAN)        | <p>The retro pay calculation supports retroactively:</p> <ul style="list-style-type: none"> <li>Ending an additional job.</li> <li>Corrections to ending an additional job.</li> <li>Rescinding the ending an additional job</li> </ul>                                                                      |
| Retro hire                            | <p>The retro pay calculation supports:</p> <ul style="list-style-type: none"> <li>Corrections to a retro hire (CAN, USA).</li> <li>Hires entered retroactively (CAN, UK, USA).</li> <li>Hires entered retroactively for workers with or without payroll results on the previous pay period (FRA).</li> </ul> |
| Retro Pay Group Change (CAN)          | The retro pay calculation supports changing a worker's pay group in a retro pay period.                                                                                                                                                                                                                      |

| Event Category                   | Description                                                                                                                                                                                                                                                                                          |
|----------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Retro Tax Authority Change (CAN) | The retro pay calculation supports retroactively changing a worker's tax authority due to a work location or residence change.                                                                                                                                                                       |
| Retro termination                | The retro pay calculation supports: <ul style="list-style-type: none"> <li>• Terminations entered retroactively.</li> <li>• Rescinding terminations retroactively.</li> <li>• Corrections to a retro termination.</li> </ul>                                                                         |
| Time entry                       | The retro pay calculation supports retro time entry for time tracking.                                                                                                                                                                                                                               |
| Time off                         | When you enter retro time off, the retro pay calculation recalculates: <ul style="list-style-type: none"> <li>• Paid or unpaid time off earnings directly affected by the change.</li> <li>• Earnings indirectly affected by the change, such as when time off reduces base pay earnings.</li> </ul> |

### Reference: Change No Retro Processing Prior to Dates

After you run retro for a pay group, Workday sets the No Retro Processing Prior To (NRPPT) date of the workers in the pay group. When workers have no in-progress retro results, you can change that date using these tasks and web service. The new date must be after any unsupported events that workers have.

| Task or Web Service                       | Description                                                                                                                                                                                                                                                                                                                                                            | Date Change Applies to |
|-------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------|
| <b>Edit Tenant Setup - Payroll</b> task   | You can use the <b>Maximum Months Allowed For Retro Processing</b> field to define the maximum number of months before the current pay period to enable retro processing. The preset value is 24, and the maximum you can enter is 72. Example: You can exclude any events that occurred during previous tax years.                                                    | All workers.           |
| <b>Change No Retro Prior To Date</b> task | Enables pay partners to submit a request to you to change an existing NRPPT date. Workday routes the request for approval as part of the <i>Change No Retro Prior To Date</i> business process. Workday also sets the: <ul style="list-style-type: none"> <li>• Worker's retro status to <i>Cannot Process Retro - Retro Change Date Event in Progress</i>.</li> </ul> | 1 worker.              |

| Task or Web Service                                                       | Description                                                                                                                                                                                                                                                                                                                     | Date Change Applies to                                |
|---------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------|
|                                                                           | <ul style="list-style-type: none"> <li>Retro calculation status to <i>Error</i>.</li> </ul> <p>Before you approve the request, pay partners can cancel it by accessing the <b>Worker History</b>. They can also recalculate or cancel the workers' retro results, but can't run retro for another supported event for them.</p> |                                                       |
| <b>Change No Retro Processing Prior to Date for Group of Workers</b> task | Enables you to change the NRPPT date to 1 day after the last pay period with completed pay results.                                                                                                                                                                                                                             | All workers in selected pay groups or pay run groups. |
| <i>Change No Retro Processing Prior To</i> web service                    | Enables you to select different NRPPT dates by worker. When you don't specify an NRPPT date, Workday sets the new date to 1 day after the workers' last completed pay results.                                                                                                                                                  | Multiple workers.                                     |

#### How do I restart a retro calculation after it stops?

When a retro calculation fails or you cancel it before it finishes, access the **Run Retro Pay Calculation** task to restart it. In most cases, you should use the same **Employees to Calculate** option used on the original run.

| Original Run       | Restarted Run                                                                                              |
|--------------------|------------------------------------------------------------------------------------------------------------|
| <i>Smart Retro</i> | <p>Select <i>Smart Retro</i> when you restart.</p> <p>If results are in error after the restarted run,</p> |

| Original Run                 | Restarted Run                                                                                                                                                                                                                                                                                                          |

**Can I retroactively rehire a worker (CAN, FRA, UK, USA)?**

For Payroll for Canada, France, the UK, and the U.S., yes, move the No Retro Processing Prior (NRPPT) date to 1 day after the termination of the previous employment. For Payroll for Canada and the U.S., you can process workers who had a different company or tax authority in their previous employment.

**When we rehire employees, how do we prevent the retro pay calculation from including pay periods from their previous employment?**

Use the **Change No Retro Prior To Date** task to advance the employee's NRPPT date.

Consider adding a To Do step on the *Termination* business process to change the NRPPT date.

**Can I rescind a retro hire?**

Yes, but you must cancel the retro results before rescinding the hire.

**How can I exclude supported retro events that occurred in the previous tax year from retro pay calculations?**

Use the **Change No Retro Prior To Date** task to push out the NRPPT date of the employee.

**Does Workday process retroactive changes when I add or edit an earning or deduction definition?**

Changing the definition of an effective-dated earning or deduction doesn't trigger a retro pay calculation. Retro picks up the change when the worker has a supported retro event in the period it processes. Workday uses the pay component definitions effective in the retro periods.

**How can I ensure that balances are correct for on-demand additional payments that are *In Progress* during retro processing (CAN, FRA, UK, USA)?**

Determine whether the retro differences impact the on-demand additional payment limits or balances. If they do, update them by either:

- Recalculating the on-demand additional payments.
- Setting the on-demand additional payments to include retro differences.

For Payroll for Canada, the UK, and the U.S., this also applies for limits.

**Why doesn't a bonus compensation plan with a retroactive effective date trigger a retro event?**

A bonus compensation plan isn't one of the compensation plan types that trigger a retro event. Only these types trigger a retro event:

- Allowance Amount Plan
- Allowance Percent Plan
- Allowance Unit Plan
- Calculated Plan
- Hourly Plan
- Salary Period Plan
- Salary Plan
- Salary Unit Plan

## Troubleshooting: Retro Termination Errors When Crossing a Tax Year (UK)

**Cause:** Attempting to apply retro termination from a previous tax year to the current tax year.

**Solution:** Use recalculated amounts in retro results for the last pay period of the tax year to submit an update to previous tax year amounts to HMRC.

### Steps

1. Identify the retro calculation values for the terminated worker.  
To find the values for:
  - 1 worker, display their retro results.
  - Multiple workers, run the **Retro Calculation Processing Report**.  
Security: *Reports: Pay Calculation Results for Pay Group (Results)* domain in the Core Payroll functional area.
2. Cancel the worker's retro result. From the worker's related actions menu, select **Retro Pay Calculation > Cancel**.
3. Access the **Run On Demand Payment for Worker** task.  
Run an on-demand additional payment for the worker for the last pay period of the previous tax year. Use the worker's termination date as the **Sub-Period Target Date** and **Payment Date**.  
Adjust the affected pay components using the retro results in error from step 1.  
Security: *Process: Off Cycle (On Demand)* domain in the Core Payroll functional area.
4. If necessary, to be able to complete the on-demand additional payment, use a net pay adjustment to set the net pay to zero.
5. Access the **Add Worker UK RTI Details** task.  
Enter the **Late PAYE Reporting Reason**: *H. Correction to earlier submission*.  
Security: *Worker Data: Payroll (Company Specific) - UK* domain in the UK Payroll functional area.
6. Send the off-cycle payment details to HMRC.
  - For the 2020-2021 tax year onwards, submit an FPS.
  - For the 2018-2019 and 2019-2020 tax years, submit an EYU.
7. For the 2020-2021 tax year onwards, submit an EPS to HMRC.
8. Access the **Change No Retro Prior To Date** task.  
Enter the period begin date for the first pay period of the tax year as the worker's **Proposed Value of No Retro Processing Prior To** date.  
Security: Configure the *Change No Retro Prior To Date* business process and security policy in the Core Payroll functional area.
9. Access the **Run Retro Pay Calculation** task.  
Recalculate the worker's payment.  
Security: *Process: Run Batch Calculations (Retro Calculation)* domain in the Core Payroll functional area.
10. Generate any required forms.  
HMRC guidance says you:
  - Don't need to create a new P45 because the termination is in a previous tax year, out of date, and can't be used for a new employment.
  - Can give the worker a letter showing the amendment as a statement of earnings.

# Review Retroactive Payroll Results

## Setup Considerations: Retroactive Payroll Results

You can use this topic to help make decisions when planning your configuration and use of retroactive payroll results. It explains:

- Why to set them up.
- How they fit into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

### What They Are

Retroactive payroll results enable you to iteratively:

- Review retro results.
- Pay the calculated differences.
- Make necessary payroll adjustments.

### Business Benefits

Workday helps reduce manual processing and improve payroll efficiency by providing a centralized report that you can use to:

- Review retro results and understand their impact on workers' regular pay.
- Take action on those results for 1 or multiple workers at a time.

### Use Cases

You can review retro results for workers:

- With high-value retro differences in earnings or deductions.
- Who transferred companies in prior periods.
- With bonuses from pay groups other than their current primary pay group.
- With negative retro differences.

You can take action on some or all results, such as:

- Processing them in on- or off-cycle payments.
- Suspending them when you don't want to process the retro differences in payroll.

### Questions to Consider

| Questions                                   | Considerations                                                                                                                                     |
|---------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------|
| Which retro results do you want to look at? | The <b>Retro Calculation Processing Report</b> provides filters for common characteristics that you can use to select workers to review. Examples: |

| Questions                                                          | Considerations                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

|                                                                    | <ul style="list-style-type: none"> <li>• Retro transaction types such as payroll inputs or retro terminations.</li> <li>• Retro statuses such as unsupported or unprocessed events.</li> <li>• Earning and deduction difference amounts such as negative or zero net differences.</li> <li>• Source of retro differences such as from other pay groups or companies.</li> <li>• Worker types such as active or on leave.</li> </ul> <p>After you filter the workers, the subreports provide detailed information to help you make decisions on how to resolve unexpected results. Example: You can analyze differences that retro calculates but doesn't process in the workers' on-cycle payroll in the <b>Payroll Results Report</b>.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| How do you want to resolve retro differences?                      | <p>Depending on whether you react to retro results for subsets of workers or a whole pay group, you can use the <b>Retro Calculation Processing Report</b> or dedicated tasks. On the report, you can:</p> <ul style="list-style-type: none"> <li>• Complete retro results and pay the differences as part of the workers' regular on-cycle pay or using on-demand payments.</li> <li>• Suspend retro results and bring them back later by canceling them and running retro again.</li> <li>• Cancel retro results, and make necessary adjustments before running retro again.</li> </ul> <p>Using dedicated tasks, you can:</p> <ul style="list-style-type: none"> <li>• Cancel or complete retro results for an entire pay group.</li> <li>• Move the workers' No Retro Processing Prior To (NRPPT) date to exclude from retro events occurring before that date.</li> </ul> <p>Example: You run retro for a pay group, and some workers have unexpected earning differences. To pay the differences to the other workers in the pay group, you can either:</p> <ul style="list-style-type: none"> <li>• Suspend the unexpected results and complete retro for the pay group. When you run regular payroll, Workday pays the retro differences you didn't suspend.</li> <li>• Complete only the expected retro results and pay those differences as off-cycle payments to the corresponding workers.</li> </ul> |
| Do you need to pay retro differences for unprocessed retro events? | <p>For Workday to generate retro results for a supported event, it must occur:</p> <ul style="list-style-type: none"> <li>• After the workers' NRPPT date.</li> <li>• In a prior period where there's no unsupported event. When workers have unsupported retro</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

| Questions                                                          | Considerations                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
|--------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                                                    | <p>events, Workday moves their NRPPT date to the day after the last period with completed pay results.</p> <p>If any of these conditions aren't met, Workday assigns the <i>Unprocessed</i> status to the results. Example: You run retro for a bonus effective in a period where the worker has no existing pay results.</p> <p>You can:</p> <ul style="list-style-type: none"> <li>• Change the effective date of the retro event to fall in a period where the workers have a pay result or after the workers' NRPPT date.</li> <li>• Move the NRPPT date in the past so that Workday considers the event. You can't move the date before an unsupported retro event. When you modify a deduction that you processed in retro, set an NRPPT date that's after your edit. Otherwise, you can create a new effective-dated snapshot for the deduction.</li> <li>• Run prior period off-cycle payments for the period you want to process in retro to generate pay results.</li> </ul>   |
| Do you need to pay retro differences for unsupported retro events? | <p>When workers have an unsupported event, Workday:</p> <ul style="list-style-type: none"> <li>• Doesn't calculate retro differences and advances the workers' NRPPT date to the last completed period plus 1 day.</li> <li>• Assigns the <i>Unsupported</i> status to the results.</li> <li>• Doesn't consider any other events, supported or unsupported, in the period processed in retro.</li> </ul> <p>You can enter manual adjustments for unsupported events such as with a payroll input or off-cycle payments.</p> <p>Workday doesn't consider these changes as retro events:</p> <ul style="list-style-type: none"> <li>• Definition of effective-dated pay components. Example: Changing the pay group detail eligibility.</li> <li>• Effective date of compensation changes. Example: Backdating a change to a compensation plan.</li> </ul> <p>To process these changes, you can enter a supported retro event for the worker such as payroll input with a zero amount.</p> |
| What's your timeline for running retro (CAN, UK, USA)?             | Depending on your retro run timeline in relation to payroll, these retro results can require manual adjustments in the target period:                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

| Questions                                        | Considerations                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
|--------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                                  | <ul style="list-style-type: none"> <li>A worker transfers companies, pay groups, or tax authorities after you run retro and before you complete payroll. You can run the <b>Retro Results Report</b> of the <b>Retro Calculation Processing Report</b> to identify these results.</li> <li>You create reversals after you run retro and before you run payroll in the current pay period. You can run the <b>Reversal Results with Retro</b> report to identify these results.</li> </ul> |
| Do you need to resolve negative net pay results? | <p>Some retro events can result in negative net pay, such as retro terminations or retro leaves of absence. You can resolve a negative net pay by either:</p> <ul style="list-style-type: none"> <li>Creating an earning or deduction of the same amount that resolves the pay period to zero net pay.</li> <li>Canceling the retro result and setting the NRPPT date after the termination date.</li> <li>Suspending the retro result.</li> </ul>                                        |

### Recommendations

Review which events you can and can't process in retro in these reports:

- All Supported Payroll Retro Transaction Types**
- All Unsupported Payroll Retro Transaction Types**

Complete or cancel retro payroll calculations for pay groups at the pay group level. Example: Canceling retro results for each worker individually doesn't update the pay group retro pay calculation status to *Not Yet Started*.

When you create off-cycle payments by completing retro results using the **Retro Calculation Processing Report**, create new batch IDs to help track those payments.

After you close the ledger period, don't run the **Cancel Retro Complete** task to avoid unexpected accounting impacts.

### Requirements

No impact.

### Limitations

You can't:

- Cancel completed retro results by worker.
- Manage individual retro events from the same retro worker result; you can only do so by worker, subsets of workers, or pay groups. Example: A worker has a compensation change and a spot bonus. To cancel the bonus, you also have to cancel the compensation change.
- Have more than 1 retro worker result per worker in 1 open retro calculation.
- Unsuspend completed retro results. You can cancel the completed result and recalculate retro for the workers.

## Tenant Setup

No impact.

## Security

Configure the *Change No Retro Processing Prior To* business process and security policy and these domains in the Core Payroll functional area:

| Domains                               | Considerations                                                                                    |
|---------------------------------------|---------------------------------------------------------------------------------------------------|
| <i>Self-Service: My Pay Dashboard</i> | Enables users to configure the <b>Pay Cycle Command Center</b> dashboard to add reports or tasks. |
| <i>Set Up: Payroll (Reporting)</i>    | Enables users to view the lists of supported and unsupported retro events.                        |

Configure these domains in other functional areas:

| Domains                                                                             | Considerations                                                                                                                                                                                             |
|-------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <i>HCM All Organizations</i> in the Staffing functional area                        | Enables users to run the <b>Audit - Workers with Multiple Jobs having Different Organization Assignments</b> report to identify workers who might require manual payroll adjustments due to multiple jobs. |
| <i>System Auditing</i> in the System functional area                                | Enables users to run the <b>View Audit Trail</b> report to understand the chain of events for a worker.                                                                                                    |
| <i>Worker Data: Historical Staffing Information</i> in the Staffing functional area | Enables users to run the <b>View Worker History</b> report to identify workers who might require manual payroll adjustments due to unsupported retro events.                                               |

## Business Processes

You can add the *Review Payroll Input by Worker(s)* action step to the *Pay Cycle Event* business process to identify payroll inputs that you include in retro results. You can also add *To Do* steps as reminders to run the:

- **Retro Calculation Processing Report** to take action on retro results for 1 or more workers.
- **Run Retro Pay Calculation** and **Run Retro Pay Complete** tasks to recalculate and complete retro after you reviewed retro results. You can't add those tasks directly as action steps.

You can use the *Change No Retro Prior To Date* business process to change a worker's NRPPT date.

## Reporting

You can use the **Payroll Retro Worker Results** report data source to create custom reports on retro payments.

You can use this dashboard and these reports to manage retro results:

| Reports or Dashboards              | Considerations                                                                                                                        |
|------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------|
| Pay Cycle Command Center dashboard | You can add the <b>Retro Differences</b> worklet to the dashboard to gain insights into retro differences in earnings and deductions: |

| Reports or Dashboards                                                                      | Considerations                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
|--------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

| <b>All Earnings</b> and <b>All Deductions</b> reports                                      | Enables you to identify which pay components you configure to recalculate during retro.                                                                                                                                                                                                                                                                                                                                                                                         |
| <b>Audit - Workers with Multiple Jobs having Different Organization Assignments</b> report | Enables you to identify workers with multiple jobs in different pay groups and companies, which can generate unprocessed retro results. Those results then require manual processing such as with payroll inputs.                                                                                                                                                                                                                                                               |
| <b>Payroll No Retro Processing Prior To Date for Group of Workers</b> report               | Enables you to view the NRPPT date for workers by pay groups that Workday applies the next time you run retro. This report can help understand why retro doesn't generate results for some supported events.                                                                                                                                                                                                                                                                    |
| <b>Reversal Results with Retro</b> report (CAN, UK, USA)                                   | Enables you to identify workers with retro differences when you reverse the source or target period after running retro.                                                                                                                                                                                                                                                                                                                                                        |
| <b>View Audit Trail</b> report                                                             | Enables you to view a chain of events made for workers over a period of time to understand their retro results.                                                                                                                                                                                                                                                                                                                                                                 |
| <b>View Payroll Event Categories</b> report                                                | <p>Enables you to access the <b>Payroll Retro Event Categories</b> tab to identify the individual payroll event types that retro processes. This report provides more details about retro triggering events. Example: A retro company transfer can include these payroll event types:</p> <ul style="list-style-type: none"> <li>Change Organization Assignments for Worker</li> <li>Move Worker (By Organization)</li> <li>Move Workers</li> <li>Switch Primary Job</li> </ul> |
| <b>View Worker History</b> report                                                          | Enables you to view the worker's staffing history to help identify unsupported events that other users might have entered such as a retro company change.                                                                                                                                                                                                                                                                                                                       |

## Integrations

You can use these web services:

- *Change No Retro Processing Prior To*: To change the NRPPT date by worker for multiple workers at a time. Doing so enables you to exclude periods with retro results you can't process, such as because of unsupported retro events.
- *Import Payroll Off-Cycle Payment*: To pay retro differences through off-cycle payments.

## Connections and Touchpoints

| Features                 | Considerations                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |

## Steps: Manage Retro Results

### Prerequisites

- Review setup considerations for retroactive payroll results.
- Run retro pay calculations.
- Security: *Reports: Pay Calculation Results for Pay Group (Results)* domain in the Core Payroll functional area.

### Context

After you run retro and before running on-cycle pay calculations, you can verify retro results:

- By pay group and retro processing dates.
- For specific workers using facets, such as the worker status.

You can then determine how to manage them such as by suspending or canceling the results.

For Payroll for France, when workers change companies after you run retro and before you complete regular payroll, Workday forwards the differences to the current company.

### Steps

1. Run the **Retro Calculation Processing Report** for an overview of retro results such as the:

- Volume of transactions.
- Transaction types.
- Whether there's unprocessed or unsupported retro.

2. Use the facets to filter specific workers whose results you want to review.

Example: You can select workers with unprocessed retro or high-value retro differences.

3. Run the **Retro Results Report** to verify how Workday processes retro events, including unprocessed retro.

Drill down into results for details such as the event types or their effective date.

4. Run the **Payroll Results Report** to verify the impacts on the workers' on-cycle payroll.

Drill down into results for details such as the breakdown of each pay component processed in retro.

5. Address any retro changes that Workday doesn't calculate automatically with manual adjustments such as payroll inputs.

For Payroll for Canada, the UK, and the U.S., see [Concept: Retro Differences That Require Manual Adjustments](#) on page 862.

6. (Optional) [Complete Retro Results for Workers](#) on page 853.

7. (Optional) Select the workers whose results you want to suspend and click **Suspend**.

Ensure that workers have in-progress retro results with the *Supported Retro to process* status.

See [Concept: Suspended Retro Results](#) on page 862.

Security: *Process: Run Batch Complete (Retro Complete)* domain in the Core Payroll functional area.

8. (Optional) Select the workers whose results you want to cancel and click **Cancel**.

Ensure that no on-cycle payroll processes are running for any pay groups. When you cancel retro results for subsets of workers, Workday:

- Doesn't reset the workers' retro pay calculation status to *Not Yet Started*. Workday resets that status only when you use the **Run Retro Pay Cancel** task.
- Updates the workers' No Retro Processing Prior To (NRPPT) date to the value before you ran retro.

When you rerun retro, Workday processes the supported events again.

Security: *Process: Run Batch Cancel (Retro Cancel)* domain in the Core Payroll functional area.

9. [Calculate On-Cycle Payroll](#) on page 618.

Workday pulls retro differences into the workers' current payroll run. You can view the processed differences on the **Gross to Net** and **Additional Pay Components** tabs of the **View Payroll Result** report on the worker profile. These differences are from recalculated prior periods.

10. (Optional for Payroll for Canada, the UK, and the U.S.) Run the **Reversal Results with Retro** report to identify retro differences that Workday calculates but doesn't forward to the workers' on-cycle payroll because of reversals.

### Example

In January, the **Payroll Changes Unprocessed for a Retro Run** report identifies a compensation change for Dan Johnson as *Unprocessed*. You determine that he had a retroactive salary increase of 200 per month, effective January 1, entered on February 15. You also learn that his NRPPT date is February 1.

Because the effective date of the change is before his NRPPT date, the **Run Retro Pay Calculation** task only recalculates results for February.

To pay Dan the 200 owed for January, you enter pay input for the current open period.

|            | January | February 1         | February 15                                                     | February | March                                                             |
|------------|---------|--------------------|-----------------------------------------------------------------|----------|-------------------------------------------------------------------|
| Base pay   | 3,000   |                    |                                                                 | 3,200    | 3,200                                                             |
| In Workday |         | Change NRPPT date. | Enter retroactive salary increase for 200, effective January 1. |          | Run report, which identifies unprocessed change: 200 for January. |
| Retro pay  |         |                    |                                                                 |          | Pay input for 200.                                                |
| Total      | 3,000   |                    |                                                                 | 3,200    | 3,400                                                             |

### Next Steps

Complete the retro pay calculation for the pay group and run payroll.

## Complete Retro Results for Workers

### Prerequisites

- Review the retro results.
- Ensure that no on-cycle payroll processes are running for any pay groups.
- Ensure that no on-demand replacements payments are in progress for the period you want to complete.
- Security: *Process: Run Batch Complete (Retro Complete)* domain in Core Payroll functional area.

## Context

You can use the **Retro Calculation Processing Report** to:

- Complete retro results for workers that you select from a pay group.
- Identify unpulled retro results (a worker's retro result without a target payroll result).
- Create on-demand additional payments based on retro results.

You can't use retro results as inputs to on-demand additional payments for workers that already have either:

- A priority 1 on-demand additional payment for the same period.
- An *In Progress* pay result that includes forwarded retro differences.
- An associated regular payroll that's complete.

Workday recommends that you don't enter any additional pay components for OMWJ workers after creating off-cycles using the **Retro Calculation Processing Report**, as retro doesn't apply the additional pay components according to your OMWJ splits after you've override the worktags.

## Steps

1. Access the **Retro Calculation Processing Report**.

2. As you complete the report, consider:

| Option                                                    | Description                                                                                                                                                                                                                                                                                                                                   |
|-----------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Pay Run Groups and/Or Pay Group Details</b>            | Select to complete retro results for the workers with relevant pay groups.                                                                                                                                                                                                                                                                    |
| <b>Retro Processing Date</b>                              | The date you enter reflects the date of the first retro pay calculation after your last retro complete.                                                                                                                                                                                                                                       |
| <b>Display Only ~Workers~ with Unpulled Retro Results</b> | <p>Select to identify unpulled retro results (retro worker result without a target payroll result).</p> <p>For a worker with multiple retro results, Workday displays all the retro worker results, when you:</p> <ul style="list-style-type: none"> <li>• Enter multiple retro processing dates.</li> <li>• Select the check box.</li> </ul> |

3. Select the workers whose results that you want to complete and click **Complete**.

4. To pay retro differences as on-demand additional payments to the worker, consider:

| Option                                                               | Description                                                                                                                                                                                                                                                                                        |
|----------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Create Off-cycle Inputs</b>                                       | Select to display on-demand payment options.                                                                                                                                                                                                                                                       |
| <b>Exclude Retro Results Already Included in On-cycle (CAN, USA)</b> | <p>Select to ensure that you don't create any off-cycle inputs for the already paid retro differences. This check box displays only when you select <b>Create Off-cycle Inputs</b>.</p> <p>Workday recommends you perform the <b>Run Pay Calculation</b> task before selecting this check box.</p> |
| <b>Batch ID</b>                                                      | Select <i>Payroll Off-Cycle</i> .                                                                                                                                                                                                                                                                  |
| <b>Payment Date</b>                                                  | Select the latest start date of all periods with retro differences for the pay group that you're processing.                                                                                                                                                                                       |
| <b>Payment Type Override</b>                                         | Select <i>Check</i> .                                                                                                                                                                                                                                                                              |

| Option | Description                                                                                                                    |
|--------|--------------------------------------------------------------------------------------------------------------------------------|
|        | When you don't configure a check type on the <b>Maintain Payment Types</b> task, Workday uses each worker's payment elections. |

5. Select the **OK to Proceed** check box.

### Next Steps

Review the retro results for the entire pay group and recalculate payroll.

**Note:** For Payroll for the UK, Workday only creates one payment when you:

1. Access the **Find Subset of Workers for Retro Complete** task.
2. Enable the **Create Off-Cycle Inputs** setting.
3. Process retro complete with a retro company change.
4. View **Processed Off-Cycle Inputs** from the **View Background Process** page.

Additionally, no company override worktag displays.

## Concept: Retro Processing Periods

### No Retro Processing Prior to Date

A worker's No Retro Processing Prior To (NRPPT) date determines the earliest period for which Workday recalculates earnings and deductions for supported retro events. Workday selects the pay components to recalculate according to their retro setting and effective date. For any changes that occur before that date, you must manually calculate and enter the differences, such as with payroll inputs.

When you run the retro pay calculation for workers with supported retro events, Workday:

- Detects all events for the workers, but only calculates differences for supported events occurring after the workers' NRPPT date.
- Reports differences for the events in each period processed in retro, from the workers' NRPPT date to the current pay period.
- Reports with a status of *Unprocessed* events linked to pay components with an effective date before the worker's NRPPT date.

When the NRPPT date falls midperiod, Workday:

- Ignores that period, and considers events in the next period.
- Doesn't create a zero pay result while calculating retro.

You can view workers' NRPPT dates on retro reports before and after you run retro such as the **Retro Calculation Processing Report**. You can view the NRPPT date used for the next retro run on the **Payroll No Retro Processing Prior To Date for Group of Workers** report.

### How Workday Assigns the No Retro Processing Prior to Date

#### Preset Timeframe at Tenant Level

In the preset configuration, Workday processes past events up to 24 months before the workers' current pay period. You can change this timeframe in the **Maximum Months Allowed For Retro Processing** field on the **Edit Tenant Setup - Payroll** task. For

## Run Retro Pay Calculation

optimized performance, Workday recommends that you set the limit to 24 months or fewer.

When you run the retro pay calculation, Workday sets the NRPPT date for:

- Workers with unsupported events to 1 day after the last period with completed on- or off-cycle results.
- New hires to the later of:
  - The start date of the first processing period of their pay group, and
  - The date determined by the **Maximum Months Allowed For Retro Processing** field on the **Edit Tenant Setup - Payroll** task.
- All other workers to the later of the first pay period with completed results, and 24 months before you run retro.

## Suspend Retro Results

When you suspend a worker's retro results, Workday changes their NRPPT date to the day after the last period with completed results.

## Cancel Retro Results

When you cancel a worker's retro results, Workday reverts their NRPPT date to the value it was before you ran retro.

## Impacts of Changing the No Retro Processing Prior to Date

You can change the NRPPT date that Workday assigns to workers, but only do so when necessary because:

- Setting the date too far back can impact performance.
- Setting it too far forward can require you to process too many retro events manually.

You can't move a worker's NRPPT date before an unsupported event.

Changing the NRPPT date doesn't trigger a retro pay calculation. When the new NRPPT date is before the original date, you can generate retro differences for previously unprocessed events only when:

- They were unprocessed because they occurred before the original NRPPT date, or in the same period as that date.
- You run retro again for the worker to process a new supported event.

You can manage the other unprocessed events with pay inputs or off-cycle payments.

## Examples

### No Retro Processing Prior to Date and Supported Retro Events

John has an NRPPT date of January 1. On April 20 of the same year, you enter a 10% retro pay increase effective February 1. When you run retro on April 25, John has no unsupported retro, so Workday:

- Doesn't change the NRPPT date.
- Process the pay increase because it's effective after the worker's NRPPT date.

### No Retro Processing Prior to Date and Unsupported Retro Events

John has an NRPPT date of January 1. You enter these retro events for him:

- April 5: Pay group transfer effective March 25.
- April 20: 10% retro pay increase effective February 1.

When you run retro on April 25, Workday:

- Detects the pay group transfer as an unsupported retro event.
- Changes the worker's NRPPT date to April 1. This new date is the day after the end date of his last completed payroll period (March).
- Doesn't process the pay increase because it's effective before the worker's new NRPPT date.

**Midperiod No Retro Processing Prior to Date and Supported Events**

John has an NRPPT date of January 1 and the pay period is from December 25 to January 10. On February 1, you enter a 10% retro pay increase effective January 5. When you run retro, John has no unsupported retro, so Workday doesn't change the NRPPT date. However, Workday doesn't process the pay increase because it's effective in the same period as the worker's NRPPT date.

**No Retro Processing Prior To Date and Effective-Dated Pay Components**

You have a deduction for which the **Recalculate During Retro** check box is clear. On January 16, you select the check box and add an effective date of that day to the deduction.

You enter a supported event effective on January 2 for James, Carrie, and Richard. They all have different NRPPT dates. You run retro for the January 1 to January 15 pay period to process that event. Workday compares the deduction effective date against each worker's NRPPT date to calculate the deduction and retro differences for the event:

| Worker | NRPPT Date | Deduction                                                                            | Supported Event                                              |
|--------|------------|--------------------------------------------------------------------------------------|--------------------------------------------------------------|
| James  | January 1  | Unprocessed<br>The deduction effective date is after the period considered in retro. | Processed<br>The event is effective after the NRPPT date.    |
| Carrie | January 15 | Unprocessed<br>The deduction effective date is after the period                      | Unprocessed<br>The event is effective before the NRPPT date. |

| Worker  | NRPPT Date | Deduction                                                             | Supported Event                                              |
|---------|------------|-----------------------------------------------------------------------|--------------------------------------------------------------|
|         |            | considered in retro.                                                  |                                                              |
| Richard | February 1 | Unprocessed<br>The deduction effective date is before the NRPPT date. | Unprocessed<br>The event is effective before the NRPPT date. |

The workers have another supported event effective on January 16 so you run retro for the January 16 to January 31 pay period. Since the deduction effective date is in the period processed in retro, Workday always calculates the event, but processes it according to the NRPPT dates:

| Worker  | NRPPT Date | Deduction | Supported Event                                              |
|---------|------------|-----------|--------------------------------------------------------------|
| James   | January 1  | Processed | Processed<br>The event is effective after the NRPPT date.    |
| Carrie  | January 15 | Processed | Processed<br>The event is effective after the NRPPT date.    |
| Richard | February 1 | Processed | Unprocessed<br>The event is effective before the NRPPT date. |

## Concept: Supported, Unsupported, and Unprocessed Retro Events

### What Triggers Retro

Some events that you or someone else in your organization enter can trigger retro pay calculations. You can also select workers to process in smart retro using those events. The **Payroll Retro Event Categories** tab on the **View Payroll Event Categories** report lists individual retro triggering events for each category. A triggering event can be a supported or unsupported event. Examples:

- A change in benefit election deductions triggers retro, but not a change in benefit dependents.
- A compensation change triggers retro and is a supported event.
- A pay group change triggers retro but isn't a supported event for Payroll for Australia, France, the UK, and the U.S.
- A company change triggers retro but isn't a supported event for Payroll for Canada.

When an event triggers retro, Workday considers all events from the last completed period to the No Retro Processing Prior To (NRPPT) date. Those events include both supported and unsupported events, regardless of whether they're related to the triggering event.

Example for Payroll for Australia, France, the UK, and the U.S.: The current pay period is July, and Meghan has a retro bonus to process from June. Your payroll administrator enters a pay group change also effective in June but doesn't notify you. When you run retro, Workday considers both the bonus and the pay group change.

Example for Payroll for Canada: The current pay period is July, and Meghan has a retro bonus to process from June. Your HR partner enters a company change also effective in June but doesn't notify you. When you run retro, Workday considers both the bonus and the company change.

### Supported Events

Workday generates retro differences that you can pay in target pay periods for workers when you enter events for them that both:

- Trigger retro pay calculations.
- Are supported events.

You can identify supported events for each country in the **All Supported Payroll Retro Transaction Types** report.

### Unsupported Events

Workday doesn't calculate retro differences for unsupported events regardless of the retro setting on the pay component. You can view these events on the **All Unsupported Payroll Retro Transaction Types** report. When you run retro for workers with unsupported events, Workday:

- Identifies the event as *Unsupported* in reports.
- Changes the workers' NRPPT date to 1 day after the last period with completed results.
- Ignores any events, supported or unsupported, before that date.

You can review these events on the **Retro Calculation Processing Report** and make manual adjustments as needed.

For Payroll for Australia, France, the UK, and the U.S., when you retroactively make changes to a worker's pay group and have a supported retro event, Workday processes the supported retro event only when the effective date of the supported retro event overlaps with the payroll results affected by the pay group change. Example: You complete pay calculations for January, February, and March. You retroactively make changes to the worker's pay group in February and then run pay calculation and complete for April. If you enter retro pay input in April, Workday processes retro for this supported event as the payroll results for April aren't affected by the pay group change. If you add payroll input to any of the prior pay periods

such as January, February, or March, Workday doesn't process retro for this supported event and identifies the unsupported retro pay group change.

For Payroll for Canada, when you retroactively make a company change to a worker and have a supported retro event, Workday processes the supported retro event only when the effective date of the supported retro event overlaps with the payroll results affected by the company change. Example: You complete pay calculations for January, February, and March. You retroactively make changes to the worker's company in February and then run pay calculation and complete for April. If you enter retro pay input in April, Workday processes retro for this supported event as the payroll results for April aren't affected by the company change. If you add payroll input to any of the prior pay periods such as January, February, or March, Workday doesn't process retro for this supported event and identifies the unsupported retro company change.

### Unprocessed Supported Events

When workers have a supported retro event such as a payroll input, any of these factors can cause Workday not to consider it in retro:

- The event occurs before the worker's NRPPT date, or in the same period as that date.
- The worker has unsupported events occurring in the same pay period.
- You select the **Do Not Recalculate During Retro** or **Always Gross-Up** check box on the earning related to the event.
- You leave the **Recalculate During Retro** check box clear on the deduction related to the event.
- The worker isn't eligible for the pay component related to the event.
- For Payroll for Canada and the U.S., the worker has positions in more than 1 company and they have no existing pay results in those companies. Workday reports the entry as processed but doesn't generate any results to forward to their current payroll. You can identify workers with multiple jobs in different pay groups and companies on the **Audit - Workers with Multiple Jobs having Different Organization Assignments** report. Example: Jane is in company A and you enter an additional job in company B and a bonus for the same period retroactively. When you run retro, Workday processes the retro bonus but doesn't pay it in company B.

When you run retro for workers with unprocessed events:

- Workday identifies those events as *Unprocessed* in reports.
- You can adjust the configuration and run retro again to process them. Example: You can manually resolve unsupported events and move the workers' NRPPT date before the unprocessed event occurs.

### Retroactive Changes to Processing Position (CAN, USA)

When you use a position override to determine a worker's payroll processing position, retroactive changes to position override attributes can cause the processing position to change. Changing the processing position isn't a retro event and doesn't trigger a retro calculation. But when a supported retro event occurs, Workday rederives the processing position when you run the retro calculation.

Example: Ben has 2 positions in the same pay group and company. His primary position is the payroll processing position. You retroactively adjust Ben's scheduled weekly hours, so that his additional position becomes his processing position. When a supported retro event occurs, Workday uses the additional position to calculate retro differences.

Retroactive changes to the processing position can also affect worker eligibility for pay components in the retro period.

## Concept: Retro Processing Statuses with Multiple Retro Runs

When you run retro for pay groups or pay run groups, Workday assigns the *In Progress* retro pay calculation status to:

- The processed pay groups.
- The results of the workers in the pay groups.

You can complete or cancel some workers' retro results within those in-progress pay groups. When you run retro again for the pay groups, Workday ignores workers with completed retro results. To process them, the retro pay calculation status of the pay group must be *Complete* or *Not Yet Started*. Workday updates its *In Progress* status based on how you manage retro results in those pay groups.

### Complete Retro Results for Workers

You can update the pay group retro pay calculation status to *Complete* by completing all workers' retro results when you access 1 of these tasks:

- **Run Retro Pay Complete.**
- **Run Retro Pay Complete for Subset of Workers** from the **Retro Calculation Processing Report**.
- Related actions menu of the payroll retro worker result by selecting **Retro Pay Calculation > Complete**.

Example: Pay group PG1 has 5 workers. You enter supported retro events for all workers and run retro. Then you:

- Access the **Run Retro Pay Complete for Subset of Workers** task for 3 workers.
- Complete the other 2 workers' retro results by accessing their related actions menu.

Workday updates the retro pay calculation status of PG1 to *Complete*.

### Cancel Retro Results for Workers

You can only update the pay group retro pay calculation status to *Not Yet Started* when you access the **Run Retro Pay Cancel** task. Workday keeps that status to *In Progress* when you access 1 of these tasks:

- **Run Retro Cancel for Subset of Workers** from the **Retro Calculation Processing Report**.
- Related actions menu of the payroll retro worker result by selecting **Retro Pay Calculation > Cancel**.

Example: Pay group PG1 has 5 workers. You enter supported retro events for all workers and run retro. Then you:

- Access the **Run Retro Cancel for Subset of Workers** task for 3 workers.
- Cancel the other 2 workers' retro results by accessing their related actions menu.

The retro pay calculation status of PG1 remains *In Progress*.

### Complete and Cancel Retro Results for Workers

Canceling retro results for 1 worker or a subset of workers doesn't trigger status updates. When you complete some workers' retro results and cancel others, Workday doesn't update the pay group retro pay calculation status.

Example: Pay group PG1 has 5 workers. You enter supported retro events for all workers and run retro. Then you:

- Access the **Run Retro Pay Complete for Subset of Workers** task for 3 workers.
- Cancel the other 2 workers' retro results by accessing their related actions menu.

The retro pay calculation status of PG1 remains *In Progress*.

**Related Information****Tasks**

[Steps: Manage Retro Results](#) on page 852

**Reference**

[Reference: Retro Processing Statuses](#) on page 837

**Concept: Suspended Retro Results**

You can use the **Retro Calculation Processing Report** to suspend retro results for workers you select from a pay group to:

- Temporarily exclude workers' retro results from on-cycle and off-cycle calculations.
- Review and correct the suspended results.

Example: You terminate Eric retroactively, but have already paid his earnings until the current pay period. When you run retro, Workday generates a difference for the overpaid amount. You want to review that amount, so you suspend his retro result to exclude it from his on-cycle result.

When you suspend retro results, Workday updates the workers':

- Retro processing status to *Suspended Retro to exclude*.
- Pay calculation status to *Requires ReCalc due to Retro*.
- No Retro Processing Prior To (NRPPT) date to 1 day after the end date of the last completed pay period. When you cancel suspended retro results, Workday moves the NRPPT date back to the date before the suspension.

You can bring back the suspended retro results by canceling them and rerunning retro. When you complete the retro period, you can no longer cancel suspended results. To process them, cancel the completed retro before canceling the suspended results.

[Workday 32 What's New Post: Suspend Retro Results](#)

**Concept: Retro Differences That Require Manual Adjustments**

This topic provides information on retro differences that require manual adjustments for these countries:

- Payroll for Canada
- Payroll for the UK
- Payroll for the U.S.

Depending on when you enter supported retro events and process payroll, Workday can create retro results that require manual adjustments in the target pay period.

**Company, Pay Group, or Tax Authority Transfers**

Tax authority transfers apply to Payroll for Canada and Payroll for the U.S. only.

Workday processes retro differences in the on-cycle payroll of a worker's current company, pay group, and tax authority, even when they transfer:

- After you run the retro pay calculation for supported events.
- And before you complete on-cycle payroll in the current pay period.

Because you enter those transfers after running retro, they don't generate unsupported retro events. However, if you run retro again, Workday now considers the transfers as unsupported events.

You can identify the resulting retro differences in the **Payroll Retro Changes that Invalidate Retro Difference(s)** report. Then, you can adjust the current payroll and process them in the correct company, pay group, or tax authority.

#### Example

The current pay period is April, and Bill is in company B.

He submits his time entry for March. You run and complete retro for this event. Later in April, the HR partner enters a company transfer from company A to company B, effective on March 1. Therefore the time entry applies to company A. When you run the April payroll, Workday processes the retro time entry in company B instead of company A. Once you identify the retro differences, you can adjust the payroll in both companies by reversing the payment in company B. Then, you can run an on-demand additional payment in company A.

### Source Period Reversals

When you have retro differences from a prior period that you reverse, and run payroll in the current pay period, Workday:

- Doesn't reverse the retro differences.
- Processes them in the current pay period.

You can identify those retro differences in the **Reversal Results with Retro** report. Then, you can offset the payment in the current pay period.

#### Example

The current pay period is April.

Bill submits his time entry for March. You run and complete retro for this event. Due to errors in the March payroll, you reverse it. When you run the April payroll, Workday includes again the retro time entry for March. You can run an on-demand additional payment to offset the retro differences.

### Target Period Reversals

When you process retro differences in a pay period that you later reverse, Workday pays the differences in the current or a future pay period. The period Workday selects for processing can be different from the reversed pay period. You can identify the retro differences in the **Reversal Results with Retro** report. Then, you can process payment in the reversed pay period.

#### Example

In March, Bill submits his time entry for February. You run and complete retro for this event, and Workday processes the differences in the March payroll.

In April, due to errors in the March payroll, you reverse it, which also reverses the retro differences. You can run an on-demand additional payment to process the reversed retro differences to Bill.

**FAQ: Retro Results**

**Why does Workday display a retro difference for a pay component that isn't related to the supported change I entered?**

The retro pay calculation found another supported retroactive change and displays all retro differences.

**Why doesn't Workday adjust a pay component for a pay period?**

Workday doesn't adjust a pay component if you add it as an override amount for the period using payroll input.

**Can I reverse a zero pay result created by retro leave of absence?**

You can't reverse a zero pay result. However, you can remove it by canceling the retro result that contains the retro leave event.

**After retroactively terminating a worker, how can I resolve a negative net pay period due to negative retro differences?**

For Payroll for Canada, the UK, and the U.S., you can resolve a negative net pay in one of these ways:

- Creating an earning or deduction of the same amount that resolves the pay period to a zero net pay.
- Canceling the retro result and setting the No Retro Processing Prior To date after the termination date.
- Suspending the retro result.

For Payroll for France, you can use these Workday-delivered pay components to resolve a negative net pay due to negative retro differences:

- *Negative Net Pay Advance [FRA]*
- *Repayment of Previous Negative Net Salary [FRA]*

**Why does retro processing include unsupported retro events that you've rescinded or canceled?**

Retro processing picks up both supported and unsupported events regardless of whether you've canceled or rescinded them. As a consequence, canceling or rescinding an unsupported retro event won't change the status of the retro result to supported.

**Related Information****Reference**

[Reference: Retro Processing Statuses](#) on page 837

**FAQ: Unprocessed Retro Changes**

**Why doesn't Workday process the retro event I entered?**

The most common reasons are:

- The event is unsupported, or there's another unsupported event in the same prior period. You can process the event manually such as with a payroll input.
- The event occurred in a period or for a run category where the worker has no payroll

### Why does the retro pay calculation include current period events as unprocessed?

results. You can process the event manually such as with a payroll input.

- The event occurred before the worker's No Retro Processing Prior To (NRPPT) date, or in the same period as that date. You can process the event manually such as with a payroll input.
- The retro pay calculation completed with exceptions. You can address the exceptions and rerun retro.

The retro pay calculation considers events occurring in the current pay period when:

- The current on-cycle payroll is in-progress.
- You complete off-cycle results, or results from other run categories, after the start of the current pay period.

Example: You have a biweekly regular run category and a monthly bonus run category. The current on-cycle pay period is August 15 to August 31 and is in progress. When you complete results in the bonus run category for August, the retro pay calculation evaluates any events from August 15 to August 31 and marks them as *Unprocessed*.

## Troubleshooting: Retro and Pay Calculations Produce Different Balances

**Cause:** You suspended retro results for the worker and changed their No Retro Processing Prior To date to an earlier date.

### Solution:

#### Steps

1. Access 1 of these tasks:

- **Create Earning**
- **Create Deduction**

Create a memo pay component to offset the result you want to suspend.

Ensure that the memo pay component updates pay balances and limits without impacting workers' gross pay to prevent a retro amount in the next on-cycle pay results.

Example: To offset a suspended retro result of 100, create a memo deduction of the same value for the source period.

Security: *Set Up: Payroll (Calculations - Payroll Specific)* domain in the Core Payroll functional area.

2. Access the **Run Retro Pay Calculation** task.

When you rerun retro, Workday applies the memo pay component and excludes the amount from balances, limits, and pay balances.

Security: *Process: Run Batch Calculations (Retro Calculation)* domain in the Core Payroll functional area.

### 3. Access the **Run Pay Calculation** task.

When you rerun the pay calculation, Workday excludes the suspended retro result from the pay result in the target period.

Security: *Process: Run Batch Calculations (Pay Calculation)* domain in the Core Payroll functional area.

[Concept: Retro Limits and Balances with Suspended Retro Results](#) on page 875

## Concepts: Retroactive Processing Touchpoints

---

### Concept: Retro and Run Categories

You can configure your regular pay run category for both:

- Retro payroll calculations, to calculate retro differences.
- Payroll calculations, to process calculated retro differences.

#### Retro Payroll Calculations

For retro payroll calculations, Workday uses the run category to determine:

- Which workers to process.
- Which pay components to recalculate for a prior period.

Workday automatically processes all workers with supported retro events, who are:

- Active.
- On leave.

To process terminated workers with supported retro events, you can select *Terminated with Retroactive Events (for Retro Pay Calc only)* from the **Status** prompt.

#### Payroll Calculations with Retro Differences to Process

As with any payroll calculation, Workday uses the **Workers to Process** grid to determine which workers with retro differences to process.

Workday always processes retro differences identified by a retro calculation, regardless of the:

- Pay component eligibility.
- Pay components on the **Nonactive (On Cycle, On Demand Replacement)** tab of the run category.

Select the **Disable Automatic Retro Differences Processing for Non-Active Workers** check box on the **Edit Tenant Setup - Payroll** task to continue to use your pay component configuration on the nonactive tab for run categories when processing retro entries in the pay calculation.

#### Multiple Run Categories for a Pay Group

When you run the **Run Retro Pay Calculation** task, Workday detects retro changes for all run categories associated with the selected pay group. Example: When a worker is processed on the regular run category, Workday also detects any retro changes for the worker based on the pay components in a bonus run category.

### Concept: Retro and Pay Component Eligibility

These factors can affect a worker's eligibility for a pay component during retro processing.

## Effective Dating

The **Recalculate During Retro** setting on deductions and the **Do Not Recalculate During Retro** setting on earnings are effective-dated. To change the retro setting on a pay component, add a new effective date. If you don't, any setting changes apply to all periods regardless of a worker's No Retro Processing Prior To (NRPPT) date. When you add a new effective date, you can:

- Reset the **Recalculate During Retro** setting for the earning or deduction for the intended time frame.
- Advance the NRPPT date to limit how far back Workday processes events for a worker.

When Workday processes a pay component in a prior period, it evaluates the pay component definition based on the appropriate effective date.

You can change the NRPPT date to ensure that no retroactive changes get processed before you want to process the pay component.

## Pay Component Eligibility

When a retro pay calculation processes a pay component in a prior period, it evaluates the:

- Worker eligibility criteria as of the pay component effective date.
- Worker data based on the effective date of the retroactive event.
- Active or inactive status of the pay component for the period.

Regardless of the **Retro Calculation** setting, Workday processes retro differences when you update:

- Worker eligibility criteria.
- The active or inactive status of the pay component.

Workday recommends that when you configure pay components to recalculate in retro, you only reference other pay components that also recalculate in retro. This configuration ensures that retro uses correct amounts when calculating prior periods. Example: You leave the **Do Not Recalculate During Retro** check box clear on an earning. To reference another earning, select 1 with the check box clear. To reference a deduction, pick 1 with the **Recalculate During Retro** selected.

You can configure the **Disable Automatic Retro Differences Processing for Non-Active Workers** field on the **Edit Tenant Setup - Payroll** task to use your pay component configuration on the nonactive tab for run categories when processing retro entries in payroll.

### Example: Effect of changes to worker eligibility criteria

To be eligible for a car allowance earning in January, employees must work in city 1, city 2, or city 3.

At the beginning of February, you change the worker eligibility rules. Employees must now work in city 1 or city 3 to receive the car allowance. To make the change, you create a new effective-dated definition.

In February, Nancy, who works in city 2, gets a 100 car allowance that's retroactive to January. You run a retro pay calculation in March. It doesn't generate any differences for the January car allowance earning because your definition has an effective date for February.

**Note:** Editing a pay component definition without effective dating can affect employee pay during retro processing. These impacts are especially likely when you change eligibility criteria.

|                  | January                                  | February                                                | March                          |
|------------------|------------------------------------------|---------------------------------------------------------|--------------------------------|
| Rule             | Must work in city 1, city 2, and city 3. | Effective-dated change: Must work in city 1 or city 3.  | Must work in city 1 or city 3. |
| Event            |                                          | Nancy, in city 2, gets car allowance effective January. | Run retro.                     |
| Retro difference |                                          |                                                         | Zero.                          |

#### Example: Effect of changes to worker data

Only full-time employees are eligible for a bonus earning. Monica was a full-time employee in January and switched to part time with an effective date in February.

In March, you enter a 1000 bonus for Monica for January. Monica passes the eligibility requirement because she was full-time when the retro event occurred. The retro pay calculation creates a 1000 retro difference for the earning, to pay Monica in the current period.

|                  | January                        | February                       | March                                                                                           |
|------------------|--------------------------------|--------------------------------|-------------------------------------------------------------------------------------------------|
| Rule             | Bonus for full-time employees. | Bonus for full-time employees. | Bonus for full-time employees.                                                                  |
| Event            |                                | Monica switches to part time.  | <ul style="list-style-type: none"> <li>Enter a bonus for Monica.</li> <li>Run retro.</li> </ul> |
| Retro difference |                                |                                | 1000.                                                                                           |

#### Example: Effect of changes to the active or inactive status of a pay component

Global Modern Services (GMS) has a new health plan coming into effect starting March. In March, you inactivate the deduction for the previous health plan. You also leave the **Recalculate During Retro** check box clear on the deduction definition.

The deduction for the previous health plan was 50 per month. Alex receives a 1000 bonus in January. He now has a supported retroactive change, so you run the retro pay calculation in the current period

(March). The retro pay calculation generates these retro differences:

- 50 \* 2 as a refund for the deductions in January and February, because it considers all pay components for eligibility.
- 1000 for the bonus.

|                  | January                   | February                  | March                                                                                                                                                       |
|------------------|---------------------------|---------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Rule             | 50 health plan deduction. | 50 health plan deduction. | 50 health plan deduction.                                                                                                                                   |
| Event            | Alex gets a bonus.        |                           | <ul style="list-style-type: none"> <li>• Inactivate the previous health plan deduction.</li> <li>• Enter a bonus for Alex.</li> <li>• Run retro.</li> </ul> |
| Retro difference |                           |                           | 50 + 50 + 1000 = 1100                                                                                                                                       |

### Benefit Plans and Coverage/Cost as of Payment Date

The retro pay calculation processes pay periods whose end date is on or after the effective date of a retro event. When you map benefit plans to pay components, you can select the **Coverage/Cost as of Payment Date** check box, to define how Workday applies the deduction begin date. When you select **Coverage/Cost as of Payment Date**:

- In pay calculations, Workday compares the deduction begin date with the payment date instead of the pay period end date.
- In retro pay calculations, Workday uses the pay period end date to determine the retro period to process. Workday doesn't include events falling outside the considered period.

Example: You run payroll biweekly and have completed the pay period from January 1 to January 15. The payment date for that period is January 18. The benefits at your company have a coverage begin date of January 1. You select **Coverage/Cost As Of Payment Date** on the deduction mapped to the benefit plan. You enter a benefit change effective on January 16. When you run retro, Workday:

- Considers the period from January 15 to January 31 based on the retro event.
- Doesn't consider any events falling outside the retro period, regardless of the deduction mapping and the payment date.

### Adding and Removing Pay Components from a Run Category

Retro pay calculations recalculate all pay components configured for retro for the run category and pay group processed in the prior period. These pay components include earnings and deductions that you added or removed after the original calculation.

- Added pay components: Retro processes added pay components when the worker meets eligibility requirements in the prior period.
- Removed pay components: Retro can generate negative differences, reflecting the original resolved value of the earnings in the prior period. Alternatively, you can inactivate the earnings and deductions as of a certain date and keep them in the run category definition.

## Related Information

### Concepts

[Concept: Effective Dating for Earnings and Deductions](#) on page 290

### Tasks

[Map Pay Components to Benefit Plans](#) on page 253

## Concept: Retro and Pay Balances

You can configure pay balances to:

- Include all retro differences in the current balance period regardless of the period earned.
- Only include the retro differences that fall within the pay balance period.
- Exclude all retro differences for pay components that you don't calculate in retro.

Workday recommends that you don't change existing pay balances that you process in retro. Instead, create pay balances with a new effective date. This practice helps ensure accurate retro pay calculations.

### Retro Calculation Examples

The balance period is January through December. Susan receives an ongoing monthly bonus of 100. In March of the current balance period, you enter:

- A 50 retro bonus for December in the previous year.
- A 25 retro bonus for January.

Depending on how you want to include retro values, you could configure the pay balance in 3 different ways:

#### **Include All Retro Values in Current Gross to Net**

Workday includes the bonuses regardless of the source period. The pay balance in March is:

$100 \text{ (January ongoing bonus)} + 100 \text{ (February ongoing bonus)} + 100 \text{ (March ongoing bonus)} + 50 \text{ (December bonus)} + 25 \text{ (January bonus)} = 375$

#### **Include All Retro Values Based on Earned Period**

Because Susan earned the 50 bonus before the current balance period, Workday excludes it. The pay balance in March is:

$100 \text{ (January ongoing bonus)} + 100 \text{ (February ongoing bonus)} + 100 \text{ (March ongoing bonus)} + 25 \text{ (January bonus)} = 325$

#### **Exclude Values from Current Gross to Net During Calculation and Include All Retro Values Based on Earned Period**

Workday:

- Excludes the current period ongoing bonus.
- Excludes the December bonus because Susan earned it before the current balance period.
- Includes the January bonus because it's paid in the current balance period.

The March pay balance is:

100 (January ongoing bonus) + 100 (February ongoing bonus) + 25 (January bonus) = 225

Exclude Retro Values Examples

Exclude Retro Values from Balances for Pay Components that Calculate in Retro

To configure a pay balance to exclude retro amounts, select the **Include All Retro Values Based on Earned Period** option and select a **Balance Period** of *Current Period*.

**Note:** This exclusion only works when the pay component that uses the pay balance is configured to calculate in retro.

Exclude Retro Values from Balances for Pay Components that don't Calculate in Retro

To exclude all retro values, create an arithmetic calculation that uses 2 different pay balances.

Example: You have a deduction that doesn't **Recalculate during Retro**. The **Calculation** on that deduction is a percentage of an earning that does recalculate in retro (excluding retro amounts).

1. Set up *Pay Balance 1*, based on the earning, and select these values:
  - The **Include All Retro Values in Current Gross to Net** option.
  - A **Balance Period** of *Current Period*.
2. Set up *Pay Balance 2*, based on the earning, and select these values:
  - The **Exclude Values from Current Gross to Net During Calculation** check box.
  - The **Include All Retro Values in Current Gross to Net** option.
  - A **Balance Period** of *Current Period*.
3. Access the **Create Arithmetic Calculation** task and complete these fields:

| 1st Operand          | Operator        | 2nd Operand          |
|----------------------|-----------------|----------------------|
| <i>Pay Balance 1</i> | <i>Subtract</i> | <i>Pay Balance 2</i> |

Related Information  
Tasks  
[Create Pay Balances](#) on page 317

Concept: Retro and Limits

- You can limit retro pay calculations based on:
- Earnings.
  - Deductions.
  - Pay component related calculations (PCRCs).

When you calculate payroll for the target period, Workday includes retro differences to the current earning or deduction.

Workday reduces the total retro difference for the recalculated periods to the earning and deduction limit when those differences exceed that limit.

#### Example: Deduction Limit

Flora earns weekly base wages of 1000. She has a deduction that is 20% of base pay with a limit of 250 each period. Workday deducts 200 for each of the first and second weekly periods.

In week 3, Flora receives a retroactive increase to 1200 for her base pay effective week 1. This change increases her regular deduction to 240. To complete the adjustment, week 3 needs a total deduction of 320 (240 + 80 in retro). This adjustment exceeds the 250 limit set for Flora.

Workday takes the retro deduction first, which is 40 each week, or 80 total. Given the 250 limit, there's 170 left for the week 3 deduction, the remaining 70 of which goes into arrears.

Workday calculates her total base pay:

|                       | Week 1 | Week 2 | Week 3 |
|-----------------------|--------|--------|--------|
| Base pay amount       | 1000   | 1000   | 1200   |
| Retro base pay amount | 200    | 200    |        |
| Total base pay amount | 1200   | 1200   | 1200   |

Workday calculates the total deduction due:

|                                          | Week 1 | Week 2 | Week 3 |
|------------------------------------------|--------|--------|--------|
| Deduction: 20% up to 250 before increase | 200    | 200    |        |
| Deduction: 20% up to 250 after increase  | 240    | 240    | 240    |
| Retro deduction difference               | 40     | 40     | 80     |
| Sum of deductions due in week 3          |        |        | 320    |

Workday calculates the retro amount and arrears up to the limit:

|                                                       | Week 1 | Week 2 | Week 3           |
|-------------------------------------------------------|--------|--------|------------------|
| Sum of deductions due in week 3                       |        |        | 320              |
| 80 retro deduction taken up to the 250 limit          |        |        | $250 - 80 = 170$ |
| 170 remaining deducted from the 240 regular deduction |        |        | $240 - 170 = 70$ |
| Amount due in arrears                                 |        |        | 70               |

### Example: Earning Limit

Jane is eligible for wellness reimbursements of up to 600 for the year. She receives a payment of 200 for each of the first 2 monthly pay periods. In month 3, she receives a retroactive increase for the first month to 350 so you run the retro pay calculation.

Workday generates a 150 difference for the first pay period and forwards it to the current pay period.

When you calculate payroll for the current period, Workday considers the total retro difference for the reimbursement (150). When it calculates the current reimbursement ( $150 + 400$  previously paid = 550), it is below the 600 limit by 50. Workday calculates a current value of the Wellness reimbursement of 50.

|                        | Month 1 | Month 2 | Month 3 |
|------------------------|---------|---------|---------|
| Wellness reimbursement | 200     | 200     | 50      |
| Retro increase         |         |         | 150     |

### Related Information

#### Tasks

[Set Up Earning or Deduction Limits](#) on page 247

[Set Up Pay Component Related Calculations](#) on page 241

### Concept: Retro and Arrears

The **Run Retro Pay Calculation** task doesn't put deductions into arrears or recoup arrears generated in completed pay periods. Workday considers arrears when calculating the retro difference for a deduction that had a prior period arrears balance.

When a retro deduction and a regular deduction combined exceed worker's pay, Workday applies the amount to retro first and forwards the remainder to regular pay. Workday then places the amount over the limit in arrears.

#### Example: Deduction with Prior Period Arrears Balance

Helen earns a base pay for the current period of 120. Their pay isn't enough to cover a lower priority deduction, so part of it goes into arrears:

|                   | Current Amount | Amount Taken | Arrears Amount |
|-------------------|----------------|--------------|----------------|
| Base pay          | 120            |              |                |
| Medical deduction | - 100          | - 100        |                |
| Dental deduction  | - 24           | - 20         | - 4            |

After the pay period is complete, you increase Helen's base pay retroactively to 150. The medical deduction increases to 110, and the dental deduction increases to 25. When you run retro, Workday calculates these differences:

|                   | Current Amount | Amount Taken | Arrears Amount | Retro Difference    |
|-------------------|----------------|--------------|----------------|---------------------|
| Base pay          | 150            |              |                | $150 - 120 = 30$    |
| Medical deduction | - 110          | - 100        |                | $110 - 100 = - 10$  |
| Dental deduction  | - 25           | - 20         | - 4            | $25 - 20 - 4 = - 1$ |

#### Example: Arrears Recouped from Refunded Deduction

John is on a biweekly pay schedule. On August 1, they have a qualifying event and wants to waive medical coverage but notifies you only on August 17. John is also on unpaid leave from August 16 to August 31. On August 17, you enter a retro benefit change, and run retro and payroll. John doesn't have any regular pay to cover his deductions in the current pay period. Workday recoups the deductions from the refunded retro amount, and puts the remaining deduction into arrears:

|                            | August 1 - August 15       | August 16 - August 31 |
|----------------------------|----------------------------|-----------------------|
| Base pay                   | 200                        | Zero                  |
| Medical deduction          | - 30                       | 30 (retro refund)     |
| Dental deduction           | - 20                       | - 20                  |
| Commuter benefit deduction | - 15                       | - 15                  |
| Remaining pay              | $200 - 30 - 20 - 15 = 135$ | $30 - 20 - 15 = - 5$  |

#### Example: Negative Retro Difference

When you make a retroactive change to a deduction with arrears that results in a negative retro difference, Workday recoups those deductions before recouping other deductions with arrears.

Bob is on a monthly pay schedule. In January, their medical deduction of 100 goes into arrears. You retroactively place Bob on leave beginning January 16. When you run retro in February, Workday calculates a retro difference of -50. Bob returns from leave on February 1. When you run on-cycle payroll for February, Workday attempts to recoup the arrears for the medical deduction first, because it has a negative retro difference. Workday then attempts to recoup other deductions with arrears balances.

**Example: Negative Retro Difference with Insufficient Minimum Net Pay**

Barb's medical deduction of 150 goes into arrears for 2 periods. They then request that you retroactively cancel their medical coverage due to a life event. When you run retro, Workday calculates a -300 retro difference. Barb's base pay for the current period is 50, and they have a dental deduction of 100. Minimum net pay is zero. When you run on-cycle payroll, Workday first resolves current period deductions, and then attempts to recoup deductions with negative retro differences before recouping other deductions with arrears balances.

|                          | Retro Pay Calc | On-Cycle Pay Calc | Amount Available for Deductions / Recouping | Notes                                              |
|--------------------------|----------------|-------------------|---------------------------------------------|----------------------------------------------------|
| Medical Retro Difference | -300           | -300              |                                             |                                                    |
| Base Pay                 |                | 50                | $50 - (-300) = 350$                         | Workday adds negative retro difference to net pay. |
| Dental Deduction         |                | 100               | $350 - 100 = 250$                           | Workday takes dental deduction first.              |
| Medical Arrears Balance  | 300            | $300 - 250 = 50$  | $250 - 250 = \text{zero}$                   | Workday recoups partial arrears balance.           |
| Net Pay                  |                | Zero              | Zero                                        |                                                    |

To identify workers with negative retro differences, you can run the **Retro Calculation Processing Report** and its subreports **Retro Results Report** and **Payroll Results Report**.

**Related Information****Concepts**

[Setup Considerations: Net Pay Validation and Arrears](#) on page 389

[Concept: Arrears Processing](#) on page 400

[Concept: Retro and Limits](#) on page 871

**Concept: Retro Limits and Balances with Suspended Retro Results**

When you suspend retro results for workers, Workday:

- Excludes the results from on-cycle and off-cycle pay calculations.
- Moves the workers' No Retro Processing Prior To (NRPPT) date to the first day of the next completed period.

When workers have supported retro events in periods before their new NRPPT date, you can move that date to an earlier date to process those events. Workday still applies the suspended results in balances and limits you recalculate for prior periods in retro pay calculations, including results for FLSA calculations for Payroll for the U.S. Running retro again after moving the NRPPT date can generate discrepancies.

You can create memo pay components to offset results you want to suspend to resolve the discrepancies between retro and pay results. When you rerun retro and pay calculations, Workday:

- Applies the memo pay component in retro and excludes the amount from balances, limits, and pay balances, as configured.
- Excludes the suspended retro result from the pay result in the target period.

**Note:** To avoid pay calculations processing retro differences in workers' next on-cycle payroll, make sure those memo pay components:

- Only update pay balances and limits.
- Don't impact workers' gross pay.

Example: To offset a 100 suspended retro result, create a memo deduction of 100 for the source period.

**Example: Limits Without Suspended Retro Results**

Mary has a monthly commuting allowance of 100 with a quarterly limit of 1,300. In February, your company updates this allowance to 500 effective January 1. You run retro to process a payment for this change in the on-cycle results:

|          | Retro Pay Calculation                                                                                             | Pay Calculation                                                                              |
|----------|-------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------|
| January  | 500 (new allowance) - 100 (previous paid allowance) = 400<br>QTD allowance balance: 500<br>Remaining balance: 800 | Forwarded retro difference: 400<br>QTD allowance balance paid: 500<br>Remaining balance: 800 |
| February |                                                                                                                   | Allowance for the month: 500<br>QTD allowance balance paid: 1,000<br>Remaining balance: 300  |

In March, your company updates the allowance to 700 effective January 1, but the quarterly limit remains 1,300. You run retro again to process a payment for this change:

|         | Retro Pay Calculation                                                                                             | Pay Calculation                                                                              |
|---------|-------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------|
| January | 700 (new allowance) - 500 (previous paid allowance) = 200<br>QTD allowance balance: 700<br>Remaining balance: 600 | Forwarded retro difference: 200<br>QTD allowance balance paid: 700<br>Remaining balance: 600 |

|          | <b>Retro Pay Calculation</b>                                                                                                    | <b>Pay Calculation</b>                                                                                 |
|----------|---------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------|
| February | 600 (remaining balance) - 500 (previous paid allowance) = 100<br><br>QTD allowance balance: 1300<br><br>Remaining balance: Zero | Forwarded retro difference: 100<br><br>QTD allowance balance paid: 1300<br><br>Remaining balance: Zero |
| March    |                                                                                                                                 | Allowance for the month: Zero                                                                          |

Mary reaches the quarterly limit in February both using the retro pay calculation and the regular pay calculation.

#### **Example: Limit in Retro with Suspended Results**

Mary has a monthly commuting allowance of 100 with a quarterly limit of 1,300. In February, your company updates this allowance to 500 effective January 1. She changes pay groups in February, so the January increase is from a different pay group. You don't want to process the January increase in her current pay group, so you:

1. Run retro and suspend her retro result for January. Workday moves her NRPPT date to February 1.
2. Run the pay calculation for February.

Workday applies the suspended result to limits in retro and excludes it from pay results in the target period. The retro results are identical to the previous example, but pay results differ:

|         | <b>Retro Pay Calculation</b>                                                                                                                                    | <b>Pay Calculation</b>                                                                                                                       |
|---------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------|
| January | 500 (new allowance) - 100 (previous paid allowance) = 400<br><br>QTD allowance balance: 500 (400 suspended retro result included)<br><br>Remaining balance: 800 | Forwarded retro difference: Zero<br><br>QTD allowance balance paid: 100 (400 suspended retro result excluded)<br><br>Remaining balance: 1200 |

|          | Retro Pay Calculation | Pay Calculation                                                                                   |
|----------|-----------------------|---------------------------------------------------------------------------------------------------|
| February |                       | Allowance for the month: 500<br><br>QTD allowance balance paid: 600<br><br>Remaining balance: 700 |

In March, to process the allowance increase to 700, you:

1. Move the worker's NRPPT date to January 1.
2. Run retro.
3. Run the pay calculation for March.

The retro results are identical to the example without suspended results but the pay results differ:

|          | Retro Pay Calculation                                                                                                                                                                             | Pay Calculation                                                                                                                                                      |
|----------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| January  | 700 (new allowance) -<br>100 (previous paid allowance) -<br>400 (suspended result) = 200<br><br>QTD allowance balance:<br>700 (400 suspended retro result included)<br><br>Remaining balance: 600 | Forwarded retro difference: 200<br><br>QTD allowance balance paid:<br>300 (400 suspended retro result excluded)<br><br>Remaining balance: 1000                       |
| February | 600 (remaining balance) - 500 (previous paid allowance) = 100<br><br>QTD allowance balance: 1300<br><br>Remaining balance: Zero                                                                   | Forwarded retro difference: 100<br><br>QTD allowance balance paid:<br>300 (QTD allowance balance paid in January)<br><br>+ 500 (previous paid allowance in February) |

|       | Retro Pay Calculation | Pay Calculation                                                                                     |
|-------|-----------------------|-----------------------------------------------------------------------------------------------------|
|       |                       | + 100<br>(forwarded retro difference in February)<br><br>= 900<br><br>Remaining balance: 400        |
| March |                       | Allowance for the month: 400<br><br>QTD allowance balance paid: 1300<br><br>Remaining balance: Zero |

Mary reaches her quarterly limit:

- In February for the retro pay calculation.
- In March for the regular pay calculation.

When you have a supported event in March and run retro, Workday reverses the 400 paid for that month. You can create a memo deduction of 400 for January that offsets the suspended result without impacting the worker's net pay. The limits are then consistent between the retro and regular pay calculations.

[FAQ: Earnings and Deductions](#) on page 260

## Concept: Retro Payroll Accounting

You can run the **Maintain Payroll Accounting Options** task secured to the *Set Up: Payroll (Calculations – Payroll Specific)* domain in the Core Payroll functional area to configure retro costing. The task enables you to update the retro result lines for the retro pay period instead of the current period to reflect:

- Costing rules.
- Budget date.
- Payroll attributes.

When you select the **Enable Retroactive Costing** check box on the task, Workday applies retro to all types of costing, including:

- Earnings.
- Deductions.

- Employer-paid expenses.
- Fringe recovery.

You can also select specific **Earnings to Exclude from Retro Costing**, to keep the costing in the current pay period. If there are multiple retro events during a period, Workday evaluates the retro costing rules. Workday applies effective dates for costing and retro events.

For Payroll for the U.S., the Configuration for Retro Lines with Salary Cap Grant section enables you to have the system charge retro amounts either over or under a salary cap grant by default when you run retro payroll calculations. You can also configure retro lines specific to salary cap grants to cost fully over or under the cap for certain job families, job family groups, and job profiles. If the job profile associated with a retro line matches the job profile you specify or belongs to the job family or job family group that you configure, then the behavior you select applies to the retro line.

### Retroactive Costing

In July, a worker receives a bonus pay of 1000 that is retroactive to the month of January. Their cost center in January was CC100. In March, they moved to a different department and their cost center changed from CC100 to CC500. Their current pay period is July. When you **Enable Retroactive Costing** and run a retro pay calculation for the bonus pay, Workday applies the costing from the retro pay period instead of the current period. Their bonus is charged to cost center CC100 instead of CC500.

### Retro Costing to Salary Cap Grant (USA)

You have a worker who is a full-time professor earning a salary associated with a grant subject to a salary cap: SOC Grant A.

- They earn \$72,000 as a base annual salary, and they're on a monthly period schedule earning \$6,000 per month.
- SOC Grant A is subject to the award salary cap of \$240,000 base annual salary, or \$20,000 per month.

The worker is subject to these costing allocation rules:

- For salary covered by the grant subject to the salary cap: SOC Grant A, Fund A, Cost Center A at 100%.
- For the salary over the cap portion: Fund B, Cost Center B at 100%.

| Default                                | SOC Suballocation       | Distribution Percent |
|----------------------------------------|-------------------------|----------------------|
| SOC Grant A<br>Fund A<br>Cost Center A |                         | 100%                 |
|                                        | Fund B<br>Cost Center B | 100%                 |

The worker earns their normal monthly salary from January to June. In July they receive an annual salary increase to \$84,000, or \$7,000 per month, which is retroactive to June. When you run the **Run Retro Pay Calculation** task in July, Workday pulls in the worker's salary increase as a retro event. After the next payroll calculation, the Actuals journal reflects the retro differences and the costing configuration for lines with salary over the cap grants.

If you have **Default Over Cap** selected, Workday allocates the retroactive \$1,000 to the worker's suballocation, which is Fund B, Cost Center B for June, and the current \$7,000 to SOC Grant A, Fund A, Cost Center A. The Actuals journal on the worker's payroll result for July displays their current payroll period earnings and the retro earnings lines:

| Default | SOC Suballocation | Distribution Amount | Budget Date |
|---------|-------------------|---------------------|-------------|
|         | Fund B            | 1000                | 2023-06-30  |

| Default                                | SOC Suballocation | Distribution Amount | Budget Date |
|----------------------------------------|-------------------|---------------------|-------------|
|                                        | Cost Center B     |                     |             |
| SOC Grant A<br>Fund A<br>Cost Center A |                   | 7000                | 2023-07-31  |

If you have **Default Under Cap** selected, Workday allocates the retroactive \$1,000 and the current \$7,000 to SOC Grant A, Fund A, Cost Center A for June:

| Default                                | SOC Suballocation | Distribution Amount | Budget Date |
|----------------------------------------|-------------------|---------------------|-------------|
| SOC Grant A<br>Fund A<br>Cost Center A |                   | 1000                | 2023-06-30  |
| SOC Grant A<br>Fund A<br>Cost Center A |                   | 7000                | 2023-07-31  |

If you configure a row in the table to have Professor as a Job Profile or select the Job Family to which the Professor job belongs, then retro processing respects your choice to **Cost Fully Over Cap** or **Cost Fully Under Cap** for those selections rather than follow your default choice.

## Concept: Retro Events and Establishments (FRA)

Workday Payroll for France only supports DSN reporting for retro terminations and retro hires when the establishment remains the same for the previous and following contracts.

#### Example: Retroactive Termination and Hire to Change an Employment

In February, you submit a DSN with this data:

| Contract Dates      | Establishment   | Contract   |
|---------------------|-----------------|------------|
| January 1 - ongoing | Establishment 1 | Contract 1 |

In March, you retroactively terminate the position for Contract 1, and retroactively hire the position for Contract 2. You produce a DSN that reflects this data.

Workday supports DSN reporting for the retroactive change, as long as Contract 1 and Contract 2 are with the same establishment.

| Contract Dates         | Establishment   | Contract   |
|------------------------|-----------------|------------|
| January 1 - February 5 | Establishment 1 | Contract 1 |
| March 3 - ongoing      | Establishment 1 | Contract 2 |

When there's a retroactive change in the establishment, Workday treats the change as a supported retro change but doesn't support DSN reporting for it.

| Contract Dates         | Establishment   | Contract   |
|------------------------|-----------------|------------|
| January 1 - February 5 | Establishment 1 | Contract 1 |
| March 3 - ongoing      | Establishment 2 | Contract 2 |

#### Example: Retroactive Hire and Termination to Insert an Employment

In February, you submit a DSN with this data:

| Contract Dates         | Establishment   | Contract   |
|------------------------|-----------------|------------|
| January 1 - February 5 | Establishment 1 | Contract 1 |
| March 3 - ongoing      | Establishment 1 | Contract 3 |

In March, you retroactively insert a new short-term employment for Contract 2 through a retroactive hire and termination. You produce a DSN that reflects this data.

Workday supports the retroactive change, as long as all 3 contracts are with the same establishment.

| Contract Dates            | Establishment   | Contract   |
|---------------------------|-----------------|------------|
| January 1 - February 5    | Establishment 1 | Contract 1 |
| February 10 - February 20 | Establishment 1 | Contract 2 |
| March 3 - ongoing         | Establishment 1 | Contract 3 |

When there's a retroactive change in the establishment, Workday treats the change as a supported retro change but doesn't support DSN reporting for it.

| Contract Dates            | Establishment   | Contract   |
|---------------------------|-----------------|------------|
| January 1 - February 5    | Establishment 1 | Contract 1 |
| February 10 - February 20 | Establishment 2 | Contract 2 |
| March 3 - ongoing         | Establishment 1 | Contract 3 |

## Supported Retroactive Features

---

### Concept: Retro Payroll Input

You can run the **Retro Pay Calculation** task to recalculate prior periods results in retro for workers when:

- You enter payroll input for a prior period.
- Workers have prior results for the period and run category.

#### What Workday Processes

When you run retro, Workday processes retro payroll inputs for the workers, including one-time payments.

Example: When you enter a retro payroll input in January that's only eligible for a bonus run category, Workday:

- Processes the payroll input only when the worker has results in January for the bonus run category.
- Ignores it when the worker has results in January only for the regular run category.

Deleting payroll inputs doesn't remove the associated workers' retro results. To adjust retro payroll inputs that you already included in retro results, cancel those results before loading the new payroll inputs and rerunning retro. Doing so ensures that Workday doesn't consider the retro period of the initial payroll input in the new retro pay calculation.

#### Pay Groups with Multiple Run Categories

Workday detects retro changes for all run categories associated with a pay group.

#### Earning and Deduction Calculations

When processing retro payroll input, Workday:

- Recalculates deductions that have payroll input when they're set to **Recalculate during Retro**.
- For Payroll for Canada, France, the UK, and the U.S., recalculates earnings that have payroll input when they're not set to **Do Not Recalculate during Retro** or **Always Gross Up**.

**Note:** Workday reports payroll input for pay components not configured for retro as unprocessed retro events.

Workday only overrides earning and deduction eligibility requirements when payroll input exists for the worker in the current pay period.

Workday uses the rates in effect on the dates specified for the payroll input.

## Worktags

Workday carries forward any worktags you enter on retro payroll input.

Example for Payroll for Canada and the U.S.: When you select a worktag for a different tax authority than in the original calculation, Workday uses the new worktag.

Example for Payroll for France: When you select a worktag for a different tax election than in the original calculation, Workday uses the new worktag.

## Related Information

### Tasks

[Steps: Set Up Payroll Input](#) on page 583

[Steps: Manage Retro Results](#) on page 852

## Concept: Retro Leave of Absence

Workday processes retroactive leaves of absence for:

- Leave types that have **Payroll Effect** selected on the **Create Leave Type** task.
- Run categories that have *On Leave* statuses set on these tabs of the **Create Run Category** task:
  - **General**
  - **Nonactive (On Cycle, On Demand Replacement)**

The retro pay calculation doesn't support multiple returns from leave in 1 leave event. To return workers or correct returns from multiple leave types, do so for each type in a separate event.

Workday uses the pay components, pay component groups, and leave types that you select on the run category.

When you run the retro pay calculation, it creates subperiods to accommodate the leave and calculates the differences from the original pay results.

## Missing Prior Periods

Workday supports retroactive leave of absence changes for periods with no on-cycle results between the leave period and the current period. The retro pay calculation creates a zero pay result for the missing periods, including periods with on-demand additional payments. The zero pay result is created after the payroll has a status of *Complete*, so it doesn't affect accounting.

You can't reverse a zero pay result created by retro leave of absence, but you can remove it. To remove the zero result, cancel the retro result that contains the retro leave event.

## Proration Method Changes (CAN, FRA, UK, USA)

When changing the proration method of a pay component from gross-to-net to pay component proration, do so for all of their effective-dated definitions. This practice prevents unexpected results in the prior period that retro recalculates.

## Examples

Mary receives base wages of 10,000 for March 1 through 31. On March 11, Mary left work quickly for a family medical emergency. She didn't have time to fill out the leave request and stayed out of work for a week. In April, she submitted a family medical leave request for March 11 through 18.

The company family medical leave plan pays 66% of her regular salary. You configured *Family Medical Leave* to have payroll effect. Mary belongs to a run category that includes the *Benefits During Leave* pay component group. In this example, you configure base wages to prorate by calendar days.

### Retro Results With Prior Period Pay Results

When you run the retro pay calculation, the results include a subperiod for the leave.

| Pay Period                     | Base Wages                          |
|--------------------------------|-------------------------------------|
| March 1 - 31 pay period.       | (10,000)                            |
| March 1 - 10 subperiod.        | $10,000 / 31 * 10 = 3,225.80$       |
| March 11 - 18 leave subperiod. | $10,000 / 31 * 0.66 * 8 = 1,703.23$ |
| March 19 - 31 subperiod.       | $10,000 / 31 * 13 = 4,193.55$       |
| Retro pay adjustment in April. | (877.42)                            |

### Retro Results Without Prior Period Pay Results

If Mary didn't enter any hours for March, her pay period would be missing. Workday creates a zero paid period in order to process the leave of absence. Workday then creates 3 subperiods and adjusts the leave pay retroactively, carrying it forward to April. The pay result displays the payments carried forward to the current period, including payment for the family medical leave.

| Pay Period                            | Base Wages                                         |
|---------------------------------------|----------------------------------------------------|
| March 1 - 31 pay period.              | No original result. Workday creates a zero result. |
| March 1 - 10 subperiod.               | $10,000 / 31 * 10 = 3,225.80$                      |
| March 11 - 18 family leave subperiod. | $10,000 / 31 * 0.66 * 8 = 1,703.23$                |
| March 19 - 31 subperiod.              | $10,000 / 31 * 13 = 4,193.55$                      |
| Retro pay adjustment in April.        | 9,122.58                                           |

## Concept: Retro Events and Terminated Workers

When you configure run categories to include workers with supported retro events and retro differences processed in payroll, you can calculate their pay after you retroactively:

- Terminate their employment.
- Rescind a termination.
- Correct a termination date.
- Enter supported events for terminated workers during or after the period that includes the termination date.

Payroll for France supports DSN reporting for retro terminations only in these cases:

- Retroactive hire followed by a retroactive termination.
- Retroactive termination in the previous month of the DSN.
- Retroactive termination followed by rehiring in the current month of the DSN.
- Retroactive termination followed by a retroactive rehiring in the same month as the retroactive termination.

Workday doesn't support DSN reporting when there's a change in establishment due to a retroactive termination and rehiring.

### What Workday Processes

When you retroactively terminate workers and run the **Retro Pay Calculation** task, Workday processes:

- Their pay results until the termination date.
- Any other supported retro events you enter for them.

For midperiod terminations, Workday creates subperiods and prorates the pay component amounts when you configure it.

### Retro Termination on the Last Day of the Month (FRA)

Retroactively terminating a worker on the last day of the month without rehiring them can produce a retroactive result missing a target pay period. This occurs when there's no difference retro difference in the gross pay. To ensure accurate DSN reporting, add payroll input to create a payroll result for the current payroll period before processing retro.

### Negative Pay Periods

Workers terminated retroactively can have negative retro differences, which can result in negative net pay for the pay period. Example: Retroactively terminating employment of a salaried worker. You can resolve negative net pay manually such as by suspending the retro result or offsetting it with a memo earning.

### Missing Prior Periods

You can retroactively terminate workers with an effective date in a period where they have no existing payroll results, such as when you:

- Terminate a worker's employment and rescind the termination.
- Move a retro termination date to another completed pay period.

Workday creates a zero pay result for any missing payroll periods, from the period start date to the termination date. The employee self-service **Pay** dashboard and worker profile hide payslips generated by retro termination events with zero pay results.

### Example

James receives a biweekly salary of 5,000 processed twice a month and prorated by calendar days. James leaves his job on July 10, but the payroll partner enters the termination on July 15. Workday already processed James's 5,000 wage.

When you run the retro pay calculation, Workday creates subperiods and generates a negative 2,000 retro difference.

| Pay Period                | Processing Date | Base Wages               |
|---------------------------|-----------------|--------------------------|
| July 1 - July 15          | July 13         | 5,000                    |
| July 1 - July 9 subperiod |                 | $5,000 / 15 * 9 = 3,000$ |

| Pay Period                  | Processing Date | Base Wages               |
|-----------------------------|-----------------|--------------------------|
| July 10 - July 15 subperiod | July 27         | 5,000 / 15 * 5 = (2,000) |

## Related Information

### Tasks

[Steps: Manage Retro Results](#) on page 852

### Reference

[FAQ: Retro Results](#) on page 864

## Concept: Retro Time Off

The retro pay calculation reprocesses prior period earnings when a worker enters time off. Dates for this time off must be after the worker's No Retro Processing Prior To date. The recalculations include:

- For Payroll for Australia:
  - Paid or unpaid time off earnings directly affected by the change.
  - Earnings indirectly affected by the change. Example: Ordinary pay that is reduced by the hours paid as time off.
- For Payroll for Canada, the UK, and the U.S.:
  - Paid or unpaid time off earnings directly affected by the change.
  - Earnings indirectly affected by the change. Base pay earnings are salary minus (paid + unpaid time) to avoid double paying employees for the hours they aren't working.
- For Payroll for France:
  - Earnings for paid time off.
  - Deductions for paid or unpaid time off where **Recalculate for Retro** is selected.

## Examples

You process payroll monthly. March is the last completed payroll period.

- For Payroll for Australia, on April 5, you enter 8 hours of Annual Leave for Marion on March 3, affecting these earnings:
  - Annual Leave Pay. Defined as Annual Leave hours x hourly rate, where hourly rate is 30/hour.
  - Ordinary pay. Defined as (scheduled hours in the month - paid time off and leave hours) x hourly rate.
- For Payroll for Canada and the U.S., on April 5, you enter 8 hours of PTO for Marion for March 3, affecting these earnings:
  - Vacation Pay. Defined as vacation hours x hourly rate, where hourly rate = 20/hour.
  - Base Pay. Defined as salary - paid time off.
- For Payroll for France, on April 5, you enter 8 hours of paid vacation for Marion for March 3, affecting these earnings and deductions:
  - Vacation Time Off deduction. Defined as vacation hours x hourly rate, where hourly rate = 20/hour.
  - Vacation Pay earning. Defined as vacation hours x hourly rate, where hourly rate is from the Vacation Time Off deduction.
- For Payroll for the UK, on April 5, you enter 8 hours of holiday for Marion for March 3, affecting these earnings:
  - Holiday Pay. Defined as holiday hours x hourly rate, where hourly rate = 20/hour.
  - Base Pay. Defined as salary - paid time off.
- On April 5, you run the retro pay calculation.

- On April 8, you calculate her regular payroll results.

When you run the retro pay calculation, Workday recalculates her March earnings and subtracts her prior results to determine the retro differences:

For Payroll for Australia:

| Earning          | Recalculated Results                      | Prior Results        | Retro Differences        |
|------------------|-------------------------------------------|----------------------|--------------------------|
| Annual Leave Pay | 7.6 hours of annual leave x 30/hour = 228 | 0 for month of March | 228 - 0 = 228            |
| Ordinary Pay     | $(164.67 - 7.6) \times 30 = 4712.1$       | 4940.1               | $4712.1 - 4940.1 = -228$ |

For Payroll for Canada and the U.S.:

| Earning      | Recalculated Results           | Prior Results                  | Retro Differences    |
|--------------|--------------------------------|--------------------------------|----------------------|
| Vacation Pay | 8 hours of PTO x 20/hour = 160 | 0 for month of March           | $160 - 0 = 160$      |
| Base Pay     | $3467 - 160 = 3307$            | 3467 (standard monthly salary) | $3307 - 3467 = -160$ |

For Payroll for France:

| Pay Components    | Recalculated Results             | Prior Results        | Retro Differences |
|-------------------|----------------------------------|----------------------|-------------------|
| Vacation Pay      | 8 hours of PTO x 20/hour = 160   | 0 for month of March | $160 - 0 = 160$   |
| Vacation Time Off | 8 hours of PTO x -20/hour = -160 | 0 for month of March | $-160 - 0 = -160$ |

For Payroll for the UK:

| Earning     | Recalculated Results               | Prior Results                  | Retro Differences    |
|-------------|------------------------------------|--------------------------------|----------------------|
| Holiday Pay | 8 hours of holiday x 20/hour = 160 | 0 for month of March           | $160 - 0 = 160$      |
| Base Pay    | $3467 - 160 = 3307$                | 3467 (standard monthly salary) | $3307 - 3467 = -160$ |

For Payroll for Australia, Canada, the UK, and the U.S., when you run the regular on-cycle payroll for April, Workday pulls the retro differences into her current payroll results. On her payslip, she sees the current period earnings:

For Payroll for Australia:

| Earnings     | Dates                    | Hours  | Rate    | Amount  | YTD |
|--------------|--------------------------|--------|---------|---------|-----|
| Ordinary Pay | 04-01-2010 to 04-30-2010 | 164.67 | 30/hour | 4940.10 |     |

For Payroll for Canada, the UK, and the U.S.:

| Earnings | Dates                    | Hours | Rate | Amount | YTD   |
|----------|--------------------------|-------|------|--------|-------|
| Base Pay | 04-01-2010 to 04-30-2010 | N/A   | N/A  | 3467   | 13868 |

For Payroll for France, when you run the regular on-cycle payroll for April, Workday pulls the retro differences into her current payroll results. On the **Summary** tab of her pay results, you can see:

- The current period earnings.
- Differences from recalculated periods, including the dates of the source periods that produced the retro differences.

| Pay Components    | Retro Period             | Rate | Amount (Retro Differences) |
|-------------------|--------------------------|------|----------------------------|
| Vacation Time Off | 03-01-2010 to 03-31-2010 | -20  | - 160                      |
| Vacation Pay      | 03-01-2010 to 03-31-2010 | 20   | + 160                      |

For Payroll for Australia, Canada, the UK, and the U.S., the payslip displays earnings differences from recalculated periods below the current results. It also includes the dates of the source periods that produced the retro differences:

For Payroll for Australia:

| Earnings         | Dates                    | Hours  | Rate | Amount (Retro Differences) |
|------------------|--------------------------|--------|------|----------------------------|
| Annual Leave Pay | 03-03-2010 to 03-31-2010 | 7.6    | 30   | +228                       |
| Ordinary Pay     | 03-03-2010 to 03-31-2010 | 157.07 | 30   | -228                       |

For Payroll for Canada and the U.S.:

| Earnings     | Dates                    | Hours | Rate | Amount (Retro Differences) |
|--------------|--------------------------|-------|------|----------------------------|
| Base Pay     | 03-01-2010 to 03-31-2010 | N/A   | N/A  | - 160                      |
| Vacation Pay | 03-01-2010 to 03-31-2010 | 8     | 20   | + 160                      |

For Payroll for the UK:

| Earnings    | Dates                    | Hours | Rate | Amount (Retro Differences) |
|-------------|--------------------------|-------|------|----------------------------|
| Base Pay    | 03-01-2010 to 03-31-2010 | N/A   | N/A  | - 160                      |
| Holiday Pay | 03-01-2010 to 03-31-2010 | 8     | 20   | + 160                      |

## Concept: Retro End Additional Job (CAN)

You can run a retro pay calculation to recalculate prior period results for a worker with multiple jobs when:

- An additional job ends.
- You correct or rescind the ending of an additional job.

### What Workday Process

When you retroactively end an additional job for a worker and run a retro pay calculation, Workday process:

- The worker's pay results until the end date for the additional job.
- Any other supported retro events that you enter for them.

For midperiod job end dates, Workday create subperiods and prorates the pay component amounts when you configure it.

When you retroactively end an additional job for a worker with multiple jobs, you can:

- Process their retro differences in the current on-cycle pay result for their primary position if their primary position is in the same company as their additional job.
- Create an on-demand additional payment to process retro differences for an ended job in a different company than their primary position.

### Negative Pay Periods

Worker's with retroactive job end dates can have negative retro differences, which can result in negative net pay for a pay period. You can resolve negative net pay by suspending the retro result or offsetting it with a memo earning.

### Example

Haley has an additional job that is in the same pay group as her primary job, but for a different company. At the additional job, Haley receive pay of 5,000 twice a month and prorated by calendar days. Haley's additional job ends on September 9, but the payroll partner processes the End Job task on September 16. Workday already processed Haley's 5,000 payment for the September 1-15 pay period.

After you run the retro pay calculation, you'll need to process an on-demand additional payment for Haley's retro differences because the ended additional job was in a different company (See: [Concept: Retro Events from Other Companies \(CAN, USA\)](#) on page 893). Workday creates subperiods and generates a negative 2,000 retro difference.

| Pay Period                | Processing Date | Base Wages                 |
|---------------------------|-----------------|----------------------------|
| September 1-15            | September 13    | 5,000                      |
| September 1-9 subperiod   |                 | $5,000 / 15 * 9 = 3,000$   |
| September 10-15 subperiod | September 27    | $5,000 / 15 * 5 = (2,000)$ |

## Concept: Retro Hire

For workers that meet the processing criteria on the run category, you can run the **Retro Pay Calculation** task to recalculate their pay after you retroactively:

- Hire or rehire them.
- Correct their hire date.
- Correct their location as part of the *Hire* business process.

## What Workday Processes

When you retroactively hire workers, Workday processes pay results for them starting from their hire date. For midperiod hires, Workday creates subperiods, and prorates the pay component amounts when you configure it.

When calculating results for a retro hire, Workday also processes:

- Any other supported retro events. Examples: Retro time entry, time off.
- Unsupported retro events that have the same effective date as the retro hire. Example: Company assignments.

For Payroll for the UK, for National Insurance (NI) amounts, Workday:

- Calculates NI in the pay period when earned, not when paid.
- Uses the rates and thresholds of the current period.
- Uses the latest NI category. Example: The worker's category changes between their retro hire date and the current payroll processing date.

For Payroll for Australia PAYG amounts:

- If the retro hire happened in a previous tax year, Workday calculates the PAYG amount using Method B(ii). The superannuation is calculated using the rate as of the payment date of the retro hire period
- If the retro hire happened in the current tax year, Workday calculates the PAYG amount using the regular calculation.

For Payroll for France and the UK, Workday doesn't process terminations or the end of additional jobs as part of a retro hire.

## Missing Prior Periods

During a retro pay calculation, Workday calculates the difference between original payroll results and recalculated results. However, in many cases workers hired retroactively don't have any on-cycle payroll results for the prior period. For these workers, Workday creates a zero pay result for any missing payroll periods, starting from the hire date.

The employee self-service **Pay** dashboard and worker profile hide payslips generated by retro hire events with zero pay results.

## Hires Skipped in Pay Calculations

On-cycle payroll calculations can skip hires because the hire period either:

- Has no existing pay or retro pay results. Example: You hire a worker and assign them to a nonpaying pay group.
- Has pay results that don't account for the hires. Example: You cancel the results, or don't recalculate them after the hire is complete.
- Has run category criteria that exclude the hires. Example: You configure your run category to ignore any hires after the 20th of each month.

When the hire effective date is in the most recent period recalculated in retro, Workday processes it as a retro hire. Workday recommends that the first time you run retro for a new period, you do so by calculation statuses. This practice helps ensure that retro considers all those hires. If you find that the calculation missed some workers, you can select them by running retro by workers.

Example: In June, you enter a hire for Paul with a start date in July. Due to missing documents, you assign Paul to a nonpaying pay group in July. When you run the July payroll, Workday skips the hire. In August, Paul submits all his documents, so you move him to a regular pay group from his original hire date in July. When you run retro, Workday processes a retro hire for him effective in July.

## Related Information

### Reference

[FAQ: Retroactive Processing](#) on page 841

## Concept: Retro Pay Group Change (CAN)

After you enable retro processing for multiple pay groups on the **Edit Tenant Setup - Payroll** task, you can process supported retro events for workers who change pay groups during a current or retro pay period.

Example: You transfer a worker from an hourly pay group to a salaried pay group and enter time retroactively for the hourly pay group. You run retro to calculate the wages owed to the worker for the hours worked in the first pay group.

### What Workday Processes

When you assign a worker to a new pay group that has a period start date for a completed pay period and then run the retro pay calculation, Workday calculates the worker's retro differences and forwards them to the current on-cycle pay period.

For midperiod pay group changes, Workday creates subperiods for the old pay group and the new pay group, and prorates the worker's pay component amounts.

## Concept: Retro Events from Other Pay Groups

This topic applies to:

- Payroll for Canada
- Payroll for France
- Payroll for the UK
- Payroll for the U.S.

After you enable retro processing for multiple pay groups on the **Edit Tenant Setup - Payroll** task, you can process supported retro events for workers who:

- Have 1 or more jobs in the same or different tax authority during the source and target periods for Payroll for Canada and the U.S.
- Have 1 or more jobs in the same company during the source and target periods for Payroll for France and the UK.
- Change pay groups during the current pay period.

Example: You transfer a worker from an hourly to a salaried pay group and enter time retroactively for the hourly pay group. You run retro to calculate the wages owed to the worker for the hours worked in the first pay group.

### What Workday Processes

When you run the **Retro Pay Calculation** task in a worker's primary pay group, Workday processes:

- Retro differences in the on-cycle pay results or on-demand additional payments for the target pay group. That pay group is the current primary pay group.
- All pay components, including pay components ineligible for the target pay group or run category.

You can override the target pay group and pay period for a retro result. Example: To enter a future-dated pay group transfer, select **Retro Pay Calculation > Update** from the related actions menu on a worker's retro result. Available pay groups are based on worker eligibility.

When you override the target and recalculate retro, Workday resets the target pay group and pay period to the previous value.

For Payroll for Canada, Workday doesn't support retro differences for workers with Records of Employment (ROEs) who transfer pay groups. You can adjust ROE for the period with the retro event by either:

- Entering a payroll input.
- Running an on-demand additional payment.

### Transfers to Pay Groups with No Existing Pay Results

After you transfer workers to newly created pay groups and run retro, Workday updates the workers' No Retro Processing Prior To (NRPPT) date. Their new NRPPT date is the first day of the first processing period of the new pay group.

Processing the retro events for those workers requires that you:

- Don't define a first period to process on the pay group in the **Override First Processing Period** field.
- Assign a new period schedule to the pay group. The first period of the schedule must be 1 period before the worker's start date in the new pay group.
- Run and complete the pay calculation for the first period of the new pay group before transferring the worker.

### Transfers from or to Pay Groups Paid on a Lag

A pay group paid on a lag is a pay group with a pay period schedule associated to a different schedule. Example: You map a weekly time tracking schedule to a biweekly pay period schedule.

You can transfer workers from or to pay groups paid on a lag. When you run retro, Workday checks for unprocessed time entries up to 60 days before the run.

### Pay Groups in Reports

The **View Payroll Results** and **View Retro Results** reports display the source pay group. The **View Payroll Retro Worker Result** report displays the target pay group.

[Reference: Edit Tenant Setup - Payroll](#)

## Concept: Retro Events from Other Companies (CAN, USA)

This topic applies to:

- Payroll for Canada
- Payroll for the U.S.

You can process supported retro events from companies other than the workers' current primary job when workers:

- Have 1 or more jobs in different companies in the same or different tax authority. Processing jobs in multiple pay groups requires that you enable the corresponding setting on the **Edit Tenant Setup - Payroll** task.
- Transfer between different companies in the current pay period.

For Payroll for the U.S., for cross-company FLSA payments, you can enter bonus details and coverage dates for each company that workers had results in.

### What Workday Processes

The **Retro Pay Calculation** task generates retro differences for supported events that occur in companies workers are assigned to. When you run payroll, Workday processes the differences from the workers'

current primary job company in their on-cycle pay. For differences from other companies, you can process on-demand additional payments using the:

- **Run On Demand Payment for Worker** task for individual workers.
- **Run Retro Pay Complete for Subset of Workers** task for groups of workers, where you can exclude current company retro results.

### Mergers and Acquisitions (USA)

Workday processes workers' retro differences in their on-cycle pay when:

- The differences are from companies that go through a merger and acquisition.
- The companies that the differences are from are predecessors to the workers' current primary job company.

In other merger cases, you can pay the differences using on-demand additional payments. Example: Brian is currently in company C. He was previously in company A, which company B acquired. You want to pay Brian a retro bonus from company A. Since company A isn't a predecessor to company C, you run an on-demand additional payment for the bonus in company A.

### Retro Differences in Reports

You can run retro reports, such as subreports of the **Retro Calculation Processing Report**, to view:

- The source company of the retro differences.
- The target period for which Workday processes differences, including differences you forward to multiple pay periods.

### Example

Due to multiple reorganizations, Jane goes through several company transfers:

- In February, she's in company A.
- In April, she transfers to company B.
- In July, the current pay period, she transfers back to company A.

Jane is due a bonus from January and company B retroactively increases the gym membership allowance, so you:

- Enter a retro payroll input for the bonus.
- Run the retro pay calculation.

As the bonus originates in the same company as Jane's current company, Workday processes it for July when you run on-cycle payroll. As the allowance increase relates to company B, you can process it using an on-demand additional payment.

## Concept: Retro Differences from Current Tax Authority Change (CAN, USA)

When you make changes to a worker's tax authority in a current pay period and have a supported retro event back to a previous tax authority, Workday:

- Calculates retro differences for earnings and deductions and forwards it to the current pay period.
- Displays Source Tax Authorities that includes the Work and Resident tax authority details from each individual payroll result processed by retro, on the retro worker result.

### Example

Due to work relocation, Tara has changes to the tax authority:

- In January 2022, the work location is New York.
- The work location changed from New York to California with an effective date of February 1, 2022. The location change has an effective date that falls in the current period of February 1, 2022 and isn't retroactive.

As a payroll administrator, you run pay calculation and complete for January and February.

In March 2022; worker's current work location is California. You enter a supported event dating back to January, where the tax authority is different from the current. You add payroll input for workers (supported event) to include a:

- Bonus of \$1000 for January.
- Commission of \$2000 for February

You then run **Retro Pay Calculation** and view the payroll retro worker results. Workday calculates earnings and deductions differences and displays Source Tax Authorities for each Retro Result:

- Bonus for New York, prior location.
- Commission for California, current location.

You can use:

- On-cycle payroll for March to pay the retro differences from California.
- On-demand additional payments for March to pay the retro differences from New York.

## Steps: Process Retro Differences from Current Tax Authority Change (CAN, USA)

### Prerequisites

- [Steps: Set Up Retro Processing](#) on page 825
- [Calculate Retro Payroll](#) on page 827

### Context

You can make changes to a worker's current tax authority for a supported retro event. Workday then calculates retro differences for earnings, and deductions and forwards it to the current pay period.

### Steps

#### 1. Access the **Run Pay Calculation task** .

Process retro differences in on-cycle payments and forward the retro differences to the current pay period, when retro results have:

- The same or different source tax authorities as the current tax authorities for Payroll for Canada.
- The same source tax authorities as the current tax authorities for Payroll for the U.S.

#### 2. (Optional for Payroll for the U.S.) **Access the Edit Tenant Setup - Payroll task** and select the **Pay / Retro Calculations > Retro Calculations - USA Enable Retro Processing from Different Tax Authorities to On-Cycle Payroll** check box.

When you select the check box, Workday forwards all retro differences to on-cycle payroll and calculates taxes based on your current period tax authorities. In addition, if you'd rather use off-cycle payroll, you still have the ability to do so.

Eligibility for on-cycle includes retro results, where the source tax authorities and company are the same as the worker's current primary position.

### 3. [Process Retro Differences in On-Demand Payments](#) on page 835.

Process retro differences as on-demand additional payments in a tax authority other than a worker's current primary job. You can either:

- **Run Retro Pay Complete for Subset of Workers** from the **Retro Calculation Processing Report**. Select the **Exclude Retro Results Already Included in On-cycle** check box to ensure that you don't create any off-cycle inputs for the already paid retro differences. Or
- Access the **Run On Demand Payment for Worker** task and select the **Create Additional Payment** check box to add override worktags matching the previous source tax authorities.

**Note:** To process workers with multiple jobs in multiple pay groups, you must select the **Enable Retro Processing in Primary Pay Group** check box on the **Edit Tenant Setup – Payroll** task.

[2022R2 What's New Post: Retro Differences from Current Tax Authority Change](#)

## Concept: Retro Tax Authority Change (CAN)

Workday processes these Retro Tax Authority Change events for Payroll for Canada:

- Change Job
- Edit Position
- Move Worker
- Work Contact Change

To benefit from a Retro Tax Authority Change event for Payroll for Canada, select the **Enable Retro Processing in Primary Pay Group** check box on the **Edit Tenant Setup - Payroll** task.

### What Workday Processes

When you run and complete payroll for the current period and a worker has a Retro Tax Authority Change event, Workday processes the event in the current pay period and under the current tax authority. This enables you to run payroll without manual calculations and pay input.

Workday calculates taxes using the worker's primary pay group and reconciles any differences with the primary pay group's current tax authority.

You can view retro calculations in the **Processed Retro Entries** tab of the **View Payroll Retro Worker Result** report.

### Example

Tiffany works in British Columbia. You've completed payroll for these periods:

- Period 1: 08/05/24 - 08/16/24
- Period 2: 08/19/24 - 08/30/24

Tiffany changed jobs in pay period 1 and now works in Quebec. In the current pay period, Period 3: 09/02/24 - 09/13/24, you process the retro tax authority change when you run the current pay calculation.

#### 1. In the **Run Pay Calculation** task:

- Enter the current period.
- Enter the current pay group.
- Select **Smart Calculation Based on Events > Job Change**.

#### 2. Run and complete the retro pay calculation.

#### 3. Run the current period pay calculation (period 3) to pick up the retro results.

When you complete payroll for the current period:

- The taxes from the retro tax authority change calculate in the current period.

- Change Job displays in Processed Retro Events for Tiffany.
- Period 1 displays a retro result.

## Concept: Negative Tax Withholding for Negative Taxable Wages (USA)

When you process retro pay input and a negative wage adjustment results, Workday can calculate negative taxes. This makes the tax adjustment process more efficient.

To use this feature:

- Select the **Enable Negative Tax Withholding for Negative Wages on Payroll Result** check box on the **Edit Tenant Setup - Payroll** task. When you select this check box, Workday can calculate taxes to be credited, if you process a retro pay input and the retro differences result in negative taxable wages for a tax authority.
- Select the **Prior Period Tax Adjustment** check box when you enter a retroactive pay input with a negative earning.
- Verify that negative taxable wages exist in a pay result, caused by retroactive pay calculation differences that were processed in the period.

**Note:** To ensure a worker receives a tax refund on their negative taxable wages, the worker must have a positive tax balance and you must apply State or Local worktags to the retroactive payroll input that you create to process their negative earnings.

This feature supports state withholding (work) taxes and these local withholding taxes, when the **Do Not Allow Negative Tax Withholding** field is set to *No*:

- *Local City Withholding (Work) Employee and Employer*
- *Local County Withholding (Work)*
- *Local Other Taxes*

You can view the local tax authorities that don't support refunding taxes and whether negative tax withholding on a payroll result is enabled using the **Do Not Allow Negative Tax Withholding** report field. Workday recommends you run these reports to view which tax authorities don't support refunding taxes:

- **All Payroll Tax Authorities**
- **View Payroll Other Tax Authorities**

Use the **Audit Prior Period Tax Adjustments – Retro Pay Input Causing Negative Taxable Wages** report to:

- Audit prior period tax adjustments that were processed using retro payroll input with the **Prior Period Tax Adjustments** check box selected, that resulted in negative taxable wages on the payroll result. The audit also alerts you when the adjustment crosses a month, quarter, or year.
- View workers with incomplete payroll results that have negative taxable wages, which you can adjust before closing the payroll period.

## Example: Process a Retro Pay Input with Negative Wages (USA)

This example demonstrates 1 way to process retro pay input with negative wages for a worker.

## Context

Arnold lives and works in Alabama. In the 3/16/23-3/31/23 period, you applied a tax authority worktag override that assigned Arnold's wages to Georgia. These are the completed pay results for the semi-monthly periods:

- 03/01/23-03/15/23 - Salary = 10,000, AL taxable wages = 10,000
- 03/16/23-03/31/23 - Salary = 10,000, Worktag override State:GA, GA taxable wages = 10,000
- 04/01/23-04/15/23 - Salary = 10,000, AL taxable wages = 10,000

You learn that Arnold worked in Oregon for the 03/16/23-03/31/23 pay period, not Georgia. You also learn that Arnold now lives and works in Colorado as of 04/16/23 and updated Workday with the new work and resident state. Arnold's next pay period will be taxed in Colorado. You need to move the 03/16/23-03/31/23 wages you processed with Georgia taxes to the new tax authority, Oregon. So, you process a one-time retroactive pay input that results in a negative earning for Georgia.

## Prerequisites

Select the **Enable Negative Tax Withholding for Negative Wages on Payroll Result** check box on the **Edit Tenant Setup - Payroll** task. See: [Reference: Edit Tenant Setup - Payroll](#).

Security: *Worker Data: Payroll (Payroll Input)* domain in the Core Payroll functional area.

Security: *Process: Run Batch Calculations (Retro Calculation)* domain in the Core Payroll functional area.

## Steps

1. Identify the pay result tax authorities to adjust. In this example, it's the tax authority for the 03/16/23-03/31/23 - Salary = 10,000, GA taxable wages = 10,000 semi-monthly pay period.
2. Go to the **Add Payroll Input by Worker** task. Enter these options:

| Option                             | Description                                                                                                                                                                                                                                                                                                                                    |
|------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Worker</b>                      | Arnold                                                                                                                                                                                                                                                                                                                                         |
| <b>Pay Component</b>               | <b>Base Pay (Position)</b>                                                                                                                                                                                                                                                                                                                     |

| Payroll Worktags            | Enter <i>State: Georgia</i> .                                                                                                         |
| Prior Period Tax Adjustment | Verify you selected the check box.                                                                                                    |
| Input Details               | <ul style="list-style-type: none"> <li>• <b>Type</b> - enter <b>Amount</b>.</li> <li>• <b>Value</b> - enter <b>-10000</b>.</li> </ul> |

| Option                      | Description                                                                                                                          |
|-----------------------------|--------------------------------------------------------------------------------------------------------------------------------------|
| Position                    | Verify the correct position displays.                                                                                                |
| Processing Options          | Verify you selected <b>Regular Run Category</b> .                                                                                    |
| Payroll Worktags            | Enter <i>State: Oregon</i> .                                                                                                         |
| Prior Period Tax Adjustment | Verify you selected the check box.                                                                                                   |
| Input Details               | <ul style="list-style-type: none"> <li>• <b>Type</b> - enter <b>Amount</b>.</li> <li>• <b>Value</b> - enter <b>10000</b>.</li> </ul> |

**Note:** To ensure a worker receives a tax refund on their negative taxable wages, the worker must have a positive tax balance and you must apply State or Local worktags to the retroactive payroll input that you create to process their negative earnings.

- Click **OK** and **Done**.
- Go to the **Run Retro Pay Calculation** task. See: [Calculate Retro Payroll](#) on page 827.
- In the task, in **Pay Run Groups and/or Pay Group Details**, select Arnold's regular, semi-monthly pay group.
- Click **Done** and **Refresh**.  
The retro pay result shows the negative earnings calculated for Georgia.

### Result

Once you include the retro differences in the current pay period result, you can view Arnold's negative taxable wages for Georgia. If Arnold has a tax balance in Georgia, the taxes are refunded.

## Year-End Tax Reporting

---

### Set Up Year-End Tax Document Printing Options for Workers

---

#### Prerequisites

For Payroll for the U.S., set up your company for Puerto Rico, Guam, and U.S. Virgin Islands tax reporting to be able to select printing options for W-2PR, W-2GU, and W-2VI forms. Use the **Edit Company State and Local US Tax Reporting** task.

Security: *Set Up: Payroll (Reporting)* domain in the Core Payroll functional area.

## Context

Payroll administrators and workers can view and print year-end forms and corrections through self-service.

Workday enables administrators to generate and print year-end forms and corrections for workers. You can:

- Give workers the ability to select whether to receive printed tax documents.
- Always print forms for terminated workers.

You can load year-end electronic printing elections for workers in bulk into Workday, and pull elections from Workday, using these web services:

- *Get Quarterly Worker Tax Data* for W-2PR, W-2GU, and W-2VI printing elections.
- *Get Tax Document Deliveries*.
- *Put Tax Document Delivery*.

**Note:** For the Put Tax Document Delivery web service:

- Enter USA in the **Delivery Group** field to make updates to the W-2 and W-2C forms.
- Enter 1 in the **Override Default Delivery** field so workers only receive electronic copies, or zero so workers receive both paper and electronic copies.

## Steps

1. Access the **Company Payroll Printing Options** task.
2. For Payroll for the U.S., as you complete the **Year End Tax Documents** tab, consider:

| Option                                                       | Description                                                                                                                                                                                                                                                                           |
|--------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Allow Workers to Opt Out of Paper Copy</b>                | Workers can have different printing elections by company.                                                                                                                                                                                                                             |

| <b>Always Print Leave Workers' Paper Copy</b>                | Available only if you select <b>Allow Worker to Opt-Out of Paper Copy</b> .<br><br>Select to print tax documents for workers on leave, including workers who elected to receive only electronic copies. When you generate the printed forms, Workday identifies workers on leave.     |
| <b>Truncate SSN on ~Employee~ Copy of W-2 and W-2C Forms</b> | When selected, employees only see the last 4 digits of their SSN on their year-end forms.                                                                                                                                                                                             |

| Option                                                          | Description                                                                                                                        |
|-----------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------|
| <b>Reset Workers' Year End Tax Documents Printing Elections</b> | Select to remove worker settings for receiving only electronic copies. Workers must elect again to receive only electronic copies. |

When you configure your company tax reporting to include Puerto Rico, Guam, and the U.S. Virgin Islands, select printing options in the relevant section:

- **Puerto Rico**
- **Guam**
- **Virgin Islands**

3. For Payroll for Canada, as you complete the **Year End Tax Documents** tab, consider:

| Option                                                                | Description                                                                                                                                                                                                                                                                              |
|-----------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Allow Workers to Opt-Out of Paper Copy: T4A-RCA, RL-2, and NR4</b> | Select to enable workers to opt-out of paper copies of the T4A-RCA, RL-2, and NR4 forms created for any tax year.<br><br>Workers can have different printing elections by company.                                                                                                       |
| <b>Allow Workers to Opt-In to Paper Copy: T4, T4A, and RL-1</b>       | Select to provide all workers with only an electronic copy of their T4, T4A, and RL-1 forms, unless they elect otherwise.                                                                                                                                                                |
| <b>Always Print Terminated Workers' Paper Copy</b>                    | Available if you select either or both of the opt-in or opt-out check boxes.<br><br>Select to print tax documents for terminated employees, including workers who elected to receive only electronic copies. When you generate the printed forms, Workday identifies terminated workers. |
| <b>Always Print Leave Workers' Paper Copy</b>                         | Available if you select either or both of the opt-in or opt-out check boxes.<br><br>Select to print tax documents for workers on leave, including workers who elected to receive only electronic copies. When you generate the printed forms, Workday identifies workers on leave.       |
| <b>Reset Workers' Year End Tax Documents Printing Elections</b>       | Select to remove worker settings for receiving only electronic copies.                                                                                                                                                                                                                   |

## Result

For workers, the **Edit** button displays on **My Tax Documents**. The **Payroll > Change My Tax Documents Printing Elections** option displays on the related actions menu on the worker profile. Workers can use mobile to change existing elections.

## Next Steps

Workday displays electronic signature text for workers when they change their printing election. Use the **Edit Tenant Setup - Payroll** task to accept or override the Workday default.

For Payroll for the U.S., to identify employees receiving a printed copy, you can:

- Create a custom report using the **Tax Document Printing Elections for USA Companies** data source and these report fields:
  - **Opted Out of W-2 Paper Copy**
  - **W-2 Print Election Updated By**
  - **W-2 Print Election Updated Date/Time**
- Run either of these reports:
  - **US Year End Tax Documents Printing Elections** and select the **Show Company Terminated and/or Leave Print Overrides** check box. The report displays:
    - Workers who have pay results in the tax year and company you specify.
    - Year-end print elections in all companies the worker has been in.

For workers who haven't made an election, the report displays **No** in the **Opted Out of Paper** column and doesn't include data in the **W-2 Print Election Updated By** and **W-2 Print Election Updated Date/Time** columns.
  - **View Year End Tax Documents Printing Elections for Worker**

For Payroll for Canada, to identify employees receiving a printed copy, you can:

- Run the **CAN Year End Tax Documents Printing Elections** report and select the **Show Company Terminated and/or Leave Print Overrides** check box.
- Create a custom report using the **Tax Document Printing Elections for CAN Companies** data source and these report fields:
  - **Will Receive Paper T4/T4A/RL-1**
  - **T4/T4A/RL-1 Print Election Updated By**
  - **T4/T4A/RL-1 Print Election Updated Date/Time**
  - **Will Receive Paper T4A-RCA, RL-2, NR4**
  - **T4A-RCA, RL-2, NR4 Print Election Updated By**
  - **T4A-RCA, RL-2, NR4 Print Election Updated Date/Time**

## Steps: Set Up Payroll Year-End Business Process

---

### Prerequisites

Review setup considerations for year-end tax reporting.

Security: These domains in the System functional area:

- *Business Process Administration*
- *Manage: Business Process Definitions*

### Context

These year-end business processes enable you to complete the series of steps for year-end reporting. You can specify the sequence of year-end tasks for your company and the roles responsible for their completion:

- *W-2 Year End Process (USA).*
- *RL-1 Year End Process (Default) (CAN).*
- *T4 Year End Process (Default) (CAN).*

You can only launch the year-end business process from the **Payroll Year End** dashboard.

Some stand-alone year-end tasks can't run concurrently with the business process.

For Payroll for the U.S.:

| Can Run Concurrently With the Business Process                                                                                                                                                                                                                              | Can Run Concurrently with the Business Process But Returns a Warning        | Can't Run Concurrently with the Business Process                                                                               |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------|
| <ul style="list-style-type: none"> <li>• <b>Company W-2 Audit</b></li> <li>• <b>Maintain W-2 Sorting Setup</b></li> <li>• <b>View W-2 Form Data</b></li> <li>• <b>View W-2 Box Configuration</b></li> <li>• <b>View W-2 Errors</b></li> <li>• <b>W-2 Preview</b></li> </ul> | <ul style="list-style-type: none"> <li>• <b>Create W-2 Forms</b></li> </ul> | <ul style="list-style-type: none"> <li>• <b>Create W-2 Data</b></li> <li>• <b>Publish US Year End Tax Documents</b></li> </ul> |

For Payroll for Canada:

| Business Process                       | Can Run Concurrently with the Business Process                                                                                                                                                                                                                    | Can Run Concurrently with the Business Process but Returns a Warning         | Can't Run Concurrently with the Business Process                                                                                     |
|----------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------|
| <i>RL-1 Year End Process (Default)</i> | <ul style="list-style-type: none"> <li>• <b>RL-1 Preview</b></li> <li>• <b>View RL-1 Form Data</b></li> <li>• <b>View Canada Year End Form Box Configuration</b></li> <li>• <b>PIER Exception Report</b></li> <li>• <b>Maintain RL-1 Sorting Setup</b></li> </ul> | <ul style="list-style-type: none"> <li>• <b>Create RL-1 Forms</b></li> </ul> | <ul style="list-style-type: none"> <li>• <b>Create RL-1 Data</b></li> <li>• <b>Publish Employee Canada Year End Forms</b></li> </ul> |
| <i>T4 Year End Process (Default)</i>   | <ul style="list-style-type: none"> <li>• <b>T-4 Preview</b></li> <li>• <b>View T4 Form Data</b></li> <li>• <b>View Canada Year End Form Box Configuration</b></li> <li>• <b>PIER Exception Report</b></li> <li>• <b>Maintain T4 Sorting Setup</b></li> </ul>      | <ul style="list-style-type: none"> <li>• <b>Create T4 Forms</b></li> </ul>   | <ul style="list-style-type: none"> <li>• <b>Create T4 Data</b></li> <li>• <b>Publish Employee Canada Year End Forms</b></li> </ul>   |

When a step is already in progress in the business process, Workday processes the first completed task. Workday displays an error message to users who attempt to complete the task after that.

To initiate steps outside the year-end business process, see:

- [Steps: Set Up, Audit, and Print Year-End Tax Correction Forms \(USA\)](#) on page 926
- [Steps: Set Up, Audit, and Print Year-End Corrections \(CAN\)](#) on page 951

## Steps

### 1. [Create Custom Business Processes.](#)

Navigate to the company to associate with the year-end business process and select **Business Process > Create, Copy, or Link Definition** from the related actions menu.

Select the **Business Process Type** you want to set up:

- *W-2 Year End Process (USA)*
- *RL-1 Year End Process (Default Definition) (CAN)*
- *T4 Year End Process (Default Definition) (CAN)*

### 2. [Edit Business Processes.](#)

You can select *To Do* from the **Type** prompt and add or create **To Do** steps from your year-end checklist, such as:

- Review year-end checklist.
- Review reporting requirements for the current tax year.
- Check company and employee data for annual reporting.
- Set up period schedules for payroll and absence.
- Set up new ledger periods to ensure they're in the *Open* status to avoid operational errors.
- Enable workers to opt out of paper copy of W-2 (USA).
- Check third party sick pay W-2 setup (USA).
- Set up FLSA calendars for the new year (USA).

### 3. [Edit Business Process Security Policies.](#)

For Payroll for the U.S., select *W-2 Year End Process* from the **Business Process Type** prompt.

### 4. [Activate Pending Security Policy Changes.](#)

### 5. Set up the **Payroll Year End** dashboard.

Access the **Maintain Dashboards** report to add year-end tasks as menu items on the dashboard.

See [Reference: Payroll Year-End Dashboard](#) on page 904.

## Result

You can initiate and complete the business process from the **Payroll Year End Process** worklet on the **Payroll Year End** dashboard.

[Setup Considerations: Year-End Tax Reporting \(CAN\)](#) on page 931

### Tasks

[Steps: Configure Business Process Definitions](#)

## Reference: Payroll Year-End Dashboard

---

The **Payroll Year End** dashboard provides easy access to:

- Commonly used year-end tasks.
- Current estimates for year-end forms.
- Past year-end form statistics.
- Year-end business processes.
- Status of year-end forms.

Security: *Management Dashboard: Payroll Year End* domain in the CAN Payroll or USA Payroll functional area.

**Note:** The **Payroll Year End** dashboard doesn't support companies that are in a company relationship. The dashboard provides these year-end processing and form worklets:

| Worklet                                        | Description                                                                                                                                                                                                                                |
|------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Payroll Year End Process</b>                | Displays: <ul style="list-style-type: none"> <li>The status of the year-end business process.</li> <li>The person responsible for the next step.</li> </ul> You can launch the year-end business processes from this worklet only.         |
| <b>Last 5 Years (Forms/ Employees)</b>         | Displays: <ul style="list-style-type: none"> <li>Employee counts for original and corrected tax forms.</li> <li>Percentage of forms corrected by form type and tax year.</li> <li>Tax forms by employee, company, and tax year.</li> </ul> |
| <b>Estimated Form Types Needed (Employees)</b> | Displays projected requirements for: <ul style="list-style-type: none"> <li>Form types for the selected tax year.</li> <li>Number of employees requiring each form by company.</li> </ul>                                                  |

### Payroll for the U.S.

You can add year-end tasks as menu items on the dashboard using the **Maintain Dashboards** report. Workday recommends that you add these tasks under these section labels:

| Section Label     | Item                                                                                                                                                                                                                                                                                                                                                                                                                                    |

## Year-End Tax Reporting (USA)

---

### Setup Considerations: Year-End Tax Reporting (USA)

You can use this topic to help make decisions when planning your configuration and use of USA year-end tax reporting. It explains:

- Why to set it up.
- How it fits into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

**What It Is**

Workday enables you to create and submit year-end data to tax-filing service providers or government agencies using a series of reports, tasks, and integrations. Workday supports these USA year-end tax forms:

- W-2
- W-2PR
- W-2GU
- W-2VI

**Business Benefits**

Workday USA year-end tax reporting makes it easier to comply with year-end payroll requirements by:

- Maintaining payroll data in 1 system.
- Validating year-end data against government guidelines.
- Streamlining the creation of W-2 year-end tax forms by providing a business process.
- Streamlining the creation of W-2C, W-2PR, W-2GU, and W-2VI tax forms with tasks.
- Enabling you to audit W-2, W-2C, W-2PR, W-2GU, and W-2VI data using reports.
- Producing electronic copies of year-end tax forms for employees to access in employee self-service (ESS).
- Enabling you to submit year-end tax data to ADP, MasterTax, or Ceridian.
- Enabling you to create a custom integration to submit tax data to providers other than ADP, MasterTax, or Ceridian.

## Use Cases

- Preview year-end tax forms before the year-end process.
- Audit year-end data to identify and address company and employee discrepancies.
- Give employees the ability to opt out of a paper copy of their year-end tax forms.
- Correct year-end tax data within Workday.

## Questions to Consider

| Questions                                                                                   | Considerations                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|---------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Which year-end forms apply to your organization?                                            | Map and test each year-end form that you intend to use for that tax year. Test the integration systems.                                                                                                                                                                                                                                                                                                                                           |
| Which year-end adjustments will you be processing outside of regular payroll?               | Gather the relevant information and enter the adjustments as a manual payment. Example: Third-party sick pay.                                                                                                                                                                                                                                                                                                                                     |
| What data would you like to use to balance year-end form data?                              | Plan to create custom reports if required.                                                                                                                                                                                                                                                                                                                                                                                                        |
| Have you verified that all pay components have the correct pay component groups configured? | Pay component groups control how Workday reports some amounts on year-end slips. Pay component groups can also control taxable wages on year-end forms.                                                                                                                                                                                                                                                                                           |
| Have you changed pay component groups after completing payroll?                             | You can create manual payments if you need to adjust balances.                                                                                                                                                                                                                                                                                                                                                                                    |
| Do you have tax adjustments to make?                                                        | <p>Use manual payments for adjustments where you need a specific result on the W-2 for withholding. Example: Overpayment to a pretax deduction that has met its limit.</p> <p>Use on-demand payments for adjustments where you don't need a specific result on the W-2 for withholding. Example: Check reversals.</p>                                                                                                                             |
| Do you want employees to be able to opt out of paper copies of their year-end forms?        | You can setup options for year-end form printing for employees who want to change their printing elections.                                                                                                                                                                                                                                                                                                                                       |
| Will you print and mail W-2 year-end forms, or use a tax-filing service provider?           | <p>If you're going to print and mail year-end forms, order the forms and envelopes based on estimated W-2 counts. Workday recommends that you:</p> <ul style="list-style-type: none"> <li>• Order the <i>4UPPERFI05 Greatland</i> form.</li> <li>• Provide sufficient time and quantity for testing and reprints.</li> </ul>                                                                                                                      |
| How will you report tax filing data to government agencies?                                 | <p>If you're using ADP, MasterTax, or Ceridian tax-filing service providers:</p> <ul style="list-style-type: none"> <li>• Review the tax-filing service provider specifications. If your provider has differences from Workday, contact Support.</li> <li>• Set up the integration systems.</li> <li>• Map relevant pay components to tax-filing categories for integrations using the <b>Maintain Payroll Tax Configuration</b> task.</li> </ul> |

| Questions                                                              | Considerations                                                                                                                                                                                                                                                                                                 |
|------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                                                        | <ul style="list-style-type: none"> <li>Create test integration files to your tax-filing service provider in preparation for year-end.</li> </ul> <p>If you're not using those tax-filing service providers, plan for resources to determine how you'll report your tax filing data to government agencies.</p> |
| Do you want to hide the control number from employees?                 | You might want to hide control numbers from employees in some cases. Example: A tax-filing service provider will be assigning control numbers for year-end forms.                                                                                                                                              |
| Do you want to include third-party sick pay in W-2 forms?              | You can edit company federal tax reporting to indicate that a third party will provide the W-2 for sick pay.                                                                                                                                                                                                   |
| How will you report year-end data to the Social Security Agency (SSA)? | To report year-end data directly to the Social Security Agency, create a custom integration.                                                                                                                                                                                                                   |

### Recommendations

In preparation of the year-end process, Workday recommends that you:

- Run the W-2 and U.S. territory preview and audit reports for year-end tax forms each quarter.
- Create test integration files of year-end data each quarter.

### Requirements

In order to produce accurate year-end reporting, you must maintain your tax and payroll data throughout the year.

At the beginning of the tax year:

- Set up fiscal years to support the entire tax year.
- Set up the period schedule for payroll and absence. Validate payment dates for the upcoming year against bank holidays.
- Build out FLSA calendars.
- Verify that new ledger year and periods are in open status.
- Update or add employee and employer tax rates. Example: State Unemployment Insurance rate.
- Review the **Expiring Exempt Tax Elections** report to communicate them to impacted workers.
- Access the **Add Workers US Tax Election for Expiring Exempt** report to create new default tax elections for workers.

As necessary, throughout the tax year:

- Review government reporting requirements for the current tax year.
- Run year-end preview and audit reports.
- Update federal, state, and local tax setup for your company.
- Update workers' alternate and processing work locations.

Near the end of the tax year:

- Ensure that you mapped pay components accurately, as this drives W-2 tax reporting in Workday. Use the **View W-2 Box Configuration** and **View US Territory Year End Form Box Configuration** reports.
- Complete all payrolls for the reporting year, including all off-cycles and manual adjustments.
- Verify the company addresses, tax IDs, and company name.
- Review earnings and deductions with annual limits.
- Test W-2 form data and printing before year-end.

- Test the ADP, Ceridian, and MasterTax integrations.

### Limitations

Workday doesn't support submitting year-end data directly to government agencies. Submit year-end data to tax-filing service providers using integrations, create a custom integration, or print year-end forms to submit them to government agencies.

Workday creates year-end data for all workers, not individual workers. To provide year-end data for an individual worker:

1. Run the **W-2 / US Territory Year End Form Preview** report.
2. Use the report to create the form manually using PDFs provided by the government.

For workers who have an international assignment position in the U.S., Workday doesn't support changing tax document printing elections through the ESS (employee self-service) **My Tax Documents** task.

### Tenant Setup

Workday uses electronic signature text for employees changing printing elections for year-end tax forms. You can configure electronic signature text options on the **Edit Tenant Setup - Payroll** task.

## Connections and Touchpoints

Ensure that you provide any required year-end worker data, including:

- Contact information, such as home addresses, postal codes, and social security numbers.
- Alternate and primary work location or position job location.

Workday determines the work state of the employee from this information.

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships across your tenant. Learn more about the [Workday Touchpoints Kit](#) on Workday Community.

#### Which address does Workday use for employees on year-end tax reporting forms?

The **Usage** you select on the **Change Contact Information** task for the home or work address determines the address hierarchy.

Workday uses the first address it finds for an employee in this hierarchy:

The worker needs to have an International Assignment event for Workday to use their international event address.

Workday retrieves the address that's current when you create the form data or an employee accesses the data through self-service. However, the **Schedule W-2 Pre-Print** task enables you to generate W-2 PDFS for all employees in advance. Workday displays the address on the W-2 PDF that's current for the employee when you run the task.

Example: If an employee has a work address with a usage of *Payroll Tax Form*, Workday uses that address. If not, Workday looks for the next option, which is a home address with a usage of *Paycheck*.

#### If the company has more than 1 address, what address does Workday use on the W-2?

Workday uses the selected primary address on the **Edit Company Contact Information** task as the employer's address in Box C of the W-2.

You can also use the *Payroll Tax Form* option on the **Use For** field in the **Address** section on the

**Edit Company Contact Information** task. These reports and forms displays the payroll tax form address that you specify on the **Edit Company Contact Information** task:

- **W-2 PDF form**
- **W-2C PDF form**
- **W-2PR PDF form**
- **W-2GU PDF form**
- **W-2VI PDF form**

**How can I display the amount for an earning on an employee's W-2?**

Map the earning to *Box 14 - Other* using the **View W-2 Box Configuration** report.

Example: You map a third-party sick pay earning to *Box 14 - Other*. Workday will display the amount paid to an employee using that earning on the employee's W-2.

**Where does Workday display totals for amounts reported for employees on year-end tax reporting forms?**

You can view the totals on these reports:

- **Company W-2 Audit**
- **Company W-2C Audit**
- **Company US Territory Year End Form Audit**
- **Company US Territory Year End Form Corrections Audit**

**How do I file taxes for purged workers?**

Manually prepare tax files and year-end reports for purged workers. To view results for multiple workers based on company and year, access the **Purged Workers with Completed Payroll Results** report. The report won't return reversed pay results.

**The name of our company changed recently. How do we print the old name on the year-end tax reporting forms?**

Enter the old name on the **Company Name Override for Year End Forms** field. Access the field on the **Edit Company Federal US Tax Reporting** task.

**How do I configure Box 13 for employees who haven't elected the company retirement plan?**

See [Configure Box 13 for Employees Who Didn't Elect the Company Retirement Plan \(USA\)](#) on page 1143.

**When can employees access tax documents through self-service?**

Tax documents become available on the date you select for the company on the relevant task:

- **Publish US Year End Tax Documents**
- **Publish US Territory Year End Tax Documents**

**How do we unpublish year-end tax documents once employees can access them through self-service?**

Access the relevant task and change the availability date for the company:

- **Publish US Year End Tax Documents**
- **Publish US Territory Year End Tax Documents**

Workday will remove the documents from self-service, even though employees might have already accessed their forms.

**How can employees select whether to receive an electronic copy only of their W-2?**

See [Set Up Year-End Tax Document Printing Options for Workers](#) on page 899.

**How can employees outside the U.S. view their year-end tax reporting forms?**

They can select **Pay > Tax Documents** on their worker profile.

**Why does the W-2 display the worker's entire income for their New York state wage, when they lived or worked in New York state or Yonkers only part of the year?**

Workday follows government guidelines for part-time New York state residents. Workday reports Federal Taxable wages (Box 1) in place of these boxes on an employee's W-2 as required:

- New York State Taxable wages (Box 16)
- Yonkers Local Taxable wages (Box 19)

**Why doesn't the vendor's W-2 match Workday's W-2?**

The employee's W-2 published by a tax filing vendor doesn't always match the Workday W-2. This mismatch is due to interpretation differences of compliance departments. If your tax filing vendor sends the W-2 information to the government, Workday isn't the official record.

Example: Workday puts the CO-DNVR tax in Box 14. ADP puts the tax in Boxes 18, 19, and 20.

**How do I report on self-employment taxes for occupations such as clergy members?**

You can map custom pay components on the 2 – Additional federal income tax withheld box on the **View W-2 Box Configuration** report.

Workday sums the pay components of these boxes in Box 2 on Workday W-2 reports and forms:

- 2 – Additional federal income tax withheld
- 2 – Federal income tax withheld

Workday doesn't display this sum on the Workday tax filing reports or web services.

## Why don't my periodic totals match my QTD and YTD wages and taxes?

There are 2 possible reasons why your periodic totals don't match your QTD and YTD wages and taxes on these reports:

- **Tax Filing Periodic Data by Company**
- **Tax Filing Periodic Data for Workers**

The 2 possible reasons are:

- The periodic reports use pay period instead of pay date to derive amounts. Therefore, QTD and YTD amounts in the periodic reports can:
  - Represent a different quarter than you expect.
  - Differ from the quarterly reports.

Example: You run the periodic reports. The results for period 3/15/2019 – 3/31/2020 include pay dates 3/31/2020 and 4/2/2020. The QTD amount on the row for that period uses the quarter for the latest pay date, 4/2. It will report all amounts paid QTD in Q2 through 4/2. It won't include the amounts paid on 3/31 in the QTD on that row because 3/31 is Q1.

If you have an off-cycle result for the 3/15/2020 to 3/31/2020 period with a payment date of 4/2/2020, the **Tax Filing Periodic for Workers** report doesn't include this in the QTD value. Select the **Include Payment Date** check box to break the off-cycle result into a separate row. Workday displays the QTD represented on the off-cycle row for Q2 because this is the quarter the payment date is within. Workday doesn't display the off-cycles value in the on-cycle row.

You run the quarterly reports for Q2: **Tax Filing Quarterly Data by Company** and **Tax Filing Quarterly Data for Workers**. Workday reports all amounts paid between April 1 to June 30.

- The periodic data in the tax filing periodic reports don't include history payments, but the QTD and YTD data do. If you request data for both history periods and current periods, only the current periods display in the reports. QTD and YTD amounts don't match the periodic amounts because:
  - **QTD Taxable Wages** and **YTD Taxable Wages** include history payments. The periodic **Taxable Wages** and **Subject Wages** don't.
  - **QTD Tax Withheld** and **YTD Tax Withheld** include history taxes withheld. The periodic **Tax Withheld** doesn't.

Example: Your employee, Jane Mavens, has a history payment for period 04/01/2013 - 04/07/2013 (Weekly) with pay date of 4/8/2013,

in Q2. She also has a regular payment for period 04/08/2013 - 04/14/2013 (Weekly), also in Q2. The history payment has tax withheld of 200 USD, and taxable, subject, and gross wages for federal withholding of 1,000 USD. You request a periodic report for both pay periods. Workday returns only the regular period and includes the history amounts in the QTD and YTD amounts.

| Periodic Tax Withheld  | Periodic Taxable Wages   | Periodic Subject Wages   | Periodic Gross Wages     |
|------------------------|--------------------------|--------------------------|--------------------------|
| 306.90<br>(no history) | 1,583.08<br>(no history) | 1,583.08<br>(no history) | 1,615.39<br>(no history) |

| QTD Tax Withheld                      | QTD Taxable Wages                           | QTD Subject Wages                           | QTD Gross Wages                             |
|---------------------------------------|---------------------------------------------|---------------------------------------------|---------------------------------------------|
| 506.90<br>(306.90 + 200 from history) | 2,583.08<br>(1,583.08 + 1,000 from history) | 2,583.08<br>(1,583.08 + 1,000 from history) | 2,615.39<br>(1,615.39 + 1,000 from history) |

| YTD Tax Withheld                      | YTD Taxable Wages                           | YTD Subject Wages                           | YTD Gross Wages                             |
|---------------------------------------|---------------------------------------------|---------------------------------------------|---------------------------------------------|
| 506.90<br>(306.90 + 200 from history) | 2,583.08<br>(1,583.08 + 1,000 from history) | 2,583.08<br>(1,583.08 + 1,000 from history) | 2,615.39<br>(1,615.39 + 1,000 from history) |

## Year-End Tax Forms (USA)

### Concept: Year-End Tax Reporting (USA)

#### Year-End Dashboard and Business Process

The Payroll Year-End Dashboard provides easy access to year-end tasks, estimates, statistics, and the status of year-end forms.

You can process year-end tax reporting as part of the year-end business process or independently. You can only launch the configurable year-end business process from the Payroll Year-End Dashboard.

#### Completed Moment

Workday uses the last created tax data set when running some year-end tasks and reports. This tax data set might not reflect the current data.

Example: You run the **Create W-2 Data** task on January 5 and run an on-demand payroll on January 6. If you run the **W-2 Preview** report

on January 10, the preview reports the data you created on January 5. It doesn't include the January 6 on-demand payment. However, if you select January 6 as the **Completed Moment**, the preview report returns data up to that date.

Alternatively, you can use the **Cancel W-2 Data** task to delete any data created earlier. Workday will then automatically return data for the current moment.

You can specify the **Completed Moment** on these tasks and reports:

- **Company W-2 Audit**
- **Company W-2C Audit**
- **Company US Territory Year End Form Audit**
- **Company US Territory Year End Form Corrections Audit**
- **View W-2 Errors**
- **View US Territory Year End Form Errors**
- **W-2 Preview**
- **W-2C Preview**
- **Create W-2 Data**
- **Create W-2C Data**
- **Create US Territory Year End Form Data**
- **Create US Territory Year End Form Correction Data**

## **Steps: Set Up, Audit, and Print Year-End Tax Forms (USA)**

### **Prerequisites**

- Review setup considerations for USA year-end tax reporting.
- Configure Box 13 for employees who didn't elect the company pension plan (doesn't apply to Puerto Rico).
- Map earnings and deductions to boxes on the year-end tax reporting form. You're responsible for mapping most data on the form; Workday maps some data, but you should still verify it.

### **Context**

Run at least 1 payroll before you create year-end tax forms. When you've completed all payroll, including all off-cycle payments, you can create, view, and print the year-end forms. If you set up U.S. payroll to include workers on international assignment in the U.S., Workday generates W-2s for those workers.

Workday populates year-end forms by combining worker data and pay component mapping. Workday maps some data on the year-end form, but you're responsible for mapping the rest of the data.

### **Steps**

1. [Define Year-End Tax Form Sort and Split Options \(USA\)](#) on page 922.

2. (Optional) Hide the control number from employees.

Access the relevant report and select **Edit > Suppress Control Number Display on Form**:

- **View W-2 Box Configuration** (for 2017 onward).
- **View US Territory Year End Form Box Configuration** (for 2017 onward for Guam and the U.S. Virgin Islands, and 2018 onward for Puerto Rico).

Workday will no longer display the control numbers on W-2 PDFs in Employee Self Service (ESS).

3. For workers in Puerto Rico, access the **Edit Company State and Local US Tax Reporting** task to configure control numbers for year-end tax forms.

On the **Year End** tab, enter the control numbers.

Security: *Process: US Territory Year End Forms (Run)* domain in the USA Payroll functional area.

You can use these web services to assign Puerto Rico Control Numbers to the W-2PR form:

- *Get W-2PR Control Numbers (Web Service)*
- *Put W-2PR Control Numbers (Web Service)*

You must run the **Create US Territory Year End Form Data** task before using the web services to update the Puerto Rico Control numbers.

Security: *Process: US Territory Year End Forms (Reports)* domain in the USA Payroll functional area.

Workday assigns a unique control number to each W-2PR form when you run the **Create US Territory Year End Form Data** task.

4. Audit year-end data for 1 or more companies to ensure it's correct before creating data for a print run. Access the relevant report:

- **Company W-2 Audit**
- **Company US Territory Year End Form Audit**

Review summary year-end tax data for 1 or more companies.

When a third party provides year-end tax and tax forms for sick pay, the report includes a summary of payments and taxes (doesn't apply to U.S. territories).

For Puerto Rico workers, confirm the range of control numbers.

Security: These domains in the USA Payroll functional area:

- *Process: Tax Filing/W2s (Reports) - USA*
- *Process: US Territory Year End Forms (Reports)*

5. Identify employees with year-end form errors before a print run:

Access the relevant report:

- **View W-2 Errors**
- **View US Territory Year End Form Errors**

If desired, use the **Error Type** field to filter the report to improve performance. When you don't select error types, Workday returns all W-2 errors (doesn't apply to U.S. territories).

Security: These domains in the USA Payroll functional area:

- *Process: Tax Filing/W-2s (Reports) - USA Payroll*
- *Process: US Territory Year End Forms (Reports)*

6. Preview year-end tax data for employees in 1 or more companies before a print run.

Access the relevant report:

- **W-2 Preview**
- **US Territory Year End Form Preview**

Security: These domains in the USA Payroll functional area:

- *Process: Tax Filing / W-2s (Reports) - USA*
- *Process: US Territory Year End Forms (Reports)*

7. Create year-end form data using the relevant task:

- **Create W-2 Data**
- **Create US Territory Year End Form Data**

8. For workers in Puerto Rico, access the **Assign W-2PR/W-2CPR Confirmation Number** task.

Record the confirmation numbers you receive from the Puerto Rico Department of Treasury.

Security: *Process: US Territory Year End Forms (Run)* domain in the USA Payroll functional area.

9. Access the relevant report to view employee wage and tax amounts to ensure that they're correct:

- **View W-2 Form Data**
- **View US Territory Year End Form Data**

Security: These domains in the USA Payroll functional area:

- *Process: Tax Filing/W-2s (Reports) - USA*
- *Process: US Territory Year End Forms (Reports)*
- *Reports: Pay Calculation Results for Worker (US Territory Year End Forms)*

10. Create year-end tax forms using the relevant task:

- **Create W-2 Forms**
- **Create US Territory Year End Forms**

Except for U.S. territories, when a third party provides W-2s for sick pay, Workday includes a summary of third-party sick pay.

Security: These domains in the USA Payroll functional area:

- *Process: Tax Filing / W-2s (Reports) - USA*
- *Process: US Territory Year End Forms (Reports)*

11. (Optional) If there are errors in the extracted wage and tax data, cancel the data and correct any errors. Access the relevant task:

- **Cancel W-2 Data**
- **Cancel US Territory Year End Form Data**

If you've created W-2C data, you can't cancel W-2 data. You need to cancel the W-2C data first.

Security: These domains in the USA Payroll functional area:

- *Process: Tax Filing/W-2s (Run) - USA*
- *Process: US Territory Year End Forms (Run)*

12. [Generate and Print Year-End Tax Forms \(USA\)](#) on page 924.

- 13.** Schedule when Workday generates W-2 form PDFs at the company level to reduce the processing load on your tenant during peak hours. Not available for correction forms.

Access the relevant task:

- **Schedule W-2 Pre-Print**
- **Schedule US Territory Year End Tax Documents Pre-Print**

The **Request Name** you enter displays in the **Request** column on the **Process Monitor** report.

Security: *Process: W-2 Bulk Print* domain in the USA Payroll functional area.

Workday displays a link to the W-2 PDF file on worker's profiles instead of the **View/Print** button.

Employees can't access this link until you publish year-end tax forms to ESS.

(Optional) When a third party provides W-2s for sick pay, this task also generates a recap of third-party sick pay (doesn't apply to U.S. territories).

- 14.**(Optional) [Publish Year-End Tax Forms to Self-Service \(USA\)](#) on page 925.

- 15.**(Optional) [Launch an Integration](#) .

Launch a preconfigured tax filing integration to send annual tax data from Workday Payroll to your tax-filing service provider.

Security: *Get* and *Put* integration permissions for these domains in the USA Payroll functional area:

- *Process: Tax Filing/W-2s (Reports (USA))*
- *Process: US Territory Year End Forms (Reports)*

## Next Steps

Prepare for next year:

- Set up period schedules for payroll.
- Create new ledger periods and set the status to *Open*.

## Define Year-End Tax Form Sort and Split Options (USA)

### Prerequisites

Security domains in the USA Payroll functional area:

- *Set up: Payroll (Tax Filing/W-2s) - USA*
- *Set up: Payroll (US Territory Year End Forms)*

## Context

Specify how to split year-end tax forms into batches for printing and how to sort forms within batches. The same settings apply to tax correction forms.

## Steps

1. Access the relevant sorting task:
  - **Maintain W-2 Sorting Setup.**
  - **Maintain US Territory Year End Form Sorting Setup.**
2. Complete these fields:

| Option                              | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|-------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Year End Form Sorting Values</b> | <p>Select one or more sort categories:</p> <ul style="list-style-type: none"> <li>• <i>Employee Status</i></li> <li>• <i>Company</i></li> <li>• <i>Location</i></li> <li>• <i>Zip Code</i></li> </ul> <p>Use the <b>Order</b> column to define the sort order.</p> <p>The sort order determines the values for the control number in Box D on the tax form.<br/>Example: The employee status displays:</p> <ul style="list-style-type: none"> <li>• A for terminated.</li> <li>• B for on leave.</li> <li>• C for active.</li> </ul>                                                                                                           |
| <b>Split File</b>                   | <p>To split the forms into separate batch files, select the sort value for splitting the forms.</p> <p>Workday uses the split option to determine the filename. Example: If you split files by zip code, Workday names each batch after the zip code of the employees it contains.</p> <p>Example: If you split files by employee status, Workday names each batch after the status of the employees it contains in this order:</p> <ul style="list-style-type: none"> <li>• Terminated</li> <li>• Workers on Leave</li> <li>• Active</li> </ul> <p>If you don't select a split option, Workday automatically splits the forms by company.</p> |

## Result

When you generate forms for printing, Workday groups the forms into batch files according to the split and sort options you selected.

## Example

You're the Payroll Administrator for Global Modern Services, Inc (USA). You want to split year-end forms into different batch files by location; and within each location grouping, sort by employee status and zip code.

- In the **Year End Form Sorting Values** column, select:

1. *Location*
2. *Employee Status*
3. *Zip Code*

- Select the **Split File** check box for *Location*.

When you generate the forms, the value in Box D on Betty Liu's W-2 is *San Franci.Y.94070*, which reflects her location, employee status, and zip code.

### Next Steps

Workday uses the sort order to determine the values for the control number on the tax form. You can hide the control number from employees on their tax forms in employee self-service. Access the relevant report and select **Edit > Suppress Control Number Display on Form**:

- **View W-2 Box Configuration** for 2017 onward.
- **View US Territory Year End Form Box Configuration** for 2017 onward for Guam and the Virgin Islands.

## Generate and Print Year-End Tax Forms (USA)

### Prerequisites

- Use the relevant task to tell Workday how to sort and organize the forms into separate batch files:
  - **Maintain W-2 Sorting Setup**
  - **Maintain US Territory Year End Form Sorting Setup**
- If necessary, adjust the default top and left print alignment settings for the year-end form on the **Edit Tenant Setup - Payroll** task (applies only to U.S. states).
- Security: These domains in the USA Payroll functional area:
  - *Process: Tax Filing / W-2s (Run) - USA*
  - *Process: US Territory Year End Forms (Reports)*
  - *Reports: Pay Calculation Results for Worker (Tax Filing/W-2s) - USA*
  - *Reports: Pay Calculation Results for Worker (US Territory Year End Forms)*

### Context

You can generate PDF forms for printing after creating year-end tax data.

### Steps

1. Access the relevant task:
  - **Create W-2 Forms**
  - **Create US Territory Year End Forms**
  - **Create W-2 Forms for a Large Number of Workers** for 300,000 or more workers.
2. Click **Refresh** to view the status of the PDF generation process. When the process is complete, open the PDF files at the bottom of the page.

### Result

Workday prints the front image of the year-end form only.

## Next Steps

Use condensed 4up (quadrant) form stock with a preprinted back. Workday doesn't support the use of any other form stock. Workday recommends you use the Greatland® 4upperfi05 form stock (applies to U.S. states only).

If the forms are error-free:

- Print the PDFs and distribute them to employees.
- Publish the forms to employee self-service (ESS), when applicable.

If there are errors, cancel the forms with the relevant task. If you've created W-2C data, you can't cancel W-2 data. You need to cancel the W-2C data first.

- **Cancel W-2 Data**
- **Cancel US Territory Year End Form Data**

Correct the errors and create the year-end form data again.

## Related Information

### Tasks

[Set Up Year-End Tax Document Printing Options for Workers](#) on page 899

### Reference

[FAQ: Year-End Tax Reporting \(USA\)](#) on page 914

[Reference: Edit Tenant Setup - Payroll](#)

## Publish Year-End Tax Forms to Self-Service (USA)

### Prerequisites

- View W-2 and US Territory year-end form data.
- Security: These domains in the USA Payroll functional area:
  - *Process: US Territory Year End Forms (Reports)*
  - *Process: Tax Filing/W-2s (Reports) - USA*

### Context

Publish year-end tax forms so that employees can use self-service to view and print their forms. This feature is available for tax year:

- 2010 onward for W-2, W-2C forms.
- 2018 onward for W-2PR, W-2CPR, W-2GU, W-2CGU, W-2VI, and W-2CVI forms.

### Steps

1. Access the relevant task.
  - **Publish US Year End Tax Documents**
  - **Publish US Territory Year End Tax Documents**
2. Select the companies for which you want to publish year-end tax forms.
3. Enter the dates you want employees to be able to access their forms. As you complete the task, consider:

| Option                                   | Description                                                                                                               |
|------------------------------------------|---------------------------------------------------------------------------------------------------------------------------|
| <b>Electronic-only Availability Date</b> | Employees who opt in to receive only an electronic copy of their W-2 form will be able to access their form on this date. |

| Option                                             | Description                                                                                                                                                                                                                                                      |
|----------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Electronic and Paper Copy Availability Date</b> | <p>Employees who opt in to receive both an electronic copy and a paper copy of their W-2 form will be able to access their form on this date.</p> <p>If you don't enter a date in this field, it will populate the <b>Electronic-only Availability Date</b>.</p> |

You can update or remove the availability date by accessing this task again.

The **Issued Date** displays the last date you extracted W-2 data using the relevant task.

- **Create W-2 Data**
- **Create US Territory Year End Form Data**

### Result

- Forms are available as a related action for a worker by selecting **Payroll > Tax Documents**. In addition to desktop, workers can view and print year-end forms using Workday on Android, iPad, and iPhone.
- Terminated workers can view their W-2 forms on mobile by searching for the **My Tax Documents** task.
- Workday displays a **View/Print** button on the worker profile. If you preprint the forms, Workday displays a link to the W-2 PDF file on the worker profile.
- A W-2 form that is compatible with accessible readers is available for employees. Employees can select the **Accessible Form** button on the **My Tax Documents** task. This button displays when employees select the **Simplified View** check box on the **Change Preferences** task. (This feature doesn't apply to U.S. Territories.)

### Next Steps

- You can unpublish the forms from self-service once the availability date has passed. Access the relevant task and changing the availability date:
  - **Publish US Year End Tax Documents**
  - **Publish US Territory Year End Tax Documents**

Workday recommends that you create correction forms instead of unpublishing forms, as employees might have already accessed their forms.

- You can schedule generation of original W-2, W-2PR, W-2GU, and W-2VI form PDFs. Access the relevant task:
  - **Schedule W-2 Pre-Print**
  - **Schedule US Territory Year End Tax Documents Pre-Print**

Scheduling the generation reduces the processing load on your tenant during peak hours and includes a link directly to the W-2 PDF on the worker profile.

## Year End Tax Reporting Corrections (USA)

### Steps: Set Up, Audit, and Print Year-End Tax Correction Forms (USA)

#### Prerequisites

Correct errors in the existing year-end tax forms:

- Correct earnings and deductions mapped to tax reporting forms using the reports:
  - **View W-2 Box Configuration**
  - **View US Territory Year End Form Box Configuration**
- Correct employee data. See *Steps: Set Up Personal Information*.
- Correct year-to-date wage or tax amounts. See:
  - *Concept: Adjust Prior Period Payments*.
  - *Concept: Off Cycle Payments*.

## Context

Prepare and print employee copies of corrected year-end tax forms.

## Steps

1. [Define Year-End Tax Form Sort and Split Options \(USA\)](#) on page 922.
2. Audit corrected tax data for 1 or more companies to ensure it's correct before creating corrected data for a print run. Access the relevant report:

- **Company W-2C Audit**
- **Company US Territory Year End Form Corrections Audit**

These reports return corrections made since the last created data set. Example: You make corrections and run the **Company W-2C Audit** report. The report returns the boxes that have corrections. You run the **Create W-2C Data** task and then run the **Company W-2C Audit** report. The report returns no data until you make corrections again.

When a third party provides year-end tax and tax forms for sick pay, the report includes a summary of payments and taxes (doesn't apply to U.S. territories).

For Puerto Rico workers, confirm the range of control numbers.

You can use these web services to update Puerto Rico Control Numbers to the W-2CPR form:

- *Get W-2PR Control Numbers (Web Service)*
- *Put W-2PR Control Numbers (Web Service)*

You must run the **Create US Territory Year End Form Data** task before using the web services to update the Puerto Rico Control numbers.

Security: These domains in the USA Payroll functional area:

- *Process: Tax Filing/W2s (Reports) - USA*
- *Process: US Territory Year End Forms (Reports)*

3. Identify employees with form errors before creating corrected data for a print run. Access the relevant report:

- **View W-2 Errors**
- **View US Territory Year End Form Errors**

If desired, use the **Error Type** field to filter the report to improve performance. When you don't select error types, Workday returns all W-2 errors. Doesn't apply to U.S. territories.

Security: These domains in the USA Payroll functional area:

- *Process: Tax Filing/W-2s (Reports) - USA Payroll*
- *Process: US Territory Year End Forms (Reports)*

4. Preview tax data for employees in 1 or more companies before creating corrected data for a print run.  
Access the relevant report:

- **W-2C Preview**
- **US Territory Year End Form Corrections Preview**

Security: These domains in the USA Payroll functional area:

- *Process: Tax Filing / W-2s (Reports) - USA*
- *Process: US Territory Year End Forms (Reports)*

5. Create year-end tax forms using the relevant task:

- **Create W-2C Data.**
- **Create US Territory Year End Form Corrections Data.**

Except for U.S. territories, when a third party provides W-2s for sick pay, Workday includes a summary of third-party sick pay.

Security: These domains in the USA Payroll functional area:

- *Process: Tax Filing/W-2s (Run) – USA*
- *Process: US Territory Year End Forms (Run)*

6. Access the relevant report to corrected data:

- **View W-2C Form Data**
- **View US Territory Year End Form Corrections Data**

Security: These domains in the USA Payroll functional area:

- *Process: Tax Filing/W-2s (Reports) – USA*
- *Process: US Territory Year End Forms (Reports)*

7. (Optional) If there are errors in the extracted wage and tax data, cancel the data and correct any errors.  
Access the relevant task:

- **Cancel W-2C Data.**
- **Cancel US Territory Year End Form Data.**

Security domains in the USA Payroll functional area:

- *Process: Tax Filing/W-2s (Run) – USA*
- *Process: US Territory Year End Forms (Run)*

8. Access the **Assign W-2PR/W-2CPR Confirmation Number** task.

For workers in Puerto Rico, record the confirmation numbers you receive.

Security: *Process: US Territory Year End Forms (Run)* domain in the USA Payroll functional area.

9. [Generate and Print Year-End Tax Correction Forms \(USA\)](#) on page 929.

10. (Optional) [Publish Year-End Tax Correction Forms to Self-Service \(USA\)](#) on page 930.

Make W-2C, W-2CPR, W-2CGU, and W-2VI forms available to employees through self-service.

11. (Optional) [Launch an Integration](#) .

Launch a preconfigured tax filing integration to send annual tax correction data from Workday Payroll to your tax-filing service provider.

The setup for running annual tax filing integrations for the W-2, W-2PR, W-2C, W-2CPR, W-2GU, W-2CGU, W-2VI, and W-2CVI forms are the same.

Security: *Get* and *Put* integration permissions for these domains in the USA Payroll functional area:

- *Process: Tax Filing/W-2s (Reports (USA)*
- *Process: US Territory Year End Forms (Reports)*

[The Next Level: Adjustments, Corrections, and Reconciliations](#)

## Generate and Print Year-End Tax Correction Forms (USA)

### Prerequisites

- Use the relevant task to tell Workday how to sort and organize the forms into separate batch files:
  - **Maintain W-2 Sorting Setup**
  - **Maintain US Territory Year End Form Sorting Setup**
- If necessary, adjust the top and left print alignment settings for the year-end form on the **Edit Tenant Setup - Payroll** task (applies only to U.S. states).
- Security: These domains in the USA Payroll functional area:
  - *Process: Tax Filing / W-2s (Reports) - USA*
  - *Process: US Territory Year End Forms (Reports)*
  - *Reports: Pay Calculation Results for Worker (Tax Filing/W-2s) - USA*
  - *Reports: Pay Calculation Results for Worker (US Territory Year End Forms)*

### Context

You can generate PDF forms for printing after creating corrections for year-end tax data.

### Steps

1. Access the relevant task:

- **Create W-2C Forms**
- **Create US Territory Year End Forms** for the **Correction** type.

| Option           | Description                                                                                                                                                        |
|------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Companies</b> | If you don't select a company, Workday generates forms for all workers with correction data in the selected tax year.                                              |
| <b>Worker</b>    | You can select workers whose date and time-stamped wage and tax data includes changes or corrections made since the creation of their year-end tax reporting form. |

2. Click **Refresh** to view the status of the PDF generation process. When the process is complete, open the PDF files at the bottom of the page.

### Result

Workday prints the front image of the year-end form only.

### Next Steps

Use condensed 4up (quadrant) form stock with a pre-printed back. Workday doesn't support the use of any other form stock. Workday recommends you use the Greatland® 4upperfi05 form stock (applies to U.S. states only).

If the forms are error-free:

- Print the PDFs and distribute them to employees.
- Publish the forms to employee self-service (ESS), when applicable.

If there are errors, use the relevant task to cancel the forms:

- **Cancel W-2C Data**
- **Cancel US Territory Year End Form Data**

Correct the errors and create the year-end correction data again.

## Publish Year-End Tax Correction Forms to Self-Service (USA)

### Prerequisites

- View W-2C and US Territory corrections form data.
- Security: These domains in the USA Payroll functional area:
  - *Process: US Territory Year End Forms (Reports)*
  - *Process: Tax Filing/W-2s (Reports) - USA*

### Context

Publish year-end tax forms so that employees can use self-service to view and print their forms. This feature is available for tax year:

- 2010 onward for W-2, W-2C forms.
- 2018 onward for W-2PR, W-2CPR, W-2GU, W-2CGU, W-2VI, and W-2CVI forms.

### Steps

1. Access the relevant task:

- **Publish US Year End Tax Documents**
- **Publish US Territory Year End Tax Documents**

2. Select the companies for which to publish correction forms.

3. Enter the date you want employees to be able to access their forms in these fields:

- **Electronic-only Availability Date**
- **Electronic and Paper Copy Availability Date**

You can update or remove these dates by accessing this task again.

The **Issued Date** displays the last date you extracted W-2C data using the relevant task.

- **Create W-2C Data**
- **Create US Territory Year End Form Corrections Data**

### Result

- Forms are available as a related action for a worker by selecting **Payroll > Tax Documents**. In addition to desktop, workers can view and print year-end forms using Workday on Android, iPad, and iPhone.
- Terminated workers can view their W-2 forms on mobile by searching for the **My Tax Documents** task.

- A W-2C form that is compatible with accessible readers is available. Employees can select the **Accessible Form** button on the **My Tax Documents** task. This button displays when employees select the **Simplified View** check box on the **Change Preferences** task. (This feature doesn't apply to U.S. Territories.)

### Next Steps

You can unpublish the forms from self-service once the availability date has passed by accessing the relevant task and changing the availability date.

- **Publish US Year End Tax Documents**
- **Publish US Territory Year End Tax Documents**

Workday recommends that you create correction forms instead of unpublishing forms, as employees might have already accessed their forms.

## Year-End Tax Reporting (CAN)

---

### Setup Considerations: Year-End Tax Reporting (CAN)

You can use this topic to help make decisions when planning your configuration and use of Canada year-end tax reporting. It explains:

- Why to set it up.
- How it fits into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

### What It Is

Workday enables you to create and submit year-end tax data to government agencies using a series of reports, tasks, and integrations. Workday supports these Canadian year-end tax forms:

- T4
- T4A
- T4A-RCA
- RL-1
- RL-2
- NR4

### Business Benefits

Workday Canada year-end tax reporting makes it easier to comply with year-end payroll requirements by:

- Maintaining payroll data in 1 system.
- Validating year-end data against government guidelines.
- Streamlining the creation of T4 and RL-1 year-end tax forms by providing business processes.
- Simplifying the creation of T4A, T4A-RCA, RL-2 and NR4 tax forms with tasks.

- Enabling you to audit T4, RL-1, T4A, T4A-RCA, RL-2, and NR4 data using reports.
- Producing electronic copies of year-end tax forms for employees to access in employee self-service (ESS).
- Enabling you to correct year-end tax forms in Workday.

### Use Cases

- Preview year-end tax forms before the year-end process.
- Identify company, employee, or Pensionable and Insurable Earnings Review (PIER) exceptions.
- Give employees the ability to opt in or out of a paper copy of their year-end tax forms.
- Give employees access to print and view their electronic year-end tax forms in ESS.

### Questions to Consider

| Questions                                                                                                   | Considerations                                                                                                                                                                                                                                                                   |
|-------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Which year-end forms will you need to create for your organization?                                         | Map and test each year-end form you intend to use. Test the integration systems.                                                                                                                                                                                                 |
| Which year-end adjustments will you be processing outside of regular payroll?                               | Identify the year-end adjustments. Enter the adjustments as a manual payment. Example: Personal use of a company car.                                                                                                                                                            |
| What data would you like to use to balance year-end?                                                        | Plan to create custom reports if required.                                                                                                                                                                                                                                       |
| Have you verified that all pay components have the correct pay component groups configured?                 | Pay component groups control how Workday reports some amounts on year-end forms. Example: Amounts processed for a pay component in the <i>Income Taxable</i> pay component group are reported in Box 14 of the T4.                                                               |
| Have you changed pay component groups after completing payroll?                                             | You can create manual payments if you need to adjust balances.                                                                                                                                                                                                                   |
| Do you have to make tax adjustments?                                                                        | Use manual payments for adjustments when you need a specific result on the T4 for withholding. Example: Recording third-party payments.<br><br>Use on-demand payments for adjustments when you don't need a specific result on the T4 for withholding. Example: Check reversals. |
| Do you want to enable employees to receive hard copies of their T4, T4A, and RL-1 year-end forms?           | You can set up document printing options for employees who want to change their printing elections. Example: Terminated employees might want a paper copy of their year-end forms.                                                                                               |
| Do you want employees to be able to opt out of paper copies of their T4A-RCA, RL-2, and NR4 year-end forms? | You can set up document printing options for employees who want to change their printing elections.                                                                                                                                                                              |

### Recommendations

In preparation for the year-end process, Workday recommends that you run preview and audit reports for year-end tax forms each quarter.

## Requirements

To produce accurate year-end reporting, maintain tax and payroll data throughout the year.

At the beginning of the tax year:

- Set up fiscal years to support the entire tax year.
- Set up the period schedule for payroll and absence. Validate payment dates for the year against bank holidays.
- Verify that new ledger periods are in open status.
- Update or add tax rates.
- Ensure that appropriate pay components are mapped accurately using the **View Canada Year End Form Box Configuration** report. This drives tax reporting in Workday.

As necessary, throughout the tax year:

- Review Canada Revenue Agency and Revenu Québec reporting requirements for the current tax year.
- Run year-end preview and audit reports.
- Run PIER reports.
- Update federal and provincial tax setup for your company.
- Update workers' alternate and payroll processing work locations.

Toward the end of the tax year:

- Complete all payrolls for the reporting year, including off-cycles and manual adjustments.

## Limitations

Workday creates year-end data for all workers, not individual workers. To provide year-end data for an individual worker:

1. Run the **T4 / T4A / T4A-RCA / RL-1 / RL-2 / NR4 Preview** report.
2. Use the report to create the form manually using PDFs from the Canada Revenue Agency or Revenu Québec.

## Tenant Setup

Workday uses electronic signature text for employees changing printing elections for year-end tax forms. You can configure electronic signature text options on the **Edit Tenant Setup - Payroll** task.

## Security

| Domains                                                                                                        | Considerations                                                                                                                                                    |
|----------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <i>Business Process Administration and Manage: Business Process Definitions</i> in the System functional area. | Enables you to set up the business processes for T4 and RL-1 year-end tax forms.                                                                                  |
| <i>Management Dashboard: Payroll Year End</i> in the CAN Payroll functional area.                              | Enables you to use and configure the <b>Payroll Year End</b> dashboard.                                                                                           |
| <i>Integration Build and Integration Configure</i> in the Integration functional area.                         | Enables you to set up the integration systems to submit year-end tax forms to the Canada Revenue Agency and Revenu Québec.                                        |
| <i>Process: Year End (Reports) - CAN</i> in the CAN Payroll functional area.                                   | Enables you to preview employee data and form data and generate PDFs of the forms.                                                                                |
| <i>Process: Year End (Run) - CAN</i> in the CAN Payroll functional area.                                       | Users with access to this domain can: <ul style="list-style-type: none"> <li>• Calculate and extract wage data.</li> <li>• Cancel extracted wage data.</li> </ul> |

## Integrations

You can create these integrations to submit year-end forms to government agencies:

| Integrations                          | Considerations                                                                                                        |
|---------------------------------------|-----------------------------------------------------------------------------------------------------------------------|
| <i>Annual Tax Filing - CRA (T4)</i>   | Generates a year-end T4 <i>Statement of Remuneration Paid</i> file for submission to the Canada Revenue Agency (CRA). |
| <i>Annual Tax Filing - CRA (T4A)</i>  | Generates a year-end T4A file for submission to the CRA.                                                              |
| <i>Annual Tax Filing - CRA (NR4)</i>  | Generates a year-end NR4 file for submission to the CRA.                                                              |
| <i>Annual Tax Filing - RQA (RL-1)</i> | Generates a year-end RL-1 statement of employee taxes file for submission to Revenu Québec.                           |
| <i>Annual Tax Filing - RQA (RL-2)</i> | Generates a year-end RL-2 statement of employee taxes file for submission to Revenu Québec.                           |

| Web Services                                                              | Considerations                                                                               |
|---------------------------------------------------------------------------|----------------------------------------------------------------------------------------------|
| <i>Put Payroll Off-Cycle Payment</i>                                      | Enables you to load off-cycle payments for workers.                                          |
| <i>Put Tax Document Delivery</i>                                          | Enables you to load year-end printing options for workers.                                   |
| <i>Put Payroll Employer RPP or DPSP Registration Number Configuration</i> | Enables you to load RPP and DPSP numbers in bulk.                                            |
| <i>Get Payroll CAN Year End Forms</i>                                     | Enables you to retrieve employee Canada year-end form data for use with third-party vendors. |

## Connections and Touchpoints

Ensure that you provide any required year-end worker data, including:

- Contact information, such as home address and social insurance numbers.
- Alternate and payroll processing work locations or position job locations, which Workday uses to determine the province of employment.

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships across your tenant. Learn more about the [Workday Touchpoints Kit](#) on Workday Community.

## FAQ: Year-End Tax Reporting (CAN)

- [How do I edit or correct year-end forms once the tax year is over?](#) on page 936
- [Which address does Workday use for employees on T4, T4A, T4A-RCA, RL-1, and RL-2 forms?](#) on page 936
- [When can employees access tax documents through self-service?](#) on page 936

- [How do we unpublish year-end tax documents once employees can access them through self-service?](#) on page 936
- [How does Workday determine the Payroll Account Number \(PAN\)?](#) on page 936
- [Can I create year-end forms if a worker has a missing Social Insurance Number \(SIN\)?](#) on page 937
- [How do I configure default dental benefit codes?](#) on page 937

**How do I edit or correct year-end forms once the tax year is over?**

Access the applicable **Corrections Preview** report for the form and make the necessary edits or corrections.

For detailed instructions on correcting year-end forms, see: [Steps: Set Up, Audit, and Print Year-End Corrections \(CAN\)](#) on page 951.

**Which address does Workday use for employees on T4, T4A, T4A-RCA, RL-1, and RL-2 forms?**

The address Workday uses for employees on these forms depends on what usage you indicate for each address you add for a worker. Use the **Change Contact Information** task to select usage for employee addresses (both work and home). You can view an employee's address usage on their worker profile.

Example: If you select *Payroll Tax Form* as a usage option for an employee's work address, Workday uses that address on these forms. If you don't choose that option for the employee's work address, Workday looks for the next option where you selected *Paycheck*.

Use this table to view the hierarchy of usage.

For Workday to use an employee's international address on these forms, create an international assignment event for the worker using the **Start International Assignment** task.

**When can employees access tax documents through self-service?**

Once you create the year-end forms, tax documents become available on the date you select for the company on the **Publish Employee Canada Year End Tax Documents** task.

**How do we unpublish year-end tax documents once employees can access them through self-service?**

Access the **Override Employee Self Service Year End Tax Documents Availability Date** task. Select the affected companies. Override the **Availability Date** that you selected on the **Publish Employee Canada Year End Tax Documents** task for the companies.

Workday removes the documents from self-service, even though employees might have already accessed their forms. This task is only available for companies, not individual workers.

**How does Workday determine the Payroll Account Number (PAN)?**

The Payroll Account Number (PAN) is 15 characters and identifies the company account. The PAN consists of the 9-digit business number, *RP*, and the 4-digit reference number. You can configure the:

- *Business Number* in the **Tax IDs** tab on the **Edit Company Tax Details** task.
- **Reference Number** in the **Reference Number Criteria Assignment** tab on the **Edit Company Federal CAN Tax Reporting** task.

Example: The business number for your company is 123456789. The reference number for full-time employees at your company is 0001, and for part-time employees with no benefits is 0002. The PAN is 123456789RP0001 for full-time employees, and 123456789RP0002 for part-time employees.

#### Can I create year-end forms if a worker has a missing Social Insurance Number (SIN)?

Workday populates 9 zeroes for a worker with a missing SIN in the T4, T4A, T4A-RCA, RL-1, and RL-2 reports, forms, and tasks. Workday also populates 9 zeroes for the integration files. It's the employer's responsibility to inform Service Canada if the employee hasn't provided a SIN.

#### How do I configure default dental benefit codes?

At the company level, use the **Maintain Dental Benefits Recipient Code Configuration** task to configure dental benefit code rules for workers and terminated workers' T4 and T4A forms.

At the worker level, use the **Override Dental Benefits Recipient Code for Worker** task to override the company-level default value for a worker's access to employer-offered dental benefits.

## Year-End Tax Forms (CAN)

### Steps: Set Up, Audit, and Print Year-End Tax Forms (CAN)

#### Prerequisites

- Review setup considerations for Canada year-end tax reporting.
- Map earnings and deductions to T4, T4A, T4A-RCA, RL-1, and RL-2 boxes.
- Ensure that employee contact information is accurate.
- Complete at least 1 payroll for the reporting year.

#### Context

You can create year-end data for these forms after completing at least 1 payroll for the reporting year:

- T4
- T4A
- T4A-RCA
- RL-1
- RL-2

- NR4

When you've completed at least 1 payroll for the reporting year, you can preview year-end data. When you've completed all payrolls (including all off-cycle payments such as manual adjustments), you can preview, create, view, and publish the actual year-end forms.

To populate year-end forms, Workday uses:

- Worker data.
- Pay component mapping.

Workday maps some data on the year-end forms. You're responsible for mapping the rest of the data, such as custom pay components.

## Steps

1. [Define Year-End Tax Form Sort and Split Options \(CAN\)](#) on page 943.
2. Access the relevant report to audit any differences in income reported in the applicable box details:

- **Year End Variance in T4 Box 14**
- **Year End Variance in RL-1 Box A**

To view TD1-IN Exempt wages on the Year End Variance reports, use the **Canada Year End Form Box Configuration** task to map Box 71 and Box R. If you don't map the boxes, the reports are blank.

Use these fields to report on a worker's federal and provincial exempt wages:

- **Federal Income Tax (FIT) (CAN) - Exempt Wages**
- **Province Income Tax (QC-PIT) (CAN) - Exempt Wages**

Use these fields to create custom reports and report Box G-1 wages on the RL-1 tax form to capture taxable wages where no QPP or QPP2 contributions were withheld.

- **QPP Taxable Wages (no contribution)**
- **QPP2 Taxable Wages (no contribution)**

3. [Audit PIER Exceptions](#) on page 944.

Identify any contribution discrepancies to Canada Pension Plan (CPP), Quebec Pension Plan (QPP), Canada Pension Plan - Second Contribution (CPP2), Quebec Pension Plan - Second Contribution (QPP2), Employment Insurance (EI), and Quebec Parental Insurance Plan (QPIP).

Resolve any exceptions before creating year-end data to avoid a PIER listing from the Canada Revenue Agency requiring you to remit any balances due.

4. Access the **Canada Company Year End Audit** report.

Returns company level exceptions, such as invalid payroll account numbers.

Workday recommends that you resolve any exceptions before creating year-end data, as they might cause your integration file to fail.

Security: *Process: Year End (Reports)* - CAN domain in the CAN Payroll functional area.

5. Access the **Annual Taxable Income for Bonus Calculation** field on the applicable report to audit any bonus payments.

6. Access the relevant report to audit employee data and correct any discrepancies before generating year-end data:

- **T4 Preview**
- **T4A Preview**
- **T4A-RCA Preview**
- **RL-1 Preview**
- **RL-2 Preview**
- **NR4 Preview**

You can run the preview reports as often as needed. Correct any errors.

You can filter the preview reports to review critical, warning, or information exceptions. Resolve any critical exceptions before creating year-end data as they might cause your integration file to fail. Workday recommends that you also resolve warning exceptions.

Security: *Process: Year End (Reports)* - CAN domain in the CAN Payroll functional area.

7. Access the relevant report to audit the **Other Information** and **Additional Information** box details by box code:

- **T4 Preview – Other Info**
- **T4A Preview – Other Info**
- **RL-1 Preview – Additional Info**
- **RL-2 Preview – Additional Info**
- **View T4 Form Data – Other Info**
- **View T4A Form Data - Other Info**
- **View RL-1 Form Data – Additional Info**
- **View RL-2 Form Data - Additional Info**

The reports only list the boxes that have amounts for employees in them.

You can filter the preview reports to review critical, warning, or information exceptions. Resolve any critical exceptions before creating year-end data as they might cause your integration file to fail. Workday recommends that you also resolve warning exceptions.

Security: *Process: Year End (Reports)* - CAN domain in the CAN Payroll functional area.

8. Access the relevant task to create year-end data, after you've addressed all exceptions reported in the previous reports:

- **Create T4 Data**
- **Create T4A Data**
- **Create T4A-RCA Data**
- **Create RL-1 Data**
- **Create RL-2 Data**
- **Create NR4 Data**

Calculate and extract wage and tax data for a company.

**Note:** You can only run these tasks once per tax year.

Security: *Process: Year End (Run)* - CAN domain in the CAN Payroll functional area.

9. Access the relevant report to review form data for each worker:

- **View T4 Form Data**
- **View T4A Form Data**
- **View T4A-RCA Form Data**
- **View RL-1 Form Data**
- **View RL-2 Form Data**
- **View NR4 Data**

Example: Review the dental benefits configured using the **Maintain Dental Benefits Recipient Code Configuration** task in Box 045 and Box 015 on the T4 and T4A forms.

For 2022 onwards, Workday displays the status of the year-end tax form as *In-Progress* or *Approved*.

You can filter the form data reports to review critical, warning, or information exceptions. Resolve any critical exceptions before creating year-end data as they might cause your integration file to fail. Workday recommends that you also resolve warning exceptions.

Security: *Process: Year End (Reports)* - CAN domain in the CAN Payroll functional area.

10. [Approve Year-End Data \(CAN\)](#) on page 945.

For 2022 and beyond, approving year-end data is required. For years prior to 2022, approving year-end data isn't required.

11. Access the relevant report to review the data in each box for each payroll account and identification number:

- **View T4 Summary**
- **View T4A Summary**
- **View T4A-RCA Summary**
- **View RL-1 Summary**
- **View RL-2 Summary**
- **View NR4 Summary**

Select companies with approved year-end data.

You can use the data in this report to prepare the summary for Canada Revenue Agency or Revenu Québec.

Security: *Process: Year End (Run)* - CAN domain in the CAN Payroll functional area.

- 12.** (Optional) If the year-end data has any errors or critical exceptions, you can cancel the data and correct any errors.

Access the relevant task:

- **Cancel T4 Data**
- **Cancel T4A Data**
- **Cancel T4A-RCA Data**
- **Cancel RL-1 Data**
- **Cancel RL-2 Data**
- **Cancel NR4 Data**

Select companies with approved year-end data.

Compare the **Process Entry Moment** of the relevant **Cancel** task to the **Creation Date Time** on the relevant **View Form Data** report. Verify that you're canceling the correct data.

Workday recommends that you use the audit reports to preview year-end data before creating it. Cancel data only when necessary.

**Note:** Don't cancel data that you've submitted to a government agency.

Security: *Process: Year End (Run)* - CAN domain in the CAN Payroll functional area.

Workday cancels the most recent form data that you created for the **Tax Year** and **Company** selected.

- 13.** Set up and launch the relevant tax filing integration. Select companies with approved year-end data. Submit the tax filing to the appropriate government agency. See:

- [Steps: Set Up Canadian Revenue Agency T4 Integration.](#)
- [Steps: Set Up Canadian Revenue Agency T4A Integration.](#)
- [Steps: Set Up Canadian Revenue Agency NR4 Integration.](#)
- [Steps: Set Up Revenue Agency Quebec RL-1 Integration.](#)
- [Steps: Set Up Revenue Agency Quebec RL-2 Integration.](#)

14. After confirming that the government agency accepted the tax filing, access the relevant task:

- **Create T4 Forms**
- **Create T4A Forms**
- **Create T4A-RCA Forms**
- **Create RL-1 Forms**
- **Create RL-2 Forms**
- **Create NR4 Forms**

Select companies with approved year-end data.

Generate PDFs of the forms and save them for printing and future reference.

In the **Type** field, Workday displays:

- *Original* if all the forms in the batch are original.
- *Corrected* if any of the forms in the batch are corrections.

For T4A-RCA, you can create:

- *Employee Forms* to distribute to employees.
- *Employer Forms* to print and submit to Canada Revenue Agency. Workday includes the *Payroll Account Number*, Box 61, on these forms.

For NR4, Workday creates additional NR4 forms when the worker has more than:

- 1 country code to report.
- 1 Non-Resident Tax Account.
- 2 lines to report for a worker because of more than 2 income codes or an exemption. Workday creates an *Original-Overflow* form type when a worker has more than 2 income codes.

Security: *Process: Year End (Reports)* - CAN domain in the CAN Payroll functional area.

15. (Optional) For original year-end forms, access the **Schedule Year End Form Pre-Print** task. Select companies with approved year-end data.

Create a PDF file of year-end tax forms for all workers. You can schedule the task to run now or later.

Workday displays the precreated PDF for employees after you publish the tax documents.

16. Access the **Publish Employee Canada Year End Tax Documents** task for the company. Select companies with approved year-end data.

Specify a date from which workers can access their year-end tax documents on the **My Tax Documents** task in employee self-service (ESS). By accessing this task again, you can update the availability date or remove it if the availability date is in the future.

The **Created Date/Time** displays the last date and time that you extracted the year-end data using the relevant create data task.

Workday recommends that you set the **Availability Date** after Canada Revenue Agency and Revenu Québec have accepted the forms by integration.

To unpublish the forms from self-service once the availability date has passed, access the **Override Employee Self Service Year End Tax Documents Availability Date** task. You can only run this task for companies, not individual workers. Workday recommends that you create correction forms instead of unpublishing forms as employees might have already accessed their forms.

You can also use the *Get Payroll CAN Year End Forms* web service to collect employee year-end data. You or your third-party vendor can use the data for year-end form processing. Example: You pass the year-end form data on to the vendor so they can print and send the forms to your employees.

Security: *Process: Year End (Run)* - CAN domain in the CAN Payroll functional area.

## Define Year-End Tax Form Sort and Split Options (CAN)

### Prerequisites

Security: *Process: Year End (Run)* - CAN domain in the CAN Payroll functional area.

### Context

You can specify how Workday splits year-end forms into batches for printing and how Workday sorts them within batches.

The sort order applies to T4, T4A, T4A-RCA, RL-1, RL-2, and NR4 original and corrected forms.

### Steps

1. Access the **Maintain Canada Year End Sorting Setup** task.
2. As you complete the task, consider:

| Option                              | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
|-------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Year End Form Sorting Values</b> | <p>Select 1 or more sort categories to define their order for the PDF file you generate with the <b>Create Forms</b> task.</p> <p>Example: Select <i>Employee Status</i> and then <i>Company</i>; Workday lists workers first by employee status (terminated, leave, active) and then by company within each employee status set.</p> <p>For printed PDF year-end forms, the default sort order is:</p> <ul style="list-style-type: none"> <li>• Company</li> <li>• Last Name</li> <li>• First Name</li> <li>• Middle Initial</li> </ul>                                                              |
| <b>Split File</b>                   | <p>Select to split the forms into separate PDFs by the <b>Year-end Form Sorting Values</b>.</p> <p>If you don't select a split option, Workday organizes the forms into batch files and names the forms by company.</p> <p>The split option determines the names of the batch files.</p> <p>Example: When you split files by company, Workday:</p> <ul style="list-style-type: none"> <li>• Splits the PDF into batch files by company.</li> <li>• Names each batch file after the company of the employees it contains.</li> </ul> <p>Example: When you split files by employee status, Workday:</p> |

| Option | Description                                                                                                                                                                                                                                                                       |
|--------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|        | <ul style="list-style-type: none"> <li>Splits the PDF into batch files by employee status.</li> <li>Names each batch file after the status of the employee in this order: <ul style="list-style-type: none"> <li>Terminated</li> <li>Leave</li> <li>Active</li> </ul> </li> </ul> |

## Related Information

### Tasks

[Steps: Set Up, Audit, and Print Year-End Tax Forms \(CAN\)](#) on page 937

[Steps: Set Up, Audit, and Print Year-End Corrections \(CAN\)](#) on page 951

## Audit PIER Exceptions

### Prerequisites

- Complete at least 1 payroll for the year.
- Security: *Process: Year End (Reports)* - CAN domain in the CAN Payroll functional area.

### Context

You can run the Pensionable and Insurable Earnings Review (PIER) exception reports to identify any contribution discrepancies to:

- Canada Pension Plan (CPP)
- Quebec Pension Plan (QPP)
- Employment Insurance (EI)
- Quebec Parental Insurance Plan (QPIP)

Adjusting these discrepancies before processing year end data helps you avoid a PIER listing from the Canada Revenue Agency requiring you to remit any balances due.

The reports also provide an option to verify the employer contributions to:

- Canada Pension Plan
- Employment Insurance
- Quebec Pension Plan
- Quebec Parental Employment Insurance

### Steps

- Access the relevant report:

| Option                                  | Description                                                                       |
|-----------------------------------------|-----------------------------------------------------------------------------------|
| <b>PIER Exception Report - EI/QPIP</b>  | This report displays EI and QPIP contributions for a worker per reference number. |
| <b>PIER Exception Report - CPP/QPP</b>  | This report displays CPP and QPP contributions for a worker per reference number. |
| <b>PIER Exception Summary - CPP/QPP</b> | Use this report to:                                                               |

| Option                                   | Description                                                                                                                                                                                                                                                                                                                                                                                                    |
|------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                          | <ul style="list-style-type: none"> <li>Determine why a worker's Canada Pension Plan (CPP) or Quebec Pension Plan (QPP) is over-or under-withheld.</li> <li>Determine why they're exempt.</li> </ul> <p>This report groups information based on Company for CPP and QPP deductions and determines potential reasons for an exception. (transfer between CPP and QPP, CPP/QPP Exemptions, birth day events).</p> |
| <b>PIER Exception Report - CPP2/QPP2</b> | <p>Use this report to:</p> <ul style="list-style-type: none"> <li>View details about a worker's contributions to the Canada Pension Plan - Second Contribution (CPP2) and Quebec Pension Plan - Second Contribution (QPP2).</li> <li>View details about the employer's contributions to CPP2 and QPP2.</li> </ul>                                                                                              |

2. Correct any exceptions.

3. Rerun the report and repeat the verification and correction steps until the report displays no exceptions.

[Steps: Set Up, Audit, and Print Year-End Corrections \(CAN\)](#) on page 951

##### Reference

[Reference: Reports for Post-Payroll](#) on page 639

##### Examples

[2024R2 Feature Release Note: PIER Exception Report - CPP2/QPP2](#)

#### Approve Year-End Data (CAN)

##### Prerequisites

- Audit employee data and correct any critical exceptions.
- Create year-end data after you've addressed all exceptions in the preview reports.
- Security: *Process: Year End (Run)* - CAN domain in the CAN Payroll functional area.

##### Context

For 2022 onward, you must approve your year-end data before submitting your tax filings to the Canada Revenue Agency or Revenu Québec. Workday enables you to approve data for year-end tax forms and corrections. This approval process can help you resolve issues that might cause your integration files to fail.

##### Steps

1. Access the **Approve Year End Form Data** task.

**Note:** The **Approve Year End Form Data** task doesn't display for year-end tax data created before 2022.

2. After you complete the **Approve Year End Form Data** task, confirm that you have no exceptions or warnings at the company level or employee level.

3. (Optional) Confirm that the value in the **Approved Form Count** column is the same number as the number of tax forms you created.
4. (Optional) To cancel your approval of the year-end tax data, access the **Rescind Approve Year End Form Data** task.

### Result

After you approve your year-end data, you can select your company from the **Companies** prompt when you access the **Launch/Schedule Integration** task for tax filing.

### Next Steps

Set up and launch your tax filing integration.

### Reference: Year-End Data Requirements (CAN)

#### Company-Level Exceptions

Workday reports these exceptions for year-end forms on the **Canada Company Year End Audit** report. Workday recommends that you resolve these exceptions before creating year-end data, as they might cause your integration file to fail.

| Exception                                                                                                                         | Year-end Forms Affected                     | How to Correct It                                                                                                                           |

| Missing contact name, email address or phone number.                                                                              | T4<br>T4A<br>NR4                            | <a href="#">Set Up Company Federal Taxes (CAN)</a> on page 1276                                                                             |
| Missing or invalid identification number.<br><br>Missing transmitter number.<br><br>Missing contact name or contact phone number. | RL-1<br>RL-2                                | <a href="#">Set Up Company Province and Territory Taxes (CAN)</a> on page 1280                                                              |
| Missing nonresident account number.                                                                                               | NR4                                         | <a href="#">Set Up Company Federal Taxes (CAN)</a> on page 1276                                                                             |

#### Employee-Level Exceptions

Workday reports these exceptions for year-end forms on these year-end audit reports:

- **T4 / T4A / T4A-RCA / RL-1 / RL-2 / NR4 Preview**

- **View T4 / T4A / T4A-RCA / RL-1 / RL-2 / NR4 Form Data**

Workday recommends that you resolve these exceptions before creating year-end data, as they might cause your integration file to fail.

| Exception                                           | Year-end Form                               | How to Correct It                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

#### FAQ: Processing Payroll Adjustments for Year-End (CAN)

- [How can I make year-end adjustments?](#) on page 948
- [When do I make adjustments to year-end data using the year-end corrections process?](#) on page 948

- [How do I correct pay results reported in the wrong province of employment for a worker?](#) on page 949
- [How do I correct pay results reported in the wrong reference number?](#) on page 949

### How can I make year-end adjustments?

Workday provides multiple options for year-end adjustments. We provide these options as examples. We recommend you choose the method that works best for your organization. We recommend that best practice is to process adjustments in your Sandbox tenant. Use year-end preview reports, like **T4 Preview**, to confirm that processed adjustments calculate and report as expected before you create year-end data.

- Use the **Run Manual Payment for Worker** task to report specific wages and statutory deductions.

Example: You want to report a stock option that exercised after the last on-cycle payroll of the year. The stock vendor provided the withheld taxes to report. Select **Prior Period** and choose a pay period that was in the prior tax year (like December 16-31, 2022) to allocate the adjustment. Select a **Reason** for the adjustment. If desired, use the **Create Payroll Action Reason** task to assign a specific reason code to report on later. Ensure that the **Payment Date** is within the tax year (Dec 31, 2022).

- Use the **Run On Demand Payment for Worker** to make adjustments where Workday will automatically calculate the gross to net. This includes employer paid taxes, such as Workers Compensation, Employer Health Tax, and so on.

Example: You want to report a taxable benefit like a gift card a worker received or personal car usage. The taxable benefit occurs after the last on-cycle payroll for the year processes. Select **Prior Period** and choose a pay period that was in the prior tax year (Dec 16-31, 2022) to allocate the adjustment. Select a **Reason** for the adjustment. If desired, use the **Create Payroll Action Reason** task to assign a specific reason code to report on later. Ensure that the **Payment Date** is within the tax year (Dec 31, 2022).

Making these types of year-end adjustments generates an off-cycle payroll that you need to run and complete. You can then create the necessary accounting files for this run as you would for any other off-cycle payroll processed throughout the year.

### When do I make adjustments to year-end data using the year-end corrections process?

When:

- You created year-end data.
- You sent the integration (XML) file.
- CRA or Revenu Quebec successfully received it.

### How do I correct pay results reported in the wrong province of employment for a worker?

Override the Province Authority (Work) using the **Override Worktags** section of either the **Run On Demand Payment for Worker** or the **Run Manual Payment for Worker** task.

Select the correct province in the **Province Authority (Work)** prompt if it's different than what the **Reference Worktags** section reports.

You need to make the entry twice. Enter once to remove the previous value by entering a negative value for the incorrect province. Enter a second time to add the new value to the correct province.

Update the pay component related calculations (PCRCs) (like Subject Wages) in addition to the amounts when you do a manual payment for the worker.

### How do I correct pay results reported in the wrong reference number?

Use the **Override Worktags** section of the **Run Manual Payment for Worker** task. Select the **Company** and correct the reference number in the **Payroll Reference Number** prompt.

You need to make the entry twice. Enter once to remove the previous value by entering a negative value for the incorrect reference number. Make the entry a second time to add the new value to the correct reference number.

Update the pay component related calculations (PCRCs) (like Subject Wages) in addition to the amounts when you do a manual payment for the worker.

## Year End Tax Reporting Corrections (CAN)

### Concept: Year-End Form Corrections (CAN)

You might need to resolve errors or make adjustments to original year-end forms submitted to Canada Revenue Service and Revenue Quebec. Workday creates these kinds of corrected forms:

- Amended
- Canceled
- Additional

#### Amended

You make adjustments for an employee who received a year-end form that was incorrect. Workday then prints:

- *AMENDED* on the T4, T4A, T4A-RCA, and NR4 forms
- *MODIFIE* on the RL-1 and RL-2 forms
- Code A on the RL-1 and RL-2 forms and the forms:
  - Include all RL-1 or RL-2 data, not only the changed data.
  - Have a new serial number, which includes the original serial number.
  - *Amended-Overflow* on the NR4 form when you amend NR4 data for a worker with an *Original-Overflow* form.

You edit a worker's name effective on or before December 31 after submitting the reports for that tax year. When you create corrected data, Workday creates amended T4, T4A, T4A-RCA, and NR4 forms with the updated name.

## Canceled

You adjust data for workers who incorrectly received a year-end form, or whose form has the wrong Social Insurance Number (SIN). Workday updates the forms:

- Creates an additional form with the corrected or new SIN.
- Prints *CANCELLED* on the T4, T4A, T4A-RCA, and NR4 forms.
- Prints *ANNULE#* and *D* on the reprinted RL-1 and RL-2 forms.

You edit a worker's name effective on or before December 31 after submitting forms for that tax year. Workday creates:

- Canceled RL-1 and RL-2 forms with the previous name.
- New RL-1 and RL-2 forms with the updated name when you create corrected data.

Workday prints *Cancelled-Overflow* on the NR4 form when you cancel NR4 data for a worker with an *Original-Overflow* form.

## Additional

You make adjustments for an employee:

- Who didn't previously receive a year-end form.
- Whose form has the wrong Social Insurance Number (SIN).

Workday then prints:

- *ADDITIONAL* on the T4, T4A, T4A-RCA, and NR4 forms.
- Code *R* on both Original and Additional RL-1 and RL-2 forms.

## Steps: Set Up, Audit, and Print Year-End Corrections (CAN)

### Prerequisites

Have approved year-end data.

Resolve errors in the original T4, T4A, T4A-RCA, RL-1, RL-2, or NR4, which can result from incorrect:

- Pay component mapping.
- Year-to-date wage or tax amounts.
- Employee data.

After you've submitted data for relevant year-end tax forms to Canada Revenue Service and Revenue Quebec:

- T4
- T4A
- T4A-RCA
- RL-1
- RL-2
- NR4

### Context

When you discover adjustments after submitting year-end forms to Canada Revenue Agency and Revenue Quebec, you can create and submit amended, canceled, or additional forms.

### Steps

1. [Define Year-End Tax Form Sort and Split Options \(CAN\)](#) on page 943.
2. Access the relevant report to audit any differences in income reported in the applicable box details:
  - **Year End Variance in T4 Box 14**
  - **Year End Variance in RL-1 Box A**

To view TD1-IN Exempt wages on the Year End Variance reports, use the **Canada Year End Form Box Configuration** task to map Box 71 and Box R. If you don't map the boxes, the reports are blank.

Use these fields to report on a worker's federal and provincial exempt wages:

- **Federal Income Tax (FIT) (CAN) - Exempt Wages**
- **Province Income Tax (QC-PIT) (CAN) - Exempt Wages**

Use these fields to create custom reports and report Box G-1 wages on the RL-1 tax form to capture taxable wages where no QPP or QPP2 contributions were withheld.

- **QPP Taxable Wages (no contribution)**
- **QPP2 Taxable Wages (no contribution)**

3. [Audit PIER Exceptions](#) on page 944.

Identify any contribution discrepancies to Canada Pension Plan (CPP), Quebec Pension Plan (QPP), Canada Pension Plan - Second Contribution (CPP2), Quebec Pension Plan - Second Contribution (QPP2), Employment Insurance (EI), or Quebec Parental Insurance Plan (QPIP).

Resolve any exceptions before creating year-end data to avoid a PIER listing from the Canada Revenue Agency requiring you to remit any balances due.

4. Access the **Canada Company Year End Audit** report.

Returns company level exceptions, such as invalid payroll account numbers.

Workday recommends that you resolve any exceptions before creating year-end data, as they might cause your integration file to fail.

Security: *Process: Year End (Reports)* - CAN domain in the CAN Payroll functional area.

5. Access the **Annual Taxable Income for Bonus Calculation** field on the applicable report to audit any bonus payments.

6. Access the relevant report to audit employee data and correct any discrepancies:

- **T4 Corrections Preview**
- **T4A Corrections Preview**
- **T4A-RCA Corrections Preview**
- **RL-1 Corrections Preview**
- **RL-2 Corrections Preview**
- **NR4 Corrections Preview**

Select companies with approved year-end data.

You can run the preview reports as often as needed. Correct any errors.

You can filter the preview reports to review critical, warning, or information exceptions. Resolve any critical exceptions before creating year-end data as they might cause your integration file to fail. Workday recommends that you also resolve warning exceptions.

Security: *Process: Year End (Reports)* - CAN domain in the CAN Payroll functional area.

7. Access the relevant report to audit the **Other Information** and **Additional Information** box details by box code:

- **RL-1 Corrections Preview – Additional Info**
- **T4 Corrections Preview – Other Info**

Select companies with approved year-end data.

The reports only list the boxes that have amounts for employees in them.

You can filter the preview reports to review critical, warning, or information exceptions. Resolve any critical exceptions before creating year-end data as they might cause your integration file to fail. Workday recommends that you also resolve warning exceptions.

Security: *Process: Year End (Reports)* - CAN domain in the CAN Payroll functional area.

8. Access the relevant task, after you've addressed all exceptions reported in the previous reports:

- **Create T4 Corrected Data**
- **Create T4A Corrected Data**
- **Create T4A-RCA Corrected Data**
- **Create RL-1 Corrected Data**
- **Create RL-2 Corrected Data**
- **Create NR4 Corrected Data**

Select companies with approved year-end data.

Calculate and extract corrected year-end form data.

Security: *Process: Year End (Run)* - CAN domain in the CAN Payroll functional area.

9. Access the relevant report to review form data for each worker:

- **View T4 Form Data**
- **View T4A Form Data**
- **View T4A-RCA Form Data**
- **View RL-1 Form Data**
- **View RL-2 Form Data**
- **View NR4 Form Data**

Example: Review the dental benefits configured using the **Maintain Dental Benefits Recipient Code Configuration** task in Box 045 and Box 015 on the T4 and T4A forms.

For 2022 onwards, Workday displays the status of the year-end tax form as *In-Progress* or *Approved*.

In the **Types** field, you can filter the report to view the corrections items by selecting:

- *Additional*
- *Amended*
- *Cancelled*

You can filter the form data reports to review critical, warning, or information exceptions. Resolve any critical exceptions before creating year-end data as they might cause your integration file to fail. Workday recommends that you also resolve warning exceptions.

Security: *Process: Year End (Reports)* - CAN domain in the CAN Payroll functional area.

10. [Approve Year-End Data \(CAN\)](#) on page 945.

Approve corrected year-end data before accessing relevant tasks and reports. For 2022 and beyond, approving year-end data is required. For years prior to 2022, approving year-end data isn't required.

11. Access the relevant report to review the data in each box for each payroll account and identification number:

- **View T4 Summary**
- **View T4A Summary**
- **View T4A-RCA Summary**
- **View RL-1 Summary**
- **View RL-2 Summary**
- **View NR4 Summary**

Select companies with approved year-end data.

You can use the data in this report to prepare the summary for Canada Revenue Agency or Revenu Québec.

Security: *Process: Year End (Run)* - CAN domain in the CAN Payroll functional area.

- 12.** (Optional) If the year-end data has any errors or critical exceptions, you can cancel the data and correct any errors.

Access the relevant task:

- **Cancel T4 Data**
- **Cancel T4A Data**
- **Cancel T4A-RCA Data**
- **Cancel RL-1 Data**
- **Cancel RL-2 Data**
- **Cancel NR4 Data**

Select companies with approved year-end data.

Compare the **Process Entry Moment** of the relevant **Cancel Data** task to the **Creation Date Time** on the relevant **View Form Data** report. Verify that you're canceling the correct data.

**Note:** Don't cancel data that you've submitted to a government agency.

Security: *Process: Year End (Run)* - CAN domain in the CAN Payroll functional area.

Workday cancels the most recent form data that you created for the **Tax Year** and **Company** selected. Workday cancels the data and all forms created in the same batch.

- 13.** Set up and launch the relevant tax filing integration. Select companies with approved year-end data. Submit the tax filing to the appropriate government agency. See:

- [Steps: Set Up Canadian Revenue Agency T4 Integration.](#)
- [Steps: Set Up Canadian Revenue Agency T4A Integration.](#)
- [Steps: Set Up Canadian Revenue Agency NR4 Integration.](#)
- [Steps: Set Up Revenue Agency Quebec RL-1 Integration.](#)
- [Steps: Set Up Revenue Agency Quebec RL-2 Integration.](#)

- 14.** After confirming that the government agency accepted the tax filing, access the relevant task:

- **Create T4 Forms**
- **Create T4A Forms**
- **Create T4A-RCA Forms**
- **Create RL-1 Forms**
- **Create RL-2 Forms**
- **Create NR4 Forms**

Select companies with approved year-end data.

Generate the corrected, amended, or added PDFs and save them for printing, integration, and future reference.

The **Type** field displays *Original* if all the forms in the batch are original and *Corrected* if any of the forms in the batch are corrections.

For T4A-RCA, you can create these form types:

- *Employer Forms*, to print and submit to Canada Revenue Agency. Workday prints Box 61, *Payroll Account Number*, on these forms.
- *Employee Forms*, to distribute to employees.

For NR4, Workday creates additional NR4 forms when the worker has more than:

- 1 country code to report.
- 1 nonresident tax account.
- 2 lines to report for the worker because of more than 2 income codes or exemptions. Workday creates an *Original-Overflow* form type when a worker has more than 2 income codes.

Security: *Process: Year End (Reports)* - CAN domain in the CAN Payroll functional area.

**15.** Access the **Publish Employee Canada Year End Tax Documents** task for the company. Select companies with approved year-end data.

Specify a date from which workers can access their year-end tax documents on the **My Tax Documents** task in employee self-service (ESS). By accessing this task again, you can update the availability date or remove it if the availability date is in the future.

The **Created Date/Time** displays the last date and time that you extracted the year-end data using the relevant create data task. Workday recommends that you set the **Availability Date** after Canada Revenue Agency and Revenu Québec have accepted the forms through the integration.

To unpublish the forms from self-service once the availability date has passed, access the **Override Employee Self Service Year End Tax Documents Availability Date** task. You can only run this task for companies, not individual workers. Workday recommends that you create correction forms instead of unpublishing forms as employees might have already accessed their forms.

You can also use the *Get Payroll CAN Year End Forms* web service to collect employee year-end data. You or your third-party vendor can use the data for year-end form processing. Example: You pass the year-end form data on to the vendor so they can print and send the forms to your employees.

Security: *Process: Year End (Run)* - CAN domain in the CAN Payroll functional area.

## FLSA Wages (USA)

---

### Setup Considerations: Payroll Processing for the Fair Labor Standards Act (FLSA)

You can use this topic to help make decisions when planning your configuration and use of FLSA. It explains:

- Why to set it up.
- How it fits into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

#### What It Is

When configured, Workday processes payroll in compliance with the Fair Labor Standards Act (FLSA) to pay employees at the required rate for overtime hours. Example: Nonexempt employees who work more than 40 hours in a week must receive overtime pay at the rate of 1.5 times their regular rate of pay.

There are times when an employee receives additional pay for a work period, such as a bonus. You enter that bonus as pay input and provide coverage dates. The bonus effectively adds to the hourly pay rate used to calculate the overtime premium. Workday can automatically:

- Adjust the FLSA regular rate on each FLSA work period impacted by the bonus.
- Recalculate any overtime premium.
- Pay the difference.

Workday FLSA payroll processing enables:

- FLSA work periods that cross pay periods.
- Manual and on-demand payroll results to accumulate by FLSA work period.
- Retro processing of FLSA eligible bonuses.

#### Business Benefits

Workday FLSA enables you to:

- Spend less time manually calculating FLSA rates.
- Increase the accuracy of FLSA processing.
- Reduce the need for corrections.

#### Use Cases

When configured, Workday calculates FLSA for these work period types:

| Work Period Durations | Employees                                                  |
|-----------------------|------------------------------------------------------------|
| 7-Day                 | Workers on a standard 40-hour, 7-day workweek.             |
| 14-Day                | Healthcare workers on a standard 80-hour, 14-day workweek. |

| Work Period Durations | Employees                                                                                                                                                                                                                                                                                                                                                                                       |
|-----------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 7 Day to 28 Day       | <p>Public safety workers, such as police and fire, whose workweeks can range from 7 to 28 days. Each workweek length has a different number of hours and a different overtime threshold.</p> <p><b>Note:</b> This work period type requires you to use either Workday Time Tracking or a third-party time tracking application. It requires the ability to calculate period-based overtime.</p> |

### Questions to Consider

| Questions                                                                                                    | Considerations                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
|--------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Is your industry subject to FLSA rules for a standard 7-day, 40-hour workweek?                               | You can use the Workday-delivered work period type <i>Standard 7-day Workweek</i> . When the employee submits overtime, Workday calculates overtime based on work periods that are 7 days long. Example: An employee reports 40 regular hours and 7 overtime hours. Workday calculates 7 hours of overtime premium based on FLSA overtime rules and processes payroll accordingly.                                                                                                                                                                            |
| Is your industry healthcare and subject to the FLSA 8/80 rule?                                               | Use the Workday-delivered <i>Standard 14-day Workweek</i> . When the employee submits overtime, Workday calculates the overtime based on a 14-day work period. Example: A healthcare worker works 56 hours in the first week and 27 hours in the second week, for a total of 83 hours. Workday calculates 3 hours of overtime premium and processes payroll accordingly.                                                                                                                                                                                      |
| Are you in the public safety industry, such as police or fire, where workweeks range from 7 days to 28 days? | <p>When the employee submits overtime, Workday references tables that contain the statutory overtime thresholds for workweeks of each duration. Workday then calculates overtime and processes payroll accordingly.</p> <p>Example: By regulation, firefighters working a 21-day workweek have a 159-hour statutory threshold. Police officers working a 21-day workweek have a 128-hour statutory threshold. Workday references the threshold for the 21-day workweek, calculates overtime for hours worked over 128, and processes payroll accordingly.</p> |

### Recommendations

Set up your time tracking application to report regular and overtime hours. Example: When an employee works 48 hours in a workweek, your time tracking application reports 40 regular hours and 8 hours of overtime.

On your annual end-of-year checklist, ensure that you create FLSA work period calendars for the upcoming year.

When there's a midperiod pay group change, and you add a pay input with coverage dates that includes both pay groups; you must complete the on-cycle and pay the bonus on an off-cycle to the worker's current position and pay group.

When determining eligibility for a related calculation it's best practice to use the worker eligibility or a use a specific compensation element as opposed to adding additional complexity to the related calculation. This is regardless if your calculation includes numeric or non-numeric fields.

Process payroll in a sequential date order based on the start and end dates of the pay period. Use coverage start and end date to process a bonus (current or prior period). This ensures that the bonus is allocated to the appropriate FLSA subperiods and creates any premium adjustment differences if applicable. Example: As a payroll administrator, you:

- Run and complete a pay calculation for a worker for the pay period 10/02/2022 - 10/15/2022.
- Pay an annual bonus in between your next on-cycle for the work period 06/13/2021 - 06/11/2022.

When you process the non-regular bonus payroll, you can use the start date on or after your last completed on-cycle payroll, but before your next on-cycle payroll. This is because the start and end date of the bonus period doesn't affect the bonus allocation. Use the bonus coverage start and end date 06/13/2021 - 06/11/2022 to allocate to the appropriate FLSA subperiods.

When you reverse a previously completed payroll, manually remove the difference in the current period. Example: You can update the hours via time block when there's a correction to the hours for the worker.

When you need to update an FLSA pay component after you've completed your payroll results; Workday recommends that you create a new effective-dated snapshot and:

- Don't edit the exiting effective-dated snapshot for the FLSA earning.
- Don't add or remove the non-effective dated FLSA pay component groups for the earning.

## Requirements

For public safety overtime calculations, you must have either Workday Time Tracking or a third-party time tracking application. The time tracking application must have the ability to calculate period-based overtime.

Completed retro must have a target result. If you don't, it negatively impacts your FLSA calculation for that period. You can identify workers without a target result using the **Retro Calculation Processing Report** and selecting the **Display Only Workers with Unpulled Retro Results** check box.

## Limitations

Workday only calculates coverage dates back to the date that you enabled FLSA adjustments.

When a pay period spans multiple FLSA periods, ongoing gross-up amounts won't create FLSA subperiods. Workday pays the full grossed-up amount in the first FLSA period.

When creating an FLSA bonus earning:

- Directly reference the amount entered in the pay input or one-time payment as amount based and not rate based with percentages.
- You can't use a related calculation or a pay-component related calculation.

Workday doesn't support FLSA for workers who have an international assignment position in the U.S.

Buy Time Off shouldn't be considered FLSA eligible.

## Steps: Set Up Payroll for the Fair Labor Standards Act (USA)

### Prerequisites

The worker must be nonexempt.

Security: *Set Up: Payroll (FLSA)* - USA domain in the USA Payroll functional area.

### Context

When configured, Workday Fair Labor Standards Act (FLSA) payroll processing enables you to manage:

- FLSA work periods that cross pay periods.
- Manual and on-demand payroll results to accumulate by FLSA work period.
- Automatic adjustments to the overtime premium rate, which eliminates the need to run retro processing in certain scenarios.
- Retro processing of FLSA eligible bonuses.

## Steps

1. [Create FLSA Work Period Calendars Rules](#) on page 962.

Workday assigns workers to FLSA work periods based on the criteria that you specify in period calendar rules.

2. [Create FLSA Work Period Calendars \(USA\)](#) on page 964.

Workday uses FLSA work periods to calculate FLSA wages and taxes for assigned nonexempt workers.

3. (Optional) Extend an FLSA work period calendar by building additional work period events.

a) Access the **View FLSA Work Period Calendar** task and select the calendar that you want to extend.

b) Select **FLSA Work Period Calendar > Build Work Period Events** from the related actions menu.

c) Enter the **Number of Work Periods** to extend.

This field automatically populates, but you can override the number.

Security: *Set Up: Payroll (FLSA)* - USA domain in the USA Payroll functional area.

4. Limit retroactive processing to recent FLSA configuration.

a) Access the **Change No Retro Processing Prior To Date for Group of Workers** task.

b) Select the **Pay Run Group** or **Pay Group**.

Workday changes the **No Retro Processing Prior To** date for the group to the last completed pay period plus one day. Workday no longer processes retro for periods before this date.

Security: *Process: Run Batch Calculations (Retro Calculation)* domain in the Core Payroll functional area.

5. Access the **Create Earning** task to configure FLSA earnings for automatic FLSA adjustment processing.

Create separate earnings for each FLSA calculation. Examples:

- An earning for regular hours, plus any over 40, at the FLSA regular rate
- An FLSA premium rate earning for overtime hours.
- An earning for FLSA straight time of overtime and overtime premium that includes both regular and premium earnings.
- An FLSA bonus earning to allocate earnings across a coverage period.

As you configure the earning, consider:

| Option                        | Description                                                                                                                                                                                                                                                                                                 |
|-------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Calculation</b>            | Workday provides several calculations that you can use to configure FLSA earnings.<br><br>When creating an FLSA bonus earning, directly reference the amount entered in a pay input or one-time payment. You can't use a related calculation or a pay-component related calculation to calculate the bonus. |
| <b>Resolve by FLSA Period</b> | When you select this check box, Workday displays the earning on the <b>FLSA</b> tab of the <b>View Payroll Results</b> report. Workday applies the                                                                                                                                                          |

| Option                                             | Description                                                                                                                                                                                                                                                                                                                |
|----------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                                    | earning to the appropriate FLSA week based on the FLSA work period calendars.                                                                                                                                                                                                                                              |
| <b>Allow Coverage Dates for Bonuses</b>            | <p>Select this check box to enable coverage dates for FLSA when you also select the <b>Resolve by FLSA Period</b> check box.</p> <p>You can then enter coverage dates on payroll input and one-time payments to determine how Workday allocates FLSA bonus amounts when the coverage dates span multiple FLSA periods.</p> |
| <b>FLSA Bonus Allocation Across Coverage Dates</b> | Select an allocation method to determine how to pay FLSA bonuses on active and inactive periods. The allocation method that you select depends on whether you want to calculate and pay the bonus in nonactive periods.                                                                                                    |

Security: *Set Up: Payroll (Calculations - Payroll Specific)* domain in the Core Payroll functional area.

6. [Add Payroll Input for Workers](#) on page 589.

If you're adding payroll input for an FLSA bonus, add coverage dates. Workday then has the bonus allocate earnings across the coverage period and automatically adjust the FLSA premium rate.

### Result

You can now calculate payroll that includes FLSA payments, including FLSA bonuses that allocate the bonus across coverage dates. Workday automatically adjusts the FLSA premium rates and pays the difference.

### Prerequisites

Security: *Set Up: Payroll (FLSA) - USA* domain in the USA Payroll functional area.

### Context

You can create Fair Labor Standards Act (FLSA) work period calendar rules that Workday uses to assign workers to FLSA work period calendars based on the criteria you specify. Example: You can create a rule to specify these criteria that identify the FLSA work period calendar to apply to the worker:

- Worker is Employee = Yes.
- Location Address - Country = United States of America.
- Pay Group = FLSA Bi-Weekly.

When you process payroll, Workday calculates earnings for US nonexempt workers in the FLSA Bi-Weekly pay group and based on the associated FLSA work period calendar. This processing can simplify setting

up a new worker. Example: Once you assign a pay group, the rule automatically applies the correct FLSA work period calendar.

You can only assign workers to 1 FLSA work period calendar at a time.

**Note:** Workday doesn't display the FLSA tab on pay results when:

- You haven't assigned the FLSA calendar.
- The workers don't meet the eligibility criteria specified in the FLSA calendar rule.

## Steps

1. Access the **Create FLSA Work Period Calendar Rule** task.
2. Select an existing condition rule to modify it, or create a new rule in the **Rule Conditions** grid.
3. Select rules to configure in the **\*Source External Field or Condition Rule** field. Ensure the rules that you configure include all eligible workers in calendar membership.

Avoid unintentionally eliminating covered workers when selecting these conditions in the rule:

- Worker status. Example: You only include active workers. A worker goes on leave, and is no longer considered active. The worker has prior overtime that you still need to pay, but the worker is no longer considered eligible.
- Pay rate type. Example: You only include hourly workers. A worker goes from hourly to salaried. The worker has prior overtime that you still need to pay, but the worker is no longer considered eligible.

If you want exempt status in your rule, select *Exempt Status for FLSA Calendar Membership*.

## Result

When you process payroll, Workday calculates the worker's FLSA earnings based on the rules you configured. Workday displays the current FLSA calendar in the **Pay Results** section on the worker profile. When the worker isn't eligible for an FLSA calendar, Workday displays *No FLSA Calendar Assigned*.

## Example

You configure rules for a worker that transfers from a 7-day workweek to a 14-day workweek. The rule specifies the effective end date of the worker assigned to the 7-day workweek rule.

| Source External Field or Condition Rule | Relational Operator          | Comparison Type                       | Comparison Value                |
|-----------------------------------------|------------------------------|---------------------------------------|---------------------------------|
| <i>Worker is Employee</i>               | <i>equal to</i>              | <i>Value specified in this filter</i> | Yes (selected)                  |
| <i>Location Address - Country</i>       | <i>in the selection list</i> | <i>Value specified in this filter</i> | <i>United States of America</i> |
| <i>Pay Group</i>                        | <i>in the selection list</i> | <i>Value specified in this filter</i> | <i>FLSA Semi-monthly</i>        |
| <i>Current Effective Date and Time</i>  | <i>less than</i>             | <i>Value specified in this filter</i> | <i>1/20/2014</i>                |

The same worker transfers to a 14-day workweek. You create a rule that specifies the effective start date for the worker assigned to a 14-day workweek rule.

| Source External Field or Condition Rule | Relational Operator | Comparison Type                       | Comparison Value |
|-----------------------------------------|---------------------|---------------------------------------|------------------|
| <i>Worker is Employee</i>               | <i>equal to</i>     | <i>Value specified in this filter</i> | Yes (selected)   |

| Source External Field or Condition Rule | Relational Operator      | Comparison Type                | Comparison Value         |
|-----------------------------------------|--------------------------|--------------------------------|--------------------------|
| Location Address - Country              | in the selection list    | Value specified in this filter | United States of America |
| Pay Group                               | in the selection list    | Value specified in this filter | FLSA Semi-monthly        |
| Current Effective Date and Time         | greater than or equal to | Value specified in this filter | 1/20/2014                |

### Next Steps

Create FLSA work period calendars.

#### Tasks

[Create Business Process Condition Rules](#)

## Create FLSA Work Period Calendars (USA)

### Prerequisites

Create the rules that assign workers to FLSA work periods.

Security: *Set Up: Payroll (FLSA)* - USA domain in the USA Payroll functional area.

### Context

You can create FLSA work period calendars to automatically calculate FLSA wages and taxes for nonexempt workers. Workday Payroll then uses Fair Labor Standards Act (FLSA) work periods to calculate FLSA wages and taxes for assigned nonexempt workers.

Ensure that you create the calendar you want before running a payroll. You can't delete a calendar once Workday creates payroll results for it. When you have no payroll results for an FLSA work period calendar, you can access the **Delete FLSA Work Period Calendar** task to delete it.

**Note:** Don't move workers from 1 FLSA calendar to another because it can cause unexpected results when processing prior period adjustments.

### Steps

1. Access the **Create FLSA Work Period Calendar** task.

2. Select a **Work Period Type**.

When you select the **Work Period Type**, Workday populates the **Number of Work Periods** field on the **Build FLSA Work Period Calendar Events** task.

3. Select an **FLSA Work Period Calendar Rule**.

4. Select **FLSA Work Period Calendar** > **Build Work Period Events** from the related actions menu of the calendar.

You can override the number of weeks in the **Number of Work Periods** field.

| Work Period Type        | Number of Work Periods in 1 Year |
|-------------------------|----------------------------------|
| Standard 7-day Workweek | 53                               |

| Work Period Type                                                             | Number of Work Periods in 1 Year                                                                                                                                                                                         |
|------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 14-day Workweek                                                              | 27                                                                                                                                                                                                                       |
| Public Agency Work Period - 7 day through Public Agency Work Period - 28 day | <p>Workday calculates the approximate number of work periods in a year.</p> <p>Example: For a <i>Public Agency Work Period - 25 day</i>, there are 14.6 work periods in a year. Workday rounds this number up to 15.</p> |

5. Enter the first day of the first work period as a **Start Date** and click **OK**.

Based on the **Work Period Type** you select, Workday creates a calendar with approximate number work periods for the year.

Workday displays the worker's current FLSA calendar in the **Pay Results** section on the worker profile. When the worker isn't eligible for an FLSA calendar, Workday displays *No FLSA Calendar Assigned*.

### Next Steps

Create additional calendars as necessary for varying FLSA work weeks.

Create FLSA earnings.

Access the **FLSA Processing Status for Group of Workers** report to review preliminary information on worker eligibility for FLSA payroll processing.

## Concept: Payroll Processing for FLSA (USA)

### FLSA Work Period Types

Workday enables you to select these work period types when you process payroll for the Fair Labor Standards Act (FLSA):

| FLSA Work Period Type      | FLSA Worker Type                                                                                                                                                                               |
|----------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Standard 7-day Workweeks   | Workers on a standard 40-hour, 7-day workweek.                                                                                                                                                 |
| 14-day Workweeks           | Healthcare workers on a standard 80-hour, 14-day workweek.                                                                                                                                     |
| Public Agency Work Periods | Public safety workers, such as police and fire fighters, whose workweeks can range from 7 to 28 days. Each workweek length has a different number of hours and a different overtime threshold. |

### FLSA Eligibility Status

You can only process FLSA payroll for nonexempt workers.

When an exempt worker has multiple positions across all companies and pay groups, Workday determines the worker exempt when the sum of exempt scheduled hours is greater than the sum of nonexempt scheduled hours for those positions. When the exempt and nonexempt scheduled hours are equal, Workday uses the exemption status of the primary or processing position. This happens regardless if the job is in the same company or a different company.

Workday uses the exempt status for the worker effective on the pay period end date, unless there's one complete FLSA subperiod where the worker is nonexempt.

If you pay a bonus to a nonexempt worker, the bonus will allocate by workweeks. If you pay a bonus for an exempt worker, then Workday pays the bonus in 1 lump sum.

Example: The semimonthly pay period is 2021-01-01 to 2021-01-15, and these dates are the FLSA period weeks:

1. 2020-12-27 to 2021-01-02.
2. 2021-01-03 to 2021-01-09.
3. 2021-01-10 to 2021-01-16.

If the worker has a job change to exempt on:

- 2021-01-02, Workday pays the bonus in a lump sum and there's no allocation.
- 2021-01-03 or later, Workday treats the entire period as nonexempt because the worker is nonexempt during the last day of the first FLSA subperiod. The bonus allocates over all 3 FLSA weeks.

## FLSA Bonus and Retroactive Transactions

Workday doesn't support calculating these FLSA bonus payments concurrent with a retroactive transaction that targets the same FLSA period:

- Nonregular run category (on-cycle or off-cycle) FLSA bonus with FLSA coverage dates in some situations.
- Prior period on-demand FLSA bonus with FLSA coverage dates.

To calculate the FLSA bonus, you must either:

- Complete the FLSA bonus before you add or calculate the retroactive transaction.
- Complete and pull the retroactive transaction into your next on-cycle payment. Complete that on-cycle payment before you calculate the FLSA bonus transaction.
- Use the current period for the FLSA bonus and pay it on-cycle.
- Pay the FLSA bonus in a period without retro.

As a general rule, you can't have both payments (the FLSA bonus and the retroactive transaction targeting the same FLSA period) in progress at the same time.

Workday defers and pays all FLSA premium adjustments to the payroll result where you target retro, when:

- You run a pay calculation for an on-demand payment or nonregular run category for an FLSA worker.
- The bonus payment is in the same FLSA period that you're processing a retro pay calculation.

Workday will also display a:

- Message where the adjustment is deferred, either on the **FLSA** or the **Flat Sum Bonus** tab on the payroll results.
- Warning on the **Reversal Pay Calculation** task when you're about to reverse bonus run category or on-demand results where Workday has deferred premiums.

## Concept: View FLSA Payroll Results

### View FLSA Payroll Result

Payslips display Fair Labor Standards Act (FLSA) earnings broken out by FLSA workweek. When you select **Resolve by FLSA** on FLSA earnings, Workday displays the subperiod dates on the **Gross to Net** tab of the payroll results. When the worker has an FLSA calendar membership, an **FLSA** tab is available on pay results that identifies total FLSA wages, hours, and the FLSA rate by FLSA workweek. Click **Wages** or **Hours** to see detail by earning. When you run retro that impacts FLSA adjustments, FLSA pay results don't display until retro completes and results are recalculated.

### Payslip

Payslips summarize FLSA wages by pay component, hours, rate, amount, and YTD. When you process more than 1 work period, Workday:

- Displays coverage dates for bonuses.
- Displays separate rows for each work period when the rates are different.
- Combines them when the rates are the same.

When the payroll input is daily and rates are the same for those days, Workday summarizes by earning and rate.

**Concept: FLSA Bonus Allocation**

Workday calculates bonus amounts for FLSA-eligible workers on leave of absence (LOA) based on how you configure the bonus earning.

On the **Create Earning** task, your selections within the *Calculation Proration* section and the **FLSA Bonus Allocation Across Coverage Dates** field on the **Effective Dated** tab determine the bonus allocation. Here's what Workday does based on your configuration:

| <b>FLSA Bonus Allocation Across Coverage Dates</b>                 | <b>None of the Above</b>                                                                                                                          | <b>Prorate Using Days Worked</b>                                                                                                                                                                                                                                                                                                                                                                                                                    | <b>Prorate Using Calendar Days</b>                                                                                                                                                                                                                                                                                                                                                                                                                   |
|--------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Paid on Active Periods - Amount Reduced on Inactive Periods</b> | Pays full bonus amount to active periods only, with an equal amount of the bonus allocated to each FLSA week.                                     | Pays bonus to active periods only, prorated using working days. Reduces bonus amount by inactive days.                                                                                                                                                                                                                                                                                                                                              | Pays bonus to active periods only, prorated using calendar days. Reduces bonus amount by inactive days.                                                                                                                                                                                                                                                                                                                                              |
| <b>Paid on Active Periods - Full Amount</b>                        | Pays full bonus amount to active periods only, with an equal amount of the bonus allocated to each FLSA week.                                     | Pays full bonus amount to active periods only, prorated using working days.                                                                                                                                                                                                                                                                                                                                                                         | Pays full bonus amount to active periods only, prorated using calendar days.                                                                                                                                                                                                                                                                                                                                                                         |
| <b>Paid on all Periods - Full Amount</b>                           | Pays full bonus amount to all periods, with an equal amount of the bonus allocated to FLSA each week.                                             | Pays full bonus amount to all periods, prorated using working days.                                                                                                                                                                                                                                                                                                                                                                                 | Pays full bonus amount to all periods, prorated using calendar days.                                                                                                                                                                                                                                                                                                                                                                                 |
| <b>Paid on Periods with FLSA Hours - Full Amount</b>               | Pays full bonus amount to active periods, and to periods with FLSA hours reported, with an equal amount of the bonus allocated to each FLSA week. | <p>Pays full bonus amount to active periods, and to periods with FLSA hours reported, prorated using working days. For LOA periods and proration purposes, any FLSA hours for the period count as if all 5 days had hours.</p> <p>For workers who don't report time, such as exception hourly, Workday allocates bonuses with coverage dates for the current period based on proration settings. You can enter time manually to adjust amounts.</p> | <p>Pays full bonus amount to active periods, and to periods with FLSA hours reported, prorated using calendar days. For LOA periods and proration purposes, any FLSA hours for the period count as if all 7 days had hours.</p> <p>For workers who don't report time, such as exception hourly, Workday allocates bonuses with coverage dates for the current period based on proration settings. You can enter time manually to adjust amounts.</p> |

**Note:** Workers must have pay results for a period to receive a bonus amount to that period. When the worker is on LOA for the entire period, there must be a zero amount pay result. Configure run categories to create results for workers on leave.

When you terminate a worker during the coverage window, Workday allocates the bonus to FLSA periods before the termination, based on proration settings.

Workday doesn't support the **Prorate Using Annual Working Days** option when you configure the **FLSA Bonus Allocation Across Coverage Dates** field. Workday uses the number of FLSA periods within coverage dates instead.

## Concept: FLSA and Payroll Processing Position

You can configure the payroll processing position rules for workers with multiple jobs. Based on the rules you select, you must consider changes to their taxes related to FLSA.

The changes to taxes can occur when a worker is in different companies or pay groups with multiple gross-to-nets. On the **Maintain Payroll Processing Position Rules** task, when you configure:

- Primary position as the processing position, Workday uses the work state for the primary job to determine taxation regardless of which gross to net is being calculated.
- Position override as the processing position, Workday uses the work state based on each position. Also consider impacts to taxes when a worker with each position is in a different state. FLSA adjustments for overtime earned in 1 job can be paid on the other job. Example:

A worker has 2 jobs. Job 1 has a work state of Connecticut and Job 2 has a work state of New York. The worker gets paid regular, overtime, and a shift differential in each job. This creates 2 gross-to-net results (GTN 1 and GTN 2). Workday:

- For Job 1, calculates the FLSA overtime premium rate based on the earnings in the GTN1 and is taxed in Connecticut.
- For Job 2, calculates the FLSA overtime premium rate based on all the hours and wages including both GTN1 and GTN2. Overtime adjustments for both GTN1 and GTN2 are taxed in New York even though the original overtime for GTN1 was taxed in Connecticut.

## Concept: FLSA and Retro Differences from Current Tax Authority Change

When Workday forwards retroactive pay including overtime premiums in an on-demand payment with the tax authorities from the source period; you can pay subsequent overtime premium adjustments in the on-cycle payroll using current period tax authorities.

### FLSA Overtime Premium Adjustment

When Workday calculates FLSA overtime premium adjustments in the regular on-cycle pay result, the overtime premium is based on the source gross to net. However, the taxation for the adjustment occurs where the worker receives the adjustment using the current tax authorities (unless you specify a worktag override on the source result).

Depending on your business requirements, you'd need to make manual tax adjustments on the pay result where the adjustment occurs.

**Example 1:**

You process retro for a worker who moved from California to New York with an overtime premium that doesn't cross states.

In Period 1, you pay the California worker overtime and an FLSA bonus with coverage dates for the current period only. Effective for Period 2, the worker moves to New York.

When you add retroactive overtime back to Period 1, which is a supported retro event, Workday:

- Calculates retro differences.
- Pays overtime and premium in an on-demand payment for California (tax authority of the source period).

**Example 2:**

You process retro for a worker who moved from California to New York with an overtime adjustment that crosses states.

In Period 1, you pay the California worker overtime. Effective Period 2, the worker moves to New York. You pay an FLSA bonus with coverage dates back to Period 1. Workday calculates premium adjustments for the overtime in Period 1 and pays in the current state of New York.

When you add retroactive overtime back to Period 1, Workday:

- Calculates retro differences.
- Pays Overtime in an on-demand payment for California (tax authority of the source period).
- Pays FLSA premium adjustments in Period 3 in an on-cycle payment for New York (tax authority of the current period).

**Example: Create FLSA Regular Earning (USA)**

This example illustrates 1 way to create an FLSA regular rate earning. You can use an FLSA regular rate earning with an FLSA premium rate earning to calculate FLSA wages and display the payment rates on payslips.

**Context**

Terry needs to set up an FLSA earning for regular hours, plus any over 40, at the FLSA regular rate. She wants the rate to display on the worker's payslip.

**Prerequisites**

Security: *Set Up: Payroll (Calculations - Payroll Specific)* domain in the Core Payroll functional area.

**Steps**

1. Access the **Create Earning** task.
2. Enter these values:

| Option      | Description              |
|-------------|--------------------------|
| <b>Name</b> | <i>FLSA Regular Rate</i> |
| <b>Code</b> | <i>FLSA_REG</i>          |

3. Enter these settings on the **Effective Dated** tab:

| Option                | Description                      |
|-----------------------|----------------------------------|
| <b>Effective Date</b> | Select a future effective date   |
| <b>Calculation</b>    | <i>Hours (unprorated) * Rate</i> |

| Option                 | Description |
|------------------------|-------------|
| Input Amount Allowed?  | Select      |
| Override Frequency     | Hourly      |
| Resolve by FLSA Period | Select      |

4. Enter these settings in a row on the **Related Calculations** grid:

| Related Calculation       | Groups                  | Default Calculation  |
|---------------------------|-------------------------|----------------------|
| <i>Hours (unprorated)</i> | <i>FLSA Hours [USA]</i> | <i>Payroll Input</i> |

5. Enter these settings in a row on the **Related Calculations** grid:

| Related Calculation | Override Calculation                                                     |
|---------------------|--------------------------------------------------------------------------|
| <i>Rate</i>         | <i>Compensation: Compensation Element Value (using PC Freq Override)</i> |

6. Select the appropriate **Compensation Element**.
7. Select *FLSA Wages [USA]* from the **Groups** prompt on the **Non-Effective Dated** tab.
8. Click **OK**.
9. In **Related Calculations** grid, from the related actions menu of *Hours(unprorated)*, select **Relation Calculation --> Edit**.
10. On the **Edit Related Calculation** task, select the **Bring Forward Difference** check box on the **Retro Adjustment Type** tab.
11. Click **OK**.
12. Click **Done**.

## Result

Workday:

- Prorates FLSA salaried and exception regular hourly earnings.
- Processes retro pay.
- Displays FLSA regular and premium rates on the worker's payslip.

## Next Steps

Set up payroll input for a pay component, such as hourly pay.

## Example: Create FLSA Premium Rate Earning (USA)

This example illustrates 1 way to create an FLSA premium rate earning that you can use with an FLSA regular rate earning to calculate FLSA wages.

## Context

Terry needs to set up an FLSA premium rate earning for overtime hours. She wants the rate to display on the workers' payslips.

## Prerequisites

Security: These domains in the Core Payroll functional area:

- *Set Up: Payroll (Calculations - Payroll Specific)*
- *Set Up: Payroll (Calculations - Generic)*

## Steps

1. Access the **Create Related Calculation** task.

2. Enter these settings:

| Option          | Description      |
|-----------------|------------------|
| <b>Name</b>     | <i>FLSA Rate</i> |
| <b>Code</b>     | <i>FLSA_RATE</i> |
| <b>Category</b> | <i>Payroll</i>   |

3. Select *FLSA Rate by Company and FLSA Period* (returns 0 if *FLSA Hours by Company and FLSA Period* = 0) from the **Default Value** prompt on the **Value** tab.

4. Click **OK**.

5. Click **Done**.

6. Access the **Create Arithmetic Calculation** task.

7. Enter these settings:

| Option             | Description                        |
|--------------------|------------------------------------|
| <b>Name</b>        | <i>OT Premium Rate Calculation</i> |
| <b>Category</b>    | <i>Payroll</i>                     |
| <b>1st Operand</b> | <i>FLSA Rate</i>                   |
| <b>Operator</b>    | <i>Multiply</i>                    |
| <b>2nd Operand</b> | <i>0.5</i>                         |

8. Click **OK**.

9. Click **Done**.

10. Access the **Create Related Calculation** task.

11. Enter these settings:

| Option          | Description                            |
|-----------------|----------------------------------------|
| <b>Name</b>     | <i>Premium Rate (1/2 of FLSA Rate)</i> |
| <b>Code</b>     | <i>OT_RATE</i>                         |
| <b>Category</b> | <i>Payroll</i>                         |

12. Select *OT Premium Rate Calculation* from the **Default Value** prompt on the **Value** tab.

13. Click **OK**.

14. Click **Done**.

15. Access the **Create Arithmetic Calculation** task.

16. Enter these settings:

| Option          | Description                                                 |
|-----------------|-------------------------------------------------------------|
| <b>Name</b>     | <i>Hours (unprorated) * Premium Rate (1/2 of FLSA Rate)</i> |
| <b>Category</b> | <i>Payroll</i>                                              |

| Option      | Description                     |

## Example: Create FLSA Straight Time of Overtime and Overtime Premium (USA)

This example illustrates 1 way to create an FLSA earning that includes both regular and premium earnings. You can't display separate FLSA rates on payslips when you combine earning types. Instead, Workday combines the regular rate of pay with the FLSA rate.

## Context

Terry wants to set up an FLSA earning that calculates regular and overtime hours.

## Prerequisites

Security: *Set Up: Payroll (Calculations - Payroll Specific)* domain in the Core Payroll functional area.

## Steps

1. Access the **Create Related Calculation** task.

2. Enter these settings:

| Option          | Description                                         |
|-----------------|-----------------------------------------------------|
| <b>Name</b>     | <i>FLSA - Payment for Straight Time of Overtime</i> |
| <b>Code</b>     | <i>FLSA_STOT</i>                                    |
| <b>Category</b> | <i>Payroll</i>                                      |

3. Select the **Currency Related** check box on the **Value** tab.

4. Select the **Bring Forward Difference** check box on the **Retro Adjustment Type** tab to avoid overstating FLSA wages.

5. Access the **Create Related Calculation** task.

6. Enter these settings:

| Option          | Description      |
|-----------------|------------------|
| <b>Name</b>     | <i>FLSA Rate</i> |
| <b>Code</b>     | <i>FLSA_RATE</i> |
| <b>Category</b> | <i>Payroll</i>   |

7. Select *FLSA Rate by Company and FLSA Period* (returns 0 if *FLSA Hours by Company and FLSA Period* = 0) from the **Default Value** prompt on the **Value** tab.
8. Access the **Create Arithmetic Calculation** task.
9. Enter these settings:

| Option      | Description                        |
|-------------|------------------------------------|
| Name        | <i>OT Premium Rate Calculation</i> |
| Category    | <i>Payroll</i>                     |
| 1st Operand | <i>FLSA Rate</i>                   |
| Operator    | <i>Multiply</i>                    |

| Override Frequency     | Hourly                                |
| Resolve by FLSA Period | Select                                |

22. Enter these settings in a row on the **Related Calculations** grid:

| Related Calculation | Groups           | FLSA Premium Calculation Type | Default Calculation | Input Allowed? | Do Not Store / Do Not Store if Zero |
|---------------------|------------------|-------------------------------|---------------------|----------------|-------------------------------------|
| Hours (unprorated)  | FLSA Hours [USA] | FLSA Premium Hours            | Payroll Input       | Select         | None of the above                   |

23. Enter these settings in a row on the **Related Calculations** grid:

| Related Calculation | Override Calculation                                              | Do Not Store / Do Not Store if Zero |
|---------------------|-------------------------------------------------------------------|-------------------------------------|
| Rate                | Compensation: Compensation Element Value (Using PC Freq Override) | None of the above                   |

24. Enter these settings in a row on the **Related Calculations** grid:

| Related Calculation                          | Groups           | Override Calculation      | Do Not Store / Do Not Store if Zero |
|----------------------------------------------|------------------|---------------------------|-------------------------------------|
| FLSA - Payment for Straight Time of Overtime | FLSA Wages [USA] | Hours (unprorated) * Rate | None of the above                   |

25. Enter these settings in a row on the **Related Calculations** grid:

| Related Calculation | Default Calculation                                                                           | Do Not Store / Do Not Store if Zero |
|---------------------|-----------------------------------------------------------------------------------------------|-------------------------------------|
| FLSA Rate           | FLSA Rate by Company and FLSA Period (returns 0 if FLSA Hours by Company and FLSA Period = 0) | None of the above                   |

26. Enter these settings in a row on the **Related Calculations** grid:

| Related Calculation             | FLSA Premium Calculation Type | Default Calculation         | Do Not Store / Do Not Store if Zero |
|---------------------------------|-------------------------------|-----------------------------|-------------------------------------|
| Premium Rate (1/2 of FLSA Rate) | FLSA Premium Rate             | OT Premium Rate Calculation | None of the above                   |

27. Select *Base Pay - Academic Pay Enabled* from the **Compensation Element** prompt.
28. Click **OK**.
29. Click **Done**.
30. Select the *Hours (unprorated)* calculation on the **Edit Related Calculation** task.
31. Select the **Bring Forward Difference** on the **Retro Adjustment Type** tab.
32. Click **OK**.
33. Click **Done**.

## Result

Workday:

- Prorates FLSA salaried and exception hourly earnings that come from compensation.
- Processes retro pay.

## Next Steps

Set up payroll input for the pay component, such as hourly pay.

## Example: Create FLSA Bonus That Allocates Across a Coverage Period (USA)

This example illustrates 1 way to create an FLSA bonus earning that allocates across a coverage period.

## Context

Terry needs to set up an FLSA bonus earning that allocates across the period in which the employee earned it. She wants to pay the bonus earning in the first pay period in July but apply it to January through June. She needs to include the allocated bonus amount in the FLSA wages, which impacts the premium rates for the pay periods in those months.

**Note:** When creating an FLSA bonus earning, you must directly reference the amount entered in the pay input or one-time payment. You can't use a related calculation or a pay-component related calculation.

## Prerequisites

Security: *Set Up: Payroll (Calculations - Payroll Specific)* domain in the Core Payroll functional area.

## Steps

1. Access the **Create Earning** task.
2. Enter these values:

| Option      | Description       |
|-------------|-------------------|
| <b>Name</b> | <i>FLSA Bonus</i> |
| <b>Code</b> | <i>FLSA_BON</i>   |

3. Enter these settings on the **Effective Dated** tab:

| Option                                              | Description                                                                                                                                                                        |
|-----------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Effective Date</b>                               | Select a future effective date.                                                                                                                                                    |
| <b>Calculation</b>                                  | <i>Payroll Input</i>                                                                                                                                                               |
| <b>Input Amount Allowed?</b>                        | Select                                                                                                                                                                             |
| <b>Override Frequency</b>                           | <i>Hourly</i>                                                                                                                                                                      |
| <b>Resolve by FLSA Period</b>                       | Select                                                                                                                                                                             |
| <b>Allow Coverage Dates for Bonuses</b>             | Select<br><br>To allocate the bonus across a coverage period, select the check box for the <b>Coverage Dates</b> fields to display on the <b>Add Payroll Input by Worker</b> task. |
| <b>FLSA Amount Allocation Across Coverage Dates</b> | <i>Paid on Active Periods – Full Amount</i><br><br>The allocation method you select depends on whether you want to calculate and pay the bonus in nonactive periods.               |

4. Select *FLSA Wages [USA]* from the **Groups** prompt on the **Non-Effective Dated** tab.

Select other pay component groups as needed.

5. Click **OK**.6. Click **Done**.**Result**

Workday:

- Adjusts the FLSA regular rate on each FLSA work period impacted by the bonus.
- Recalculates premium pay (half-time overtime premium).
- Pays the difference.

Workday displays FLSA adjustments for each active FLSA work period to which the bonus applies on the payroll results and on payslips. The payslips display FLSA adjustments in the **Earnings** section.

**Example: Create FLSA Gross-Up Bonus Earning**

This example illustrates 1 way to create an FLSA bonus earning to use for gross-up bonuses.

**Context**

Terry needs to set up an earning for FLSA bonus amounts that gross up from an input net amount.

## Prerequisites

Set up gross-up calculations.

Security: *Set Up: Payroll (Calculations - Payroll Specific)* domain in the Core Payroll functional area.

## Steps

1. Access the **Create Earning** task.

2. Enter these settings:

| Option      | Description                |
|-------------|----------------------------|
| <b>Name</b> | <i>FLSA Gross-Up Bonus</i> |
| <b>Code</b> | <i>FLSA_GUB</i>            |

3. Enter these settings on the **Effective Dated** tab:

| Option                                              | Description                                                                                                                                                                                                               |
|-----------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Calculation</b>                                  | Select <i>Grossed up Amount</i> .                                                                                                                                                                                         |
| <b>Input Amount Allowed?</b>                        | Leave the check box clear for gross-up earnings.                                                                                                                                                                          |
| <b>Always Gross Up</b>                              | Selected.                                                                                                                                                                                                                 |
| <b>Gross-Up Type</b>                                | Select a gross-up type. If you select <i>Company Specific Percentage</i> , enter the flat tax rate for the gross-up in the <b>Gross-Up Percentage</b> prompt.                                                             |
| <b>Resolve by FLSA Period</b>                       | Selected.                                                                                                                                                                                                                 |
| <b>Allow Coverage Dates for Bonuses</b>             | Selected.<br><br>When you don't select this check box, the <b>Coverage Dates</b> fields don't display when you run the <b>Add Payroll Input by Worker</b> task, so you can't allocate the bonus across a coverage period. |
| <b>FLSA Amount Allocation Across Coverage Dates</b> | Select <i>Paid on Active Periods – Full Amount</i> .<br><br>The allocation method you select depends on whether you want to calculate and pay the bonus in nonactive periods.                                             |

4. From the **Groups** prompt on the **Non-Effective Dated** tab, select *FLSA Wages [USA]*, along with other pay component groups as needed.

## Result

When Terry adds payroll input for the bonus, she can enter the net amount for the worker to receive. Workday calculates the tax amounts.

[Steps: Set Up Gross-Up Calculations](#) on page 323

## Example: FLSA Processing (USA)

This example demonstrates how Workday processes FLSA bonuses and overtime.

## Context

### Workday FLSA Bonus and Overtime Process

Robert is a nonexempt FLSA worker who works a 40-hour work week at 25 USD per hour. On the week of 2019-11-01 to 2019-11-07, in addition to these hours, he works 3 overtime hours and is eligible for a 500 USD bonus payment.

The payroll administrator uses earnings, payroll input, and an on-demand additional payment to take into account these 3 components of his pay.

### Steps

1. Access the **Create Earning** task to create 2 FLSA earnings: 1 for the straight time and 1 for the premium rate to account for his overtime.
2. Access the **Add Payroll Input by Worker** task. Enter 43 hours for straight-time at a 25 USD per hour rate for regular pay.  
 $25 * 43 = 1,075 \text{ USD}$
3. Access the **Run On Demand Payment for Worker** task. Set up a nondiscretionary bonus payment of 500 USD for the same work period, which increases his total wages to 1,575 USD.
4. Access the **Add Payroll Input** task to enter 3 hours of premium pay for his overtime. The premium portion of the overtime is 0.5 of his premium rate:  
 $1,575 \text{ total straight time and bonus pay} / 43 \text{ hours} = 36.63 \text{ USD per hour FLSA premium rate}$   
 $0.5 * 36.63 = 18.315 \text{ premium portion}$   
 $3 \text{ overtime hours} * 18.315 = 54.95 \text{ USD}$

### Result

His total pay for the work period is:

$$(43 \text{ hours} * 25) + 500 + 54.95 = 1,629.95 \text{ USD}$$

### Payslip Including Overtime and Bonus

| Description                 | Dates                    | Hours | Rate   | Amount (USD) | YTD (USD) |
|-----------------------------|--------------------------|-------|--------|--------------|-----------|
| FLSA Hourly Pay (Reg Hours) | 2015-11-01 to 2015-11-07 | 43    | 25.00  | 1,075.00     | 1,075.00  |
| FLSA Bonus                  | 2015-11-01 to 2015-11-07 | 0     | 500    | 500          | 500       |
| FLSA Overtime Premium       | 2015-11-01 to 2015-11-07 | 3     | 18.32  | 54.95        | 54.95     |
|                             |                          |       | Total: | 1629.95      | 1629.95   |

**Note:** Workday aggregates the earnings on payslips when the rate is the same for multiple work periods.

### Example: FLSA Adjustment (USA)

This example demonstrates how to use Workday to make an FLSA adjustment.

## Context

During the payroll run for the work week 11/08 - 11/14, the payroll administrator realizes Robert should have received a 600 USD bonus, but he received 500 USD. She needs to pay Robert the 100 USD and apply it to the 11/01 - 11/07 pay period.

## Steps

1. Access the **Add Payroll Input by Worker** task.
2. Select the worker.
3. Select the **Start Date** and **End Date** of the pay period. (In this case, select the work week 11/08 - 11/14.)
4. Select the **Pay Component**. (In this case, *Bonus*.)
5. Select the **Processing Defaults**. (In this case, *One-time, Adjustment, and Regular Run Category*.)
6. Enter **Coverage Dates** 11/01 - 11/07.
7. After clicking **OK**, enter **Input Details**:
  - a) **Type**. (In this case, *Amount*.)
  - b) **Value**. (In this case *100.00*.)

## Result

When the payroll administrator processes payroll for 11/08 - 11/14, Workday automatically adjusts the overtime rate for the previous period 11/01 - 11/07. The on demand adjustment displays the 100.00 USD gross for the FLSA bonus and the FLSA rate difference:

| FLSA Work Week      | Hours | Rate (USD)                                     |
|---------------------|-------|------------------------------------------------|
| 11/01/15 - 11/07/15 | 3     | 54.95 without 100 bonus.                       |
| 11/01/15 - 11/07/15 | 3     | 58.43 with 100 bonus; a rate increase of 3.48. |

In some cases, the net of an FLSA adjustment could be negative.

## FAQ: Fair Labor Standards Act (FLSA)

### Can I process FLSA adjustments for all pay frequencies?

Yes. Set up the pay component that is paying the FLSA premium rate with these Workday-delivered FLSA related calculations:

- *FLSA Premium Hours*: Set up this calculation type on the related calculation that is using *Hours (unprorated)*.
- *FLSA Premium Rate*: Set up this calculation type on the related calculation for the premium, or half-time, portion of overtime.

Workday supports work periods not aligned with pay periods, such as monthly and semimonthly periods. Workday FLSA processing enables:

- FLSA work periods that cross pay periods.
- Manual and on-demand results to accumulate by FLSA work period.
- Retro adjustments for all pay frequencies.

- Automatic adjustments to the overtime premium rate in certain situations.

**If I have multiple gross-to-net results with FLSA, does Workday review all of them to calculate the regular rate of pay?** Yes.

**If workers changed FEINs or pay groups, would I be able to process the resulting subperiods as FLSA?**

FLSA continues to calculate when you move workers from 1 pay group to another. However, Workday doesn't support FLSA calculations across companies for workers who move from 1 FEIN to another.

**How can I process a quarterly bonus that prorates for each weekly period?**

Workday FLSA processing supports multiple pay periods, so you can allocate a bonus across pay periods.

**Does Workday summarize wages and adjustments on payslips and pay checks when I input hours daily?**

Yes. When payslips are configured, the FLSA wages and adjustments display in the **Earnings** section. There's no special payslip configuration required for FLSA.

**Is FLSA a worktag?**

No. Workday FLSA functions according to the **Start Date** and **End Date** for the work period. You can't use worktags to implement Workday-delivered FLSA.

## Troubleshooting: Duplicated Ongoing Payroll Inputs in FLSA Processing (USA)

**Cause:** You don't configure the earning paid through payroll input for proration.

**Solution:**

### Steps

Security: These domains in the Core Payroll functional area:

- *Process: Run Batch Calculations (Pay Calculation)*
- *Set Up: Payroll (Calculations - Payroll Specific)*

1. Access the **Edit Earning** task.
2. In the **Calculation Details** section of the **Effective Dated** tab, select a proration method that isn't *None of the above*.
3. Access the **Run Pay Calculation** task to recalculate payroll.

## FLSA Company Relationships (USA)

### Setup Considerations: FLSA Company Relationships (USA)

You can use this topic to help make decisions when planning your configuration and use of FLSA Company Relationships. It explains:

- Why to set it up.
- How it fits into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

### What It Is

You can set up FLSA company relationships for workers with multiple jobs across different companies to calculate:

- FLSA blended overtime premium.
- Flat Sum bonus overtime premium rate.

When you create an FLSA company relationship, to calculate FLSA blended overtime premium, Workday:

- Applies it to all FLSA overtime calculations for eligible employees.
- Aggregates the hours and wages of workers across 2 or more companies within the FLSA company relationship.

When you create an FLSA company relationship, to calculate Flat Sum Bonus overtime premium rate, Workday:

- Applies it to all Flat Sum Bonus overtime calculations for eligible employees.
- Uses all hours worked based on coverage dates across 2 or more companies within the FLSA company relationship.

### Business Benefits

Setting up an FLSA company relationship enables you to:

- Save time by automatically calculating FLSA blended overtime premiums.
- Easily report the hours and wages of workers across multiple companies.
- Save time by automatically calculating Flat Sum Bonus overtime premium rate.
- Easily report the total regular hours based on coverage dates.
- Reduce your manual effort and the need for manual calculations.

### Use Cases

|                |                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
|----------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| FLSA           | <p>Calculate an FLSA blended rate when the earnings affect the rate of pay for workers with multiple jobs across different companies.</p> <p>Example: A worker has 2 jobs. Each job has a unique company and a different rate of pay or additional earnings that impact the FLSA regular rate of pay. Job 1 (Company A) pays the worker 32 hours regular and 1 hour of overtime. Job 2 (Company B) pays a worker 8 hours regular and 1 hour of overtime.</p> |
| Flat Sum Bonus | <p>Calculate the Flat Sum Bonus overtime premium rate on total regular hours worked for a worker based on the bonus coverage dates across different companies.</p> <p>Example: A worker moves to a new company. Both companies are in an FLSA company relationship</p>                                                                                                                                                                                       |

and the worker is paid a Flat Sum Bonus with coverage dates spanning between both companies. Job 1 (Company A) pays the worker 32 hours regular and 1 hour of overtime. Job 1 (Company B) pays a worker 8 hours regular and 1 hour of overtime.

### Questions to Consider

| Questions                                                                                                         | Considerations                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

| How do you set up FLSA company relationships?                                                                     | You can use the <b>Create FLSA Company Relationship</b> task.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| How does Workday pay overtime adjustments (FLSA)?                                                                 | <p>Workday calculates the overtime adjustments on the last processed gross-to-net. The company that caused the adjustment pays the overtime adjustment.</p> <p>Use the intercompany accounting functionality to charge the overtime to the desired company.</p> <p>There are no changes to how Workday allocates bonus and applies the proration rules.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| How does Workday pay a prior period bonus (FLSA)?                                                                 | <p>When the workers' jobs are in unique companies and the companies:</p> <ul style="list-style-type: none"> <li>• Are in an FLSA relationship, the overtime adjustments such as bonus is paid on the last gross-to-net of all the companies within the relationship.</li> <li>• Aren't in an FLSA relationship, the overtime adjustments are calculated independently for each company.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| How does Workday pay the bonus across multiple companies when a worker moves companies (FLSA and Flat Sum Bonus)? | <p>For FLSA: Workday pays the bonus and adjusts overtime to the current company. Since the worker is terminated in the prior company, use retro or prior period on-demand additional processing, when you need to pay a bonus back to the prior company.</p> <p>If you pay an FLSA bonus with coverage dates that crosses companies, Workday pays the bonus and adjusts overtime to the current company regardless if the company is an FLSA relationship or not.</p> <p>For Flat Sum Bonus: Workday calculates the Flat Sum Bonus premium rate for all hours within the bonus coverage period within the FLSA relationship. For companies that aren't in a company relationship:</p> <ul style="list-style-type: none"> <li>• If the bonus coverage dates are in the previous company, Workday doesn't calculate the Flat Sum Bonus premium rate. Use prior period on-demand additional payment or retro targeting</li> </ul> |

| Questions | Considerations                                                                                                                                                                                                                                                                                                        |
|-----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           | <p>the previous company to pay the Flat Sum Bonus premium rate</p> <ul style="list-style-type: none"> <li>If the bonus coverage dates are in targeting both the previous and current or only the current company; Workday calculates only the overtime Flat Sum Bonus premium rate for the current company</li> </ul> |

### Recommendations

Workday recommends that you enable payroll intercompany accounting to support FLSA company relationships. Make sure you:

- Include all companies within an FLSA Company Relationship on the intercompany profile.
- Set up payroll ledgers for each company for all configured operational transaction types.
- Open ledger periods for all configured operational transaction types for the period end date or in the future.
- Review cost center and company restrictions to ensure they're within the related companies and have valid operational transactions and worktag balancing rule configurations.
- Review, add, or update a worker's assigned costing.

Workday recommends you not to do reversals for workers with an FLSA adjustment or for workers with multiple jobs and companies. If you do so, you'd need to manually make adjustments going forward for the worker for that period.

.

### Requirements

To calculate FLSA blended overtime or Flat Sum Bonus overtime premium rate accurately, you must:

- Set up FLSA work period calendar rules. Companies must be in the same FLSA work period calendar and FLSA work period calendar rule.
- Create an FLSA company relationship.
- Have the same pay frequency (pay period start/end and check date) for each company in the FLSA company relationship.
- Have all companies in the same pay group.
- Have the same run category for regular pay.
- Use position-based earnings for regular and overtime hours.

### Limitations

Workday doesn't support future coverage dates.

### Tenant Setup

Workday aggregates all the hours and wages for nonexempt employees of all companies involved in the Single Legal Entity or Common Paymaster company relationship. An FLSA Company relationship isn't needed. Therefore, there could be an FLSA overtime adjustment for a different company on your current company payroll result. Workday recommends that you enable payroll intercompany accounting. You can disable the automatic FLSA overtime premium calculation to aggregate across companies by selecting the **Disable Company Tax Relationships for FLSA and Flat Sum Bonus** check box on the **Edit Tenant Setup-Payroll** task.

## Security

Users with security enabled for the *Set Up: Payroll (FLSA) - USA* domain in the USA Payroll functional area can set up FLSA company relationships.

## Business Processes

No impact

## Reporting

You can run the **View FLSA Company Relationship** report to verify the FLSA company relationships you've set up.

## Integrations

You can use these web services to update FLSA company relationships:

- *Get FLSA Company Relationships*
- *Put FLSA Company Relationship*

## Connections and Touchpoints

| Touchpoint                                             | Consideration                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|--------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Single Legal Entity and Common Paymaster relationships | <p>For workers in a Single Legal Entity or Common Paymaster relationship, Workday automatically calculates FLSA overtime by aggregating hours and wages of workers across 2 or more companies defined for that relationship. Therefore, you needn't set up FLSA company relationships.</p> <p>However, if you do set it up, the FLSA company relationship always takes precedence over tax relationships when determining FLSA calculations.</p> |

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships in your tenant. Learn more about the [Workday Touchpoints Kit](#) on Workday Community.

## Create FLSA Company Relationships (USA)

### Context

You can set up FLSA company relationships for workers with multiple jobs across different companies to calculate:

- FLSA blended overtime premium.
- Flat Sum bonus overtime premium rate.

When you create an FLSA company relationship, to calculate FLSA blended overtime premium, Workday:

- Applies it to all FLSA overtime calculations for eligible employees.
- Aggregates the hours and wages of workers across 2 or more companies within the FLSA company relationship.

When you create an FLSA company relationship, to calculate Flat Sum Bonus overtime premium rate, Workday:

- Applies it to all Flat Sum Bonus overtime calculations for eligible employees.
- Uses all regular hours worked based on coverage dates across 2 or more companies within the FLSA company relationship.

FLSA company relationship configuration takes precedence over tax relationships. You can use FLSA company relationships to calculate only FLSA and has no impact on tax relationships. Any changes to the relationship should be made prior to running the pay calculation. When you make changes to the company relationship, you must recalculate payroll. Workers with a midperiod company change will be in the company for the entire FLSA week. Workday recommends that you move all workers to a new company prior to calculating payroll.

Workday recommends that you enable payroll intercompany accounting to support FLSA company relationships. Make sure you:

- Include all companies within an FLSA Company Relationship on the intercompany profile.
- Set up payroll ledgers for each company for all configured operational transaction types.
- Open ledger periods for all configured operational transaction types for the period end date or in the future.
- Review cost center and company restrictions to ensure they're within the related companies and have valid operational transactions and worktag balancing rule configurations.
- Review, add, or update a worker's assigned costing.

## Steps

1. Access the **Create FLSA Company Relationship** task.
2. On the **Effective Dated** tab, consider:

| Option                   | Description                                                                                                                                                                                                                                                                                                     |
|--------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Effective Date</b>    | Enter an effective date that's on or before the current date.<br><br>Adding or updating an effective date doesn't trigger a retro event. However, Workday uses the effective date in retro calculations when a worker has supported events such as compensation change or additional hours from a prior period. |
| <b>Inactive</b>          | Inactivate a company relationship to no longer calculate the FLSA blended overtime premium or Flat Sum Bonus overtime premium rate for related companies as of the effective date.                                                                                                                              |
| <b>Related Companies</b> | Enter at least 2 companies. You can create any number of FLSA company relationships. However, you can't set up the same company in more than 1 relationship at a time. You can only select USA companies.                                                                                                       |

## Next Steps

You can use the **Edit FLSA Company Relationship** task to update an existing effective date or add a new effective date. To inactivate an active relationship going forward, you must add a new effective date and select the **Inactive** check box.

## Concept: Inactivate Company Relationships (USA)

You can select the **Inactivate** check box from the **Edit FLSA Company Relationship** task to disable an existing FLSA company relationship. When you inactivate an FLSA company relationship for workers with multiple jobs across different companies, Workday:

- Doesn't calculate the FLSA blended overtime premium.
- Doesn't calculate the Flat Sum Bonus overtime premium rate.

When the FLSA relationship is inactive and you pay an FLSA bonus with coverage dates going back to a period when the FLSA company relationship was active, Workday doesn't aggregate to calculate the blended rate. The overtime adjustments are calculated independently since the FLSA company relationship was inactive.

Example 1: The FLSA week is Sunday - Saturday. You had the FLSA company relationship for the semimonthly pay period 2023-04-01 to 2023-04-15 set to active. You inactivate the FLSA company relationship on 2023-04-16. Workday considers the entire FLSA week (2023-04-12 to 2023-04-18) inactive because the status was inactivate at the FLSA period end date (2023-04-18).

| Sunday    | Monday    | Tuesday   | Wednesday | Thursday  | Friday    | Saturday  |
|-----------|-----------|-----------|-----------|-----------|-----------|-----------|
|           |           |           | 1         | 2         | 3         | 4         |
| 5         | 6         | 7         | 8         | 9         | 10        | 11        |
| <b>12</b> | <b>13</b> | <b>14</b> | <b>15</b> | <b>16</b> | <b>17</b> | <b>18</b> |
| 19        | 20        | 21        | 22        | 23        | 24        | 25        |
| 26        | 27        | 28        | 29        | 30        |           |           |

When the FLSA company relationship is inactive and you run retro going back to a period when the FLSA company relationship was active, Workday calculates retro based on the status of that period.

Example 2: The FLSA week is Sunday - Saturday. You had the FLSA company relationship for the semimonthly pay period 1 (2023-04-01 to 2023-04-15) set to active. You add a new effective dated snapshot and then set the relationship to inactive on 2023-04-16. After you complete your payroll for the pay period 2 (2023-04-16 to 2023-04-30), you then change the worker's compensation effective on 2023-04-01. When you process retro:

Workday calculates pay period 1 (2023-04-01 to 2023-04-15) based on the active status of the FLSA company relationship.

| Sunday    | Monday    | Tuesday   | Wednesday | Thursday | Friday    | Saturday  |
|-----------|-----------|-----------|-----------|----------|-----------|-----------|
|           |           |           | <b>1</b>  | <b>2</b> | <b>3</b>  | <b>4</b>  |
| <b>5</b>  | <b>6</b>  | <b>7</b>  | <b>8</b>  | <b>9</b> | <b>10</b> | <b>11</b> |
| <b>12</b> | <b>13</b> | <b>14</b> | <b>15</b> | 16       | 17        | 18        |
| 19        | 20        | 21        | 22        | 23       | 24        | 25        |
| 26        | 27        | 28        | 29        | 30       |           |           |

Workday calculates pay period 2 (2023-04-16 to 2023-04-30) based on the inactive status of the FLSA company relationship.

| Sunday | Monday | Tuesday | Wednesday | Thursday | Friday | Saturday |
|--------|--------|---------|-----------|----------|--------|----------|
|        |        |         | 1         | 2        | 3      | 4        |
| 5      | 6      | 7       | 8         | 9        | 10     | 11       |

|    |    |    |    |    |    |    |
|----|----|----|----|----|----|----|
| 12 | 13 | 14 | 15 | 16 | 17 | 18 |
| 19 | 20 | 21 | 22 | 23 | 24 | 25 |
| 26 | 27 | 28 | 29 | 30 |    |    |

Example 3: The FLSA week is Sunday - Saturday. You had the FLSA company relationship for the semimonthly pay period 1 (2023-04-01 to 2023-04-15) set to active. You update the existing effective dated snapshot and then set the relationship to inactive on 2023-04-16. After you complete payroll for the pay period 2 (2023-04-16 to 2023-04-30), you then change the worker's compensation effective on 2023-04-01. When you process retro:

Workday calculates pay periods 1 and 2 based on the inactive status of the FLSA company relationship.

|        |        |         |           |          |        |          |
|--------|--------|---------|-----------|----------|--------|----------|
| Sunday | Monday | Tuesday | Wednesday | Thursday | Friday | Saturday |
|        |        |         | 1         | 2        | 3      | 4        |
| 5      | 6      | 7       | 8         | 9        | 10     | 11       |
| 12     | 13     | 14      | 15        | 16       | 17     | 18       |
| 19     | 20     | 21      | 22        | 23       | 24     | 25       |
| 26     | 27     | 28      | 29        | 30       |        |          |

### Concept: FLSA Company Relationships (USA)

You can calculate FLSA blended overtime premium for workers with multiple jobs across different companies. When you **Create FLSA Relationship** Workday:

- Applies it to all FLSA overtime calculations for eligible employees.
- Calculates FLSA overtime premiums by aggregating the hours and wages of employees across 2 or more companies within the FLSA company relationship.

Example: Sam has 2 jobs and each job has a unique company. You:

- Create an FLSA relationship for both companies (Company A and Company B).
- Assign a worker to a 7-day FLSA week calendar with a weekly payroll period.

Sam's pay for Job A (Company A) is \$20 per hour and Job B (Company B) is \$23. At Job A (Company A), Sam works 32 hours regular and 1 hour overtime. At Job B (Company B), they work 8 hours regular and 1 hour of overtime. Since the companies are in an FLSA relationship, Workday calculates the FLSA overtime premium at the blended rate of pay.

Sam receives 2 gross-to-net payslips, 1 for each company.

- Workday processes Job A first. Since Job B hasn't been processed yet, Workday calculates FLSA rate and includes wages and hours only for Job A.

| Job/<br>Company      | Description                  | Dates                          | Hours | Rate | Amount | YTD   |
|----------------------|------------------------------|--------------------------------|-------|------|--------|-------|
| Job A<br>(Company A) | Hourly                       | 2023-05-01<br>to<br>2023-05-07 | 32    | \$20 | \$640  | \$640 |
| Job A<br>(Company A) | Overtime<br>Straight<br>Time | 2023-05-01<br>to<br>2023-05-07 | 1     | \$20 | \$20   | \$20  |

|                      |                  |                          |   |      |      |      |
|----------------------|------------------|--------------------------|---|------|------|------|
| Job A<br>(Company A) | Overtime Premium | 2023-05-01 to 2023-05-07 | 1 | \$10 | \$10 | \$10 |
|----------------------|------------------|--------------------------|---|------|------|------|

- **Calculations for Gross-to-net for Job A (Company A):**

|                                   |                                                                                                                                                                                           |
|-----------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| FLSA Eligible Wages and Hours:    | <ul style="list-style-type: none"> <li>• 32 regular hours @ \$20.00 per hour = \$640.00</li> <li>• 1 overtime hour (1x) @ \$20.00 per hour = \$20.00</li> </ul>                           |
| FLSA Overtime Calculation:        | <ul style="list-style-type: none"> <li>• FLSA rate = \$660.00 (total wages) divided by 33 total hours worked) = \$20.00</li> <li>• FLSA Premium Rate = \$20.00 * 0.5 = \$10.00</li> </ul> |
| Total Overtime due to the Worker: | \$20.00 (1x) + \$10.00 (Premium) = \$30.00                                                                                                                                                |

- Workday processes Job B next, and calculates FLSA rate to include hours and wages for both Job A and Job B. Overtime adjustments are made for Job A overtime based on the new FLSA rate. Gross-to-net for Job B (Company B):

| Job/<br>Company      | Description                 | Dates                    | Hours | Rate    | Amount  | YTD     |
|----------------------|-----------------------------|--------------------------|-------|---------|---------|---------|
| Job B<br>(Company B) | Hourly                      | 2023-05-01 to 2023-05-07 | 8     | \$23    | \$184   | \$184   |
| Job B<br>(Company B) | Overtime Straight Time      | 2023-05-01 to 2023-05-07 | 1     | \$23    | \$23    | \$23    |
| Job B<br>(Company B) | Overtime Premium            | 2023-05-01 to 2023-05-07 | 1     | \$10.33 | \$10.33 | \$10.33 |
| Job A<br>(Company A) | Overtime Premium Adjustment | 2023-05-01 to 2023-05-07 | 1     | -\$10   | - \$10  | \$0.33  |
| Job A<br>(Company A) | Overtime Premium Adjustment | 2023-05-01 to 2023-05-07 | 1     | \$10.33 | \$10.33 | \$0.33  |

The YTD for Job A (Company A) is \$0.33 because it's the YTD for Company A that's paid on the result of Job B (Company B).

- **Calculations for Gross-to-net for Job B (Company B):**

|                                |                                                                                                                                                                                                                                                                                                                                                                        |
|--------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| FLSA Eligible Wages and Hours: | <ul style="list-style-type: none"> <li>• Job A (Company A): 32 regular hours @ \$20.00 per hour = \$640.00</li> <li>• Job A (Company A): 1 overtime hour (1x) @ \$20.00 per hour = \$20.00</li> <li>• Job B (Company B): 8 regular hours (1x) @ \$23.00 per hour = \$184.00</li> <li>• Job B (Company B): 1 overtime hour (1x) @ \$23.00 per hour = \$23.00</li> </ul> |
|--------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

|                                   |                                                                                                                                                                                                                                             |
|-----------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| FLSA Overtime Calculation:        | <ul style="list-style-type: none"> <li>FLSA rate = \$867.00 (total wages from both companies) divided by 42 (total hours from both companies) = \$20.65</li> <li>FLSA Premium Rate = \$20.65 * 0.5 = \$10.33</li> </ul>                     |
| Total Overtime due to the Worker: | <ul style="list-style-type: none"> <li>Job A company A: Premium adjustment only - \$10.33 (new FLSA Premium rate) – \$10.00 (premium rate from GTN1) = 0.33</li> <li>Job B company B: \$23.00 (1x) + \$10.33 (Premium) = \$33.33</li> </ul> |

### Concept: Flat Sum Bonus with FLSA Company Relationship (USA)

You can calculate Flat Sum Bonus overtime premium rate for workers with multiple jobs across different companies. When you **Create FLSA Relationship** Workday:

- Applies it to all Flat Sum Bonus overtime calculations for eligible employees.
- Uses all regular hours worked based on coverage dates across 2 or more companies within the FLSA company relationship.

Example: Sam has 2 jobs and each job has a unique company. You:

- Create an FLSA relationship for both companies (Company A and Company B).
- Assign a worker to a 7-day FLSA week calendar with a weekly payroll period.

At Job A (Company A), Sam works 8 hours regular and 1 hour overtime. At Job B (Company B), they work 32 hours regular and 1 hour of overtime. A Flat sum bonus of \$100 is paid for each job. Since the companies are in an FLSA relationship, Workday calculates the Flat Sum Bonus overtime premium rate using the total regular hours worked for both companies.

Sam receives 2 gross-to-net payslips, 1 for each company.

- Workday processes Job A first. Since Job B hasn't been processed yet, Workday calculates Flat Sum Bonus Overtime rate only for Job A Flat Sum Bonus and overtime hours.

| Job/<br>Company      | Description                     | Dates                          | Hours | Rate    | Amount  | YTD     |
|----------------------|---------------------------------|--------------------------------|-------|---------|---------|---------|
| Job A<br>(Company A) | Hourly                          | 2023-05-01<br>to<br>2023-05-07 | 8     | \$25    | \$200   | \$200   |
|                      | Flat Sum Bonus                  | 2023-05-01<br>to<br>2023-05-07 |       |         | \$100   | \$100   |
| Job A<br>(Company A) | Overtime Straight Time          | 2023-05-01<br>to<br>2023-05-07 | 1     | \$12.50 | \$12.50 | \$12.50 |
| Job A<br>(Company A) | Flat Sum Bonus Overtime Premium | 2023-05-01<br>to<br>2023-05-07 |       | \$3.75  | \$3.75  | \$3.75  |

- Calculations for Gross-to-net 1 for Job A (Company A):**

|                                |                                                                                                    |
|--------------------------------|----------------------------------------------------------------------------------------------------|
| Flat Sum Bonus Eligible Hours: | <ul style="list-style-type: none"> <li>Company A and Company B total regular hours = 40</li> </ul> |
|--------------------------------|----------------------------------------------------------------------------------------------------|

|                                                                                                |                                                                                                    |
|------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------|
|                                                                                                | <ul style="list-style-type: none"> <li>Company A and Company B total overtime hours = 2</li> </ul> |
| Overtime Premium Rate: Flat sum bonus amount /Number of regular hours in the pay period) x 1.5 | $(\$100 / 40) * 1.50 = \$3.75$ that will be applied to Overtime hours for Job A (Company A)        |

Workday processes Job B next, and calculates the Flat Sum Bonus Overtime rate to include hours for both Job A and Job B. Job A (Company A) and Job B (Company B) are in an FLSA relationship therefore there's a blended rate that's calculated in the second Gross-to-net:

| Job/<br>Company      | Description                              | Dates                          | Hours | Rate     | Amount   | YTD     |
|----------------------|------------------------------------------|--------------------------------|-------|----------|----------|---------|
| Job B<br>(Company B) | Hourly                                   | 2023-05-01<br>to<br>2023-05-07 | 32    | \$20     | \$640    | \$640   |
|                      | Flat Sum<br>Bonus                        | 2023-05-01<br>to<br>2023-05-07 |       |          | \$100    | \$100   |
| Job B<br>(Company B) | Overtime<br>Straight Time                | 2023-05-01<br>to<br>2023-05-07 | 1     | \$20     | \$20     | \$20    |
| Job B<br>(Company B) | Overtime<br>Premium                      | 2023-05-01<br>to<br>2023-05-07 | 1     | \$10.54  | \$10.54  | \$10.54 |
|                      | Flat Sum<br>Bonus<br>Premium             | 2023-05-01<br>to<br>2023-05-07 |       | \$7.50   | \$7.50   | \$7.50  |
| Job A<br>(Company A) | Overtime<br>Premium                      | 2023-05-01<br>to<br>2023-05-07 |       | \$10.54  | \$10.54  | \$1.79  |
| Job A<br>(Company A) | Flat Sum<br>Bonus<br>Overtime<br>Premium | 2023-05-01<br>to<br>2023-05-07 |       | \$3.75   | \$3.75   | \$1.79  |
| Job A<br>(Company A) | Overtime<br>Premium                      | 2023-05-01<br>to<br>2023-05-07 |       | -\$12.50 | -\$12.50 | \$1.79  |

• **Calculations for Gross-to-net 2 for Job B (Company B):**

|                                |                                                                                                                                                                                                                                                                                                                                                                     |
|--------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| FLSA Eligible Wages and Hours: | <ul style="list-style-type: none"> <li>Job A (Company A): 8 regular hours (1x) @ \$25.00 per hour = \$200.00</li> <li>Job A (Company A): 1 overtime hour (1x) @ \$25.00 per hour = \$25.00</li> <li>Job B (Company B): 32 regular hours (1x) @ \$20.00 per hour = \$640.00</li> <li>Job B (Company B): 1 overtime hour (1x) @ \$20.00 per hour = \$20.00</li> </ul> |
|--------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

|                                                                                                     |                                                                                                                                                                                                                                                                               |
|-----------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| FLSA Overtime Calculation:                                                                          | <ul style="list-style-type: none"> <li>FLSA rate = \$885.00 (total wages from both companies) divided by 42 (total hours from both companies) = \$21.071</li> <li>FLSA Premium Rate = \$21.071 * 0.5 = \$10.535</li> </ul>                                                    |
| Total Overtime due to the Worker:                                                                   | <ul style="list-style-type: none"> <li>Job A company A: Premium adjustment only - \$10.54 (new FLSA Premium rate) – \$12.50 (premium rate from GTN1) = -\$1.96 (negative)</li> <li>Job B company B: \$20.00 (1x) + \$10.54 (Premium) = \$30.54</li> </ul>                     |
| Flat Sum Bonus Eligible Hours                                                                       | <ul style="list-style-type: none"> <li>Company A and Company B total regular hours = 40</li> <li>Company A and Company B total overtime hours = 2</li> </ul>                                                                                                                  |
| Overtime Premium Rate: Both Flat sum bonus amount /Number of regular hours in the pay period) x 1.5 | <ul style="list-style-type: none"> <li><math>(\\$200 / 40) * 1.50 = \\$7.50</math> that will be applied to Job B (Company B)</li> <li><math>\\$7.50 - \\$3.75</math> (Flat sum bonus rate from GTN1) = \$3.75 difference that will be applied to Job A (Company A)</li> </ul> |

### Concept: FLSA Calculation Impacts When Workers Move Companies (USA)

Workday processes FLSA for workers that move companies the same regardless of whether the companies are in an FLSA relationship or not. When a worker moves from 1 company to another and you pay a bonus with start and end dates to the current job with the coverage dates going back to the prior company, Workday pays the bonus and adjusts the overtime only to the current designated company. If you target the bonus to the prior company, you should process retro with accurate start and end dates as well as coverage dates for the company.

**Example 1:** Paying an FLSA bonus with coverage dates targeted to the current and prior company.

Sam works in Job A (Company A), gets paid 40 hours regular and 1 hour of overtime, for pay period 1 (2023-05-01 to 2023-05-07). They move to Job B (Company B) during pay period 2 (2023-05-08 to 2023-05-14); get paid 40 hours regular, 1 hour of overtime, and an FLSA bonus with coverage dates 2023-05-01 to 2023-05-14. Workday:

- Pays the bonus amount based on the allocation rules set on the earnings code.
- Adds the bonus amount only to the FLSA wages of the current company (pay period 2). This impacts overtime premiums only for the current company.

Use retro or prior period on-demand additional processing, when you need to pay a bonus back to the prior company.

**Example 2:** Paying an FLSA bonus with coverage dates targeted only to the prior company.

Sam works in Job A (Company A), gets paid 40 hours regular and 1 hour of overtime, for pay period 1 (2023-05-01 to 2023-05-07). They move to Job B (Company B) during pay period 2 (2023-05-08 to 2023-05-14), get paid 40 hours regular, 1 hour of overtime, and an FLSA bonus with coverage dates 2023-05-01 to 2023-05-07. Workday:

- Pays the bonus amount based on the allocation rules set on the earnings code.
- Adds the bonus amount only to the FLSA wages of the current company (pay period 2). The bonus is considered a non-FLSA bonus. The worker wasn't working in Job B (Company B) during pay period 1 (2023-05-01 to 2023-05-07) so there are no FLSA earnings to calculate.

Use retro or prior period on-demand additional processing, when you need to pay a bonus back to the prior company.

**Example 3:** Paying FLSA bonus when moving midperiod

Sam works in Job A (Company A), gets paid 40 hours regular and 1 hour of overtime, for pay period 1 (2023-05-01 to 2023-05-07). They move to Job B (Company B) during pay period 2 (2023-05-08 to 2023-05-14). For pay period 2, they get paid 40 hours regular, 1 hour of overtime, and an FLSA bonus with coverage dates 2023-05-01 to 2023-05-07. Workday:

- Allocates bonus to the FLSA week belonging to Company B where the worker moved to the new company midperiod.
- Pays the bonus amount based on the allocation rules set on the earnings code.
- Adds the bonus amount only to the FLSA wages for the current company (pay period 2). This impact the overtime premiums only for the current company.

Use retro or prior period on-demand additional processing, when you need to pay a bonus back to the prior company.

## Concept: Flat Sum Bonus Calculation Impacts When Workers Move Companies (USA)

Flat Sum Bonus is based on coverage dates regardless of a worker's position, job, or company. Coverage dates determine how the bonus and regular hours are considered for Flat Sum Bonus calculations.

If a worker moves from 1 company to another and the companies are in an FLSA relationship:

|                                                                                                                 |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|-----------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

## Flat Sum Bonuses (USA)

### Setup Considerations: Flat Sum Bonuses (USA)

You can use this topic to help make decisions when planning your configuration and use of Workday flat sum bonus functionality. It explains:

- Why to set it up.
- How it fits into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

#### What It Is

Workday developed flat sum bonus functionality in response to a California Supreme Court ruling (*Alvarado v. Dart Container Corporation*) which addressed the method employers in California should use to calculate the bonus overtime premium when a worker receives a flat sum bonus. The method outlined by the California Supreme Court is different from the method used to calculate bonus overtime premium under the federal Fair Labor Standards Act (FLSA).

If your state doesn't require special calculation of flat sum bonus overtime premiums, you don't need to set up this functionality. You would continue to use the existing FLSA functionality.

#### Business Benefits

Configuration of flat sum bonus functionality helps you be compliant with California overtime rules for hourly workers.

#### Use Cases

To reduce compliance risk and manual entries, you can set up a flat sum bonus earning to use special state rules.

#### Questions to Consider

| Question                                         | Considerations                                                                                                                                                                                                                                                                                                                                                                                                |
|--------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Have you implemented Workday FLSA functionality? | <p>Flat sum bonus functionality requires FLSA functionality. That is, the calculation uses FLSA work period calendar rules and work period calendars.</p> <p>If you have an existing FLSA earnings code, you can update the earning to include flat sum bonus. Workday then looks at the employee's work state to determine whether to pay the bonus overtime premium using FLSA or flat sum bonus rules.</p> |

| Question                                     | Considerations                                                                                                                                                                                                                                                                                                                         |
|----------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| How do your employees report overtime hours? | <p>You can report regular and overtime hours for a flat sum bonus either by:</p> <ul style="list-style-type: none"> <li>• Day using pay input or Workday Time Tracking.</li> <li>• Week by aggregating hours and aligning your coverage dates with an FLSA workweek.</li> </ul> <p>These 2 ways are the only ways to be compliant.</p> |

### Recommendations

Create separate earnings for regular time and overtime hours. This configuration enables you to display straight time overtime and overtime premium as separate rates in pay results.

When you need to update an flat sum bonus pay component after you've completed your payroll results; Workday recommends that you create a new effective-dated snapshot and:

- Don't edit the exiting effective-dated snapshot for the flat sum bonus earning.
- Don't add or remove the non-effective dated flat sum bonus pay component groups for the earning.

### Requirements

- Either Workday Time Tracking or a third-party time tracking application that has the ability to calculate period-based overtime.
- Pay input must be one-time, not ongoing, and include start and end dates.
- A flat sum bonus entered by pay input must have a single direct amount entry. Don't enter a value for any PCRC (except for the Workday-owned Net for Gross-Up PCRC, where applicable). The entry of a PCRC causes the input to revert and processes as a standard earning without any flat sum bonus-specific functionality.

### Limitations

The Workday flat sum bonus overtime functionality:

- Works going forward after setup. You can't run retro on a period before it was set up.
- Is for hourly workers only.
- Only validates that the worker has a flat sum bonus and has overtime. It doesn't validate whether a worker is exempt or nonexempt.
- Doesn't support adjusting regular hours on an on-demand payment for a previously paid flat sum bonus. Adjusting regular hours won't create an overtime adjustment to the overtime premium caused by the flat sum bonus.
- Requires you to complete on cycle pay results before an on-demand additional payment for a flat sum bonus for the same period can resolve. A flat sum bonus paid as on demand additional only resolves the overtime premium for completed payroll results.
- Doesn't count paid time off entered through Absence Management as worked hours.
- Doesn't support Tax Location Mapping (TLM) or hours adjusted by TLM.
- Doesn't support the automatic adjustment of overtime premium caused by a previously paid flat sum bonus when regular hours are subsequently added or adjusted within its coverage period.

The Workday flat sum bonus earnings code:

- Can't be future-dated.
- Doesn't enable you to pay a Flat Sum Bonus through Workday Time Tracking.
- Requires you to pay using pay input or one-time payments.
- Doesn't prorate.

Workday doesn't support this use case:

1. In pay period 1, you pay the worker regular and overtime hours in an on-cycle payment. You run and complete payroll.
2. In pay period 2, you pay the worker for the regular and overtime hours worked. You include a flat sum bonus with coverage dates that cover pay periods 1 and 2. You run and complete payroll.
3. You use pay input to enter additional overtime hours for pay period 1. You run and complete this payment as a prior period on-demand additional payment.

Since you paid the flat sum bonus in pay period 2, Workday doesn't adjust the overtime premium for pay period 1.

### Tenant Setup

When you report an aggregate number of hours for the workweek and you don't align the coverage dates with the FLSA workweek, Workday automatically:

- Extends the coverage dates to include the FLSA workweek, capturing all regular hours in the FLSA workweek.
- Calculates the overtime premium.
- Applies that premium to all overtime hours in the extended period.

If you don't want Workday to extend the coverage dates, you can select the **Disable FLSA Period Alignment for Flat Sum Bonus Coverage Date** check box on the **Edit Tenant Setup - Payroll** task. When you disable FLSA period alignment, Workday:

- Still refers to FLSA workweeks.
- Disregards all hours that aren't part of a full FLSA week based upon coverage dates.

In the overtime premium calculation for the bonus, Workday doesn't include hours that fall outside the coverage dates that are within the FLSA week.

### Connections and Touchpoints

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships in your tenant. Learn more about the [Workday Touchpoints Kit](#) on Workday Community.

## Concept: Overtime Payments for Flat Sum Bonuses (USA)

California calculates the rate of the bonus overtime premium for flat sum bonuses differently from the method prescribed by the federal Fair Labor Standards Act (FLSA).

You can create 2 types of flat sum bonus overtime earnings. The difference between them is how Workday displays the overtime rates on payslips. When you combine the overtime regular hours and overtime premium hours into 1 earning, Workday displays an aggregated overtime rate. Workday displays rates separately when you use separate earnings for:

- Regular overtime hours.
- Hours that earn the overtime premium rate.

Workday calculates overtime premium rates and processes flat sum bonuses when you:

- Configure Workday for the flat sum bonus functionality.
- Report regular and overtime hours by day using pay input or Workday Time Tracking.
- Report aggregated hours using pay input and align your coverage dates with an FLSA workweek.
- Enter bonus coverage dates using pay input or a one-time payment configured to use coverage dates.

### Requirements

To calculate flat sum bonus overtime, you must configure:

- FLSA work period calendar rules.
- FLSA work period calendars.
- Configure earnings to support the flat sum bonus calculation.

Workday uses submitted payroll input or approved time blocks to calculate the flat sum bonus overtime premium. When you submit payroll input or approved time blocks in error, correct the error in the original source. Example: A worker submits a time block through Time Tracking and it's approved. However, the worker didn't actually work the time. You correct the error in Time Tracking.

Provide coverage dates. If you do, Workday calculates the flat sum bonus using California flat sum bonus rules. If you don't, when you set up the bonus as:

- A stand-alone flat sum bonus earning without FLSA configured, the bonus has no overtime premium impact.
- A combination of both FLSA and flat sum bonus, Workday adds the flat sum bonus to FLSA wages. It's added because it's a member of the *FLSA Wages* pay component group.

#### Example: Flat Sum Bonus Calculation

In 1 pay period, Catherine works 40 regular and 10 overtime hours, and receives a 50 USD flat sum bonus. Her regular pay rate is 20USD/hour. Her pay for the week is 1 118.75 USD, calculated as:

| Calculation                                                                                        | Example                          |
|----------------------------------------------------------------------------------------------------|----------------------------------|
| Base pay for the 40-hour week<br><br>The regular rate x the number of regular hours.               | 20 USD x 40 = 800 USD            |
| Overtime rate<br>Regular rate x 1.5.                                                               | 20 USD x 1.5 = 30 USD            |
| Overtime pay<br>Overtime rate x number of overtime hours.                                          | 30 USD x 10 = 300 USD            |
| Overtime premium rate<br>(Flat sum bonus amount /Number of regular hours in the pay period) x 1.5. | (50 USD / 40) x 1.5 = 1.875 USD  |
| Overtime premium<br>Overtime premium rate x number of overtime hours.                              | 1.875 USD x 10 hours = 18.75 USD |
| Pay for regular hours<br>+ Pay for overtime                                                        | 800 + 300 + 18.75 = 1,118.75 USD |

| Calculation                     | Example |
|---------------------------------|---------|
| hours + bonus overtime premium. |         |

### Overtime Earnings Impacted by a Flat Sum Bonus

You can create 2 types of overtime earnings with impact to flat sum bonus overtime premium. The difference between them is how Workday displays the overtime rates on payslips:

| Earnings                                                                                                                                 | Impact                                                                               | Action                                                                               |
|------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------|
| Create a combined overtime earning.                                                                                                      | The straight time of overtime and the overtime premium display as 1 aggregated rate. | Modify your existing FLSA combined overtime earning.                                 |
| Create separate earnings for the: <ul style="list-style-type: none"> <li>Regular time of overtime.</li> <li>Overtime premium.</li> </ul> | The straight time of overtime and the overtime premium display as separate rates.    | Modify your FLSA overtime premium earning to support the flat sum bonus calculation. |

### Reporting Daily Hours with Coverage Dates that Align with the FLSA Workweek

Ideally, you report actual hours worked for each day in the FLSA workweek and align the coverage dates with the FLSA workweek. Workday calculates the bonus overtime premium based on all regular hours worked within the workweek. Workday reports the coverage dates on payslips.

### Reporting Aggregated Hours with Coverage Dates that Align with the FLSA Workweek

If you're not able to report actual daily hours, you can report an aggregate number of hours for the workweek and align the coverage dates with the FLSA workweek. Workday calculates the bonus overtime premium based on all regular hours worked within the workweek. Workday reports the coverage dates Workday used in the calculation on payslips.

### Reporting Aggregated Hours with Coverage Dates that Don't Align with the FLSA Workweek

When you report an aggregate number of hours for the workweek and you don't align the coverage dates with the FLSA workweek, Workday automatically:

- Extends the coverage dates to include the FLSA workweek, capturing all regular hours in the FLSA workweek.

- Calculates the bonus overtime premium.
- Applies that premium to all overtime hours in the extended period.
- Workday automatically considers all pay-component related calculations (PCRCs) on a flat sum bonus overtime earning to be aggregate when even 1 PCRC on the earning has the Aggregate check box selected.

If you don't want Workday to extend the coverage dates, you can select the **Disable FLSA Period Alignment for Flat Sum Bonus Coverage Date** check box on the **Edit Tenant Setup - Payroll** task. When you disable FLSA period alignment, Workday doesn't include hours that fall outside the coverage dates within the FLSA week in the overtime premium calculation for the bonus. When using Disable FLSA Period Alignment for Flat Sum Bonus Coverage Date feature the aggregate check box must be selected on the hours PCRC for all FLSA earnings code.

Workday still refers to FLSA workweeks and disregards all hours that aren't part of a full FLSA week based upon coverage dates.

Example: You enter a flat sum bonus with coverage dates 1 - 30. You select the **Disable FLSA Period Alignment for Flat Sum Bonus Coverage Date** check box on the **Edit Tenant Setup-Payroll** task. Therefore, Workday doesn't extend the coverage dates to include the hours for days outside an FLSA work period. In this case, the first and last weeks of the month aren't complete FLSA work periods. Workday ignores them and those hours aren't included in the flat sum bonus overtime premium calculation.

| Sunday | Monday | Tuesday | Wednesday | Thursday | Friday | Saturday |
|--------|--------|---------|-----------|----------|--------|----------|
|        |        |         | 1         | 2        | 3      | 4        |
| 5      | 6      | 7       | 8         | 9        | 10     | 11       |
| 12     | 13     | 14      | 15        | 16       | 17     | 18       |
| 19     | 20     | 21      | 22        | 23       | 24     | 25       |
| 26     | 27     | 28      | 29        | 30       |        |          |

## Multi-Jurisdiction Considerations

When you have a mobile workforce with workers who move from 1 tax jurisdiction to another during a work period, Workday uses these factors to calculate which rules to apply when calculating the overtime premium:

- Gross-to-net end date.
- Coverage dates.
- Tax authority exceptions.

When you pay a flat sum bonus for a mobile workforce, Workday uses the end date of the last gross-to-net within the coverage period to calculate the overtime premium.

Examples:

| <b>Jurisdiction Change</b> | <b>Ongoing Multiple Work Jurisdictions (OMWJ) Configured</b> | <b>Coverage Dates</b>                                    | <b>Calculation</b>                                                                                                  |
|----------------------------|--------------------------------------------------------------|----------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------|
| CA to AZ                   | No                                                           | Coverage dates fall within the first gross-to-net.       | Workday calculates the bonus overtime premium using only the hours in the first subperiod.                          |
| CA to AZ                   | No                                                           | Gross-to-Net end date falls within the second subperiod. | No flat sum bonus overtime premium.                                                                                 |
| CA                         | Yes                                                          | Gross-to-Net end date falls within the second subperiod. | California rules are used to calculate the bonus overtime premium. Workday ignores the subperiod end date for OMWJ. |

Tax authority overrides on hours don't impact flat sum bonus overtime premium calculations. Flat sum bonus functionality is managed at the worker level. When a worker is eligible, all worked hours are considered in the overtime premium calculation, regardless of jurisdiction.

If a worker has a retroactive bonus, or a bonus with previous coverage dates, Workday uses the FLSA or flat sum bonus rules of the state the worker is currently in. You can pay the bonus using prior state rules. Target the bonus overtime premium dates to the prior period and override the state worktag. Example: A worker moves from CA to AZ with a

gross-to-net end date falling within the second FLSA subperiod. You edit the bonus to target the coverage dates to the first subperiod. You override the state worktag to CA. Workday now calculates bonus overtime premium using flat sum bonus rules.

## Steps: Set Up Overtime Payments for Flat Sum Bonuses (USA)

### Context

You can configure Workday to process flat sum bonuses according to tax authority regulations.

### Steps

1. Edit your regular hourly earning to support a flat sum bonus.  
Access the **Edit Earning** task. Add the *Flat Sum Bonus Regular Hours [USA]* pay component group to the **Groups** column for the **Hours** row in the **Related Calculations** grid.  
Do this for all regular earnings.
2. [Add a Flat Sum Bonus to an Existing Bonus Earning \(USA\)](#) on page 1005.  
Create a flat sum bonus earning by itself or combine it with your existing FLSA bonus earning.
3. [Define Exceptions for a Flat Sum Bonus \(USA\)](#) on page 1005.  
Identify exceptions for processing the flat sum bonus earning.
4. Edit overtime earnings to include a flat sum bonus.  
These examples illustrate how to update your FLSA overtime earnings to include flat sum bonus overtime premium impact:
  - [Example: Modify an Overtime plus Overtime Premium Earning to Support Flat Sum Bonuses \(USA\)](#) on page 1007.
  - [Example: Modify an Overtime Premium Earning to Support Flat Sum Bonuses \(USA\)](#) on page 1009.
5. Access the **Maintain Payroll Payslip Configuration** task.  
On the **Sections** tab, select your flat sum bonus overtime premium rate calculation from the **Related Calculation(s) 2** prompt.  
Access the **Printing** tab and select the **Breakout FLSA Earnings by Workweek on Payslip** check box.  
Security: *Set Up: Payroll (Reporting)* domain in the Core Payroll functional area.
6. Access the **Edit One-Time Payment Plan** task.  
Select an **Effective Date** that is today or in the future.  
Select the **Enable Coverage Dates** check box.  
Security: *Set Up: Compensation Elements* domain in the Core Compensation functional area.
7. Review flat sum bonus payroll results and calculation details.  
See [Concept: Flat Sum Bonus Payroll Results \(USA\)](#) on page 1006.

### Result

Workday supports flat sum bonus overtime premium calculations when you:

- Report time daily.
- Report time as an aggregate number of hours for a period that aligns with an FLSA workweek.
- Enter coverage dates when paying a flat sum bonus.

**Add a Flat Sum Bonus to an Existing Bonus Earning (USA)****Prerequisites**

- Security: *Set Up: Payroll (Calculations - Payroll Specific)* domain in the Core Payroll functional area.

**Context**

You can edit an existing bonus earning or create a new flat sum bonus earning. This topic provides instructions for editing your existing bonus earning.

**Steps**

1. Access the **Edit Earning** task.
2. Select your bonus earning.
3. Add an **Effective Date** that is today or in the future.
4. Select the **Subject to State Rules for Flat Sum Bonus** check box in the **FLSA** section.
5. Select the **Allow Coverage Dates for Bonuses** check box in the **Coverage Dates** section.

**Related Information****Tasks**

[Steps: Create Earnings](#) on page 222

**Define Exceptions for a Flat Sum Bonus (USA)****Prerequisites**

Security: *Set Up: Payroll (Calculations - Payroll Specific)* domain in the Core Payroll functional area.

**Context**

In certain states, receipt of a flat sum bonus impacts the rate paid to workers for overtime. You can configure Workday to apply *Flat Sum Bonus Rules [USA]* when calculating a flat sum bonus for those states.

**Steps**

1. Access the **Maintain Tax Authority Exceptions Pay Component Groups** task.
2. Select the *Flat Sum Bonus Rules [USA]* pay component group.
3. On the **Exceptions for Flat Sum Bonus** tab, add a row and enter these values:

| Option                         | Description                                                                                              |
|--------------------------------|----------------------------------------------------------------------------------------------------------|
| <b>Payroll State Authority</b> | Example: <i>California</i>                                                                               |
| <b>Flat Sum Bonus Earning</b>  | Select the earning you want to use to calculate a flat sum bonus. Example: <i>Flat Sum Bonus [USA]</i> . |

## Result

Example: When a California worker receives a flat sum bonus, Workday calculates the earning and overtime using California state rules.

## Next Steps

To verify that Workday will use the rule, view **Exceptions for Flat Sum Bonus** in the Groups section of the **Non-Effective Dated** tab of the earning.

## Concept: Flat Sum Bonus Payroll Results (USA)

### The Flat Sum Bonus Premium Tab

The Flat Sum Bonus Premium tab on pay results displays when you calculated a bonus using the *Flat Sum Bonus Rules* pay component group. You can use this information to gain insight into how the overtime premium was calculated and to reconcile issues:

- **Flat Sum Bonus**
- **Bonus Amount**
- **Position**
- **Coverage Dates**
- **Extended Coverage Dates**
- **Total Regular Hours**
- **Worked Hours Not Paid**
- **Rate**

**Extended Coverage Dates** only displays when you're passing aggregated hours and:

- The **Disable FLSA Period Alignment for Flat Sum Bonus Coverage Date** check box on the **Edit Tenant Setup – Payroll** task is clear.
- You haven't aligned your flat sum bonus with an FLSA workweek.

**Worked Hours Not Paid** only displays when regular hours:

- Were reported as worked and were therefore included in the flat sum bonus rate calculation.
- Don't appear to be paid on the **Gross to Net** tab.

When you calculate and complete payroll for a Flat Sum Bonus worker with an FLSA company relationship, Workday displays these sections on the payroll result of the **Flat Sum Bonus Premium** tab:

- **Contributed Regular Hours**
- **Impacted Premium Earnings**

Workday also displays these columns on the **Contributed Regular Hours** and **Impacted Premium Earnings** sections:

- **Earnings**
- **Start Date - End Date**
- **Company**
- **Worktag**
- **Hours**

The Flat Sum Bonus Premium tab is visible on a payroll result only when there's an Flat Sum Bonus Pay Input

## Example: Modify an Overtime plus Overtime Premium Earning to Support Flat Sum Bonuses (USA)

This example illustrates 1 way to modify an existing FLSA earning that calculates overtime plus overtime premium to include a flat sum bonus.

### Context

You want to set up an overtime earning that calculates pay for overtime hours for both the regular rate and the overtime premium rate.

### Prerequisites

Set up FLSA in your tenant, including:

- *FLSA Calendar Rules*
- *FLSA Calendars*

Set up earnings for:

- Bonus.
- FLSA Straight Time of Overtime + Overtime Premium.
- Regular hours.

Security:

- *Run Batch Calculations* in the Core Payroll Functional area.
- *Set Up: Payroll (Calculations - Payroll Specific)* in the Core Payroll functional area.
- *Set Up: Payroll (FLSA) - USA* domain in the USA Payroll functional area.

### Steps

1. Access the **Create Arithmetic Calculation** task.
2. Enter these values:

| Option             | Description                                                            |
|--------------------|------------------------------------------------------------------------|
| <b>Name</b>        | Flat Sum Bonus Premium Rate * 1.5                                      |
| <b>Category</b>    | <i>Payroll</i>                                                         |
| <b>1st Operand</b> | <i>Aggregated Flat Sum Bonus Supplemental Rate</i>                     |
| <b>Operator</b>    | <i>Multiply</i>                                                        |
| <b>2nd Operand</b> | <i>By Category &gt; Type &gt; Constant Value Calculation &gt; 1.5.</i> |
| <b>Rounding</b>    | <i>Round to nearest 0.01</i>                                           |

3. Access the **Create Related Calculation** task.
4. Enter these values:

| Option          | Description                    |
|-----------------|--------------------------------|
| <b>Name</b>     | Flat Sum Bonus OT Premium Rate |
| <b>Code</b>     | FSBOT                          |
| <b>Category</b> | <i>Payroll</i>                 |

| Option        | Description                              |
|---------------|------------------------------------------|
| Default Value | <i>Flat Sum Bonus Premium Rate * 1.5</i> |
| Proration     | <i>None of the above</i>                 |

5. Access the **Create Arithmetic Calculation** task.

6. Enter these values:

| Option      | Description                                         |
|-------------|-----------------------------------------------------|
| Name        | Hours (unprorated) * Flat Sum Bonus OT Premium Rate |
| Category    | <i>Payroll</i>                                      |
| 1st Operand | <i>Hours (unprorated)</i>                           |
| Operator    | <i>Multiply</i>                                     |
| 2nd Operand | <i>Flat Sum Bonus OT Premium Rate</i>               |

7. Access the **Create Related Calculation** task.

8. Enter these values:

| Option        | Description                                                |
|---------------|------------------------------------------------------------|
| Name          | Flat Sum Bonus OT Premium Amount                           |
| Code          | FSBOTAMT                                                   |
| Category      | <i>Payroll</i>                                             |
| Default Value | <i>Hours (unprorated) * Flat Sum Bonus OT Premium Rate</i> |
| Proration     | <i>None of the above</i>                                   |

9. Access the **Create Arithmetic Calculation** task.

10. Enter these values:

| Option      | Description                                                                |
|-------------|----------------------------------------------------------------------------|
| Name        | FLSA - Straight Time of OT + OT Premium + Flat Sum Bonus OT Premium Amount |
| Category    | <i>Payroll</i>                                                             |
| 1st Operand | <i>FLSA - Straight Time of OT + OT Premium</i>                             |
| Operator    | <i>Add</i>                                                                 |
| 2nd Operand | <i>Flat Sum Bonus OT Premium Amount</i>                                    |

11. Access the **Edit Earning** task.

12. Select your existing earning that calculates FLSA straight time of overtime plus the overtime premium.

13. Select a date that is today or later from the **Add New Effective Date** calendar prompt.

14. Select *FLSA - Straight Time of OT + OT Premium + Flat Sum Bonus Premium Amount* in the **Calculation** section.

15. Locate the **Hours (unprorated)** row in the **Related Calculations** grid and ensure that the **Aggregate** check box isn't selected.

When you record daily hours for workers, the **Aggregate** check box shouldn't be selected. However, when you provide weekly aggregated hours, select the **Aggregate** check box and align coverage dates with an FLSA workweek. These are the only ways to be compliant.

**Note:** When any overtime earnings exist that are configured to support flat sum bonus premiums and those earnings have any PCRCs marked as **Aggregate**, Workday automatically aligns all flat sum bonus coverage dates to FLSA work period boundaries.

16. Add a row to the bottom **Related Calculations** grid.

17. Enter these values:

| Option                                                          | Description                                                       |
|-----------------------------------------------------------------|-------------------------------------------------------------------|
| <b>Related Calculation</b>                                      | <i>Flat Sum Bonus OT Premium Rate</i>                             |
| <b>FLSA Premium Calculation Type</b>                            | <i>Flat Sum Bonus Premium Rate</i>                                |
| <b>Do Not Store / Do Not Store if Zero</b>                      | <b>None of the above</b>                                          |
| <b>Display Current / Current and Balances</b>                   | <i>Display Current</i> (displays the premium rate in pay result). |
| <b>Do Not Apply Percentage Splits / Apply Percentage Splits</b> | <i>Do Not Apply Percentage Splits</i>                             |

18. Add another row to the **Related Calculations** grid and enter these values:

| Option                                                          | Description                                                       |
|-----------------------------------------------------------------|-------------------------------------------------------------------|
| <b>Related Calculation</b>                                      | <i>Flat Sum Bonus OT Premium Amount</i>                           |
| <b>Do Not Store / Do Not Store if Zero</b>                      | <b>None of the above</b>                                          |
| <b>Display Current / Current and Balances</b>                   | <i>Display Current</i> (displays the premium rate in pay results) |
| <b>Do Not Apply Percentage Splits / Apply Percentage Splits</b> | <i>Do Not Apply Percentage Splits</i>                             |

## Result

Workday calculates pay for overtime hours for both the regular rate and the overtime premium rate according to applicable state rules.

## Next Steps

Duplicate these steps to create a double-time earning, replacing 1.5 with 2.0.

## Example: Modify an Overtime Premium Earning to Support Flat Sum Bonuses (USA)

This example illustrates 1 way to modify your existing FLSA overtime premium earning to include the flat sum bonus overtime premium.

## Context

You want to modify your FLSA overtime premium earning to include the overtime premium for a flat sum bonus. The earning requires specific calculations, so Matt creates them before selecting them in the earning.

## Prerequisites

Set up FLSA in your tenant, including:

- *FLSA Calendars*
- *FLSA Calendar Rules*
- FLSA overtime premium rate earning

Security:

- *Process: Run Batch Calculations* in the Core Payroll Functional area.
- *Set Up: Payroll (Calculations - Payroll Specific)* in the Core Payroll functional area.
- *Set Up: Payroll (FLSA) - USA* domain in the USA Payroll functional area.

## Steps

1. Access the **Create Arithmetic Calculation** task.
2. Enter these values:

| Option             | Description                                        |
|--------------------|----------------------------------------------------|
| <b>Name</b>        | Flat Sum Bonus OT Premium Rate * 1.5               |
| <b>Category</b>    | <i>Payroll</i>                                     |
| <b>1st Operand</b> | <i>Aggregated Flat Sum Bonus Supplemental Rate</i> |
| <b>Operator</b>    | <i>Multiply</i>                                    |
| <b>2nd Operand</b> | 1.5                                                |
| <b>Rounding</b>    | <i>Round to the nearest 0.01</i>                   |

3. Access the **Create Related Calculation** task.
4. Enter these values:

| Option               | Description                                 |
|----------------------|---------------------------------------------|
| <b>Name</b>          | Flat Sum Bonus OT Premium Rate              |
| <b>Code</b>          | FSBOT                                       |
| <b>Category</b>      | <i>Payroll</i>                              |
| <b>Default Value</b> | <i>Flat Sum Bonus OT Premium Rate * 1.5</i> |
| <b>Proration</b>     | <b>None of the above</b>                    |

5. Access the **Create Arithmetic Calculation** task.
6. Enter these values:

| Option             | Description                                       |
|--------------------|---------------------------------------------------|
| <b>Name</b>        | Hours Unprorated * Flat Sum Bonus OT Premium Rate |
| <b>Category</b>    | <i>Payroll</i>                                    |
| <b>1st Operand</b> | <i>Hours (unprorated)</i>                         |
| <b>Operator</b>    | <i>Multiply</i>                                   |
| <b>2nd Operand</b> | <i>Flat Sum Bonus OT Premium Rate</i>             |

7. Access the **Create Related Calculation** task.

8. Enter these values:

| Option        | Description                                                |
|---------------|------------------------------------------------------------|
| Name          | Flat Sum Bonus OT Premium Amount                           |
| Code          | FSBOTAMT                                                   |
| Category      | <i>Payroll</i>                                             |
| Default Value | <i>Hours (unprorated) * Flat Sum Bonus OT Premium Rate</i> |
| Proration     | <b>None of the above</b>                                   |

9. Access the **Create Arithmetic Calculation** task.

10. Enter these values:

| Option      | Description                             |
|-------------|-----------------------------------------|
| Name        | FLSA OT + FSB OT Premium                |
| Category    | <i>Payroll</i>                          |
| 1st Operand | <i>Hours * Overtime Rate</i>            |
| Operator    | <i>Add</i>                              |
| 2nd Operand | <i>Flat Sum Bonus OT Premium Amount</i> |

11. Access the **Edit Earning** task.

12. Select your FLSA overtime premium earning.

13. In the **Add New Effective Date** calendar prompt, select today or later.

14. Select *FLSA OT + FSB OT Premium* from the prompt in the **Calculation** field.

15. In the *Hours (unprorated)* row of the **Related Calculations** grid, clear the **Aggregate** check box.

When you record daily hours for workers, the **Aggregate** check box shouldn't be selected. However, when you provide weekly aggregated hours, select the **Aggregate** check box and align coverage dates with an FLSA workweek. These are the only ways to be compliant.

Even if you report daily hours, when you include an Override Calculation on the Hours pay component related calculation to generate the number of hours based on straight time hours, Workday aggregates the hours in the workweek to calculate the flat sum bonus overtime premium. You must line up the bonus coverage dates with the FLSA workweek to be compliant.

**Note:** When any overtime earnings exist that are configured to support flat sum bonus premiums and those earnings have any PCRCs marked as **Aggregate**, Workday automatically aligns all flat sum bonus coverage dates to FLSA work period boundaries.

16. Add a row in the **Related Calculations** grid.

17. Enter these values:

| Option                                                  | Description                                                       |
|---------------------------------------------------------|-------------------------------------------------------------------|
| Related Calculation                                     | <i>Flat Sum Bonus OT Premium Rate</i>                             |
| FLSA Premium Calculation Type                           | <i>Flat Sum Bonus Premium Rate</i>                                |
| Do Not Store / Do Not Store if Zero                     | <b>None of the above</b>                                          |
| Display Current / Current and Balances                  | <i>Display Current</i> (displays the premium rate in pay results) |
| Override Related Calculation for Multiple Jurisdictions | <b>Do Not Apply Percentage Splits</b>                             |

18. Add another row in the **Related Calculations** grid.

19. Enter these values:

| Option                                                  | Description                                                       |
|---------------------------------------------------------|-------------------------------------------------------------------|
| Related Calculation                                     | <i>Flat Sum Bonus OT Premium Amount</i>                           |
| Do Not Store / Do Not Store if Zero                     | <b>None of the above</b>                                          |
| Display Current / Current and Balances                  | <i>Display Current</i> (displays the premium rate in pay results) |
| Override Related Calculation for Multiple Jurisdictions | <b>Do Not Apply Percentage Splits</b>                             |

### Result

Workday calculates the overtime premium rate for hours worked according to applicable state rules.

### Next Steps

Duplicate these steps to create a double-time earning, replacing 1.5 with 2.0.

## Third-Party Sick Pay (USA)

---

### Steps: Process Third-Party Sick Pay (USA)

#### Context

You can set up third-party sick pay when an outside party, such as an insurance company, pays an employee who is unable to work due to illness or disability. Workday enables you to process sick pay when the third party transfers liability for employer taxes to your company. You can process it for either of these scenarios:

- Your company issues the W-2.
- Third-party issues the W-2.

Workday automatically calculates the employer taxes. Workday creates the W-2s when your company is responsible for issuing them and creates a Third-Party Sick Pay Recap when the third-party issues them.

As with any new procedure, try this in your Sandbox Preview, as you must complete the *manual payment* to create W-2 data.

#### Steps

1. [Set Up W-2 Provider for Third-Party Sick Pay \(USA\)](#) on page 1013

Workday assumes that you provide the W-2 for third-party sick pay. You can accept or override this default.

2. [Create Third-Party Sick Pay Earning \(USA\)](#) on page 1013
3. [Process a Manual Payment for Third-Party Sick Pay \(USA\)](#) on page 1014

#### Next Steps

Review third-party sick pay reports.

**Related Information****Reference**

[Reference: Third-Party Sick Pay Reports \(USA\)](#) on page 1016

**Set Up W-2 Provider for Third-Party Sick Pay (USA)****Prerequisites**

Security: *Set Up: Payroll - Company Specific (Taxes) - USA* domain in USA Payroll functional area.

**Context**

You can set up whether you or the third party provides the W-2s for sick pay. You can enable Workday to display third-party sick pay on payslips, W-2s, and tax filing.

When you process W-2s, Workday produces reports according to this setting. When a third party provides W-2s, Workday creates a **Third Party Sick Pay Recap** report.

**Steps**

1. Access the **Edit Company Federal US Tax Reporting** task.
2. Select the **Third Party Provides W-2 for Sick Pay** check box if you aren't providing the W-2s.  
You can configure multiple start dates for company federal tax reporting, but make sure to carry over any features you want to keep. Example: You select **Third Party Provides W-2 for Sick Pay** to start on 2022-01-01. You later want to set up **Exempt from FUI** to start on 2022-07-01. When you add the second setting, check **Third Party Provides W-2 for Sick Pay** again. Otherwise, this choice reverts to the default, where you provide the W-2 for sick pay.
3. (Optional) Enter the details for these fields, which are required for Form 8922:
  - **Third Party Insurer/Agent Name**
  - **Third Party Tax ID**

**Next Steps**

Create a third-party sick pay earning.

**Related Information****Tasks**

[Set Up Company Federal Taxes \(USA\)](#) on page 1107

**Create Third-Party Sick Pay Earning (USA)****Prerequisites**

Set up who provides the W-2 for third-party sick pay.

Security: *Set Up: Payroll (Calculations - Payroll Specific)* domain in Core Payroll functional area.

**Context**

When a third party transfers liability for employer taxes to you, create an earning to enable tracking these employee wages and taxes through a manual payment.

**Steps**

1. Access the **Create Earning** task.
2. Access the **Effective Dated** tab.
3. In the **Criteria** section, select *Payroll Input Exists for Pay Component* from the **Worker Eligibility** field.

4. In the **Calculation Details** section, enter these settings:

| Option                       | Description                                                        |
|------------------------------|--------------------------------------------------------------------|
| <b>Calculation</b>           | Select <i>Payroll Input</i> .                                      |
| <b>Input Amount Allowed?</b> | Select to enable Workday to record the third-party payment amount. |

5. In the **Groups** field on the **Non-Effective Dated** tab, include the *Third Party Sick Pay* and the *Adds to Gross* pay component groups in addition to any other relevant pay component groups.

### Result

An earning is available to record third-party sick pay as a manual payment.

### Next Steps

Process a manual payment for third-party sick pay.

Map the earning to boxes on year-end forms using the relevant report:

- **View US Territory Year End Form Box Configuration**
- **View W-2 Box Configuration**

### Related Information

[FAQ: Earnings and Deductions](#) on page 260

## Process a Manual Payment for Third-Party Sick Pay (USA)

### Prerequisites

Set up the third-party sick pay earning.

Set up W-2 provider for third-party sick pay.

Security: Process: *Off Cycle (Manual Payment)* domain in the Core Payroll functional area.

### Context

Process a manual payment to record third-party sick pay when the third party withholds employee taxes, and they transfer liability for the employer taxes to you.

### Steps

1. Access the **Run Manual Payment for Worker** task.
2. Select **Third Party Sick Pay**.  
Workday selects the **Create Additional Payment** field automatically.
3. Select the **Period**, **Pay Group Detail**, and **Worker**.
4. From the **Reason** field, select a valid reason, such as *Third Party Sick Pay*.
5. Select a **Sub Period Target Date** and a **Payment Date** within the same year.
6. Enter a valid priority, such as *1* in the **Priority** field.
7. Enter the third-party sick pay amount minus the employee taxes in the **Net Pay** field.

8. In the **Input** section, enter **Gross Wages**, **Subject Wages**, **Taxable Wages**, and **Amount** on separate rows.

| Pay Component                                                          | Worktags                                                                                                   | Type                                                                                                                                                            | Value                                                                             |
|------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------|
| Enter each employee tax and the third-party sick pay on separate rows. | Enter the worktags for state and local tax authorities. Workday enters the federal worktags automatically. | Select: <ul style="list-style-type: none"> <li><i>Gross Wages</i></li> <li><i>Subject Wages</i></li> <li><i>Taxable Wages</i></li> <li><i>Amount</i></li> </ul> | Verify that the third-party payment amount minus the taxes equals the net amount. |

9. Use the **Run Pay Complete** task for the manual payment.

## Result

Workday calculates employer taxes and updates accounting. The journal lines on payroll actuals only reflect employer paid taxes and not employee taxes.

**Note:** Processing third-party sick pay only records worker payments for reporting and accounting. It doesn't generate payments to the workers.

When you don't select the **Third Party Provides W-2 for Sick Pay** field on the **Edit Company Federal US Tax Reporting** task, Workday creates W-2 data for workers with third-party sick pay when you run the **Create W-2 Data** task.

When you select the **Third Party Provides W-2 for Sick Pay** field on the **Edit Company Federal US Tax Reporting** task, Workday displays the **W-2/W-2C Recap Count** when you run the **Create W-2 Data** task.

## Example

Your employee at Global Modern Services, Steve Morgan, received 1000 USD in sick pay from his insurance company. After taxes of 276.50 USD, his net pay is 723.50 USD. The third party is providing the W-2s, but transfers the liability for the taxes to Global Modern Services.

You enter 723.50 USD in the **Net Amount** field for the manual payment and enter the third-party sick pay and tax values in the **Input** section.

| Pay Component                   | Worktags                 | Type          | Value (USD) |
|---------------------------------|--------------------------|---------------|-------------|
| <i>Medicare</i>                 | <i>Federal: Federal</i>  | <i>Amount</i> | 30.00       |
| <i>Federal Withholding</i>      | <i>Federal: Federal</i>  | <i>Amount</i> | 150.00      |
| <i>State Withholding (Work)</i> | <i>State: California</i> | <i>Amount</i> | 50.00       |
| <i>OASDI</i>                    | <i>Federal: Federal</i>  | <i>Amount</i> | 46.50       |
| <i>Third Party Sick Pay</i>     |                          | <i>Amount</i> | 1000        |

The third party provides the W-2s, so Workday:

- Calculates the third-party sick pay employer taxes.
- Displays the **W-2/W-2C Recap Count** on the **Create W-2 Data** task.

If your company provides the W-2s, use the same settings on the manual payment. Only the reports produced change. Example: Workday produces W-2s instead of a recap.

## Reference: Third-Party Sick Pay Reports (USA)

To see how Workday displays W-2 reports for the settings you've selected for your company, run the:

- **Run Pay Complete** task for the third-party sick pay manual payment.
- **Create W-2 Data** task to create the data that Workday displays on the reports.

These tables describe the way Workday displays information about third-party sick pay (3PSP) based on who provides the W-2:

| Worker Report                                                                                                       | You Provide W-2s                                            | Third Party Provides W-2s                                                                    |

### Third-Party Sick Pay Correction Recap - IRS Form 8922

To support the IRS Form 8922, Workday includes these fields in the report:

- *Third Party Insurer / Agent Name.*
- *Third Party Provides Sick Pay W-2.*
- *Third Party Tax ID.*

### Related Information

#### Tasks

[Steps: Process Third-Party Sick Pay \(USA\)](#) on page 1012

[Complete Payroll](#) on page 627

## Tip Wages and Taxes (USA)

### Steps: Set Up Payroll for Tip Wages and Taxes (USA)

#### Context

Set up Workday to:

- Pay tips employees receive through pooled tips or tips added to credit card payments.
- Report taxes paid on tips.

#### Steps

1. [Define Deduction Priorities and Arrears Handling](#) on page 395.
2. [Create Earnings for Tips \(USA\)](#) on page 1018.
3. Employer-controlled tips must be paid as well as reported for taxation. To add tip earnings to the Gross pay accumulation:
  - a) Access the **Edit Pay Accumulation** task and select **Gross**.
  - b) Select *Employer Controlled Tips [USA]* in the **Adds to Pay Accumulation > Pay Component Groups** field.

Security: *Set Up: Payroll (Calculations - Payroll Specific)* domain in the Core Payroll functional area.
4. [Edit Run Categories That Include Employees with Tips \(USA\)](#) on page 1019.

5. (Optional) Configure payslips for tips to have OASDI taxable wages displayed separately.
  - a) Access the **Maintain Payroll Payslip Configuration** task.
  - b) Add the Workday-owned *OASDI Tip Tax [USA] - Taxable Wages* pay component related calculation to the *Subject or Taxable Wages* **Payslip Group**.

Security: *Set Up: Payroll (Reporting)* in the Core Payroll functional area.

## Result

When you run a pay calculation for an employee, the administrative payroll results display:

- The employer-controlled tip wages and associated taxes on the **Gross to Net** tab in the **Others** section.
- The employee-reported tip wages and associated deductions on the **Additional Pay Components** tab in the **Others** section.

The employee payslip displays:

- Employee-reported wages as *OASDI Tip Tax [USA] - Taxable Wages*, when configured.
- Employer-controlled wages and taxes aggregated with other compensation, such as Base Pay.

If there's insufficient Net, Workday reports uncollected taxes in boxes 12A and 12B on the worker's W-2.

## Next Steps

Run payroll.

View payroll results, payslips, and tax filing reports and correct any discrepancies before completing a payroll.

## Create Earnings for Tips (USA)

### Prerequisites

Security: *Set Up: Payroll (Calculations - Payroll Specific)* in the Core Payroll functional area.

### Context

Create earnings to calculate employee-reported and employer-controlled tips.

## Steps

1. Create an earning to calculate employee-reported tip wages.

- Access the **Create Earning** task.
- Enter a name, such as *Employee-Reported Tips*.
- On the **Effective Dated** tab, select *Payroll Input* in the **Calculation** field and select the **Input Amount Allowed?** check box.
- On the **Non-Effective Dated** tab, add the earning *Employee Reported Tips [USA]* in the **Groups** field.

**Note:** Don't use this pay component group for an earning with the pay component group *Employer Controlled Tips [USA]*.

2. Create an earning to calculate employer-controlled tip wages.

- Access the **Create Earning** task.
- Enter a name, such as *Employer-Controlled Tips*.
- On the **Effective Dated** tab, select *Payroll Input* in the **Calculation** field and select **Input Amount Allowed?**. Alternatively, you can create a calculation for pooled tips, such as *Percent x Payroll Input*.
- On the **Non-Effective Dated** tab, add the earning in the **Groups** field.

**Note:** Don't use this pay component group for an earning with the pay component group *Employee Reported Tips [USA]*.

## Result

You can add the groups that include these earnings to pay accumulations, run categories, and payslip configurations.

## Next Steps

Add employer-controlled tips to gross or net pay.

## Related Information

### Tasks

[Define Deduction Priorities and Arrears Handling](#) on page 395

[Steps: Create Earnings](#) on page 222

## Edit Run Categories That Include Employees with Tips (USA)

### Prerequisites

Add employer-controlled tips to gross or net pay.

Security: *Set Up: Payroll - Pay Group Specific* domain in the Core Payroll functional area.

### Context

Add these tips pay component groups (PCGs) to all run categories that pay employees with tips:

- *Employer Controlled Tips [USA]*
- *Employer Reported Tips [USA]*

### Note:

The PCG *Employee Reported Tips* can't be selected when these PCGs are already included for the earning:

- *Employer Controlled Tips [USA]*
- *Federal Taxable (Withhold Taxes) [USA]*

- *FICA Taxable [USA]*
- *Income Code* (any Income Code)
- *Pooled Tips [USA]*

### Steps

1. Access the **General** tab on the **Edit Run Category** task for each run category.
2. Add the pay accumulation that includes the *Employer Controlled Tips [USA]* PCG to **Gross Pay Accumulations** or **Net Pay Accumulations**, so that the tips are paid and taxed.
3. Add the *Employer Reported Tips [USA]* PCG to **Additional Pay Component Groups to Calculate**, so that the tips are reported for taxation.
4. Repeat the process for any other relevant run categories.

### Result

Run categories that include *Employer Controlled Tips [USA]* and *Employer Reported Tips [USA]* are available for payroll processing.

### Next Steps

- Configure payslips for tips.
- Add payroll input for tips.

### Related Information Tasks

[Identify What to Pay in On-Cycle and On-Demand Replacement Pay](#) on page 102

## Concept: Tip Wages and Taxes (USA)

Employees can receive cash tips from customers, which they then report to you for taxation. They can also receive tips through you, such as pooled tips or tips added to credit card payments. You can pay tips to employees along with an on-cycle payroll. Workday processes both employee-reported and employer-controlled tips for tax reporting.

### Tip Earnings

Create 2 earnings to accommodate these situations:

- Employee-reported tips.
- Employer-controlled tips.

Workday doesn't calculate tips as supplemental earnings.

### Tip Tax Deductions

Add these State Withholding Tip Tax deductions using the **Maintain Deduction Priorities** task to properly process state tip taxes:

- *State Withholding Tip Tax (Resident) [USA]*
- *State Withholding Tip Tax (Work) [USA]*
- *Local County Withholding Tip Tax (Resident) [USA]*
- *Local County Withholding Tip Tax (Work) [USA]*

### Tips and Tip Taxes in Payroll Results

When you run a pay calculation for an employee, the administrative payroll results display:

- The employer-controlled tip wages and associated taxes on the **Gross to Net** tab in the **Others** section.
- The employee-reported tip wages and associated deductions on the **Additional Pay Components** tab in the **Others** section.

When configured, the payslip displays:

- Employee-reported wages as *OASDI Tip Tax [USA] - Taxable Wages*.
- Employer-controlled wages and taxes aggregated with other compensation, such as base pay.

Payslips display OASDI wages separately from OASDI tip wages so the employee can tie their payslip to their W-2 form. The payslip aggregates taxes, but displays these OASDI regular wages and tip wages separately:

- *OASDI [USA] - Taxable Wages*
- *OASDI Tip Tax [USA] - Taxable Wages*

Wages:

- *Federal Withholding - Taxable Wages [USA]* = federal + federal tip wages
- *Medicare - Taxable Wages [USA]* = Medicare + Medicare tip wages
- *OASDI [USA] - Taxable Wages*
- *OASDI Tip Tax [USA] - Taxable Wages*

Taxes:

- *Federal Withholding [USA]* = Federal + Federal Tip Tax
- *Medicare [USA]* = Medicare + Medicare Tip Tax
- *OASDI [USA]* = OASDI + OASDI Tip Tax
- *State Withholding Tip Tax (Resident) [USA]*
- *State Withholding Tip Tax (Work) [USA]*
- *County Withholding Tip Tax (Resident) [USA]*
- *County Withholding Tip Tax (Work) [USA]*

## Reports and Web Services

Except for OASDI, Workday combines all taxes and wages in reports and web services.

## Examples: Earnings and Deductions (USA)

### Example: 401(k) Deductions (USA)

#### Example: Define a 401(k) Pre-Tax Deduction (USA)

##### Context

John earns 114,000 USD/year, or 9,500 USD/month. John elected to contribute the maximum of 20% of their monthly salary to their pre-tax 401(k) retirement savings. You create a deduction for the 401(k) employee pre-tax contribution, subject to these current IRS limits:

- Employee elective deferrals.
- Employee and employer total contributions.

##### Prerequisites

Your company created a 401(k) retirement savings plan.

Create a *Retirement Savings Eligible Wages* pay component group.

Create a *Retirement Savings Eligible Wages > 0* value comparison calculation.

Create these pay accumulations if there's another employee deduction, or an employer match:

- *401(k) Total Contributions: EE [USA]*
- *401(k) Total Contributions: EE + ER [USA]*

Security: *Set Up: Payroll (Calculations - Payroll Specific)* domain in the Core Payroll functional area.

##### Steps

1. Access the **Create Deduction** task.
2. Enter these settings:

| Option | Setting               |
|--------|-----------------------|
| Name   | <i>401(k) Pre-Tax</i> |
| Code   | 401k                  |

3. Enter these settings on the **Effective Dated** tab:

| Option                   | Setting                                                                                                                                                                                                                                                                       |
|--------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Effective Date           | Current date                                                                                                                                                                                                                                                                  |
| Run Category Eligibility | <i>Bonus</i><br><i>Regular</i>                                                                                                                                                                                                                                                |
| Worker Eligibility       | Row 1:<br><ul style="list-style-type: none"> <li>• <i>Retirement Savings Eligible Wages &gt; 0</i></li> <li>• <i>Benefits: Benefit Plan Percentage Exists (and &lt;&gt; 0)</i></li> </ul> Workday recommends you review your benefit plan configuration for worker elections. |

| <b>Benefit Plans</b> | Select the relevant benefit plan.                                                                                                                                                           |

7. (Optional) Once you've created a *401(k) Roth* deduction, update the *401(k) Total Contributions: EE [USA]* pay accumulation:

- Access the **Edit Pay Accumulation** task.
- Select these **Deductions** on the **Add and Subtract Calculations** tab:
  - 401(k) Pre-Tax*
  - 401(k) Roth*
- Access the **Calculate/Display Exceptions** tab and enter these settings:

| Option                               | Description                                                              |
|--------------------------------------|--------------------------------------------------------------------------|
| <b>Option</b>                        | <i>Calculate and display only if specified Earning/ Deduction exists</i> |
| <b>Specified Earnings/Deductions</b> | <i>401(k) Pre-Tax</i><br><i>401(k) Roth</i>                              |

8. (Optional) Once you've created a *401(k) Employer Match* deduction, update the *401(k) Total Contributions: EE + ER [USA]* pay accumulation:

- a) Access the **Edit Pay Accumulation** task.
- b) Select these **Deductions** on the **Add and Subtract Calculations** tab:
  - *401(k) Pre-Tax*
  - *401(k) Roth*
  - *401(k) Employer Match*
- c) Access the **Calculate/Display Exceptions** tab and enter these settings:

| Option                        | Description                                                             |
|-------------------------------|-------------------------------------------------------------------------|
| Option                        | <i>Calculate and display only if specified Earning/Deduction exists</i> |
| Specified Earnings/Deductions | <i>401(k) Employer Match</i>                                            |

## Result

Workday deducts the 401(k) pre-tax employee contribution up to the current IRS elective deferral limit.

His payroll result for the first month displays the result for his 401(k) pre-tax contribution on the **Gross to Net** tab:

| Pay Component  | Amount (USD) | YTD (USD) | Related Calculation | Amount (USD) |
|----------------|--------------|-----------|---------------------|--------------|
| 401(k) Pre-Tax | 1,900        | 1,900     | Base (unprorated)   | 9,500        |
|                |              |           | Percent             | 0.20         |

The 2021 elective deferral annual limit is 19,500 USD. John's 401(k) pre-tax deduction exceeds the annual limit in the eleventh month, so Workday takes the final pre-tax deduction of 500 USD in the eleventh month.

[Create Retirement Savings Plans](#)

### Example: Define a 401(k) Roth Post-Tax Deduction (USA)

### Context

John earns 114,000 USD/year, or 9,500 USD/month. He's elected to contribute the maximum of 15% of his monthly salary to his 401(k) Roth retirement savings. The payroll administrator creates a deduction for the 401(k) employee Roth contribution, subject to these current IRS limits:

- Employee elective deferrals.
- Employee and employer total contributions.

### Prerequisites

Your company has created a 401(k) Roth retirement savings plan.

A *Retirement Savings Eligible Wages* pay component group.

A *Retirement Savings Eligible Wages* > 0 worker eligibility rule.

(Optional) Define the *401(k) Pre-Tax* deduction.

(Optional) These pay accumulations if there's another employee deduction, or an employer match:

- *401(k) Total Contributions: EE [USA]*
- *401(k) Total Contributions: EE + ER [USA]*

Security: *Set Up: Payroll (Calculations - Payroll Specific)* domain in the Core Payroll functional area.

## Steps

1. Access the **Create Deduction** task.
2. Enter these settings:

| Option      | Setting            |
|-------------|--------------------|
| <b>Name</b> | <i>401(k) Roth</i> |
| <b>Code</b> | ROTH               |

3. Enter these settings on the **Effective Dated** tab:

| Option                          | Setting                                                                                                                                                                                                                                                                       |

7. (Optional) Once you've created a *401(k) Pre-Tax* deduction, update the *401(k) Total Contributions: EE [USA]* pay accumulation:

- a) Access the **Edit Pay Accumulation** task.
- b) Select these **Deductions** on the **Add and Subtract Calculations** tab:
  - *401(k) Pre-Tax*
  - *401(k) Roth*
- c) Access the **Calculate/Display Exceptions** tab and enter these settings:

| Option                               | Description                                                              |
|--------------------------------------|--------------------------------------------------------------------------|
| <b>Option</b>                        | <i>Calculate and display only if specified Earning/ Deduction exists</i> |
| <b>Specified Earnings/Deductions</b> | <i>401(k) Pre-Tax</i><br><i>401(k) Roth</i>                              |

8. (Optional) Once you've created a *401(k) Employer Match* deduction, update the *401(k) Total Contributions: EE + ER [USA]* pay accumulation:

- a) Access the **Edit Pay Accumulation** task.
- b) Select these **Deductions** on the **Add and Subtract Calculations** tab:
  - *401(k) Pre-Tax*
  - *401(k) Roth*
  - *401(k) Employer Match*
- c) Access the **Calculate/Display Exceptions** tab and enter these settings:

| Option                               | Description                                                              |
|--------------------------------------|--------------------------------------------------------------------------|
| <b>Option</b>                        | <i>Calculate and display only if specified Earning/ Deduction exists</i> |
| <b>Specified Earnings/Deductions</b> | <i>401(k) Employer Match</i>                                             |

## Result

Workday takes the *401(k) pre-tax* deduction first, then deducts the *401(k) Roth post-tax* employee contribution.

His payroll result for the first month displays the result for his 401(k) Roth post-tax employee contribution on the **Gross to Net** tab:

| Pay Component | Amount (USD) | YTD (USD) | Related Calculation | Amount (USD) |
|---------------|--------------|-----------|---------------------|--------------|
| 401(k) Roth   | 1,425        | 1,425     | Base (unprorated)   | 9,500        |
|               |              |           | Percent             | 0.15         |

The 2021 elective deferral annual limit is 19,500 USD. John's 401(k) pre-tax and Roth deductions combined exceed the annual limit in the sixth month. Workday takes the final pre-tax deduction of 1,900 USD in the sixth month first, then takes the remaining 975 USD up to the limit for the Roth deduction.

### Example: Define an Employer Match on 401(k) Pre-Tax Contributions (USA)

#### Context

Your 401(k) retirement savings plan includes an employer match on 401(k) pretax employee contributions. The employer match contribution is 100%, capped at 6%, subject to the IRS annual compensation limit. The employer match stops when employee reaches the IRS deferral limit.

John earns 114,000 USD/year, or 9,500 USD/month. He's elected to contribute the maximum of 20% of his monthly salary to his 401(k) pretax retirement savings.

You define the 401(k) employer match deduction so that Workday deducts an amount based on the requirements.

#### Prerequisites

- Your Benefits department has defined a 401(k) retirement savings plan on the **Create Benefit Plan** task.
- Create a *401(k) Total Contributions: EE + ER [USA]* pay accumulation for the sum of the employee and employer contributions.
- Create a *401(k) Pre-Tax > 0* value comparison calculation.
- Security: *Set Up: Payroll (Calculations - Payroll Specific)* domain in the Core Payroll functional area.

#### Steps

1. Access the **Create Aggregate Calculation** task.
2. Enter these settings:

| Option          | Description                                                               |
|-----------------|---------------------------------------------------------------------------|
| <b>Name</b>     | <i>Lesser of (Eligible Wages*Max Match %) and 100% of EE Contribution</i> |
| <b>Category</b> | <i>Payroll</i>                                                            |
| <b>Function</b> | <i>Minimum</i>                                                            |

| Option          | Description                                   |
|-----------------|-----------------------------------------------|

8. Select the **Calculation** *Lesser of (Eligible Wages\*Max Match %) and 100% of EE Contribution*.

9. Enter these settings in the **Related Calculations** grid:

| Related Calculation | Override Calculation                    | Limit Details: Value            | Limit Details: Balance Period                       | Limit Details: Based On                         |
|---------------------|-----------------------------------------|---------------------------------|-----------------------------------------------------|-------------------------------------------------|
| Base (unprorated)   | Retirement Savings Eligible Wages [USA] | Section 415 eligible wage limit | YTD - Current Calendar Year (based on Payment Date) | 401(k) Employer Match [USA] - Base (unprorated) |
| Percent             | Lower of EE Contrib and 6%              |                                 |                                                     |                                                 |

a) Don't select **Input Allowed** for either related calculation.

10. Define the deduction limits in the **Limit** section at the bottom of the **Effective Dated** tab:

| Value                                                                                                               | Balance Period                                             | Based On                                         | Include Current Value                       |
|---------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------|--------------------------------------------------|---------------------------------------------|
| <i>IRS Annual Contributions Limit Value (only looks at the specified dollar value / not at annual compensation)</i> | <i>YTD - Current Calendar Year (based on Payment Date)</i> | <i>401(k) Total Contributions: EE + ER [USA]</i> | <i>401(k) Pre-Tax [USA]<br/>401(k) Roth</i> |

11. Enter these settings on the **Non-Effective Dated** tab:

| Option        | Description                                     |
|---------------|-------------------------------------------------|
| Groups        | <i>Employer Paid Benefits [FRA GBR CAN USA]</i> |
| Benefit Plans | Select your 401(k) benefit plan.                |

## Result

Workday calculates the employer match based on the same percentage of eligible wages as the employee contribution. When the employee reaches the individual annual contribution limit for the deductions in a pay period, the match is 100% of the employee deduction. This match is rather than the full percentage match on the wages.

The employer match deduction stops when the employee reaches the wage limit or the IRS employee and employer total contributions limit.

When the sum of the total employee and employer contributions exceeds the IRS employee and employer total contributions limit, Workday takes the deductions in this order up to the limit:

1. 401(k) pretax.
2. 401(k) employer match.

### Examples

[Create Retirement Savings Plans](#)

### Example: Set Up 401(k) with Employer Match and Multiple Limits (USA)

## Context

John works for Global Modern Services, Inc. and earns 114,000 USD/year, or 9,500 USD/month. John elected to contribute the maximum:

- 20% of John's monthly salary to the 401(k) pretax retirement savings.
- 15% of the monthly salary to John's 401(k) Roth post-tax retirement savings.

John's 401(k) retirement savings plan includes an employer match on 401(k) pre-tax and 401(k) Roth employee contributions. The employer match contribution is 100%, capped at 6%, subject to the IRS annual compensation limit. The employer match stops when John reaches the IRS deferral limit across both deductions.

The payroll administrator for Global Modern Services must ensure that these 2021 limits apply to the contributions:

| Deduction             | Annual Limit (USD)               |
|-----------------------|----------------------------------|
| 401(k)                | 19,500 (shared with Roth)        |
| 401(k) Roth           | 19,500 (shared with 401(k))      |
| 401(k) Employer Match | 6,840, up to 6% of annual salary |

The payroll administrator creates 3 deductions that reference each other to manage deduction limits:

### Steps

1. [Example: Define a 401\(k\) Pre-Tax Deduction \(USA\)](#) on page 1022.
2. [Example: Define a 401\(k\) Roth Post-Tax Deduction \(USA\)](#) on page 1024.
3. [Example: Define an Employer Match on 401\(k\) Pre-Tax Contributions \(USA\)](#) on page 1027.

### Result

Workday starts deducting ongoing payments. When the sum of the deductions exceeds the annual limit, Workday takes the deductions in this order up to the limit for each type of deduction:

- 401(k) pretax
- 401(k) Roth post-tax
- 401(k) employer match

#### Examples

[Create Retirement Savings Plans](#)

[Troubleshooting: Incorrect Earning or Deduction Amount](#) on page 708

### Example: Create a 401(k) Catch-Up Deduction (USA)

#### Context

John turns 50 before the end of the current calendar year and is now eligible to make 401(k) catch-up contributions. The payroll administrator creates a deduction for additional 401(k) catch-up contributions up to the IRS current annual catch-up limit. John has elected to contribute 750 USD monthly to their pre-tax 401(k) catch-up retirement savings.

#### Prerequisites

Your company has created a separate 401(k) catch-up retirement savings plan, which enables an election of either a percentage or a flat amount. You can enroll employees in both the standard plan and the catch-up simultaneously.

*A Retirement Savings Eligible Wages* pay component group.

*A Retirement Savings Eligible Wages > 0* worker eligibility rule.

(Optional) Create an *Election Amount* related calculation.

Security: *Set Up: Payroll (Calculations - Payroll Specific)* domain in the Core Payroll functional area.

**Steps**

1. Access the **Create Deduction** task.
2. Enter these settings:

| Option | Description     |
|--------|-----------------|
| Name   | 401(k) Catch-Up |
| Code   | 401kCU          |

3. Enter these settings on the **Effective Dated** tab:

| Option                    | Description                                                                                                                                                                                                                                                                                            |
|---------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Effective Date            | Current date                                                                                                                                                                                                                                                                                           |
| Run Category Eligibility  | Regular<br>(Optional) Bonus                                                                                                                                                                                                                                                                            |

8. Enter these settings on the **Non-Effective Dated** tab:

| Option   | Description                                                                                                                                                                                |
|----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Groups   | <i>Federal Taxable Reduction [USA]</i><br><i>Pretax Deductions</i><br><i>State Withholding Taxable Reduction [USA]</i><br><i>Withholding Order (all): Retirement Plan Deductions [USA]</i> |
| Benefits | Select the relevant benefit plans.                                                                                                                                                         |

## Result

Workday deducts the 401(k) pretax employee catch-up contribution up to the current IRS elective deferral catch-up limit.

The payroll result for the first month displays the result for John's 401(k) pretax contribution on the **Gross to Net** tab:

| Pay Component   | Amount (USD) | YTD (USD) | Related Calculation | Amount (USD) |
|-----------------|--------------|-----------|---------------------|--------------|
| 401(k) Catch-Up | 750          | 750       | Base (unprorated)   | 9,500        |
|                 |              |           | Election Amount     | 750          |

The 2021 elective deferral annual catch-up limit is 6,500 USD. John's 401(k) pretax catch-up deduction exceeds the annual limit in the ninth month. Therefore, Workday takes the remaining 500 USD up to the limit in the ninth month.

### Example: Set Up 401(k) Deduction for Multiple States (USA)

### Context

This example illustrates how to set up 401(k) deductions for multi-state workers.

Erin works in both Arizona and New Mexico, and has hours entered and approved in Time Tracking for both states. Her 401k deduction is 12%, which should apply to her eligible wages earned in each state.

## Prerequisites

Your company has created a 401(k) retirement savings plan.

A *Retirement Savings Eligible Wages* pay accumulation.

A *Retirement Savings Eligible Wages* > 0 value comparison calculation.

These pay accumulations if there's another employee deduction, or an employer match:

- 401(k) Total Contributions: EE [USA]
- 401(k) Total Contributions: EE + ER [USA]

Security: Set Up: Payroll (Calculations - Payroll Specific) domain in the Core Payroll functional area.

## Steps

1. Access the **Edit Company Federal US Tax Reporting** task.
2. Select the checkbox for **Allow Pre-Tax Deduction Allocation**.
3. Enable one or both of the following: **Allow Ongoing Work Jurisdiction Tax Allocation** or **Enable Tax Mapping on Location**.
4. Set up Arizona and New Mexico as locations enabled for tax location mapping.
5. Access the **Create Deduction** task.
6. Enter these settings:

| Option | Setting        |
|--------|----------------|
| Name   | 401(k) Pre-Tax |
| Code   | 401k           |

7. Enter these settings on the **Effective Dated** tab:

| Option                   | Setting                                                                                                                                                                                                                                                         |

| Effective Date           | Current date                                                                                                                                                                                                                                                    |
| Run Category Eligibility | Bonus<br>Regular                                                                                                                                                                                                                                                |
| Worker Eligibility       | Row 1:<br><ul style="list-style-type: none"> <li>• Retirement Savings Eligible Wages &gt; 0</li> <li>• Benefits: Benefit Plan Percentage Exists (and &lt;&gt; 0)</li> </ul> Workday recommends you review your benefit plan configuration for worker elections. |
| Calculation              | Base (unprorated) * Percent                                                                                                                                                                                                                                     |
| Recalculate during Retro | Workday recommends that you don't select this check box for percentage-based deductions.                                                                                                                                                                        |

8. Ensure **Do Not Apply Percentage Splits** is not enabled at the pay component level.
9. Enter these settings in the **Related Calculations** grid:

| Option               | Value                                                |
|----------------------|------------------------------------------------------|
| Related Calculation  | Base (unprorated)                                    |
| Override Calculation | Retirement Savings Eligible Wages (Pay Accumulation) |

| Option                                | Value              |
|---------------------------------------|--------------------|
| <b>Do Not Apply Percentage Splits</b> | Select the option. |

10. Enter these settings in the **Limits** grid (below the **Related Calculations** grid):

| Value                                                                                                               | Balance Period                                             | Based On                                         |
|---------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------|--------------------------------------------------|
| <i>Elective Deferral Annual Limit for 401(k), 403(b), 457(b), and 408(k) SEP Plans</i>                              | <i>YTD - Current Calendar Year (based on Payment Date)</i> | <i>401(k) Total Contributions: EE [USA]</i>      |
| <i>IRS Annual Contributions Limit Value (only looks at the specified dollar value / not at annual compensation)</i> | <i>YTD - Current Calendar Year (based on Payment Date)</i> | <i>401(k) Total Contributions: EE + ER [USA]</i> |

11. Enter these settings on the **Non-Effective Dated** tab:

| Option               | Setting                                                                                                                                                                                     |
|----------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Groups</b>        | <i>Federal Taxable Reduction [USA]</i><br><i>Pre Tax Deductions</i><br><i>State Withholding Taxable Reduction [USA]</i><br><i>Withholding Order (All): Retirement Plan Deductions [USA]</i> |
| <b>Benefit Plans</b> | Select the relevant benefit plan.                                                                                                                                                           |

12. (Optional) Once you've created a *401(k) Roth* deduction, update the *401(k) Total Contributions: EE [USA]* pay accumulation:

- a) Access the **Edit Pay Accumulation** task.
- b) Select these **Deductions** on the **Add and Subtract Calculations** tab:
  - *401(k) Pre-Tax*
  - *401(k) Roth*
- c) Access the **Calculate/Display Exceptions** tab and enter these settings:

| Option                               | Description                                                              |

| <b>Option</b>                        | <i>Calculate and display only if specified Earning/ Deduction exists</i> |
| <b>Specified Earnings/Deductions</b> | <i>401(k) Pre-Tax</i><br><i>401(k) Roth</i>                              |

**13.**(Optional) Once you've created a *401(k) Employer Match* deduction, update the *401(k) Total Contributions: EE + ER [USA]* pay accumulation:

- a) Access the **Edit Pay Accumulation** task.
- b) Select these **Deductions** on the **Add and Subtract Calculations** tab:
  - *401(k) Pre-Tax*
  - *401(k) Roth*
  - *401(k) Employer Match*
- c) Access the **Calculate/Display Exceptions** tab and enter these settings:

| Option                        | Description                                                             |
|-------------------------------|-------------------------------------------------------------------------|
| Option                        | <i>Calculate and display only if specified Earning/Deduction exists</i> |
| Specified Earnings/Deductions | <i>401(k) Employer Match</i>                                            |

### Result

On her first pay result for both states, Erin's 401(k) deduction is allocated between the two states at 12% of her unprorated earnings.

## Example: 401(k) Loan Repayment (USA)

### Steps: Calculate 401(k) Loan Repayment (USA)

#### Prerequisites

Security:

- *Set Up: Payroll (Calculations - Payroll Specific)* domain in the Core Payroll functional area.
- *Set Up: Enable Worktags* domain in the Core Payroll Functional area.
- *Set Up: Payroll (Calculations - Generic)* domain in the Core Payroll function area.
- *Worker Data: Payroll (Payroll Input)* domain in the Core Payroll functional area.
- *Process: Run Batch Complete (Pay Complete)* domain in the Core Payroll functional area.

#### Context

Create a 401(k) loan deduction for employees who have accrued 401(k) savings to deduct the repayments from subsequent payrolls. Use worktags to associate the elements of the loan and repayment.

#### Steps

1. [Set Up Worktag for 401\(k\) Loan Repayment \(USA\)](#) on page 1036  
Set up a worktag to associate the elements of the loan with repayment.
2. [Create 401\(k\) Loan Repayment Deduction \(USA\)](#) on page 1036  
Enter criteria for the loan and repayment, calculation details, limit settings, and groups.
3. [Enter 401\(k\) Loan Repayment Using Payroll Input \(USA\)](#) on page 1037  
On the **Add Payroll Input by Worker** task, enter payroll input for the loan and repayment, and run the payment for the worker or pay group.

### Result

You've entered a one-time loan in the specified pay period. Workday deducts ongoing payments from worker pay until the loan is repaid.

## Set Up Worktag for 401(k) Loan Repayment (USA)

### Prerequisites

Your company has set up a 401(k) retirement savings plan.

The worker has received a loan from the savings.

Security: *Set Up: Enable Worktags* domain in the Core Payroll Functional area.

### Context

You can create a 401k loan worktag to associate the elements of the loan and repayment.

### Steps

1. Access the **Enable Custom Worktags** task.

- a) In an unused row, select the **Custom Worktag is Enabled** check box.
- b) In the **Worktag Name** field, enter *401k Loan*.
- c) From the **Worktag Usage** prompt, select *Payroll*.

**Note:** If you plan to upload the loan values from an Enterprise Integration Builder (EIB) spreadsheet, note the **Dimension Name** of the worktag. You need it to use in the **Dimension Name** column of the EIB.

2. Access the **Maintain Custom Worktag Values** task.

- a) Select *401k Loan* from the **Custom Worktag Type** prompt.
- b) Add a new row and enter at least 1 valid value for the loan. Example: Enter *Loan 1* in the **Worktag Value** field.

If you have employees with multiple loans, enter as many valid values for the loans as needed.  
Example: Enter *Loan 1*, *Loan 2*, *Loan 3*, and so on in the **Worktag Value** field.

### Result

The *401k Loan* worktag type is available to associate all the parts of this calculation. In addition, the valid value of loans that you added as worktag values are now available for payroll input.

### Next Steps

Create a loan repayment deduction.

### Related Information

#### Examples

[Create Retirement Savings Plans](#)

[Steps: Define Custom Worktags](#)

## Create 401(k) Loan Repayment Deduction (USA)

### Prerequisites

Create a 401(k) retirement savings plan.

The worker has received a loan from the savings.

Security: *Set Up: Payroll (Calculations - Payroll Specific)* domain in the Core Payroll functional area.

### Context

Create a deduction that you can use to specify the loan balance and how to repay it.

## Steps

1. Access the **Create Deduction** task, name it *401k Loan Repayment*, and enter a unique code for it.

2. On the **Effective Dated** tab:

a) Under **Criteria** in the **Worker Eligibility** field, select *Payroll Input Exists for Pay Component*.

b) Under **Calculation Details** in the **Calculation** field, select *Original Amount*.

c) Under **Calculation Worktags**, select *401k Loan*.

For workers with more than 1 401(k) loan, select the **Include Input** check box. When you select this check box, the payroll administrator must select the worktag associated with the corresponding loan.

d) Under **Related Calculations**, use the *Create Related Calculation* option on the **Related Calculation** prompt to create the *401k Loan Balance*. Then complete the row:

| Related Calculation      | Override Calculation | Limit Details - Value | Limit Details - Balance Period | Input Allowed? | Do Not Store / Do Not Store if Zero. | Display |
|--------------------------|----------------------|-----------------------|--------------------------------|----------------|--------------------------------------|---------|
| <i>401k Loan Balance</i> | <i>Payroll Input</i> |                       |                                | Yes            | Do Not Store if Zero.                | Yes     |

e) Enter a second row:

| Related Calculation    | Override Calculation | Limit Details - Value    | Limit Details - Balance Period               | Limit Filter Worktag Default Filter Worktags | Input Allowed? | Do Not Store / Do Not Store if Zero. | Display |
|------------------------|----------------------|--------------------------|----------------------------------------------|----------------------------------------------|----------------|--------------------------------------|---------|
| <i>Original Amount</i> | <i>Payroll Input</i> | <i>401k Loan Balance</i> | <i>Open Ended (Based on Period End Date)</i> | <i>401k Loan</i>                             | Yes            | Do Not Store if Zero.                | Yes     |

3. On the **Non-Effective Dated** tab in the **Groups** field, select *Post Tax Deductions* to add the deduction to the *Post Tax Deductions* pay component group.

## Result

When you enter payroll input for this deduction and run payroll, Workday:

- Processes the loan repayment from gross pay.
- Displays the loan repayment in the pay results.

## Related Information

### Tasks

[Steps: Create Deductions](#) on page 227

### Examples

[Create Retirement Savings Plans](#)

## Enter 401(k) Loan Repayment Using Payroll Input (USA)

### Prerequisites

Your company has created a 401(k) retirement savings plan.

The worker has received a loan from the savings.

You've created the loan repayment deduction.

Security:

- *Worker Data: Payroll (Payroll Input)* domain in the Core Payroll functional area.
- *Run Batch Complete (Pay Complete)* domain in the Core Payroll functional area.

## Context

Enter the loan and the repayment input amounts.

## Steps

1. To enter payroll input for the loan and repayment, access the **Add Payroll Input by Worker** task, and select:

| Field                      | Description                                                   |
|----------------------------|---------------------------------------------------------------|
| <b>Pay Component</b>       | <i>401k Loan Repayment</i>                                    |
| <b>Processing Defaults</b> | <i>Ongoing</i>                                                |
|                            | <i>Override</i>                                               |
|                            | <i>Regular Run Category</i>                                   |
| <b>Payroll Worktags</b>    | Enter the loan worktag valid value: <i>401k Loan: Loan 1.</i> |

2. Under **Input**, enter this row:

- a) Enter the **Start Date** of the period in which the loan is part of the payroll result.
- b) Enter 2 rows of **Input Details**:

| Type                     | Value                          |
|--------------------------|--------------------------------|
| <i>401k Loan Balance</i> | The amount of the loan.        |
| <i>Original Amount</i>   | The amount of regular payment. |

3. Run the payroll for the worker or the worker's pay group.

## Result

You've entered a loan repayment input in the specified pay period. Workday stops deducting ongoing payments from payroll once the sum of the ongoing 401k Loan Repayment amount equals the *401k Loan Balance* amount entered for the ongoing input.

## Example: Flexible Spending Account with Limits (USA)

### Example: Flexible Spending Account with Limits (USA)

#### Context

Sue wants to contribute the maximum allowed by the Internal Revenue Service (IRS) to a Flexible Spending Account (FSA). Her employer also contributes to the account. Create 2 deductions with limits for these contributions.

#### Steps

1. Create a deduction to calculate the employee contribution to FSA.  
See [Example: Create Employee Flexible Spending Account Deduction with Limits \(USA\)](#) on page 1039.
2. Create a deduction to calculate the employer contribution to FSA.  
See [Example: Create Employer Flexible Spending Account Deduction with Limits \(USA\)](#) on page 1040.
3. Access the **Edit Run Category** task.
4. Select the *Regular* run category.
5. Add these deductions to **Additional Pay Components to Calculate** on the **General** tab:
  - a) *FSA Employee*
  - b) *FSA Employer*

#### Result

Workday retrieves the contribution amounts and calculates the deductions.

#### Related Information

##### Tasks

[Steps: Create Deductions](#) on page 227

### Example: Create Employee Flexible Spending Account Deduction with Limits (USA)

#### Context

As the first step in calculating Flexible Spending Account (FSA) deductions with limits, create an employee FSA deduction.

#### Prerequisites

- Create an FSA plan.
- Security: *Set Up: Payroll (Calculations - Payroll Specific)* domain in the Core Payroll functional area.

#### Steps

1. Access the **Create Deduction** task.
2. Enter these settings:

| Option      | Description  |
|-------------|--------------|
| <b>Name</b> | FSA Employee |
| <b>Code</b> | FSA-EE       |

3. Enter these settings on the **Effective Dated** tab:

| Option                | Description  |
|-----------------------|--------------|
| <b>Effective Date</b> | Current date |

| Option                    | Description                                                                                                                  |
|---------------------------|------------------------------------------------------------------------------------------------------------------------------|
| Run Category Eligibility  | <i>Regular</i>                                                                                                               |
| Worker Eligibility        | <i>Benefits Employee Cost or Pay Input Exists<br/>Pay Component Not Previously Paid in Period<br/>Processing Primary Job</i> |

## Next Steps

Create an employer FSA deduction.

## Related Information

### Tasks

[Steps: Create Deductions](#) on page 227

## Example: Create Employer Flexible Spending Account Deduction with Limits (USA)

## Context

As the second step in calculating Flexible Spending Account (FSA) deductions with limits, create an employer FSA deduction.

### Prerequisites

- Have a pay components group named *Benefits During Leave* for non-active workers.
- Create an FSA plan.
- Security: *Set Up: Payroll (Calculations - Payroll Specific)* domain in the Core Payroll functional area.

### Steps

1. Access the **Create Deduction** task.
2. Enter these settings:

| Option      | Description  |
|-------------|--------------|
| <b>Name</b> | FSA Employer |
| <b>Code</b> | FSA-ER       |

3. Enter these settings on the **Effective-Dated** tab:

| Option                          | Description                                                                                                                                                                                                  |
|---------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

| <b>Run Category Eligibility</b> | <i>Regular</i>                                                                                                                                                                                               |
| <b>Worker Eligibility</b>       | <ul style="list-style-type: none"> <li>• <i>Benefits Employer Cost or Pay Input Exists</i></li> <li>• <i>Pay Component Not Previously Paid in Period</i></li> <li>• <i>Processing Primary Job</i></li> </ul> |
| <b>Calculation</b>              | <i>Benefits: Employer Cost</i>                                                                                                                                                                               |
| <b>Calculation Proration</b>    | <i>Prorate Using Calendar Days</i>                                                                                                                                                                           |

4. Enter these settings in the **Limits** grid:

| Value                           | Balance Period                                                 | Based On                        |
|---------------------------------|----------------------------------------------------------------|---------------------------------|
| <i>FSA Employer Match [USA]</i> | <i>YTD - Current Calendar Year<br/>(based on Payment Date)</i> | <i>FSA Employer Match [USA]</i> |

5. Enter these settings on the **Non-Effective Dated** tab:

| Option               | Description                                                                 |
|----------------------|-----------------------------------------------------------------------------|
| <b>Groups</b>        | <i>Benefits During Leave</i><br><i>Employer Paid Benefits [GBR CAN USA]</i> |
| <b>Benefit Plans</b> | Select the FSA benefit plans.                                               |

### Next Steps

Add new deductions to the *Regular* run category.

### Related Information

#### Tasks

[Steps: Create Deductions](#) on page 227

## Example: Health Savings Account Costs with Limits (USA)

### Example: Health Savings Account with Limits (USA)

#### Context

Create separate deductions to calculate employer and employee contributions to a Health Savings Account (HSA) plan. Configure a cumulative limit that applies to the sum of the employee and employer amounts. Create a pay accumulation that includes both deductions.

#### Prerequisites

Create a Health Savings Account (HSA) plan.

#### Steps

1. Define a deduction for employer contribution to an HSA plan.  
See [Example: Create a Deduction for Employer Contribution to a Health Savings Account \(USA\)](#) on page 1042.
2. Define a deduction for employee contribution to an HSA plan.  
See [Example: Create a Deduction for Employee Contribution to a Health Savings Account \(USA\)](#) on page 1043.
3. Create an HSA Total pay accumulation.  
See [Example: Create a Health Savings Account Total Pay Accumulation \(USA\)](#) on page 1044.

#### Result

Workday:

- Calculates the employer contribution to the HSA.
- Retrieves the employer contribution, then calculates the employee contribution up to the limit.

#### Next Steps

Add the deductions to the **Additional Pay Component(s) to Calculate** field on the **Maintain Run Categories** task.

### Example: Create a Deduction for Employer Contribution to a Health Savings Account (USA)

#### Context

As a first step in calculating the cost of a health savings account plan, define a deduction for the employer contribution to a Health Savings Account (HSA) plan.

#### Prerequisites

- Create an HSA plan.
- Security: *Set Up: Payroll (Calculations - Payroll Specific)* domain in the Core Payroll functional area.

#### Steps

1. Access the **Create Deduction** task.
2. Enter these settings:

| Option | Description                  |
|--------|------------------------------|
| Name   | Employer Contribution to HSA |

| Option | Description |
|--------|-------------|
| Code   | HSA-ER      |

3. Enter these settings on the **Effective Dated** tab:

| Option                | Description                              |
|-----------------------|------------------------------------------|
| Effective Date        | Current date                             |
| Worker Eligibility    | <i>Employee Enrolled in Benefit Plan</i> |
| Calculation           | <i>Benefits: Employer Cost</i>           |
| Input Amount Allowed? | Selected                                 |

4. Enter these settings on the **Non-Effective Dated** tab:

| Option        | Description                                 |
|---------------|---------------------------------------------|
| Groups        | <i>Employer Paid Benefits [GBR CAN USA]</i> |
| Benefit Plans | Select the relevant HSA plans.              |

## Result

The deduction is available for payroll processing upon the effective date.

### Tasks

[Steps: Create Deductions](#) on page 227

## Example: Create a Deduction for Employee Contribution to a Health Savings Account (USA)

## Context

Create a deduction for employee contribution to a Health Savings Account (HSA) as a second step in calculating the cost of an HSA plan.

## Prerequisites

- Create an HSA plan.
- Security: *Set Up: Payroll (Calculations - Payroll Specific)* domain in the Core Payroll functional area.

## Steps

1. Access the **Create Deduction** task.
2. Enter these settings:

| Option | Description                  |
|--------|------------------------------|
| Name   | Health Savings Account (HSA) |
| Code   | HSA                          |

3. Enter these settings on the **Effective Dated** tab:

| Option                   | Description    |
|--------------------------|----------------|
| Effective Date           | Current date   |
| Run Category Eligibility | <i>Regular</i> |
| Worker Eligibility       | In 1 row:      |

| Option                          | Description                                                                                                                                                                           |
|---------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

### Tasks

[Steps: Create Deductions](#) on page 227

## Example: Create a Health Savings Account Total Pay Accumulation (USA)

## Context

As a final step in calculating Health Savings Account (HSA) costs, create an HSA Total pay accumulation for use in payroll processing.

## Prerequisites

- Create HSA deductions.
- Security: *Set Up: Payroll (Calculations - Payroll Specific)* domain in the Core Payroll functional area.

## Steps

1. Access the **Create Pay Accumulation** task.
2. Enter these settings:

| Option      | Description                                         |
|-------------|-----------------------------------------------------|
| <b>Name</b> | Health Savings Account Total Contributions: EE + ER |
| <b>Code</b> | HSA-EE-ER                                           |

3. Enter these settings on the **Add and Subtract Calculations** tab:

| Option            | Description                                                                                                                                                                      |
|-------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Deductions</b> | <ul style="list-style-type: none"> <li>• <i>Employer Contribution to a Health Savings Account</i></li> <li>• <i>Employee Contribution to a Health Savings Account</i></li> </ul> |

4. Enter these settings on the **Calculate/Display Exceptions** tab:

| Option        | Description                                                              |
|---------------|--------------------------------------------------------------------------|
| <b>Option</b> | <i>Calculate and display only if specified Earning/ Deduction exists</i> |

## Result

The pay accumulation is available for payroll processing upon the effective date.

## Related Information

### Tasks

[Create Pay Accumulations](#) on page 311

## Example: Imputed Income from Group Term Life (USA)

### Example: Imputed Income from Group Term Life Insurance (USA)

## Context

Define a deduction to calculate employee post-tax Group Term Life (GTL) contributions and an earning to calculate imputed income from employer contributions.

## Prerequisites

Create a GTL insurance plan based on rates defined in the rate tables of the benefit plan.

## Steps

1. Define a deduction for the employee post-tax GTL contribution.  
See [Example: Create a Deduction for Employee Post-Tax Group Term Life Insurance \(USA\)](#) on page 1046.
2. Define an earning to calculate the imputed income the employee receives from the employer taxable contribution to GTL.  
See [Example: Create an Earning for Imputed Income from Group Term Life \(USA\)](#) on page 1047.

## Result

Workday calculates the deduction if:

- You don't select the **Employee Cost Is Pre-Tax** option on the **Create Benefit Plan** task.
- The covered person is an employee.
- The employer (taxable) benefits cost is greater than zero.
- The insurance coverage amount (reduced by employee post-tax cost) is greater than 50,000 USD.

Workday:

- Retrieves the age of the covered person.
- Retrieves the coverage amount.
- Calculates the employer contribution subject to taxes using IRS Premium Table rates.

[Steps: Create Earnings](#) on page 222

[Steps: Create Deductions](#) on page 227

## Example: Create a Deduction for Employee Post-Tax Group Term Life Insurance (USA)

### Context

As the first step in calculating imputed income from Group Term Life (GTL), create a deduction to calculate the employee post-tax contribution to the plan.

### Prerequisites

- Have a pay components group named *Benefits During Leave* for non-active workers.
- Create a GTL insurance plan based on rates defined in benefit rate tables.
- Security: *Set Up: Payroll (Calculations - Payroll Specific)* domain in the Core Payroll functional area.

### Steps

1. Access the **Create Deduction** task.
2. Enter these settings:

| Option      | Description          |
|-------------|----------------------|
| <b>Name</b> | Group Term Life - EE |
| <b>Code</b> | GTLEE                |

3. Enter these settings on the **Effective Dated** tab:

| Option                          | Description                                                                                   |
|---------------------------------|-----------------------------------------------------------------------------------------------|
| <b>Effective Date</b>           | Current Date                                                                                  |
| <b>Run Category Eligibility</b> | <i>Regular</i>                                                                                |
| <b>Worker Eligibility</b>       | <i>Benefits Employee Cost (Post-tax) or Pay Input Exists</i><br><i>Processing Primary Job</i> |
| <b>Calculation</b>              | <i>Benefits: Employee Cost (Post-tax)</i>                                                     |
| <b>Recalculate during Retro</b> | Select the check box.                                                                         |

4. Enter these settings on the **Non-Effective Dated** tab:

| Option        | Description                  |
|---------------|------------------------------|
| <b>Groups</b> | <i>Benefits During Leave</i> |

| Option               | Description                |
|----------------------|----------------------------|
|                      | <i>Post Tax Deductions</i> |
| <b>Benefit Plans</b> | Select the GTL plan.       |

### Next Steps

Create an earning to calculate the imputed income the employee receives from the employer taxable contribution to GTL.

### Related Information

#### Tasks

**Example: Preferred Provider Organization Plan Costs (USA)****Example: Preferred Provider Organization Plan Costs (USA)****Context**

The company is offering a Preferred Provider Organization (PPO) insurance plan. Paula needs to create these payroll deductions:

- Employee Pre-Tax PPO Costs.
- Employer Non-Taxable PPO Costs.

**Prerequisites**

Security: *Set Up: Payroll (Calculations - Payroll Specific)* domain in the Core Payroll functional area.

**Steps**

1. Define a deduction for employee pretax PPO contributions.  
See [Example: Create a Deduction to Calculate Employee Preferred Provider Organization Plan Costs \(USA\)](#) on page 1049.
2. Define a deduction for employer nontaxable PPO contributions.  
See [Example: Create a Deduction to Calculate Employer Preferred Provider Organization Plan Costs \(USA\)](#) on page 1049.

## Example: Same-Sex Spouses and Domestic Partners (USA)

### Example: Same-Sex Spouses and Domestic Partners (USA)

### Context

Global Modern Services (GMS) has employees in many states. Some of these tax authorities recognize both same-sex spouses and domestic partners, some recognize only 1 of the 2 types of relationships, and others recognize neither.

Sandy, a payroll administrator, wants to create pay components for the Medical - Aetna HMO benefit for same-sex spouses and domestic partners of GMS employees. Sandy must create these 4 pay components:

| Benefit for     | Deduction             | Earning               |
|-----------------|-----------------------|-----------------------|
| Same-Sex Spouse | Employee contribution | Employer contribution |

| Benefit for      | Deduction             | Earning               |
|------------------|-----------------------|-----------------------|
| Domestic Partner | Employee contribution | Employer contribution |

However, she must decide between these 2 types of configurations, whichever requires fewer exceptions:

- Pretax deductions and nontaxable earnings with tax authority exceptions for the states that don't recognize these relationships.
- Post-tax deductions and taxable earnings with tax authority exceptions for states that do recognize these relationships.

Sandy researches which tax jurisdictions recognize which types of relationships. She decides to create post-tax and taxable pay components with exceptions for any tax authorities that differ.

### Prerequisites

Configure benefits for same-sex spouses and domestic partners.

Security: *Set Up: Payroll (Calculations - Payroll Specific)* domain in the Core Payroll functional area.

### Steps

1. [Example: Create Employee Deductions for Same-Sex Spouses \(USA\)](#) on page 1051.
2. [Example: Create Employee Deductions for Domestic Partners \(USA\)](#) on page 1052.
3. [Example: Create an Earning for Employer Contribution to Same-Sex Spouse Benefits \(USA\)](#) on page 1053.
4. [Example: Create an Earning for Employer Contribution for Domestic Partner Benefits \(USA\)](#) on page 1055.

### Result

Qualifying employees pay the associated taxes for medical benefits according to the tax authority guidelines.

### Next Steps

Sandy updates the tax authority exceptions for the pay components when changes occur.

#### Examples

[Manage Personal Relationship Types](#)

### Example: Create Employee Deductions for Same-Sex Spouses (USA)

#### Context

Create a post-tax deduction for Medical Aetna - HMO for employee contributions for their same-sex spouses, with tax authority exceptions for states that recognize same-sex marriages.

### Prerequisites

Security: *Set Up: Payroll (Calculations - Payroll Specific)* domain in the Core Payroll functional area.

### Steps

1. Access the **Create Deduction** task.

2. Enter these settings in the **Name** field.

| Option      | Description                           |
|-------------|---------------------------------------|
| <b>Name</b> | <i>Medical - AETNA - EE SSS [USA]</i> |
| <b>Code</b> | AET_EESSS                             |

3. Enter these settings on the **Effective Dated** tab:

| Option                          | Description                                |
|---------------------------------|--------------------------------------------|
| <b>Run Category Eligibility</b> | <i>Regular</i>                             |
| <b>Worker Eligibility</b>       | <i>Benefits Is Same Sex Spouse Covered</i> |
| <b>Calculation</b>              | <i>Benefits: Employee Cost (Post-tax)</i>  |

4. Enter these settings on the **Non-Effective Dated** tab:

| Option               | Description                                                                                                                                                               |
|----------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Groups</b>        | <ul style="list-style-type: none"> <li><i>Federal Taxable Reduction [USA]</i></li> <li><i>FICA Taxable Reduction [USA]</i></li> <li><i>Post Tax Deductions</i></li> </ul> |
| <b>Benefits Plan</b> | <i>Medical Aetna - HMO</i>                                                                                                                                                |

5. Access the **Maintain Tax Authority Exceptions Pay Component Groups** task and select *State Withholding Taxable Reduction (Withhold Taxes) [USA]*.

6. Create an exception:

| Option                          | Description                                                   |
|---------------------------------|---------------------------------------------------------------|
| <b>Payroll Tax Authority</b>    | [List the tax authorities that recognize same-sex marriages.] |
| <b>Include Pay Component(s)</b> | <i>Medical - AETNA - EE SSS [USA]</i>                         |

## Result

When Workday processes payroll, employees contribute to their same-sex spouse *Medical Aetna - HMO* benefits:

- In nonexcepted tax authorities after taxes.
- In federal and excepted tax authorities before taxes.

[Create Pay Component Groups](#) on page 230

[Define Tax Authority Exceptions from Pay Component Groups \(USA\)](#) on page 1137

**Example: Create an Earning for Employer Contribution for Domestic Partner Benefits (USA)****Context**

Create a taxable earning for Medical Aetna - HMO for the employer contribution for employee domestic partners, with tax authority exceptions for states that recognize domestic partnerships.

**Prerequisites**

Security: *Set Up: Payroll (Calculations - Payroll Specific)* domain in the Core Payroll functional area. See: [Steps: Enable Functional Areas and Security Policies](#).

**Steps**

1. Access the **Create Earning** task.
2. Enter these settings:

| Option      | Description                          |
|-------------|--------------------------------------|
| <b>Name</b> | <i>Medical - AETNA - ER DP [USA]</i> |
| <b>Code</b> | AET_ERDP                             |

3. Enter these settings on the **Effective Dated** tab:

| Option                    | Description                                 |
|---------------------------|---------------------------------------------|
| <b>Worker Eligibility</b> | <i>Benefits Is Domestic Partner Covered</i> |
| <b>Calculation</b>        | <i>Benefits: Employer Cost (Taxable)</i>    |

4. Enter these settings on the **Non-Effective Dated** tab:

| Option              | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
|---------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

5. Access the **Maintain Tax Authority Exceptions Pay Component Groups** task and select the *State Withholding Taxable (Withhold Taxes) [USA]* **Pay Component Group**.
6. Create an exception:

| Option                        | Description                                                      |
|-------------------------------|------------------------------------------------------------------|
| <b>Payroll Tax Authority</b>  | [List the tax authorities that recognize domestic partnerships.] |
| <b>Exclude Pay Components</b> | <i>Medical - AETNA - ER DP [USA]</i>                             |

**Result**

When Workday processes payroll, employers contribute to the domestic partner Medical Aetna - HMO benefit:

- In federal and nonexcepted tax authorities as a taxable contribution.
- In excepted tax authorities as a nontaxable contribution.

**Related Information****Tasks**

[Steps: Create Earnings](#) on page 222

[Create Pay Component Groups](#) on page 230

[Define Tax Authority Exceptions from Pay Component Groups \(USA\)](#) on page 1137

**Example: Set Up a Health Care Benefit Plan (USA)****Example: Set Up a Health Care Benefit Plan (USA)**

Demonstrates 1 way to calculate deductions and earnings for health care benefits.

**Context**

Create separate pay components to calculate:

- Employee pre- and post-tax contributions.
- Employer taxable and nontaxable contributions.
- Imputed income from health care benefits.

Both Paul and his employer contribute to Paul's health care plan. A portion of Paul's contribution is pretax and the rest is post-tax. To calculate these contributions, create 2 deductions.

A portion of the employer contributions is nontaxable and the rest is taxable. To calculate these contributions, create 2 deductions.

In addition, Paul has to pay tax on the imputed income from the taxable benefit the employer pays. Create this earning.

**Prerequisites**

[Create Health Care Plans.](#)

**Steps**

1. Define a deduction for the employee pretax health care contribution.  
See [Example: Create a Deduction for Employee Pre-Tax Contribution to Health Care Benefits \(USA\)](#) on page 1057.
2. Define a deduction for the employee post-tax health care contribution.  
See [Example: Create a Deduction for Employee Post-Tax Contribution to Health Care Benefits \(USA\)](#) on page 1058.
3. Define a deduction for the taxable employer contribution to health care benefits.  
See [Example: Create a Deduction for Employer Taxable Contribution to Health Care Benefits \(USA\)](#) on page 1059.
4. Define an earning to calculate the imputed income that employees receive from the employer taxable health care contribution.  
See [Example: Create an Earning for Imputed Income from Health Care Benefits \(USA\)](#) on page 1060.

## Result

Workday calculates taxes on imputed income from employer-paid health care benefits.

[Steps: Create Deductions](#) on page 227

[Map Pay Components to Benefit Plans](#) on page 253

## Example: Create a Deduction for Employee Pre-Tax Contribution to Health Care Benefits (USA)

This example illustrates 1 way to create a deduction for employee pretax contributions to health care benefits.

## Context

A portion of Paul's contributions to his health care plan is nontaxable. You want to create a deduction for Paul's pretax contributions to health care benefits.

## Prerequisites

- You have a pay components group named *Benefits During Leave* for non-active workers.
- Security: *Set Up: Payroll (Calculations - Payroll Specific)* domain in the Core Payroll functional area.

## Steps

- Access the **Create Deduction** task.
- Enter these settings:

| Option | Description                |
|--------|----------------------------|
| Name   | Health Care - EE (Pre-Tax) |
| Code   | HC-PRE-TAX-EE              |

- Enter these settings on the **Effective Dated** tab:

| Option                   | Description                                                                                                                      |
|--------------------------|----------------------------------------------------------------------------------------------------------------------------------|
| Effective Date           | Current date                                                                                                                     |
| Run Category Eligibility | <i>Regular</i>                                                                                                                   |

[Steps: Create Earnings](#) on page 222

## Examples: 401(k) Employer Match on Employee Contributions (USA)

### Example: Calculate a 401(k) Employer Match on Employee Contributions (USA)

This example illustrates the high-level steps in creating an employer match deduction based on employee contributions.

#### Context

Your 401(k) retirement savings plan includes an employer match on both 401(k) pretax and 401(k) Roth post-tax employee contributions. The employer match contribution is tiered:

- 100% is matched on the first 3%.
- An additional 50% is matched above that, capped at 6%.

When calculating the match, you want to consider the IRS individual contribution limit. When the employee reaches the IRS limit for the year, you want to calculate the corresponding match based on the percent the employee actually contributed in that period, as opposed to their elected percent.

You want to calculate the employer match percent and add it to a deduction. You want to create 1 calculation that covers all periods, regardless of whether the employee reaches the IRS limit for the year.

Example:

| Eligible Wages | Employee Contribution                               | Employee Percent | Matching Rule                                               | Employer Match |
|----------------|-----------------------------------------------------|------------------|-------------------------------------------------------------|----------------|
| 1000           | 80 (based on the elected percentage)                | 8%               | 100% of first 3 percent + 50% of the remaining 3% (up to 6) | 4.5%           |
| 1000           | 44 (available amount before reaching the IRS limit) | 4.4%             | 100% of first 3 percent + 50% of the remaining 1.4%         | 3.7%           |

### Steps

1. Create step-based conditions to identify when the matched percentage is:

- Less than or equal to 0.03.
- Greater than 0.03.

See [Example: Create Step-Based Conditions for a 401\(k\) Employer Match \(USA\)](#) on page 1062.

2. Create a step-based calculation to calculate the employer match amount.

See [Example: Create a Step-Based Calculation for a 401\(k\) Employer Match Amount \(USA\)](#) on page 1063.

3. Create 401(k) employer match deduction.

[Example: Create a 401\(k\) Employer Match Deduction \(USA\)](#) on page 1065.

### Result

Workday calculates the employer match deduction based on the calculated employer match percentage.

### Example: Create Step-Based Conditions for a 401(k) Employer Match (USA)

Illustrates how to create step-based conditions in preparation for creating a step-based calculation for a 401(k) employer match deduction.

### Context

Your 401(k) retirement savings plan includes an employer match on both 401(k) pretax and 401(k) Roth post-tax employee contributions. The employer match contribution is tiered, with different rules applying to the first 0-3 percent.

In preparation for creating a step-based calculation, you create a step-based condition group to identify the different options based on the matched percentage.

You also want to create conditions to identify when the matched percentage is:

- Less than or equal to 0.03.
- Greater than 0.03.

### Prerequisites

Security:

- *Set Up: Payroll (Calculations - Generic)* domain in the Core Payroll functional area.
- *Set Up: Time Off (Calculations - Generic)* domain in the Time Off and Leave functional area.

### Steps

1. Access the **Create Step Based Calculation Condition Group** task.

2. Enter these settings:

| Option   | Description     |
|----------|-----------------|
| Name     | Matched Percent |
| Category | <i>Payroll</i>  |

3. Click **OK**.

4. Access the **Create Step Based Calculation Condition** task.

5. Enter these settings:

| Option           | Description          |
|------------------|----------------------|
| Name             | Prior Value < = 0.03 |
| Category         | <i>Payroll</i>       |
| Logical Operator | AND                  |

6. Enter these settings in the **Conditions** grid:

| Operand 1 (Type/Value)   | Operator                     | Operand 2 (Type/Value)              |
|--------------------------|------------------------------|-------------------------------------|
| Type: <i>Prior Value</i> | <i>less than or equal to</i> | Type: <i>Numeric</i><br>Value: 0.03 |

7. Click **OK**.

8. Access the **Create Step Based Calculation Condition** task.

9. Enter these settings:

| Option           | Description        |
|------------------|--------------------|
| Name             | Prior Value > 0.03 |
| Category         | <i>Payroll</i>     |
| Logical Operator | AND                |

10. Enter these settings in the **Conditions** grid:

| Operand 1 (Type/Value)   | Operator            | Operand 2 (Type/Value)              |
|--------------------------|---------------------|-------------------------------------|
| Type: <i>Prior Value</i> | <i>greater than</i> | Type: <i>Numeric</i><br>Value: 0.03 |

11. Click **OK**.

### Next Steps

Create a step-based calculation to calculate an employer match deduction for 401(k).

### Related Information

#### Examples

[Example: Calculate a 401\(k\) Employer Match on Employee Contributions \(USA\)](#) on page 1061

#### Example: Create a Step-Based Calculation for a 401(k) Employer Match Amount (USA)

### Context

Your 401(k) retirement savings plan includes an employer match on both 401(k) pretax and 401(k) Roth post-tax employee contributions. The employer match contribution is tiered:

- 100% is matched on the first 3%.

- An additional 50% is matched above that, capped at 6%.

When calculating the match, you want to consider the IRS individual contribution limit. When the employee reaches the IRS limit for the year, you want to calculate the corresponding match based on the actual employee percent in that period, as opposed to the employee's elected percent.

When calculating the actual employee percent, you want to round to the nearest 0.001.

You want to create a step-based calculation to calculate the matched percent.

### Prerequisites

- Define a pay component group named *Retirement Savings Eligible Wages*.
- Define a pay accumulation for total employee contributions named *401(k) Total Contributions: EE [USA]*.
- Create a step-based condition group named *Matched Percent*.
- Create 2 step-based conditions named: *Prior Value < = 0.03*, *Prior Value > 0.03*
- Security: *Set Up: Payroll (Calculations - Payroll Specific)* domain in the Core Payroll functional area.

Security:

- *Set Up: Payroll (Calculations - Generic)* domain in the Core Payroll functional area.
- *Set Up: Time Off (Calculations - Generic)* domain in the Time Off and Leave functional area.

### Steps

1. Access the **Create Step Based Calculation** task and enter these values:

| Option   | Description                                  |
|----------|----------------------------------------------|
| Name     | 401(k) + Roth ER Match Calculated Percentage |
| Category | Payroll                                      |

2. Add these steps to the **Step Details** grid:

**Note:** Use the plus in the far left column to add a row as a new step. Use the plus to the right of the **Condition** column to add a row to the **Operations** sections within a step. The step numbers aren't visible until you click **OK** and save the calculation.

| Step | Condition Group | Condition           | Operation | Type                | Value                                |
|------|-----------------|---------------------|-----------|---------------------|--------------------------------------|
| 1    |                 |                     | Set       | Calculation         | 401(k) Total Contributions: EE [USA] |
|      |                 |                     | Divide    | Calculation         | Base (unprorated)                    |
|      |                 |                     | Round     | Rounding Definition | Round to nearest .001                |
| 2.1  | Matched Percent | Prior Value < = .03 | Exit      | Prior Value         |                                      |
| 2.2  | Matched Percent | Prior Value > .03   | Min       | Numeric             | .06                                  |
|      |                 |                     | Subtract  | Numeric             | .03                                  |
|      |                 |                     | Multiply  | Numeric             | 0.5                                  |
|      |                 |                     | Add       | Numeric             | .03                                  |

### 3. Click **OK**.

#### Result

The step-based calculation that you created runs when the value of the *Base (unprorated)* calculation is greater than zero.

Workday calculates the tiered employer match based on a total employee 401(k) and 401c(k) Roth calculated percentage for the pay period being processed. When the individual annual contribution limit for those deductions is reached in a period, the calculated employee percentage is less than the actual employee elections. Workday then bases the match percentage on the lower percentage in that period.

#### Next Steps

Create a deduction to calculate the 401(k) employer match.

#### Related Information

##### Examples

[Example: Calculate a 401\(k\) Employer Match on Employee Contributions \(USA\)](#) on page 1061

#### Example: Create a 401(k) Employer Match Deduction (USA)

Illustrates how to create a 401(k) employer match deduction.

#### Context

Your 401(k) retirement savings plan includes an employer match on both 401(k) pretax and 401(k) Roth post-tax employee contributions. You use a step-based calculation to calculate the employer match percentage.

#### Prerequisites

- Create a step-based calculation named *401(k) + Roth ER Match Calculated Percentage*.
- Define a pay component group named *Retirement Savings Eligible Wages*.
- Define a 401(k) pretax deduction, named *401(k)*.
- Define a 401(k) Roth post-tax deduction named *401(k) Roth*.
- Define a 401(k) Total Contributions EE > 0 value comparison calculation.
- Define a pay accumulation named *401(k) Total Contributions: EE + ER [USA]*.
- Security: *Set Up: Payroll (Calculations - Payroll Specific)* domain in the Core Payroll functional area.

#### Steps

1. Access the **Create Deduction** task.
2. Enter these settings:

| Option          | Description                  |
|-----------------|------------------------------|
| <b>Name</b>     | 401(k) & Roth Employer Match |
| <b>Category</b> | <i>Payroll</i>               |

3. Enter these settings on the **Effective Dated** tab:

| Option                          | Description                                        |
|---------------------------------|----------------------------------------------------|
| <b>Effective Date</b>           | Today                                              |
| <b>Run Category Eligibility</b> | <i>Bonus</i><br><i>Regular</i>                     |
| <b>Worker Eligibility</b>       | Row 1: <i>401(k) Total Contributions EE &gt; 0</i> |

| Option | Description                                                                         |
|--------|-------------------------------------------------------------------------------------|
|        | Workday recommends you review your benefit plan configuration for worker elections. |

4. Select the **Calculation Base** (*unprorated*) \* **Percent**.
5. Enter these settings in the **Related Calculations** grid:

| Related Calculation      | Override Calculation                                | Limit Details Value                    | Limit Details Balance Period                               | Limit Details Based On                                         |
|--------------------------|-----------------------------------------------------|----------------------------------------|------------------------------------------------------------|----------------------------------------------------------------|
| <i>Base (unprorated)</i> | <i>Retirement Savings Eligible Wages</i>            | <i>Section 415 Eligible Wage Limit</i> | <i>YTD - Current Calendar Year (based on Payment Date)</i> | <i>401(k) + Roth Employer Match [USA] - Based (unprorated)</i> |
| <i>Percent</i>           | <i>401(k) + Roth ER Match Calculated Percentage</i> |                                        |                                                            |                                                                |

6. Define the deduction limits in the **Limit** section at the bottom of the **Effective Dated** tab:

| Value                                                                                                               | Balance Period                                             | Based On                                         | Include Current Value               |
|---------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------|--------------------------------------------------|-------------------------------------|
| <i>IRS Annual Contributions Limit Value (only looks at the specified dollar value / not at annual compensation)</i> | <i>YTD - Current Calendar Year (based on Payment Date)</i> | <i>401(k) Total Contributions: EE + ER [USA]</i> | <i>401(k) [USA]<br/>401(k) Roth</i> |

7. Select *Employer Paid Benefits [CAN USA]* in the **Groups** field on the **Non-Effective Dated** tab.
8. Click **OK**.

### Result

Workday calculates the employer match deduction based on the calculated employer match percentage.

## Example: Calculate the Fair Market Value of Dependent Health Care Coverage (USA)

This example illustrates 1 way to configure an earning to calculate the fair market value of dependent health care coverage.

### Context

The company contributes to dependent health care coverage, and Francis needs to create an earning to calculate the fair market value of that benefit.

### Prerequisites

Have a pay components group named *Benefits During Leave* for non-active workers.

Define a dependent health care coverage plan.

Security: *Set Up: Payroll (Calculations - Payroll Specific)* domain in the Core Payroll functional area.

## Steps

1. Access the **Create Earning** task.
2. Enter these settings:

| Option      | Description                             |
|-------------|-----------------------------------------|
| <b>Name</b> | Dependent Health Care Fair Market Value |
| <b>Code</b> | DEP_HC_FMV                              |

3. Enter these settings on the **Effective Dated** tab:

| Option                       | Description                                                                                                                                                                                                                                                                                                       |
|------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Run Category</b>          | <i>Regular</i>                                                                                                                                                                                                                                                                                                    |
| <b>Worker Eligibility</b>    | Row 1: <ul style="list-style-type: none"> <li>• <i>Benefits: Fair Market Value Exists (and &lt; &gt; 0)</i></li> <li>• <i>Processing Primary Job</i></li> </ul> Row 2: <ul style="list-style-type: none"> <li>• <i>Payroll Input Exists for Pay Component</i></li> <li>• <i>Processing Primary Job</i></li> </ul> |
| <b>Calculation</b>           | <i>Benefits: Fair Market Value</i>                                                                                                                                                                                                                                                                                |
| <b>Calculation Proration</b> | <i>Prorate Using Days Worked</i>                                                                                                                                                                                                                                                                                  |

4. Enter these settings on the **Non-Effective Dated** tab:

| Option               | Description                                                                                                                 |
|----------------------|-----------------------------------------------------------------------------------------------------------------------------|
| <b>Groups</b>        | <i>Benefits During Leave</i><br><i>Non Cash Taxable Benefits</i><br><i>State Withholding Taxable (Withhold Taxes [USA])</i> |
| <b>Benefit Plans</b> | Select applicable benefit plans.                                                                                            |

## Result

The *Benefits Fair Market Value* calculation retrieves the total fair market value of over-age dependent coverage from Workday Benefits. If a worker has more than 1 over-age dependent with coverage, the calculation retrieves the sum of the dependent coverage. Workday processes this earning for eligible workers and deducts taxes on the imputed income.

## Next Steps

Use the **Maintain Tax Authority Exceptions Pay Component Groups** task to define tax authorities to include or exclude for this earning.

[Define Tax Authority Exceptions from Pay Component Groups \(USA\)](#) on page 1137

### Examples

[Steps: Set Up Fair Market Value for Health Care Plans](#)

## Example: Calculate Imputed Income from Basic Life Benefits (USA)

This example demonstrates 1 way to calculate imputed income from employer contributions to basic life insurance.

### Context

Workers have employer-provided basic life insurance. The employer pays 0.41 per 1,000 USD for income over 50,000 USD, for which the workers pay tax as imputed income. You create a deduction to calculate employer costs and an earning to calculate employee imputed income.

### Prerequisites

Configure a pay component group named *Benefits During Leave* for nonactive workers.

Set up a basic life plan.

Security: *Set Up: Payroll (Calculations - Payroll Specific)* domain in the Core Payroll functional area.

### Steps

1. Access the **Create Deduction** task.

2. Enter these values:

| Option | Description                         |
|--------|-------------------------------------|
| Name   | Employer Contribution to Basic Life |
| Code   | BL-ER                               |

3. On the **Effective Dated** tab, enter these values:

| Option                   | Description                                            |
|--------------------------|--------------------------------------------------------|
| Effective Date           | Current date                                           |
| Run Category Eligibility | <i>Regular</i>                                         |
| Worker Eligibility       | <i>Benefits: Employer Cost Exists (and &lt;&gt; 0)</i> |
| Calculation              | <i>Benefits: Employer Cost</i>                         |
| Calculation Proration    | <i>Prorate Using Days Worked</i>                       |
| Recalculate during Retro | Select the check box.                                  |

4. On the **Non-Effective Dated** tab, select these values:

| Option   | Description                                                                 |
|----------|-----------------------------------------------------------------------------|
| Groups   | <i>Benefits During Leave</i><br><i>Employer Paid Benefits [GBR CAN USA]</i> |
| Benefits | Select the basic life benefit plan that you created.                        |

5. Click **OK** and **Done**.

6. Access the **Create Earning** task.

7. Enter these values:

| Option | Description                    |
|--------|--------------------------------|
| Name   | Imputed Income from Basic Life |
| Code   | BL-IMP                         |

8. On the **Effective Dated** tab, enter these values:

| Option                   | Description                                                                                                                                                                                                                                                                                                                                 |

| Calculation              | <i>Benefits: Imputed Income for GTL (Employee)</i><br>Workday delivers the IRS monthly cost values in the <i>Benefits: Imputed Income IRS Premium Table Rate</i> lookup table. Access the <b>View Lookup Table (Workday Owned)</b> report to review the rate values for the <i>Benefits: Imputed Income for GTL (Employee)</i> calculation. |
| Calculation Proration    | <i>Prorate Using Days Worked</i>                                                                                                                                                                                                                                                                                                            |

9. On the **Non-Effective Dated** tab, select these values:

| Option   | Description                                                                                                                                                                                                                                                                                                                                                          |
|----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Groups   | <i>Benefits During Leave</i><br><i>Federal Taxable (Do Not Withhold Taxes) [USA]</i><br><i>FICA Taxable [USA]</i><br><i>Local Withholding Taxable (Do Not Withhold Taxes) [USA]</i><br><i>Local Withholding Taxable Employer (Do Not Withhold Taxes) [USA]</i><br><i>Non-Cash Taxable Benefits</i><br><i>State Withholding Taxable (Do Not Withhold Taxes) [USA]</i> |
| Benefits | Select the basic life benefit plan that you created.                                                                                                                                                                                                                                                                                                                 |

10. Click **OK** and **Done**.

### Result

Workday:

- Calculates the employer contribution subject to taxes using IRS Premium Table rates.
- Calculates the workers' imputed income when the taxable benefits cost is greater than zero and the insurance coverage amount is greater than 50,000 USD.

### Example: Create a Health Club Membership Earning (USA)

This example illustrates 1 way to configure an earning for a benefit, such as health club membership.

## Context

The company has created a new amount-based health club membership benefit. Set up an earning to calculate the value of the allowance.

## Prerequisites

Have a pay components group named *Benefits During Leave* for non-active workers.

Define a health club allowance.

Security: *Set Up: Payroll (Calculations - Payroll Specific)* domain in the Core Payroll functional area.

## Steps

1. Access the **Create Earning** task.

2. Enter these settings:

| Option      | Description                            |
|-------------|----------------------------------------|
| <b>Name</b> | Health Club Membership Taxable Benefit |
| <b>Code</b> | HC_TAX                                 |

3. Enter these settings on the **Effective Dated** tab:

| Option                          | Description                                                                                                                                                           |
|---------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Effective Date</b>           | Current Date                                                                                                                                                          |
| <b>Run Category Eligibility</b> | <i>Regular</i>                                                                                                                                                        |
| <b>Worker Eligibility</b>       | In the same row: <ul style="list-style-type: none"> <li><i>Benefits Employer Cost (taxable) or Pay Input Exists</i></li> <li><i>Processing Primary Job</i></li> </ul> |
| <b>Calculation</b>              | <i>Benefits: Employer Cost (Taxable)</i>                                                                                                                              |

4. Enter these settings on the **Non-Effective Dated** tab:

| Option               | Description                                                                                                                                                                                                                                                          |
|----------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Groups</b>        | <i>Benefits During Leave</i><br><i>Federal Taxable (Withhold Taxes) [USA]</i><br><i>FICA Taxable [USA]</i><br><i>Local Withholding Taxable (Withhold Taxes) [USA]</i><br><i>Non Cash Taxable Benefits</i><br><i>State Withholding Taxable (Withhold Taxes) [USA]</i> |
| <b>Benefit Plans</b> | Select the health club membership benefit.                                                                                                                                                                                                                           |

## Result

Workday processes this earning for eligible workers and deducts taxes on the imputed income.

## Process Decentralized On-Demand Payments (USA)

### Steps: Set Up Decentralized Processing for On-Demand Payments (USA)

#### Prerequisites

Set up a custom report to produce a PDF payslip at the end of the business process.

#### Context

You can give terminated workers their final pay and payslip on the day of termination or any other day. When you configure *On Demand Event* as a subprocess of the *Termination* business process, people other than payroll administrators (such as HR partners) can:

- Process a final on-demand replacement payment for terminated workers.
- Provide final payslips to workers.

#### Steps

##### 1. [Edit Business Process Security Policies.](#)

Edit the security policies for these business processes:

| Business Process       | Security to Configure                                                                                                                                                                                                                                                                                                                                                         |
|------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <i>On Demand Event</i> | Add security groups to the business process such as HR Partner. At a minimum, add security groups to these action steps: <ul style="list-style-type: none"> <li>• <i>On Demand Information for Termination</i></li> <li>• <i>Review On Demand Calculation</i></li> <li>• <i>View All</i></li> <li>• <i>Approve</i></li> <li>• <i>Cancel</i></li> <li>• <i>Deny</i></li> </ul> |
| <i>Termination</i>     | Add security groups to the <i>On Demand Information for Termination</i> step.                                                                                                                                                                                                                                                                                                 |

##### 2. Access the **Create Business Process Definition (Default Definition)** task.

From the **Business Process Type** prompt, select *On Demand Event*.

Security: These domains in the System functional area:

- *Business Process Administration*
- *Manage: Business Process Definitions*

##### 3. [Edit Business Processes.](#)

On the *On Demand Event* business process, add 3 rows with these values on the **Business Process Steps** tab:

| Order | Type             | Specify                                      | Group | Run As User                                                                                        |
|-------|------------------|----------------------------------------------|-------|----------------------------------------------------------------------------------------------------|
| b     | <i>Batch/Job</i> | <i>Payroll On-Demand Payment Calculation</i> |       | <i>Payroll Administrator</i><br><br>Must be a member of a user-based security group secured to the |

| Order | Type             | Specify                      | Group                                                                                                                | Run As User                                                                       |
|-------|------------------|------------------------------|----------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------|
|       |                  |                              |                                                                                                                      | <i>Process: Off Cycle (On Demand)</i> domain in the Core Payroll functional area. |
| b1    | Action           | Review On Demand Calculation | HR Partner                                                                                                           |                                                                                   |
| c     | Review Documents |                              | HR Partner<br>Must be a security role that's responsible for initiating the <i>On Demand Event</i> business process. |                                                                                   |

When you use external payroll input for terminated workers, add an *Integration* step after the initiation step. You can use the **Off-Cycle Event Integration Background Process Runtime Status** report field to check that the integration is complete.

Set *Review On Demand Calculation* as the completion step.

On the *Termination* business process, add the *On Demand Information for Termination* action step after the existing completion step.

4. Access the **Maintain Payment Election Rules** task to configure payment types.

Select the *Payroll Rule Election Rule Type*.

Select *Check* or *Manual* as **Allowed Payment Types for Transaction Overrides**.

Security:

- *Set Up: Payment Election* domain in the Expenses functional area.
- *Set Up: Payroll (Payment Election Rules)* domain in the Core Payroll functional area.
- *Set Up: Payroll Interface* domain in the Payroll Interface functional area.

5. Access the **Maintain Off-Cycle Configuration** task.

On the **Payroll Action Reason** tab, select an **On Demand Replacement Business Process Default**.

On the **Payment Type** tab, select **On Demand Replacement Business Process Options**.

When other users review on-demand payment information as part of the *Termination* business process, they can select a payment type from the ones you configured.

Security: *Set Up: Payroll* domain in the Core Payroll functional area.

### Examples

[Example: Edit On Demand Event Business Process \(USA\)](#) on page 1074

## Concept: Decentralized Processing for On-Demand Payments (USA)

When you configure the *On Demand Event* business process as a subprocess of the *Termination* business process, you can enable other Workday users to generate final payments for terminated workers. Other users can include payroll administrators, or nonpayroll administrators such as HR partners or store managers.

### Processing Tasks for Other Users

When users run the *Termination* business process, the *On Demand Event* subprocess makes these steps available:

| Step                                         | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|----------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <i>On Demand Information for Termination</i> | When this step completes, Workday runs an off-cycle pay calculation for the on-demand payment.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| <i>Review On Demand Calculation</i>          | <p>Business process initiators can:</p> <ul style="list-style-type: none"> <li>Approve the final payment amounts and Workday updates the pay result status to <i>Completed</i>. If configured, they can also print the PDF payslip from the <i>Review Documents</i> business process step.</li> <li>Deny the final payment, and provide a comment to payroll for further action for the terminated worker.</li> </ul> <p>Both of these options update the business process status to <i>Completed</i>, but the deny option leaves the pay result status <i>In Progress</i>.</p> |

The **Termination Date** must be within the current payroll processing period. The **Payment Date** for the on-demand payment can be any date.

### Payroll Processing Considerations

The *On Demand Event* business process only completes the pay calculation when the pay result status is *In Progress*. You can view these statuses on the **Pay Calculation Off-cycle Inputs for Group of Workers** report.

When other users terminate workers using the *On Demand Event* business process:

- You can't cancel the on-demand payment until other users complete the *Review On Demand Calculation* step.
- The **Cancel Off-Cycle Complete for Group of Workers** and **Completed Off-Cycle Results to be Canceled** reports don't display the terminated workers.
- You can't cancel pay results using the **Cancel Off-Cycle Complete** task.

Payroll administrators must complete all subsequent pay cycle tasks, such as settlement.

When terminated workers have retro to process in their final payment, you can access the **Run On Demand Payment for Worker** task to:

- Process the retro events.
- Issue a secondary or replacement payment.

[Terminate Employees](#)

## Example: Edit On Demand Event Business Process (USA)

This example illustrates how to configure the default definition of the *On Demand Event* business process to add it as a subprocess of the *Termination* business process.

### Context

Your payroll department operates out of Houston, and your organization employs workers in California. California law requires that terminated workers receive all payments owed and their payslip on the day of termination. You want to enable your store managers in California business locations to perform these tasks for the terminated worker on that day:

- Process the final payment.
- Print the payslip.

Your store managers have HR partner security role access.

### Prerequisites

- Set up a custom report to produce a PDF payslip at the end of the business process.
- Configure the *On Demand Event* business process security policy to add the **HR Partner** security group to these action steps:
  - *Review On Demand Calculation*
  - *View All*
  - *Approve*
  - *Deny*
- Create a default definition for the *On Demand Event* business process.
- Security: These domains in the System functional area:
  - *Business Process Administration*
  - *Manage: Business Process Definitions*

### Steps

1. From the related actions menu of the *On Demand Event* business process, select **Business Process > Edit Definition**.
2. Enter the current date in the **Date** field and click **OK**.
3. Add 3 rows with these values on the **Business Process Steps** tab:

| Order | Type                    | Specify                                      | Group             | Run As User                  |
|-------|-------------------------|----------------------------------------------|-------------------|------------------------------|
| b     | <i>Batch/Job</i>        | <i>Payroll On-Demand Payment Calculation</i> |                   | <i>Payroll Administrator</i> |
| b1    | <i>Action</i>           | <i>Review On Demand Calculation</i>          | <i>HR Partner</i> |                              |
| c     | <i>Review Documents</i> |                                              | <i>HR Partner</i> |                              |

4. Set *Review On Demand Calculation* as the completion step and click **OK**.
5. Click **Configure Document Review**.
6. Enter the current date in the **Effective Date** field and click **OK**.
7. From the **Document Effective As Of** prompt, select *Effective Date*.
8. From the **Document** prompt, select the custom report you created for your payslips.

9. In the **Signature Options** section, select **Acknowledgment**.

10. In the **Signature Statement** field, enter a statement to inform the business process initiator that when they submit the business process, Workday:

- Processes the terminated worker's final payment.
- Provides the worker's payslip.

11. Click **OK**.

12. On the **Report Criteria** tab, select these values:

| Value Type                        | Value                                     |
|-----------------------------------|-------------------------------------------|
| <i>Determine Value at Runtime</i> | <i>Payroll Result for Off-Cycle Event</i> |

13. On the **Output** tab, select **Business Form (PDF)** and the custom report you created for payslips.

14. On the **Share** tab, select **Share report output with other users**.

15. Select the *HR Partner* and *Payroll Partner* **Security Groups** to view the payslip PDF.

16. Select **I agree to the statement above** and click **OK**.

### Next Steps

(Optional) Add a *To Do* step or **Add Notification** on the *On Demand Event* business process to notify the payroll administrator that either:

- The termination is ready for their review.
- The store manager denied the termination.

Configure:

- *On Demand Event* as a subprocess on the *Termination* business process after the completion step.
- Payment types for the final payment on the **Maintain Off-Cycle Configuration** task.

[Steps: Set Up Custom Report Designer Payslips](#) on page 482

[Create Integration \(Step\)](#)

## Example: Create Pay Card Number Field for On Demand Event (USA)

This example illustrates how to create a pay card number field to add to the *On Demand Event* business process for final payments to terminated workers.

### Context

Your payroll department operates out of Houston, and your organization employs workers in California. California law requires that terminated workers receive all payments owed and their payslip on the day of termination. You want to enable your store managers in California business locations to process final payments for terminated workers using pay cards. You want to create the pay card number field to add to the *On Demand Event* business process.

### Prerequisites

Security: *Custom Object Management* domain in System functional area.

### Steps

1. Access the **Create Custom Object** task.

2. Enter these values and click **OK** and **Next**:

| Option             | Description                      |
|--------------------|----------------------------------|
| Workday Object     | Worker (Effective Dated)         |
| Custom Object Name | On Demand Event Business Process |

3. Click **Add**.

4. Enter these values and click **Next**:

| Option      | Description     |
|-------------|-----------------|
| Field Label | Pay Card Number |
| Field Type  | Text            |

5. Click the **Edit** icon.

6. Select the *Person Data: Personal Data Domain* and click **Next**.

7. Confirm your changes and click **OK**.

8. Make no changes on the **Activate Custom Object** task and click **OK**.

9. Click **Done**.

## Result

You can now configure the On Demand Event Business Process custom object as an *Edit Additional Data* step on the *On Demand Event* business process.

## Related Information

### Tasks

[Create and Edit Custom Object Definitions](#)

## Example: Configure Pay Card for On Demand Event Business Process (USA)

This example illustrates how to configure the *On Demand Event* business process to enable pay card as a final payment type for terminated workers.

## Context

Your payroll department operates out of Houston, and your organization employs workers in California. California law requires that terminated workers receive all payments owing and their payslip on the day of termination. You want to enable your store managers in California business locations to process final payments for terminated workers using pay cards. Now you need to configure these steps on the *On Demand Event* business process:

- *Edit Additional Data*: Enables your store managers to enter a pay card number when they review on-demand payment information for the final payment.
- *Integration*: Sends the worker information, pay card number, and net amount to the third-party vendor to fund the pay card.

Your store managers have HR partner security role access.

## Prerequisites

- On the **Maintain Payment Election Rules** task, for the *Payroll Rule Election Rule Type* row, create and select a new payment type with a:
  - **Payment Type Name** of Pay Card.
  - **Payment Method** of *Manual*.
- Configure the new Pay Card payment type for final payments to terminated workers on the **Maintain Off-Cycle Configuration** task.

- Create an On Demand Event Business Process custom object for the pay card number.
- Configure the default definition of the *On Demand Event* business process as a subprocess of the *Termination* business process.
- Create a custom integration with the pay card vendor.
- Security: These domains in the System functional area:
  - *Business Process Administration*
  - *Manage: Business Process Definitions*

## Steps

1. From the related actions menu of the *On Demand Event* business process, select **Business Process > Edit Definition**.
2. Enter the current date in the **Date** field and click **OK**.
3. Add 2 rows on the **Business Process Steps** tab.
4. Enter these values and click **OK**.

| Order | Type                        | Specify                                 | Group             |
|-------|-----------------------------|-----------------------------------------|-------------------|
| a1    | <i>Edit Additional Data</i> | <i>On Demand Event Business Process</i> | <i>HR Partner</i> |
| d     | <i>Integration</i>          |                                         |                   |

5. From the related actions menu of the *Edit Additional Data* step, select **Business Process > Create Condition Rule**.
6. Enter Only if Pay Card in the **Description** field.
7. In the **Rule Conditions** section, enter these values and click **OK**:

| Source External Field or Condition Rule | Relational Operator          | Comparison Type                       | Comparison Value |
|-----------------------------------------|------------------------------|---------------------------------------|------------------|
| <i>Payment Type</i>                     | <i>in the selection list</i> | <i>Value specified in this filter</i> | <i>Pay Card</i>  |

8. From the related actions menu of the *On Demand Event* business process, select **Business Process > Edit Definition**.
9. Enter the current date in the **Date** field and click **OK**.
10. Click **Configure Integration System**.
11. Select the **Integration** you created to connect with the pay card vendor and click **OK**.
12. Confirm that the integration configuration is correct and click **OK**.
13. From the related actions menu of the *On Demand Event* business process, select **Business Process > Edit Definition**.
14. Enter the current date in the **Date** field and click **OK**.
15. Confirm that the steps are correct and click **OK**.
16. From the related actions menu of the *Edit Additional Data* step, select **Business Process > Maintain Step Conditions**.
17. Enter the current date in the **Date** field and click **OK**.
18. Add a row.
19. Select the **Only if Pay Card Rule** and click **OK**.
20. From the related actions menu of the *Integration* step, select **Business Process > Maintain Step Conditions** and click **OK**.
21. Enter the current date in the **Date** field and click **OK**.
22. Add a row.

23. Select the *Only if Pay Card Rule*, click **OK**, and click **Done**.

### Result

When your store managers run the *Termination* business process and reach the *On Demand Information for Termination* step, they can:

- Select the *Pay Card* payment type.
- Enter a pay card number.

When they submit the on-demand payment information, Workday connects with the pay card vendor through the integration to fund the pay card. You can review the pay card number on the worker profile as additional data.

## Adjust Taxes (USA)

---

### Setup Considerations: Prior Period Tax Adjustments (USA)

You can use this topic to help make decisions when planning your configuration and use of prior period tax adjustments. It explains:

- Why to set them up.
- How they fit into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

### What It Is

Prior period tax adjustments (PPTAs) enable you to recalculate taxes for a completed payroll result and create a tax adjustment result.

### Business Benefits

You can use PPTAs to recalculate a worker's tax authority wages and taxes for a completed payroll result. This feature helps you:

- Comply with tax and year-end reporting.
- Improve efficiency when processing tax adjustments.
- Reduce manual processing and potential errors.

### Use Cases

You can adjust prior periods taxes with the **Prior Period Tax Adjustment Calculator** task when a worker moved to a different primary home state, work state, or jurisdiction during the payroll period.

## Questions to Consider

| Questions                                                                                                                                             | Considerations                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
|-------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| How does the PPTA calculator work?                                                                                                                    | <p>The PPTA calculator applies retroactive changes that you make for the worker's:</p> <ul style="list-style-type: none"> <li>• Primary work and resident states.</li> <li>• Tax elections for their state, city, county, school district, and local other.</li> </ul> <p>Workday uses the tax authorities in effect as of the period-end date of the original pay result that you're adjusting. The tax authorities in effect are applied to the entire pay result or subperiod pay result.</p> <p>We include the tax authority attributes when they're in effect as of the payment date of the original pay result you're adjusting.</p> <p>Workday only adjusts tax authority wages and taxes for earnings and deductions that were originally applied to the worker's primary work and resident tax authorities. Earnings and deductions applied to other tax authorities on the original result will remain in those tax authorities.</p> |
| What's the difference between a tax adjustment result that you create using the PPTA calculator and a tax adjustment result that you create manually? | <p>Workday treats the tax adjustment results created with the PPTA calculator as if they were part of the original pay result.</p> <p>Example: You create a tax adjustment result with the PPTA calculator for a payroll result from January. Workday uses the same wages and tax limits as of the completion date and time of the original payroll result.</p> <p>For the tax adjustment results that you create manually, Workday uses the completion date and time when you make those changes.</p> <p>Example: In February, you create an off-cycle on-demand additional payment for a pay period in January. Workday uses the completion date and time from February, not January, for the wages and tax limits.</p>                                                                                                                                                                                                                      |
| Where do you want to report your prior period tax adjustment result?                                                                                  | <p>Workday uses the payment date to determine where the tax adjustment result is processed for tax and year-end reporting. If you use a payment date in a prior quarter, you might need to amend your tax filings.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| When do I need to use a net pay offset code?                                                                                                          | <p>You must use a net pay offset code for PPTAs when:</p> <ul style="list-style-type: none"> <li>• There's an employee tax difference.</li> <li>• An employee has been underwithheld.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

| Questions                                                                                                                            | Considerations                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
|--------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                                                                                                                      | The PPTA calculator uses the net pay offset code to bring the net pay to zero on the tax adjustment result.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| How does the <i>Is Not Processing Tax Adjustment Result</i> instance value calculation (IVC) relate to prior period tax adjustments? | <p>The <i>Is Not Processing Tax Adjustment Result</i> IVC prevents U.S. tax deductions from resolving on tax adjustment results if the tax authorities aren't sent from the PPTA calculator.</p> <p>The IVC is on all effective dated rows so you can process PPTAs as far back as you want. You can also use the IVC with tenant pay components if needed.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| How do I adjust prior period taxes for multiple sibling gross-to-net (GTN) results?                                                  | <p>Workday calculates sibling GTN results together when you use the PPTA calculator.</p> <p>If your period has sibling gross-to-net results, Workday:</p> <ul style="list-style-type: none"> <li>• Calculates taxes using the tax authorities in effect for the period end date of each subperiod.</li> <li>• Displays all the pay results that must be recalculated together.</li> </ul> <p>Subperiod GTN results that have been calculated together in their original pay calculation should also be adjusted together using the PPTA calculator.</p> <p>When you run the PPTA calculator on 1 sibling GTN result, Workday recalculates the other sibling GTNs together, whether or not they require a tax adjustment. The calculator creates a separate tax adjustment result for each subperiod GTN result.</p> <p>If you take action on any of the sibling tax adjustment results, Workday recalculates, cancels, or completes all of the results together. You must individually adjust reversals for sibling tax adjustment results to help avoid negatively affecting the wage and tax balances and limits.</p> |

### Recommendations

Adjust pay results by the earliest:

- Pay period.
- Completed date and time.

Example:

| Payroll Result | Period                                                    | Calculation Status | Calculation Date Time |
|----------------|-----------------------------------------------------------|--------------------|-----------------------|
| A              | 01/01/2024 - 01/15/2024<br>(Semimonthly)                  | Completed          | 01/13/2024 09:56 AM   |
| B              | 01/16/2024 - 01/31/2024<br>(On-demand additional payment) | Completed          | 01/21/2024 03:15 PM   |

| Payroll Result | Period                                   | Calculation Status | Calculation Date Time |
|----------------|------------------------------------------|--------------------|-----------------------|
| C              | 01/16/2024 - 01/31/2024<br>(Semimonthly) | Completed          | 01/29/2024 07:26 PM   |

Adjusting the above pay results in this order helps ensure that pay balances are applied to the correct period:

1. Payroll Result A
2. Payroll Result B
3. Payroll Result C

### Requirements

If you plan to collect tax underwithholding from workers, you must create at least 1 net pay offset code.

### Limitations

You can't create prior period tax adjustments for:

- 1042-S workers.
- Gross-up calculations.
- Incomplete payroll results.
- Pretax deduction allocations.
- Trailing payments or payments in a future period that you created using Next Period.
- Workers with multiple jobs.

The **Prior Period Tax Adjustment Calculator** task can't be used to:

- Adjust pay results created within a company relationship.
- Make retroactive changes for hire date corrections or ongoing multiple work jurisdictions (OMWJ).
- Split the original payroll result into separate subperiods when there are retroactive midperiod changes to tax authorities.
- Move tax authorities to a different company.
- Change the earning or deduction amounts that were paid and deducted on the original pay result.
- View retroactive tax authority change events across workers and pay results.

The **Prior Period Tax Adjustment** related action isn't available on these pay result types:

- Created by Retro
- Manual Payments
- Pay on Demand
- Payroll History
- Reversals

Using the PPTA calculator for a worker with position-based taxes who had retroactive changes to their position and location will cause an error on the on-demand additional payment. The on-demand additional payment uses the worker's new position, while the worker's position-based taxes calculated in PPTA are based on the old position, causing the error.

You can't use the PPTA calculator if it calculates that the original earnings and deductions are different amounts from what was paid on the original payroll result. Examples include:

- A deduction went into arrears and the retroactive tax authority change results in a refund of taxes.
- An earning or deduction is no longer in effect for the pay result that you're adjusting
- A pay component is retroactively changed.

Example: A worker who previously lived in California usually paid \$50 for a pretax medical deduction. On the original payroll result that you're adjusting, the worker only paid \$45 because they didn't have enough

money to collect the full amount. Then, the worker has a retroactive tax authority change that results in a tax refund.

Now when you try to run the PPTA calculator on the original payroll result, you receive an error because:

- The tax refund increases the net pay and allows the medical deduction to increase to \$50, causing the taxable wages in the PPTA calculation to be reduced by \$5 when that's not what was originally deducted.
- The PPTA calculator doesn't allow earnings or deductions to be changed from the original values and you must calculate and process the tax adjustments manually.

### Tenant Setup

No impact.

### Security

| Domains                                                  | Considerations                                                                                           |
|----------------------------------------------------------|----------------------------------------------------------------------------------------------------------|
| <i>Process: Off-Cycle</i>                                | Enables users to access the <b>Prior Period Tax Adjustment &gt; Run</b> related action to create a PPTA. |
| <i>Set Up: Payroll (Calculations - Payroll Specific)</i> | Enables users to create an earning or deduction for their net pay offset pay component.                  |

### Business Processes

No impact.

### Reporting

On the **Pay Calculation Results for Worker** report, you can use the columns to help you verify the relationship between an original payroll result and its tax adjustment result:

- *Tax Adjustment Result*
- *Original Result for Tax Adjustment*

### Integrations

No impact.

### Connections and Touchpoints

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships in your tenant. Learn more about the [Workday Touchpoints Kit](#) on Workday Community.

## Steps: Adjust Prior Period Taxes (USA)

### Context

You can adjust prior period taxes by retroactively adding, changing, or deleting the:

- Primary work or resident state tax authorities of a worker.
- Tax elections of a worker for their primary work and resident city, county, school district, domicile state, or local other.

## Steps

1. (Optional) Create a net pay offset code for the PPTA calculator to use for your tax adjustment result.  
See [Steps: Create Net Pay Offset Code](#).
2. [Create a Prior Period Tax Adjustment Result](#).
3. Complete the prior period tax adjustment result that you created.  
See [Complete Payroll](#).

## Result

The tax adjustment result:

- Doesn't void the original pay result.
- Acts like a sibling result and is treated like an update to the original pay results' tax authorities for tax authority limit and balance purposes.

The tax adjustment result uses all tax conditions that are in effect for the original payroll period of the completed payroll result.

When you adjust prior period taxes on a pay result, Workday doesn't split the original pay result into multiple gross-to-net (GTN) results when the retroactive effective date is in the middle of the period. We recalculate the entire period for the:

- Primary work tax authority.
- Primary home tax authority.
- Domicile state tax election.

If you create a tax adjustment result for a period with multiple sibling GTN results, Workday creates tax adjustment results for each subperiod.

The accounting for the tax adjustment result is based on the configuration of the original payroll result.

## Next Steps

We recommend that you review the accounting after using the **Prior Period Tax Adjustment Calculator** task to verify that the accounting is valid according to your business rules.

If a pay component is resolving on a tax adjustment not sent from the PPTA, add the *Is Not Processing Tax Adjustment Result* instance value calculation to the pay component's worker eligibility to help prevent it from resolving on the tax adjustment ODAs.

In these scenarios, rerun the PPTA calculator to verify that you account for the pay balances from the manual payment:

| Scenario                                                                                                                                                                                    | Solution                                                                                     |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------|
| A worker has a: <ul style="list-style-type: none"> <li>• Completed on-cycle.</li> <li>• Manual payment in progress.</li> </ul>                                                              | Complete or cancel the incomplete pay result that exists before you run the PPTA calculator. |
| You create: <ul style="list-style-type: none"> <li>• An in-progress on-demand additional payment using the PPTA calculator.</li> <li>• An on-demand additional payment manually.</li> </ul> | Recalculate the tax adjustment result that you created first with the PPTA calculator.       |

If you need to reverse an original pay result that has been adjusted by a tax adjustment result, you must either:

- Reverse the related tax adjustment result.

- Run the **Cancel Pay Complete** task to cancel the tax adjustment result. See [Cancel a Completed On-Cycle Payroll](#) on page 635.

This order helps avoid reporting wages and taxes that don't have any related earnings or deductions.

## Steps: Create Net Pay Offset Code Pay Components (USA)

### Context

If you plan to collect tax differences from employees, you must create a net pay offset pay component before you use the prior period tax adjustment (PPTA) calculator.

You can create an earning or deduction to help ensure that Workday offsets the net pay on your tax adjustment result to zero. On the PPTA calculator, you can select the net pay offset pay component to send to your tax adjustment result.

Your net pay offset pay component must:

- Be active as of the end date of the period where you create the tax adjustment result.
- Not be based on a worktag or include any groups you added.

You can't base your net pay offset pay component on a worktag because this might result in unexpected outcomes on your tax adjustment result.

Workday doesn't automatically deduct or refund the tax differences applied to the net pay offset code on the tax adjustment result that you create.

### Steps

- Create an earning for your net pay offset pay component.

See [Steps: Create Earnings](#).

As you complete the **Create Earning** task, select:

| Option                | Description                                                                                                                                                                                                                                                                                  |
|-----------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Country               | <i>United States of America</i>                                                                                                                                                                                                                                                              |
| Effective Date        | A date in the pay period where you plan to post your tax adjustment result.<br><br>We recommend that you select an effective date in the earliest pay period.<br><br>Example: Select 2020-01-01 so that the net pay offset pay component is active for any pay period from that date onward. |
| Worker Eligibility    | <i>Payroll Input (Onetime or Ongoing) Exists for Pay Component (Sub Period)</i> in the Worker Eligibility grid on the <b>Effective Dated</b> tab.                                                                                                                                            |
| Calculation           | <i>Payroll Input</i> on the <b>Effective Dated</b> tab.                                                                                                                                                                                                                                      |
| Input Amount Allowed? | This check box on the <b>Effective Dated</b> tab.                                                                                                                                                                                                                                            |
| Groups                | <i>Adds to Gross [CAN USA]</i> on the <b>Non-Effective Dated</b> tab.                                                                                                                                                                                                                        |

## 2. Create a deduction for your net pay offset code.

See [Steps: Create Deductions](#).

As you complete the **Create Earning** task, select:

| Option                       | Description                                                                                                                                                                                                                                                                                             |
|------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Country</b>               | <i>United States of America</i>                                                                                                                                                                                                                                                                         |
| <b>Effective Date</b>        | <p>A date within the pay period where you plan to post your tax adjustment result.</p> <p>We recommend that you select an effective date in the earliest pay period.</p> <p>Example: Select 2020-01-01 so that the net pay offset pay component is active for any pay period from that date onward.</p> |
| <b>Worker Eligibility</b>    | <i>Payroll Input (Onetime or Ongoing) Exists for Pay Component (Sub Period) in the Worker Eligibility grid on the <b>Effective Dated</b> tab.</i>                                                                                                                                                       |
| <b>Calculation</b>           | <i>Payroll Input on the <b>Effective Dated</b> tab.</i>                                                                                                                                                                                                                                                 |
| <b>Input Amount Allowed?</b> | This check box on the <b>Effective Dated</b> tab.                                                                                                                                                                                                                                                       |
| <b>Groups</b>                | <i>Post Tax Deductions on the <b>Non-Effective Dated</b> tab.</i>                                                                                                                                                                                                                                       |

### Result

On the **Prior Period Tax Adjustment Calculator** task, you can:

- Select your net pay offset pay component from the **Net Pay Offset Code** field.
- Create the tax adjustment result with the net pay offset code that you select.

### Next Steps

We recommend that you create a custom report to track net pay offset codes and their balances before you use these pay components on the PPTA calculator.

## Create a Prior Period Tax Adjustment Result (USA)

### Prerequisites

Have a completed payroll result for a worker.

Security: *Process: Off-Cycle* domain in the Core Payroll functional area.

### Context

You can create a prior period tax adjustment result to recalculate a worker's primary tax authority wages and taxes for a completed payroll result.

If you adjust the taxes of a pay result that was created from a nonregular run category, you must create the tax adjustment result in the regular run category.

You can create only 1 tax adjustment result per original payroll result.

### Steps

1. Access a completed payroll result for the worker who needs their tax authority wages or taxes adjusted.
2. From the related actions menu of the completed payroll result, select **Prior Period Tax Adjustment > Run**.
3. As you complete the **Tax Adjustment Result Processing Details** section, consider:

| Option                     | Description                                                                                                                                                                                                                                                                                                                                         |
|----------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Prior Period</b>        | Select this check box to adjust the worker's taxes in a prior period.                                                                                                                                                                                                                                                                               |
| <b>Payment Date</b>        | Select a payment date for where you want to report your tax adjustment result.                                                                                                                                                                                                                                                                      |
| <b>Net Pay Offset Code</b> | <p>(Optional) From the prompt, select the net pay offset code that you created for earnings or deductions.</p> <p>Workday only displays codes that you configured with these pay component groups:</p> <ul style="list-style-type: none"> <li>• <i>Adds to Gross</i> for earnings.</li> <li>• <i>Post Tax Deductions</i> for deductions.</li> </ul> |

4. As you review the **Tax Adjustment Summary** section, consider:

| Option                         | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|--------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Employee Tax Difference</b> | <p>Displays how much tax the employee has been over or under withheld.</p> <p>This field helps you verify how the worker is impacted and determine whether you want to:</p> <ul style="list-style-type: none"> <li>• Collect or refund the tax.</li> <li>• Offset the difference using a net pay offset code.</li> </ul>                                                                                                                                                                                                                                                          |
| <b>Use Override Tax Amount</b> | <p>You can't override the:</p> <ul style="list-style-type: none"> <li>• Original tax authority amounts.</li> <li>• Tax authority's related calculations.</li> </ul> <p>To override the taxes for the newly calculated tax authority amounts, select this check box in either or both of these grids:</p> <ul style="list-style-type: none"> <li>• <b>Tax Adjustment Differences - Employee</b></li> <li>• <b>Tax Adjustment Differences - Employer</b></li> </ul> <p>Workday uses the override tax amount value in the tax adjustment result instead of the calculated value.</p> |

5. Verify the calculations before creating your tax adjustment result.
6. Click **Create Tax Adjustment Result**.

### Result

Workday creates the tax adjustment result:

- As an in-progress on-demand additional (ODA) payment.
- With a subperiod target date equal to the period end date or the termination date of the worker if they were terminated.

Workday:

- Automatically assigns the ODA a payment priority of zero.
- Doesn't send any earnings or deductions because they were already paid and reported on the original pay result.
- Sends both the original and new tax authorities and wages from the PPTA calculator to the ODA payment.
- Sends the company as a worktag override when creating the ODA.

### Next Steps

To modify:

- An in-progress ODA payment, rerun the PPTA calculator on the same original pay result to create a new tax adjustment result.
- A completed ODA payment, you can:
  - Cancel complete, cancel, or reverse the ODA result.
  - Rerun the PPTA calculator on the same original pay result to create a new tax adjustment result.

## Concept: Prior Period Tax Adjustment Calculator (USA)

The prior period tax adjustment (PPTA) calculator:

- Adjusts the primary work and resident tax authority wages and taxes for a worker when you process retroactive changes.
- Produces tax and wage differences for you.
- Uses the earning and deduction amounts from the original payroll result to determine the tax authority wage and tax differences.

When determining the tax authority wage and tax limits for the period that you're adjusting, the PPTA calculator:

- Includes balances from other payroll results completed before the payroll result that you're adjusting.
- Includes balances from other tax adjustment results that are for payroll results you've already adjusted with the PPTA calculator before the payroll result that you're adjusting.
- Recognizes the tax adjustment result as being part of the original pay result for wage and tax limit purposes.

The PPTA calculator doesn't include balances from pay results that were completed after the pay result you're adjusting. The exception is for tax adjustment results, which Workday treats as if they're completed at the same time as the original pay result, regardless of:

- Whether the tax adjustment result is completed in a current or prior period.
- The completion date and time of the tax adjustment result.

On the **Prior Period Tax Adjustment Calculator** task, you can access these tabs to view and validate the differences before creating your tax adjustment result:

| Tab                           | Description                                                                                                                                   |
|-------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Tax Adjustment Summary</b> | Displays the employee tax difference and the tax authority differences that Workday uses to create the tax adjustment result.<br><br>You can: |

| Tab                           | Description                                                                                                                                                                                                                                                                                                                                                                                                             |
|-------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                               | <ul style="list-style-type: none"> <li>• Override the newly calculated taxes before creating the tax adjustment result.</li> <li>• Define the period and payment date for the tax adjustment result.</li> </ul>                                                                                                                                                                                                         |
| <b>Tax Adjustment Details</b> | <p>Displays information about the earnings and deductions paid on the original pay result.</p> <p>You can:</p> <ul style="list-style-type: none"> <li>• Verify the earning and deduction amounts that the PPTA calculator uses as the basis for recalculating the tax authority wages and taxes of the worker.</li> <li>• Review the original, new, and difference amounts for all impacted tax authorities.</li> </ul> |

### Retroactive Changes to a Worker's Position and Location

Using the PPTA calculator for a worker with position-based taxes who had retroactive changes to their position and location will cause an error on the on-demand additional payment. The on-demand additional payment uses the worker's new position, while the worker's position-based taxes calculated in PPTA are based on the old position, causing the error.

## Concept: Prior Period Tax Adjustments (USA)

### On-Demand Additional (ODA) Payments

When you create an ODA from the prior period tax adjustment (PPTA) calculator, Workday associates that tax adjustment result with the original pay result.

When you create a tax adjustment result for an original pay result and run the PPTA calculator on the next pay result, Workday includes only the tax authority balances from these results when calculating the PPTA on the next pay result:

- Original results completed prior to the result you're adjusting.
- ODA tax adjustment results for original pay results completed prior to the result you're adjusting.

You might need to adjust several pay results to adjust the impacted tax authorities.

Except for PPTA ODAs, Workday doesn't include any tax authority balances from results completed after the pay result you're adjusting.

### Tax Authority Exceptions

Workday includes tax authority exceptions when you process PPTAs.

If a tax authority exception is added or changed due to legislation that's effective for the current year, Workday still applies that tax authority exception to the pay results you adjust because there's no effective date.

### Terminated Workers

When you recalculate taxes and tax authority wages for a terminated worker, Workday uses the tax authorities that are in effect on or before the termination date of the worker.

When a retroactive work tax authority goes into effect after the termination date of the worker, Workday doesn't include it in the PPTA calculation.

### Midperiod Company Changes

If there's a midperiod change to a company, Workday:

- Creates multiple gross-to-net results.
- Calculates all of the results together for payroll.

When you run the PPTA calculator on a subperiod pay result for a midperiod company change, Workday:

- Calculates an ODA tax adjustment result for each subperiod.
- Creates a tax adjustment result for each subperiod and company.

### Midperiod State Tax Authority Changes

Unlike regular payroll calculations, PPTA calculations don't create multiple sibling gross-to-net results when processing a PPTA from a single pay result in a pay period if there's a retroactive midperiod change to the state tax authority. Instead, the PPTA calculator applies the new state tax authority to the entire pay period.

Example: A worker with a semimonthly pay frequency:

- Lives and works in California from *01/01/2024 - 01/07/2024*.
- Moves to live and work in Oregon from *01/08/2024 - 01/15/2024*.

You process payroll for the January 15pay period. You get a payroll result for the:

- *01/01/2024 - 01/07/2024* subperiod that calculates California wages and taxes.
- *01/08/2024 - 01/15/2024* subperiod that calculates Oregon wages and taxes.

You find out that the worker moved to live and work in Utah on January 4. When you use the PPTA calculator to adjust their work and resident state tax authorities, Workday:

- Calculates both subperiods using Utah as the work and resident tax authority because the state tax authority is in effect within the end dates of both subperiods.
- Doesn't split the original payroll results into subperiods or combine them into a single result.

## Salary Over the Cap (USA)

---

### Setup Considerations: Salary Over the Cap (USA)

You can use this topic to help make decisions when planning your configuration and use of salary over the cap. It explains:

- Why to set it up.
- How it fits into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

### What It Is

Salary over the cap enables you to define rules to set up salary caps so that payroll expenses don't exceed limitations for the salaries of workers with grants.

### Business Benefits

Salary over the cap helps you:

- Comply with regulatory and reporting requirements.

- Track federal funding allocated for research.
- Calculate under and over the salary for a grant.
- Configure costing rules for salary exceeding the cap amount.

### Use Cases

Salary over the cap is used by universities, hospitals, or specialized agencies that receive funding from the federal government or a sponsor to do research work. Example: National Institute of Health (NIH) provides funding for stem cell research with annual salary cap amount of \$240,000 to the Global Modern University.

### Questions to Consider

| Questions                                                    | Considerations                                                                                                                                                                                                                                                      |
|--------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| How can you set up worktags for salary over the cap costing? | You can use the <b>Maintain Salary Over the Cap Type</b> report to add specific <i>Salary Over the Cap Type</i> worktags. Workday includes the salary over the cap type worktags while evaluating over the cap amount, for the worker whose salary exceeds the cap. |
| How do you define salary caps?                               | You can use the <b>Maintain Salary Caps</b> task to define: <ul style="list-style-type: none"> <li>• Salary cap amounts</li> <li>• Specific earnings for pay component group.</li> <li>• Salary cap intervals.</li> </ul>                                           |
| How do you configure alternate salary over the cap costing?  | You can use the <b>Assign Costing Allocation</b> task to set up costing rules for salary exceeding the cap amount, including allocating the over the cap portion of a worker's salary to grant worktags other than the parent grant.                                |

### Recommendations

Workday recommends that you don't make changes if you've already assigned the salary cap to an award line and payroll exists.

### Requirements

You must:

- Set up an award with a sponsor salary cap in Workday Grants Management, to be able to configure salary over cap costing in Workday Payroll.
- Enable salary over the cap for payroll accounting to be able to set up the salary over the cap feature for payroll commitments.

### Limitations

You can't make payroll accounting adjustments for salary over the cap costing.

### Tenant Setup

You can use the **Edit Tenant Setup - Payroll** task to enable:

- Salary over the cap for payroll accounting and commitments.

- Using the number of work periods in the academic year to calculate the salary over the cap amount for a pay period. Workday recommends selecting the check box when you use specialized configurations of academic pay using both an:
  - Earning for the annual work period.
  - Offset earning for the accrual payment.

## Security

| Domains                                                              | Considerations                                                                                                                                                       |
|----------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <i>Set Up: Salary Cap</i> in the Core Payroll functional area.       | Enables access to the: <ul style="list-style-type: none"> <li><b>Maintain Salary Over the Cap Type</b> report.</li> <li><b>Maintain Salary Caps</b> task.</li> </ul> |
| <i>Set Up: Tenant Setup - Payroll</i> in the System functional area. | Enables access to the <b>Edit Tenant Setup - Payroll</b> task.                                                                                                       |

## Business Processes

You can configure the *Assign Costing Allocation* business process to assign alternate costing rules for salary caps.

## Reporting

| Reports                                    | Considerations                                                                                                                                                                                                                                                                                                                                                  |
|--------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Salary Over the Cap Audit Report           | Verify if the salary over the cap calculation for a worker needs review.<br><br><b>Note:</b> This report currently doesn't support the <b>Salary Over the Cap - Allow Grant Worktags in Suballocations</b> tenant setting. When you enable this setting, values on the <b>Salary Over Cap Pay Amount for Grant with a Salary Cap</b> column report incorrectly. |
| Retro Journal Lines with Salary Cap Grants | Identify retro period journal lines associated with grants using the Salary Over the Cap feature and determine if the amounts charged over or under the salary cap.                                                                                                                                                                                             |

## Integrations

No impact.

## Connections and Touchpoints

| Features          | Considerations                                                                                                                                                                                                                      |
|-------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Grants Management | You need a separate Grants Management license to be able to create and use awards in Workday. If you have Grants Management with Payroll Accounting, you can: <ul style="list-style-type: none"> <li>Create salary caps.</li> </ul> |

| Features             | Considerations                                                                                                                                                                                                                                                                                          |
|----------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                      | <ul style="list-style-type: none"> <li>Assign the salary cap to an award line with a grant before you configure payroll costing allocations.</li> </ul>                                                                                                                                                 |
| Effort Certification | When a payroll journal line displays a Salary Over the Cap worktag, the worktag displays for effort certification. Salary Over the Cap Type is a payroll worktag; you can't change it.                                                                                                                  |
| Payroll Commitments  | <p>When you enable salary over the cap for payroll commitments, Workday calculates costing and standard salary cap proration for these payroll commitment transactions:</p> <ul style="list-style-type: none"> <li>Initial commitments</li> <li>Commitment adjustments</li> <li>Liquidations</li> </ul> |

Workday offers a Touchpoints Kit with resources to help you understand configuration relationships in your tenant. Learn more about the [Workday Touchpoints Kit](#) on Workday Community.

## Create Salary Caps (USA)

### Prerequisites

- Create a *Salary Over the Cap Type* worktag for each salary cap definition on the **Maintain Salary Over the Cap Type** task.
- Security: *Set Up: Salary Cap* domain in the Core Payroll functional area.

### Context

You can create a salary cap so that payroll expenses don't exceed limitations.

Example: The National Institutes of Health decides they won't accept billings for salaries over \$183,300. Dr. Reid Tsai is researching for the Environment Health and Safety of Nanotechnology grant and has a salary of \$200,000. You can create and assign a salary cap so that Workday applies alternate payroll costing to the excess \$16,700.

You must have Workday Payroll to create, assign, and calculate salary caps.

- If you use Workday Payroll with Grants Management, assign the salary cap on an award line with a grant before you configure payroll costing allocations.
- If you use Workday Payroll, but not Grants Management, assign the salary cap to a grant worktag before you configure payroll costing allocations.

### Steps

1. Access the **Maintain Salary Caps** task.

2. As you complete the task, consider:

| Option                             | Description                                                                                                  |
|------------------------------------|--------------------------------------------------------------------------------------------------------------|
| <b>Salary Over the Cap Type</b>    | You can assign a <i>Salary Over the Cap Type</i> worktag to 1 or more salary caps.                           |
| <b>Pay Component Group</b>         | You can select Workday-delivered pay component groups or create your own custom salary cap groups.           |
| <b>In Use</b>                      | Indicates whether the salary cap is in use. You can't edit salary caps that are in use.                      |
| <b>Date From</b><br><b>Date To</b> | Salary cap intervals can't overlap. Only the most recent interval can have no value in <b>Date To</b> field. |
| <b>Currency</b>                    | Workday currently only supports USD.                                                                         |

### Result

- For Workday Grants Management, you can assign the salary cap definition to an award line with a grant, and assign the grant to a costing allocation.
- For Workday Payroll, you can assign the salary cap definition to a grant worktag, and assign the grant to a costing allocation.

Workday uses that costing allocation to generate payroll, and the salary cap to determine how much salary you can charge to the grant.

Workday applies your *Salary Over the Cap Type* worktag to payroll amounts that are either:

- Over the cap.
- Not part of the pay component of the salary cap for the associated grant.

[The Next Level: Salary Over the Cap](#)

## Define Salary Over the Cap Costing Allocations for a Worker (USA)

### Prerequisites

- Add Grant as a Primary or Additional Worktag Type on the **Payroll Costing Allocation** section of the **Maintain Worktag Usage** report.
- Select these check boxes on the **Maintain Payroll Accounting Options** task:
  - **Salary Over the Cap - Enable**
  - **Salary Over the Cap - Allow Grant Worktag in Suballocations**
- [Create Salary Caps](#).
- Configure the *Assign Costing Allocation* business process and security policy in the Core Payroll functional area.

### Context

You can specify the default costing allocation details that you would like to apply to the over-the-cap portion of a worker's salary. Workday applies those details to all costing allocation lines associated with a Salary Over the Cap grant.

You can also specify override costing allocation details to specific costing allocation lines if you don't want to apply the default costing allocation details to them.

You can allocate the over the cap portion of a worker's salary to grant worktags that are different from the grant used to fund the worker's salary. This enables you to:

- Manage your funds across multiple grants within a grants management system.
- Ensure compliance with grant reporting requirements.

## Steps

1. Access the **Assign Costing Allocation** task.
2. Select a worker whose salary is associated with a salary over the cap grant worktag.
3. On the **Salary Over the Cap Default Costing Allocations** grid, specify the worktags and distributions that you would like to apply to all of the costing allocation lines associated with a Salary Over the Cap grant.
4. (Optional) To specify an override, click the button in the **Salary Over the Cap** column of the **Costing Allocation Details** grid, then enter the override details.
5. (Optional) To cost salary to an additional grant worktag, click the **Salary Over the Cap** button on the **Costing Allocation Details** grid, then enter additional grant worktags on the **Additional Worktags** column.
6. Enter additional grant worktags on the **Additional Worktags** column.

**Note:** When you enable intercompany accounting, the costing company or default company on the suballocation must match the award in effect for the grant you enter.

## Result

Depending on whether you've specified default costing allocations, override costing allocations, or additional grant worktags, Workday allocates the over-the-cap portion of the worker's salary to the details you've specified and displays those details on journal lines for the over-the-cap portion of the worker's salary.

## Next Steps

You can recalculate a worker's existing payroll results to reallocate the over-the-cap portion of their salary.

On the **Pay > Costing Allocations** section of their worker profile, you can see the additional grant worktags associated with the parent grant on the **Salary Over the Cap Costing** column.

You can create custom validations on your Salary Over the Cap suballocations.

## Concept: Salary Over Cap Costing (USA)

### Costing for Sponsor Award with Salary Cap

When you set up an award with a sponsor salary cap in Workday Grants Management, you can set up salary over cap costing instructions for Workday Payroll. Workday requires more time to process payroll for workers with salary over the cap.

## Salary Over Cap Costing Worktags

There are 3 kinds of worktags in salary over the cap costing:

### Grant worktag associated with an Award with Sponsor Salary Cap

Once you assign this grant to a costing allocation, it remains assigned throughout the costing and payroll processes.

### Salary Over the Cap Type (SOC Type)

To determine what falls under the sponsor salary cap, Workday evaluates earnings in the pay component group you define on the **Maintain Salary Cap** task. Workday then applies the *Salary Over the Cap Type* worktag to any payroll amount that is either:

- Over the cap.
- Not part of the pay component of the salary cap for the associated grant on the award line.

**Note:** Selecting the **Salary Over the Cap - Use Costing Overrides when Earning isn't in the Pay Component Group** check box in **Edit Tenant Setup - Payroll** allocates earnings that you haven't included in the salary cap pay component group to costing override worktags you've configured.

### Salary Over the Cap Basis

*Salary Over the Cap Basis* worktags enable you to identify over the cap costs on journal lines for payroll:

- Actuals.
- Actuals Forward Accruals.
- Commitments.
- Obligations.

The *Salary Over the Cap Basis* worktag is also available as a dimension on account posting rules and as an optional summary dimension if you enable journal summarization.

When a costing allocation has a grant worktag and the grant is subject to the salary cap in the **Assign Costing Allocation** task, you can:

- Use the action button in the **Salary Over the Cap** column to access the salary over cap suballocation costing grid.
- Edit the worker's organizational default worktags on the salary over cap suballocation.
- Edit the worker's costing company if you've enabled intercompany accounting.

### Example: Full Time Costing Allocation

Dr. Kay works full time as a researcher on a project associated with a grant subject to a salary cap: SOC Grant A.

- Dr. Kay earns \$240,000 base salary a year, and is on a monthly period schedule, earning \$20,000 per month.
- SOC Grant A is subject to the award salary cap of \$180,000 base yearly salary, or \$15,000 per month.

You assign costing allocation rules for Dr. Kay:

- For salary covered by the grant subject to the salary cap: SOC Grant A, Fund A, Cost Center A at 100%.

- For the salary over the cap portion: Fund B, Cost Center B at 100%.

| Default (As of Start Date)             | SOC Suballocation       | Distribution Percent |
|----------------------------------------|-------------------------|----------------------|
| SOC Grant A<br>Fund A<br>Cost Center A |                         | 100                  |
|                                        | Fund B<br>Cost Center B | 100                  |

Result lines after payroll accounting processing:

| Default (As of Start Date)             | Due to SOC Suballocation                                           | Distribution Amount |
|----------------------------------------|--------------------------------------------------------------------|---------------------|
| SOC Grant A<br>Fund A<br>Cost Center A |                                                                    | 15,000              |
|                                        | SOC Grant A<br>Fund B<br>Cost Center B<br>Salary Over the Cap Type | 5,000               |

### Example: Split Effort Costing Allocation

Professor Chavez works half time as a professor in Cost Center Physics, and the other half as researcher on a project associated with a grant subject to salary cap: SOC Grant A.

- She earns \$240,000 base salary a year, and is on a monthly period schedule earning \$20,000 per month.
- Half of her salary, or \$10,000 per month, is costed to Cost Center Physics, Fund P.
- SOC Grant A has an award salary cap of \$180,000 base yearly salary, or \$15,000 per month. Her effort level on SOC Grant A is 50%, which caps the monthly salary billable to SOC Grant A at \$7,500.

You assign costing allocation rules for the Professor:

- For the physics teaching salary not costed to the grant: Fund P, Cost Center Physics.
- For salary covered by the salary over cap grant: SOC Grant A, Fund A, Cost Center A at 50%.
- For the salary over the cap portion: Fund B, Cost Center B at 100%.

| Default (As of Start Date)             | SOC Suballocation | Distribution Percent |
|----------------------------------------|-------------------|----------------------|
| Fund P<br>Cost Center Physics          |                   | 50                   |
| SOC Grant A<br>Fund A<br>Cost Center A |                   | 50                   |
|                                        | Fund B            | 100                  |

| Default (As of Start Date) | SOC Suballocation    | Distribution Percent |
|----------------------------|----------------------|----------------------|
|                            | <i>Cost Center B</i> |                      |

Result lines after payroll accounting processing:

| Default (As of Start Date)                                  | Due to SOC Suballocation                                                                       | Distribution Amount |
|-------------------------------------------------------------|------------------------------------------------------------------------------------------------|---------------------|
| <i>Fund P</i><br><i>Cost Center Physics</i>                 |                                                                                                | 10,000              |
| <i>SOC Grant A</i><br><i>Fund A</i><br><i>Cost Center A</i> |                                                                                                | 7,500               |

### Concept: Salary Over the Cap for Multiple Positions (USA)

When a worker has multiple job positions, Workday:

- Adds the FTE values of all positions within a gross-to-net result.
- Applies the total FTE to calculate the applicable cap amount.

If the total FTE % on all positions is greater than 100%, Workday only calculates the total FTE for a 100%.

Workday calculates salary over the cap by applying the total FTE to:

- Positions paid on the same payroll result for payroll actuals.
- Positions in the same pay group for obligations.
- Earnings paid on the position that are outside of the Salary Over the Cap pay component group (SOC-PCG).

#### Example

Dr. Chavez works at the Global Modern University. She has 2 positions at the university and is on a monthly period schedule for both positions.

- As a professor, she earns \$200,000 annual salary at 75% FTE.
- As a researcher, she earns \$125,000 annual salary at 25% FTE.

Both positions are associated with a grant subject to a salary cap: SOC Grant A. SOC Grant A is subject to the award salary cap of \$183,300 annually, with a grant allocation of 100%.

|                    |           |
|--------------------|-----------|
| <b>SOC Grant A</b> |           |
| Annual cap         | \$183,300 |
| Pays per year      | 12        |
| Maximum Per Pay    | \$15,275  |

Her pay and costing details:

| Worker                                             | Professor Position | Researcher Position | Total       |
|----------------------------------------------------|--------------------|---------------------|-------------|
| Annual salary                                      | \$200,000          | \$125,000           | \$325,000   |
| Per pay earnings (SOC-PCG)                         | \$16,666.67        | \$10,416.67         | \$27,083.33 |
| Percentage of SOC-PCG per Job (Earning % of total) | 62%                | 38%                 |             |
| Position FTE                                       | 75%                | 25%                 | 100%        |
| Grant allocation % (SOC Grant A)                   | 100%               | 100%                |             |
| Charge to Grant (SOC Grant A)                      | \$16,666.67        | \$10,416.67         | \$27,083.33 |

Workday applies total FTE to calculate salary cap and determines how much her sponsor needs to pay:

| Sponsor                               | Professor Postion                   | Researcher Postion                 | Total       |
|---------------------------------------|-------------------------------------|------------------------------------|-------------|
| Total FTE                             | 100%                                | 100%                               |             |
| Total FTE * Max Per Pay               | \$15,275                            | \$15,275                           |             |
| PCG prorated % allocation             | 62%                                 | 38%                                |             |
| Amount charged to Grant (SOC Grant A) | \$9,400 (\$15,275 x 0.62)           | \$5,875 (\$15,275 x 0.38)          | \$15,275    |
| Salary over the cap max per Pay       | \$7,266.67 (\$ 16,666.67 - \$9,400) | \$4,541.67 (\$10,416.67 - \$5,875) | \$11,808.34 |

## Concept: Academic Pay Annual Work Periods (USA)

To calculate salary over the cap amount for a pay period using the number of work periods in the academic year, you can select the **Salary Over the Cap - Use Academic Pay Annual Work Periods** check box in the **Payroll Accounting** section on the **Edit Tenant Setup – Payroll** task.

Workday recommends selecting the check box when you use specialized configurations of academic pay using both an:

- Earning for the annual work period.
- Offset earning for the accrual payment.

Example: An academic professor teaches or conducts research during a 9-month school year where the:

- Annual salary over the cap amount is \$197,300.
- Annualized academic pay percentage of the year is 75% of the full salary cap amount ( $197,300 \times 0.75 = \$147,975.0$ ).

Workday calculates salary over the cap amount per period as  $(147,975/9 = \$16,441.6667)$ .

## Tax Setup (USA)

### Setup Considerations: Payroll Tax Setup (USA)

You can use this topic to help make decisions when planning your payroll tax setup. It explains:

- Why to set it up.
- How it fits into the rest of Workday.
- Downstream impacts and cross-product interactions.
- Security requirements and business process configurations.
- Questions and limitations to consider before implementation.

Refer to detailed task instructions for full configuration details.

### What It Is

Workday provides tax data and related tasks and calculations that enable you to manage federal, state, and local taxes for payroll. You enter the company and worker-specific tax data.

Workday also provides a *Payroll Compliance Updates* dashboard to give you insight into updates that might affect you and your employees.

### Business Benefits

Workday Payroll maintains tax updates by tax authority and type. Workday Payroll enables you to:

- Easily meet the legal requirements for deducting and reporting worker pay and statutory contributions.
- Increase efficiency by streamlining the process for managing and submitting tax reports.
- Save time by automatically calculating federal, state, and local taxes, including up-to-date tax rates, wage and payment limits, and allowances.

### Use Cases

You can set up payroll taxes to:

- Enable workers to make tax elections through employee self-service (ESS).
- Calculate and track company and employee tax contributions.
- Automatically adjust tax calculations when legislation changes tax rates.
- Report itemized and total federal, state, and local tax contributions by company and employee.

### Questions to Consider

| Questions                                                                                                                                                              | Considerations                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| How often do your employees have work assignments in different tax jurisdictions? OR What's the nature of your employees' work assignments in other tax jurisdictions? | <p>You can set up taxes for workers with work assignments in different tax jurisdictions. For:</p> <ul style="list-style-type: none"> <li>• Recurring infrequent assignments, you can use payroll inputs with worktags. Example: A technical support representative travels to a tax jurisdiction only when a technical issue arises.</li> <li>• One-off assignments, you can use either Tax Location Mapping (TLM) or payroll input with worktags to tax the worker by work location. Example: An employee occasionally works out of the office closest to their childhood home.</li> <li>• Recurring assignments based on a set schedule, you can configure Ongoing Multiple Work Jurisdictions (OMWJ). After you enter employee tax jurisdiction by the applicable percentages, Workday automatically applies that percentage to each pay period. Example: A pharmaceutical representative assigned to a tri-</li> </ul> |

| Questions                                                                                                  | Considerations                                                                                                                                                                                                                                                                                                                                  |
|------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                                                                                            | state area works the same percentage of time in each jurisdiction each pay period.                                                                                                                                                                                                                                                              |
| Do you employ nonresident aliens (NRAs)?                                                                   | You can enable Workday to calculate and report taxes for NRAs. Workday references the tax treaties that you set up when calculating taxes and taxable wages for 1042-S reporting.                                                                                                                                                               |
| Where do your employees work?                                                                              | Workday maintains up-to-date tax data and calculates and reports on taxes for all states and these territories: <ul style="list-style-type: none"> <li>• Guam.</li> <li>• Puerto Rico.</li> <li>• U.S. Virgin Islands.</li> </ul>                                                                                                               |
| Do some employees in your company live in 1 state and work in another?                                     | When employees live in 1 state and work in another, Workday can automatically calculate taxes based on state tax reciprocity agreements. This includes whether to withhold taxes and the tax calculation method specified in the agreements.<br><br>When they work and live in the same state, Workday calculates taxes based on work location. |
| Do employees enter their time in Workday Time Tracking?                                                    | You can set up TLM so employees can specify their work location when entering time.                                                                                                                                                                                                                                                             |
| Does your company use a third party for sick pay?                                                          | If so, you have the option to set up Workday to display sick pay on payslips and W-2s. If your third party provides the W-2s, you can also set this option up in Workday.                                                                                                                                                                       |
| Are your employees exempt from Federal Unemployment Insurance (FUI) or State Unemployment Insurance (SUI)? | If yes, you can set up Workday to manage this exemption. If not, Workday can withhold and report on FUI and SUI taxes.                                                                                                                                                                                                                          |
| Do you pay bonuses using a separate check or combine bonuses with regular pay?                             | If you combine bonuses with regular pay, you can set up federal taxation using a flat rate or standard withholding. If you pay them with a separate check, you have the option of using a flat rate or aggregate - standard taxation. You can also set up Workday to withhold state and local taxes on supplemental earnings.                   |

### Recommendations

Workday Payroll for U.S. is designed to assist you in withholding taxes and other amounts required by law. However, you should independently verify your withholding and remittance obligations required by the various jurisdictions in which you operate.

### Requirements

Maintain your own tax authority exceptions. Example: The *State Withholding Taxable Reduction* pay component group (PCG) reduces state taxable income for 401(k) contributions in all states except Pennsylvania, so the pay component *401(k) [USA]* should be excluded for the Pennsylvania tax authority from the *State Withholding Taxable Reduction* PCG.

## Limitations

Regardless of how you set up tax allocations, Workday doesn't apply percentage splits to SUI taxable and subject wages. Workday always applies SUI and other taxes based on SUI to the primary work state.

## Tenant Setup

No impact.

## Security

| Domains                                                                                              | Considerations                                                                                                                                                                                                               |

## Steps: Set Up Payroll Taxes (USA)

### Context

Workday maintains information on valid federal, state, and local tax data and deductions. You enter company and worker-specific tax data.

### Steps

1. [Set Up Company Tax ID \(USA\)](#) on page 1105.
2. Review your pay component groups to see if any members of a group need an exception. Then [Define Tax Authority Exceptions from Pay Component Groups \(USA\)](#) on page 1137.
3. [Set Up Company Federal Taxes \(USA\)](#) on page 1107.
4. [Set Up Company State Taxes \(USA\)](#) on page 1119.
5. [Set Up Company Local Taxes \(USA\)](#) on page 1124.
6. (Optional) [Set Up Company Taxes by Location \(USA\)](#) on page 1159.

## 7. Enter worker tax data:

- [Steps: Add Worker Tax Elections \(USA\)](#) on page 1180.
- Workers can enter federal and state tax elections using the **Withholding Elections** self-service task.

Not all state forms are available for completion in Workday. When Workday doesn't provide the online form, we provide links to the forms.

- [Set Up Ongoing Multiple Work Jurisdictions \(USA\)](#) on page 1160.
- [Maintain Tax Treaty Information for a Worker \(USA\)](#) on page 1179.

## 8. [Map Earnings and Deductions to W-2 Boxes \(USA\)](#) on page 1140.

### Result

Workday uses these settings to calculate federal, state, and local taxes during payroll processing.

### Next Steps

Configure tax integration.

## Set Up Company Tax ID (USA)

### Prerequisites

Security:

- *Set Up: Payroll - Company Specific (Accounting)* domain in the Core Payroll functional area.
- *Set Up: Company General* domain in the Common Financial Management functional area.

### Context

Record tax ID numbers for a company.

### Steps

1. Access the **Edit Company Tax Details** task.
2. (Optional) On the **VAT on Payment** tab, for financial transactions, select **VAT on Payment** to record Value Added Tax (VAT) on payments instead of invoices.  
For financial transactions, if you use **VAT on Payment**, select the **Default Tax Applicability** and **Default Tax Code**.
3. On the **Tax IDs** tab, in the **Tax IDs** grid, add information for each country for which the company processes payments.

| Field                          | Description                                                                 |
|--------------------------------|-----------------------------------------------------------------------------|
| <b>Country for Tax ID Type</b> | The prompt displays only the countries with Workday-delivered tax ID types. |

| Field                     | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|---------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Tax ID Type</b>        | <ul style="list-style-type: none"> <li>• <i>Employer ID Number</i> required for Workday Payroll</li> <li>• <i>Sales/Use Tax</i></li> <li>• <i>State Income Tax ID</i></li> <li>• <i>Transmitter Control Code</i> - 5-digit code required for filing information returns electronically.</li> </ul>                                                                                                                                                                                                                                                                             |
| <b>Identification #</b>   | <p>Enter the ID number for the selected tax ID type.</p> <p>You can add or change the ID (the Employer Identification Number, or EIN) using the <b>Edit Company State and Local US Tax Reporting</b> task. If you update the EIN, Workday displays a <b>Box 15 – State – Employer's State ID Number (Previous)</b> column on the <i>View W-2C Form Data</i> report. You can use that column to view the original EIN.</p>                                                                                                                                                      |
| <b>Transaction Tax ID</b> | <p>Select this check box to include this identification number on financial transactions, like customer invoices and purchase orders.</p> <p>If you don't select <b>Transaction Tax ID</b> for any of the identification numbers you configure, financial transactions report the <b>Primary Tax ID</b>.</p> <p>Example: You configure 2 Tax IDs for your company. You select <b>Transaction Tax ID</b> for 1 of them. Workday includes that tax ID as the Transaction Tax ID on any invoices and purchase orders you generate for that company.</p>                           |
| <b>Primary Tax ID</b>     | <p>Select to indicate this identification number as the Primary Tax ID for your business entity. If you didn't select <b>Transaction Tax ID</b> for any of the identification numbers you configured, Workday finds and uses the Primary Tax ID.</p> <p>If you configured neither a Transaction Tax ID nor a Primary Tax ID for the business entity, financial transactions don't use tax ID, except for customer invoices where you selected <b>Transaction Tax ID Required</b>. You're unable to complete the customer invoice without configuring a Transaction Tax ID.</p> |

### Example

The Blake Company uses Workday Payroll for the U.S. to pay U.S. employees through their corporate office in the United States. Their branch office in Toronto uses Workday Payroll for Canada to process payroll for Canadian employees. They can also process payments to their non-resident workers. Enter this tax ID information:

| Country                  | Tax ID Type                     | Identification # |
|--------------------------|---------------------------------|------------------|
| Canada                   | Business Number                 | 123456789        |
| Canada                   | Non-Resident Tax Account Number | NR1234567        |
| United States of America | Employer ID Number              | 98-7654321       |
| United States of America | Transmitter Control Code        | 56565            |

### Next Steps

Set up company federal taxes.

[Steps: Configure Transaction Tax Rules](#)

## Set Up Company Federal Taxes (USA)

### Prerequisites

- [Set Up Company Tax ID \(USA\)](#) on page 1105.
- Security: *Set Up: Payroll - Company Specific (Taxes)* - USA domain in the USA Payroll functional area.

### Context

You can enter company-specific data to calculate and report on federal payroll taxes.

### Steps

1. Access the **Edit Company Federal US Tax Reporting** task.
2. As you complete the **Company Tax Reporting** grid, consider:

| Option                                          | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
|-------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Start Date</b>                               | Enter a date that is on or after the start date reported for the federal tax authority on the <b>View Payroll Tax Authority</b> report.                                                                                                                                                                                                                                                                                                                                                                                                 |
| <b>Supplemental Tax Method - Regular Check</b>  | <p>Select a tax method for supplemental payments added to regular paychecks. When you select:</p> <ul style="list-style-type: none"> <li>• <i>Flat Rate</i>: Workday calculates taxes based on a federally mandated percentage rate.</li> <li>• <i>Standard Withholding</i>: Workday calculates taxes based on federally mandated percentages for income brackets.</li> </ul> <p>For troubleshooting federal tax withholdings, see <a href="#">Unexpected federal tax withholding from employee's supplemental pay</a>, on page 705</p> |
| <b>Supplemental Tax Method - Separate Check</b> | <p>Select a tax method for supplemental payments paid separately from regular pay. | <b>Allow Pre-Tax Deduction Allocation</b>                                 | Select the check box to calculate pretax deductions from work tax authority worktags. For more information, see <a href="#">Concept: Multi-Jurisdiction Tax Allocations (USA)</a> on page 1163.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| <b>Allow Ongoing Work Jurisdiction Tax Allocation</b>                     | <p>When you select the check box, Workday displays a <b>Tax Allocation</b> tab on the <b>Add Worker US Tax Elections</b> task.</p> <p>Select the check box to enable Workday to allocate wages to taxing jurisdictions when employees work in multiple jurisdictions on an ongoing basis.</p> <p>When employees work in multiple tax jurisdictions that change from 1 pay period to the next, use tax location mapping instead.</p> <p>Clear the check box when employees work in the jurisdiction for 100% of the time.</p> <p>To include Workday Time Tracking time blocks in tax calculations, select both this check box and the <b>Enable Ongoing Work Jurisdiction Tax Allocation with Time Tracking</b> check box.</p> <p>Example: Each pay period, a sales representative spends 30% of their time in Virginia, 25% in Maryland, and 45% in Pennsylvania. The company payroll sets up the allocation percentages for the worker's tax elections, and Workday uses the allocations to calculate taxes.</p> <p>See <a href="#">Set Up Ongoing Multiple Work Jurisdictions (USA)</a> on page 1160.</p> |
| <b>Enable Ongoing Work Jurisdiction Tax Allocation with Time Tracking</b> | <p>Select when:</p> <ul style="list-style-type: none"> <li>• Employees work in multiple tax jurisdictions on an ongoing basis.</li> <li>• You want to calculate taxes based on percentages worked in each jurisdiction.</li> <li>• Employees use Workday Time Tracking to enter hours or project time.</li> </ul> <p>The check box displays when you select <b>Allow Ongoing Work Jurisdiction Tax Allocation</b>.</p> <p>When you don't select this check box, the tax allocation splits only earnings and pretax deductions from:</p> <ul style="list-style-type: none"> <li>• Workday Compensation.</li> <li>• Payroll input.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

| Option                                          | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
|-------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Enable Tax Location Mapping</b>              | <p>Select the check box when an employee works in more than 1 tax jurisdiction and the locations and percentage of time are unpredictable.</p> <p><b>Note:</b> Select the check box before you create and approve time blocks in Workday Time Tracking to ensure that Workday links a time entry with a reported location to the relevant tax authority codes. When you select the check box after you approve time, you must update, resubmit, and approve the time blocks for payroll to split among different tax authorities.</p> <p>When you select the Elections task, Workday displays the <b>Tax Location Mappings</b> tab on the <b>Add Worker US Tax Elections</b>.</p> <p>Example: A sales consultant has multiple customers in different states. In month 1, the consultant works 2 weeks in New York, 1 week in New Jersey, and 1 week in Connecticut. In Month 2, they work 2 weeks in Connecticut and 2 weeks in New Jersey. Using tax location mapping, payroll ensures that Workday calculates all applicable state, city, and local taxes.</p> <p>See <a href="#">Set Up Company Taxes by Location (USA)</a> on page 1159.</p> |
| <b>Exclude 1042-S Taxes from Tax Filing</b>     | <p>Select to exclude 1042-S taxes and Income Code 15 taxes from these reports and web services:</p> <ul style="list-style-type: none"> <li>• <b>Tax Filing Periodic Data by Company</b> report</li> <li>• <i>Get Periodic Company Tax Filing Data</i> web service</li> <li>• <b>Tax Filing Periodic Data by Common Pay Agent</b> report</li> <li>• <b>Tax Filing Periodic Data for Event</b> report</li> <li>• <b>Tax Filing Periodic Data for Workers</b> report</li> <li>• <i>Get Periodic Worker Tax Filing Data</i> web service</li> <li>• <b>Tax Filing Quarterly Data for Workers</b> report</li> <li>• <i>Get Quarterly Worker Tax Filing Data</i> web service</li> <li>• <b>Tax Filing Quarterly Data by Company</b> report</li> <li>• <b>Tax Filing Quarterly Data by Common Pay Agent</b> report</li> </ul>                                                                                                                                                                                                                                                                                                                            |
| <b>Company Name Override for Year End Forms</b> | <p>Select the check box to override the company name on W-2 and W-2C forms, audits, and reports.</p> <p>When you change company name, you can use the override to display the new name on</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

The check box doesn't display when you use a custom disclaimer.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |

| Option                   | Description                                                                                          |
|--------------------------|------------------------------------------------------------------------------------------------------|
| <b>Custom Disclaimer</b> | The custom disclaimer displays even when you select the <b>Display Default Disclaimer</b> check box. |

For workers in Guam, Puerto Rico, and the U.S. Virgin Islands who previously had federal taxes withheld while working in another state and the self-adjusting taxes are based on wages, Workday:

- Recognizes previous balances or values when calculating self-adjusting taxes, such as the Additional Medicare tax, for the current tax year.
- Applies previous values across deductions.
- Recognizes taxes already withheld and avoids overwithholding.
- Respects and supports wage balances across company relationships.

## Next Steps

Access the:

- **Company Federal US Tax Reporting** report to view a summary of company federal elections, including a history of inactive elections.
- **Company US Tax Reporting** report to view federal, state, and local tax elections for the company.

Set up the company:

- State taxes.
- Third-party personal tax reporting.

## Aggregate Federal Wages (USA)

### Set Up Aggregate Federal Wages (USA)

#### Prerequisites

If you have multiple *In Progress* on-demand additional payments, complete those payments so Workday can use them to calculate federal withholding taxes in subsequent calculations.

Security:

- *Set Up: Payroll Interface* domain in the Payroll Interface functional area
- *Set Up: Payroll - Pay Group Specific* domain in the Core Payroll functional area

#### Context

To help you more accurately withhold workers' federal taxes, you can configure a run category to aggregate federal standard withholding wages across multiple completed pay results within the same period. Workday aggregates wages for all pay groups within:

- The same company.
- Different companies if they're in a company relationship.

You can't aggregate standard withholding wages for state or local taxes.

## Steps

1. Access the **Edit Run Category** task.
2. In the **Payroll Processing** section on the **General** tab, select the **Aggregate Federal Wages** check box.

## Result

Workday calculates federal standard withholding taxes by:

- Using the aggregated wages for the period.
- Subtracting the taxes already withheld for the period from the calculated amount of tax withholding.

## Next Steps

Recalculate your in-progress payroll results.

## Related Information

### Reference

[2023R1 What's New Post: Aggregate Federal Standard Withholding Wages](#)

## Concept: Aggregate Federal Wages (USA)

Workday enables you to aggregate federal wages across multiple pay results in the same pay period to help you calculate standard tax withholding. You can aggregate wages for:

- Pay on-demand results.
- On-cycle results.
- Off-cycle results in a regular pay period.
- Multiple results across related companies in a company relationship.

Workday aggregates the wages of all pay results in the pay period for the run category you specify, regardless of whether you enabled aggregate wages for previous pay results.

Workday uses the current tax election when you calculate the withholding tax amount for the workers. When there's a tax election change, Workday applies the current tax election to the aggregated wages for the period when calculating the current pay result.

## Example

John is a new hire at Global Modern Services and has 2 pay results in the same period. You have enabled aggregate federal wages, and you want to view how much withholding tax Workday calculated to be withheld.

| Result Type                     | Period                                    | Payment Date/<br>Reversal Date | Pay Group Detail              | Calculation Status |
|---------------------------------|-------------------------------------------|--------------------------------|-------------------------------|--------------------|
|                                 | 01/01/2023 -<br>01/15/2023 (Semi-monthly) | 01/13/2023                     | USA Semi-Monthly<br>(Regular) | In Progress        |
| On-Demand<br>Payment Additional | 01/01/2023 -<br>01/15/2023 (Semi-monthly) | 01/05/2023                     | USA Semi-Monthly<br>(Regular) | Complete           |

Workday aggregates the wages from both pay results because:

- They have the same pay period.

- The status of the first payment is Complete.

As a payroll administrator, you drill down on the pay results of John to view how Workday calculates the standard withholding tax:

**The first pay result is for a signing bonus of 2,500.00 USD.**

You view how much withholding tax Workday calculated to be withheld:

| Pay Component             | Related Calculation                 | Amount | YTD    |
|---------------------------|-------------------------------------|--------|--------|
| Federal Withholding [USA] | Standard Withholding Calculated Tax | 227.52 | 227.52 |

**The second pay result is for a salary of 2,500.00 USD and a bonus of 100.00 USD.**

In the **Pay Accumulations / Balances** tab, you view the aggregate wages that Workday uses to calculate withholding tax:

| Pay Balance                                             | Amount   |
|---------------------------------------------------------|----------|
| Federal Standard Withholding Wages for Pay Period [USA] | 5,000.00 |

In the **Gross to Net** tab, you view how much withholding tax Workday calculated to be withheld, based on the aggregated wages:

| Pay Component             | Related Calculation                 | Amount | YTD    |
|---------------------------|-------------------------------------|--------|--------|
| Federal Withholding [USA] | Standard Withholding Calculated Tax | 558.98 | 786.50 |
| Federal Withholding [USA] | Flat Rate Withholding Wages         | 100.00 | 100.00 |

Because you enabled aggregate federal wages, Workday calculates the withholding tax as if you paid both payments together. The aggregated wages are 5,000.00 USD, so Workday calculates the withholding tax to be 786.50 USD.

Workday then subtracts the standard withholding calculated tax of the first pay result from 786.50 USD. The withholding tax from the signing bonus was 227.52 USD, so Workday calculates the withholding tax for the second pay result to be 558.98 USD.

Because John has a bonus in the second pay result, Workday calculates the supplemental withholding tax amount to be 22.00 USD. Workday

adds this amount to the withholding tax amount calculated from the salary.

As a result, the total federal withholding amount for the second pay result will be 580.98 USD.

### Tax Calculations

Workday uses these tax calculations to support aggregate federal standard withholding wages:

- *Federal Withholding [USA]*
- *Federal Withholding Territories [USA]*
- *Federal Withholding Tip Tax [USA]*

### Related Calculations

These related calculations provide you with visibility on the wages used for tax calculation on the workers' pay results. They can help you understand the amount of taxes withheld in the standard withholding calculation:

| Related Calculation                        | Description                                                                                                                |
|--------------------------------------------|----------------------------------------------------------------------------------------------------------------------------|
| <i>Flat Rate Withholding Wages</i>         | Displays the wages Workday uses to calculate supplemental tax.                                                             |
| <i>Standard Withholding Wages</i>          | Displays the wages Workday uses to calculate standard federal withholding.                                                 |
| <i>Standard Withholding Calculated Tax</i> | Displays the taxes Workday calculates to withhold based on the tax table we use to determine standard federal withholding. |

Workday uses these pay balances to calculate taxes for the pay period:

- *Federal Standard Withholding Calculated Tax for Pay Period [USA]*
- *Federal Standard Withholding Wages for Pay Period [USA]*
- *Federal Tip Tax Standard Withholding Calculated Tax for Pay Period [USA]*
- *Federal Tip Tax Standard Withholding Wages for Pay Period [USA]*

## State, Territories, and Local Taxes

### Steps: Set Up Supplemental State Taxes (USA)

#### Prerequisites

Security:

- *Set Up: Payroll - Pay Group Specific* and *Set Up: Payroll (Calculations - Payroll Specific)* domains in the Core Payroll functional area.
- *Set Up: Payroll - Company Specific (Taxes) - USA* in the USA Payroll functional area.

#### Context

Workday automatically applies supplemental taxation for on-cycle payments and supports up to 2 supplemental tax rates for each state:

- Standard

- Alternate

You can apply a different method to supplemental payments that you issue as separate checks or combined with other payments.

### Steps

1. [Set Up Company State Taxes \(USA\)](#) on page 1119 .

Select the supplemental tax method to use for state withholding. You can apply a different method to supplemental payments to issue them as separate checks or combine them with other payments.

2. [Add Earnings or Deductions to Pay Component Groups](#) on page 234.

On the **Non-Effective Dated** tab in the **Groups** field, select 1 of these Workday-owned pay component groups to add the earning to:

- *Supplemental Earnings - Standard [USA]* applies to states with only 1 supplemental tax rate.
- *Supplemental Earnings - Alternate [USA]* can apply when a state has more than 1 supplemental tax rate.

If you add earnings to the *Supplemental Earnings - Alternate* pay component group and a state has only 1 supplemental rate, Workday applies the standard supplemental rate.

3. (Optional) If you need to set up a separate nonregular run category, access the **Edit Run Category** task to select the **Non Regular Taxation** check box for the run category that uses the supplemental tax rate.

For on-demand payments, you can still apply supplemental taxation regardless of the run category setup.

See: [Set Taxation and Processing Rules for Run Categories](#) on page 101.

### Example

California taxes bonus and stock option payments at a different tax rate than other supplemental earnings, such as vacation payout.

To tax these earnings at the correct rates:

- Add bonus and stock option earnings to the *Supplemental Earnings - Standard* pay component group.
- Add earnings for vacation payout to the *Supplemental Earnings - Alternate* pay component group.

When assigning the pay component group to a run category, select the **Non Regular Taxation** option.

### Next Steps

Workday maintains current tax rate information for all states. To view this data, access the **All Payroll Tax Data** report.

To apply supplemental taxation to on-demand payments, select the **Supplemental Taxation** option on the **Run On Demand Payment for Worker** task.

### Steps: Track Workers Compensation (USA)

#### Prerequisites

Set up workers compensation.

#### Context

You can set up Workday Payroll to track unemployment data for employees whose primary work state is Washington or Wyoming.

Workday tracks the workers compensation code on employee job profiles for quarterly unemployment reporting. Payroll for the U.S. doesn't support tracking workers compensation codes by the location of a worker's payroll processing position.

When you don't configure workers compensation rates at the company level, Workday uses the preset rate for the payroll tax authority.

## Steps

1. Access the **Edit Company State and Local US Tax Reporting** task.

As you complete the **Other** section of the **State** tab, consider:

| Option            | Description                                                                                                                                                                                                                                                                                                                             |
|-------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Start Date</b> | When you're entering a tax for the first time, enter a <b>Start Date</b> .                                                                                                                                                                                                                                                              |
| <b>End Date</b>   | When you're changing tax information, Workday recommends that you enter an <b>End Date</b> to the existing row. You can then add a row with a new <b>Start Date</b> and change data as needed.                                                                                                                                          |
| <b>Tax</b>        | Select the workers compensation tax. For Washington, you can also: <ol style="list-style-type: none"> <li>a. Select <b>Use Tax Override Rate</b>.</li> <li>b. Enter the <b>Tax Override Rate</b>. Although the tax rate is an hourly rate, enter it here as a percentage. Example: If the rate is 1.39 per hour, enter 139%.</li> </ol> |

As you complete the **Workers Compensation Rate** tab, consider:

| Option            | Description                                                                                                                       |
|-------------------|-----------------------------------------------------------------------------------------------------------------------------------|
| <b>Start Date</b> | Enter a date at the beginning of the: <ul style="list-style-type: none"> <li>• Year</li> <li>• Quarter</li> </ul>                 |
| <b>End Date</b>   | Enter a date at the end of the: <ul style="list-style-type: none"> <li>• Year</li> <li>• Quarter</li> </ul>                       |
| <b>Rate</b>       | Enter unique rates for each workers compensation code. The rate you enter on this tab overrides the rate on the <b>State</b> tab. |

Security: *Set Up: Payroll - Company Specific (Taxes)* - USA domain in USA Payroll functional area.

2. Access the **Maintain Payroll Reporting Codes for Worker** task.

As you complete the **Payroll Reporting Code Description** field, consider:

| Option            | Description                                                                                                                                              |
|-------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Washington</b> | Indicate whether to report your corporate officers.                                                                                                      |
| <b>Wyoming</b>    | Assign a class code indicator to employees who are subject to the classifications: <ul style="list-style-type: none"> <li>• Corporate officer</li> </ul> |

| Option | Description                                                                                                                                                                                                                                                                                                                                                                                                                       |
|--------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|        | <ul style="list-style-type: none"> <li>• Government</li> <li>• Inmate</li> <li>• Job training</li> <li>• School to work</li> <li>• Volunteer</li> <li>• Welfare</li> </ul> <p>For each corporate office employee, assign the:</p> <ul style="list-style-type: none"> <li>• <i>C- Corporate Officer (Wyoming Class Code Indicator) class class code indicator</i></li> <li>• Appropriate Wyoming corporate officer type</li> </ul> |

Configure the *Maintain Payroll Reporting Codes for Worker* business process and security policy in the USA Payroll functional area.

## Result

Workday applies the rates in this order:

1. Override rate for the workers compensation code on the **Workers Compensation Rate** tab.
2. State override rate on the **State** tab.
3. Preset rate for the payroll tax authority. You can view the rate using the **View Payroll Tax/Allowance Data** report.

## Next Steps

Review these reports:

| Report                                                       | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

[Set Up Company Local Taxes \(USA\)](#) on page 1124

## Set Up Company State Taxes (USA)

### Prerequisites

Security: *Set Up: Payroll - Company Specific (Taxes)* - USA domain in USA Payroll functional area.

### Context

Workday maintains state tax data for payroll tax processing. You can enter company-specific data to set up, update, or override company state taxes. You can also override default state tax rates such as SUI, when a state doesn't mandate the same rate for all employers. To view default tax rates, access the **View Payroll Tax/Allowance Data** report.

### Steps

1. Access the **Edit Company State and Local US Tax Reporting** task.
2. For all sections you complete on the **State** tab:
  - If you're entering a tax for the first time, enter the **Start Date**.
  - Workday recommends that you enter an **End Date**, then add a row with a new **Start Date** when you change tax information.
  - When you add a row, Workday copies information from the previous row. Enter the **Start Date** and the changes in the new row.

As you complete the **State** tab, consider:

View both rates on the <b>View Payroll Tax/Allowance Data</b> report.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| <b>FUI ER Credit Reduction</b> | <p>You can override Workday-delivered <i>Federal Unemployment Insurance (FUI) ER Credit Reduction</i> tax rates. Select <b>Use Employer Tax Override Rate</b> and enter the new rate in the <b>Employer Tax Override Rate</b> field.</p> <p>When you select <b>OK</b>, the <b>Default Employer Rate</b> displays the tax rates from the <b>All Payroll Tax Data</b> report for all effective-dated rows.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| <b>Other</b>                   | <p>For taxes other than withholding or unemployment.</p> <p>When you select a tax, Workday automatically selects 1 of these check boxes:</p> <ul style="list-style-type: none"> <li>• <b>Exemption Allowed</b> : The tax is calculated unless you exempt the worker.</li> <li>• <b>Worker Tax Election Required</b>: The tax is calculated only if elected for a worker.</li> </ul> <p>Use the <b>Add Worker US Tax Elections</b> task to exempt a worker or make an election.</p> <p>When a tax rate override is allowed, you can select <b>Use Tax Override Rate</b>, and enter a <b>Tax Override Rate</b> to override the default. Convert a percentage to the rate.</p> <p><b>Example:</b> Enter 3.4 when the rate is 0.034 percent. Enter 0.34 when the rate is 0.0034 percent.</p> <p>You can only enter a value on the <b>Alternate Wage Limit</b> field after selecting the <b>Use Alternate Wage Limit</b> check box for these deductions with a <b>Start Date</b> that is on or after 2024-01-01:</p> <ul style="list-style-type: none"> <li>• CA: Voluntary Disability Insurance (VDI) - Mandatory [USA]</li> <li>• CA: Voluntary Disability Insurance (VDI) - Optional [USA]</li> </ul> <p>Taxes in the <b>Other</b> category can be <b>Excluded From Tax Filing</b> unless you included them using the <b>Maintain Payroll Tax Filing Configuration</b> task.</p> |

You can add or change the EIN. When you update the EIN, Workday displays a **Box 15 – State – Employer's State ID Number (Previous)** column on the *View W-2C Form Data* report that you can use to view the original EIN.

3. As you complete the **ESS Forms** tab, consider:

| Section                                 | Description                                                                                                                                                                                                                                                                                                                                                                                                                                              |
|-----------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Start Date</b>                       | Select the date that you want these changes to go into effect.                                                                                                                                                                                                                                                                                                                                                                                           |
| <b>Enable All Forms</b>                 | You only need to select <b>Enable All Forms</b> if you previously disabled forms or form types. Example: You add a row with a start date of 01-01-2023 and select <i>Exempt</i> for the <b>Disabled Form Types - All States</b> prompt. You want to enable all forms for the next month, so you add another row with a start date of 02-01-2023 and select the check box. This enables you to keep an audit trail of what forms you disabled previously. |
| <b>Disable Forms - All States</b>       | Select the forms that you want to hide from workers.                                                                                                                                                                                                                                                                                                                                                                                                     |
| <b>Disabled Form Types - All States</b> | Select the form types that you want to hide from workers.                                                                                                                                                                                                                                                                                                                                                                                                |
| <b>Display Default Disclaimer</b>       | Select to display the default disclaimer to workers when they add state withholding elections. Doesn't display when you enter a custom disclaimer.                                                                                                                                                                                                                                                                                                       |
| <b>Custom Disclaimer</b>                | Enter a custom disclaimer. The disclaimer displays to workers when they're adding state withholding elections. This disclaimer takes priority over the default disclaimer and displays even when you select the Display Default Disclaimer check box.                                                                                                                                                                                                    |

### Next Steps

Review the **Company US Tax Reporting** report for a summary of company elections, including a history of elections that have ended.

**Note:** For the **Active As of Date** field, Workday only returns the tax authorities as of the date you selected. Example: If you input 1/1/2021, you can only review company tax data that are in effect on the specified date or later.

## Set Up Union Rates for Paid Family and Medical Leave (USA)

### Prerequisites

Security: *Set Up: Payroll - Company Specific (Taxes) - USA* domain in USA Payroll functional area.

### Context

You can define union tax rates for states with paid family and medical leave.

Workday uses your union rates to override default rates for paid family and medical leave. If you don't set up union rates, Workday uses the preset rate for the payroll tax authority.

### Steps

1. Access the **Edit Company State and Local US Tax Reporting** task.
2. As you complete the **Union Rate** tab, consider:

| Option            | Description                                                                                                                                                                                    |
|-------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Start Date</b> | When you're entering a tax for the first time, enter a <b>Start Date</b> .                                                                                                                     |
| <b>End Date</b>   | When you're changing tax information, Workday recommends that you enter an <b>End Date</b> to the existing row. You can then add a row with a new <b>Start Date</b> and change data as needed. |
| <b>Union</b>      | Select the union related to the tax rate.                                                                                                                                                      |
| <b>Tax</b>        | Select the paid family and medical leave tax.                                                                                                                                                  |

### Result

Workday applies the rates in this order:

1. Override rate for unions on the **Union Rate** tab.
2. Company override rate on the **State** tab.
3. Preset rate for the payroll tax authority. You can view the rate using the **View Payroll Tax/ Allowance Data** report.

**Note:** When a worker belongs to multiple unions for the same company and you set up union override rates for multiple unions that a worker belongs to on the **Union Rate** tab of the **Edit Company State and Local US Tax Reporting** task, Workday uses the lowest override tax rate.

### Next Steps

(Optional) To review union tax rates that you set up in the company, add the **Union Rate - Union** field on custom reports.

## Set Up Washington Labor and Industry Rates and Codes (USA)

### Prerequisites

Enter compensation codes and job details for workers in Washington State on the **Maintain Workers' Compensation Codes** task.

Security:

- *Set Up: Job* domain in the Jobs & Positions functional area.
- *Set Up: Payroll - Company Specific (Taxes) - USA* domain in the USA Payroll functional area.

## Context

You can configure codes and rates for Washington that Workday uses when calculating worker compensation for an employee's primary work state. When you enter the codes and rates from the Washington State Department of Labor and Industries (WA L&I), Workday uses them for taxation and reporting purposes and to determine the:

- Worker compensation rate in effect for Washington, when the state is the business location of the worker's primary position.
- Job profile associated with the job code assigned by WA L&I.

When you don't use an override, Workday uses the default tax rate listed on the **View Payroll Tax/ Allowance Data** report.

## Steps

1. Access the **Edit Company State and Local US Tax Reporting** task.
2. Complete the **Other** grid on the **State** tab:

| Field                        | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
|------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Tax</b>                   | <p>Select 1 or more of these workers compensation tax deductions, if applicable.</p> <p>Employee Components:</p> <ul style="list-style-type: none"> <li>• WA: Washington Medical Aid Fund (Effective Jan 2017)</li> <li>• WA: Washington Stay at Work Program</li> <li>• WA: Washington Supplementation Pension Fund</li> </ul> <p>Employer Components:</p> <ul style="list-style-type: none"> <li>• WA: Washington Industrial Insurance (Accident) Fund (ER)</li> <li>• WA: Washington Medical Aid Fund (ER) (Effective Jan 2017)</li> <li>• WA: Washington Stay at Work Program (ER)</li> <li>• WA: Washington Supplemental Pension Fund (ER)</li> </ul> <p>You can only override the pension fund rate on the <b>State</b> tab.</p> |
| <b>Use Tax Override Rate</b> | Select the check box.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| <b>Tax Override Rate</b>     | <p>Enter the override rate for Washington State as a percentage. When you don't enter a tax override rate, Workday uses the default rate for the state. Although the override tax rate is an hourly rate, enter it as a percentage. Workday doesn't calculate the override rate as a flat figure. Example: Enter 1.39 if the rate is 0.0139 per hour.</p>                                                                                                                                                                                                                                                                                                                                                                              |

3. Complete the **Workers Compensation Rate** tab:

| Field             | Description                                                                  |
|-------------------|------------------------------------------------------------------------------|
| <b>Start Date</b> | When you're entering a tax for the first time, enter the <b>Start Date</b> . |

| Field      | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
|------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|            | When you're changing tax information, Workday recommends that you enter an <b>End Date</b> , then add a row with a new <b>Start Date</b> .                                                                                                                                                                                                                                                                                                                                                                                       |
| <b>Tax</b> | <p>Select 1 or more of these workers compensation tax deductions, if applicable.</p> <p>Employee Components:</p> <ul style="list-style-type: none"> <li>WA: Washington Medical Aid Fund (Effective Jan 2017)</li> <li>WA: Washington Stay at Work Program</li> </ul> <p>Employer Components:</p> <ul style="list-style-type: none"> <li>WA: Washington Industrial Insurance (Accident) Fund (ER)</li> <li>WA: Washington Medical Aid Fund (ER) (Effective Jan 2017)</li> <li>WA: Washington Stay at Work Program (ER)</li> </ul> |

**Note:** When you enter an override rate on the **Workers Compensation Rate** tab for a specific compensation code, Workday prioritizes that rate instead of the rate you enter on the **State** tab. Example: On the **State** tab, you set up a tax override rate. On the **Workers Compensation Rate** tab, you set an override rate for compensation code *0040 - Vineyards (United States of America)*. Workday only uses the workers compensation override rate for workers that have the 0040 workers compensation code and uses the tax override rate you set on the **State** tab for all other workers.

4. Click **OK**.

## Set Up Company Local Taxes (USA)

### Prerequisites

Security: *Set Up: Payroll - Company Specific (Taxes)* - USA domain in USA Payroll functional area.

### Context

Workday maintains local tax data for payroll tax processing so that these tax authorities are available in Workday for you to set up for the company:

- Counties.
- Cities.
- Local school districts.

Add them to the company so employees can make tax elections for them.

The payroll administrator receives a notification to add a tax authority when:

- You set up self-service for withholding elections that includes an approval step on the business process.
- The employee selects a tax authority that you haven't set up. In this case, manually enter the employee's tax elections and approve them.

### Steps

1. Access the **Edit Company State and Local US Tax Reporting** task.

2. Select the **Local** tab. The **Local** tab is populated only if there's local data relevant to the state and company combination.
3. If you're entering a tax for the first time:
  - Enter the **Start Date**.
  - If you're changing tax information, Workday recommends that you enter an **End Date** and add a row with a new **Start Date**. When you add a row, Workday copies information from the previous row. Enter the **Start Date** and the changes in the new row.
4. For each tax, enter 1 or more tax authorities.  
 Example: An employee works in 3 Pennsylvania locations (Philadelphia City, Abington Township, and Lower Merion Township). You can enter *Local City Withholding (Work) [USA]* once and select all 3 townships for that tax.
5. As you complete this tab, consider this location-specific information:

**Kentucky**

In the **City Withholding** section for Louisville, select *Local City Withholding (Work) [USA]* and make these **Tax Authority** selections:

- *Louisville Non-Resident + TARC (Kentucky: Jefferson)*
- *Louisville Resident + TARC (Kentucky: Jefferson)*

In the **School District Withholding** section for Louisville, select *Local School District Withholding (Resident) [USA]*. For the **Tax Authority**, select *Jefferson County School Board Tax (Kentucky: Jefferson)*.

**Ohio**

State tax election requires the employee's school district.

**Pennsylvania**

Select *Local City (PENN) Local Service Tax [LST] (USA)* in the **City Withholding Tax** field for each company in Pennsylvania. Then enter the amount in the **Previous Employer Deducted Amount** field of **Worker Tax Elections**.

Workday uses this calculation logic to return the higher of 2 taxes:

| Tax                            | Primary Work = PA and Primary Resident = PA                                                                           | Primary Work = PA and Primary Resident < > PA | Primary Work < > PA and Primary-Resident = PA |
|--------------------------------|-----------------------------------------------------------------------------------------------------------------------|-----------------------------------------------|-----------------------------------------------|
| <i>City Withholding (Work)</i> | Higher of: <ul style="list-style-type: none"> <li>• City Work Tax Rate</li> <li>• City-Resident Tax Rate +</li> </ul> | City Work Tax Rate                            | Doesn't resolve.                              |

| <b>Tax</b>                                    | <b>Primary Work = PA and Primary Resident = PA</b> | <b>Primary Work = PA and Primary Resident &lt; &gt; PA</b> | <b>Primary Work &lt; &gt; PA and Primary-Resident = PA</b> |
|-----------------------------------------------|----------------------------------------------------|------------------------------------------------------------|------------------------------------------------------------|
|                                               | School District Tax Rate                           |                                                            |                                                            |
| <i>City Withholding (Resident)</i>            | Resolves to zero.                                  | Doesn't resolve.                                           | City Resident Tax Rate + School District Tax Rate          |
| <i>School District Withholding (Resident)</i> | Resolves to zero.                                  | Doesn't resolve.                                           | Resolves to zero.                                          |

6. To file to a single tax collector for Pennsylvania local taxes, complete the **Tax Collection District (TCD)** tab.

Enter the **Tax Collection District Code** for the tax collection agency that you want to send Pennsylvania local taxes. Workday recommends that you make sure this code is accurate by checking the code on the government agency website.

**Note:** You can only have 1 active TCD code per federal tax ID (FEIN).

When changing the **Tax Collection District Code**, Workday recommends that you:

- End Date** the previous row.
- Create a new row with a new **Start Date**.

When you create the W-2, Workday reports the code that's active at the end of the relevant tax year.

When you modify, add, or delete the TCD code after you create W-2s, Workday creates a W-2C for all workers with a Pennsylvania local tax.

### Next Steps

Review the **Company US Tax Reporting** report for a summary of company elections, including a history of elections that have ended.

**Note:** For the **Active As of Date** field, Workday only returns the tax authorities as of the date you selected. Example: If you input 1/1/2021, you can only review company tax data that are in effect on the specified date or later.

### Concept: Additional State and Territory Considerations (USA)

Consider this additional state- and territory-specific information as you set up payroll taxes.

## California

At the beginning of the year, determine which disability insurance and family leave insurance plans you want Workday to calculate automatically. Add these plans using the **Edit Company State and Local US Tax Reporting** task. Mandatory deductions calculate automatically and don't require tax elections. Select from:

- *CA: State Disability Insurance (SDI) - Mandatory*
- *CA: Voluntary Disability Insurance - (VDI) - Mandatory*

Also add *CA: California Voluntary Plan Assessment – Employer Paid [USA]*, if applicable.

To calculate accurate gross wages for taxes, you must configure an SUI Taxable tax authority exception for the tax authority that corresponds to the disability plan. Use the **Maintain Tax Authority Exceptions Pay Component Groups** task to configure exceptions for these tax authorities:

- *CA: State Disability Insurance (SDI) - Mandatory*
- *CA: State Disability Insurance (SDI) - Optional [USA]*
- *CA: Voluntary Disability Insurance - (VDI) - Mandatory*
- *CA: Voluntary Disability Insurance (VDI) - Optional [USA]*

## Guam

Workday automatically adjusts all payroll processing to the corresponding Guam taxes for workers who earned wages in another state or territory in the same year.

## New Jersey

For New Jersey only, on the **Edit Company State and Local US Tax Reporting** task, in the **Unemployment** grid:

- The **Employer Tax Override Rate** check box is renamed **Use Tax Override Rate**.
- You can enter the Governmental Reimbursable override rate for SUI.
- Enter *SUI (ER [USA])* and *SUI [USA]* on separate rows.

Determine which disability insurance and family leave insurance plans you want Workday to calculate automatically for employees (state or private). Add these plans in the **Other** grid on the **Edit Company State and Local US Tax Reporting** task. Select from:

- *New Jersey Temporary Disability Fund - Mandatory*
- *New Jersey Voluntary Disability Insurance (NJVDI) - Mandatory*

- *New Jersey Family Leave Insurance (NJFLI) - Mandatory*
- *New Jersey Private Family Leave Insurance (NJPFLLI) - Mandatory*

New Jersey requires you to list employer private plans on the W-2 form. Access the **State** tab and enter the plans in the **Other** section. For each plan, select **EIN/Plan Number** and enter the private plan number.

Also add *New Jersey Voluntary Disability Insurance (NJVDI) – Employer Paid [USA]*, if applicable.

New Jersey Disability Insurance Plan and Family Leave Insurance Private Plan numbers display in boxes 19 and 20 on the New Jersey W-2 form.

## Pennsylvania

To report Pennsylvania local taxes to a single tax collector:

- Register your business with a local tax collector.
- Set up a Tax Collection District for your company. See [Set Up Company Local Taxes \(USA\)](#) on page 1124.
- Select the **Include Pennsylvania Local Taxes** launch parameter on the **MasterTax Tax Filing - Monthly** integration.
- Run the *Get Monthly Worker Tax Filing Data* web service to output monthly tax filing data for Pennsylvania local taxes.

## Puerto Rico

Workday assigns a unique Control Number to each year-end tax form for Puerto Rico when you perform the **Create US Territory Year End Form Data** task. Select the **Year End** tab and enter the **First Control Number** and **Last Control Number**.

Workday automatically populates the email address for the company contact in the Employer Email section when you perform the **Edit Company State and Local Tax Reporting** task. If no email address is available, Workday populates the company email address.

Workday automatically adjusts all payroll processing to the corresponding Puerto Rico taxes for workers who earned wages in another state or territory in the same year.

See [Steps: Set Up, Audit, and Print Year-End Tax Forms \(USA\)](#) on page 919.

## U.S. Virgin Islands

Workday automatically adjusts all payroll processing to the corresponding Virgin Islands taxes for workers who earned wages in another state or territory in the same year.

## Vermont

For information on filing the Vermont Employer Health Care Contribution Tax, see [File Vermont](#)

[Employer Health Care Contribution \(USA\)](#) on page 1206.

## Washington

Set up these taxes on the **State** tab of the **Edit Company State and Local US Tax Reporting** task:

- Seattle Employee Hours
- Washington Cares Fund

Set up Washington workers compensation on the **Workers Compensation Rate** tab of the **Edit Company State and Local US Tax Reporting** task. Select the **Use Tax Override Rate** check box.

Enter the **Tax Override Rate**. If you don't provide a rate override, then Workday uses the default rate. Although the tax rate is an hourly rate, enter it here as a percentage.

See [Steps: Track Workers Compensation \(USA\)](#) on page 1116.

## Wyoming

You can set up Wyoming workers compensation. Access the **Edit Company State and Local US Tax Reporting** task and enter the tax rate for each workers compensation code on the **Workers Compensation Rate** tab. Workday defines compensation codes using the **Maintain Workers Compensation Codes** task.

See [Steps: Track Workers Compensation \(USA\)](#) on page 1116.

### Concept: Override Multistate Resident Withholding Rules (USA)

Consider these options for configuring the override multistate resident withholding rule. The rule applies when a worker's resident state and work state don't have reciprocity.

| Multistate Resident Rule - Calculate State | Multistate Resident Rule - Calculation Method                         | Result                                                                                                                   |
|--------------------------------------------|-----------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------|
| True                                       | Blank                                                                 | Workday calculates wages and tax for the worker's resident state with no credit for the work state tax.                  |
| True                                       | Resident State Tax - Work State Tax (if > 0)                          | Workday calculates wages and tax for the worker's resident state and reduces tax by crediting applicable work state tax. |
| True                                       | Resident State Tax - Work State Tax (if > 0) / Report Work Wages Only | Workday calculates tax for the worker's resident state and reduces tax by crediting applicable work state tax.           |

| Multistate Resident Rule - Calculate State                       | Multistate Resident Rule - Calculation Method   | Result                                                                                                                                                    |
|------------------------------------------------------------------|-------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                                                  |                                                 | Workday doesn't calculate resident state wages.                                                                                                           |
| Tax Calc (State-WH-Reciprocity):<br>Work State Does Not Have Tax | Work State Does NOT Have Tax                    | Workday calculates wages and tax for the worker's resident state only if the work state doesn't have tax.                                                 |
| True                                                             | Work State Does NOT Have Tax / Report All Wages | Workday calculates wages for the worker's resident state. Workday calculates tax for the worker's resident state only if the work state doesn't have tax. |

### Concepts

[Concept: State Tax Reciprocity \(USA\)](#) on page 1170

### Tasks

[Set Up Ongoing Multiple Work Jurisdictions \(USA\)](#) on page 1160

## Concept: Payroll for U.S. Territories (USA)

Workday Payroll enables you to process payroll for employees who live and work in these U.S. territories:

- Commonwealth of Puerto Rico (starting with tax year 2016)
- Guam (starting with tax year 2017)
- U.S. Virgin Islands (starting with tax year 2017)

### Tax Withholding

Configure the **State** tab on the **Edit Company State and Local US Tax Reporting** task for:

- State tax withholding.
- Unemployment.
- Other taxes.

Workday automatically adjusts these corresponding territory taxes:

- *OASDI (EE and ER)*
- *Medicare (EE and ER)*
- *Additional Medicare Tax*

When you pay workers who previously had federal taxes withheld while working in another state, Workday:

- Recognizes previous balances or values when calculating the *Additional Medicare* tax for the current tax year.
- Applies previous values across deductions.
- Recognizes taxes already withheld and avoids over-withholding.
- Respects and supports company relationships.

Use the **All Payroll Tax Data** report to display a list of all the tax deductions available for each territory.

**Puerto Rico-Specific Information****Annual Christmas Bonus**

Workday delivers the *Puerto Rico Christmas Bonus* tax calculation you can use to configure your Christmas Bonus earning.

| <b>When the Christmas Bonus Amount is</b> | <b>Workday Withholds</b>                                                                                                            |
|-------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------|
| Up to \$600                               | Zero %                                                                                                                              |
| Greater than \$600 but less than \$1500   | 7%                                                                                                                                  |
| Greater than \$1500                       | The existing effective supplemental method – standard or aggregate – depending on whether there's a regular or separate pay result. |

For the *Puerto Rico Christmas Bonus* tax calculation to withhold at these rates, you must:

- Pay the Christmas Bonus earning by separate check.
- Not combine the earning with any other earning.

To use the *Puerto Rico Christmas Bonus* tax calculation, add these pay component groups to your Christmas Bonus earning:

- *Puerto Rico Christmas Bonus [USA]*
- *State Withholding Taxable (Withhold Taxes) [US]*
- *Supplemental Earnings - Standard [USA]*

### Entrepreneur Exemption

Workday supports these Commonwealth of Puerto Rico Department of the Treasury withholding forms:

- 499-R-4 (Spanish version)
- 499 R-4.1 (English version)

**Note:** In 2017, the Puerto Rico Department of the Treasury required employees to submit a new withholding elections form. To qualify for this exemption, select **Entrepreneur Exemption** on the new form.

Employees can use the self-service **Withholding Elections** task. At the **Young Individuals age between 16 and 26 years** prompt, employees select from:

- *I am choosing exemption on the first \$40,000 in wages*
- *I choose not to be exempt from the first \$40,000 of wages*

You can select the **Entrepreneur Exemption** check box on the **Add Worker US Tax Elections** task.

Workday:

- Bases the tax calculation on the difference between the total wages and the withholding exemption.
- Respects any valid exempted amounts for Puerto Rico.
- Includes additional withholding amounts or percentages from a worker's tax elections.

The **View Low Income Workers with No Puerto Rico Tax Withholding** report displays employees that might need a new withholding election. It displays workers:

- Who live or work in Puerto Rico.
- Whose gross wages are less than \$20,000.
- Who have had no Puerto Rico tax withheld.
- Are wage eligible for the Entrepreneur Exemption.

**Retirement Plans**

Workday delivers these calculations to support retirement plan deductions:

| Calculation                                 | Calculation Type       | Description                                                                    |
|---------------------------------------------|------------------------|--------------------------------------------------------------------------------|
| <i>Puerto Rico 1081.01 + Catch-Up Limit</i> | Arithmetic Calculation | Returns the combined value of the Puerto Rico 1081.01 annual limit plus catch- |

| Calculation                                                                                                     | Calculation Type        | Description                                                                                                                                                                                     |
|-----------------------------------------------------------------------------------------------------------------|-------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                                                                                                 |                         | up limit.                                                                                                                                                                                       |
| <i>Puerto Rico Annual Defined Contribution Plan Limit Value</i>                                                 | Lookup Calculation      | Returns the numeric value for the Puerto Rico elective deferral annual contribution limit based on the payment date year being processed. Doesn't include the value for catch-up contributions. |
| <i>Puerto Rico Dual-Plan Elective Deferral Annual Limit (including catch-up if worker over 50 years of age)</i> | Conditional Calculation | Returns the numeric value for the federal annual contribution limit (including Puerto Rico 1081.01(d) catch-up limit if applicable) based on the payment date year                              |

| Calculation                                                                                         | Calculation Type        | Description                                                                                                                                    |
|-----------------------------------------------------------------------------------------------------|-------------------------|------------------------------------------------------------------------------------------------------------------------------------------------|
|                                                                                                     |                         | being processed.                                                                                                                               |
| <i>Puerto Rico Dual-Plan Elective Deferral Annual Limit + Puerto Rico 1081.01(d) Catch-Up Limit</i> | Arithmetic Calculation  | Returns the combined value of the Puerto Rico dual plan annual limit plus catch-up limit.                                                      |
| <i>Puerto Rico Elective Deferral Annual Catch-Up Limit under PR Code 1081.01(d)</i>                 | Lookup Calculation      | Returns numeric value for the Puerto Rico elective deferral annual catch-up contribution limit based on the payment date year being processed. |
| <i>Puerto Rico Elective Deferral Annual Limit (including catch-up if worker over 50 years</i>       | Conditional Calculation | Returns numeric value for the Puerto Rico 1081.01(d) annual contribution limit (including catch-up limit if                                    |

| Calculation                                                                                          | Calculation Type   | Description                                                                                                                                                         |
|------------------------------------------------------------------------------------------------------|--------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| of age)                                                                                              |                    | applicable) based on the payment date year being processed.                                                                                                         |
| Puerto Rico Elective Deferral Annual Limit for Dual Plan under PR Code 1081.01(d) and Federal 401(k) | Lookup Calculation | Returns the numeric value for the Puerto Rico dual plan annual catch-up contribution limit based on the payment date year being processed.                          |
| Puerto Rico Elective Deferral Annual Limit under PR Code 1081.01(d)                                  | Lookup Calculation | Returns the numeric value for the Puerto Rico Elective Deferral annual contribution limit based on the payment date year being processed. Doesn't include the value |

## Tax Authorities

### Define Tax Authority Exceptions from Pay Component Groups (USA)

### Prerequisites

Security: *Set Up: Payroll (Calculations - Payroll Specific)* domain in the Core Payroll functional area.

## Context

You can set up a pay component group (PCG) to either exclude or include pay components for a tax authority.

## Steps

1. Access the **Maintain Tax Authority Exceptions Pay Component Groups** task.
2. Select the **Pay Component Group** that requires exceptions.
3. In the **Payroll Tax Authority** field on the **Exceptions for Taxes** tab, select the payroll tax authority.
4. If the pay component should be excluded from the PCG, select the pay component in the **Exclude Pay Component(s)** field. If the pay component should be included in the PCG, select the pay component in the **Include Pay Component(s)** field.
5. On the **Exceptions for Withholding Orders** tab, specify exceptions to the disposable earnings calculation for withholding orders.
  - a) From the **Payroll Tax Authority** prompt, select 1 or more tax authorities that calculate disposable earnings differently.
  - b) From the **Withholding Order Type** prompt, select 1 or more types of withholding orders.
  - c) When the pay component:
    - Is part of the group but the tax authority treatment of it doesn't apply, select it from the **Exclude Pay Component(s)** prompt.
    - Isn't part of the group but the tax authority treatment of it does apply, select it from the **Include Pay Component(s)** prompt.

## Result

Workday makes the PCG exceptions that you configure and displays them in the **Exceptions for Taxes** section of the pay component **Non Effective Dated** tab.

## Example

The *State Withholding Taxable Reduction* PCG reduces state taxable income for 401(k) contributions in all states except Pennsylvania, so the pay component *401(k) [USA]* should be excluded for the Pennsylvania tax authority from the *State Withholding Taxable Reduction* PCG.

Exceptions for taxes for the *State Withholding Taxable Reduction* PCG:

| Payroll Tax Authority | Exclude Pay Component(s) | Include Pay Component(s) |
|-----------------------|--------------------------|--------------------------|
| Pennsylvania          | 401(k) [USA]             |                          |

With this configuration, Workday excludes the *401(k) [USA]* pay component from the *State Withholding Taxable Reduction* PCG when processing payroll for Pennsylvania.
